The Proposed Program would include new and replacement wells within the contiguous and outlying Modesto water service areas, as well as upgrades to existing wells. Concentrated or intensive extraction of groundwater supplies can result in an insular cone of depression and potentially lead to localized plastic deformation or surface collapse of unconsolidated soils during strong seismic groundshaking. This differential settling can compromise the strength or integrity of a structure and damage building foundations and other infrastructure. However, this phenomenon is more prevalent following extensive groundwater withdrawal from soils containing high percentages of fine material (i.e., clays and silts). Soils in the study area predominantly consist of sandy loam to fine sandy loam (NRCS 2016). Due to the physical composition of the soils, subsidence in the Modesto area has historically been minor with surface elevation loss of 0- to 5 feet (compared to 1949 elevations) despite significant observed subsidence in other portions of the San Joaquin Valley (DWR no date). In addition, the Proposed Program was developed in consideration of the operating yield of the Modesto and Turlock groundwater sub-basins to better manage the groundwater basin in consideration of estimates of annual recharge and pumping activities, and to prevent lowering of the groundwater table. Therefore, the potential for the Proposed Program to lead to area subsidence is considered less than significant. For further discussion of groundwater resources, please refer to Chapter 12, *Hydrology and Water Quality*.

Liquefaction may occur in water-saturated soils during moderate to large earthquakes. The potential for liquefaction to occur depends on soil composition, soil saturation levels, and intensity and duration of seismic ground shaking and can lead to severe damage in concrete foundations and infrastructure. Although the study area is located in a seismically limited region, several proposed components would be located near the Tuolumne River and Dry Creek with the potential for the presence of a high water table and sandy, liquefiable soils. Therefore, impacts related to seismic-related ground failure, including liquefaction would be significant if not adequately addressed. Adherence to current CBC standards would reduce these risks by designing and building structures to a level of strength appropriate to regional seismic risks. In addition, as described in Impact GEO-2, per Section 11.08 of the City's Standard Specifications, all WMP components would be graded/constructed in accordance with the recommendations in a required soils report and any additional recommendations provided during construction by the project Geotechnical Engineer. Incorporating the findings and recommendations identified for the project into the final project designs, would reduce significant risks of subsidence, liquefaction, or collapse by ensuring new structures are designed and constructed in a manner that addresses underlying geologic conditions. In addition, the risks of landslides and lateral spreading in the study area would not be substantial. Thus, with adherence to the City's Standard Specifications, adverse effects from unstable geologic units would be **less than significant**.

Chapter 10
GREENHOUSE GAS EMISSIONS AND ENERGY RESOURCES

10.1 Overview

This chapter describes the regulatory and environmental setting related to greenhouse gases (GHGs) and energy resources and then evaluates impacts related to the Proposed Program's forecasted GHG emissions. The impact evaluation begins by describing the methodology used to evaluate significance and the GHG significance criteria, and then presents the impact evaluation.

10.2 Regulatory Setting

10.2.1 Federal Laws, Regulations, and Policies

At the federal level, USEPA has developed regulations to reduce GHG emissions from motor vehicles and has developed permitting and reporting requirements for large stationary emitters of GHGs. The following sections briefly describe the history and content of the regulatory programs developed to date by USEPA and the U.S. Supreme Court (Court).

The Court ruled for the first time in 2007 that GHG emissions are air pollutants covered under the federal Clean Air Act, in its decision *Massachusetts v. Environmental Protection Agency* (549 U.S. 497). The Court held that GHGs fit the definition of an air pollutant causing and contributing to air pollution, which reasonably may be anticipated to endanger public health or welfare. In 2009, the USEPA Administrator determined that existing and projected concentrations of GHGs threaten public health and welfare of present-day and future generations, and that combined emissions from motor vehicles contribute to GHG pollution. USEPA's endangerment finding covers emissions of six key GHGs: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). These GHGs are discussed further in Section 10.3, "Environmental Setting."

GHG Emission Standards

On April 1, 2010, USEPA and the National Highway Traffic Safety Administration (NHTSA) established a program to reduce GHG emissions and improve fuel economy standards for new model year 2012–2016 cars and light trucks. On August 9, 2011, USEPA and the NHTSA announced standards to reduce GHG emissions and improve fuel efficiency for heavy-duty trucks and buses. On October 15, 2012, USEPA and NHTSA established a program to reduce GHG emissions and improve fuel economy standards for new cars and light trucks through 2025 (USEPA 2012). In August 2016, USEPA and the NHTSA jointly finalized Phase 2 Heavy-Duty National Program standards to reduce GHG emissions and improve fuel efficiency of medium- and heavy-duty vehicles for model year 2018 and beyond (USEPA 2017a). However, on March 15, 2017 President Donald Trump ordered a midterm evaluation of the later years of the 2017-2025 standards, and thus the increased mileage standard requirements may be subject to change (Reuters 2017).

Clean Power Plan

In 2015, President Barack Obama and USEPA announced the Clean Power Plan, which is aimed at reducing carbon pollution from existing fossil fuel–fired electric generating units. The plan was designed to be flexible while implementing strict regulations to encourage the development of cleaner and lower-polluting American energy. On February 9, 2016, the Court stayed implementation of the Clean Power Plan pending judicial review. While awaiting action by the Court, USEPA was continuing to work with states that choose to find ways to reduce GHG emissions from power plants. However, in 2018, the USEPA proposed to repeal the Clean Power Plan and replace it with the proposed Affordable Clean Energy (ACE) rule (USEPA 2018). The ACE rule identifies a "best system of emission reduction", provides states with a list of "candidate technologies" that can be used to establish standards of performance, and updates EPA's New Source Review Permitting program to incentivize efficiency improvements at existing power plants (USEPA 2018). This regulation could influence the indirect GHG emissions associated with electricity use.

10.2.2 State Laws, Regulations, and Policies

GHG Reduction Goals

In recent years, California has enacted a number of policies and plans to address GHG emissions and climate change. Efforts on a statewide level to regulate and reduce GHG emissions are detailed below but include establishing GHG emission goals, developing vehicle emission standards, and promoting sustainable land use and transportation planning. Most recently, the state's efforts to continuing GHG emission control and regulation progress include developing international partnerships.

AB 32, SB 32 and Executive Orders

In 2006, the California State Legislature enacted AB 32, the Global Warming Solutions Act, which set the overall goals for reducing California's GHG emissions to 1990 levels by 2020. EOs S-3-05 and B-16-2012 further extend this goal to 80 percent below 1990 levels by 2050. EO B-30-15 established an interim target to cut California's GHG emissions to 40 percent below 1990 levels by 2030. Senate Bill 32 codified the 40 percent below 1990 levels by 2030 target.

CARB approved the First Update to the AB 32 Scoping Plan on May 22, 2014 (CARB 2014). This update defines climate change priorities for the next 5 years and also sets the groundwork to reach long-term goals set forth in EOs S-3-05 and B-16-2012. The update also highlights California's progress toward meeting the near-term 2020 GHG emission reduction goals and evaluates how to align the State's longer term GHG reduction strategies with other state policy priorities for water, waste, natural resources, clean energy, transportation, and land use. CARB is updating the Scoping Plan to reflect progress since 2005, additional reduction measures, and plans for reductions beyond 2020.

CARB released and adopted a 2017 Scoping Plan Update (CARB 2018a) to reflect the 2030 target set by EO B-30-15 and codified by SB 32 (CARB 2017a, 2017b). The 2017 Scoping Plan Update suggests several areas where measures for water and wastewater treatment could be considered. This includes improving the energy consumption for water pumping, treatment, heating; utilizing anaerobic digestion and wastewater treatment plant capacity to help process organic waste

diverted from landfills; using biosolids for soil amendments; and incentivizing methane capture systems at wastewater treatment plants to produce renewable electricity, transportation fuel, or pipeline biomethane.

California has adopted several vehicle emission reduction and fuel efficiency regulations that are similar and consistent with the federal USEPA and NHTSA regulations. These California vehicle regulations were granted under a waiver request by the USEPA and would not necessarily be affected by changes in the federal policies. The current federal administration has suggested revoking California's waiver, and if the waiver is revoked the California standards may be subject to change.

GHG Reporting and Reduction Regulations

CARB has completed rulemaking to implement several GHG emission reduction regulations and continues to investigate the feasibility of implementing additional GHG emission reduction regulations. These include the low carbon fuel standard, which reduces GHG emissions associated with fuel usage, and the renewable portfolio standard (RPS), which requires electricity suppliers to increase the amount of electricity generated from renewable sources to 33 percent by 2020 and to 50 percent by 2030.

In January 2012, CARB approved the Advanced Clean Cars Program, a vehicle emission control program for model years 2017–2025. To further California's support of the national program to regulate emissions, CARB submitted a proposal that would allow automobile manufacturer compliance with USEPA's requirements to show compliance with California's requirements for the same model years. The final rulemaking package was filed on December 6, 2012, and the final rulemaking became effective December 31, 2012. CBC Title 24 governs construction of buildings in California. Parts 6 and 11 of Title 24 are relevant for energy use and green building standards, which reduce the amount of indirect GHG emissions associated with buildings.

SB 1383 directed ARB to develop a Short-Lived Climate Pollutant (SLCP) reduction strategy with targets of reducing emissions of methane and hydrofluorocarbons 40 percent below 2013 levels by 2030 and black carbon emissions 50 percent below 2013 levels by 2030 (CARB 2017c, SB 1383 2016).

California requires industrial sources with GHG emissions over 10,000 metric tons (MT) to annually report their GHG emissions under the Mandatory Reporting Rule. Wastewater treatment facilities may be required to report GHG emissions depending on their size and types of equipment used in the wastewater treatment process.

Climate Change Adaptation Policies

In 2009, California adopted a statewide Climate Adaptation Strategy that summarizes climate change impacts and recommends adaptation strategies across seven sectors: public health, biodiversity and habitat, oceans and coastal resources, water, agriculture, forestry, and transportation and energy. The California Natural Resources Agency, in coordination with other state agencies, has updated the 2009 California Climate Adaptation Strategy (California Natural Resources Agency 2009). The new Safeguarding California Plan augments previously identified strategies in light of advances in climate science and risk management options (California Natural Resources Agency 2014). The Safeguarding California Plan highlights climate risks in nine broad

areas (e.g., energy, forestry, transportation, water) in California, discusses progress to date, and makes realistic sector-specific recommendations. For the Proposed Program, the Water and Public Health sectors are relevant.

California Integrated Energy Policy

Senate Bill 1389, passed in 2002, requires the California Energy Commission (CEC) to prepare an Integrated Energy Policy Report for the governor and legislature every two years (CEC 2018). The reports and report updates analyze data and provide policy recommendations on trends and issues concerning electricity and natural gas, transportation, energy efficiency, renewable energy, and public interest energy research (CEC 2018). The 2018 Integrated Energy Policy Report Update highlights California's innovative policies and the related clean energy economy (CEC 2018).

10.2.3 Local Laws, Regulations, and Policies

San Joaquin Valley Air Pollution Control District

The SJVAPCD's *Climate Change Action Plan*, adopted in 2008, directed the District Air Pollution Control Officer to develop guidance to assist lead agencies, project proponents, permit applicants, and interested parties in assessing and reducing the impacts of project-specific GHG emissions on global climate change (SJVAPCD 2009a, 2017). On December 17, 2009, the SJVAPCD adopted *Guidance for Valley Land-use Agencies in Addressing GHG Emission Impacts for New Projects under CEQA* (Guidance) (SJVAPCD 2009b). The Guidance establishes a streamlined process that can be used to evaluate the significance of project-specific GHG emission impacts on global climate change, based on the use of Best Performance Standards (BPS) (SJVAPCD 2009b); the streamlined evaluation process is designed to meet the reduction goals of AB 32. The SJVAPCD defines BPS as "the most effective achieved-in-practice means of reducing or limiting GHG emissions from a GHG emissions source." Types of BPS include equipment type, equipment design, operational and maintenance practices, measures that improve energy efficiency, and measures that reduce vehicle miles traveled (SJVAPCD 2009b). If BPS are not available, the SJVAPCD encourages users to demonstrate at least a 29-percent reduction from business as usual (BAU); however, the Guidance does not provide clear BPS or thresholds for the evaluation of construction-related effects under CEQA.

Stanislaus County Regional Transportation Plan / Sustainable Communities Strategy

Stanislaus County's *Regional Transportation Plan / Sustainable Communities Strategy, (RTP/SCS),* adopted in 2014, contains land-use and transportation goals and objectives for the County and addresses requirements, including those in SB 375, for reductions in GHG emissions from the transportation sector (Stanislaus Council of Governments [StanCOG] 2014). The WMP is a tool to ensure implementation of appropriate water management policies for the land-use goals outlined in the RTP/SCS.

Stanislaus County Regional Sustainability Toolbox

Stanislaus County, in collaboration with the nine cities within the county, completed the Stanislaus Regional Sustainability Toolbox (RST) (Stanislaus County 2017). The RST includes multiple planning tools to achieve regional GHG reductions. The planning tools include an example climate action plan (CAP) with regional CAP strategies and low-impact development

standards and specifications. Regional strategies from this model CAP related to water-related infrastructure projects like the Proposed Program include the following (ESA 2013):

Goal E.1: Increase Building and Equipment Efficiency Community-Wide

> **Strategy 1.7:** Industrial Equipment Energy Efficiency Promotion. Promote San Joaquin Valley Air Pollution Control District Best Performance Standards to increase energy efficiency in industrial equipment.

Stanislaus County General Plan

The *Stanislaus County General Plan's* Conservation and Open Space Element (2016) identifies water conservation-related goals and policies that would contribute to reduced GHG emissions by conserving water resources and reducing related energy use for water and implementation measures for reducing air pollutant emissions that would also reduce GHG emissions:

Goal Six: Improve air quality.

> **Policy Nineteen:** The County will strive to accurately determine and fairly mitigate the local and regional air quality impacts of proposed projects.

Implementation Measure 1. Require all development proposals, where appropriate, to include reasonable air quality mitigation measures.

Implementation Measure 2. Minimize case-by-case analysis of air quality impacts through the use of standard criteria for determining significant environmental effects, a uniform method of calculating project emissions, and standard mitigation methods to reduce air quality impacts.

> **Policy Twenty:** The County shall strive to reduce motor vehicle emissions by reducing vehicle trips and vehicle miles traveled and increasing average vehicle ridership.

City of Modesto General Plan

The *City of Modesto's General Plan* Chapter VII, Environmental Resources, Open Space and Conservation (2019) contains the following goals related to energy conservation may be relevant to the Proposed Program:

> **Policy I.2.a.** Require shade trees, where feasible and appropriate, in landscape plans for all new development proposals. Mature trees have lower water needs. Develop shade-tree specifications for development projects, including appropriate types of trees (size, deciduous or evergreen, absence or lower branches, etc), locations (e.g., distance from structures), density (i.e. within a subdivision or parking lot), and orientation (trees on the west side of a building generally provide the most benefit) for use in landscape plans.
>
> **Policy I.1.c.** Discourage removal of street trees unless they are badly diseased and have become a threat to public safety. If a tree must be removed, it should be replaced no later than the end of the next planting season with a large-canopy species.
>
> **Policy I.1.g.** Encourage the use of solar energy systems for residential, agricultural, parks, public buildings, and business purposes as provided in Government Code Section 65850.5.

Policy I.1.j. Support the State of California's commitment to the "Renewable Portfolio Standard," which requires electrical utility providers to obtain one-third (33%) of their electricity from renewable energy sources by 2020.

Policy I.1.l. Consider purchasing clean-fuel / alternative-fuel fleet vehicles.

City of Turlock General Plan

The *City of Turlock General Plan's* Air Quality and Greenhouse Gases Element, (2012) contains the following policies that may be relevant to the Proposed Program:

8.2-a Reduce Greenhouse Gas Emissions. Reduce greenhouse gas emissions to support statewide GHG reduction goals under the California Global Warming Solutions Act (AB 32).

8.2-n Wastewater and Water System Efficiency. Maximize the efficiency of City-operated wastewater treatment, water treatment, pumping, and distribution equipment.

8.2-s Require Energy Efficiency for Projects Receiving Public Assistance. Require that projects receiving assistance from the City of Turlock, including but not limited to infrastructure projects and affordable housing, include energy efficiency measures beyond the minimum standards of Title 24.

Ceres General Plan 2035

The *Ceres General Plan 2035,* in Chapter 5, Health and Safety (2018), contains the following goals and policies related to energy use and greenhouse gas emissions that may have direct or indirect beneficial effects on the generation of GHGs that may be relevant to the Proposed Program:

Goal 5.E: Reduce the community's GHG emissions to mitigate the rate and extent of climate change.

Policy 5.E.1. Green Building Code: Continue to implement and enforce the Green Building Code to promote energy efficient building design and construction.

Policy 5.E.2. LEED Certification: Encourage new development to participate in the Leadership in Energy and Environmental Design (LEED) certification program for the design, operation, and construction of high-performance energy efficient buildings.

Policy 5.E.4. Energy Efficient Design: Reduce the need for artificial temperature control and lighting by establishing standards to encourage the following:

- Passive cooling measures in new and existing development; and
- Design that incorporates windows that open to the outside in all habitable rooms to maximize the use of daylight and promote ventilation.

Policy 5.E.5 Energy Efficient Lighting. Establish standards to improve energy efficiency related to outdoor lighting by limiting unnecessary fixtures and utilizing low-energy fixtures.

Policy 5.E.7 Energy Efficient Municipal Operations. Demonstrate leadership by reducing the use of energy and fossil fuel consumption in municipal operations, increasing energy efficiency in transportation, waste management, building design and use, and the purchasing of goods and services.

10.3 Environmental Setting

Climate change results from the accumulation in the atmosphere of GHGs, which are produced primarily by the burning of fossil fuels for energy. Because GHGs (CO_2, methane, and N_2O) persist and mix in the atmosphere, emissions anywhere in the world affect the climate everywhere in the world. GHG emissions are typically reported in terms of carbon dioxide equivalents (CO_2e), which converts all GHGs to an equivalent basis taking into account their global warming potential (GWP) compared to CO_2. **Table 10-1** shows the six GHGs and their respective GWP.

Table 10-1. Greenhouse Gas Overview and Global Warming Potential

Greenhouse Gas	GWP over 100 years (in IPCC 2013/SAR)(a)	Description
Carbon Dioxide (CO_2)	1/1	Released into the atmosphere through burning of fossil fuels (coal, natural gas and oil), solid waste, trees, and wood products, and also because of certain chemical reactions; removed from the atmosphere when it is absorbed by plants and oceans; remains in the atmosphere for 50 to more than 100,000 years.
Methane (CH_4)	28/21	Emitted during the production and transport of coal, natural gas, and oil; methane emissions also result from livestock and other agricultural practices and from the decay of organic waste, notably in municipal solid waste landfills; remains in the atmosphere for about 10 years.
Nitrous Oxide (N_2O)	265/310	Emitted during agricultural and industrial activities, as well as during combustion of fossil fuels and solid waste; remains in the atmosphere for about 100 years.
Hydrofluoro-carbons (HFCs)	4-12,400/ 650–11,700	Typically used in refrigeration and air conditioning equipment, as well as in solvents; emissions are generated primarily from use in air conditioning systems in buildings and vehicles; remains in the atmosphere from 10 to 270 years.
Perfluoro-carbons (PFCs)	6,630-11,100/ 6,500–9,200	Emitted as by-products of industrial and manufacturing sources; remains in the atmosphere from 800 to 50,000 years.
Sulfur Hexa-fluoride (SF_6)	23,500/23,900	Used in electrical transmission and distribution; remains in the atmosphere approximately 3,200 years.

(a) As scientific understanding of the global warming potential (GWP) of various greenhouse gases (GHGs) improves over time, GWP values are updated in the Intergovernmental Panel on Climate Change

(IPCC) scientific assessment reports. For regulatory consistency, however, the United Nations Framework Convention on Climate Change reporting guidelines (and international treaties) for national inventories continue to the use of GWP values to those published in the IPCC's 1996 Second Assessment Report (SAR). The table shows GWP values for 100 years from IPCC 2013 and SAR.

Sources: USEPA 2015; IPCC 2013; IPCC 1996

These six gases are the major GHGs that were recognized by the United Nations Framework Convention on Climate Change and other international climate change treaties including the Kyoto Accords which was the first international treaty to establish GHG emission reduction goals. Other GHGs were not recognized by the international treaties, chiefly because of the smaller role that they play in global climate change or the uncertainties surrounding their effects. One GHG not recognized by the international treaties is atmospheric water (H_2O) because no obvious correlation exists between H_2O and specific human activities. Water appears to act in a feedback manner; higher temperatures lead to higher H_2O concentrations, which in turn cause more global warming (IPCC 2003). Nitrogen trifluoride was not recognized in the initial Kyoto Accords, but was subsequently included by the United Nations Framework Convention on Climate Change and recognized in California as a GHG.

The most important GHG in human-induced global warming is CO_2. Although many gases have much higher GWP than the naturally occurring GHGs, CO_2 is emitted in such vastly higher quantities that it accounts for about 82 percent of the GWP of all GHGs emitted by the United States (USEPA 2017b). Fossil fuel combustion, especially for the generation of electricity and powering of motor vehicles, has led to substantial increases in CO_2 emissions over time and, thus, substantial increases in atmospheric CO_2 concentrations. In 2005, atmospheric CO_2 concentrations were about 379 ppm, more than 35 percent higher than the pre-industrial concentrations of about 280 ppm (IPCC 2008). In addition to the sheer increase in the volume of its emissions, CO_2 is a major factor in human-induced global warming because of its long lifespan in the atmosphere (50,000–100,000 years).

Anthropogenic (human-caused) emissions of GHGs are widely accepted in the scientific community as contributing to global warming. Temperature increases associated with climate change are expected to adversely affect plant and animal species, cause ocean acidification and sea level rise, affect water supplies, affect agriculture, and harm public health.

Global climate change is already affecting ecosystems and societies throughout the world. Climate change adaptation refers to the efforts undertaken by societies and ecosystems to adjust to and prepare for current and future climate change, thereby reducing vulnerability to those changes. Human adaptation has occurred naturally over history; people move to more suitable living locations, adjust food sources, and more recently, change energy sources. Similarly, plant and animal species also adapt over time to changing conditions; they migrate or alter behaviors in accordance with changing climates, food sources, and predators.

Many national, as well as local and regional, governments are implementing adaptive practices to address changes in climate, as well as planning for expected future impacts from climate change. Some examples of adaptations that are already in practice or under consideration include conserving water and minimizing runoff with climate-appropriate landscaping, capturing excess rainfall to minimize flooding and maintain a constant water supply through dry spells and

droughts, protecting valuable resources and infrastructure from flood damage and sea level rise, and using water-efficient appliances.

In 2016, total California GHG emissions were 429.4 million tons of carbon dioxide equivalents (MMT CO_2e) (CARB 2019). This represents a reduction in total GHG emissions from 2012, which had the first emissions increase since 2007. The 2012 increase was driven primarily by strong economic growth in the state, the unexpected closure of the San Onofre Nuclear Generating Station, and drought conditions that limited in-state hydropower generation. Overall GHG emissions reached a peak in 2004 and have since decreased by 13 percent. In 2016, the transportation sector of the California economy was the largest source of emissions, accounting for approximately 39 percent of the total emissions. On-road vehicles accounted for roughly 91 percent of emissions in the transportation sector.

10.3.1 Energy Resources and Consumption

MID also provides electricity services to the City of Modesto in addition to water services through a network of over 1,800 miles of power lines throughout its service area (MID 2017a). MID also provides power to the Cities of Waterford, Salida, Mountain House, and parts of Ripon, Escalon, Oakdale and Riverbank. Approximately 23 percent of the power provided comes from solar and wind renewable sources, while the remaining 77 percent comes from a mixture of coal, large hydroelectric, natural gas, and unspecified sources of power. Turlock Irrigation District (TID) and PG&E also provide power in the Program area. **Table 10-2** provides a more detailed breakdown of MID's, TID's, and PG&E's energy resources. As mentioned in 10.2.2, California's RPS requires electricity suppliers to increase the amount of electricity generated from renewable sources to 33 percent by 2020 and to 50 percent by 2030, which will decrease the GHG intensity of the electricity the Proposed Program will utilize in the future.

Table 10-2. Summary of Energy Sources for the Modesto Irrigation District, Turlock Irrigation District, and PG&E

Energy Resources	Utility Power Mix (%)		
	MID (2016)	TID (2015)	PG&E (2015)
Eligible Renewable	23	21	30
Coal	19	10	0
Large Hydroelectric	10	14	6
Natural Gas	21	36	25
Nuclear	0	0	23
Unspecified Power*	27	19	17
Total	100	100	100

*Unspecified power is defined as electricity from transactions that are not traceable to specific generation sources.

Source: MID 2017b, CEC 2017a, CEC 2017b

The TID in conjunction with MID owns and operates the San Pedro Dam, providing up to 203 megawatts of hydroelectric power to customers throughout the City of Modesto. Out of the 203 megawatts produced by this dam, 139 megawatts go to TID and the remaining 64 go to MID (TID 2017).

10.4 Impact Analysis

10.4.1 Methodology

For WMP components within the SJVAB, construction and operation-related GHG emissions and energy use impacts were evaluated qualitatively by considering the Proposed Program's potential sources of GHG emissions, including fossil-fueled or electric energy consuming equipment and vehicles, potential frequency and duration of emissions. Where specific construction or operation-related details were lacking, impacts were conservatively judged to be significant, and prescriptive mitigation measures were developed to minimize significant impacts.

Projected changes in climate associated with global warming may have related effects on other resources in the future, including effects on the Proposed Program (such as changed weather patterns). Anticipated potential worldwide climate change effects include coastal erosion, sea level rise, melting glaciers, atmospheric temperature warming, increased wildfire risk, ocean warming, food production issues (e.g., decreased crop yields), effects on terrestrial and marine ecosystems, flooding and/or drought conditions, and altered hydrologic patterns such as changes in river flows or lake levels (IPCC 2014). California-specific climate change effects and indicators of climate change are similar to those that may be experienced globally and are discussed in *Indicators of Climate Change in California,* a report prepared by the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment in 2013 (OEHHA 2013). The evaluation of such effects on the Proposed Program is beyond the scope of this GHG analysis.

10.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on greenhouse gas emissions if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment;
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of GHGs;
- Cause wasteful, inefficient, and unnecessary consumption of energy during construction, operation, and/or maintenance; or
- Cause a substantial increase in energy demand and the need for additional energy resources.

With regard to the first criterion, construction and operational emissions were considered less than significant if GHG emissions were consistent with the local air district's significance thresholds. The SJVAPCD has adopted a BMP threshold for GHG emissions based on an achievable

in practice analysis of improvement over a business-as-usual scenario or 29 percent improvement. However, at this time there is not an approved BMP for this type of project nor has suitable data to establish a business-as-usual scenario been provided by the SJVAPCD. The SJVAPCD threshold has also not been updated to reflect the SB 32 2030 goal which needs to be considered given the timeline of the Program construction activities. Therefore, the published California air district mass emissions thresholds were reviewed and considered in developing an appropriate threshold. The applicable threshold for the Proposed Program was determined to be 10,000 metric tons per year, which is the threshold for industrial sources used by the Santa Barbara County Air Pollution Control District (SBCAPCD) (SBCAPCD 2015) and the South Coast Air Quality Management District (SCAQMD) (SCAQMD 2008). Although quantitative construction-specific thresholds have not been determined by the SCAQMD, the SBCAPCD recommends amortizing construction emissions over the life of the project (defined as 30 years) and adding it to the operational emissions (SCAQMD 2008). In addition, where construction-specific quantitative significance thresholds have not been defined, operational significance thresholds are typically applied or construction emissions are amortized and considered along with operational emissions to determine a project's overall significance. Therefore, for the Proposed Program, GHG emissions have been considered less than significant if the generated GHG emissions are less than the operational threshold of 10,000 MT CO_2e/year.

With regard to the second criterion for consistency with the applicable plans and policies, the following impact analysis evaluates the Program's operational-related emissions for consistency with CARB's Scoping Plan and updates, which outline the strategies that will need to be implemented for the state to meet the goals of AB32, SB 32 and EO S-3-05. Specifically, if a proposed component would not conflict with CARB's GHG emission reduction policies, it would have a less than significant impact.

The last two significance criteria were considered qualitatively for the Proposed Program.

10.4.3 Environmental Impacts

Impact GHG-1: Generate a Substantial Amount of GHG Emissions *(Significant and Unavoidable*)

Construction Impacts. Construction of Program components including tanks, pump stations, wells, and pipelines would involve activities that would result in one-time emissions of GHGs. Changes in carbon sequestration due to land use change and tree planting would also result in one-time emissions of GHGs. GHG emissions from construction equipment exhaust, including exhaust from haul or equipment trucks and worker commutes. Specific project-level data about the amount, use, and locations of these equipment are not available at this time, nor are specific project-level data about the construction periods for each individual CIP. In general, replacement and maintenance of existing facilities and strengthening and replacement of existing water lines would be categorically exempt from CEQA. New water mains or extension of water mains that have been identified in the WMP would therefore be considered to fall below the significance threshold. For other CIPs, in the absence of specific project-level information, it has been conservatively assumed that construction activities for each WMP component would generate GHG emissions that, in combination with the other Program components, could be substantial because they would exceed the significance threshold of 10,000 MT CO_2e/year. This is considered a significant impact.

Consulting with and permitting through the SJVAPCD for stationary source projects would reduce GHG emissions from construction of WMP components. However, it is still possible that these emissions would not be reduced below the applicable significance threshold of 10,000 MT CO_2e/year of GHG emissions and therefore the Proposed Program would result in a significant and unavoidable impact.

Operational Impacts. The Proposed Program would indirectly and directly generate GHG emissions through operation of booster pump stations, use of new or larger emergency electrical generators, and employee vehicle trips for operation and maintenance of future facilities. Employee trips would be similar to the City's existing maintenance and operation activities. Emissions for emergency electrical generators would be infrequent and would not be substantial. Operation of new or larger pumps at booster pump stations as well as the increased capacity and improved level of water distribution could generate GHG emissions that are substantial because they would increase GHG emissions over the applicable significance threshold of 10,000 MT CO_2e/year of GHG emissions Therefore, this impact would be significant. Again, consulting with and permitting through the SJACPCD for stationary source projects would reduce GHG emissions from project operation under the Proposed Program. However, these emissions may not be able to be reduced below the applicable significance threshold, and no other feasible mitigation has been identified which can further reduce emissions. Therefore, the Proposed Program would result in a **significant and unavoidable** impact.

Overall Conclusion

On the whole, since specific details regarding the WMP components are not yet available, construction and operation impacts of these components have been conservatively determined to generate GHG emissions that exceed the significance threshold. Therefore, the Proposed Program's impact related to increased GHG emissions would be **significant and unavoidable**.

Impact GHG-2: Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs (*Significant and Unavoidable*)

Consistency with strategies outlined in CARB's Scoping Plan and future updates are used to ensure that the state goals of AB32, SB 32 and EO S-3-05 will be met. The Renewable Portfolio Standard would reduce GHG emissions compared to the existing mix of energy sources, and would likely result in the program-level components having a 29-percent reduction by at least 2030. This is consistent with the emissions reductions goal of AB 32 and SB 32, as well as the policies/actions described in CARB's 2017 Scoping Plan.

In addition, individual WMP components would comply with the RST/SCS's regional CAP goals, strategies, and policies, as well as the County's general plan policies related to reduced energy use. Specifically, WMP components would have an energy-efficient design, and utilize Modesto Irrigation District's, TID's, & PG&E's increased renewable energy sources.

WMP components would achieve GHG emission reductions in their design, as discussed above, and would minimize GHG emissions to the maximum extent feasible. Therefore, these components would generally comply with applicable plans, policies, and regulations, including AB 32 and SB 32, as well as the policies/actions described in CARB's 2017 Scoping Plan. However, at this time the state is still developing strategies that will be needed to fully reach the goals of SB 32 and EO S-3-05 and new strategies may be developed that are inconsistent with the Proposed

Program. As described in Impact GHG-1 above, the GHG emissions for the entire Program would be significant and, as such, may impede the state from reaching the goals of AB 32, SB 32, and EO S-3-05 to reduce GHG emissions within California. Consulting with and permitting through the SJVAPCD would reduce this impact, but not necessarily to less-than-significant levels, and may not be consistent in the future with new strategies. Therefore, this impact would be **significant and unavoidable**.

Impact GHG-3: Cause Wasteful, Inefficient, and Unnecessary Consumption of Energy During Construction, Operation, and/or Maintenance (*Less than Significant*)

Construction Impacts. Construction activities would require the consumption of energy (fossil fuels) for construction equipment, worker vehicles, and truck trips. However, energy consumption during construction is necessary to maintain and improve the water conveyance and storage system for the City of Modesto and surrounding areas to meet future water needs. These construction activities would not cause wasteful, inefficient, and unnecessary consumption of energy, or cause a substantial increase in energy demand and increase the need for additional energy resources. Therefore, the Proposed Program's effects on energy resources would be **less than significant**.

Operational Impacts. The operational activities associated with some WMP components would require the consumption of energy including fossil fuels, natural gas, and electricity. Fossil fuel use would include worker vehicle and truck trips to and from the storage tanks and wells. In addition, emergency generators would use diesel fuel. The design of new and replaced water infrastructure will utilize the latest energy efficient design, as required by Title 24 of the California Code of Regulations. Water supply and reliability improvements are necessary to counteract the effects of climate change and therefore these program components are necessary to ensure a reliable water supply infrastructure. These operational activities would not cause wasteful, inefficient, and unnecessary consumption of energy or cause a substantial increase in energy demand and the need for additional energy resources. Therefore, the Proposed Program's effects on energy resources would be **less than significant**.

Overall Conclusion. Considering the WMP components as a whole, construction and operation impacts would not cause wasteful, inefficient, and unnecessary consumption of energy. Therefore, impacts are considered less than significant. In conclusion, the Proposed Program's effect on energy resources would be **less than significant**.

Impact GHG-4: Cause a Substantial Increase in Energy Demand and the Need for Additional Energy Resources (*Less than Significant*)

Substantial quantities of fossil fuel would not be required for the Proposed Program since maintenance and operation vehicle trips would be similar to existing conditions. Construction activities would require some fossil fuel use for construction equipment, material hauling, and worker commuting. However, the amount of fossil fuel use would not result in the need for additional fossil fuel energy resources beyond what is projected to be available with existing resources.

The various booster pumps and wells require electrical power and would likely increase the energy use as the Program is completed with increased services to future development and buildout areas. The amount of electricity required would not be substantial compared to the projected available electricity supply from MID, TID, and PG&E and new sources of electricity generation would therefore not be required to meet this demand. Since there would not be a substantial increase in energy demand or the need for additional energy resources, this impact would be **less than significant.**

Chapter 11
HAZARDS AND HAZARDOUS MATERIALS

11.1 Overview

This chapter evaluates the Proposed Program's impacts related to hazards and hazardous materials. Hazardous materials are chemical and non-chemical substances that can pose a threat to the environment or human health if misused or released. Hazardous materials occur in various forms and can cause death, serious injury, long-lasting health effects, and damage to buildings, homes, and other property. Hazardous materials can include explosives, flammable and combustible substances, poisons, radioactive materials, pesticides, petroleum products, and other materials defined as hazardous under the Resource Conservation and Recovery Act of 1976 (RCRA) in 40 CFR 261. CEQA also considers hazards from proximity of projects to airports and schools, and hazards from wildfire.

Impacts are evaluated in light of existing laws and regulations governing hazards and hazardous materials, and the existing physical environmental setting as it relates to hazards and hazardous materials, as described in Section 11.2, "Regulatory Setting," and Section 11.3, "Environmental Setting."

11.2 Regulatory Setting

Because regulations for hazardous materials were developed over time, numerous agencies, whose jurisdictions and responsibilities sometimes overlap, are involved in regulating these materials. Federal agencies that regulate hazardous materials include USEPA and OSHA. At the state level, agencies such as the California Department of Industrial Relations, the California Occupational Safety and Health Administration (Cal/OSHA) and the California Emergency Management Agency (Cal EMA) govern the use of hazardous materials. State and local agencies often have either parallel or more stringent rules than federal agencies.

Generation, transport, and disposal of hazardous wastes can also be regulated by different agencies, and USEPA is the lead federal agency overseeing these aspects of hazardous waste. The California Department of Toxic Substances Control (DTSC) has primary state regulatory responsibility, but may delegate enforcement authority to local jurisdictions that enter into agreements with the state agency.

The following is a review of federal, state, and local regulations and policies that are potentially pertinent to the Proposed Program.

11.2.1 Federal Laws, Regulations, and Policies

Resource Conservation and Recovery Act

RCRA (42 USC Section 6901 *et seq*.), as amended by the Hazardous and Solid Waste Amendments of 1984, is the primary federal law for the regulation of solid waste and hazardous waste in the

United States. These laws provide for the "cradle-to-grave" regulation of hazardous wastes, including generation, transportation, treatment, storage, and disposal. Any business, institution, or other entity that generates hazardous waste is required to identify and track its hazardous waste from the point of generation until it is recycled, reused, or disposed of.

USEPA has primary responsibility for implementing RCRA, but individual states are encouraged to seek authorization to implement some or all RCRA provisions. California received authority to implement the RCRA program in August 1992. DTSC is responsible for implementing the RCRA program in California.

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, also called the Superfund Act; 42 USC Section 9601 *et seq*.) is intended to protect the public and the environment from the effects of past hazardous waste disposal activities and new hazardous material spills. Under CERCLA, USEPA has the authority to seek the parties responsible for hazardous materials releases and to ensure their cooperation in site remediation. CERCLA also provides federal funding (through the "Superfund") for the remediation of hazardous materials contamination. The Superfund Amendments and Reauthorization Act of 1986 (Public Law 99-499) amends some provisions of CERCLA and provides for a Community Right-to-Know program**.**

Energy Policy Act of 2005

Title XV, Subtitle B of the Energy Policy Act of 2005 (the Underground Storage Tank [UST] Compliance Act of 2005) contains amendments to Subtitle I of the Solid Waste Disposal Act, the original legislation that created the UST Program. As defined by law, a UST is "any one or combination of tanks, including pipes connected thereto, that is used for the storage of hazardous substances and that is substantially or totally beneath the surface of the ground." In cooperation with USEPA, SWRCB oversees the UST Program. The intent is to protect public health and safety and the environment from releases of petroleum and other hazardous substances from USTs. The four primary program elements include leak prevention (implemented by Certified Unified Program Agencies [CUPAs]), cleanup of leaking tanks, enforcement of UST requirements, and tank integrity testing. CUPAs are described in more detail below.

Spill Prevention, Control, and Countermeasure Rule

USEPA's Spill Prevention, Control, and Countermeasure Rule (40 CFR Part 112) applies to facilities with a single above-ground storage tank with a storage capacity greater than 660 gallons, or multiple tanks with a combined capacity greater than 1,320 gallons. The rule includes requirements for oil spill prevention, preparedness, and response to prevent oil discharges into navigable waters and adjoining shorelines. The rule requires specific facilities to prepare, amend, and implement these plans.

Renovation and Demolition of Buildings Containing Asbestos

The National Emission Standards for Hazardous Air Pollutants regulations (40 CFR Part 61, Subpart M), established under the federal Clean Air Act, require that specific practices for handling asbestos-containing building materials be followed during demolition and renovation of all structures, installations, and buildings (excluding residential buildings that have four or fewer dwelling units). The regulations require a thorough inspection of the demolition or renovation site

and notification to the appropriate state agency before any demolition or renovation of buildings that could contain a certain threshold amount of asbestos or asbestos-containing material. In addition, certain requirements must be followed when removing asbestos-containing waste. USEPA is the lead enforcement agency. The Asbestos Hazard Emergency Response Act's Model Accreditation Plan (MAP) (40 CFR, Part 763, Subpart E, Appendix C) requires that professionals working with asbestos-containing building materials be accredited under the USEPA MAP or a program at least as stringent as the USEPA MAP program.

Occupational Safety and Health Act

OSHA is responsible at the federal level for ensuring worker safety. OSHA sets federal standards for implementation of workplace training, exposure limits, and safety procedures for the handling of hazardous substances, as well as other workplace hazards. OSHA also establishes criteria by which each state can implement its own health and safety program. 29 CFR Chapter XVII, Subpart Z, Section 1926.1101 includes regulations to prevent worker exposure to unsafe levels of asbestos during construction and demolition activities. These regulations require contractors to set up regulated areas in dealing with asbestos materials and ensure that persons entering these areas are wearing respirators.

11.2.2 State Laws, Regulations, and Policies

Safe Drinking Water and Toxic Enforcement Act of 1986 – Proposition 65

The Safe Drinking Water and Toxic Enforcement Act of 1986, more commonly known as Proposition 65, protects the state's drinking water sources from contamination with chemicals known to cause cancer, birth defects, or other reproductive harm. Proposition 65 also requires businesses to inform the public about exposure to such chemicals in the products they purchase, in their homes or workplaces, or that are released into the environment. In accordance with Proposition 65, the California Governor's Office publishes, at least annually, a list of such chemicals. The OEHHA, an agency under the California Environmental Protection Agency (Cal/EPA), is the lead agency for implementation of the Proposition 65 program. Proposition 65 is enforced through the California Attorney General's Office; however, district and city attorneys and any individual acting in the public interest may also file a lawsuit against a business alleged to be in violation of Proposition 65 regulations.

The Unified Program

The Unified Program (20 Health and Safety Code [HSC] Sections 25404-25404.9) consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. Statewide, DTSC has primary regulatory responsibility for management of hazardous materials, and it works with other state agencies and delegates its authority to local jurisdictions that enter into agreements with the state. Local agencies, including Stanislaus County, administer these laws and regulations. DTSC, CalEPA, and other state agencies set the standards for their programs while local governments implement the standards. These local implementing agencies, the CUPAs, regulate/oversee the following for each county:

- Hazardous materials business plans (HMBPs) (19 CCR Sections 2650-2660);

- California accidental release prevention plans or federal risk management plans (RMPs) (19 CCR Sections 2735-2785);
- The operation of USTs (23 CCR Sections 2610-2729) and above-ground storage tanks (20 HSC Sections 25270-25270.13);
- Universal waste and hazardous waste generators and handlers (22 CCR Division 4.5);
- On-site hazardous waste treatment (22 CCR Division 4.5);
- Inspections, permitting, and enforcement (22 CCR Division 4.5);
- Proposition 65 reporting; and
- Emergency response.

Hazardous Materials Business Plans

HMBPs are required for businesses that handle hazardous materials in quantities equal to or greater than 55 gallons of a liquid, 500 pounds of a solid, or 200 cubic feet of compressed gas, or extremely hazardous substances above the threshold planning quantity (40 CFR, Part 355, Appendix A; California Governor's Office of Emergency Services [Cal OES] 2014). HMBPs are required to include an inventory of the hazardous materials used/stored by the business, a site map, an emergency plan, and a training program for employees. In addition, HMBP information is provided electronically to a statewide information management system, verified by the applicable CUPA, and transmitted to agencies responsible for the protection of public health and safety (i.e., local fire department, hazardous material response team, and local environmental regulatory groups).

California Occupational Safety and Health Administration

Cal/OSHA assumes primary responsibility for developing and enforcing workplace safety regulations in California. Cal/OSHA regulations pertaining to the use of hazardous materials in the workplace (CCR Title 8) include requirements for safety training, availability of safety equipment, accident and illness prevention programs, warnings about exposure to hazardous substances, and preparation of emergency action and fire prevention plans. Hazard communication program regulations that are enforced by Cal/OSHA require workplaces to maintain procedures for identifying and labeling hazardous substances, inform workers about the hazards associated with hazardous substances and their handling, and prepare health and safety plans to protect workers at hazardous waste sites. Employers also must make material safety data sheets available to employees and document employee information and training programs.

California Accidental Release Prevention

The purpose of the California Accidental Release Prevention program (19 Cal. Code Regs. Section 2735 et seq.) is to prevent accidental releases of substances that can cause serious harm to the public and the environment, to minimize the damage if releases do occur, and to satisfy community right-to-know laws. In accordance with this program, businesses that handle more than a threshold quantity of regulated substance are required to develop a RMP. This RMP must provide a detailed analysis of potential risk factors and associated mitigation measures that can

be implemented to reduce accident potential. CUPAs implement the California Accidental Release Prevention program through review of RMPs, facility inspections, and public access to information that is not confidential or trade secret.

CAL FIRE Wildland Fire Management

The Office of the State Fire Marshal and the California Department of Forestry and Fire Protection (CAL FIRE) administer state policies regarding wildland fire safety. Construction contractors must comply with the following requirements in the Public Resources Code during construction activities at any sites with forest-, brush-, or grass-covered land:

- Earthmoving and portable equipment with internal combustion engines must be equipped with a spark arrestor to reduce the potential for igniting a wildland fire (Pub. Res. Code Section 4442).
- Appropriate fire-suppression equipment must be maintained from April 1 to December 1, the highest-danger period for fires (Pub. Res. Code Section 4428).
- On days when a burning permit is required, flammable materials must be removed to a distance of 10 feet from any equipment that could produce a spark, fire, or flame, and the construction contractor must maintain the appropriate fire-suppression equipment (Pub. Res. Code Section 4427).
- On days when a burning permit is required, portable tools powered by gasoline-fueled internal combustion engines must not be used within 25 feet of any flammable materials (Pub. Res. Code Section 4431).

11.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan* (Stanislaus County 2016a) guides land use, development, and impact mitigation decisions in Stanislaus County. Goals and policies relevant to hazards and hazardous materials include the following:

Safety Element

Goal One: Prevent loss of life and reduce property damage as a result of natural disasters.

Policy One: The County will adopt (and implement as necessary) plans inclusive of the Multi-Jurisdictional Hazard Mitigation Plan, to minimize the impacts of natural and man-made disasters.

Policy Two: Development should not be allowed in areas that are within the designated floodway or any areas that are known to be susceptible to being inundated by water from any source.

Goal Two: Minimize the effects of hazardous conditions that might cause loss of life and property.

Policy Thirteen: The Department of Environmental Resources shall continue to coordinate efforts to identify locations of hazardous materials and prepare and implement plans for management of spilled hazardous materials as required.

City of Modesto Urban Area General Plan

The *Modesto Urban Area General Plan* (City of Modesto 2019) guides land use and development within the City's incorporated areas. Goals and policies contained in the General Plan related to hazards and the Proposed Program include the following:

Policy VII-J[a]. Support the Local Hazard Mitigation Plan (LHMP) and ensure the LHMP will be monitored, evaluated, and updated every three years or more frequently as the need arises.

Policy VII-J[b]. Ensure that all new development is designed to reduce potential safety and health hazards.

Policy VII-J[d]. Support efforts to improve levels of emergency response.

Policy VII-M.C[2]. Design and maintain roads so as to ensure adequate access in hazardous conditions.

Policy VII-N [h]. The City shall promote public awareness of the following local routes (shown in **Figure 11-1**) for the public's use in evacuating the City in the event of an emergency:

(1) State Highways 99, 132, 219, and 108
(2) Briggsmore Avenue
(3) Claus Road
(4) Standiford/Sylvan Avenue
(5) Scenic Drive
(6) Pelandale Avenue
(7) Ninth Street
(8) Paradise Road
(9) Carpenter Road

Policy VI-E.5[b]. City plans and policies shall not interfere with any emergency evacuation and response plans. This would include the continued maintenance of adequate police and fire services, and identified emergency evacuation routes [refer to Figure 11-1 of this DEIR].

Policy VI-E.5[c]. The City shall ensure the provision of adequate and accessible evacuation routes.

Del Rio and Salida Community Plans

The *Del Rio Community Plan* (Stanislaus County 1992) and *Salida Community Plan* (Stanislaus County 2007) do not contain any goals or policies specifically related to hazards and hazardous materials.

Ceres General Plan 2035

The *Ceres General Plan 2035* (City of Ceres 2018) contains the following goals and policies related to hazards and hazardous materials that are applicable to the Proposed Program:

Goal 5.I Minimize the risk of loss of life, injury, serious illness, damage to property, and economic and social dislocations resulting from the use, transport, treatment, and disposal of hazardous materials.

Policies

5.I.1 Hazardous Materials Standards. Ensure that the use and disposal of hazardous materials in the city comply with local, State, and federal safety standards. Ensure that industrial facilities are constructed and operated in accordance with current safety and environmental protection standards and best practices.

5.I.5 County Cooperation. Work with the County to strictly regulate the storage of hazardous materials and wastes.

5.I.6 Development Standards. Ensure that industrial facilities and other uses where hazardous materials are created, stored, or disposed of are designed, constructed, and operated in accordance with current safety and environmental protection standards. Require secondary containment and periodic examination for storage of large quantities of toxic materials.

5.I.10 Coordinated Emergency Response. Work with other agencies, including the City of Modesto and Stanislaus County, to ensure an adequate countywide response capability for hazardous materials emergencies. Provide for safe and efficient hazardous waste emergency response and contaminated site cleanup.

City of Turlock General Plan

The *City of Turlock General Plan* (City of Turlock 2012) includes the following policies related to hazards and hazardous materials that are applicable to the Proposed Program:

Guiding Policies

10.1-a Protect Lives and Property. Prevent loss of lives, injury, illness, and property damage due to hazardous materials and wastes.

10.1-b Protect Natural Resources. Protect soils, surface water, and groundwater from contamination from hazardous materials.

10.1-c Coordinate Efforts to Minimize Risks. Cooperate with State agencies and the Stanislaus County Environmental Resources Department efforts to identify hazardous materials users, implement hazardous materials plans, provide safe waste disposal sites, and minimize risks associated with hazardous cargoes, agricultural spraying, and electromagnetic fields.

Stanislaus County Airport Land Use Compatibility Plan

The *Stanislaus County Airport Land Use Compatibility Plan* identifies compatible land uses in proximity to airports in Stanislaus County including the Modesto City-County Airport. Compatible land uses are those that will not threaten the safe operation of an airport or create hazards endangering public safety (Stanislaus County 2016). Each airport has a designated airport influence area, which is defined by the area encompassing lands on which uses could be negatively affected by existing or future aircraft operations. As shown in

Figure 11-2, the Modesto City-County Airport's referral area is divided into two areas: "Referral Area 1" and "Referral Area 2". Referral Area 1 encompasses locations where noise and/or safety represent compatibility concerns and airspace protection and air flight may also be concerns; and Referral Area 2 includes areas where airspace protection and/or overflight are compatibility concerns but not noise or safety.

Stanislaus County Hazard Mitigation Plan

The Stanislaus County Hazard Mitigation Plan is a countywide plan that identifies risks posed by disasters and ways to minimize damage from those disasters. Among other functions, the Hazard Mitigation Plan creates a decision tool for management, promotes compliance with state and federal program requirements, enhances local policies for hazard mitigation capability, and provides for inter-jurisdictional coordination (Stanislaus County Office of Emergency Services [OES] 2017).

11.3 Environmental Setting

11.3.1 Schools

Numerous schools exist within the study area, as shown in **Figure 11-3**. These include Modesto City Schools, which include over a dozen elementary schools, four middle schools, and nine high schools (Modesto City Schools 2017), as well as schools in the Salida Union District, Ceres Unified School District, Empire School District, and Turlock School District. Numerous Modesto schools are located within 0.25 mile of proposed components. Schools in Salida, Ceres, and Empire are within 0.25 mile of Proposed Program components. Three Turlock area schools (First Baptist Academy, Los Gatos Academy, and Turlock Junior High) are located within 0.25 mile of Proposed Program components. No schools in other outlying service areas are located within 0.25-mile of proposed components.

11.3.2 Existing Hazards and Hazardous Materials

Both the SWRCB's GeoTracker database and DTSC's EnviroStor database were searched for up to one-quarter mile of the study area. **Figure 11-4** shows hazardous material sites identified by these databases within one-quarter mile of the Proposed Program components. **Table 11-1** provides further information on these sites. The database searches include the following hazardous materials site lists: leaking underground storage tank cleanup sites, spills, leaks, investigation and cleanup sites, and other cleanup sites.

In general, hazardous materials contamination is most often connected with past land uses such as gas stations, industrial facilities with underground storage tanks, military bases, and other sites that commonly use or store hazardous materials.

11.3.3 Airports and Private Strips

The Modesto City-County Airport is located at 617 Airport Way in the southwest portion of Modesto near the Tuolumne River. Several Program improvements would be located near this airport. The Turlock Airpark had been located in the southern portion of Turlock, but according to the Stanislaus County Airport Land Use Compatibility Plan (2016), this facility is in the process of being sold for a non-aeronautical use. No other airports or private airstrips are located within two miles of the Proposed Program.

11.3.4 Wildfire Hazards

The study area is primarily urban in nature, with limited potential for wildfire hazards. The majority of the study area is unzoned for fire hazards, with several isolated patches zoned as moderate (CAL FIRE 2007). **Figure 11-5** shows wildfire risk in the Proposed Program vicinity, as mapped by CAL FIRE.

11.4 Impact Analysis

11.4.1 Methodology

Impacts from the Proposed Program related to hazards and hazardous materials were evaluated qualitatively by considering aspects of the Proposed Program in relation to the CEQA significance criteria. In many instances, where the precise locations and designs of Proposed Program are not yet known, possible impacts are discussed more generally, and mitigation is prescribed in the event certain conditions are encountered during future project planning.

11.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on hazards and hazardous materials if it would:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area;
- For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
- Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

11.4.3 Environmental Impacts

Impact HAZ-1: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Construction (*Less than Significant*)

Construction of the Proposed Program improvements would involve use of heavy construction equipment, which would use hazardous materials in their operation. These materials would include fuel, grease, oil, and other materials that may be contained within the equipment and/or stored on-site by the construction contractor. Contractors may routinely transport these materials to and from the site, and dispose of the materials once they have been used. In addition, the disinfection and flushing of newly constructed pipelines would require the use of hazardous materials (i.e., chlorination or de-chlorination chemicals).

Transport, use, and disposal of hazardous materials during construction could expose workers, the public, or the environment to hazards if adequate precautions are not taken. Construction workers could inhale toxic vapors or make bodily contact with materials, which could subject them to harm. The public or the environment could be exposed to toxic substances if materials were not stored, transported, or disposed of properly. The potential for harm may depend on the site-specific characteristics at any given Program improvement site, as well as proximity to sensitive receptors or environmental resources.

In accordance with applicable regulations, the City of Modesto and its contractors would be required to identify and track hazardous waste from "cradle to grave" (see RCRA under Section 11.2.1) and provide training and personal protective equipment to workers, if necessary, to prevent exposure to hazardous substances in excess of exposure limits (see "OSHA" under Section 11.2.1). Additionally, the City and/or its contractors would be required to follow protocols established under the NESHAP regulations (described in Chapter 6, *Air Quality*), which are designed to limit health impacts associated with hazardous substances.

Compliance with these laws and regulations described in the regulatory setting would prevent significant impacts from occurring during construction activities, and the WMP does not create unique hazards from use, storage, transport, and disposal of materials. Therefore, this impact would be **less than significant.**

Impact HAZ-2: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Operation (*Less than Significant*)

During operation, Proposed Program facilities would not use or store large amounts of hazardous materials. New emergency generators supplying back-up power to various booster pump stations for tank and well sites throughout the water system would store fuel. New groundwater wells installed under the Proposed Program also would each have diesel generators, which would store and use diesel fuel. Depending on the wellhead treatment process selected (e.g., coagulation/filtration, oxidation, coagulation assisted microfiltration, lime softening, sorbtion processes, ion exchange, microfiltration, ultrafiltration, reverse osmosis, electrodialysis reversal, or blending), these activities may require disposal of hazardous materials. Wellhead treatment could generate waste streams (e.g., spent media, dewatered sludge, liquid brine) that contain

toxins, heavy metals, radio nucleotides, or other hazardous materials that may require disposal in a hazardous waste landfill. In accordance with USEPA's Spill Prevention and Countermeasure Rule (see Section 11.2.1), the City would be required to provide secondary containment structures and spill counter-measure protocols for storage tanks that exceed the threshold volume (660 gallons), but, regardless, the City would provide secondary containment for all fuel storage tanks.

City of Modesto workers also may use, transport, or dispose of hazardous materials during ongoing routine maintenance, routine facility repair activities, or wellhead treatment system maintenance. If water treatment filtration media is used, these media would potentially accumulate heavy metals, and possibly other hazardous substances present in the source water and underlying rock/soil. This filtration media would need to be periodically disposed of, during which workers may be exposed to the materials. However, the same regulations described above under Impact HAZ-1 with respect to construction would apply to these activities to ensure that workers are not exposed to unsafe levels of toxic substances, and that hazardous materials are transported and disposed of in accordance with applicable laws.

In general, use, storage, transport, and disposal of hazardous materials under the Proposed Program would be similar to its current activities related to operating and maintaining the City's water system, and would not create a substantial hazard to the public or the environment. The Program would add approximately 22 new back-up, diesel generators with fuel tanks associated with new wells and tanks/booster pump stations. As described above, secondary containment structures and existing requirements related to hazardous materials would prevent accidental releases of fuel and adverse impacts. Therefore, this impact would be **less than significant**.

Impact HAZ-3: Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment during Construction (*Less than Significant*)

As described under Impact HAZ-1, the Proposed Program would involve use, storage, transport, and disposal of hazardous materials during construction. If these materials were to be accidentally released, such as through a spill or encountering contaminated soil, it could harm workers, the public or the environment. However, compliance with all local, state, and federal regulations concerning hazardous materials would result in less-than-significant impacts. Once operational, these facilities would not result in additional hazard emissions or the use of hazardous materials near students or school facilities. Storage of onsite hazardous materials, such as diesel fuel, would require secondary containment to prevent leaks or spills, as required by federal and state regulations. This impact would be **less than significant.**

Impact HAZ-4: Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment during Operation (*Less than Significant*)

As described under Impact HAZ-2, the Proposed Program would involve limited use, storage, transport, and disposal of hazardous materials during operation. Improper storage or use of such materials could lead to upset and accident conditions involving the release of hazardous materials into the environment. In accordance with applicable laws and regulations, the City would be

required to track any hazardous wastes generated during Program operation from "cradle to grave" and dispose of this material appropriately. The City also would be required to implement spill prevention and counter-measures in accordance with USEPA's Spill Prevention and Countermeasure Rule for fuel storage tanks under the Proposed Program that exceed the threshold volume, but the City would include secondary containment on all fuel storage tanks. Compliance with these requirements would reduce this impact to a **less-than-significant** level.

Impact HAZ-5: Emit Hazardous Emissions or Handle Hazardous or Acutely Hazardous Materials, Substances, or Waste within One-Quarter Mile of an Existing or Proposed School (*Less than Significant*)

Depending on the specific WMP component, Proposed Program activities may involve use or handling of hazardous materials within 0.25 mile of a school. As shown in Figure 11-3, numerous schools are located throughout Modesto, many of which are located in relatively close proximity to Proposed Program components. Several schools in Turlock also are located within 0.25-mile of proposed components.

Use and handling of hazardous materials near schools during construction of proposed components would be as described under Impact HAZ-1 (e.g., use of fuel, grease, or related materials in construction equipment). These activities would not create a hazard, even if located in close proximity to a school, by complying with applicable regulations described in Impact HAZ-1. Construction equipment may emit some amount of TAC emissions, such as DPM from operation of diesel-fueled construction equipment; however, these emissions would be temporary.

Program activities would use relatively limited hazardous materials during operation and the operation of emergency generators and staff vehicle trips would emit limited amounts of TACs. Adherence to SJVAPCD's permitting process would ensure that TAC emissions would not create unacceptable health risks for nearby sensitive receptors, such as schools. As such, this impact would be **less than significant.**

Impact HAZ-6: Location on a Site Which Is Included on a List of Hazardous Materials Sites Compiled Pursuant to Government Code Section 65962.5 and, as a Result, Create a Significant Hazard to the Public or the Environment (*Less than Significant*)

As indicated in Figure 11-4, various Proposed Program elements are located within 0.25 mile of identified hazardous materials sites. In accordance with Modesto City Council Resolution 2003-66, a Phase 1 Environmental Site Assessment is required prior to the acquisition of real property. The Phase 1 Environmental Site Assessment would identify any past sources of contamination on or near a site and, if contamination is identified, may recommend performance of a more detailed Phase 2 Environmental Site Assessment, including soils testing. The City may not purchase a property on which significant contamination is discovered during the due diligence phase and which may create a significant hazard to the public or the environment. Proposed pipeline improvements would generally be located within the public right-of-way and not within documented clean-up sites. Therefore, this impact would be **less than significant.**

Impact HAZ-7: Location in an Airport Land Use Plan or within 2 miles of a Public Airport, Resulting in a Safety Hazard for People Residing or Working in the Program Area (*Less than Significant*)

As shown on Figure 11-3, only one major public airport is located in Modesto: the Modesto City-County Airport. Under the Proposed Program, facilities may be constructed within the Modesto City-County Airport or the Turlock Municipal Airport land use plan areas. However, these facilities would be primarily belowground and would not pose any risks to aviation or exceed maximum height requirements. Impacts are considered **less than significant**.

Impact HAZ-8: Impair Implementation of or Physically Interfere with an Adopted Emergency Response Plan or Emergency Evacuation Plan (*Less than Significant*)

In general, the Proposed Program would not substantially impair or interfere with an emergency response plan. The Proposed Program would be limited to upgrades/ improvements to the City's water infrastructure. As described in Chapter 2, *Program Description,* construction of Proposed Program facilities, such as installation of water pipelines, would involve trenching/excavation within the roadway. These activities could require temporary closure of one lane of traffic, which could interfere with emergency evacuation procedures or emergency vehicle access.

All projects would be required to follow the current version of the City of Modesto Standard Specifications. Section 12 of the General Provisions includes Temporary Traffic Control requirements that must be incorporated into all projects. As part of the Traffic Management Plan (TMP), the public and appropriate fire and police departments are notified in advance of temporary road closures. This ensures that any impacts on emergency protection services during construction would be **less than significant**.

Impact HAZ-9: Expose People or Structures, Either Directly or Indirectly, to a Significant Risk of Loss, Injury, or Death Involving Wildland Fires (*No Impact*)

The prevalent land uses in the Program area are rural agricultural and developed. There are no wildlands in the Program area, as shown in Figure 11-5. As such, implementation of the Proposed Program would have **no impact** related to wildfires.

Chapter 12
HYDROLOGY AND WATER QUALITY

12.1 Overview

This chapter evaluates impacts of the Proposed Program on hydrology and water quality. It identifies the existing federal, state, and local laws, regulations, and policies related to hydrology and water quality that may be applicable to the Proposed Program; describes the existing physical environmental conditions in the study area; and evaluates impacts on hydrology and water quality from the Proposed Program.

12.2 Regulatory Setting

12.2.1 Federal Laws, Regulations, and Policies

Clean Water Act

The CWA is the primary federal law that protects the quality of the nation's surface waters, including lakes, rivers, and coastal wetlands. The key sections of the CWA that are potentially relevant to the Proposed Program are Sections 303(d) and 402.

Section 303(d)

Under CWA Section 303(d), states are required to identify "impaired water bodies" (i.e., those that do not meet established water quality standards), identify the pollutants causing the impairment, establish priority rankings for waters on the list, and develop a schedule for developing control plans to improve water quality. USEPA then approves the state's recommended list of impaired waters or adds and/or removes waterbodies. USEPA also reviews and approves the control plan developed for each pollutant, known as the total maximum daily load (TMDL). Section 303(d), Category 5 water body segments are segments in which at least one beneficial use is not supported and a TMDL is needed. **Table 12-2** in Section 12.3.3 lists Section 303(d), Category 5 water body segments in the study area.

Section 402

CWA Section 402 regulates stormwater discharges to surface waters through the National Pollutant Discharge Elimination System (NPDES), which is officially administered by the USEPA. In California, USEPA has delegated its authority to the SWRCB; SWRCB, in turn, delegates implementation responsibility to the nine RWQCBs, as discussed below in regard to the Porter–Cologne Water Quality Control Act. The NPDES program provides for both general permits (those that cover a number of similar or related activities) and individual (activity- or project-specific) permits. Relevant general NPDES permits are described further under Section 12.2.2, "State Laws, Regulations, and Policies."

National Flood Insurance Program

Congress established the National Flood Insurance Program (NFIP) to provide property owners with access to federally-backed flood insurance protection and to reduce the destructive consequences of flooding. FEMA administers the NFIP and works closely with state and local officials to identify flood hazard areas and flood risks. FEMA's Flood Insurance Rate Maps (FIRMs) show the extent of areas within the 100-year floodplain (i.e., areas that would be inundated by the 1-percent annual chance flood), providing the basis of the NFIP regulations and flood insurance requirements (FEMA 2017).

12.2.2 State Laws, Regulations, and Policies

State Reclamation Board

The State Reclamation Board, deriving its regulatory authority from CCR Title 23, Waters, and, in cooperation with USACE, is responsible for the control of flooding along the Sacramento and San Joaquin Rivers and their tributaries, including the Tuolumne River. The State Reclamation Board cooperates with federal and state agencies and local governments in establishing, planning, constructing, operating, and maintaining flood control works, and maintains the integrity of the existing flood control system and designated floodways through the issuance of permits for encroachments. Designated floodways have been established on both Dry Creek and the Tuolumne River and are subject to regulation by the Reclamation Board. Encroachment permits are required from the Reclamation Board for any project occurring within the boundaries of the designated floodways or within ten feet of a levee.

Several proposed pipeline improvements would cross or be located within the Designated Floodway along the Tuolumne River and Dry Creek, as shown on **Figure 12-1**. Two proposed wells in Grayson are located within 300 feet of the Designated Floodway along the San Joaquin River.

Porter–Cologne Water Quality Act

The 1969 Porter–Cologne Water Quality Control Act (known as the Porter–Cologne Act) dovetails with CWA (see discussion of CWA above). It established the SWRCB and divided the state into nine regions, each overseen by its own RWQCB. The SWRCB is the primary state agency responsible for protecting the quality of the state's surface water and groundwater supplies; however, much of the SWRCB's daily implementation authority is delegated to the nine RWQCBs, which are responsible for implementing CWA Sections 303[d] and 402. In general, the SWRCB manages water rights and regulates statewide water quality, whereas RWQCBs focus on water quality within their respective regions.

The Porter–Cologne Act requires that the RWQCB develop water quality control plans (also known as Basin Plans) that designate beneficial uses of California's major surface-water bodies and groundwater basins and establish specific narrative and numerical water quality objectives for those waters. Beneficial uses represent the services and qualities of a waterbody (i.e., the reasons that the waterbody is considered valuable). Water quality objectives reflect the standards necessary to protect and support those beneficial uses. Basin Plan standards are primarily implemented by regulating waste discharges so that water quality objectives are met. Under the Porter–Cologne Act, Basin Plans must be updated every three years.

The Proposed Program is located within the planning area/jurisdiction of the Central Valley RWQCB. *The Water Quality Control Plan (Basin Plan) for the California Regional Water Quality Control Board, Central Valley Region* (Central Valley RWQCB 2016) establishes beneficial uses for the San Joaquin River, Stanislaus River, Tuolumne River and the downstream water bodies to which they are tributary, as shown in **Table 12-1**. The Basin Plan does not identify beneficial uses for Dry Creek. In regards to groundwater, the Basin Plan states that "unless otherwise designated by the Regional Water Board, all ground waters in the Region are considered as suitable or potentially suitable, at a minimum, for municipal and domestic water supply (MUN), agricultural supply (AGR), industrial service supply (IND), and industrial process supply (PRO)" (Central Valley RWQCB 2016).

National Pollutant Discharge Elimination System Permits

Construction Activities

Most construction projects that disturb 1 acre or more of land are required to obtain coverage under SWRCB's General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ as amended by 2010-0014-DWQ and 2012-0006-DWQ). The general permit requires that the applicant file a public notice of intent to discharge stormwater and prepare and implement a SWPPP. The SWPPP must include a site map and a description of the proposed construction activities; demonstrate compliance with relevant local ordinances and regulations; and present a list of BMPs that would be implemented to prevent soil erosion and protect against discharge of sediment and other construction-related pollutants to surface waters. Permittees are further required to monitor and report on all construction-related activities to ensure that BMPs are correctly implemented and are effective in controlling the discharge of construction-related pollutants.

Dewatering Activities

Although some construction-related dewatering is covered under the General Construction Permit, the Central Valley RWQCB has also adopted a general permit for limited threat discharges to surface water, including construction dewatering discharges (Order No. R5-2016-0076 [NDPES No. CAG995002]) (Central Valley RWQCB 2016). This permit would most likely apply to the Proposed Program if construction would require dewatering in greater quantities than that allowed by the General Construction Permit and would discharge the effluent to surface waters. The general permit for limited threat discharges to surface water contains waste discharge limitations and prohibitions similar to those in the General Construction Permit. To obtain coverage, the applicant must submit a Notice of Intent and a pollution prevention and monitoring program.

Municipal Stormwater Permitting Program

The SWRCB and RWQCBs regulate stormwater discharges from municipal separate storm sewer systems (MS4) through the Municipal Stormwater Permitting Program. Permits are issued under two phases depending on the size of the urbanized area/municipality. Phase I MS4 permits are issued for medium (population between 100,000 and 250,000) and large (population of 250,000 or more) municipalities, and are often issued to a group of co-permittees within a metropolitan area. Phase I permits have been issued since 1990. The City of Modesto is covered under a Phase I permit, Order R5-2015-0025. The Order requires the City to continue implementing its Storm Water Program, which includes requirements for construction projects to implement BMPs to

control sediment and pollutants from construction sites. The Storm Water Program also includes a Municipal Program, which, among other things, seeks to prevent sanitary sewer overflows (SSO) or spills from entering the storm drain system (Central Valley RWQCB 2015).

Water Reclamation Requirements for Recycled Water

In 2016, the SWRCB adopted the proposed Water Reclamation Requirements for Recycled Water Use (General Order), which replaced the existing 2014-0090-DWQ General Waste Discharge Requirements for Recycled Water Use. The General Order establishes standard conditions for recycled water use and conditionally delegates authority to an Administrator to manage a Water Recycling Program and issue Water Recycling Permits to recycled water users. Only treated municipal wastewater for non-potable uses can be permitted, such as landscape irrigation, crop irrigation, dust control, industrial/commercial cooling, decorative fountains, etc. (SWRCB 2017).

California Toxics Rule

On May 18, 2000, the USEPA promulgated numeric water quality criteria for priority toxic pollutants and other provisions for new water quality standards to be applied to waters in the state of California. USEPA promulgated this rule, also known as the California Toxics Rule, based on a determination that the numeric criteria were necessary in California to protect human health and the environment (USEPA 2017).

The California Toxics Rule fills a gap in California water quality standards that was created in 1994 when a state court overturned the state's water quality control plans containing water quality criteria for priority toxic pollutants. Thus, the State of California has been without numeric water quality criteria for many priority toxic pollutants as required by the CWA, necessitating the action by the USEPA. The federal criteria included in the California Toxics Rule are legally applicable in the state of California for inland surface waters, enclosed bays and estuaries for all purposes and programs under the CWA (USEPA 2017).

Sustainable Groundwater Management Act

On September 16, 2014, Governor Edmund G. Brown, Jr., signed the Sustainable Groundwater Management Act (SGMA), comprised of three separate bills: AB 1739, Senate Bill (SB) 1319, and SB 1168. A central feature of SGMA is that it allows local agencies to customize groundwater sustainability plans (GSPs) to their regional economic and environmental conditions and needs (DWR 2017a). Among other things, SGMA requires that a GSP be adopted for high- and medium-priority groundwater basins (127 out of 515 basins and subbasins) in California. SGMA defines sustainable groundwater management as the "use of groundwater in a manner that can be maintained during the planning and implementation horizon without causing undesirable results." Undesirable results are defined as the following (DWR 2017b):

- Chronic lowering of groundwater levels (not including overdraft during a drought if a basin is otherwise managed);
- Significant and unreasonable reduction of groundwater storage;
- Significant and unreasonable seawater intrusion;
- Significant and unreasonable degraded water quality, including the migration of contaminant plumes that impair water supplies;
- Significant and unreasonable land subsidence that substantially interferes with surface land uses; or
- Depletions of interconnected surface water that have significant and unreasonable adverse impacts on beneficial uses of the surface water.

SGMA outlines the following timetable for adoption of GSPs:

- By 2017, local groundwater sustainability agencies (GSAs) must be identified.
- By 2020, overdrafted basins must be covered by a GSP; other high- and medium-priority basins not in overdraft must have plans by 2022.

- By 2040, each high- and medium-priority basin must achieve sustainability, although this deadline can be extended 10 years for good cause.

GSAs within the study area include the Stanislaus and Tuolumne Rivers Groundwater Basin Association (STRGBA), which covers roughly the Modesto Subbasin (i.e., from the Stanislaus River to the Tuolumne River), and the West Turlock Subbasin Groundwater Sustainability Agency, which covers the area south of the Tuolumne River within the Turlock Subbasin (DWR 2017c).

CASGEM Basin Prioritization

In 2009, the California State Legislature amended the California Water Code with SBx7-6, which mandates a statewide groundwater elevation monitoring program to track seasonal and long-term trends in groundwater elevations in California (DWR 2017d). Pursuant to this amendment, DWR established the California Statewide Groundwater Elevation Monitoring (CASGEM) Program. The CASGEM Program establishes the framework for regular, systematic, and locally managed monitoring in all of California's groundwater basins (DWR 2017d). To facilitate implementation of the CASGEM Program and focus limited resources, as required by the California Water Code, DWR ranked all of California's basins by priority: high, medium, low, and very low based on the following factors (DWR 2017e):

1. Population overlying the basin;
2. Rate of current and projected growth of the population overlying the basin;
3. Number of public supply wells that draw from the basin;
4. Total number of wells that draw from the basin;
5. Irrigated acreage overlying the basin;
6. Degree to which persons overlying the basin rely on groundwater as their primary source of water;
7. Any documented impacts on the groundwater within the basin, including overdraft, subsidence, saline intrusion, and other water quality degradation; and
8. Any other information determined to be relevant by DWR.

DWR classifies the Modesto Subbasin as a high-priority basin, with noted impacts of "water quality degradation due to industrial and agricultural practices," though the basin is not specifically noted as being in overdraft (DWR 2014). The Turlock and Delta-Mendota subbasins are also both classified as high-priority basins, with noted groundwater overdraft issues (DWR 2014).

DWR Water Well Standards (Bulletins 74-81 and 74-90 combined)

DWR's well standards, contained in Bulletin 74-81 together with the well standards in the supplement Bulletin 74-90, are recommended minimum statewide standards for the protection of groundwater quality. The construction standards contained in Bulletins 74-81 and 74-90 apply to all water wells and cover such topics as well location with respect to contaminants and pollutants, sealing the upper annular space (i.e., space between the well casing and wall of the

drilled hole), and surface construction features. The well standards require that the surface portions of wells be adequately sealed such that contaminated water cannot enter through the well and into the groundwater.

Central Valley Flood Protection Board

The Central Valley Flood Protection Board (CVFPB) is the state regulatory agency responsible for ensuring that appropriate standards are met for the construction, maintenance, and protection of the Central Valley's flood control system, including along the Sacramento and San Joaquin Rivers and their tributaries. The 2017 Central Valley Flood Protection Plan Update provides an updated vision and strategy for flood system improvements within the State Plan of Flood Control (SPFC) (see below). Designated floodways have been established on the Tuolumne River, Stanislaus River, San Joaquin River, and portions of Dry Creek. In general, CVFPB requires a permit for proposed work that is located within the SFPC (see below), within 300 feet of a Designated Floodway that has been adopted by the CVFPB, or within 30 feet from the banks of a CVFPB Regulated Stream (CVFPB 2017). Several proposed pipeline improvements would cross or be located within the Designated Floodway along the Tuolumne River and Dry Creek, as shown on Figure 12-1. Two proposed wells in Grayson are located within 300 feet of the Designated Floodway along the San Joaquin River.

State Plan of Flood Control

The SPFC (Central Valley Flood Management Planning Program 2010) provides an inventory and description of the existing State-federal flood protection system in the Central Valley of California. The State-federal flood protection system refers to the set of federally authorized project levees and related facilities for which the State has provided assurances of cooperation to the federal government. No SPFC facilities are located along the Tuolumne River in the vicinity of Modesto and the study area. An SPFC levee is located along the east bank of the San Joaquin River near the location of the proposed improvements in Grayson; however, the proposed improvements would not affect this levee (Central Valley Flood Management Planning Program 2010).

12.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan* guides land use and development in the unincorporated area of Stanislaus County (Stanislaus County 2016a). Goals and policies in the general plan related to hydrology and water quality include the following:

Conservation and Open Space Element

Goal Two. Conserve water resources and protect water quality in the County.

Policy Five. Protect groundwater aquifers and recharge areas, particularly those critical for the replenishment of reservoirs and aquifers.

Goal Five. Reserve, as open space, lands subject to natural disaster in order to minimize loss of life and property of residents of Stanislaus County.

Policy Sixteen. Discourage development on lands that are subject to flooding, landslide, faulting, or any natural disaster to minimize loss of life and property.

Safety Element

Goal One. Prevent loss of life and reduce property damage as a result of natural disasters.

Policy Two. Development should not be allowed in areas that are within the designated floodway or any areas that are known to be susceptible to being inundated by water from any source.

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (City of Modesto 2019a) identifies the Stanislaus and Tuolumne Rivers, and Dry Creek, as regional parks. The River Greenway Program, which guides development within the Stanislaus River, Tuolumne River, and Dry Creek Comprehensive Planning Districts, includes the following policies that are potentially relevant to the Proposed Program and the hydrology and water quality impacts analysis:

Policy VII-B.7[l]. Sensitive habitats and natural areas, including wetlands and riparian corridors, will be protected and enhanced, when feasible.

Policy VII-B.7[n]. Aquatic species and habitat will be protected and enhanced, when feasible.

Policy VII-B.7[o]. The natural forces influencing the development of recreational areas, including potential flooding, prevailing winds, sun orientation, and topography will be considered during design.

Policy VII-B.7[p]. A flood management program that provides protection from catastrophic flooding and contributes to the ecological values of the river corridor will be promoted.

Del Rio Community Plan

The *Del Rio Community Plan* (Stanislaus County 1992) includes the following goal and policy that are relevant to hydrology and water quality:

Goal 5 Future development shall be served by adequate public infrastructure.

Policy A. All future development in Del Rio shall require underground utilities and facilities for community-wide secondary sewage treatment and water supply systems.

Salida Community Plan

The *Salida Community Plan* (Stanislaus County 2007) does not include any goals or policies that are relevant to the hydrology and water quality analysis for the Proposed Program.

City of Ceres General Plan

The City of Ceres General Plan (1997) includes the following goals and policies related to hydrology and water quality:

Goal 4.C To ensure a safe and reliable water supply sufficient to meet the future needs of the city.

Policies

4.C.2. The City shall only approve new development that relies on a public water system and where an adequate water supply and conveyance system exists or will be provided.

4.C.5. The City shall promote aquifer and wellhead protection programs to limit infiltration of pollutants that might contaminate the groundwater supply.

4.C.6. The City shall participate in a groundwater management program to preserve existing groundwater quality and quantity and to ensure future supplies.

Goal 4.E To collect and dispose of stormwater in a manner that minimizes inconvenience to the public, minimizes potential water-related damage, and enhances the environment.

Policies

4.E.1 The City shall require new development to adequately mitigate increases in stormwater peak flows and/or volume. Mitigation measures should take into consideration impacts on adjoining lands in the city and immediately adjacent to the city in unincorporated Stanislaus County.

4.E.2 All drainage designs shall be in accordance with the accepted principles of civil engineering, the Stanislaus County *Storm Drainage Design Manual,* and City improvement standards.

4.E.4 The City shall encourage project designs that minimize drainage concentrations and impervious coverage.

4.E.6. The City shall require projects that have significant impacts on the quality of surface water runoff to incorporate mitigation measures for water quality impacts related to urban runoff.

Goal 6B To protect and enhance the natural qualities of the Ceres area's rivers, creeks, and groundwater.

Policies

6.B.1. The City shall cooperate with other agencies in the conservation of the Tuolumne River for the protection of its water resources and its open space qualities.

6.B.3. The City shall help protect groundwater resources from overdraft by promoting water conservation and groundwater recharge efforts.

6.B.4. The City shall continue to require the use of feasible and practical best management practices (BMPs) to protect receiving waters from the adverse effects of construction activities and urban runoff.

City of Turlock General Plan

The *City of Turlock General Plan* (2012) includes the following policies related to hydrology and water quality:

Guiding Policies

3.3-a Protect Water Quality and Supply. Continue efforts to safeguard the quality and availability of Turlock's water supply.

3.3-b Use Groundwater at a Sustainable Rate. Undertake steps to ensure the use of groundwater does not exceed the sustainable supply by verifying the estimated sustainable supply of 24,550 acre-feet per year and limiting groundwater use to the sustainable supply.

3.3-d Meet Projected Needs. Promote the orderly and efficient expansion of public utilities and the storm drainage system to adequately meet projected needs, comply with current and future regulations, and maintain public health, safety, and welfare.

3.3-e Coordinate Infrastructure Provision with Growth. Coordinate capital improvements planning, design, and construction for all municipal service infrastructure with the direction, extent, and timing of growth.

Integrated Regional Groundwater Management Plan for the Modesto Subbasin

The *Integrated Regional Groundwater Management Plan for the Modesto Subbasin* (IRGMP) (STRGBA 2005) was developed by the STRGBA, an association of the following six agencies: City of Modesto, Modesto Irrigation District, City of Oakdale, Oakdale Irrigation District, City of Riverbank, and Stanislaus County. The IRGMP was developed in compliance with the Groundwater Management Planning Act of 2002 (SB 1938) and the Integrated Regional Water Management Planning Act of 2002 (SB 1672). The overarching goal of the IRGMP is "to provide for the integrated use of groundwater and surface water within the basin to ensure the reliability of a long-term water supply to meet current and future beneficial uses including agricultural, industrial, and municipal water requirements while protecting the environment" (STRGBA 2005).

Consistent with SB 1938, the IRGMP contains basin management objectives (BMOs) to meet the purpose and goals of the groundwater management plan. BMOs that may be applicable to the Proposed Program include the following:

- Maintain groundwater levels
  - Identification and mapping of the basin's natural recharge areas
  - Development of a water budget to determine if the basin is in overdraft and, if so, to determine the amount of overdraft

- Control degradation of groundwater quality
  - Maintaining groundwater levels to control the movement of poor quality water into and within the basin. Groundwater pumping that results in the lowering of groundwater levels in part of the basin could alter the natural groundwater flow direction in the basin. In the area with groundwater contamination, this change could result in the movement of poor quality water in the basin. The City of Modesto has reduced groundwater pumping in some parts of the basin, augmenting its groundwater with surface water deliveries to its customers. Other actions may include implementing the actions summarized for the groundwater level BMOs listed above.
- Protect against potential inelastic land surface subsidence
- Groundwater monitoring and assessment

Groundwater Management Plan for the Turlock Groundwater Basin

The Groundwater Management Plan for the Turlock Subbasin presents BMOs and recommended protection measures to meet the Turlock Groundwater Basin Association's (TGBA's) overall goal to "ensure that groundwater remains a reliable, safe, efficient, and cost-effective water supply for the local area." The TGBA is a formal group for coordinating groundwater management activities within the Turlock Subbasin, which has included input from the Turlock and Modesto irrigation districts; the cities of Ceres, Turlock, Modesto, and Hughson; the Hilmar and Delhi county water districts; the Keyes, Denair, and Ballico community services districts; the Eastside and Ballico-Cortez water districts; and Stanislaus and Merced counties. BMOs described in the Groundwater Management Plan include the following (TGBA 2008):

1. Maintain an adequate water level in the groundwater basin.
2. Protect groundwater quality and implement measures, where feasible, to reduce the potential movement of existing contaminants.
3. Monitor groundwater extraction to reduce the potential for land subsidence.
4. Promote conjunctive use of groundwater and surface waters.
5. Support and encourage water conservation.
6. Develop and support alternate water supplies, and educate users on the benefits of water recycling.
7. Continue coordination and cooperation between the TGBA members and customers.

Stanislaus County Groundwater Ordinance

The Stanislaus County Groundwater Ordinance requires that all applications for a Well Construction Permit filed after November 25, 2014 demonstrate, based on substantial evidence, that either (1) one or more of the exemptions set forth in Section 9.37.050 apply, or (2) extraction of groundwater from the proposed well will not constitute unsustainable extraction of

groundwater. The ordinance notes that the above conditions do not apply to a well designed to replace an existing well that has been permitted under Chapter 9.36 prior to November 25, 2014, if the replacement well has no greater capacity than the well it is replacing.

The exemptions set forth in Section 9.37.050, referenced above, include the following:

> Water resources management practices of public water agencies that have jurisdictional authority within the County, and their water rate payers, that are in compliance with and included in groundwater management plans and policies adopted by that agency in accordance with applicable state law and regulations, as may be amended, including but not limited to the California Groundwater Management Act (Water Code Sections 10750 et seq.), or that are in compliance with an approved Groundwater Sustainability Plan.

12.3 Environmental Setting

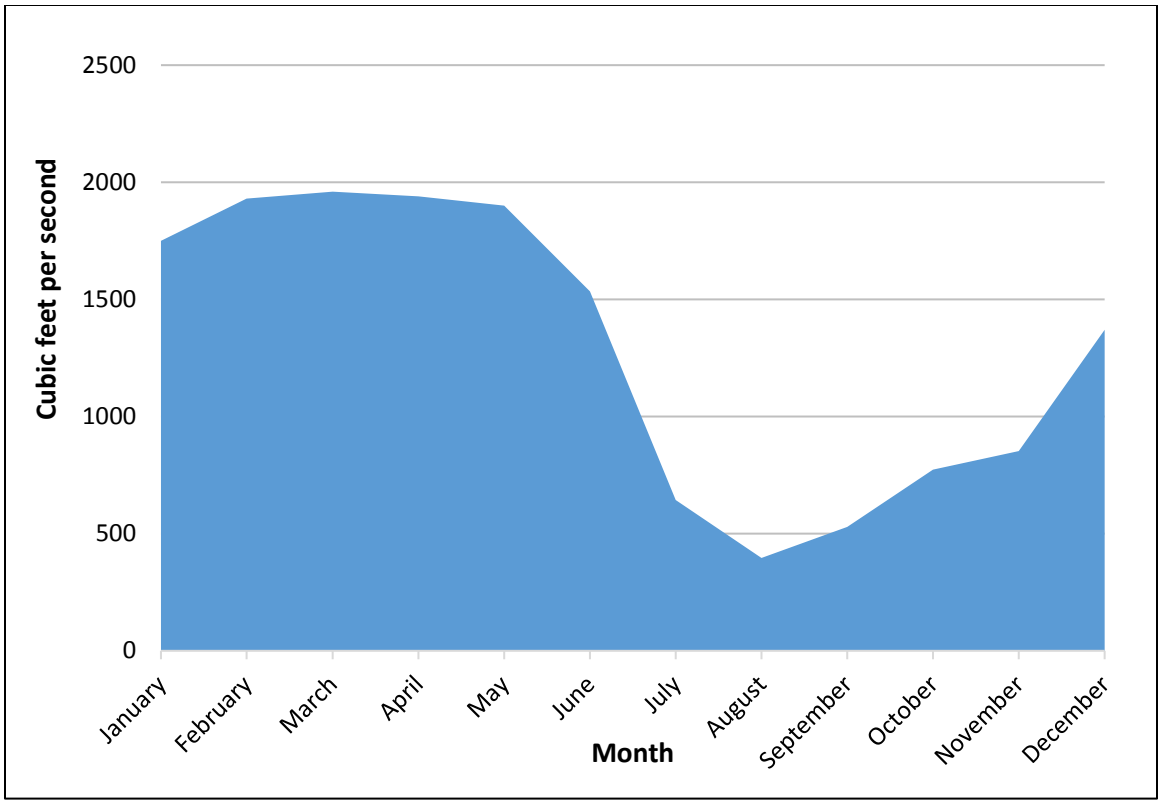
12.3.1 Topography and Climate

Being located in the Central Valley of Northern California, the City of Modesto and its outlying service areas are generally flat and subject to a Mediterranean climate and precipitation pattern. Summers are typically hot and dry, while winters are cool and wet. Most precipitation falls from November through April. Flows in area surface waters are typically highest during this period as well. Snowmelt may contribute substantially to flows in the Tuolumne River during the spring.

12.3.2 Surface Water Hydrology

The Tuolumne River is the primary surface water feature in the City of Modesto area, passing through roughly the center of the City. The Stanislaus River flows in an east-west direction to the north of the City, making up the northern boundary of Stanislaus County and passing near the communities of Del Rio, Salida, and Riverbank. The Tuolumne River drains to the San Joaquin River, which flows northwest through the Central Valley before joining the Sacramento River and flowing out to San Francisco Bay and the Pacific Ocean. Dry Creek flows through northeast Modesto before discharging into the Tuolumne River. Figure 12-1 shows surface water bodies in the study area.

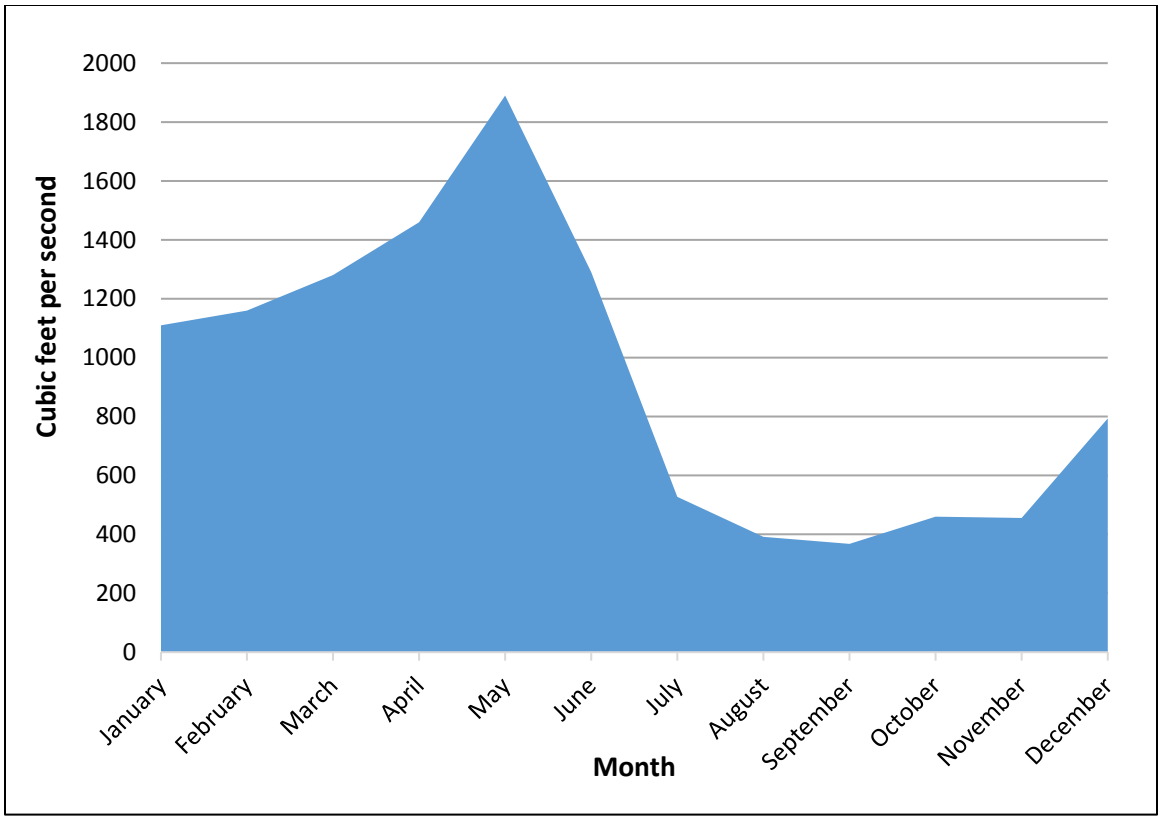
Flows in study area waters vary seasonally, roughly in line with the seasonal precipitation pattern. Flows in the Tuolumne River are regulated by reservoirs and power plants upstream from Modesto, including Hetch Hetchy Reservoir and Don Pedro Reservoir. Don Pedro Reservoir, jointly operated by the Modesto Irrigation District (MID) and the Turlock Irrigation District (TID), has a capacity of 2,030,000 acre-feet (AF) and provides flood control for the Modesto area (City of Modesto 2019b). **Figure 12-2** shows the mean monthly flow in the Tuolumne River as measured at the USGS stream gage at Modesto (USGS 11290000).



Source: USGS 2017a

Figure 12-2. Mean Monthly Discharge at USGS Gage 11290000 (Tuolumne River at Modesto, CA), Water Years 1940-2016

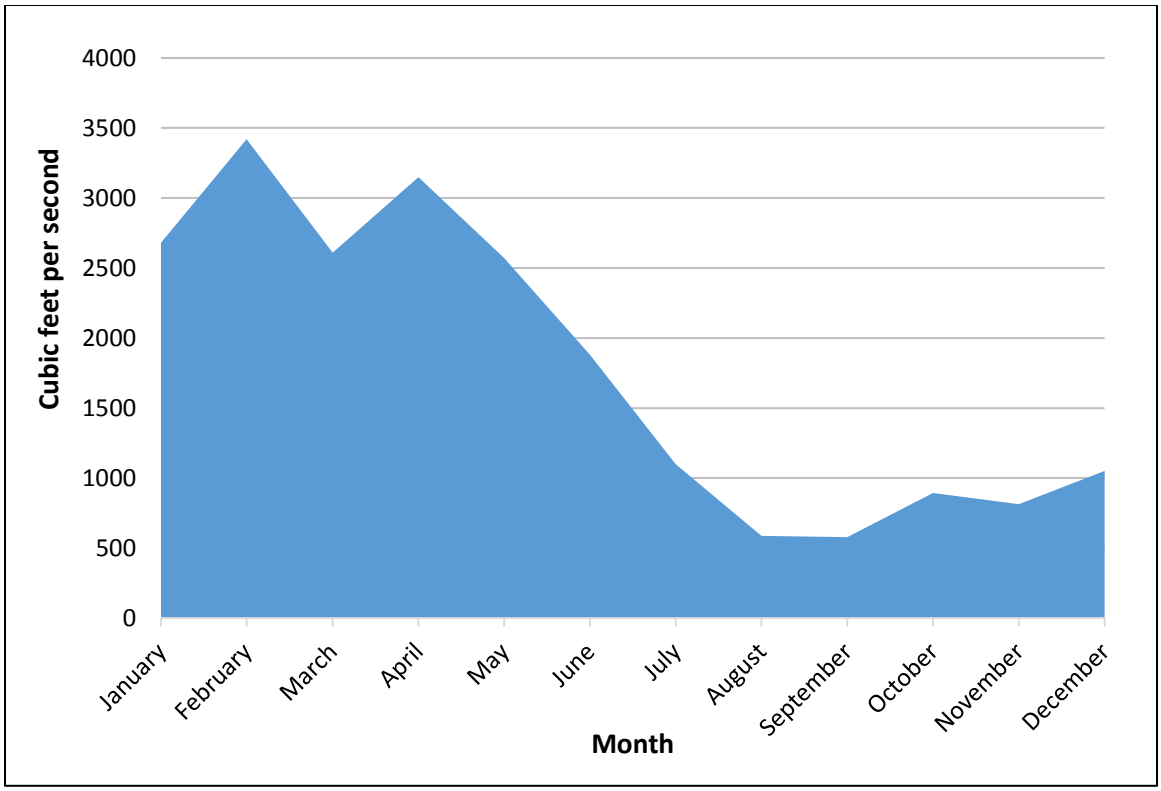
Flows in the Stanislaus River also are regulated by upstream dams and reservoirs, including the Tulloch Reservoir and New Melones Lake. **Figure 12-3** shows mean monthly flow in the Stanislaus River as measured at the USGS stream gage at Ripon (USGS 11303000).



Source: USGS 2017b

Figure 12-3. Mean Monthly Discharge at USGS Gage 11303000 (Stanislaus River at Ripon, CA), water Years 1940-2016

Upstream reservoirs on the San Joaquin River include Millerton Lake and Mammoth Pool Reservoir. **Figure 12-4** shows mean monthly flow in the San Joaquin River as measured at the USGS stream gage near Crows Landing (USGS 11274550).



Source: USGS 2017c

Figure 12-4. Mean Monthly Discharge at USGS Gage 11274550 (San Joaquin River near Crows Landing, CA), Water Years 1995-2016

No stream gage exists on Dry Creek, but it can be assumed that flows follow a generally similar pattern, with higher flows in the winter and spring and lower flows in the summer and fall.

12.3.3 Water Quality

Surface water quality in the San Joaquin, Stanislaus, and Tuolumne rivers is excellent at their sources in the Sierra Nevada Mountains (Stanislaus County 2016b). However, as each river flows through the San Joaquin Valley, water quality declines. Agricultural and domestic use-and-return both contribute to water quality degradation. During dry summer months, the concentration of pollutants increases, particularly in the San Joaquin River, which drains domestic and industrial wastewater for the entire San Joaquin Valley. Water quality in the Stanislaus and Tuolumne rivers declines by the time they discharge into the San Joaquin River. Comparatively, water quality declines more in the Tuolumne River than the Stanislaus River due to agricultural return flows and gas well wastes (Stanislaus County 2016b).

Table 12-2 shows CWA, Section 303(d) Category 5 (i.e., requiring a TMDL) listings for water body segments in the study area and downstream.

Table 12-2. Section 303(d), Category 5 Listings for Water Body Segments Potentially Affected by the Proposed Program

Water Body	Watershed CalWater / USGS HUC	Contaminant	Source	First Listed	TMDL Status[1]	Completion Date[2]

12.3.4 Stormwater

The City's storm drainage system includes approximately 77 miles of storm drain lines and 25 storm pump stations. Stormwater discharges from Modesto drain to 24 drainage basins and approximately 12 major outfalls (greater than 24 inches in diameter) to receiving waters (Tuolumne River or Dry Creek), MID laterals/drains, or rockwells. According to the City's *Storm Drainage Master Plan* (City of Modesto 2008), surface water discharges generally occur in the older parts of Modesto or those areas immediately adjacent to the Tuolumne River, Dry Creek, or irrigation canals. Approximately 40 percent of stormwater gets discharged to detention/retention basins, 20 percent of stormwater gets directed to receiving waters, 10 percent is directed to MID laterals/drains, and 30 percent goes to rockwells.

Rockwells are designed to collect surface stormwater runoff and allow it to infiltrate to the groundwater. These are rock-lined holes that are typically 6 feet in diameter and up to 50 feet deep. There are approximately 10,500 rockwells in Modesto, serving approximately two-thirds of the City's area. As a large urban area, Modesto has large areas of impervious surface, which generate increased volumes of surface runoff compared to the natural ground surface. To the extent this runoff is not captured by rockwell structures and allowed to infiltrate to groundwater, it may ultimately be discharged to nearby water bodies via the City's positive gravity stormwater drainage systems. The Tuolumne River and Dry Creek receive a large fraction of stormwater runoff from the Modesto urban area.

12.3.5 Groundwater Levels, Flows, and Quality

The proposed components would primarily be located in the Modesto Subbasin of the San Joaquin Valley Groundwater Basin. This subbasin extends from the San Joaquin River east to the Sierra foothills, and from the Tuolumne River north to the Stanislaus River. Several components south of the Tuolumne River (e.g., Program components in East Modesto, Ceres, Empire, and Turlock) also would be located in the Turlock Subbasin. The proposed components in Grayson would be located in the Delta-Mendota Subbasin of the San Joaquin Valley Groundwater Basin.

The western portions of the Modesto and Turlock subbasins generally have two principal aquifers: one above and one below the Corcoran clay[1] (STRGBA 2005). East of the Corcoran clay, the aquifers are generally unconfined. Groundwater in the Delta-Mendota subbasin occurs in three water-bearing zones, including a lower zone, upper zone, and shallow zone. The Corcoran Clay also underlies this subbasin at depths ranging from 100 to 500 feet, which creates confining conditions (DWR 2006a). In the area of Modesto, groundwater flows from east to west-southwest following the topography of the land and differences in mean groundwater levels. Groundwater contours suggest that groundwater is discharged to the Tuolumne River along most reaches of the river.

Groundwater recharge in the region occurs primarily from percolation of applied irrigation water, as well as seepage from the Modesto Reservoir and irrigation canals (DWR 2004). Lesser recharge occurs from subsurface flows originating in the mountains and foothills along the east side of the subbasins and percolation of direct precipitation (DWR 2004). Groundwater recharge to the deeper aquifers can occur from seepage through unconfined aquifers or across the Corcoran clay, or from horizontal movement of water from the eastern portion of the subbasin (STRGBA 2005).

Groundwater levels in the Modesto area have declined over the past decades. The Modesto subbasin water level declined nearly 15 feet from 1970 through 2000 (DWR 2004), while average groundwater levels in the Turlock Subbasin declined nearly 7 feet from 1970 through 2000 (DWR 2006b). Groundwater levels in the Delta-Mendota Subbasin declined an average of 2.2 feet from 1970 through 2000 (DWR 2006a). Groundwater levels were locally depressed beneath and around the Modesto urban area, but completion of the Modesto Regional Water Treatment Plant in 1994 and subsequent importation of surface water supplies from the Modesto Irrigation District caused groundwater levels to rebound to some degree (STRGBA 2005). More recent data indicates that from 2007 to 2017 groundwater levels in the Modesto area decreased from 0 to 20 feet, with isolated areas of greater reductions (DWR 2017f). Some of this decrease may be attributable to the recent drought in California, which lasted in its most severe form from roughly 2013-2014, though moderate drought conditions continued for up to years afterwards in some areas of the state, including in the Modesto area through February 2017. In 2014 in the Central Valley, total groundwater pumping was increased by 5 million acre-feet to partially compensate for a reduction in surface water deliveries to farmers of 6.5 million acre-feet in that year (Stanislaus County 2014).

Groundwater quality throughout the San Joaquin Valley region is suitable for most urban and agricultural uses; however, localized areas of high total dissolved solids (TDS), nitrates, boron, chloride, arsenic, selenium, dibromochloropropane (DBCP), and radon exist (Stanislaus County 2016b). Elevated TDS concentrations may occur from recharge of streamflow originating from marine sediments or concentration of salts from agricultural practices due to evaporation and poor drainage. The major human sources of nitrates are disposal of human and animal waste products and fertilizers, but nitrates may also occur naturally. Agricultural pesticides (e.g., DBCP) and herbicides have been detected in groundwater through the region (Stanislaus County 2016b).

[1] The Corcoran clay is a clay layer underlying the western half of the Modesto and Turlock Subbasins. This clay layer is present at depths ranging between 50 and 200 feet below ground surface, and establishes an effective barrier to water movement between the confined and unconfined water bodies (DWR 2004, 2006b).

12.3.6 Floodplains and Dam Inundation Areas

Several Proposed Program improvements would be located within the 100-year (i.e., 1-percent annual chance flood) floodplain mapped by FEMA; however, all would be buried pipelines with no above-ground components. Mapped FEMA flood zones are depicted in Figure 12-1. The Proposed Program is located in the Central Valley of California, approximately 70 miles from the ocean. Therefore, it would be outside of any tsunami zone.

The Stanislaus County General Plan (Figure V-3) shows that much of Modesto, including the area of the Program improvements, is within the inundation area for multiple dams. The figure (reproduced as **Figure 12-5** here) shows that Modesto and potentially North Ceres are within the inundation area for New Melones and New Don Pedro Dams (Stanislaus County 2010).

City of Modesto Water Master Plan EIR

12.4 Impact Analysis

12.4.1 Methodology

Impacts to hydrology and water quality were evaluated qualitatively based on consideration of ways in which construction and operation of the proposed components could trigger the CEQA significance criteria. As described throughout this DEIR, all impacts are evaluated at a program level of detail.

12.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on hydrology and water quality if it would:

- Violate any water quality standards or waste discharge requirements;
- Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted);
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
- Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;
- Otherwise substantially degrade water quality;
- Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map;
- Place within a 100-year flood hazard area structures which would impede or redirect flood flows;
- Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam; or
- Inundation by seiche, tsunami, or mudflow.

The Proposed Program would not include any new housing. Therefore, the eighth criterion above is dismissed from detailed consideration, as the Proposed Program would have no potential to place housing within the 100-year floodplain. Likewise, the Proposed Program area is generally

flat and located far from the ocean or any large standing bodies of water. Therefore, the Proposed Program would have no potential to be subjected to inundation by seiche, tsunami, or mudflow, and the last criterion is dismissed.

12.4.3 Environmental Impacts

Impact HYD/WQ-1: Violate Any Water Quality Standards or Waste Discharge Requirements or Otherwise Degrade Water Quality (*Less than Significant with Mitigation*)

Construction of the proposed components could result in discharges of poor-quality water to nearby water bodies, if adequate precautions are not taken. Trenching and other ground-disturbing activities could expose loose soils that could be eroded during precipitation events. Construction equipment also would use hazardous materials (e.g., fuel and diesel) that could spill during routine use, storage, transport, or disposal, and then potentially seep into groundwater or be washed into nearby water bodies. Use of trenchless construction methods (e.g., jack and bore, horizontal directional drilling [HDD] also could present hazards to water quality, such as from frac-out[2] accidents during boring activities below or near streams. Additionally, construction of Program components may require dewatering of excavations, particularly for those components adjacent to the Tuolumne River. Discharge of this water back to the river or other areas could result in adverse water quality effects if adequate precautions are not taken.

Testing, disinfection, and flushing of pipeline improvements prior to use also would require disposal of de-chlorinated flushing water to the storm drainage system or sanitary sewer system. As described in Chapter 2, *Program Description,* one of the prescribed disinfection methods in the City's standard specifications, which comply with American Water Works Association (AWWA) standard methods, would be used to disinfect all new water mains and appurtenances. After completion of the disinfection process, the heavily chlorinated water would be de-chlorinated and flushed from the new pipelines/water system facilities until the residual chlorine concentration meets the City's established requirements, which are protective of water quality in receiving waters. Discharges of this water would not substantially affect receiving waters or result in a violation of water quality standards or waste discharge requirements; refer to Chapter 17, *Utilities and Service Systems* for additional discussion of impacts on the stormwater and sewer system from discharge of testing, disinfection and flushing water.

As described in Chapter 11, *Hazards and Hazardous Materials,* many water quality impacts associated with Program construction activities would be minimized or avoided through compliance with the NPDES General Construction Permit. All components with a footprint greater than one acre of disturbance area would be subject to this permit, which requires preparation and implementation of a SWPPP. As described in Section 12.2, the SWPPP must, among other things, present a list of BMPs that would be implemented to prevent soil erosion and protect against discharge of sediment and other construction-related pollutants to surface waters. The

[2] "Frac-out" is the inadvertent return and release to the environment of drilling lubricant during HDD. This is a potential concern when HDD is used under sensitive habitats, waterways, and areas of concern for cultural resources. The HDD procedure uses bentonite slurry, which is a fine clay material that is used as a drilling lubricant. Bentonite is non-toxic and is commonly used farming practices, but benthic invertebrates, aquatic plants, and fish and their eggs can be smothered by the fine particles if bentonite is discharged to waterways (California Public Utilities Commission [CPUC] 2003).

SWPPP also would include spill prevention and response procedures for any hazardous materials used during construction. Compliance with this permit would minimize any impacts of Proposed Program construction activities on water quality, but construction water quality impacts of individual program components could nevertheless be significant.

For Program components whose construction would disturb less than one acre, the City of Modesto's Standard Specifications require that all projects less than one acre develop a Local SWPPP or Erosion Control Plan and implement stormwater BMPs during construction. The Local SWPPP must be submitted to the City of Modesto Land Development Engineering Division for review prior to obtaining a Grading or Encroachment Permit for the project. Erosion control BMPs are described in Chapter 15 of the Standard Specifications. Implementation of these requirements included in the City's Standard Specifications would ensure that impacts on water quality related to erosion for Program components that disturb less than one acre would be less than significant.

As described in Chapter 11, *Hazards and Hazardous Materials,* the City would maintain compliance with all local, state, and federal regulations concerning hazardous materials which would prevent substantial water quality impacts (e.g., due to accidental spills of hazardous materials) during construction activities and ensure water quality impacts would be less than significant.

To ensure that the Proposed Program would not adversely impact water quality from proposed trenchless pipeline installation methods (e.g., new water distribution pipelines underneath the Tuolumne River or Dry Creek), the City would implement **Mitigation Measure HYD/WQ-1 (Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods)**. This measure would require the City's drilling contractor to prepare and implement a frac-out contingency plan for trenchless construction methods. The plan would be designed to minimize the potential for frac-out, provide for the timely detection of frac-outs, and ensure a timely and effective response in the event a frac-out occurs (CPUC 2003). Implementation of this mitigation measure would reduce adverse water quality impacts from frac-out associated with trenchless activities to a level that is less than significant.

Operation of the Proposed Program improvements would not be likely to have significant adverse impacts on water quality. Operational activities would be very similar to existing maintenance, operation, and repair activities for the existing water system. The proposed aquifer storage and recovery (ASR) program would use water treated to drinking water standards to recharge groundwater, and therefore would not present an opportunity for groundwater quality contamination. Operational water quality impacts would be less than significant.

Overall, compliance with NPDES permit requirements and the City's Standard Specifications, and implementation of Mitigation Measure HYD/WQ-1would minimize adverse effects on water quality. In conclusion, the Proposed Program's overall impact would be **less than significant with mitigation**.

Mitigation Measure HYD/WQ-1: Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods.

The City of Modesto's drilling contractor for trenchless pipeline installation activities (e.g., horizontal directional drilling or microtunneling) shall prepare and implement a frac-out contingency plan prior to conducting Proposed Program construction activities involving

these methods. At a minimum, the frac-out contingency plan shall include the following components/measures:

- Require a geotechnical engineer or qualified geologist to make recommendations regarding the suitability of the formations to be bored to minimize the potential for frac-out conditions.

- Require that a qualified archaeologist and biologist survey for and recommend protection measures for sensitive cultural and biological resources at the location of the entry and exit points and along the boring route.

- Include worker training measures to ensure that all field personnel understand their responsibility for timely reporting of frac-outs to their supervisors. Supervisors must then report frac-outs to CDFW as described in the last bullet below.

- Maintain necessary response equipment on-site or at a readily accessible location and in good working order.

- Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003):

    - For a terrestrial frac-out:

        - Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud.

        - Based on consultation with CDFW (see below), either:

            - Use a mobile vacuum truck to pump the drilling mud from the contained area and recycle it to the return pit; or

            - Leave the drilling mud in place to avoid potential damage from vehicles entering the area.

        - Once excess drilling mud is removed, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation.

    - For an aquatic frac-out:

        - Monitor frac-out for 4 hours to determine if the drilling mud congeals (bentonite will usually harden, effectively sealing the frac-out location).

        - Based on consultation with CDFW (see below), either:

            - If the drilling mud congeals, take no other action that would potentially suspend sediments in the water column.

- If drilling mud does not congeal, erect isolation/containment environment (underwater boom and curtain).

- If the fracture becomes excessively large, call in a spill response team to contain and clean up excess drilling mud in the water. Keep phone numbers of spill response teams on-site.

– If the spill affects an area that is vegetated, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation.

- Notify and consult with CDFW in the event of a frac-out. Restore vegetation damaged by drilling fluid to pre-construction conditions.

Impact HYD/WQ-2: Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would Be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level (*Significant and Unavoidable*)

The Proposed Program involves the construction and operation of impervious features such as storage tanks, buildings to house booster pump stations and groundwater wells, and a corporation yard. These features are expected to result in only a small incremental increase in impervious surfaces and would not substantially affect percolation of rainfall or groundwater recharge.

The City of Modesto's Proposed Program includes new and replacement groundwater wells within the contiguous and outlying Modesto water service areas. Typically, the wells would have a pumping capacity between 750 and 2,000 gallons per minute (gpm). Although it cannot be determined how much groundwater pumping may increase under the Proposed Program, as it is not known how frequently and at what capacity the new wells would operate, it can be assumed that groundwater pumping would increase over time in accordance with the City's growth and development. **Table 12-3** below shows projected increases in water demand and groundwater extraction in the City's service area.

Table 12-3. City of Modesto – Projected Retail Water Supplies

Water Supply	Projected Water Supply (Acre-feet)				
	2020	2025	2030	2035	2040
Purchased or Imported Water[1]	44,800	48,533	52,267	56,000	59,733
Groundwater	24,664	26,369	28,073	29,778	31,483
Total:	69,464	74,902	80,340	85,778	91,216

Notes: [1]Purchases from Modesto Irrigation District.

Source: City of Modesto 2016

As described in Chapter 4 of the WMP, a model was developed to analyze the system and determine the existing and future water system needs. To determine the water supply needs in

the outlying communities where groundwater is the primary or only source of water, the maximum operating yield of the Modesto and Turlock groundwater sub-basins was incorporated into the model.

The Proposed Program was developed in consideration of the operating yield of the Modesto and Turlock groundwater sub-basins. This operating yield was calculated to better manage the groundwater basin in consideration of estimates of annual recharge and pumping activities, and to prevent lowering of the groundwater table. Therefore, by design, operation of existing and proposed wells in the study area should not substantially lower the overall basin-wide level of water or the capacity of the groundwater basins. Individual wells would also be designed and operated to avoid localized reductions in groundwater levels that could substantially affect nearby wells and groundwater beneficial uses.

The City is a participant in the Groundwater Sustainability Agencies that have been formed for the Modesto and Turlock subbasins. Both GSAs are currently developing Groundwater Sustainability Plans per the requirements of SGMA. The City, along with other agencies or private entities, will implement the recommendations of the GSP, when available, in accordance with SGMA.

That said, groundwater development in the Modesto, Turlock, and/or Delta-Mendota subbasins by other agencies or private entities could, in combination with the City's use of groundwater, result in overall groundwater pumping which exceeds the sustainable yield of the aquifer(s). Pumping by other entities is outside of the City's control. SGMA requires users of groundwater in a basin to develop a GSP which will define the sustainable yield of the aquifer and allocate pumping amounts to individual users (or identify other measures) which will ensure that overall pumping is sustainable. The City will be a participant in development of the GSPs. However, because the GSP has not been developed, and the measures or allocations it will contain are currently unknown and would not be entirely within the City's control, the GSP cannot be relied upon as the basis for concluding that the City's use of groundwater (in combination with other users) would not exceed the sustainable yield of the basin(s); this would be improperly deferred mitigation under CEQA.

While the City fully expects that the SGMA process and the planning surrounding the WMP will prevent overdraft, due to the stage of the SGMA planning process, the City has conservatively concluded that impacts are potentially significant. The City has not identified feasible mitigation beyond that which would be identified in the future pursuant to SGMA, and such measures would be outside of the City's control, to the extent they would need to be implemented by other entities (e.g., other users of groundwater in the basin(s). For these reasons, this impact is considered **significant and unavoidable.**

Impact HYD/WQ-3: Substantially Alter the Existing Drainage Pattern of the Site or Area Such as to Result in Substantial Erosion, Siltation, or Flooding On- or Off-Site (*Less than Significant*)

The Proposed Program would not alter the course of any stream or river and would not substantially affect the drainage patterns at individual project sites over the long term. Many of the proposed components would be buried underground within existing streets (e.g., new water pipelines) and would have no potential to alter drainage patterns. The Proposed Program would include construction of several new pipelines crossing the Tuolumne River and Dry Creek; these

would be installed using trenchless methods beneath the water bodies, or be incorporated into pedestrian or vehicular bridges, and would not affect the existing drainage patterns.

Certain Program components would include new impervious surface areas, which would alter existing drainage patterns on-site to some degree (impervious surfaces generally increase volume and velocity of surface runoff), but these changes would not be substantial and would not result in substantial siltation, erosion, or flooding on- or off-site.

During construction of individual Program improvements, the Proposed Program could temporarily alter the drainage patterns of individual project sites. Trenching for installation of water lines, excavation and foundation work for installation of new storage tanks and associated facilities, and related activities could temporarily change the ground surface and expose loose soils to erosive forces (e.g., water, wind). These changes could result in substantial erosion on-site, a significant impact.

For CIP projects that exceed one acre in size, compliance with the NPDES General Construction Permit would minimize erosion during construction activities. In general, the change in runoff patterns that could occur during construction would not be sufficient to result in substantial flooding on- or off-site. In addition, for CIP projects in close proximity to Designated Floodways along the Tuolumne River, Dry Creek, and San Joaquin River, the City would apply for appropriate encroachment permits from the CVFPB and State Reclamation Board prior to construction. For CIP projects with less than one acre in size, the City would implement requirements in its Standard Specifications for a Local SWPPP, which would prevent substantial impacts related to erosion and siltation. Therefore, this impact would be **less than significant.**

Impact HYD/WQ-4: Create or Contribute Runoff Water Which Would Exceed the Capacity of Existing or Planned Stormwater Drainage Systems or Provide Substantial Additional Sources of Polluted Runoff (*Less than Significant*)

The Proposed Program would include limited areas of new impervious surface area, which could marginally increase the volume and velocity of surface water runoff at the location of certain Program improvements. Most improvements would route any stormwater generated on-site to the City's system of rockwells and positive stormwater collection features. The City would comply with its Phase I municipal stormwater permit (Order R5-2015-0025), which requires industrial/ commercial development projects greater than 1 acre to incorporate storm water measures into the design plan. Given the small amount of additional stormwater runoff that may be generated by the Proposed Program improvements (many of the improvements would be buried underground and would have no potential to generate stormwater), the Proposed Program would not exceed the capacity of existing or planned stormwater drainage systems.

Given the nature of the Proposed Program components, these facilities would not provide additional sources of polluted runoff. It is possible that small amounts of fuel or solvents used in pump station generators or facility maintenance could be spilled and washed into the storm drain system, but this occurrence would be unlikely and any amount of polluted runoff generated by the Proposed Program would be small.

Therefore, this impact would be **less than significant.**

Impact HYD/WQ-5: Place Within a 100-year Flood Hazard Area Structures Which Would Impede or Redirect Flood Flows (*Less than Significant*)

Several proposed components would be located within the 100-year flood hazard area (i.e., 1-percent annual chance flood zone), as shown on Figure 12-1; however, all of these would be buried pipelines with no above-ground components. Therefore, these proposed components would not impede or redirect flood flows and would not increase flood hazards for other nearby structures. As a result, this impact would be **less than significant.**

Impact HYD/WQ-6: Expose People or Structures to a Significant Risk of Loss, Injury or Death Involving Flooding, Including Flooding as a Result of the Failure of a Levee or Dam (*Less than Significant*)

As discussed in Section 12.3, virtually the entire City of Modesto, including most if not all of the proposed components, are located within the zone of potential inundation in the event of dam failure of several reservoirs (e.g., New Melones, Don Pedro, Exchequer, San Luis, or Pine Flat Dams). These dams are routinely evaluated for seismic stability by the California Division of Safety of Dams to ensure the integrity of the structures (DWR 2017g). Because the probability of dam failure is extremely low, impacts related to flooding due to failure of a dam would be **less than significant**.

Chapter 13
LAND USE AND PLANNING

13.1 Overview

Existing land uses in the study area and applicable land use policies and regulations for the City of Modesto, City of Turlock, City of Ceres, and Stanislaus County are presented. This chapter also evaluates land use compatibility impacts that would result from the implementation of the Proposed Program and considers mitigation measures to reduce Program-related impacts.

The regulatory and environmental settings and impact analysis for land use and planning were developed through a review of:

- the *Stanislaus County General Plan* (2016),
- the *City of Modesto Urban Area General Plan* (2019),
- the *Ceres General Plan 2035* (2018),
- the *City of Turlock General Plan* (2012), and
- the *Tuolumne River Regional Park Master Plan* (EDAW 2001).

13.2 Regulatory Setting

No federal or state laws, regulations, or policies pertaining to land use and planning are applicable to the Proposed Program.

13.2.1 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan* (2016) applies to unincorporated lands surrounding the City of Modesto, including unincorporated lands within the City's sphere of influence (SOI) (e.g., Empire, Salida, Grayson, and Del Rio). The water storage tank and groundwater well site located northwest of Modesto, and two groundwater well sites located west of Modesto are designated for agricultural uses. The Agriculture designation recognizes the value and importance of agriculture by acting to preclude incompatible urban development within agricultural areas. The designation is intended for areas of land which are presently or potentially desirable for agricultural usage. While the designation establishes agriculture as the primary use in land, it also allows dwelling units, limited agriculturally related commercial services, agriculturally related light industrial uses, and other uses which by their unique nature are not compatible with urban uses, provided they do not conflict with the primary use (Stanislaus County 2016).

The groundwater well site near Charity Way and Bitritto Way is designated as Planned Industrial (PI), and the well site near Coffee Road and Claratina Avenue is designated as Planned Development. The Planned Development designation is intended for land which, because of its unique characteristics, may be suitable for a variety of uses without detrimental effects on other property (Stanislaus County 2016).

The three well sites located northeast of Modesto (one at the Oakdale Road and Claribel Road intersection, one located west of Roselle Avenue, and the third located near the intersection of Plainview Road and Litt Road) are designated as Urban Transition. The water storage tank site near Gomes Road is also designated as Urban Transition. The purpose of the Urban Transition designation is to ensure that land remains in agricultural use until urban development consistent with a city's (or unincorporated community's) general plan designation is approved. In general, urban development on these lands would only occur upon annexation to a city but such development may be appropriate prior to annexation provided the development is not inconsistent with the land use designation of the general plan of the affected city (Stanislaus County 2016).

The Land Use Element contains the following policies:

> **Policy 1.** Land will be designated and zoned for agricultural, residential, commercial, industrial, or historical uses when such designations are consistent with other adopted goals and policies of the general plan.
>
> **Policy 2.** Land designated Agriculture shall be restricted to uses that are compatible with agricultural practices, including natural resources management, open space, outdoor recreation and enjoyment of scenic beauty.
>
> **Policy 4.** Urban development shall be discouraged in areas with growth-limiting factors such as high water table or poor soil percolation, and prohibited in geological fault and hazard areas, flood plains, riparian areas, and airport hazard areas unless measures to mitigate the problems are included as part of the application.
>
> **Policy 5.** Residential densities as defined in the General Plan shall be the maximum based upon environmental constraints, the availability of public services, and acceptable service levels. The densities reflected may not always be achievable and shall not be approved unless there is proper site planning and provision of suitable open space and recreational areas consistent with the supportive goals and policies of the General Plan.
>
> **Policy 6.** Preserve and encourage upgrading of existing unincorporated urban communities.
>
> **Policy 7**. Riparian habitat along the rivers and natural waterways of Stanislaus County shall to the extent possible be protected.
>
> **Policy 10.** New areas for urban development (as opposed to expansion of existing areas) shall be limited to less productive agricultural areas.

Policy 11. Development of residential areas shall be adjacent to existing compatible unincorporated urban development or, in the case of remote development, included as part of a specific plan.

Policy 12. The expansion of urban boundaries of unincorporated communities shall attempt to minimize conflict between various land uses.

Policy 13. Expansion of urban boundaries of unincorporated communities should be based on infilling and elimination of existing "islands" and should not permit leapfrog development or create new "islands."

Policy 14. Uses shall not be permitted to intrude into or be located adjacent to an agricultural area if they are detrimental to continued agricultural usage of the surrounding area.

Policy 16. Outdoor lighting shall be designed to be compatible with other uses.

Policy 17. Agriculture, as the primary industry of the County, shall be promoted and protected.

Policy 18. Promote diversification and growth of the local economy.

Policy 19. Accommodate the siting of industries with unique requirements.

Policy 20. Nonconforming uses are an integral part of the County's economy and, as such, should be allowed to continue.

Policy 21. Facilitate retention and expansion of existing businesses.

Policy 22. Support and facilitate efforts to develop and promote economic development and job creation centers throughout the County.

Policy 24. Future growth shall not exceed the capabilities/capacity of the provider of services such as sewer, water, public safety, solid waste management, road systems, schools, health care facilities, etc.

Policy 26. Development, other than agricultural uses and churches, which requires discretionary approval and is within the sphere of influence of cities or in areas of specific designation created by agreement (e.g., Sperry Avenue and East Las Palmas Corridors), shall not be approved unless first approved by the city within whose sphere of influence it lies or by the city for which areas of specific designation were agreed. Development requests within the spheres of influence or areas of specific designation of any incorporated city shall not be approved unless the development is consistent with agreements with the cities which are in effect at the time of project consideration. Such development must meet the applicable development standards of the affected city as well as any public facilities fee collection agreement in effect at the time of project consideration.

Del Rio Community Plan

Stanislaus County prepared the *Del Rio Community Plan*, which was adopted by the Stanislaus County Board of Supervisors in 1992. The community plan designates land uses in two development areas. The northern portion (Area I) of Del Rio is designated as low-intensity residential and agriculture, while the southern portion (Area II) is designated as agriculture and future-specific planning. The Community Plan proposed to develop Del Rio as a mixed residential, recreational, and agricultural community with natural open space/recreational uses. Goals of the Del Rio Community Plan that relate to land use and planning for the Proposed Program include the following:

Goal 1: Future development should occur in an orderly manner to meet the needs of existing and future residents.

Policy A: Until the plan is updated, future development for Del Rio shall be in accordance with the Community Plan.

Goal 2: Prime agricultural land in the Del Rio vicinity should be preserved in areas where incompatibility impacts between agricultural and residential uses can be minimized.

Goal 3: Further development in the Del Rio area should be planned to ensure that adverse impacts on services and utilities, schools, transportation and circulation, agriculture, water and air quality are appropriately mitigated.

Policy A: All future developments in Del Rio shall be Planned Developments and, in Area II, approved only after specific plan and EIR are prepared for Area II which address cumulative development impacts on the entire Del Rio area, Community Plan conformance, and methods of plan implementation.

Goal 5: Future development shall be served by adequate public infrastructure.

Policy A: All future development in Del Rio shall require underground utilities and facilities for community-wide secondary sewage treatment and water supply systems.

Salida Community Plan

Stanislaus County prepared the *Salida Community Plan, which* was adopted by the Stanislaus County Board of Supervisors in August 2007. The Salida Community Plan provides land use planning and guidance for development of approximately 4,600 acres in the Salida area. Land uses included in the planning area include Business Park, Low-Density Residential, Medium Density Residential, High-Density Residential, Commercial, Planned Industrial, and Agriculture. The majority of planned land uses include Planned Industrial (1,259 acres or 37.2 percent of the Amendment Area). Most of these lands are in the northeastern portion of Salida. Collectively, the land uses, goals, and policies of this document are intended to promote job creation, retail opportunities, tax generation, expanded recreational amenities, expanded housing opportunities, preservation of open space, and effective transitions between urban and agricultural environments. The *Salida Community Plan* acknowledges that new public utilities such as an adequate water supply must be secured and demonstrated for new development.

Stanislaus County Zoning Ordinance

According to the Stanislaus County Zoning Ordinance, public utilities including underground pipelines, are permitted in all zoning districts.

Two new water storage tanks (one east of Dale Road near Salida, one in eastern Modesto south of Gomes Road) and seven groundwater wells would be installed on lands zoned A-2 General Agriculture (Stanislaus County 2017). **Figure 13-1** shows the locations of WMP elements relative to the County's zoning districts throughout the WMP study area. Permitted uses for A-2 districts include agricultural uses, single-family dwelling; mobile homes; buildings, appurtenances, and uses such as custom contract harvesting or land preparation; home occupations; garage sales; and other uses related to agriculture. According to Section 21.20.030 of the Stanislaus County Code, this district allows development of certain uses that are not directly related to agriculture but may be necessary to serve the A-2 district. For example, development of facilities for public utilities qualifies as a "Tier Three" use that may be allowed if the Stanislaus County Planning Commission concludes that the use would not be substantially detrimental to or conflict with agricultural use of other property in the vicinity, and the parcel on which such use is requested is not located in one of the county's "most productive agricultural areas," as this term is used in the general plan; or if the character of the use that is requested is such that the land may reasonably be returned to agricultural use in the future.

The proposed groundwater well site near Charity Way and Bitritto Way (northern Modesto) is zoned as Planned Industrial (PI). Permitted uses for PI districts include public utilities, public and quasi-public buildings, and mini-warehouses.

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (2019) serves as the City's "blueprint for future growth" and is intended to guide the physical development of the overall Modesto community. The General Plan identifies three distinct planning areas:

the Downtown Area, which generally includes the City's historic downtown; the Baseline Developed area, which generally includes areas that are already developed with urban uses; and the Planned Urbanizing Area, which forms the perimeter of Modesto's General Plan Urban Area. Land use designations for Modesto lands are shown in Figure III-1, Adopted Land Use Diagram, of the *City of Modesto Urban Area General Plan* and include the following land use designations: Residential (R), Mixed Use (MU), Commercial (C), Industrial (I), Redevelopment Planning District (RPD), Village Residential (VR), Regional Commercial (RC), Business Park (BP), Open Space (OS), and land use designations of the *Salida Community Plan* (SCP). The following land uses are permitted for each of these designations:

- Open Space – Planned land uses shall include low-impact recreational facilities, public ownership, low density residential, and agriculture.

- Residential – Land uses include single-family detached housing, single-family attached housing, multi-family housing, and mobile homes. Compatible uses may include schools, parks, and religious or community facilities.

- Mixed Use – Single-family residential, multi-family residential, commercial, office, and institutional uses are allowed in close proximity to each other. The guiding land use intensity is 0.35 square feet of building area per square foot of gross acreage of the site.

- Business Park – Business parks consist of light industrial and employment intensive uses. In general, these areas will have a campus-like setting, with a guiding intensity of 0.40 square feet of building area per square foot of gross area of the site.

- Regional Commercial – Land uses include but are not limited to business, medical, and professional offices other than large office campuses, neighborhood retail centers, convenience retail, highway-oriented commerce, Regional Commercial uses, and the downtown commercial districts.

- Village Residential – Villages are mixed-use, compact, pedestrian- and transit-oriented development that are intended to accommodate a variety of residential product types such as detached houses on small lots and multi-family and senior housing, in addition to village-serving (i.e., non-residential) units. The residential density within a Comprehensive Planning District is typically 6.6 to 7.5 dwelling units per gross acre. Approximately 4 percent of land designated as VR shall be devoted to commercial uses with a guiding intensity of 0.35 square feet of building per square foot of gross area of the site.

- Redevelopment Planning District – The Modesto RPD area is intended to consist of development that "will be the focal point of community life and the social, cultural, business, governmental and entertainment center of the northern San Joaquin Valley." Acceptable development will consist of housing, modern transportation systems, and vertical mixed-use development.

- Industrial – This designation provides for the full range of industrial uses, including but not limited to manufacturing, food processing, trucking, packing, and recycling. The guiding land use intensity for this designation is 0.50 square feet per square foot of gross area on an area-wide basis.

The *City of Modesto Urban Area General Plan* (2019) provides the following goals and policies related to land use and planning.

Chapter II – Community Growth Strategy

Policy II.B.1. Priority Development Areas. Support new development with infrastructure developed in accordance with the established Capital Improvement Program priority areas of Downtown, Kiernan Business Park, the Tivoli Specific Plan area and the South Modesto Industrial Park (north of Whitmore Ave. between Crows Landing Rd. and Morgan Rd.).

Policy II.B.3. Funding Capital Improvements. Increase and improve capital projects over time through maintaining or enhancing existing funding sources, maximizing joint-use efficiencies, and strategically prioritizing capital investments.

Chapter III – Community Development Policies

Goal III.A. Zoning Consistency. Maintain and enhance consistency between General Plan (land use designations and policies) and zoning.

Policy III.A.1. Parcel-Specific Zoning. Zoning within the incorporated City limits should be, and generally is, consistent with the General Plan Land Use Designations as presented on the Land Use Diagram. However, because these designations are broad in nature, there may be minor instances in which the existing zoning for a particular property is not consistent with the Land Use Designation for the property. These situations are still considered to be consistent with the overall goals and policies of the General Plan, and development of these properties may occur consistent with zoning. Chapter VII – Environmental Resources, Open Space and Conservation.

Policy VIII-B. Local Open Space Plan. Open space needs are broadly identified by the state legislature. It is within this scope that local jurisdictions must identify specific areas and targets of preservation, development, and/or production. Government Code Section 65560 lists six broad categories to be designated on a local open space plan: Open space for 1) the preservation of natural resources, 2) public health and safety, 3) managed production of resources, 4) outdoor recreation, 5) buffer zones to military activities, and 6) protection of places, features, and objects. These categories will be discussed in detail as they relate to the Modesto Urban Area.

Open Space Policies – River Greenway Program

Policy VII-B.7[a]. Visual corridors of the river will be protected and enhanced.

Policy VII-B.7[b]. Visual corridors and access points on the riverfront will be recreated through redevelopment.

Policy VII-B.7[c]. Identifiable park entrances will be created. A comprehensive program of park signage and graphics will be developed.

Policy VII-B.7[d]. Adequate circulation throughout the park will be provided in order to accommodate pedestrians, bicyclists, and vehicles, as well as equestrians and boaters, if appropriate. Opportunities for park access via public transportation will be provided.

Policy VII-B.7[e]. Active and passive recreational areas with universal access will be created.

Modesto Code of Ordinances

Title 10 of the Modesto Code of Ordinances establishes zoning regulations for land within the City of Modesto's jurisdictional boundary.

The storage tank site proposed in northern Modesto (east of Mable Avenue and north of McReynolds Avenue) is zoned as Specific Plan (SP), which is intended to permit various land uses including residential, industrial, and commercial development through Specific Plans. This particular tank site is addressed under the City of Modesto's Village One Specific Plan, which envisions a future school in the near vicinity. The water storage tank site in southern Modesto (northeast of East Whitmore Avenue and Morgan Road intersection) is zoned as Heavy Industrial

(M-2). No other aboveground Program elements would be within the City's jurisdictional boundary.

According to the City of Modesto Code of Ordinances Title 10, Chapter 3 – Land Use Regulations, land uses for all minor public facilities (e.g., pumps and wells) are permitted for all zoning districts. Public buildings and grounds are permitted in commercial-industrial and industrial districts and conditionally permitted in residential, professional office, and commercial districts.

Ceres General Plan 2035

The *Ceres General Plan 2035* (2018) establishes land use designations in the following categories: Residential, Mixed Use, Commercial, Industrial, and Other. The following policies are applicable to the Proposed Program:

> **2.D.1 Promote Infill.** Promote infill development and reuse of underutilized parcels in the city to reduce pressure to develop on farmland or other "greenfield" sites on the periphery.
>
> **2.I.2 Area-wide Plans.** Use area-wide plans (i.e., master plans or specific plans) to comprehensively plan for new neighborhood developments. Each residential area-wide plan should at minimum address the following:
>
> - Provisions for development phasing to ensure orderly and contiguous development consistent with infrastructure expansions and anticipated market demand.
> - Provisions for minimizing conflicts between new development and adjacent agricultural uses.

City of Turlock General Plan

The *Turlock General Plan* (2012) establishes the following land use designations: Residential (Very Low Density, Low and Medium Density, and High Density), Agriculture, Vacant, Industrial, Commercial and Mixed Use, Public/Semi-Public/Community Facility, Park and Open Space, and Office. The primary land uses include Low and Medium Density Residential (37 percent) followed by Agriculture (16 percent), Vacant (12 percent), and Industrial (11 percent). The following policies are applicable to the Proposed Program:

> **2.9-b.** Urban land uses belong in incorporated areas. Work with Stanislaus County to direct growth to incorporated areas and established unincorporated communities.
>
> A key policy of the General Plan is the limited and orderly expansion of the City. This policy would be undermined by approval of urban activities in unincorporated areas.
>
> **2.9-f.** Work with County on mitigating impacts of growth. Work with Stanislaus County to implement financing mechanisms to ensure that development within the Planning Area pays its fair share of both City and County improvements required to mitigate the impacts of growth.

2.11-c. Facilitate new development. Define clear development standards and process development applications expeditiously.

3.1-a. Proactively manage growth. Proactively manage and plan for growth in an orderly, sequential and contiguous fashion.

3.1-b. Minimize negative effects through use of fiscal and infrastructure tools. Plan and implement growth so as to minimize negative effects on existing homes and businesses within and outside the City. This shall include working with the County to establish fiscal and infrastructure tools to ensure that improvements to County roads and other infrastructure are being made as new development proceeds.

3.1-f. Provide adequate public services. Ensure the adequacy and quality of public services and facilities for all residents.

3.1-j. Capital improvement program review. Continue to annually review the City's Capital Improvement Program in order to increase capacity of needed public services in response to City growth.

Tuolumne River Regional Park Master Plan

The TRRP Master Plan is a long-range plan for a riverfront park in southern Modesto (EDAW 2001). The plan encompasses over 500 acres including lands along a 7-mile stretch of the Tuolumne River, generally bounded by Mitchell Road to the east and Carpenter Road to the west. The TRRP Master Plan provides a long-range vision for establishing recreational facilities such as the Riverwalk, boat and fishing piers, vista points, a sports complex near the Sutter Plant, an interpretive center, trails, roadways and parking areas, all of which are intended to enhance the natural environment and create both recreational educational opportunities along the river. The TRRP Master Plan also has a riparian restoration component that calls for creating improved riparian habitat along the Tuolumne River and Dry Creek. The Proposed Program does not have improvements directly within this planning area but does have proposed CIPs nearby.

13.3 Environmental Setting

Proposed components would occur within Modesto and unincorporated areas of Stanislaus County. The following sections generally describe land uses within the City of Modesto's contiguous service area (Modesto and its SOI including Salida, North Ceres, and Empire) and outlying service areas (Del Rio, Ceres, Grayson, and portions of Turlock).

13.3.1 Modesto

The City of Modesto is located in central Stanislaus County, in the northern section of California's San Joaquin Valley. The Tuolumne River runs along the southern edge of the city. State Route (SR) 99 intersects the city along the north–south axis, and SR 132 intersects the city along the east–west axis. Nearby cities include Riverbank, Ripon, and Manteca to the north and Ceres, Turlock, and Merced to the south.

Before 1960, most of Stanislaus County's population lived in unincorporated areas. Today, the population of the nine incorporated cities substantially exceeds that of the unincorporated area.

While the county's economic base remains predominantly agricultural, the regional economy is diversifying. Housing development has significantly increased the urbanized land area within Modesto. Because many of these new residents continue to work in the Bay Area, traffic along SR 99, SR 132, and Interstate 5 has increased noticeably.

The vast majority of land in Modesto is considered urban/built-up land. Urbanized areas of Modesto including commercial uses are concentrated along SR 99, the Southern Pacific Railroad corridor, and major arterial roadways; industrial uses south of Yosemite Boulevard, adjacent to the Modesto City-County Airport; and mixed residential uses which occur throughout the city. Land along the portion of the Tuolumne River that is adjacent to Modesto City-County Airport and along portions of Dry Creek that are adjacent to Central Valley Specialty Hospital and Creekside Golf Course, respectively, are classified as nonagricultural and natural vegetation lands (CDOC 2017). Throughout the City, the majority of the land is designated for a combination of residential, mixed use, and commercial (City of Modesto 2017).

13.3.2 Ceres

The city of Ceres is located along SR 99, south of Modesto and the Tuolumne River, and north of Turlock in Stanislaus County. Ceres encompasses approximately 7 square miles and the majority of the city is designated for low-to-medium density residential uses.

13.3.3 Del Rio

Del Rio is an unincorporated census-designated place (CDP) in central Stanislaus County and is located approximately 2.5 miles north of Modesto. Del Rio encompasses 2.1 square miles, with approximately 1.8 square miles being residential and the remaining space being utilized as a golf course, open space, and water (U.S. Census Bureau 2010). The Stanislaus River runs along the northern edge of Del Rio, and the community is bounded by McHenry Avenue to the east, Ladd Road to the south, and Carver Road to the west. State Route 99 is approximately 5.8 miles west of Del Rio. Nearby cities include Escalon, Manteca, Modesto, and Riverbank. Del Rio is a predominantly residential community that began with the development of a golf course and country club.

13.3.4 Empire

The community of Empire is in unincorporated Stanislaus County, located immediately east of Modesto. Empire is south of Dry Creek and north of the Tuolumne River. The community encompasses approximately 1.6 square miles, and the majority of Empire is designated as residential land use.

13.3.5 Grayson

The community of Grayson is also in unincorporated Stanislaus County and located approximately 11 miles southwest of Modesto and 6.5 miles northwest of the city of Patterson. Grayson is a small rural residential and agricultural community that occupies roughly 2.7 square miles. The community is situated on the west bank of an old channel of the San Joaquin River.

13.3.6 Salida

Salida is located northwest of Modesto, along SR 99 and south of Ripon. The community encompasses approximately 5.2 square miles and like other "islands" of Stanislaus County, comprises mostly residential development. Other land uses in Salida include agricultural uses, open space, and industrial development.

13.3.7 Turlock

The City of Turlock is the second largest city in Stanislaus County and is located about 14 miles south of Modesto. The City of Turlock's planning area extends beyond their city limits and includes unincorporated communities of Keyes and Denair. Commercial uses are concentrated along SR 99, Golden State Boulevard, and other major arterials. The community is largely shaped by the California State University, Stanislaus and agricultural industry.

13.4 Impact Analysis

13.4.1 Methodology

The analysis of land use and planning is generally qualitative and pursuant to CEQA Guidelines Section 15125, describes potential inconsistencies between the Proposed Program and applicable land use policies, plans, and programs described in Section 13.2 above. Inconsistencies with land use policies are considered a significant impact only if those inconsistencies would result in significant adverse effects on the physical environment. Physical impacts on the environment that could result from inconsistency with land use plans or policies are addressed in the other resource chapters (Chapters 4 through 12 and Chapters 14 through 17), not in this land use analysis. Specifically, potential conflicts with SJVAPCD's air quality plans are discussed in Chapter 6, *Air Quality;* inconsistencies with the *Water Quality Control Plan (Basin Plan) for the California Regional Water Quality Control Board, Central Valley Region* are discussed in Chapter 12, *Hydrology and Water Quality;* and inconsistencies with the *Congestion Management Process for the Stanislaus County Region* are addressed in Chapter 16, *Transportation and Traffic.* General consistency of the Proposed Program with the laws, regulations, and policies identified in Section 13.2, above, is discussed in Impact LU-2.

13.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on land use and planning if it would:

- Physically divide an established community;
- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including a general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; or
- Conflict with any applicable habitat conservation plan or natural community conservation plan.

The third criterion is addressed in Chapter 7, *Biological Resources,* and not discussed in the following impact analysis.

13.4.3 Environmental Impacts

Impact LU-1: Divide an Established Community (*Less than Significant*)

The Proposed Program would occur within the city of Modesto, a portion of the city of Turlock, a portion of the city of Ceres, and unincorporated areas of Stanislaus County. Proposed CIPs would involve various components to the City's water supply system including storage tanks and booster pump stations, groundwater wells, pipelines, new emergency generators for booster pump stations, water security enhancements, SCADA system upgrades, replacement pumps, and other water quality and groundwater management studies.

Pipeline replacement projects would occur in areas where such facilities already exist. New groundwater wells, storage tanks, pipelines, and new water mains would generally be constructed on the outskirts of Modesto and would facilitate redevelopment or new urban development. For all components, construction activity would be temporary and any disturbed land would be returned to pre-construction conditions except for where new aboveground structures would be built. While construction of these components could result in temporary construction impacts to neighborhood land uses, such as temporary impacts on community traffic, air emissions, public safety, or noise, construction of these CIPs would be short-term and phased through 2050. These temporary impacts are addressed in Chapter 6, *Air Quality;* Chapter 14, *Noise and Vibration;* and Chapter 16, *Transportation and Traffic*. Operation of proposed facilities would be consistent with and, for the most part, located adjacent to existing utility operations and would not impede access to neighboring communities. For these reasons, the Program's overall impact regarding division of an established community would be **less than significant**.

Impact LU-2: Conflict with Land Use Plans, Policies, or Regulations Adopted for the Purpose of Avoiding or Mitigating an Environmental Effect (*Less than Significant*)

The Proposed Program would include a series of CIPs that involve construction and operation of new storage tanks, groundwater wells, emergency generators, booster pump stations, water supply pipelines, and repair and replacement of aging water mains. These CIPs would be implemented to address existing deficiencies and capacity needs for the City's water distribution and supply system through 2040. These components are also expected to provide sufficient water service for new growth projected in the City's Urban Area General Plan, other areas in the City's contiguous service area (e.g., Salida, Empire, and North Ceres), and the City's outlying service areas (e.g., Del Rio, Ceres, Grayson, and portions of Turlock). Because water supply pipelines and water mains would be installed belowground, these CIPs would not pose any conflicts with Stanislaus County or City of Modesto zoning ordinances; therefore, consistency with local zoning regulations for these WMP components are not discussed further.

Consistency with Stanislaus County Zoning and General Plan Designations. In Salida, a new storage tank would be constructed northeast of the Dale Road and Pirrone Road intersection. This land is currently zoned and designated for agricultural uses in unincorporated Stanislaus County.

As discussed in Section 13.2.1, in the northern portion of Modesto, one new groundwater well north of Kiernan Avenue would be constructed on unincorporated Stanislaus County lands designated and zoned for agricultural uses (A-2). The two groundwater wells located west of Modesto would be installed on lands designated and zoned for agricultural uses. The future well planned near Charity Way and Bitritto Court would be constructed on County lands zoned and designated as Planned Industrial (PI). The future groundwater wells proposed at the Coffee Road and Claribel Road intersection, west of Roselle Avenue, and Plainview Road and Litt Road intersection would be constructed on lands zoned for agricultural uses but designated as either Planned Development (PD) or Urban Transition (UT) in the County's General Plan. In addition, the 5 MG tank site near Gomes Road is zoned for agricultural uses and designated as Urban Transition in the County's General Plan. This zoning and General Plan designation discussion is based on the most current available information; however, it should be noted that at least some of the Proposed Program's new well sites are conceptual and their locations may change in the future.

Based on the above, various Program components would be constructed on lands zoned and designated for various types of uses. Proposed water storage tanks and other water infrastructure on County lands zoned for agricultural uses would constitute facilities for public utilities, and, therefore, qualify as a "Tier Three" use that is allowed within the A-2 district, subject to the approval of the Stanislaus County Planning Commission. Proposed Program components constructed on land zoned as PI would be consistent with the industrial zoning district as all new facilities are considered public facilities. Therefore, no conflicts with County zoning would occur under the Proposed Program. Some tank and well sites have General Plan land use designations including Agriculture, Urban Transition, and Planned Development. Since the General Plan includes policies requiring that utility infrastructure (e.g., water supply) be reasonably available for planned and future development areas, the Proposed Program would generally be consistent with the County's General Plan designations.

Consistency with City of Modesto Zoning and General Plan Designations. The new 2.9 MG storage tank proposed east of Mable Avenue is designated as Village Residential and zoned as Specific Plan (SP). As described in Section 13.2, the tank would serve a future school planned for in the Village One Specific Plan. The proposed 2.6 MG tank in southern Modesto (north of East Whitmore Avenue and west of Morgan Road) would be installed on land zoned as Heavy Industrial and designated as Industrial.

As mentioned in Section 13.3, "Environmental Setting," above, minor public facilities such as pumps and wells would be permitted in all zoning districts according the City of Modesto Code of Ordinances Title 10, Chapter 3 – Land Use Regulations. Public buildings and grounds are permitted in industrial districts and conditionally permitted in residential, professional office, and commercial districts. Thus, the above-described water storage tank and groundwater well, and associated infrastructure would be permitted in all Modesto zoning districts. A conditional use permit may need to be submitted to the City of Modesto's Planning Department prior to development of the two new water storage tanks planned in the northeastern and southern areas of Modesto.

Consistency with the TRRP. The Proposed Program does not have improvements directly within the TRRP Master Plan's planning area but does have proposed CIPs nearby. No major Program components involve work along the Tuolumne River such that a potential conflict with the TRRP

Master Plan goals and actions for riparian restoration or planned recreational linkages between park planning districts would occur.

Conclusion. The Proposed Program would generally support general plan policies that call for safe and reliable water supply services and would not conflict with the Stanislaus County General Plan, local community plans, the City of Modesto Urban Area General Plan, the City of Turlock General Plan, the Ceres General Plan 2035, or local zoning districts. Proposed construction would occur within the planned urbanizing areas of each of the communities included in the Program, as analyzed by the County, Modesto, Ceres, and Turlock general plan EIRs. Temporary and/or permanent easement acquisitions may be required to ensure the City has adequate right-of-way and access to the various CIP sites. For example, some easements may need to be acquired from Modesto Irrigation District and Turlock Irrigation District prior to constructing some pipeline components. Based on the above analysis, there would be no conflicts with applicable land use plans, policies, or regulations, and this impact would therefore be **less than significant.**

Chapter 14
NOISE AND VIBRATION

14.1 Overview

This chapter describes the existing noise environment in the vicinity of the project sites, presents relevant noise and vibration regulations, identifies sensitive noise and vibration receptors that could be affected by the Proposed Program, and evaluates the noise and vibration impacts of the Proposed Program. Mitigation measures are prescribed to reduce significant noise and vibration impacts.

14.2 Noise and Vibration Concepts and Terminology

14.2.1 Noise

In the CEQA context, noise can be defined as unwanted sound. Sound is characterized by various parameters, including the rate of oscillation of sound waves (frequency), the speed of propagation, and the pressure level or energy content (amplitude). In particular, the sound pressure level is the most common descriptor used to characterize the loudness of an ambient sound level, or sound intensity. The decibel (dB) scale is used to quantify sound intensity. Because sound pressure can vary enormously within the range of human hearing, a logarithmic scale is used to keep sound intensity numbers at a convenient and manageable level. The human ear is not equally sensitive to all frequencies in the spectrum, so noise measurements are weighted more heavily for frequencies to which humans are sensitive, creating the A-weighted decibel (dBA) scale.

Different types of measurements are used to characterize the time-varying nature of sound. Below are brief definitions of these measurements and other terminology used in this chapter.

- **Decibel (dB)** is a measure of sound on a logarithmic scale that indicates the squared ratio of sound pressure amplitude to a reference sound pressure amplitude.
- **A-weighted decibel (dBA)** is an overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.
- **Maximum sound level (L_{max})** is the maximum sound level measured during a given measurement period.
- **Minimum sound level (L_{min})** is the minimum sound level measured during a given measurement period.
- **Equivalent sound level (L_{eq})** is the equivalent steady-state sound level that, in a given period, would contain the same acoustical energy as a time-varying sound level during that same period.

- **Day-night sound level (L_{dn})** is the energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels during the period from 10:00 p.m. to 7:00 a.m. (typical sleeping hours). This weighting adjustment reflects the elevated sensitivity of individuals to ambient sound during nighttime hours.

- **Community noise equivalent level (CNEL)** is the energy average of the A-weighted sound levels during a 24-hour period, with 5 dB added to the A-weighted sound levels between 7:00 p.m. and 10:00 p.m. and 10 dB added to the A-weighted sound levels between 10:00 p.m. and 7:00 a.m.

In general, human sound perception is such that a change in sound level of 3 dB is barely noticeable, a change of 5 dB is clearly noticeable, and a change of 10 dB is perceived as doubling or halving the sound level. **Table 14-1** presents approximate noise levels for common noise sources, measured adjacent to the source.

Table 14-1. Examples of Common Noise Levels

Common Outdoor Activities	Noise Level (dBA)
Jet flyover at 1,000 feet	110
Gas lawnmower at 3 feet	100
Diesel truck at 50 feet traveling 50 miles per hour	90
Noisy urban area, daytime	80
Gas lawnmower at 100 feet, commercial area	70
Heavy traffic at 300 feet	60
Quiet urban area, daytime	50
Quiet urban area, nighttime	40
Quiet suburban area, nighttime	30
Quiet rural area, nighttime	20

Notes: Caltrans = California Department of Transportation; dBA = A-weighted decibel.

Source: Caltrans 2009

14.2.2 Vibration

Groundborne vibration propagates from the source through the ground to adjacent buildings by surface waves. Vibration may be composed of a single pulse, a series of pulses, or a continuous oscillatory motion. The frequency of a vibrating object describes how rapidly it is oscillating, measured in Hertz (Hz). Most environmental vibrations consist of a composite, or "spectrum," of many frequencies. The normal frequency range of most groundborne vibrations that can be felt generally starts from a low frequency of less than 1 Hz to a high of about 200 Hz. Vibration information for this analysis has been described in terms of the peak particle velocity (PPV), measured in inches per second, or of the vibration level measured with respect to root-mean-square vibration velocity in decibels (VdB), with a reference quantity of 1 micro-inch per second.

Vibration energy dissipates as it travels through the ground, causing the vibration amplitude to decrease with distance away from the source. High-frequency vibrations attenuate much more rapidly than do those characterized by low frequencies, so that in a far-field zone distant from a source, the vibrations with lower frequency amplitudes tend to dominate. Soil properties also affect the propagation of vibration. When groundborne vibration interacts with a building, a ground-to-foundation coupling loss usually results but the vibration also can be amplified by the structural resonances of the walls and floors. Vibration in buildings is typically perceived as rattling of windows, shaking of loose items, or the motion of building surfaces. In some cases, the vibration of building surfaces also can be radiated as sound and heard as a low-frequency rumbling noise, known as groundborne noise.

Groundborne vibration is generally limited to areas within a few hundred feet of certain types of industrial operations and construction/demolition activities, such as pile driving. Road vehicles rarely create enough groundborne vibration amplitude to be perceptible to humans unless the receiver is in immediate proximity to the source or the road surface is poorly maintained and has potholes or bumps. Human sensitivity to vibration varies by frequency and by receiver. Generally, people are more sensitive to low-frequency vibration. Human annoyance also is related to the number and duration of events; the more events or the greater the duration, the more annoying it becomes.

14.3 Regulatory Setting

14.3.1 Federal Laws, Regulations, and Policies

No federal laws, regulations, or policies for construction-related noise and vibration apply to the Proposed Program. However, the Federal Transit Administration (FTA) *Guidelines for Construction Vibration in Transit Noise and Vibration Impact Assessment* state that for evaluating daytime construction noise impacts in outdoor areas, a noise threshold of 90 dBA L_{eq} should be used for residential areas (FTA 2006).

For construction vibration impacts, the FTA guidelines use an annoyance threshold of 80 VdB for infrequent events (fewer than 30 vibration events per day) and a damage threshold of 0.12 inches per second (in/sec) PPV for buildings extremely susceptible to vibration damage (FTA 2006). The groundborne vibration annoyance level is 65 VdB for buildings where vibration would interfere with interior operations, 72 VdB for residences, and 75 VdB for institutional land uses with primarily daytime uses.

14.3.2 State Laws, Regulations, and Policies

California requires each local government entity to implement a noise element as part of its general plan. California Administrative Code, Title 4, presents guidelines for evaluating the compatibility of various land uses as a function of community noise exposure. The state land use compatibility guidelines are listed in **Table 14-2**.

For the protection of fragile, historic, and residential structures, Caltrans recommends a more conservative threshold of 0.2 in/sec PPV for normal residential buildings and 0.08 in/sec PPV for old or historically significant structures (Caltrans 2013).

Table 14-2. State Land Use Compatibility Standards for Community Noise Environment

	Normally Acceptable	Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
	Conditionally Acceptable	New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.
	Normally Unacceptable	New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
	Clearly Unacceptable	New construction or development generally should not be undertaken.

Notes: CNEL = community noise equivalent level; dB = decibel; Ldn = day-night sound level.

Source: California Governor's Office of Planning and Research 2017

14.3.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan 2015

Stanislaus County addresses noise impacts through its General Plan and Municipal Code. The Noise Element of the *Stanislaus County General Plan 2015* (Stanislaus County 2016a) utilizes noise exposure information to identify existing and potential noise conflicts through the Land Use Planning and Project Review processes. The Noise Element establishes exterior noise level standards and maximum allowable noise exposure from stationary noise sources at noise-sensitive land uses.

Goal Two: Protect the citizens of Stanislaus County from the harmful effects of exposure to excessive noise.

Policy Two: It is the policy of Stanislaus County to develop and implement effective measures to abate and avoid excessive noise exposure in the unincorporated areas of the County by requiring that effective noise mitigation measures be incorporated into the design of new noise generating and new noise sensitive land uses.

Implementation Measure 1: New development of noise-sensitive land uses will not be permitted in noise-impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels to the following levels:

(a) For transportation noise sources such as traffic on public roadways, railroads, and airports, 60 [dBA] Ldn (or CNEL) or less in outdoor activity areas of single family residences, 65 [dBA] Ldn (or CNEL) or less in community outdoor space for multi-family residences, and 45 [dBA] Ldn (or CNEL) or less within noise sensitive interior spaces. Where it is not possible to reduce exterior noise due to these sources to the prescribed level using a practical application of the best available noise-reduction technology, an exterior noise level of up to 65 Ldn (or CNEL) will be allowed. Under no circumstances will interior noise levels be allowed to exceed 45 Ldn (or CNEL) with the windows and doors closed in residential uses.

(b) For other noise sources such as local industries or other stationary noise sources, noise levels shall not exceed the performance standards contained within Table IV-24 [reprinted as Table 14-3 below].

Implementation Measure 2: New development of industrial, commercial or other noise generating land uses will not be permitted if resulting noise levels will exceed 60 [dBA] Ldn (or CNEL) in noise-sensitive areas. Additionally, the development of new noise-generating land uses which are not preempted from local noise regulation will not be permitted if resulting noise levels will exceed the performance standards contained within Table IV-24 [**Table 14-3** below] in areas containing residential or other noise sensitive land uses.

Table 14-3. Maximum Allowable Noise Exposure from Stationary Noise Sources

	Daytime 7a.m. to 10 p.m.	Nighttime 10 p.m. to 7 a.m.
Hourly L_{eq}, dBA	55	45
Maximum level, dBA	75	65

Note: Each of the noise level standards specified in Table IV-24 shall be reduced by five (5) dBA for pure tone noises, noise consisting primarily of speech or music, or for recurring impulsive noises. The standards in Table IV-24 should be applied at a residential or other noise-sensitive land use and not on the property of a noise-generating land use. Where measured ambient noise levels exceed the standards, the standards shall be increased to the ambient levels.

Source: Stanislaus County General Plan, Noise Element, Table IV-24 (2016a)

Policy Three: It is the objective of Stanislaus County to protect areas of the County where noise-sensitive land uses are located.

Implementation Measure 1: Require the evaluation of mitigation measures for projects that would cause the Ldn at noise-sensitive uses to increase by 3 dBA or more and exceed the "normally acceptable" level, cause the Ldn at noise-sensitive uses to increase 5 dBA or more and remain normally acceptable, or cause new noise levels to exceed the noise ordinance limits (after adoption).

Stanislaus County Municipal Code

Noise generating sources in Stanislaus County are also regulated under the Municipal Code, Chapter 10.46 (Noise Control) (Stanislaus County 2017). Property line and construction noise limits are established in this ordinance. Property line noise limits apply to noise generation from one property to an adjacent property with the existence of a sensitive receptor (if no receptor, an exception or variance to the standards may be appropriate). These standards do not apply to construction noise that occurs between 7 a.m. and 7 p.m. The following are the applicable portions of the Stanislaus County Noise Control Ordinance, and **Table 14-4** and **Table 14-5** (reprinting Tables A and B of the ordinance) highlight the applicable noise limits.

Table 14-4. Exterior Noise Level Standards

Land Use Zone	Maximum A-Weighted Sound Level as Measured on a Sound Level Meter (L_{max})	
	7:00 a.m. to 9:59 p.m.	10:00 p.m. to 6:59 a.m.
Noise Sensitive	45	45
Residential	50	45
Commercial	60	55
Industrial	75	75

Table 14-5. Cumulative Duration Allowance Standards

Cumulative Duration	Allowance Decibels
Equal to or greater than 30 minutes per hour	Table 6 plus 0 dBA
Equal to or greater than 15 minutes per hour	Table 6 plus 5 dBA
Equal to or greater than 5 minutes per hour	Table 6 plus 10 dBA
Equal to or greater than 1 minute per hour	Table 6 plus 15 dBA
Less than 1 minute per hour	Table 6 plus 20 dBA

Source: Stanislaus County Code, Chapter 10, Table B.

Section 10.46.050 Exterior Noise Level Standards

A. It is unlawful for any person at any location within the unincorporated area of the county to create any noise or to allow the creation of any noise which causes the exterior noise level when measured at any property situated in either the incorporated or unincorporated area of the county to exceed the noise level standards as set forth below:

1. Unless otherwise provided herein, the following exterior noise level standards shall apply to all properties within the designated noise zone:

2. Exterior noise levels shall not exceed the following cumulative duration allowance standards:

3. Pure Tone Noise, Speech and Music. The exterior noise level standards set forth in Table A [Table 14-4 of this DEIR] shall be reduced by five dB(A) for pure tone noises, noises consisting primarily of speech or music, or reoccurring impulsive noise.

4. In the event the measured ambient noise level exceeds the applicable noise level standard above, the ambient noise level shall become the applicable exterior noise level standard.

Section 10.46.060 Specific Noise Source Standards

E. Construction Equipment. No person shall operate any construction equipment so as to cause at or beyond the property line of any property upon which a dwelling unit is located an average sound level greater than seventy-five decibels between the hours of seven p.m. and seven a.m.

Section 10.46.070 Vibration. Operating or permitting the operation of any device that creates vibration that is above the vibration perception threshold of any individual at or beyond the property boundary of the source if on private property, or at one hundred fifty feet from the source if on a public space or public right-of-way is prohibited. For the purpose of this section, "vibration perception threshold" means the minimum groundborne or structure-borne vibration motion necessary to cause a reasonable person to be aware of the vibration by such direct means as, but not limited to, sensation by touch or visual observation of moving objects, or a measured motion velocity of 0.01 in/sec over the range of one to one hundred Hertz.

Section 10.46.080 Exemptions. The following sources are exempt from the provisions of this chapter:

> **J. Public Entity or Public Utility Activity.** This chapter [Section 10.46 of the Municipal Code] shall not apply to construction or maintenance activities performed by or at the direction of any public entity or public utility.

Stanislaus County Airport Land Use Compatibility Plan

The Stanislaus County Airport Land Use Compatibility Plan (ALUCP) contains airport compatibility policy maps of three airports in Stanislaus County, including the Modesto City-County Airport. The ALUCP document provides planning area boundary maps and noise contours, presents airport land use background information, and discusses existing and potential noise conflicts in the area (Stanislaus County Airport Land Use Commission 2016). Figure 11-3 in Chapter 11, *Hazards and Hazardous Materials,* of this DEIR provides a copy of the Modesto City-County Airport Planning Area Boundary Map.

City of Modesto Urban Area General Plan

The following policies of Chapter VII, Environmental Resources, Open Spaces and Conservation, of the *City of Modesto Urban Area General Plan* (City of Modesto 2019a) are applicable to the Proposed Program:

Noise Mitigation Policies – Baseline Developed Area

All development projects located within the Baseline Developed Area (and Redevelopment Area) shall be required to incorporate the following measures into the Program.

Policy VII-G.3[g]. At noise-sensitive land uses, increases in noise should not exceed 3 dBA where any other noise threshold or standard would be exceeded, and/or 5 dBA where

noise levels would otherwise fall within acceptable limits, for the existing conditions scenario as compared to the buildout scenario.

Policy VII-G.3[h]. Additional study and/or mitigation for outdoor recreation areas will be required if: ◦ For single-family dwellings, noise exceeds 65 dBA Ldn in one or more backyards; ◦ For multi-family dwellings, noise exceeds 65 dBA Ldn at common recreation areas, such as swimming pools or play areas or at private patios and balconies; or, ◦ For other uses, noise exceeds the level considered "conditionally acceptable" as shown on [General Plan] Table VII-2.

Policy VII-G.3[i]. Limit trucking to specific routes, times, and speeds that minimize adverse effects on sensitive receptors.

Policy VII-G.3[n]. For construction activities involving high-powered vibratory tools or pile driving within 200 feet of an existing structure, demonstrate that project construction would not exceed the Caltrans construction vibration thresholds to ensure that no damage to sensitive structures would occur.

Modesto Municipal Code

The following sections of the Modesto Municipal Code in Title 4, Chapter 9, "Noise Regulations," (City of Modesto 2017) are applicable to the Proposed Program:

Section 4-9.103 – Enumeration. The following specific acts, subject to the exemptions provided in Section 4-9.104, are declared to be public nuisances in violation of Section 4-9.102, namely:

(a) The loud and raucous discharge into the open air of the steam of any steam equipment or exhaust from any stationary internal-combustion engine.

(b) The loud and raucous operation or use of any of the following before 7:00 a.m. or after 9:00 p.m. daily (except Saturday and Sunday and State or federal holidays, when the prohibited time shall be before 9:00 a.m. and after 9:00 p.m.):

(1) A hammer, or any other device or implement used to pound or strike an object.

(2) An impact wrench, or other tool or equipment powered by compressed air.

(3) A hand-powered saw.

(4) Any tool or piece of equipment powered by an internal-combustion engine such as, but not limited to, chain saw, backpack blower, and lawn mower. Except as included in subsection (a)(6) below, motor vehicles, powered by an internal-combustion engine and subject to the California Vehicle Code, are excluded from this prohibition.

(5) Any electrically powered (whether by alternating current electricity or by direct current electricity) tool or piece of equipment used for cutting, drilling,

or shaping wood, plastic, metal, or other materials or objects, such as, but not limited to, a saw, drill, lathe, or router.

(6) Any of the following: heavy equipment (such as but not limited to bulldozer, steam shovel, road grader, back hoe), ground drilling and boring equipment (such as but not limited to derrick or dredge), hydraulic crane and boom equipment, portable power generator or pump, pavement equipment (such as but not limited to pneumatic hammer, pavement breaker, tamper, compacting equipment), pile-driving equipment, vibrating roller, sand blaster, gunite machine, trencher, concrete truck, and hot kettle pump.

(7) Any construction, demolition, excavation, erection, alteration, or repair activity.

In the case of urgent necessity and in the interest of public health and safety, the Chief Building Official may issue a permit for exemption from the requirements within subsection (b) of this section. Such period shall not exceed three (3) working days in length while the emergency continues but may be renewed for successive periods of three (3) days or less while the emergency continues. The Chief Building Official may limit such permit as to time of use and/or permitted action, depending upon the nature of the emergency and the type of action requested.

(c) The loud and raucous use or operation of any radio, amplifier, phonograph, stereo, compact disc or tape player, loudspeaker, bullhorn, megaphone, or other device for the producing or reproducing of sound.

(d) Loud and raucous yelling, shouting, talking, whistling, or singing between the hours of 10:00 p.m. and 7:00 a.m. on any day.

(f) The loud and raucous use of any drum, guitar, horn, or other musical instrument or device.

Section 4-9.104 – Exemptions. The term "loud and raucous noise" as used in this chapter does not include noise or sound generated by the following:

(d) Activities on or in publicly owned property and facilities, or by public employees while in the authorized discharge of their responsibilities, are exempt provided that such activities have been authorized by the owner of such property or facilities or its agent or by the employing authority.

Ceres General Plan 2035

The following policies from Chapter 5, "Health and Safety," of the *Ceres General Plan 2035* (City of Ceres 2018) relate to noise:

5.L.3 Performance Standards. Use performance standards established in Table 5-5: Performance Standards for Stationary Sources to regulate operational noise associated with new non-residential development or changes of non-residential use.

Require, prior to approval of a project, that noise generated by the project be mitigated so as not to exceed the performance standards of Table 5-5 [provided below]. Standards apply to the noise sources themselves, as measured at the edge of the property line of residential or other sensitive uses; noise caused by motor vehicles traveling to and from the site is exempt from these standards.

Table 5-5. Performance Standards for Stationary Noise Sources

Noise Level Descriptor	Daytime (7 a.m. to 10 p.m.)	Nighttime (10 p.m. to 7 a.m.)
Hourly Leq, dB	55	45
Maximum sound level, dB	60	45

Sound level measurements shall be made at a point on the receiving property nearest where the sound source at issue generates the highest sound level. Each of the noise levels specified above shall be lowered by five dB for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises. These noise level standards do not apply to residential units established in conjunction with industrial or commercial uses (e.g., caretaker dwellings).

5.L.6 Acoustical Analysis. Require an acoustical analysis as part of the environmental review process for proposed non-residential land uses that are likely to produce noise levels exceeding the performance standards of Table 5-4: Maximum Allowable Noise Exposure for Transportation Noise Sources for existing or planned noise-sensitive uses to ensure that mitigation is included in the project design. The acoustical analysis shall meet the following requirements:

- It shall be the financial responsibility of the applicant;
- It shall be prepared by a qualified person, selected by the City, who is licensed through the State of California in the fields of environmental noise assessment and architectural acoustics;
- It shall include representative noise measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources;
- It shall include estimates of existing and projected cumulative (20 years) noise levels in terms of DNL or CNEL and/or the standards of Table 5-4: Maximum Allowable Noise Exposure for Transportation Noise Sources, and compare those levels to the adopted policies of the General Plan;
- It shall recommend appropriate mitigation to achieve compliance with the adopted policies and standards of the noise section of the General Plan, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings which contain noise-sensitive land uses. Where the noise source in question consists of intermittent single events, the report must address the effects of maximum noise levels in sleeping rooms in terms of possible sleep disturbance;

- It shall include estimates of noise exposure after the prescribed mitigation measures have been implemented; and

- It shall describe a post-project assessment program which could be used to evaluate the effectiveness of the proposed mitigation measures, when deemed necessary by the City.

The following policies from Chapter 9.36, "Noise," of the *City of Ceres Code of Ordinances* (City of Ceres 2017) are applicable to the Proposed Program:

> **E. Construction or Repairing of Buildings:** The erection (including excavating), demolition, alteration or repair of any building other than between the hours of seven o'clock (7:00) A.M. and eight o'clock (8:00) P.M., except that, by special permit issued by the Building Inspector or City Engineer, as the case may be, upon a determination that the public health and safety will not be impaired thereby, the erection, demolition, alteration or repair of any building or the excavation of streets and highways may be permitted within the hours of eight o'clock (8:00) P.M. and seven o'clock (7:00) A.M.

City of Turlock General Plan

The following policies from Chapter 9, "Noise" of the Turlock General Plan (City of Turlock 2012a) relate to noise:

> **9.4-d Required Noise Analysis.** Use the noise and land use compatibility matrix (Table 9-1) and Future Noise Contours map (Figure 9-2) as review criteria for all new development. For proposed development located where projected noise exposure would be other than "normally acceptable," and which require discretionary review, require that a noise analysis be conducted.
>
> A required noise analysis should:
>
> - Be prepared by a certified noise consultant or acoustical engineer;
>
> - Be funded by the applicant;
>
> - Include a representative, on-site day and night sound level measurement;
>
> - Include a delineation of current (measured) and projected (10 years) noise contours with and without the proposed project, ranging from 55 to 75 dBA (L_{dn}) within the proposed development site; and
>
> - Include a description of adequate and appropriate noise abatement measures where sound measurements exceed Table 9-2 standards for the proposed use.
>
> **9.4-h Non-Transportation Noise Sources—Required Mitigation.** Require mitigation of noise created by new proposed non-transportation noise sources so that it does not exceed the noise level standards of Table 9-3 as measured immediately within

the property line of lands designated for noise-sensitive uses. Appropriate mitigation measures include:

- Dampen or actively cancel noise sources;
- Increase setbacks for noise sources from adjacent dwellings;
- Use soundproofing materials and double-glazed windows;
- Screen and control noise sources, such as parking and loading facilities, outdoor activities, and mechanical equipment;
- Use open space, building orientation and design, landscaping and running water to mask sounds; and
- Control hours of operation, including deliveries and trash pickup.

This policy does not apply to noise sources associated with agricultural operations on lands zoned for agricultural uses.

The following policies from Chapter 5-28, "Noise Standards," of the *Turlock Municipal Code* (City of Turlock 2017) are applicable to the Proposed Program:

5-28-110 Prohibited acts.

The following acts are hereby prohibited:

(g). **Construction or demolition.**

(1) **Hours of operation.** Operation or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between weekday hours of 7:00 p.m. and 7:00 a.m. (or 8:00 p.m. and 9:00 a.m. on weekends or holidays) such that the sound therefrom creates a *noise* disturbance across a residential or commercial real property line, except for emergency work or public service utilities or by variance issued by the Noise Control Officer; and

(2) **Noise restrictions at affected properties.** Where technically and economically feasible, construction activities shall be conducted in such a manner that the maximum sound levels at affected properties will not exceed those listed in the following schedule:

(i) **Mobile equipment.** Maximum sound levels for nonscheduled, intermittent, short term operation (less than ten (10) days per month) of mobile equipment:

Mobile Construction Equipment			
Time Interval	**One- and Two-Family Residential (dBA)**	**Multiple-Family Residential (dBA)**	**Commercial and Industrial (dBA)**
Daily 7:00 a.m. – 7:00 p.m.	75	75	85
Weekends/Holidays 9:00 a.m. – 8:00 p.m.	70	70	85

(ii) **Stationary equipment.** Maximum sound levels for repetitively scheduled and relatively long-term operation (periods of ten (10) days or more per month) of stationary equipment:

Stationary Construction Equipment			
Time Interval	**One- and Two-Family Residential (dBA)**	**Multiple-Family Residential (dBA)**	**Commercial and Industrial (dBA)**
Daily 7:00 a.m. – 7:00 p.m.	70	70	85
Weekends/Holidays 9:00 a.m. – 8:00 p.m.	60	65	85

(h) **Vibration.** Operating or permitting the operation of any device which creates a vibration which annoys or disturbs at least two (2) or more reasonable persons of normal sensitivity who reside in separate residences (including apartments and condominiums) at or beyond the property boundary of the noise source. When the noise source is located on a public space or in the public right-of-way, the affected residence shall be located at least one hundred fifty (150') feet (forty-six (46) meters) from the *noise* source.

(i) **Motor vehicle noise limits.**

(1) **Motor vehicles.** It shall be the policy of the City to enforce those sections of the Vehicle Code of the State of California regarding motor vehicle noise limits and equipment violations which create noise problems, motor vehicle horns, sound levels emitted from off-highway vehicles operating off the public right-of-way, and successors thereof. Commercial maintenance equipment and machinery shall be equipped with proper mufflers and air-intake silencers in good working order.

5-28-114 Special variances.

(a) The Planning Commission is authorized to grant variances for exceptions from any provision of this chapter, subject to limitations as to area, noise levels, time limits, and other terms and conditions as the Planning Commission determines are appropriate to protect the public health, safety, and welfare from the noise emanating therefrom. This section shall in no way affect the duty to obtain any permit or license required by law for such activities.

(b) Any person seeking a variance pursuant to this section shall file an application with the Planning Commission. The application shall contain information which demonstrates that bringing the source of sound or activity for which the variance is sought into compliance with this chapter would constitute an unreasonable hardship on the applicant, on the community, or on other persons. The application shall be accompanied by a fee established by resolution of the City Council. A separate application shall be filed for each noise source; provided, however, several mobile sources under common ownership, or several fixed sources on a single property, may be combined into one (1) application. Notice of an application for a variance shall be published according to this Code. Any individual who claims to be adversely affected by the allowance of the variance may file a statement with the Planning Commission containing any information to support his claim. If at any time the Planning Commission finds that a sufficient controversy exists regarding an application, a public hearing will be held.

(c) In determining whether to grant or deny the application the Planning Commission shall balance the hardship of not granting the variance on the applicant, the community, and other persons against the adverse impact on the health, safety, and welfare of persons affected, the adverse impact on property affected, and any other adverse impacts of granting the variance. Applicants for variances and persons contesting variances may be required to submit such information as the Planning Commission may reasonably require. In granting or denying an application, the Planning Commission shall keep on public file a copy of the decision and the reasons for denying or granting the variance.

(d) Variances shall be granted by notice to the applicant containing all necessary conditions, including a time limit on the permitted activity. The variance shall not become effective until all conditions are agreed to by the applicant. Noncompliance with any condition of the variance shall terminate the variance and subject the person holding it to those provisions of this chapter for which the variance was granted.

(e) A variance shall not exceed three hundred sixty-five (365) days after the date in which it was granted. Applications for the extension of the time limits specified in variances or for the modification of other substantial conditions shall be treated like applications for initial variances under subsection (b) of this section.

14.4 Environmental Setting

14.4.1 Noise-Sensitive Land Uses

Sensitive land uses generally include those that where exposure to noise and vibration would be a nuisance, as well as uses where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both noise levels (interior and exterior) and vibration levels. Other sensitive land uses include schools, hospitals, convalescent facilities, parks, hotels, places of worship, libraries, and other uses where low noise and vibration levels are essential. Many, if not all, of these sensitive land uses can be found in the immediate vicinity of Proposed Program components throughout Modesto, the outlying service areas, and unincorporated Stanislaus County. While specific sensitive receptors may change or move over the life of the Proposed Program, Figure 11-3 in Chapter 11*, Hazards and Hazardous Materials,* shows the locations of schools, an existing sensitive receptor category, with respect to Proposed Program components.

14.4.2 Existing Noise and Vibration Sources

The Program study area covers a large area and dominant noise sources vary depending on location. In general, noise sources include industrial facilities (e.g., canneries), agricultural activities, railroads, air traffic (near the Modesto City-County Airport), and vehicular traffic, in particular near highways and major transportation corridors. Railroad lines operated by multiple companies and SR 99, 132, 108, and 219 create elevated ambient noise levels and pass through large portions of the study area. The Modesto City-County Airport's planning area boundary and noise contours overlap sections of the study area (Stanislaus County 2016b).

The Proposed Program components include new and/or improvements to storage tanks, groundwater wells and treatment, pipelines to replace and extend water mains, pumps, emergency generators, security enhancements, water meters, and other water related programs and studies. The noise environment varies across the study area and is described generally in the City's 2019 Final Master Environmental Impact Report for the Modesto General Plan Update (City of Modesto 2019b) referred to here as 2019 General Plan EIR), the noise section of which is incorporated by reference and summarized here. Table V-3-8 and Figure V-3-3 in the 2019 General Plan EIR show the projected traffic noise levels at General Plan buildout in 2040 generated by traffic, the airport, and the railroads. Stationary sources, such as industries, are discussed qualitatively.

As the City's 2019 General Plan EIR discusses, substantial noise increases (3 dBA Ldn or greater) would occur along multiple roadways under 2040 General Plan buildout conditions. Existing residential land uses are located within the projected 65 dBA Ldn noise contours under 2040 General Plan buildout conditions along most of these existing roadways. In addition to projected traffic noise increases along existing roadway segments, traffic noise levels would increase in areas adjacent to proposed future roadways and roadway extensions.

The specific Proposed Program components, in particular the water pipelines, would be located in almost all areas of the City and would be within the range of all noise levels indicated in the 2019 General Plan EIR.

Areas outside of the City's 2019 General Plan EIR scope (i.e., the Proposed Program's outlying water service areas), would have similar noise contour trends as described for the City, and as supported in the noise sections from the City of Turlock's General Plan EIR (City of Turlock 2012b) and the Stanislaus County General Plan EIR (Stanislaus County Airport Land Use Commission 2016). Elevated noise levels greater than 70 dBA Ldn occur along SR 99 and various arterial streets in both Turlock and unincorporated areas of Stanislaus County. Primary noise generators in these outlying service areas are related to roadways and vehicle traffic.

14.5 Impact Analysis

14.5.1 Methodology

Construction and operation impacts of all Program components were determined using a qualitative approach. The qualitative analysis uses distances to sensitive receptors, project information and design, and information provided by City of Modesto staff.

14.5.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on noise and vibration if it would:

- Expose persons to or generate a substantial temporary or permanent increase in ambient noise levels in the project vicinity in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Expose persons to or generate excessive groundborne vibration or groundborne noise levels;
- Substantially permanently increase ambient noise levels in the project vicinity above levels existing without the project;
- Substantially temporarily or periodically increase ambient noise levels in the project vicinity above levels existing without the project;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; or
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

The last criterion has been dismissed from this analysis because the Proposed Program does not include any components within the vicinity of a private airstrip; therefore, no impact would occur and this topic is not discussed further.

For the Proposed Program, the significance of noise effects is based on a comparison between predicted noise levels and noise criteria defined by Stanislaus County, the City of Modesto, the City of Ceres, and the City of Turlock. For the Proposed Program, noise impacts would be significant if existing or proposed noise-sensitive land uses would be exposed to noise levels in excess of the County of Stanislaus General Plan Noise Element (Stanislaus County 2016a),

Stanislaus County Municipal Code standards, City of Modesto General Plan Noise Element (City of Modesto 2019a), the City of Modesto Noise Ordinance, the Ceres General Plan 2035 Noise Element, the City of Ceres Noise Ordinance, the City of Turlock Municipal Code Noise Standards, or the City of Turlock General Plan Noise Element described in Section 14.3, "Regulatory Setting," or if implementing the Proposed Program would increase ambient noise levels at noise-sensitive land uses in excess of those described above.

The following considerations apply to the first four significance criteria:

- **Noise impacts from operation of Proposed Program facilities:** For all affected noise-sensitive uses, noise that would be generated by operation of proposed facilities would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses or if it would result in an increase of ambient noise levels by 10 dBA.

- **Noise impacts from increased daily traffic:** For all affected noise-sensitive uses, noise generated by an increase in daily traffic volumes caused by the Proposed Program would be significant if it would cause the overall exterior noise level to exceed the "normally acceptable" noise standard compatible with exterior land uses, exceed the interior noise standard, or result in an increase of ambient noise levels by 10 dBA.

- **Exposure of sensitive receptors to, or generation of, excessive vibration levels:** Short- and long-term vibration impacts would be significant if project construction or operation would result in the exposure of sensitive receptors to, or would generate, vibration levels that exceed Caltrans' recommended standard of 0.2-0.3 in/sec PPV for the prevention of structural damage to non-engineered timber and masonry or engineered concrete and masonry buildings or the FTA's vibration standards of 72 VdB regarding human response for residential uses (i.e., annoyance), or 65 VdB for human perception, at any nearby existing sensitive land uses.

- **Temporary, short-term noise impacts from construction:** Temporary, short-term noise impacts caused by construction are exempt from noise ordinances described in the Stanislaus County Municipal Code Specific Noise Source Standards Subsection E (Section 10.46.060, "Construction Equipment"), the City of Modesto Code Ordinances (Section 4-9.103, "Enumeration"), and the City of Turlock Municipal Code Noise Standards (Chapter 5-28, "Noise Standards"), since they will be conducted by a public agency and public utility. Program-related construction noise levels greater than the FTA significance threshold of 90 dBA at residential and noise-sensitive land uses would be considered to result in a temporary noise impact.

14.5.3 Environmental Impacts

Impact NOI-1: Expose Persons to Noise Levels in Excess of Standards Established in a Local General Plan or Noise Ordinance or in the Applicable Standards of Other Agencies (*Less than Significant with Mitigation*)

As described in Chapter 2, *Program Description,* construction activities would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m. excluding City-observed holidays. Nonetheless, since the construction timeframes and schedules for each individual CIP have not

yet been determined, future construction activities have potential to expose people (particularly residential receptors) to noise levels exceeding the above-listed timeframe and other standards in the local general plan and noise ordinances. This impact is considered significant. Construction of all WMP components would be required to follow applicable local laws and the City's contractor(s) would be required to adjust the times of construction accordingly. Stanislaus County and the City of Modesto, City of Turlock, and City of Ceres municipal codes contain some exemptions for noise from construction and maintenance activities performed by, or for, public utilities and facilities (e.g., a special exemption permit allowed by Modesto Municipal Code Section 4-9.103[b][6]).

With implementation of **Mitigation Measure NOI-1 (Employ Noise-Reducing Construction Practices)** and **Mitigation Measure NOI-2 (Limit Nighttime Construction Noise)**, the City's contractor(s) would be required to ensure that construction activities occur in a manner consistent with local noise standards when operating during allowable daytime hours outlined above. Therefore, this impact would be less than significant with mitigation.

Once construction is complete, WMP components involving new, upgraded, or replacement pipelines would not generate excess noise levels. However, operation of proposed tanks, wells, water pump stations, and emergency generators would generate ongoing noise levels in areas that could expose people to noise levels in excess of established noise levels without mitigation. The Proposed Program includes wells, emergency generators, and booster pump station components in residential areas of Modesto and the outlying service areas, and the operation of these facilities would generate noise. For the purpose of this analysis, it is assumed that a single pump with an engine rating of up to 100 horsepower (hp) would be used at each new wellhead. Based on the current Proposed Program description, all pumps would be powered by electric engines. Data provided by U.S. Electrical Motors for a 100-hp electric motor running under no load (Roughton pers. comm. 2000) indicate that the motor would produce a sound level of 56 dBA at 50 feet. To approximate the sound level produced under a load, 3 dB were added to the no-load condition for a resulting source level of 59 dBA at 50 feet. The distance needed for a source of this level to attenuate to the lowest County noise-level standards is 250 feet for 45 dBA (nighttime standard). Noise at sensitive receptors located closer than 250 feet to proposed well locations or pumps could exceed the threshold of significance.

In the event that propane- or natural gas–powered engines are used at some of the proposed CIP locations, the sound level of a similarly-sized pump operated by a propane-fueled reciprocating engine was calculated using the equations for reciprocating engines from Noise Control for Buildings, Manufacturing Plants, Equipment and Products (Hoover and Keith 1996). Based on these calculations, a 100-hp, propane-fueled engine would produce a sound level of 75 dBA at 50 feet. This sound level would represent the highest potential noise level from well pumping activities, or the worst-case scenario at the proposed well locations. The distances needed for a source of this level to attenuate to the lowest County noise-level standards is 1,250 feet for 45 dBA (nighttime standard).

Currently, the level of design detail for all proposed CIPs is not sufficient to conduct a quantitative noise analysis; thus, operational noise impacts for these components are conservatively considered to be significant. The preliminary analysis indicates that there is the potential for noise from engines at proposed facilities with the maximum horsepower rating to exceed County nighttime noise standards at residences located within 250 feet of electric engines, or within

1,250 feet of a propane powered engine. For sensitive receptors within Modesto, the noise standard allows a higher exposure level, and the residences could be located closer than 250 feet. This impact is considered potentially significant. With implementation of **Mitigation Measure NOI-3 (Employ Noise-Reducing Methods during Operations)** this impact would be reduced to a less-than-significant level.

Overall Conclusion

Considering the WMP components as a whole, while construction-related noise impacts would be reduced to a less-than-significant level with implementation of Mitigation Measures NOI-1 and NOI-2. Design details and specific locations for some components (e.g., wells, emergency generators, booster pump stations) have not yet been developed such that a quantitative operational noise analysis can be conducted at this time. Implementation of Mitigation Measure NOI-3 would ensure that noise-reducing design measures are incorporated into the design of these components. In conclusion, implementation of Mitigation Measures NOI-1, NOI-2, and NOI-3 would reduce noise levels associated with the Proposed Program's construction and operation, and noise levels would not be in excess of standards established in the relevant noise ordinances and policies. Therefore, this impact would be **less than significant with mitigation**.

Mitigation Measure NOI-1: Employ Noise-Reducing Construction and Maintenance Practices.

The following measures will be implemented by the City or its contractor to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected:

- locating stationary equipment as far as practical from noise-sensitive land uses,
- using electrified or otherwise quieter equipment when practical,
- using sound-control devices on equipment that are more effective than devices originally provided on the equipment,
- using noise-reducing enclosures around noise-generating equipment, and
- installing temporary barriers between noise sources and noise sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission.

When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.

Mitigation Measure NOI-2: Limit Nighttime Construction Noise.

The City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays or that the project has received a variance or special permit following procedures outlined in the applicable noise ordinance to operate outside of these hours.

Mitigation Measure NOI-3: Employ Noise-Reducing Methods During Operations.

The City will implement noise-reducing methods so that noise from well operations and emergency generators does not exceed County noise-level standards at adjacent residences. Example measures may include but are not limited to:

- using sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available.
- locating stationary equipment as far as practical from noise-sensitive land uses,
- using electrified or otherwise quieter equipment when practical,
- using sound-control devices on equipment that are more effective than devices originally provided on the equipment,
- installing permanent barriers between noise sources and noise-sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission, and
- limiting operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.

Impact NOI-2: Expose Persons to Excessive Groundborne Vibration or Groundborne Noise Levels (*Less than Significant with Mitigation*)

Construction activities associated with the operation of heavy equipment may generate localized groundborne vibration. Vibration from non-impact construction activity is typically below the threshold of perception when the activity is more than about 50 feet from the receptor. Impact construction activity, including the use of compactors, jackhammers, and similar equipment, may be perceived hundreds of feet away and can cause damage to susceptible buildings located over 100 feet away. Loaded trucks, a substantial source of construction-related vibration, would likely be used during construction of Proposed Program-level components, which would involve travel along residential roads in Modesto and the outlying service areas. These trucks can generate vibration above the annoyance and human perception thresholds at distances up to 73 and 125 feet respectively.

As a result, vibration effects on sensitive receptors would be significant. Implementation of **Mitigation Measure NOI-4 (Implement Vibration Reduction Measures)** would reduce construction-related impacts from vibration to a less-than-significant level.

Operational noise would be generated from mechanical equipment such as pumps, emergency generators, and maintenance vehicle trips. This type of activity would generate vibration levels that are much lower than the levels generated during construction. Because of the distance between the operating equipment and nearby sensitive receivers, vibration levels would result in a less-than-significant noise impact during operation.

Given the temporary nature of vibration resulting from construction activities and the implementation of Mitigation Measures NOI-4, this impact would be **less than significant with mitigation.**

Mitigation Measure NOI-4: Implement Vibration Reduction Measures.

The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors:

- Ensure proper tuning of vibration-causing equipment.
- Use vibration damping devices to the extent feasible.
- Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings.
- Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible.
- Use electric stationary equipment (e.g., generators) where feasible.
- Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment, particularly if construction activities are conducted after 7:00 pm. For all construction activities occurring within 60 feet of residences at any time of day, install a temporary noise and vibration barrier between the project site and the nearest sensitive receptors. Following the completion of construction activities within that distance, the barrier will be removed.

Impact NOI-3: Substantial Temporary, Periodic, or Permanent Increase in Ambient Noise Levels in the Project Vicinity Above Levels Existing Without the Proposed Program (*Less than Significant with Mitigation*)

Temporary and periodic increases in noise levels associated with the Proposed Program's construction activities, periodic maintenance activities, and associated periodic truck traffic, would increase ambient noise levels above the ambient noise levels existing without the Proposed Program. However, implementation of Mitigation Measure NOI-1, which includes several construction noise-reducing measures, would reduce short-term noise impacts to a less-than-significant level.

Operation of proposed tanks, wells, pipelines, water pump stations, and emergency generators would generate ongoing noise levels in areas that could expose people to substantial permanent increases in noise levels. The Proposed Program's components would be located near or in residential areas of Modesto, Ceres, Del Rio, and Turlock. As indicated in Impact NOI-1, implementation of Mitigation Measure NOI-3 would reduce potential operation-related noise levels such that the proposed components would not result in noise levels exceeding the relevant thresholds (a CNEL exterior noise levels shown in Table 14-4 or 3-dB increase if existing levels are above the ambient noise level), and thereby ensure that operation of new and upgraded facilities would not result in substantial permanent increases in noise levels. In conclusion, the Proposed Program's effects on ambient noise levels would be **less than significant with mitigation**.

Impact NOI-4: Expose People Residing or Working in the Study Area to Excessive Noise Levels Associated with a Public Airport (*Less than Significant*)

The Modesto City-County Airport's planning area boundary and noise contours overlap sections of the Program study area (Stanislaus County Airport Land Use Commission 2016). However, the Program components within areas affected by airport-related noise (i.e., the CNEL noise zones policy areas shown in the Noise Zones Policy Map for Modesto City-County Airport [Stanislaus County Airport Land Use Commission 2016]), would be limited to upgraded or replaced tanks, well sites, emergency generators, booster pump stations, and pipelines. These types of components would not require workers to be onsite during operation, and thus would only result in temporary exposure of City employees or contractors to airport-related noise exclusively during temporary construction and maintenance activities. Therefore, since no sensitive receptors would be located in the airport noise impact zones once any construction activities are complete, this impact would be **less than significant.**

Chapter 15
POPULATION AND HOUSING

15.1 Overview

This section describes the Proposed Program's impacts related to population and housing. The environmental setting and impact analysis for population and housing were developed through a review of:

- *Stanislaus County General Plan* (2016a) and Housing Element (2016b);
- City of Modesto Urban Area General Plan (2019) and Housing Element (2017);
- *Turlock General Plan* (2012) and Housing Element (2016);
- Del Rio Community Plan (1992) and Salida Community Plan (2007);
- California Department of Finance's (DOF's) City and Unincorporated Areas Estimates documents (DOF 2016, 2017); and
- U.S. Census Bureau American Fact Finder (2010a–c, 2015a–f, and 2016).

15.2 Regulatory Setting

There are no federal or state laws, regulations, and/or policies that are applicable to the Proposed Program. The following section describes local population and housing laws, regulations and/or policies that would be applicable to the Proposed Program.

15.2.1 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan* (Stanislaus County 2016a) contains the following goals and policies related to population and housing.

Land Use Element

Goal One. Provide for diverse land use needs by designating patterns which are responsive to the physical characteristics of the land as well as to environmental, economic, and social concerns of the residents of Stanislaus County.

Policy Five. Residential densities, as defined in the General Plan, shall be the maximum based upon environmental constraints, the availability of public services, and acceptable service levels. The densities reflected may not always be achievable and shall not be approved unless there is proper site planning and provision of

suitable open space and recreational areas consistent with the supportive goals and policies of the General Plan.

Implementation Measure

1. Residential development shall not be approved at the maximum density if: (1) it threatens riparian habitat; (2) growth-limiting factors such as high water table, poor soil percolation, geological fault areas, and airport hazard areas exist; (3) development is in a designated floodway or does not meet the requirements of Chapter 16.50 of the County Code; (4) it conflicts with the Airport Land Use Compatibility Plan; (5) there is lack of, or inadequate, sanitary sewer or public water service; or (6) environmental impacts, including traffic, cannot be mitigated.

Policy Six. Preserve and encourage upgrading of existing unincorporated urban communities.

Housing Element

Goal Four. Designate sufficient sites for all types of residential development required to meet projected housing needs.

Policies

The County shall identify unincorporated areas with adequate infrastructure and limited environmental concerns that are most suited for housing, especially lower-cost and higher-density housing.

The County shall identify specific methods and provide assistance to improve infrastructure in residential areas (Stanislaus County 2016b).

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (2019) implements a community growth strategy that emphasizes policies regulating the quality, quantity, and direction of urban growth. These policies have resulted in a compact urban form, with few infill parcels remaining, neighborhoods offering a diversity of housing types and higher-than-average densities, and a geographic balance with new growth occurring on all sides of the community. The Urban Area General Plan recognizes that, while significant public facility deficiencies may result from these policies in the short term, their resolution is still deemed manageable over the long term.

Policy II.A.3. Development Follows Annexation

Annex residential growth and development within the Modesto Urban Area General Plan boundary before development occurs.

Policy II.A.4. Direct Growth Inward

Direct urban growth to areas currently served with City services.

Goal II.B. Development Priorities and Financing

Establish priority areas for new development and identify reasonable and certain financing for capital projects consistent with applicable City policies and standard operating procedures.

Policy II.B.1. Priority Development Areas

Support new development with infrastructure developed in accordance with the established Capital Improvement Program priority areas of Downtown, Kiernan Business Park, the Tivoli Specific Plan area and the South Modesto Industrial Park (north of Whitmore Ave. between Crows Landing Rd. and Morgan Rd.).

Policy II.B.3 Funding Capital Improvements

Increase and improve capital projects over time through maintaining or enhancing existing funding sources, maximizing joint-use efficiencies, and strategically prioritizing capital investments.

Policy II.C.3 Unincorporated "Island" Annexations

Annex unincorporated County islands, generally located in the south and west areas of Modesto, into the City limits only after a Public Improvement Agreement (PIA) is established between the City and County. Certain conditions contained within the PIA, such as those regarding funding and construction of infrastructure systems, must be satisfied prior to annexation.

The PIA establishes the infrastructure systems that must be constructed, which typically include water, wastewater, storm drainage, fire hydrants, streets and streetlights. Other infrastructure components may be necessary on an area-by-area basis. The PIA also documents the applicable tax-share agreement between the City and County, and certain other project-specific details.

Housing Element 2015-2023

The *City of Modesto Housing Element 2015-2023* (City of Modesto 2017a) is an element of the General Plan that aims to develop a coordinated and comprehensive housing strategy that promotes the production of safe, decent, and affordable housing within the community. The Housing Element identifies strategies and programs that focus on matching housing supply with need, maximizing housing choice throughout the community, assisting in the provision of affordable housing, removing governmental and other constraints to housing investment, and promoting fair and equal housing opportunities. Chapter 2, *Program Description,* of this document provides an analysis of the City's demographics, housing characteristics, and existing and future housing needs.

City of Ceres General Plan

The following policies from the *City of Ceres General Plan* (1997) related to population and housing are listed below.

Goal 1.B. To grow in an orderly pattern consistent with economic, social and environmental needs, maintaining Ceres' small-town character and preserving surrounding agricultural lands.

Policy 1.B.1. The City shall ensure that land is designated for development consistent with needs of the community and to maintain a positive fiscal balance for the City.

Policy 1.B.3. The City shall ensure that future development occurs in an orderly sequence based on the logical extension of public facilities and services.

2014-2023 Housing Element

The City of Ceres 2014-2023 Housing Element (City of Ceres 2016) does not identify specific policies or regulations related to population and housing.

Del Rio and Salida Community Plan

The Del Rio Community Plan (Stanislaus County 1992) and Salida Community Plan (Stanislaus County 2007), which were both incorporated into the *Stanislaus County General Plan*, do not identify specific policies or regulations related to population and housing.

City of Turlock 2012 General Plan

The Turlock General Plan (City of Turlock 2012) identifies the following policies related to population and housing:

Policy 2.5-c: Infill and existing neighborhoods. Preserve the scale and character of existing neighborhoods while allowing and encouraging appropriate infill development.

Policy 2.5-e: "No net loss" of housing. Do not allow development at less than the minimum density prescribed by each residential land use category, without rebalancing the overall plan to comply with the "no net loss" provisions of State housing law.

2015-2023 Housing Element

The City of Turlock 2015-2023 Housing Element (City of Turlock 2016) identifies the following objective and policy related to population and housing.

Objective 5-2: Reduce the incidence of displacement.

Policy 5-2-1: In development of public projects, require an analysis of potential displacement of existing residences with an emphasis on minimizing both temporary displacement and relocation.

15.3 Environmental Setting

15.3.1 Population

Stanislaus County

In 2010, Stanislaus County had a population of approximately 514,453 (Stanislaus County 2016a as cited in Stanislaus County 2016b). As of January 1, 2015, the total County population rose to 532,297, of which the unincorporated areas accounted for 113,772 persons (Stanislaus County 2016b). Population growth by 2025 is projected to reach over 637,000 according to the Stanislaus Council of Governments (StanCOG), which represents an approximately 20 percent increase from the County's 2015 population estimate with the majority of growth projected to occur in incorporated cities (City of Modesto 2017a). **Table 15-1** provides a breakdown of past population estimates and future projections from 2015 through 2050 for Modesto, Del Rio, Salida, Empire, Grayson, Turlock, and the total unincorporated Stanislaus County.

Modesto

Modesto is the largest city in Stanislaus County. Since 1990, the City has grown by an estimated 21.6 percent from 164,730 in 1990 to 210,341 as of 2015 (California Department of Finance 2015 as cited in City of Modesto 2017a; StanCOG 2016). Between 2000 and 2010, the population growth rate declined as the City's population grew at an average annual rate of 0.6 percent from about 188,900 to 201,165. More recent projections estimate that the City's population was at 211,903 in 2016, which represents a 0.9 percent increase from 2015 (California Department of Finance 2016).

Del Rio

The community of Del Rio had a population of approximately 1,925 persons in 2015, which is an increase from a population of 1,186 in 2010 (U.S. Census Bureau 2015a, 2010a). The community's largest population by age group are people ranging from 55 to 59 years. This group accounted for approximately 20.7 percent of the total population in 2015 (U.S. Census Bureau 2015a). Del Rio is within the jurisdiction of unincorporated Stanislaus County.

Salida

The community of Salida, within unincorporated Stanislaus County, is located along the northwestern border of the City of Modesto and in the northern/central part of the County. The Salida community had an estimated population of 14,625 in 2010 and declined to 13,501 persons in 2015 (U.S. Census 2015b, 2010b). The largest population age groups for the community are adolescents from 10 to 14 years of age (11.1 percent) and 15 to 19 years of age (10.3 percent). In 2007, the County's general plan included a new Salida Community Plan, which projected a residential buildout of a total of 5,000 new dwelling units. The construction of these units would result in the projected local population to increase by an additional 15,063 persons. However, future development within the Community was placed on hold due to the economic crisis (Stanislaus County 2016b). Therefore, it is unknown how many of these new dwelling units have been completed and how much the population may have altered from the 2015 estimates.

Table 15-1. Population Growth Trends for the Cities of Modesto, Ceres, Turlock, and Unincorporated Stanislaus County Communities and Areas

Jurisdiction	2015	2020	2025	2030	2035	2040	2045	2050	Change (2015–2050)	
									Number	Percent Change
Modesto	210,341	220,865	232,622	244,662	256,545	268,176	279,460	290,555	+80,214	27.6

*Source: StanCOG 2016; *Stanislaus County 2016b*

Empire

The community of Empire is located adjacent to Modesto's eastern boundary and is an unincorporated community of Stanislaus County (Stanislaus County 2016b). The Community had an estimated population of 4,394 in 2015 and is projected to grow by 1,796 persons into 2050 (StanCOG 2016). Empire's most common age group in 2015 was 25 to 34 years, which accounted for an estimated 15.4 percent of the entire population. People from ages 35 to 44 years accounted for the second largest percentage of the population at an estimated 12.5 percent (U.S. Census Bureau 2015c).

Grayson

Grayson is an unincorporated community in Stanislaus County (Stanislaus County 2016b). Grayson had an estimated population of 983 in 2015, and is projected to increase by approximately 271 persons by 2050 (StanCOG 2016). The most populous age group within this community was people from 25 to 34 years of age in 2015, accounting for an estimated 25.3 percent of the total population. (U.S. Census Bureau 2015d).

Turlock

The total population in the City of Turlock was estimated at 72,229 persons in 2015, an increase from an estimated population of 68,549 in 2010 (Stanislaus County 2016b). In 2015, the most populous age group within the City was people between 25 and 34 years of age (14.3 percent). The second most populous group was people between 35 and 44 years of age (13.3 percent) (U.S. Census Bureau 2015e). Population counts as of 2016 were estimated at 72,796 (U.S. Census Bureau 2016).

Ceres

The City of Ceres had an estimated population of 47,754 as of January 2017 (DOF 2017). The City's projected population for the year 2050 is projected to increase from the current population by an estimated 23,021 persons (StanCOG 2016).

15.3.2 Housing

Housing availability within the unincorporated portions of Stanislaus County is limited for the number of employed persons that work in the county. Based on 2010 estimates, the housing to jobs ratio was 0.54, with 68,086 employed jobs to just 36,684 housing units available. The housing to jobs ratio is projected to decrease steadily through 2030, and is projected to decline to 0.47 by then (StanCOG 2040 Demographic Forecast, as cited in Stanislaus County 2016b). However, the number of new homes permitted is increasing steadily, with 420 new homes being permitted in 2014 compared to 244 in 2010. **Table 15-2** shows housing unit growth trends for following cities and/or communities from 2015 to 2050: Modesto, Del Rio, Salida, Empire, Turlock, Grayson, and Ceres.

Table 15-2. Housing Unit Growth in Modesto, Ceres, Turlock, and Unincorporated Stanislaus County Communities (2015–2050)

City	2015	2020	2025	2030	2035	2040	2045	2050	Change (2015–2050)		
									Numerical	Percent Change	Average Annual Percent Change
Modesto	72,897	77,383	81,861	86,253	90,184	94,105	97,742	101,314	+28,417	28.0	+0.8
Del Rio	512	544	576	607	635	663	689	714	+202	28.2	+0.8
Salida	4,298	4,730	5,161	5,584	5,962	6,340	6,690	7,034	+2736	38.9	+1.1
Empire	1,287	1,371	1,456	1,539	1,614	1,688	1,756	1,824	+537	29.4	+0.8
Grayson	260	271	283	294	304	314	324	333	+73	21.9	+0.6

Ceres	13,577	14,624	15,670	16,695	17,613	18,528	19,377	20,211	+6,634	32.8	+0.9
Totals	**117,082**	**124,924**	**132,755**	**140,434**	**147,308**	**154,164**	**160,523**	**166,768**	--	--	--

* Housing unit estimates in 2015 by the U.S. Census Bureau and by the Stanislaus Council of Governments (StanCOG) (see table 15-2) differ slightly. However, the U.S. Census Bureau gives their estimate a margin of error of +/-84, which contains StanCOG's estimated count of 1,351 (U.S. Census Bureau 2015c; StanCOG 2016). 2015 housing unit estimates from StanCOG were used in Table 15-2 in order to maintain consistency with the document's projected forecast values.

Source: StanCOG 2016

Modesto

The City of Modesto makes up the largest portion of housing in the County with approximately 75,816 units as of 2017 (DOF 2017). As of 2016, the approximate housing vacancy rate was approximately 6.7 percent with about 70,613 units occupied of a total 75,715 units in the City. The average household size was 2.96 persons (DOF 2017).

Del Rio

The community of Del Rio is considered to be an upscale community within Stanislaus County. This community has a potential dwelling capacity of 156 units that can be built on the available vacant parcels (Stanislaus County 2016b). As of 2015, there were approximately 630 total housing units with a margin of error of +/-131 within the community, all of which are occupied (U.S. Census Bureau 2015f).

Salida

The community of Salida is considered to have a diverse mix of residential land uses and housing types with a wide range of prices (Stanislaus County 2016b). In 2007, the County's general plan included a new Salida Community Plan, which projected a residential buildout of a total of 5,000 new dwelling units. 2,754 of these units would be Low Density, while 1,306 would be Medium Density and 940 for Medium-High Density. Medium-Density lot sizes would be between 2,000 and 3,000 square-feet compared to the County's traditional minimum of 6,000 square-feet. This would allow the community to accommodate a greater capacity of small-lot single-family dwelling units (Stanislaus County 2016b). During the economic housing crisis, 1 in every 724 dwelling units was considered to be in an active state of foreclosure (Realtytrac 2014 as cited in Stanislaus County 2016b). This crisis particularly affected the implementation of the Salida Community Plan, resulting in a temporary hold on development until the economic climate improves (Stanislaus County 2016b).

Empire

The Community of Empire had an estimated housing unit count of 1,333 in 2015. 40 of these units were considered vacant, accounting for a vacancy rate of 3.0% (U.S. Census 2015g). This number is down by 5.4 percent from the vacancy rate in for the Community in 2010 (8.4 percent). However, the number of total housing units decreased by 14 units since then (U.S. Census 2010c).

Grayson

The Community of Grayson had a total of 260 housing units in 2015 with a projected growth of 73 additional units through 2050 (StanCOG 2016).

Turlock

The City of Turlock had a total of 24,896 housing units as of January, 2017. Out of these homes, 23,165 were occupied, resulting in a vacancy rate of 7.0 percent (DOF 2017). Housing growth projections estimate an 11,087-unit increase to 35,338 by 2050 (StanCOG 2016).

Ceres

For the City of Ceres, the total number of housing units compared to Modesto were significantly less, totaling 13,807 in 2017. This is a 134- unit increase from 2010 estimates, which determined the number of households to be 13,673 (DOF 2017). The vast majority of housing stock is single-family units, which comprised approximately 76 percent of the City of Ceres' stock in 2014 (City of Ceres 2016).

15.3.3 Workforce

Employment numbers in Stanislaus County were projected to reach 171,375 jobs by 2015 (Caltrans 2015). Similarly, projected job growth is projected to rise to 236,749 jobs by 2040. As of 2015, the unemployment rate was 10.4 percent, ranking 45th out of the state's 58 counties. This number is projected to decrease to 7.8 percent by 2020. **Table 15-3** presents a more in-depth projection of employment numbers for the County between 2015 and 2040.

Table 15-3. Economic Forecast for Stanislaus County (2015–2040)

	2015	2020	2025	2030	2035	2040
Population[1] (people)	534,605	559,097	585,812	612,925	637,626	658,010
Employment[2] Growth (jobs)	171,375	184,250	197,125	209,999	222,874	236,749
Unemployment[3] Rate (percent)	10.4	7.8	7.8	7.6	7.5	7.1

Sources: [1,3] Caltrans 2015, [2] City of Modesto 2016a

Unincorporated Stanislaus County

Total employment in the unincorporated portions of Stanislaus County, which includes the communities of Del Rio, Salida, Grayson and Empire, was approximately 68,086 employees in 2010. This number increased by 4,439 employees by 2015, reaching 72,525 total employees. Growth projections predict that employment numbers will continue to increase through 2040, reaching 94,721 total employees by 2040. Based on these projections, the projected annual percent increase in employment is 2.8, or approximately 634 employees per year, up to 2040 (City of Modesto 2017a).

Modesto

Employment numbers for the City of Modesto totaled approximately 56,000 in 2015. This number is projected to increase to approximately 59,250 by 2020 and 62,500 employees by 2025. From 2010 to 2040, the number of jobs within the City is projected to increase by 0.91 percent annually (StanCOG, 2014 RTP Appendix J, as cited in City of Modesto 2017a). In contrast, unemployment rates in 2015 dropped to 7.4 percent, compared to a 10.5 percent unemployment rate in 2014 (City of Modesto 2017a). The majority of jobs in the City are in the service industry (39.7 percent of the occupational distribution). The second highest ranking of jobs are in the sales and office

industry, comprising 22.3 percent of the City's jobs. The construction and extraction industry makes up 6.3 percent of jobs in the City, while production and transportation account for 15.5 percent (2013 U.S. Census as cited in City of Modesto 2017a).

Turlock

The City of Turlock's most recent total employment count was approximately 28,635 employed persons as of 2013, accounting for approximately 14.1 percent of employment within Stanislaus County. The City's major sectors of employment in 2013 were health care and social assistance, accounting for an estimated 15 percent of the City's workforce, manufacturing (13 percent), retail/trade (12 percent) and educational services (12 percent). In total, these sectors accounted for approximately 40 percent of the total jobs in Turlock (2013 American Community Survey, as cited in City of Turlock 2016). The City's unemployment rate reached a 10-year high in 2010 at 13.3 percent, but have slowly dropped off since then. In 2014, the unemployment rate was recorded at 10.1 percent (U.S. Bureau of Labor Statistics as cited in City of Turlock 2016).

15.4 Impact Analysis

15.4.1 Methodology

The methods for this analysis included a review of relevant documents, statistics, and policies about the City of Modesto, Turlock, Ceres and Stanislaus County's housing and employment data. The evaluation is based on the Proposed Program's effects on housing and population in Modesto, Turlock, Ceres, Grayson, Del Rio, and Stanislaus County.

15.4.2 Criteria for Determining Significance

Based on the State CEQA Guidelines Appendix G Environmental Checklist, the Proposed Program would result in a significant impact with regard to population and housing if it would:

- Induce substantial population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure);
- Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere; or
- Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

15.4.3 Environmental Impacts

Impact PH-1: Induce Substantial Population Growth, Both Directly and Indirectly, during Construction (*Less than Significant*)

WMP improvements would not directly or indirectly induce substantial population growth during construction. Construction of each improvement would be temporary and the overall implementation of the WMP would be phased over a period of 35 years. As described in Section 15.3, *Environmental Setting*, above, the construction/extraction industry in the City accounts for

roughly 6.3 percent of the City's work force (2013 U.S. Census, as cited in City of Modesto 2017a). Additional construction staff can also be obtained from neighboring cities throughout the County, the Central Valley, or the San Francisco Bay Area if needed. As such, there is sufficient availability of local existing construction companies and staff to support construction of proposed improvements. Construction crews would be capable of commuting to and from the project sites throughout the time that project construction activities would occur. Therefore, an increased demand for housing to accommodate these workers would not occur due to construction. As a result, this impact would be **less than significant.**

Impact PH-2: Displace Substantial Numbers of People or Existing Housing, Necessitating the Construction of Replacement Housing Elsewhere (*Less than Significant*)

The Proposed Program involves construction of various CIPs in the cities of Modesto, Turlock, and Ceres, and in communities and areas of unincorporated Stanislaus County. The locations of all wells, booster pump stations and storage tanks have not been finalized, but the City would generally avoid using sites with existing housing for its proposed CIPs. In addition, due to the relatively small number of proposed well or tank CIPs, the extended period over which these CIPs might be constructed, and the available vacant housing in the Program vicinity, even if removal of housing were required, construction of these facilities would not displace a substantial number of people or housing.

Proposed future or buildout pipelines and existing system pipeline improvements would occur within the limits of city or County right-of-way boundaries to the extent feasible. As such, these improvements would not displace existing homes or people. Any roadways that require trenching would be returned to pre-construction conditions after construction, and crews may close one lane of traffic temporarily during pipeline installation if needed. As a result, residents who use these roads to access their homes would not be displaced from their homes during construction; traffic-related impacts of construction are analyzed in Chapter 16, *Transportation and Traffic*.

For these reasons, it is unlikely that the construction of the Proposed Program's infrastructure would be built on lands with substantial housing units or result in the displacement of substantial numbers of people or houses. As a result, this impact would be **less than significant.**

Impact PH-3: Long-term Inducement of Substantial Population Growth, Both Directly and Indirectly (*Less than Significant with Mitigation*)

As noted above, the Proposed Program includes upgrading the City's groundwater treatment, and water storage and distribution systems to provide improved water service to the City's contiguous and outlying service areas. The Program would not directly induce growth as it does not entail construction of new housing. However, by upgrading the treated water distribution system to deliver more water, it would remove an obstacle to planned development that would support population growth. Although this growth would be consistent with projected growth evaluated in adopted general plans, such growth could not occur without the proposed water system improvements addressed in this EIR.

As summarized in Section 15.3, "Environmental Setting," above, between 2015 and 2050, the City's population is projected to grow from 210,341 to 290,555 at an annual average growth rate

of 0.8 percent (StanCOG 2016). Population growth is also projected in the cities of Turlock and Ceres as well as the unincorporated communities of Del Rio, Salida, Grayson, and Empire. The contiguous service area projections are presented in **Table 15-4** (City of Modesto 2017b).

Based on the estimates provided above, the total population increase within the total contiguous and outlying service areas is estimated to increase by 134,407 people between 2015 and 2050 (City of Modesto 2017b). This accounts for all growth within all of the cities and communities where the Proposed Program improvements will be made.

New growth facilitated by the Proposed Program would result in associated physical environmental impacts; this could include aesthetic effects, conversion of farmland, air pollutant and greenhouse gas emissions, conversion of habitat, impacts on cultural or tribal cultural resources, increased point source or nonpoint source water pollution, use and possible releases of hazardous materials, noise, traffic, additional demands for public services and utilities such as police protection, fire protection, schools, parks, wastewater treatment, solid waste disposal, and energy.

Growth-inducing and secondary impacts are addressed by the policies of general plans and community plans of Stanislaus County, Modesto, Del Rio, Salida, Empire, Turlock and Ceres. These policies ensure that development within the planned growth areas occur as demand arises and services are available, and that utilities are sized appropriately to serve such development. The general and community plans mitigate for impacts through advanced planning and the implementation of growth management strategies, the provision of adequate public services and utilities such as treated water distribution, wastewater collection, and the protection of open space and habitat areas.

In conclusion, proposed improvements to the City's water distribution and storage system would remove an obstacle to urban development and population growth within the Program area. This development would occur in accordance with general plans and thus would not result in unplanned or disorderly growth. Nevertheless, the Program would remain growth-inducing and the impacts of growth inducement, and the secondary environmental effects of induced growth, are considered significant.

The policies contained in general and community plans, in particular Policy No. V.C.4[b], as well as the mitigation measures contained in this DEIR, would reduce the secondary effects of growth to a level of insignificance. Individual development improvements would be required to comply with CEQA, which may result in additional mitigation for growth and its effects. For these reasons, this impact is considered **less than significant with mitigation**.

Table 15-4. Projected Population for the City's Water Service Area

Year	Contiguous Service Areas				Outlying Service Areas				Total Contiguous Service Area[1]	Total Contiguous and Outlying Service Areas[2]
	City of Modesto	Salida	Empire	North Ceres (Bystrom)	Del Rio	Ceres (Walnut Manor)	Grayson	Turlock (Portions)		
2015	218,375	13,750	4,189	4,008	1,021	154	960	1,146	255,906	259,187
2020	232,943	14,667	4,189	4,008	1,233	154	996	1,146	271,392	274,920
2025	248,483	15,646	4,189	4,008	1,444	154	1,032	1,146	287,910	291,686
2030	265,060	16,690	4,189	4,008	1,656	154	1,068	1,146	305,531	309,555
2035	282,743	17,803	4,189	4,008	1,868	154	1,104	1,146	324,327	328,599
2040	301,605	18,991	4,189	4,008	2,079	154	1,140	1,146	344,377	348,896
2045	321,726	20,258	4,189	4,008	2,291	154	1,176	1,146	365,765	370,352
2050	343,189	21,609	4,189	4,008	2,502	154	1,212	1,146	388,579	393,594

Notes:

[1] The Total Contiguous Service Area population includes the population of the contiguous communities shown above as well as the populations of Bret Harte, Shackelford, and West Modesto, which are county areas served by the City. The Bret Harte, Shackelford, and West Modesto communities are built out and have populations, respectively, of 5,152, 4,750, and 5,682.

[2] The Total Contiguous and Outlying Service Area populations includes the contiguous and outlying service area populations of the communities shown above as well as the additional communities Bret Harte, Shackelford, and West Modesto in the contiguous service area.

Chapter 16
TRANSPORTATION

16.1 Overview

This chapter evaluates impacts of the Proposed Program on transportation and traffic. Impacts are evaluated in light of existing laws and regulations governing transportation and traffic, and in consideration of the goals and policies in applicable jurisdiction's general plans; the existing roadway system and transportation infrastructure are described; and the impacts of the Proposed Program are analyzed.

The following sources of information were used in preparing this chapter:

- Transportation Research Board's *Highway Capacity Manual* (HCM) (Transportation Research Board 2000, 2010);
- *City of Modesto Urban Area General Plan* (City of Modesto 2019a) and EIR (City of Modesto 2019b);
- *Stanislaus County General Plan* (Stanislaus County 2016);
- *Ceres General Plan 2035* (2018);
- *Turlock General Plan* (2012); and
- Congestion Management Process for the Stanislaus County Region (StanCOG 2010).

16.1.1 Transportation and Traffic Terminology

The following are definitions of key transportation and traffic terms used in this section, based on the HCM (Transportation Research Board 2000).

Level of Service. The level of service (LOS) is a qualitative measure describing operational conditions within a traffic stream, based on service measures, such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience.

Peak hour LOS for roadway segments in Modesto is evaluated by comparing the traffic volume with its vehicle capacity (the volume-to-capacity ratio) and correlating the result to a letter grade to represent the levels of congestion, as follows (Fehr & Peers, pers. comm., 2018):

1. LOS A: free flow, low traffic volumes, and drivers can maintain their desired speed with little to no delay. Volume-to-capacity ratio: 0.6 or less.
2. LOS B: stable flow, operating speeds beginning to be restricted by traffic conditions. Volume-to-capacity ratio: 0.61 to 0.7.
3. LOS C: stable flow, but speeds and maneuverability are more closely controlled by higher volumes. Volume-to-capacity ratio: 0.71 to 0.8.

4. LOS D: approaching unstable flow; tolerable operating speeds which are, however, considerably affected by operating conditions. Volume-to-capacity ratio: 0.81 to 0.9.
5. LOS E: unstable flow with yet lower operating speeds and stoppages of momentary duration. Volume-to-capacity ratio: 0.91 to 1.0.
6. LOS F: stopped flow, which may occur for short or long periods. These conditions usually result when vehicles are blocked by a restriction downstream. Volume-to-capacity ratio: greater than 1.0.

Daily levels of service are calculated based on the per-lane volume threshold for each level of service capacity as presented in **Table 16-1**.

Table 16-1. Per-Lane Roadway Segment Capacities

Type of Roadway Segment	Hourly Capacity[a,c]	Daily Volume Threshold[b,c]				
		LOS A	LOS B	LOS C	LOS D	LOS E
Freeway Mainline	2,000	8,000	12,750	18,750	23,130	25,000
Expressway – Class A	1,500	5,630	9,380	13,120	15,750	18,750
Expressway – Class B	1,250	4,690	7,820	10,940	13,130	15,630
Expressway – Class C	1,000	3,750	6,250	8,750	10,500	12,500
Principal Arterial (6 lanes)	850	3,190	5,320	7,440	8,930	10,630
Minor Arterial (4 lane facility with center left-turn lane)	925	810	2,190	3,930	6,820	11,560
Minor Arterial (4 lanes)	750	660	1,780	3,190	5,530	9,380
Minor Arterial (2 lane facility with center left-turn lane)	925	810	2,190	3,920	6,820	11,560
Major Collector (4 lane facility)	700	2,450	4,110	5,780	6,910	8,750
Downtown Collector	700	2,450	4,110	5,780	6,910	8,750
Minor Collector (2 lane facility with center left-turn lane)	925	810	2,1900	3,930	6,820	11,560
Minor Collector (2 lanes)	650	570	1,540	2,760	4,800	8,130
Local Roadway	500	440	1,190	2,130	3,690	6,250
Rural Road	900	790	2,140	3,830	6,640	11,250

a. Vehicles per through lane per hour.
b. Vehicles per lane per day. Peak hour capacity 8 percent of daily capacity based on a review of peak hour to daily counts on over 200 roadway segments in the City.
c. Hourly and daily calculated based on the method presented in the Highway Capacity Manual (HCM) (Transportation Research Board 2010). LOS is assessed based on the volume in relationship to the capacity threshold. For example, a freeway lane carrying 18,700 vehicles on a daily basis would be classified as LOS C as it is between the LOS B and LOS C threshold; if the volume was 19,000 vehicles a day, it would be classified as LOS D.

Source: Fehr & Peers, pers. comm., 2018.

16.2 Regulatory Setting

No federal laws, regulations, or policies relate to transportation and traffic and the Proposed Program.

16.2.1 State Laws, Regulations, and Policies

Caltrans manages the state highway system and ramp interchange intersections. The state agency is also responsible for highway, bridge, and rail transportation planning, construction, and maintenance. Caltrans also issues encroachment permits for activities (e.g., installation of a pipeline or any structure) within the State highway rights of way.

16.2.2 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan* (Stanislaus County 2016) guides land use and development in the unincorporated area of Stanislaus County. The General Plan contains the following policy:

Circulation Element

> **Policy Five.** Transportation requirements shall be considered during planning, design and construction of commercial and industrial development to address safety, mobility, and accessibility needs.

Additionally, the County General Plan states that as a matter of policy, the County strives to maintain LOS D or better for motorized vehicles on all roadway segments and a LOS of C or better for motorized vehicles at all roadway intersections.

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (City of Modesto 2019a) guides land use and development in the City's incorporated area. The following policies are potentially relevant to the Proposed Program's traffic analysis.

> **Policy V.C.1. Transportation Study Thresholds.** Figure II-1 delineates the functional geographic areas (Downtown, Baseline Developed Area, Planned Urbanizing Area) of the city described below. For CEQA purposes, the following are Modesto's thresholds for performing transportation studies.
>
> Downtown Area: This area is exempt from automobile Level of Service (LOS) standards and no traffic impact analysis will be required for new development.
>
> Baseline Developed Area: If a proposal is consistent with the Urban Area General Plan, no traffic impact analysis will be required. If a general plan amendment is needed, a traffic impact analysis may be required if the proposal would result in at least 100 peak hour trips above and beyond what was assumed in the analysis for the Urban Area General Plan Master Environmental Impact Report, if determined to be necessary. LOS "D" is the significance threshold.
>
> Planned Urbanizing Area: In new specific plan areas that are outside city limits, a traffic study may be required if project-related traffic, as measured in Average Daily

Trips, is expected to be at least ten percent (10%) greater than anticipated to result from the General Plan land use designations. The purpose of such a study would be to determine the amount of feasible automobile-oriented and non-auto-oriented mitigation associated with the project. Once a specific plan has been approved and the area annexed to the city, traffic study policies for the Baseline Developed Area will apply. LOS "D" is the significance threshold.

Policy V.C.6. Prioritizing Transportation Investments. Strive to achieve quality of service, as depicted in Table V-2 (FDOT Figure 1-2, 2009) for each non-automobile travel mode appropriate to the location in the City. Downtown Area: Pedestrian and bus quality of service should be A/B. Bicycle quality of service should be C/D or better. (Air quality, public health, energy conservation, environmental justice) Baseline Developed Area: Pedestrian quality of service should be C/D on arterial streets and A/B on local and collector streets. Bicycle quality of service should be A/B on local and collector streets, C/D on arterial streets, and E/F on expressways. Bus quality of service should range from C/D to E/F, depending upon boardings. Consider improving accessibility along impacted routes by implementing Transportation Demand Management strategies. (Air quality, public health, energy conservation, environmental justice)

Del Rio Community Plan

The *Del Rio Community Plan* (Stanislaus County 1992) includes a goal (Goal 3) that further development in the Del Rio area should be planned to ensure that adverse effects on transportation and circulation are appropriately mitigated.

Salida Community Plan

The *Salida Community Plan* (Stanislaus County 2007) does not include any goals or policies related to transportation and traffic.

Ceres General Plan 2035

The *Ceres General Plan 2035* (2018) includes the following goals and policies related to transportation and traffic:

Goal 3.A Provide for the long-range planning, development, and maintenance of the city's roadway system to ensure the safe and efficient movement of people and goods through a variety of travel modes.

Policies

3.A.1 Multi-Modal Network. Provide for a comprehensive, integrated transportation network in accordance with the functional classification system described in this chapter and reflected in the Circulation Diagram with infrastructure and design that allows safe and convenient travel along and across streets for all users, including bicyclists, pedestrians, transit vehicles, truckers, and motorists, appropriate to the function and context of the facility.

3.A.2 Level of Service. Develop and manage the roadway system to maintain Level-of-Service ("LOS") C or better on secondary collectors and local streets and "LOS" D or better on primary collectors, arterials, expressways, and freeways. One service

level deviation may be permitted at locations where land development or transportation improvement projects support other goals from the General Plan including transit, active transportation, and economic development. Exceptions may also be allowed in areas where the City finds that the improvements or other measures required to achieve the "LOS" standards are unacceptable because of right-of-way limitations, physical impacts on surrounding properties, adverse effects on other travel modes, and/or the visual aesthetics of the required improvement and its impact on community identity and character.

Goal 3.B Maintain acceptable multi-modal travel flow along Ceres' major corridors.

Goal 3.C Protect residential areas from high-volume and high-speed traffic and its effects and promote bicycling and walking on residential streets.

Goal 3.E Promote provision of safe and efficient transit service to reduce congestion, improve the environment, and provide viable non-automotive means of transportation within and connecting to Ceres.

Goal 3.F Provide a safe, comprehensive, and integrated system of facilities for non-motorized transportation.

City of Turlock General Plan

The *City of Turlock General Plan* (2012) includes the following policies related to transportation and traffic.

Guiding Policies

5.2-a A safe and efficient roadway system. Promote a safe and efficient roadway system for the movement of both people and goods.

5.3-c Develop a safe and efficient non-motorized circulation system. Provide safe and direct pedestrian routes and bikeways between places.

5.4-a Promote safe, efficient, and convenient public transportation. Promote the use of public transportation for daily trips, including to schools and workplaces, as well as other purposes.

Congestion Management Process for the Stanislaus County Region

The 2009 *Congestion Management Process for the Stanislaus County Region* (CMP) provides a blueprint for transportation planning in Stanislaus County. The performance measures of the CMP support mobility, air quality, land use, and economic objectives, and are used to determine whether projects are to be included in the CMP's CIP for consideration for inclusion in the Regional Transportation Plan (RTP) (StanCOG 2010). Objectives and policies of potential relevance to the Proposed Program include the following:

Objective I. Improve Mobility for People and Freight

Policies:

Street and road improvements should be designed to optimize the use of existing facilities as a potential alternative to new construction.

All feasible Transportation System Management, Transportation Demand Management strategies and required Transportation Control Measures shall be implemented to reduce congestion and improve air quality.

Objective III. Preserve and Enhance Environmental Quality

Policies:

The environmental impacts, both short-term and long-term, of transportation decisions shall be appropriately analyzed and considered, and adverse impacts mitigated wherever possible.

Stanislaus Council of Governments Regional Transportation Plan/Sustainable Communities Strategy

The Stanislaus Council of Government's (StanCOG) *2014 Regional Transportation Plan/Sustainable Communities Strategies (RTP/SCS)* is a regional transportation planning document that seeks to bridge the gap between land use and transportation planning, recognizing the significant connection between these two areas and its impact on the region's quality of life (StanCOG 2014). The plan also addresses recent requirements, such as Senate Bill 375, which calls for reductions in greenhouse gas emissions from the transportation sector, as well as new federal mandates under the Moving Ahead for Progress in the 21st Century Act (MAP-21). The RTP/SCS identifies the following goals:

Goal 1. **Mobility & Accessibility.** Improve the ability of people and goods to move between desired locations; and provide a variety of transportation choices.

Goal 2. **Social Equity.** Promote and provide equitable opportunities to access transportation services for all populations and ensure all populations share in the benefits of transportation improvements and provide a range of transportation and housing choices.

Goal 3. **Economic and Community Vitality.** Foster job creation and business attraction, retention, and expansion by improving the quality of life through new and revitalized communities.

Goal 4. **Sustainable Development Pattern.** Provide a mix of land uses and compact development patterns; and direct development toward existing infrastructure, which will preserve agricultural land, open space, and mature resources.

Goal 5. **Environmental Quality.** Consider the environmental impacts when making transportation investments and minimize direct and indirect impacts on clean air and the environment.

Goal 6. **Health & Safety.** Operate and maintain the transportation system to ensure public safety and security; and improve the health of residents by improving air quality and providing more transportation options.

Goal 7. **System Preservation.** Maintain the transportation system in a state of good repair, and protect the region's transportation investments by maximizing the use of existing facilities.

16.3 Environmental Setting

The proposed WMP components would occur within or along numerous roadways within Modesto and the outlying areas served by the City of Modesto, such as Del Rio, Grayson, and Turlock. Modesto is a densely developed urban area. Outlying areas are typically dominated by agricultural land uses. Regional transportation access is provided by Highway 99, which runs roughly northwest-southeast through the study area. Other major transportation routes include SR 132, SR 108, and SR 219. SR 132 runs east-west along Maze Boulevard, D Street and Yosemite Avenue, and connects with SR 99 and Interstate 580 to the west. SR 108 runs in a north-south fashion along McHenry Avenue, providing direct access to adjacent land uses. SR 219 runs east-west along Kiernan Avenue to the north of Modesto and connects with SR 108 to SR 99. **Figure 16-1** shows roads and highways in the study area.

Roadway capacities vary within the study area, from small residential streets to collectors to arterials. Program components would not be constructed within freeways. Several roadway segments in Modesto operate at congested LOS, as shown in **Table 16-2**.

Table 16-2. Roadway Segments with Existing (2014) Daily Level of Service of E or F

Roadway Segment	Cross Street	Classification	Lanes	Volume	Daily LOS
Claribel	McHenry to Coffee	Rural	2	16,300	E
Claribel	Coffee to Oakdale	Rural	2	13,800	E
Oakdale	Claribel to Claratina	Rural	2	17,900	E
Roselle	Claratina to Sylvan	Rural	2	13,800	E
Standiford	SR 99 to Prescott	Arterial	4	39,200	F
Standiford	Prescott to Carver	Arterial	4	34,700	E
Sylvan	McHenry to Coffee	Arterial	4	33,400	E
Claus	Sylvan to Floyd	Rural	2	18,900	E
Floyd	Coffee to Rose	Collector	2	13,300	E
Briggs-more	Prescott to SR 99	Arterial	6	66,700	F
Carpenter	SR 99 to Woodland	Arterial	4	37,200	E
El Vista	Scenic to Encina	Arterial	4	32,300	E
La Loma	Scenic to Yosemite	Collector	2	14,300	E
Maze	Carpenter to Emerald	Arterial	2	11,800	E
Crows Landing	7th Street to SR 99	Arterial	2	13,700	E
Carpenter	Paradise to Hatch	Collector	3*	19,200	E
Hatch	Crows Landing to Jim Way	Collector	3*	17,600	E

* Roadway has one travel lane in each direction, plus a center two-way left-turn lane. LOS is based on thresholds for Minor Collector (2 lane facility with center left-turn lane) with capacity threshold based on two lanes.

Source: City of Modesto 2019b

Existing transit service in the study area includes various bus and rail service providers in Modesto, Ceres, Empire and surrounding areas in Stanislaus County. Modesto Area Express (MAX) provides transit service to the Modesto Urban Area, Empire, and nearby areas of Stanislaus County (excluding Ceres) (MAX 2017). Ceres Area Transit serves the City of Ceres. Stanislaus Regional Transit (StaRT) is a regional public transit service that takes passengers from Modesto to surrounding cities and communities including Oakdale, Hughson, Turlock, and Patterson. The Greyhound provides intercity and long-distance public transit service; a Greyhound bus stop is located in downtown Modesto. Train service includes Amtrak and Altamont Commuter Express (ACE) connections.

Numerous bicycle paths and routes exist throughout the study area.

16.4 Impact Analysis

16.4.1 Methodology

Because specific construction details related to individual CIPs are not yet available, construction-related impacts to transportation and traffic were evaluated qualitatively based on consideration of ways in which construction of the Proposed Program components could affect existing roadway operations and LOS. The operation of the Proposed Program would have limited potential to generate trips over the long term, and a quantitative analysis was not conducted for Program operation. Secondary impacts related to traffic and transportation from new growth and development accommodated by the Proposed Program are discussed in Chapter 15, *Population and Housing*.

16.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on transportation and traffic if it would:

- Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit;
- Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways;
- Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks;
- Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment);
- Result in inadequate emergency access;
- Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such features.

Figure 16-1
Roads and Highways in the Proposed Program Vicinity

City of Modesto
Water Master Plan EIR

C:\Users\GIS\Documents\ArcGIS_PROJECTS\15042_Modesto_WMP_EIR\mxd\Figure_16-1_Roads.mxd 9/26/2017 RH

This page intentionally left blank

The third criterion above is eliminated from detailed consideration because the Proposed Program would have no potential to affect air traffic patterns. Program components would be limited to capital upgrades to the City's water distribution and storage system. Therefore, the Program would not increase air traffic levels or change the location or routes of air travel.

16.4.3 Environmental Impacts

Impact TR-1: Conflict with an Applicable Plan, Ordinance, or Policy Establishing Measures of Effectiveness for the Performance of the Circulation System (*Less than Significant*)

The Proposed Program would not include any housing or commercial uses that would directly increase population or add vehicle trips. The Proposed Program would be limited to upgrades to existing water infrastructure, to address existing needs and accommodate future growth in the City and in outlying areas served by the City's water storage and distribution system. Please refer to Impact PH-3 in Chapter 15, *Population and Housing*, for a discussion regarding the Program's secondary traffic effects due to accommodating growth.

Trips generated by the Proposed Program during operation would be limited to routine maintenance and repair visits to facilities by City staff, and would not change substantially compared to existing conditions.

During construction of individual components, the Proposed Program would temporarily increase traffic and congestion in the immediate area of the construction. Construction of facilities would involve use of heavy equipment and transport of materials/hauling of debris, which could contribute to localized congestion. Construction of Program components also would involve trenching within the roadway, which could require temporary closure of up to one lane of traffic.

All projects would be required to follow the current version of the City of Modesto Standard Specifications. Section 12, Public Convenience and Safety, of Chapter 7, General Provisions, of the City's Standard Specifications includes Temporary Traffic Control requirements, including preparation of a traffic management plan (TMP) that must be incorporated into all projects. As part of the TMP, the public and appropriate fire and police departments would be notified in advance of temporary road closures. The TMP also would include implementation of appropriate traffic control measures (e.g., temporary barriers, use of flaggers) to allow for the safe passage of vehicular and pedestrian traffic through and within the Project site. In addition, the City requires that emergency vehicles would be provided access through any temporary construction work areas. These measures would reduce effects on vehicle movement and roadway LOS during construction activities. By complying with these standard specifications, the temporary congestion and traffic delays that could result from some Proposed Program construction activities would not substantially conflict with goals and policies in the City of Modesto General Plan, Stanislaus County General Plan, or CMP for the Stanislaus County Region. As such, this impact would be **less than significant**.

Impact TR-2: Conflict with an Applicable Congestion Management Program (*Less than Significant*)

As described in Impact TR-1, the Proposed Program itself would not generate substantial long-term vehicle trips. To the extent that the Proposed Program improvements would accommodate

growth, this growth would follow the respective jurisdiction's general plan (see Impact PH-3 in Chapter 15, *Population and Housing,* for further discussion).

Trips generated during operation of Program components would primarily be limited to routine operation and maintenance trips to facilities by City staff, and would be similar to existing conditions. As such, the Program components would not substantially affect existing LOS or conflict with objectives, policies, or performance standards in the CMP for Stanislaus County.

During construction of individual Program components and depending on their location and nature, some components could result in temporary congestion and traffic. Trenching within the roadway for new water pipelines may require temporary closure of up to one lane of traffic, which could create localized delays. Likewise, movement of construction equipment and materials for construction of new water storage tanks, groundwater wells, and other proposed facilities may marginally affect existing traffic conditions.

These construction-related traffic impacts would not be considered to conflict with the County CMP, because the effects would be temporary and would not affect the long-term performance of the roadway system. This impact would therefore be less-than-significant. Additionally, preparation and implementation of a TMP in accordance with the City's Standard Specifications regarding temporary traffic controls to ensure public convenience and safety would further reduce temporary construction impacts from the Program improvements. Therefore, this impact would be **less than significant.**

Impact TR-3: Substantially Increase Hazards Due to a Design Feature or Incompatible Uses (*Less than Significant*)

The Proposed Program would not change the design or configuration of any public road. As described in Chapter 2, *Program Description,* proposed components would be limited to upgrades to the City's water system. Therefore, the Proposed Program would not result in an increase in hazards due to a design feature.

During construction of individual components (e.g., new fire flow and distribution pipelines), construction activities could temporarily create hazards from trenching within the roadway, which could result in a significant impact. As described in Impact TR-1, this potential impact would be minimized through implementation of a TMP, prepared pursuant to the City's Standard Specifications, which would require backfilling of trenches at the end of the work day and erection of temporary barriers to separate motorists from potential hazards. Temporary use of construction equipment in the roadway would not be considered an incompatible use, and would not pose a substantial hazard given adherence to the City's Standard Specifications. Over the long-term, the Proposed Program would not introduce any new land uses that could create potential for use of incompatible equipment on roadways. Therefore, this impact would be **less than significant**.

Impact TR-4: Result in Inadequate Emergency Access (*Less than Significant*)

The Proposed Program would not alter the permanent design or configuration of any public roadway. In accordance with the California Fire Code, the Proposed Program would provide for fire apparatus and emergency vehicle access to new proposed facilities (e.g., new water storage tanks), as appropriate. During construction of individual components, trenching and use of heavy equipment within roadways would reduce roadway capacity and potentially impede emergency vehicle movement and access if appropriate traffic controls are not implemented.

As described in Impact TR-1, the City would prepare and implement a TMP in accordance with its Standard Specifications. This plan would include comprehensive traffic control measures (e.g., lane closure procedures) and a requirement to notify public safety personnel in advance of construction activities. The TMP also would require advance notification of any owner of a private driveway whose access would be temporarily disrupted during Project construction activities, and to limit disruption of private driveways to no more than one hour, as feasible. With implementation of this measure, emergency vehicle access would be maintained during construction of proposed components. Therefore, this impact would be **less than significant**.

Impact TR-5: Conflict with Adopted Policies, Plans, or Programs Regarding Public Transit, Bicycle, or Pedestrian Facilities, or Otherwise Decrease the Performance or Safety of Such Features (*Less than Significant*)

Program components would not permanently alter any roadways, bicycle lanes, sidewalks, or other non-motorized transportation facilities. Many of the Program improvements would be buried underground (e.g., water pipelines). Where features would be built above-ground, these features would be on parcels out of the road right-of-way.

Construction of Program improvements could temporarily interfere with bicycle, pedestrian, and transit vehicle movement (e.g., from trenching for installation of facilities) and cause transit delays due to pipeline installation work that occurs in public roads. Without adequate measures, such construction activities could thereby temporarily conflict with Policy V-B.6[f] in the City's Urban Area General Plan, which calls for maintaining high levels of service for all transportation modes (vehicle, transit, pedestrian, and bicycle). However, implementation of the TMP would minimize this impact and avoid substantial conflicts with this policy. In conclusion, this impact would be **less than significant**.

This page intentionally left blank

Chapter 17
UTILITIES AND SERVICE SYSTEMS

17.1 Overview

This chapter describes the setting and impacts on utilities, services, and energy resources from the Proposed Program. Resources used to prepare this section include information and regulations from applicable local planning documents and from the various utility service providers, as referenced below:

- The Stanislaus County (2016), City of Modesto (2019), City of Ceres (2018), and City of Turlock (2012) General Plans;
- The Del Rio (Stanislaus County 1992) and Salida (Stanislaus County 2007) Community Plans;
- City of Modesto 2015 *Urban Water Management Plan* (City of Modesto 2016, prepared by West Yost Associates); and
- State and local regulations.

17.2 Regulatory Setting

17.2.1 Federal Laws, Regulations, and Policies

There are no federal laws, regulations, and policies regarding utilities and service systems that are relevant to the Proposed Program.

17.2.2 State Laws, Regulations, and Policies

California Integrated Waste Management Act of 1989 and AB 341

The California Integrated Waste Management Act of 1989 (Pub. Res. Code, Division 30) requires all California cities and counties to implement programs to reduce, recycle, and compost wastes by at least 50 percent by 2000 (Pub. Res. Code Section 41780). In 2011, the Governor approved an even more ambitious goal of 75 percent recycling, composting, or source reduction of solid waste by 2020 called AB 341. The state, acting through the California Department of Resources Recycling and Recovery (CalRecycle), determines compliance with this mandate. Per capita disposal rates are used to determine whether a jurisdiction's efforts are meeting the intent of the act (CalRecycle 2017a).

SB 610

Senate Bill 610 amended state law in order to improve the link between water supply availability information and land use decisions made by cities and counties. Along with SB 221, this bill sought

to promote more collaborative planning between local water suppliers and cities and counties. Under SB 610, water assessments for certain projects, as defined in Water Code 10912[a] and subject to the CEQA, must be furnished to local governments for inclusion in any environmental documentation. The Proposed Program would not be considered a "project" under the applicable criteria for SB 610 (as defined in Water Code section 10912), which define residential, commercial, or industrial projects that would be required to comply with SB 610 based on their land use types, building sizes, areas of development, water use demands, and/or employee quantities (DWR 2003). Therefore, SB 610 would not be applicable to the Proposed Program, although it could be required for projects which use the water that would be provided by the Proposed Program.

California Solid Waste Reuse and Recycling Access Act of 1991

The California Solid Waste Reuse and Recycling Access Act of 1991 (Pub. Res. Code Sections 42900–42911) requires that all development projects applying for building permits include adequate, accessible areas for collecting and loading recyclable materials.

Urban Water Management Planning Act

California Water Code Section10610 *et seq.* requires that all public water systems providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 acre-feet per year, prepare an urban water management plan (UWMP). Urban water management plans must identify and quantify available water supplies and current and projected water use and demands, and plan for maintaining adequate water supply reliability during normal, dry, and multiple dry water years. UWMPs must be submitted to DWR for approval every five years.

Sustainable Groundwater Management Act

The Sustainable Groundwater Management Act is described in Chapter 12, *Hydrology and Water Quality*, of this DEIR, and would be applicable to the Proposed Program.

Water Conservation Act of 2009

The Water Conservation Act of 2009 (SB X7-7 2009) requires all water suppliers to increase water use efficiency by reducing per capita urban water use by 20 percent by December 31, 2020. In order to achieve this goal, the state established an incremental benchmark goal of reducing water use by 10 percent by December 31, 2015. Based on this goal, each urban retail water supplier would be required to develop long-term and interim urban water use targets. Agricultural water suppliers would be required to implement efficient water management practices. Under this bill, the DWR, in consultation with other state agencies, developed a single standardized water use reporting form for use by urban and agricultural water agencies. As a response to a multi-year drought that affected California between 2012 to 2017, a series of Executive Orders were enacted to further limit water usage. Executive Order B-40-17 was enacted on April 7, 2017 and is the latest of such orders (DWR 2017). This order effectively ended the drought state of emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne. For these counties, emergency drinking water projects would continue to help address diminished groundwater supplies. Water reporting requirements and prohibitions on wasteful practices would continue to be enforced as well (DWR 2017).

17.2.3 Local Laws, Regulations, and Policies

City of Modesto Urban Area General Plan

Chapter V, Community Services and Facilities, of the *City of Modesto Urban Area General Plan* (2019) discusses the City's applicable planning goals and policies related to water supplies, water use, water management planning programs and documents, and the City's water distribution and treatment system infrastructure management are provided below. In addition, the City's policies relevant to other utilities, such as wastewater, storm drainage, and solid waste include the following:

Water Policies

Goal VI.A. Ensure a consistent, reliable, high-quality water supply for the City of Modesto's residents and businesses.

> **Policy VI.A.3.** All new connections to the public water system are to have meters installed. In addition, on or before January 1, 2025, all existing municipal and industrial service connections are to have water meters installed.
>
> **Policy VI.B.2.** Prepare and maintain a Water Master Plan. Update the Water Master Plan, as needed, to incorporate changes in growth projections, water supplies, and demands.
>
> **Policy VI.B.3.** Encourage the optimum beneficial use of water resources within the City. Strive to maintain an adequate supply of high-quality water for urban uses. At a minimum, potable water supplies delivered to water customers shall conform to the primary maximum contaminant levels as defined in State law.
>
> **Policy VI.B.5**. Construct, operate, maintain, and replace water infra-structure facilities in a manner that will provide the best possible service to the public. Ensure that infrastructure is installed before or concurrently with development. Take a comprehensive approach to financing, using a blend of special taxes, benefit assessments, and other methods to ensure that infrastructure installation occurs in a timely manner.

Wastewater Policies

Goal VI.D. Strive to meet increasingly strict wastewater regulations in a cost-effective manner. The City's wastewater treatment facilities will conform to standards for wastewater and biosolids treatment and disposal, as established by the Central Valley Regional Water Quality Control Board, in compliance with applicable federal and state laws.

> **Policy VI.D.1.** Consider reclaiming wastewater as a means to optimize the region's water resources, reduce discharge from the treatment plant, reduce the risk of fines and reduce costs associated with producing water from new / additional sources.
>
> **Policy VI.D.2.** Comply with the Central Valley Regional Water Quality Control Board requirement to cease all discharge of wastewater that is treated at less than tertiary levels by May 1, 2018.

Policy VI.D.3. Consider reuse of wastewater treatment byproducts, such as biosolids and digester gas, which can reduce costs associated with treatment plant operations.

Policy VI.D.4. Pursue the near-term expansion of the wastewater treatment and disposal capacity of the Jennings Road Treatment Plant.

Policy VI.D.5. Pursue the long-term relocation of the Sutter Avenue Primary Treatment Plant, to the Jennings Road site, in order to consolidate operations and reduce treatment plant flooding risks.

Policy VI.D.6. Construct, operate, maintain, and replace wastewater facilities in a manner that will provide the best possible service to the public. In developing implementation plans, consider rehabilitation of essential existing facilities, expansion to meet current excess demand, and the timely expansion for future demand.

Policy VI.E.1. Allocate the City's wastewater system capacity to existing and future residential, commercial, and industrial customers. Discharges from environmental cleanup sites may be issued conditional discharge permits subject to the availability of excess treatment capacity. In accordance with federal and state regulations, discharges to the wastewater system may not, or may not threaten to, upset or interfere with, the wastewater system.

Policy VI.E.2. Require wastewater infrastructure master plans for the specific public infrastructure or when otherwise pertinent to provision of service at adopted service levels for the specific plan areas or other projects depending on site issues and location.

Policy VI.E.9. Strive to use land application of biosolids as the most environmentally beneficial reuse of this resource, rather than the disposal options of landfilling or incineration.

Policy VI.E.10. Develop methods to discontinue use of the sanitary system to temporarily drain stormwater runoff, and eliminate cross-connections between the wastewater and stormwater infrastructure systems.

Policy VI.E.16. Prepare and implement an update to the City's Wastewater Master Plan (WWMP), and complete an EIR for the updated WWMP. The updated WWMP should account for the UAGP, zoning revisions, updated growth projections, updated sewer demand information, regulatory requirements, and identify new capital improvement projects. The WWMP should involve several improvements to the City's collection system and upgrades to the Sutter and Jennings treatment plants. The objectives of the updated WWMP may include the following:

- Implement the City's economic goals and Urban Area General Plan by planning for, and providing, sewer infrastructure in a timely and cost-effective manner to serve new and existing development.

- Continue the City's policy of providing affordable and attractive wastewater rates.
- Repair and replace aging wastewater infrastructure.
- Ensure adequate wastewater infrastructure and services are available to serve new growth within the General Plan and City's Sphere of Influence.
- Provide an adequate funding mechanism to pay for necessary improvements.
- Require new development to pay for infrastructure necessary to serve it.
- Plan for state-of-the-art facilities that reliably and economically meet the changing regulatory requirements.

For collection system improvements, the objectives of the updated WWMP may include:

- To increase sewer capacity to convey peak wet weather flows for a 10-year storm event, and where required, to serve future customers.
- To reduce wet weather flow volumes by removing cross connections with stormwater sewers.
- To extend service to new customers.
- To replace, repair, or rehabilitate existing trunk sewers, and to reduce infiltration and inflow of stormwater into the sanitary sewers.
- To improve sewer collection reliability by providing new and redundant infrastructure improvements, including sewer trunk lines and lift stations, in known deficient areas at critical areas within the existing system.

For treatment plant improvements, the objectives may include the following:

- To reduce flooding impacts at the Sutter Plant site and increase treatment process operational flexibility and efficiencies by constructing new primary treatment and solids handling facilities at the Jennings Plant and remove primary treatment and handling facilities from the Sutter Plant.
- To increase the capacity of the outfall connecting the primary and secondary treatment plants, and to provide increased reliability for the existing outfall.
- To increase treatment systems efficiency, reliability, and functionality for both domestic and cannery process stream flows.
- To increase treatment operational opportunities through new systems or system alterations to remain in compliance with existing Central Valley RWQCB's NPDES requirements and plan for potential future permitting regulations.

Storm Drainage Policies

Goal VI.F. Establish and maintain an operating storm drainage system that protects people and property from flood damage.

Policy VI.G.2. Construct, operate, maintain, and replace storm water drainage facilities in a manner that will provide the best possible service to the public, as required by federal and state laws and regulations. In developing implementation plans, consideration shall be given to rehabilitation of existing facilities, remediation of developed areas with inadequate levels of drainage service, and timely system expansion for future development.

Solid Waste Policies

Policy VI.L.1. Continue to comply with all requirements of Assembly Bill 939, which mandates the diversion of solid waste of 50% by 2000, by way of source reduction, recycling, composting, and transformation.

Policy VI.L.3. Continue to comply with Stanislaus County's Hazardous Waste Management Plan.

Policy VI.L.5. To meet the waste disposal demands of the growing population, continue to seek alternative waste disposal methods for solid waste, including transformation, composting, and alternative energy conversion technologies.

Policy VI.L.6. In addition to the Solid Waste Disposal policies in place [as outlined above], consider implementing local land use incentives and zoning/building code modifications to encourage source reduction, recycling, and composting, and to provide adequate space for containers. Such measures to be considered include a Construction and Demolition Recycling Ordinance, an ordinance and incentive program for Green Building Projects, and mandatory recycling for commercial/industrial waste and organics recycling per AB 341 and AB 1826.

City of Modesto Rebate Programs

Currently, the City of Modesto Utilities Department offers a number of water rebate programs for its customers. Among these programs are the following (City of Modesto N.D.):

- **Drip Irrigation Rebate Program** – customers may be eligible for a rebate when they convert their existing overhead spray system to Drip Irrigation or install a Drip Irrigation system in an existing garden bed.

- **High-Efficiency Clothes Washer Rebate** – customers in single and multi-family homes may be eligible for a rebate when they replace their old clothes washer with a new high efficiency clothes washer.

- **High-Efficiency Toilet Rebate** – customers in single and multi-family homes may be eligible for a rebate when they replace their old high-water use toilets.

- **Turf Replacement Program** – customers may be eligible for a rebate when they replace their grass with polyethylene/nylon artificial turf products or any qualifying drought tolerant landscape products.

- **High Efficiency Sprinkler Nozzles Rebate Program** – customers may be eligible for a rebate when they upgrade from their old conventional spray head sprinklers to the High Efficiency Sprinkler Nozzles.

- **Rain Barrel Rebate Program** – customers may be eligible for a rebate when they purchase and install an approved Rain Barrel.

- **Smart Irrigation Controller Rebate Program** – customers may be eligible for a rebate when they upgrade or purchase a new smart irrigation controller.

Del Rio Community Plan

The Del Rio Community Plan (Stanislaus County 1992) provides goals, policies, and recommendations for future development. The plan is considered part of the Stanislaus County General Plan. Areas of development such as drainage/flood control, water, sewer, utilities, and other services throughout the community are addressed in this Community Plan. The following regulations would apply to the Proposed Program:

Drainage/Flood Control

"It is desired that all future development within the Del Rio Community Plan (DRCP) area include curb and gutters that connect to adequate development wide drainage systems."

Sewer

"No future developments within the DRCP area shall use septic systems for treatment of sewage."

Utilities

"All further development in the DRCP area shall incorporate below ground utilities exclusively."

Salida Community Plan

The Salida Community Plan (Stanislaus County 2007), which was incorporated in the *Stanislaus County Plan,* identifies the following requirement related to utilities:

Water Supply

"An adequate water supply must be secured and demonstrated for development in accordance with applicable law."

Ceres General Plan 2035

The *Ceres General Plan 2035* (City of Ceres 2018) establishes the following goals and policies related to utilities:

Stormwater Drainage

Goal 6.F: Collect and dispose of stormwater in a manner that minimizes inconvenience to the public, reduces burden on existing stormwater facilities, encourages groundwater recharge, minimizes potential water-related damage, and enhances the environment.

> **6.F.4 New Development Stormwater Mitigation.** Require new development to mitigate increases in stormwater peak flows and/or volume. Mitigation measures, such as low impact development (LID) strategies, should take into consideration impacts on adjoining lands in the city and immediately adjacent to the city in unincorporated Stanislaus County.
>
> **6.F.5 Drainage System Design.** Design all drainage systems to be in accordance with the accepted principles of civil engineering, the adopted Storm Drainage Master Plan, and adopted storm drainage design standards and specifications.
>
> **6.F.7 Grading.** Require appropriate mitigation, such as temporary mulch or revegetation, for grading activities during the rainy season to avoid sedimentation of storm drainage facilities.
>
> *See Municipal Code Chapter 13.18.120.*

Solid Waste Collection and Disposal

Goal 6.G: Ensure the safe and efficient disposal, composting, or recycling of solid waste generated in Ceres.

> **6.G.1 Waste and Recycling for New Development.** Require waste and recycling collection in all new development, and require that all new development complies with applicable provisions of the City of Ceres Source Reduction and Recycling Element and the Stanislaus County Integrated Waste Management Plan.

City of Turlock General Plan

The *City of Turlock General Plan* (City of Turlock 2012) does not identify any goals or policies related to utilities for the Proposed Program.

17.3 Environmental Setting

17.3.1 Water

Water Supply

The City of Modesto is the primary domestic water purveyor in Stanislaus County, serving not only the City of Modesto, but also Salida; Ceres (Walnut Manor); Grayson; Del Rio (Hillcrest); and

North, South, and Central Turlock. The City of Modesto currently distributes treated surface water supplied by MID through the Modesto Regional Water Treatment Plant (MRWTP), and groundwater pumped from City owned and operated wells, to serve the water demands of its customers. The City, in conjunction with MID, expanded its water supply when the MRWTP Phase 2 Expansion became operational (May 2016) with an additional 30 mgd of capacity to help meet demand north of the Tuolumne River. The MRWTP has a total capacity of 60 mgd, or 67,200 acre-feet per year (MID 2017a). In addition, there are a limited number of private wells operating within the City limits that provide water for parks, golf courses, industry, and agricultural uses (City of Modesto 2016). Water supply needs include residential, agricultural, industrial uses, as well as emergency (fire) and drought supplies.

From the MRWTP, treated surface water is supplied to municipal customers within the City limits north of the Tuolumne River, including the communities of Empire and Salida. The treated surface water place of use is defined by the overlap of the MID water service boundary with the City of Modesto Municipal Water System service area north of the Tuolumne River. Areas served by the City of Modesto that lie outside the MID water service boundary (i.e., south of the Tuolumne River), including the community of Grayson, parts of Ceres and Turlock, and the portion of the Modesto system south of the Tuolumne River, are served exclusively by groundwater. The recently completed MRWTP expansion is intended to help reduce the City's reliance on groundwater pumping and help meet demand north of the Tuolumne River.

While the areas south of the Tuolumne River are within the TID service area, TID currently serves only agricultural customers with surface water, and does not supply water for municipal uses. However, TID is working with the Stanislaus Regional Water Authority (SRWA) on the proposed Surface Water Supply Project (SWSP), described in more detail in Chapter 18, *Other Statutory Considerations,* Section 18.4, "Cumulative Impacts," which (if approved) would supply treated Tuolumne River water as an additional source of potable water for the cities of Turlock and Ceres (City of Turlock 2012).

In 2015, total water supply for the City was 47,459 acre-feet (AF), with 15,401 AF of Tuolumne River surface water purchased from MID and 32,058 AF pumped from groundwater. **Table 17-1**, below, summarizes projected water supplies for 2020-2040. These projections are based on normal water years (City of Modesto 2016).

Table 17-1. Projected Water Supplies

Source	Projected Water Supply (af/yr)				
	2020	**2025**	**2030**	**2035**	**2040**
Surface water (from MID)	44,800	48,533	52,267	56,000	59,733
Groundwater	24,664	26,369	28,073	29,778	31,483
Total	**69,464**	**74,902**	**80,340**	**85,778**	**91,216**

Notes: AF = acre-feet; af/yr = acre-feet per year; MID = Modesto Irrigation District.
All groundwater volumes are reasonably available volumes. Total right or safe yield of groundwater is 53,500 AF for all years.

Source: City of Modesto 2016 (Table 6-20)

Sources of Surface Water

MID and TID obtain surface water supplies from the Tuolumne River, stored in the Don Pedro Reservoir, which they jointly own. This water is obtained under TID and MID's pre-1914 water rights. From Don Pedro Reservoir, MID releases water through its power generation facilities directly into the river. From MID's Upper Main Canal at La Grange, water is delivered to Modesto Reservoir, then flows to the canal system, where the water is diverted to several locations that drain into the San Joaquin, Stanislaus, and Tuolumne Rivers (MID 2017b). From Modesto Reservoir, MID may release water to its Lower Main Canal for irrigation purposes or to the MRWTP for municipal and industrial purposes. Currently, MID manages 208 miles of gravity flow–operated canals and pipelines and provides irrigation water to approximately 3,100 agricultural customers.

Following treatment at the MRWTP, water is conveyed to the City's distribution system. In October 2005, MID and the City approved the Amended and Restated Water Treatment and Delivery Agreement between MID and the City of Modesto. With the expansion of the MRWTP with an additional 30 mgd of capacity to help meet demand north of the Tuolumne River, available surface water supply provided by MID increased to 67,204 af/yr (60 mgd) and became the primary water supply for the City of Modesto. By 2035, the surface water supply purchased from MID is projected to reach 67,200 af/yr (MID 2011).

Groundwater

Groundwater conditions are described in detail in Section 12.3.5 of Chapter 12, *Hydrology and Water Quality*, and are summarized here, The Proposed Program components would primarily overlie the Modesto Subbasin of the San Joaquin Valley Groundwater Basin but some components would also be located in the Turlock Subbasin, and the Delta-Mendota Subbasin. Prior to the operation of the MRWTP, the City conducted extensive pumping of groundwater in and near the City's service area that resulted in localized overdrafting conditions (i.e., extraction of groundwater in excess of its long-term average rate of natural recharge) All three subbasins had declining groundwater levels between 1970 and 2000. Since 1995, groundwater levels increased as surface water supplies were available from the MRWTP's operation and then declined again as drought conditions affected surface water supplies. A 2007 evaluation conducted by the City determined that, if the total, long-term average groundwater pumpage quantity is held at or below 53,500 af/yr, groundwater levels would stabilize at approximately 40 feet msl (City of Modesto 2016).

Groundwater management requirements of state regulations, specifically the Sustainable Groundwater Management Act, are discussed in Chapter 12, *Hydrology and Water Quality*.

Water Demand

City of Modesto 2015 Urban Water Management Plan

The *2015 Urban Water Management Plan* (City of Modesto 2016) describes the City's and MID's past, current and projected water use and demand by sector up to the year 2040. **Table 17-2**. below summarizes the projected water demand by water source from 2020 to 2040. The City does not use recycled water to offset potable water use, nor does it anticipate doing so in the future.

Table 17-2. Projected Water Demand for the City of Modesto, 2020-2040

Source	Projected Water Demand (AF)				
	2020	**2025**	**2030**	**2035**	**2040**
Potable and raw water	69,464	74,902	80,340	85,778	91,216
Recycled water	0	0	0	0	0
Total	**69,464**	**74,902**	**80,340**	**85,778**	**91,216**

Notes: AF = acre-feet

Source: City of Modesto 2016 (Table 4-4)

A more detailed summary of the City's projected water demands by sector type is summarized in **Table 17-3**.

Table 17-3. Projected Water Demands by Use Type in the City of Modesto, 2020-2040

Use Type	Projected Water Demand (AF)				
	2020	**2025**	**2030**	**2035**	**2040**
Single Family	35,872	38,680	41,488	44,296	47,105
Multi-Family	6,894	7,434	7,974	8,513	9,053
Commercial	11,031	11,895	12,758	13,622	14,486
Industrial	3,993	4,305	4,618	4,931	5,243
Institutional/Governmental	2,175	2,345	2,515	2,685	2,855
Landscape	2,553	2,753	2,953	3,153	3,352
Other (unmetered water uses)	0	0	0	0	0
Losses	6,946	7,490	8,034	8,578	9,122
TOTAL	**69,464**	**74,902**	**80,340**	**85,778**	**91,216**

Note: AF = acre-feet.

Source: City of Modesto 2016

City of Modesto Water Master Plan

The City's WMP estimates projected water demands for the contiguous and outlying water service areas at buildout and with consideration of assumed per capita water use targets in compliance with Senate Bill SB X7-7. Based on updated population estimates, the projected water demand for the contiguous service area is 99,240 af/yr (City of Modesto 2016).

Water Treatment Facilities

The water treatment facility that operates within the City of Modesto is the MRWTP owned and operated by the Modesto Irrigation District. Water is supplied to the plant through the Modesto Reservoir, which receives its water from the Tuolumne River. In 2016, MID completed Phase II of

this plant, which expanded the existing facility with an additional 30 million gallons per day (mgd) for a total annual average of up to 60 mgd (MID 2017c).

17.3.2 Wastewater

Modesto's wastewater collection system conveys wastewater from residential, commercial, and industrial customers in its service area to treatment plants. The City's wastewater collection system consists of approximately 40 sewer lift stations, more than 600 miles of sanitary lines ranging from 6 to 66 inches in diameter, 69 miles of trunk lines (pipelines greater than 15 inches in diameter), and an additional 15 miles of trunk lines connecting cannery food processors directly to land disposal (application) areas. Wastewater flowing into the collection system flows by gravity, or is pumped, to the Sutter Plant and the Jennings Plant for further treatment.

The majority of the influent received at the City's wastewater treatment facilities consists of domestic, commercial, industrial, food processing, and winery waste. The Sutter Plant provides primary treatment as well as screening, sedimentation and grit removal services. From there, the wastewater gets transferred via two 6.5-mile-long effluent outfall pipelines to the Jennings Plant. Currently, the Jennings plant disposes of secondary treated effluent in two ways: (1) through irrigation of approximately 2,500 acres of ranch lands owned by the City, and (2) through seasonal discharge to the San Joaquin River. According to the City's NPDES surface water discharge permit (Order R5-2012-0031, NPDES No. CA0079103), discharge of secondary treated wastewater to the San Joaquin River is only allowable between October and May until the year 2018. The City is in the process of constructing tertiary treatment facilities at the Jennings Plant. Once completed, secondary treated wastewater would undergo tertiary treatment and could be used to provide recycled water demands off-site.

As of 2015, the City's wastewater treatment system had a capacity of 81 mgd, including 40.2 mgd of capacity for cannery wastewater. In 2014, average non-canning-season domestic wastewater flows (exclusive of cannery segregated flow) was 18.5 mgd. During the 2014 dry season, the sewer system received an average of approximately 20 mgd of wastewater, with a peak of 36.3 mgd. The peak wet weather wastewater flow was approximately 72.8 mgd (Carollo Engineers 2016). In June and July 2019, the City circulated a Draft Environmental Impact Report for its Wastewater Master Plan, which defines the City's long-term wastewater collection and treatment needs and guides management of its wastewater collection and treatment system through proposed improvement projects for the City's wastewater systems.

Additional wastewater utility providers in the study area include:

- Salida Sanitary District serves the Salida area, with a wastewater treatment plant capacity of 2.4 mgd.
- City of Ceres operates and maintains the City's 2.7+ mgd Wastewater Treatment Plant and Wastewater Collection System, including 190+ acres of percolation - evaporation basins and grounds, 14 lift stations and 133 miles of pipeline within the collection system.
- Grayson Community Services District was formed in 1969, and provides street lighting and sewer services to the residents.

- The Turlock Regional Water Quality Control Facility provides tertiary treatment of wastewater from the City of Turlock, Ceres and the community service districts of Keyes and Denair.

17.3.3 Stormwater

The City's stormwater drainage system consists of approximately 77 miles of drainage lines and 20 pump stations. As the stormwater drains through this system, it discharges into four major locations. Based on the City's *2015 Urban Water Management Plan*, approximately 40 percent of the stormwater discharges to detention/retention basins, 20 percent to receiving waters (Tuolumne River or Dry Creek), 10 percent to MID laterals/drains, and 30 percent to rockwells. The City currently utilizes these rock wells (approximately 11,000), along with infiltration basins and underground storage and recharge facilities, to recharge the groundwater aquifer with some of the stormwater for beneficial reuse as a water supply source to meet local water demands (City of Modesto 2016).

The outlying service areas' stormwater systems vary in size and complexity based on the various communities' needs. The Del Rio stormwater system consists of a retention pond, curbs, and gutters (Stanislaus County 2007). The retention pond does not discharge to the Stanislaus River (Stanislaus County 2007). Stormwater needs in the small Grayson community is primarily provided by roadside percolation but some areas include storm drainage pipes and a detention basin that discharges to the San Joaquin River (Stanislaus County 2007). The condition of these facilities is good (Stanislaus County 2007). The Turlock stormwater system is owned and operated solely by the City of Turlock and comprised of 28 active storm lift stations, 66 storm ponds (which total 140 acres), 1,300 storm water catch basins and a total of 102 miles of storm drain pipe (City of Turlock 2003). Ultimately, storm water percolates down to recharge the groundwater or flows to the San Joaquin River.

17.3.4 Solid Waste

In 2015, the City disposed of 104,468 tons of solid waste (CalRecycle 2015). The City of Modesto has an annual per capita disposal rate target of 5 pounds per resident per day, and an annual per capita disposal rate target of 13.8 pounds per employee per day. In 2015, the most recent year for which disposal rate data were available for the city of Modesto, the City's annual per capita disposal rates were 4.5 pounds per resident per day and 12.6 pounds per employee per day (CalRecycle 2015).

There are currently two major firms that are responsible for the collection and transport of solid waste in Modesto. Gilton Solid Waste Management and Bertolotti Disposal both provide hauling and interim transfer stations for the City's waste disposal, transformation, and diversion streams. Bertolotti Disposal also manages the solid waste and recycling programs for the City of Ceres.

The City of Modesto Public Works Department manages garbage and recycling collection services throughout the City. In addition to standard waste, the department also manages hazardous waste cleanup, bulk item pick-up, composting, and street sweeping (City of Modesto 2017).

Solid waste is managed by Turlock Scavenger for the Program outlying service areas located in the City of Turlock. Turlock Scavenger provides residential, commercial, and industrial solid waste,

recycling, and green waste collection services to the City of Turlock and adjacent portions of Stanislaus County. They also operate a public recycling buyback and processing facility.

The Fink Road Sanitary Landfill is the primary landfill within Stanislaus County. This approximately 200-acre landfill is owned by Stanislaus County and operated by the County Department of Environmental Resources. It is located west of I-5 near the town of Crown Landing, where it receives solid waste from all of the cities and unincorporated areas within the county.

Categorized as a Class II and III landfill for nonhazardous municipal solid waste, its maximum permitted throughput is 2,400 tons per day. It had a remaining capacity of 8,240,435 cubic yards as of January 5, 2012 with a maximum permitted capacity of 14,640,000 cubic yards. Most industrial, commercial, and residential waste (e.g., household and commercial garbage, construction debris) is accepted here, while waste such as car bodies, septic tank waste, and liquid waste are not. As of 2012, it had a remaining capacity of over 8 million cubic yards and an estimated closure date of 2022 (CalRecycle 2017b). The landfill is currently considering alternatives for facility expansion, which would extend the closure date to approximately 2030.

As noted above, the solid waste programs operated by Modesto and Turlock include recycling programs; Stanislaus County operates a similar program. These include curb-side recycling and operation of recycling centers throughout their various jurisdictions within the Program area. There are also several private recycling companies that are not affiliated with those who have specific contracts with the cities or counties.

17.3.5 Communications

A number of communications companies serve the Modesto area, including Comcast, AT&T, and Charter Communications. Many of the streets within which the Proposed Program components would be installed include underground or overhead communications lines.

17.4 Impact Analysis

17.4.1 Methodology

This section describes the impacts of the Proposed Program related to utilities and services systems. This evaluation considers the extent to which the Proposed Program would require entirely new or altered existing facilities to address immediate or foreseeable needs associated with Proposed Program operations. Effects are evaluated qualitatively based on available information on existing facilities and current demand in the Proposed Program area.

17.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on utilities and service systems and energy resources if it would:

- Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board;

- Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects;

- Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects;

- Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed;

- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;

- Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs; or

- Comply with federal, state, and local statutes and regulations related to solid waste.

The second criterion listed above is not applicable because construction of new and upgraded water infrastructure services is the primary subject of this DEIR and the environmental effects of the Proposed Program are described throughout this document. In addition, the Proposed Program would not directly result in any wastewater discharges that would require additional wastewater facilities; temporary portable wastewater facilities would be used during construction activities, and temporary pipeline flushing wastewater volumes would be negligible. Indirect/growth-related impacts on water or wastewater infrastructure from the Proposed Program are addressed in Chapter 15, *Population and Housing*. Therefore, this criterion does not require further discussion in this chapter.

The fifth criterion listed above is not applicable because the Proposed Program's water infrastructure improvements would not result in any permanent wastewater discharges. Some wastewater may be discharged to the local wastewater treatment system or stormwater system during construction activities as part of the required pipeline flushing activities. However, these activities would not be conducted without the City's or other local agency's pre-authorization as described in Chapter 2, *Program Description*, and, as such, would not exceed the wastewater treatment provider's capacity. Therefore, this criterion does not require further discussion in this chapter.

17.4.3 Environmental Impacts

Impact UTL-1: Exceed Wastewater Treatment Requirements of the Applicable Regional Water Quality Control Board (*Less than Significant*)

The Proposed Program would result in the construction of infrastructure to address the City's existing and future water system deficiencies. These improvements would replace and repair aging water storage and distribution system infrastructure or ensure adequate water infrastructure to accommodate growth in the City's service area. Construction activities for the Proposed Program would require the disinfection and flushing of newly constructed pipelines,

and other water facilities (tanks/wells) prior to connection to the existing system and operation of the new facilities. Disinfection activities would involve heavily chlorinating the water in the water facilities (tanks/pipelines), and then flushing it and dechlorinating the water. De-chlorinated water from the disinfection and flushing tank and pipeline processes would be discharged to the City's, or, for the outlying service areas, other local agencies' storm drainage systems or wastewater collection systems. As a result, this flushed water would not contain chemicals or pollutants such that it would affect the local agency's ability to comply with its applicable stormwater NPDES permit or the wastewater treatment processes or requirements. (Specific permitting requirements for the City and outlying service areas are further described in Chapter 12, *Hydrology and Water Quality*.) Operation of the Proposed Program would not directly require wastewater treatment. Based on this information, any change in the quantity or quality of wastewater caused by the Proposed Program would be accommodated by the City's wastewater system and would not result in a violation of any wastewater treatment or discharge requirements. As a result, this impact would be **less than significant.**

Impact UTL-2: Require or Result in the Construction of New Stormwater Drainage Facilities or Expansion of Existing Facilities, the Construction of Which Could Cause Significant Environmental Effects (*Less than Significant*)

The Proposed Program would result in the construction of new water storage tanks, booster pump stations, groundwater wells and new water main pipelines. These improvements would require site preparation activities such as clearing, grubbing and trenching, which would result in excavated soil that has the potential to be washed into the City's stormwater drainage system. As discussed in Chapter 11, *Hazards and Hazardous Materials*, many water quality impacts associated with Program construction activities would be minimized or avoided through compliance with the NPDES General Construction Permit. As a result, new facilities or expansion of existing stormwater facilities would not be required.

The construction of the storage tanks and booster pump stations would result in the construction and operation of new impervious surfaces that would lead to a small degree of runoff. While some on-site stormwater drainage may be needed for these facilities, given the relatively small scale of the storage tanks and booster pump stations, the environmental effects of constructing any new stormwater drainage facilities would be minimal. Furthermore, the operation of this new infrastructure would not significantly contribute to runoff. As a result, this impact would be **less than significant.**

Impact UTL-3: Require New or Expanded Water Supply Entitlements (*No Impact*)

Construction of each improvement would require the use of water to compact loose soils and earthen materials that are dug up from trenching activities. Construction crews would likely use publicly available recycled water for most construction uses throughout the various construction phases. As a result, construction of proposed improvements would not substantially affect local water supplies.

The Proposed Program involves the construction and operation of water system infrastructure as well as the implementation of water management programs. The Proposed Program's water infrastructure would not require any new or expanded water supply entitlements. In addition, the

Proposed Program would result in a beneficial impact on the City's overall ability to use existing water supply entitlements to meet existing and future water demands, as discussed further below.

Operation of the Proposed Program would enhance the use of available, existing water supply entitlements by improving the City's water system infrastructure to accommodate increased surface water supplies from the MRWTP's Phase II, and by implementing groundwater management programs and infrastructure. The Proposed Program's groundwater management activities, groundwater aquifer storage and recovery (ASR) program, proposed wellhead treatment activities, and construction of replacement and new wells would allow for use of the existing groundwater supply entitlements by the City. This would alleviate pressure on the need to expand the City's water supply entitlements. Additional or new water supply entitlements would not be required to support the operation of the Proposed Program's facilities. As a result, there would be **no impact.**

Impact UTL-4: Require Additional Permitted Landfill Capacity to Accommodate the Project's Solid Waste Disposal Needs (*Less than Significant*)

Construction of the Proposed Program facilities would produce solid waste in the form of demolished asphalt, concrete, and excavated soils (construction waste). Construction waste would be transported to one of the recycling facilities currently used by the City of Modesto and outlying service areas, and soils may be reused pending testing results (see Chapter 11, *Hazards and Hazardous Materials*), thus minimizing the amount of waste sent to landfills.

When construction waste recycling is not possible, waste would be transported to the Stanislaus County Fink Road landfill, located at 4000 Fink Road in Crows Landing. The landfill has a total permitted capacity of 14.5 million tons, about one-third of which is full. The facility has an estimated closure date of 2022. The landfill is currently considering alternatives for facility expansion, which would extend the closure date to approximately 2030 (California Integrated Waste Management Board 2007; Frank pers. comm.). In the event that a new landfill would need to be used once the Fink Road landfill is closed, the City has disposal requirement standard practices and general provisions in place that would prevent any potential impacts caused by this activity. These standard practices state that the City would only dispose of waste at a licensed disposal facility, and would identify such facility prior to committing to any project action (i.e. construction activity). These practices can be found in Section 5.06, Disposal of Excess Material, and Section 11.04, Grading Plans, of the City of Modesto Standard Specifications (2014). Furthermore, the treatment and handling of all wastes produced during the construction period would adhere to all applicable federal, state, and local statutes.

The generation of construction waste is considered a short-term impact that would not require existing disposal facilities or conveyance transfer and haul systems to be expanded. While the Proposed Program could result in the creation of additional solid waste once proposed facilities are operational, the standard practices stated above would ensure that the Proposed Program's waste would only be disposed of at licensed disposal facilities and in accordance with all solid waste handling and disposal requirements. Therefore, this impact would be **less than significant**.

Impact UTL-5: Comply with Federal, State, and Local Statutes and Regulations Related to Solid Waste (*Less than Significant*)

The Proposed Program would be in compliance with federal, state, and local statutes and regulations related to solid waste. Construction specifications would contain requirements for the handling, storage, cleanup, and disposal of hazardous materials. For additional information about hazardous materials compliance and permitting requirements, refer to Chapter 11, *Hazards and Hazardous Materials*. The Proposed Program would also comply with all of the applicable policies outlined in Section 17.2.3, "Local Laws, Regulations, and Policies." As a result, this impact would be **less than significant.**

Chapter 18
OTHER STATUTORY CONSIDERATIONS

18.1 Overview

This chapter presents discussions of significant and unavoidable impacts, growth-inducing impacts, and cumulative impacts as required by the State CEQA Guidelines.

18.2 Significant and Unavoidable Impacts

Section 15126.2(b) of the State CEQA Guidelines requires an EIR to describe any significant impacts that cannot be mitigated to a less-than-significant level. All of the impacts associated with the Proposed Program would be reduced to a less-than-significant level through the implementation of identified mitigation measures, with the exception of the impacts discussed below. The following impacts have been identified as significant and unavoidable:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use (Impact AG-1)
- Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use (Impact AG-3)
- Conflict with or Obstruct Implementation of an Applicable Air Quality Plan (Impact AQ-1)
- Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard (Impact AQ-3)
- Generate a Substantial Amount of GHG Emissions (Impact GHG-1)
- Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs (Impact GHG-2)
- Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level (Impact HYD/WQ-2)
- Cumulative Impacts on Agriculture (Impact CUM-2)
- Cumulative Impacts on Air Quality and GHG (Impact CUM-3)
- Cumulative Impacts on Hydrology and Water Quality (Impact CUM-6)

18.3 Growth Inducement

Section 15126.2(d) of the State CEQA Guidelines requires an EIR to include a discussion of a proposed project's growth-inducing impacts. The analysis of growth-inducing impacts must discuss the ways in which a proposed project (or program) could foster economic or population growth or the construction of additional housing in the surrounding environment. The analysis must also address project-related actions that, either individually or cumulatively, would remove existing obstacles to population growth. The Proposed Program is considered growth-inducing because it removes water service infrastructure as an obstacle to growth. Refer to Impact PH-3 in Chapter 15, *Population and Housing,* for a detailed discussion of the secondary effects of growth and direct growth-related effects of the Proposed Program.

18.4 Cumulative Impacts

According to State CEQA Guidelines Section 15130(a)(1), a cumulative impact is created by the combination of a proposed project with other past, present, and probable future projects causing related impacts. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time (State CEQA Guidelines Section 15355[b]). Under CEQA, an EIR must discuss the cumulative impacts of a project when the project's incremental contribution to the group effect is "cumulatively considerable." An EIR does not need to discuss cumulative impacts that do not result, in part, from the project evaluated in the EIR.

To meet the adequacy standard established by State CEQA Guidelines Section 15130, an analysis of cumulative impacts must contain the following elements:

- an analysis of related past, present, and probable future projects that would affect resources in the project area similar to those affected by the Proposed Program;
- a summary of the environmental effects expected to result from those projects with specific reference to additional information stating where that information is available; and
- a reasonable analysis of the combined (cumulative) impacts of the relevant projects.

The cumulative impacts analysis must evaluate a project's potential to contribute to the significant cumulative impacts identified, and it must discuss feasible options for mitigating or avoiding any contributions assessed as cumulatively considerable. The discussion of cumulative impacts is not required to provide as much detail as the discussion of the effects attributable to the project alone. Rather, the level of detail is to be guided by what is practical and reasonable.

18.4.1 Approach to Analysis: Combined Approach

The following analysis of cumulative impacts focuses on whether the cumulatively significant impacts exist to which the Proposed Program may contribute, and whether the Proposed Program's contribution to such impacts would be considerable. The cumulative impact analysis considers both the Proposed Program and other projects proposed within the area defined for each resource that have the potential to contribute to cumulatively significant impacts.

State CEQA Guidelines Section 15130 provides the following two alternative approaches for analyzing and preparing an adequate discussion of significant cumulative impacts:

- the list approach, which involves listing past, existing, and probable future projects or activities that have or would produce related or cumulative impacts, including, if necessary, those projects outside the control of the lead agency; or

- the projection approach, which uses a summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions and their contribution to the cumulative effect.

This discussion combines the projection approach and the list approach for the Proposed Program's cumulative impact analysis. Projects included in the cumulative analysis were determined using several factors, including the location and type of activity and the characteristics of the activity related to resources that could be affected by the Proposed Program. In addition, regional or global conditions that might lead to cumulative impacts (e.g., greenhouse gas [GHG] emissions) are also described.

Resource Topics Considered and Dismissed

The Proposed Program has been evaluated for its potential to make a considerable contribution to cumulative impacts related to the following resource topics: agricultural resources, air quality, biological resources, cultural resources, GHG and energy, hydrology and water quality, noise and vibration, traffic/transportation, and utilities and service systems. GHG emissions are inherently a cumulative issue and are already addressed in Chapter 10, *Greenhouse Gas Emissions and Energy Resources.* In addition, the Proposed Program's contribution to cumulative air quality impacts is addressed in Chapter 6, *Air Quality.* Therefore, these topics are not discussed further in this section. For several other resource topics, as shown in **Table 18-1**, either significant cumulative impacts do not exist, or the Proposed Program would not have the potential to make a considerable contribution to any significant cumulative impacts. These resource topics have been eliminated from consideration in the analysis of cumulative impacts and are not discussed further.

Note also that, while the Proposed Program would be growth inducing and the secondary effects of growth could contribute to significant cumulative impacts, such secondary effects are considered to be already captured in the cumulative setting. Therefore, the analysis of the Proposed Program's contributions to cumulative impacts focus on the impacts of the Proposed Program itself, and not such secondary effects.

Table 18-1. Resource Topics Eliminated from Further Consideration in the Analysis of Cumulative Impacts

Resource Topic Not Discussed Further	Rationale
Forestry Resources	Stanislaus County's tracts of hardwood forest are located outside of the Program area. For this reason, the Proposed Program would not have any potential to make a contribution to any significant cumulative impacts pertaining to forest lands, or lands zoned for forest land or timberland uses. Therefore, this resource topic is dismissed from further analysis.
Geology, Soils, and Seismicity	Impacts related to geology, soils, and seismicity from other projects and development in the Modesto area would be site-specific and like the Proposed Program, would be required to comply with California Building Standards Code standards to minimize seismic-related impacts. For these reasons, there would be no significant cumulative impact regarding geology, soils and seismicity to which the Proposed Program could contribute. Therefore, this resource topic is dismissed from further analysis.
Hazards and Hazardous Materials	The Proposed Program's effects related to hazards and hazardous materials would be site-specific, temporary, and/or mitigated to a level that is less than significant. As described in Chapter 11, *Hazardous Materials,* City standards and policies require that proper measures are taken in the event of an accidental hazardous materials spill or in the event that contaminated soils are encountered during construction. Other projects in the Modesto region could have similar construction-related hazards and hazardous materials impacts but these likewise would likely be site-specific and/or temporary. Similar to the Proposed Program, other projects would also be required to comply with the same regulations pertaining to safe use, storage, transport, and disposal of hazardous materials used during construction. Other development in the region that adds hazardous materials-intensive land uses (e.g., gas stations, dry cleaners) could increase the cumulative burden of potential hazardous materials releases in the area, but these impacts would result by a different mechanism than the Proposed Program. Therefore, there are no cumulatively significant impacts to which the Proposed Program could contribute, and this resource topic is dismissed from further analysis.

Resource Topic Not Discussed Further	Rationale
Land Use and Planning	As discussed in Chapter 13, *Land Use and Planning,* the Proposed Program would not result in impacts that involve the division of an established community. Land use and planning has been dismissed from the cumulative analysis because, similar to the Program, other projects are subject to planning, environmental review, and a permitting process. Through these processes, inconsistencies with relevant plans and policies would be resolved before project implementation; therefore, there would be no significant cumulative impact related to conflicts with local plans and policies to which the Proposed Program could contribute.
Minerals	There are no known mineral resource zones, historic or active mines or quarries within the Program area, and the Proposed Program's components would not directly affect mineral production sites or prevent future availability of mineral resources. For this reason, the Proposed Program would not have the potential to make any contribution to a significant cumulative impact pertaining to mineral resources. Therefore, this resource topic is dismissed from further analysis.
Public Services	While the Proposed Program would indirectly induce growth, which would increase demand for public services, the City, County, and other affected communities would plan for and implement appropriate improvement to their public services (including associated facilities and infrastructure), such that cumulatively significant impacts related to public services does not and would not occur. For this reason, no cumulatively significant impact exists to which the Proposed Program could contribute, and this topic has been dismissed from further analysis.
Recreation	While the Proposed Program would indirectly induce growth, which would increase demand for recreational facilities, City, County, and other affected communities would plan for and implement appropriate improvement to their recreational facilities, such that cumulatively significant impacts related to recreation does not and would not occur. For this reason, no cumulatively significant impact exists to which the Proposed Program could contribute, and this topic has been dismissed from further analysis.

Notes: DEIR = Draft Environmental Impact Report

Geographic Scope of Analysis

The level of detail of a cumulative impact analysis should consider a proposed project's geographic scope and other factors (e.g., a project's construction or operational activities, the nature of the environmental resource being examined) to ensure that the level of detail is practical and reasonable. The discussion focuses on the cumulative impacts of the Proposed Program for

environmental resources that could be cumulatively affected by the Proposed Program in conjunction with other past, present, and reasonably foreseeable future projects.

The defined specific geographic scope for each environmental resource area analyzed in this DEIR to which the Proposed Program could contribute to cumulative impacts is provided below in **Table 18-2**.

Table 18-2. Geographic Scope for Resources with Cumulative Impacts Relevant to the Proposed Program

Resource	Geographic Scope	Explanation for the Geographic Scope
Aesthetics	General vicinity of the proposed components (e.g., within 0.5 mile) in Modesto and outlying service areas	Aesthetic impacts are limited to the general vicinity of the proposed components. Other projects in the vicinity of proposed above-ground components would contribute to cumulative aesthetic impacts and collectively affect the region's visual character.
Agricultural Resources	Generally, agricultural land throughout the state; for the purposes of this analysis, focused on the City of Modesto and outlying service areas, as well as the remainder of Stanislaus County	While the Proposed Program's impacts on agricultural resources are limited to the footprint of the proposed components, agricultural resources are a valuable regional asset and an important part of the character of Modesto and its surrounding area. Other projects in the vicinity of Modesto and the outlying service areas that affect agricultural land, in combination with the Proposed Program, could result in cumulative effects.
Biological Resources	Modesto and the outlying water service areas and greater Stanislaus County, particularly areas of sensitive biological resources value (e.g., wetlands)	Animals are able to migrate and plants may disperse long distances via seed carried by the wind or other mechanisms. Additionally, biological resources are important regional assets. Therefore, the geographic scope for this analysis considers projects in the vicinity of Modesto and the outlying service areas, as well as Stanislaus County as whole.
Cultural, Tribal, and Paleontological Resources	Modesto and the outlying service areas	Cultural, tribal, and paleontological resource impacts from the Proposed Program would be limited to the immediate area or footprint of the proposed components. Other projects in Modesto, the outlying service areas, and the vicinity that would disturb the ground surface could affect cultural resources (including tribal cultural resources) in a similar manner to the Proposed Program, potentially leading to significant cumulative impacts.

Resource	Geographic Scope	Explanation for the Geographic Scope
Hydrology and Water Quality	Immediate vicinity of Modesto and the outlying service areas, including adjacent reaches of the Tuolumne and San Joaquin Rivers	Contributions of the Proposed Program to cumulative impacts on hydrology and water quality (e.g., stormwater discharges from construction sites) would affect the immediate area of the proposed components and potentially areas downstream. Other projects that are constructed in this same area could affect hydrology and water quality in similar ways to the Proposed Program, potentially leading to cumulative impacts.
Noise and Vibration	Immediate vicinity (i.e., within roughly ¼ mile) of proposed components in Modesto and the outlying service areas	Noise impacts from the Proposed Program would be limited to the immediate area of the proposed components. Cumulative impacts could result if other projects were to be constructed at the same time as the proposed components and in same area (i.e., roughly ¼ mile), such that ambient noise levels could increase.
Transportation and Traffic	Immediate vicinity of the proposed components in Modesto and the outlying service areas	The Proposed Program would not add substantial numbers of vehicle trips over the long term. Therefore, the Proposed Program's impacts on transportation and traffic would primarily be limited to construction-related effects (i.e., temporary closures of up to one lane of traffic for installation of pipelines). Cumulative impacts could result if other nearby projects were to be constructed at the same time as the proposed components.
Utilities and Service Systems	Immediate vicinity of Modesto and the outlying service areas and regional landfills that may be used by the Proposed Program	The Proposed Program would improve water service within the City's service area and would not involve wastewater collection, conveyance, or treatment. The Proposed Program may require disposal of excavated and demolished material at a local landfill. Other projects in the Modesto area that may require disposal of large volumes of waste at a landfill, in combination with the Proposed Program, could result in cumulative impacts on the capacity of landfill(s) in the area.

Table 18-3 lists projects planned in the study area that could affect resources that would also be affected by the Proposed Program. The locations of these projects are also shown in **Figure 18-1.** The list was developed by reviewing sources available on the City's website, the Stanislaus County website, and the Governor's Office of Planning and Research CEQAnet database. While it is

unlikely that every potential cumulative project is listed, the list of cumulative projects is sufficiently comprehensive to be representative of the types of impacts that would be generated by other projects similar to or related to the Proposed Program. The evaluation of cumulative impacts assumes that the impacts of past and present projects are represented by baseline conditions. Cumulative impacts are based on the impacts of the Proposed Program plus impacts of reasonably foreseeable future projects, compared to baseline conditions.

Table 18-4 describes the planning documents containing projections used in the analysis.

Table 18-3. Reasonably Foreseeable Future Projects that Might Cumulatively Affect Resources of Concern for the Proposed Program

No.	Project Title	Brief Project Description	Distance from Program Area
Recreation Projects			
1.	Tuolumne River Regional Park Master Plan	The Tuolumne River Regional Park (TRRP) Master Plan envisions over 500 acres of parkland that would run along 7 river miles of the Tuolumne River. The regional park would extend from the Mitchell Street Bridge east to the Carpenter Road Bridge in Stanislaus County. Five major areas make up the TRRP: the Legion Park/Airport Area, the Gateway Parcel, Mancini Park, the Dryden Park Golf Course Area, and the Carpenter Road Area. The City is currently constructing recreational trails on the Gateway Parcel, which will establish a connection to the downtown corridor and existing pathways along the Tuolumne River (including those adjacent to Beardbrook Park and farther east toward the Modesto Airport). The new development on the Gateway Parcel includes a backwater channel, additional seating, an outdoor classroom, and a pedestrian bridge spanning the mouth of the channel on the bank of the Tuolumne River (Ortega pers. comm. 2017).	Overlaps Proposed Program study area

No.	Project Title	Brief Project Description	Distance from Program Area
Development and Agricultural Projects			
2.	Bronco Wine Co. 2016 Rezone Application (Stanislaus County)	The application requests Stanislaus County to rezone the entire 118-acre parcel to a new Planned Development, and to expand an existing wine manufacturing facility. The project includes 14 new buildings, totaling 1.4 million square feet, which includes warehousing, office and administrative buildings, and an employee center. The expansion also includes railroad access to the Union Pacific Railroad by constructing two rail spurs, which would minimize traffic impacts in surrounding areas. Access to the facility would be along Bystrum Road. Phase 1 is expected to occur within 5 years of project approval; future phases would be built based upon market demands. An initial study was circulated in March-April 2017 (Stanislaus County 2016a).	Approximately 3.5 miles south of proposed future tank
3.	Modesto Courthouse Project (Stanislaus County)	The State of California Judicial Council, Administrative Office of the Courts is pursuing the construction of a new courthouse in Modesto for the Superior Court of Stanislaus County. The preferred site is located in downtown Modesto in the city block bounded by G and H Streets and 9th and 10th Streets. The new courthouse will serve the public with a modern, secure, integrated, and efficient court facility in downtown Modesto. The new courthouse would occupy approximately 300,000 square feet, consist of 26 courtrooms, and replace seven facilities (City of Modesto 2014). The project has been approved but has not yet been constructed.	Overlaps Proposed Program study area
4.	DB Equipment Staff Approval Permit (Stanislaus County)	Request to establish an orchard tractor cab assembly and installation business on a legal non-conforming property, in two phases. Phase 1 includes the reuse of two existing buildings for shipping, receiving, and general office work. Phase 2 includes construction of a 10,000-square-foot metal building, which would be used for the assembly of the orchard tractor cabs.	Approximately 0.4 mile north of buildout pipeline
5.	Marketplace Shopping Center Project (City of Modesto)	The project includes the construction of a new shopping center with approximately 170,000 square feet of floor area on approximately 18 acres. The project includes two large buildings in the shopping center that would be partitioned into spaces for various tenants. A Final EIR was published in November 2013 (City of Modesto 2013). Following the resolution of legal challenges, construction began in early 2017 and will be completed in 2018.	Overlaps Proposed Program study area

No.	Project Title	Brief Project Description	Distance from Program Area
6.	Trinkler Dairy Farms (Stanislaus County)	The project proposes to increase a dairy herd size from 3,150 to 5,175 animal units, consisting of 3,180 milk cows, 600 dry cows, and 1,395 heifers in the A-2-40 (General Agriculture) zoning district. Expansion would require the construction of a freestall barn, a milk parlor, a calf barn, a feed storage pad, and a wastewater storage pond (lagoon). The 220± acre parcel is located at 7251 Crows Landing Road, at the southwest corner of Crows Landing and West Taylor Roads, in the Ceres area. The Planning Commission adopted a Negative Declaration for this project on December 14, 2016. A Notice of Determination was received on February 27, 2017 (Stanislaus County 2017).	Approximately 4.3 miles south of proposed future pipelines
7.	Blue Diamond Growers Rezone Application (Stanislaus County)	Request to rezone the existing parcels for future expansion of the Blue Diamond facility. Expansion plans would include removal of the stormwater basin and construction of an underground storage and percolation system, cold and/or dry storage, and pasteurization buildings. This project is currently undergoing CEQA review (Stanislaus County 2016b).	Overlaps Proposed Program study area
8.	Art Silva Dairy (Stanislaus County)	Request to increase the milk/dry cows at this facility by 928 head. The facility currently houses 583 milk cows, 60 dry cows, and 390 heifers. With the increase, the totals would be 920 milk cows, 180 dry cows, and 861 heifers. The proposed increase would require construction of an approximately 53,000-square-foot freestall barn within an existing exercise pen area. As per the amended Waste Water Management Plan, the lagoons are sufficiently sized to contain the increased wastewater (Stanislaus County 2015a).	Approximately 1.2 miles from proposed buildout pipelines
9.	Derrell's Mini Storage Rezone and Merger Application (Stanislaus County)	This is a request to rezone expired P-D (202) to a new P-D to allow for 100 spaces of RV storage on a 3± acre site. The project site consists of 3 separate parcels of 0.39± acre, 0.36± acre and 2.25± acres but the applicant requests to merge the three parcels into one parcel. The project would include construction and operation of 78 enclosed and 22 open storage spaces, a 20-foot pole sign, fencing, and landscaping. The operation would be unstaffed and is anticipated to generate an average of 5-10 vehicle trips per day. A Negative Declaration for this project was considered for adoption during the review period from February 9, 2016, to March 14, 2016 (Stanislaus County 2016c).	Overlaps Proposed Program study area

No.	Project Title	Brief Project Description	Distance from Program Area
10.	Kansas Woodland Business Park	The City of Modesto is proposing the development of the Kansas Woodland Business Park located northwest of downtown Modesto. It is bounded by Woodland Avenue to the north, Kansas Avenue to the south, 9th Street on the east, and is on the web by State Route 99. The City aims to attract technology intensive businesses to the park (City of Modesto 2017).	Overlaps Proposed Program study area
11.	Fruit Yard Amphitheater	This project would expand an existing Planned Development with an outdoor, fenced, 3,500-person-capacity amphitheater event center, a 5,000-square-foot stage, a 5,000-square-foot roof structure, a 4,000-square-foot storage building, a parking lot to the rear of the stage, and an additional 1,302-space temporary parking area. A maximum of 12 amphitheater events are proposed to take place per year. This use permit also includes a covered seating area of approximately 4,800 square feet and a 1,600-square-foot gazebo in the eastern half of the park area, east of the outdoor amphitheater, and replacement of the existing pylon freestanding pole sign with an electronic reader board sign. An initial study was circulated in March 2017.	Approximately 2.7 miles east of proposed future pipelines
12.	Amendment to Planned Development 190	This project would amend Planned Development 190 for Lander Crossings commercial center to change the use on one parcel (1831 Lander Avenue) from a 12,000-square-foot retail building to a 93-room hotel. The approved use for Parcel 2 (1811 Lander Avenue) would also be amended from retail to additional parking to support the Lander Crossings commercial center.	Approximately 2.8 miles southwest of proposed fire flow improvement pipelines
13.	Sikh Temple Turlock	The project includes construction of a new two-story, approximately 21,000-square-foot building. The first floor of the building would consist of a dining area and kitchen, and the second floor would have a conference room, priest residence, and guest rooms. A six-foot-tall, externally illuminated monument sign is also proposed. The subject property is located at 1391 Fifth Street, Stanislaus County.	Approximately 0.5 mile southwest of proposed fire flow improvement pipelines
14.	Northwest Triangle Specific Plan	The Northwest Triangle Specific Plan was adopted in 1995 and was amended in 2004. This project would update the specific plan, which covers 800 acres, to re-designate six properties within the Specific Plan area. The General Plan designation will be amended for select parcels to Community Commercial from existing designations of Highway Commercial. For additional parcels, the designations will be changed from Community Commercial to Community Commercial/Medium Density Residential.	Approximately 1.2 miles west of proposed fire flow improvement pipelines

No.	Project Title	Brief Project Description	Distance from Program Area
		Minor updates will also be made to the Specific Plan to ensure consistency with the updated 2012 General Plan policies and current regulation. An Initial Study was adopted and the project was approved in May 2017.	
15.	Assyrian Pentecostal Church	The project involves construction of a 12,000-square-foot sanctuary building and a 13,000-square-foot multi-purpose building for the Assyrian Pentecostal Church. Many of the on-site improvements, such as the construction of the parking lot with 175 spaces, have already been installed as part a previously approved project. The new project would be developed in phases. The project would construct a smaller 9,854-square-foot multi-purpose building first, with the sanctuary to be constructed at a later date. Landscaping and other site improvements would be required in accordance with updated standards. An application for a time extension to a previously approved minor discretionary permit from the City of Turlock was received in August 2017.	Approximately 1.9 miles northwest of proposed fire flow improvement pipelines
16.	Turlock Assisted Care Center	The project is an approved licensed assisted living and memory care community, involving the construction of a two-story, 67,430-square-foot building that will include a total of 82 assisted living apartments. An existing oak tree will be retained and incorporated into the wandering garden. On-site and off-site improvements include landscaping, parking, commercial driveways, and two monument signs. A time extension for this project was granted in June 2017 by the City of Turlock.	Approximately 0.4 mile south of proposed fire flow improvement pipelines
17.	Sunburst Disease Plant	The project would develop an approximately 5-acre property for the new headquarters for a full-service agricultural laboratory. The project would include the construction of two buildings totaling 16,256 square feet that would house the offices and laboratories and six 4,900-square-foot greenhouses. The office and laboratory buildings would be connected with a covered walkway. The project applicant requested a time extension from the City of Turlock in August 2017 for this previously approved project.	Approximately 2.4 miles west of proposed fire flow improvement pipelines
18.	Super Store Industries	The Super Store Industries project consists of the development of three parcels totaling approximately 26 acres for the construction of a new processing plant, guard shack, and parking lot for Super Store Industries. The project would be constructed in two phases that would generally involve constructing two parking lots (total of 339 spaces) in Phase 1 within one year of project approval, and,	Approximately 2.1 miles west of proposed fire flow improvement pipelines

No.	Project Title	Brief Project Description	Distance from Program Area
		in Phase 2, constructing a 157,018-square-foot processing plant to connect to an existing 155,728-square-foot processing plant. The guard shack and truck scale will include an off-street stacking lane for incoming delivery trucks. The proposed project will be an expansion of the current facility, which makes packaged dairy and juice products, and will increase the production of the same packaged dairy and juice products. The facility currently operates 24 hours a day, seven days a week and will continue to do so with the new expansion. Both processing plants will operate with a total of 110 employees per shift and approximately 435 truck deliveries/ loadings per day. An Initial Study was completed and the City of Turlock approved the project in August 2017.	
19.	Century Chevron	The project would remove and reconstruct an existing convenience mart, fuel island, and detached car wash on an approximately 1-acre parcel. The new 5,312-square-foot convenience mart would be constructed on the southern portion of the property. A new 6-tank fuel island and canopy would be constructed in the same location as the existing fuel island. The existing fuel tanks would remain in place. A new freestanding drive-through car wash would be located on the eastern side of the property. A new freestanding price sign would be constructed. New exterior wall signs for the convenience mart, car wash, and fuel canopy would also be constructed. The project was approved by the City of Turlock in June 2017.	Approximately 1.9 miles southwest of proposed fire flow improvement pipelines
Public Works Projects			
20.	City of Modesto Wastewater Master Plan Update	The City of Modesto is in the process of updating and replacing its Wastewater Master Plan and EIR to guide management of its wastewater service system. The Wastewater Master Plan would include various Capital Improvement Projects collectively intended for system-wide implementation to increase sewer capacity, extend service to new development, replace and repair existing sewers, reduce infiltration and inflow of stormwater into the sanitary sewers, reduce flooding impacts at the Sutter Plant site, increase treatment process operational flexibility and efficiencies by constructing new primary treatment and solids handling facilities at the Jennings Plant, and removing primary treatment and handling facilities from the Sutter Plant. The City proposes to construct and operate numerous improvements to its collection system and upgrades to the Sutter and Jennings plants. These include collection system	Overlaps contiguous service area

No.	Project Title	Brief Project Description	Distance from Program Area
		and treatment plant CIPs located throughout the City's service area and unincorporated Stanislaus County.	
21.	California High-Speed Rail Passenger Station	The City of Modesto Community and Economic Development Department has prepared a feasibility study for constructing a downtown passenger rail station for the California High-Speed Rail Project. The project is part of Phase 2 of the Proposition 1A High Speed Rail System project, but a specific start date has not been determined. The City has identified a potential site for the rail station, generally bounded by State Route 99 to the west, 9th Street to the east, North Jefferson Street to the northwest, and B Street to the south (California Department of Transportation 2013).	Overlaps Proposed Program study area
22.	Carpenter Road at Whitmore Avenue Intersection and Bridge Widening (Stanislaus County)	The project includes installation of light signals and widening or replacing the existing Carpenter Road over Turlock Irrigation District Lateral No. 1 Bridge (Stanislaus County N.D.a).	Overlaps Proposed Program study area
23.	Airport Neighborhood Sewer (Phase II) (Stanislaus County)	Phase I of this project was constructed in 2014 and included installation of a gravity sewer system along Kerr Avenue. The County has developed improvement plans for Phase II, which is scheduled to end in fall 2017 and would include construction of a new gravity sanitary sewer system consisting of approximately 20,000 feet of sewer pipe. The completed project would provide approximately 362 sewer service connections to the residents of the Airport Neighborhood Sewer District (Stanislaus County N.D.b).	Overlaps Proposed Program study area
24.	Crows Landing Road Corridor Improvement Project (Stanislaus County)	This road improvement project is intended to improve safety, help illuminate the corridor, and make pedestrians and cyclists more visible to drivers. The project includes constructing raised medians, street lighting, and buffered bike lanes. Crows Landing Road would be resurfaced for buffered bike lanes. Existing signals would be modified and obsolete parts would be removed and salvaged (Stanislaus County N.D.c).	Overlaps Proposed Program study area

No.	Project Title	Brief Project Description	Distance from Program Area
25.	McHenry Avenue Improvement Project (Stanislaus County)	San Joaquin County, in cooperation with Stanislaus County, has completed engineering work for a project to widen and improve a one-mile segment of McHenry Avenue from Jones Road to 1,700 feet south of River Road, in Stanislaus County. The project will widen and signalize the McHenry Avenue/River Road intersection; widen McHenry Avenue to provide a center left-turn lane; and replace two existing bridges - one across the Stanislaus River, and the other across the SSJID canal. Construction was anticipated to begin in spring 2017; the project shown as being in the design phase on the County's website as of August 2017 (Stanislaus County N.D.d).	Overlaps Proposed Program study area
26.	Claribel Road at Roselle Avenue Intersection Road Widening Project (Stanislaus County)	The project includes constructing a signalized intersection at Claribel Road and Roselle Avenue and right-of-way acquisition, utility relocation, widening the existing two-lane roadway at the intersection to accommodate turn lanes, new signalization, utilities, and drainage improvements. A Mitigated Negative Declaration was published in June 2016 (Stanislaus County 2016d).	Overlaps Proposed Program study area
27.	North Valley Regional Recycled Water Program (City of Modesto)	The City of Modesto, City of Turlock, and Del Puerto Water District (DPWD) are partnering on a regional solution to address water supply shortages in DPWD's service area on the west side of the San Joaquin River in San Joaquin, Stanislaus and Merced Counties. The project would deliver 59,000 af/yr of recycled water produced by the Cities of Modesto and Turlock via the Delta-Mendota Canal. Recycled water would be conveyed from Modesto and Turlock through pipelines from their wastewater treatment facilities, crossing the San Joaquin River, and ending at the Delta-Mendota Canal. The purpose of the project is to make the Cities' recycled water available to DPWD for agricultural purposes, to provide an additional source of water south of the Delta, which can be used to meet agricultural uses and support wildlife refuges and wetland areas. Construction of this project is currently underway and is anticipated to be complete by the end of 2017 (City of Modesto 2016).	Modesto Water Quality Control Facility discharge site is approximately 5.4 miles southeast of Grayson improvements

No.	Project Title	Brief Project Description	Distance from Program Area
28.	Stanislaus River Regional Water Authority's Surface Water Supply Project	The SWSP would include release of up to 30,000 af/yr of water from Don Pedro Reservoir, downstream diversion from the Tuolumne River through an existing infiltration gallery and newly constructed pump station and raw water pipelines, treatment at a newly constructed water treatment plant, conveyance of the treated water to the Cities of Ceres and Turlock, and connection to the existing potable water system infrastructure of the two cities. The project also includes a minimum annual transfer of 2,000 af of "offset water" from SRWA member agencies to TID, which would increase in dry years.	The infiltration gallery, pump station, and water treatment plant would be located on the south bank of the Tuolumne River at Geer Road, approximately 3.9 miles southeast of the nearest CIP

Notes: af/yr = acre-feet per year; CIP = Capital Improvement Project; DPWD = Del Puerto Water District; EIR = environmental impact report; RV = recreational vehicle; SRWA = Stanislaus Regional Water Authority; SSJID = South San Joaquin Irrigation District; SWSP = Surface Water Supply Project; TID = Turlock Irrigation District; TRRP = Tuolumne River Regional Park

Table 18-4. Planning Documents Considered for Cumulative Impact Analysis

Document	Summary
City of Modesto Urban Area General Plan 2019	The City of Modesto Urban Area General Plan guides land use and development within the City of Modesto. The goals and policies in the General Plan provide an outline for new growth and minimization of possible impacts, while the adopted land use diagram included in the General Plan identifies desired land use types in the City. Adopted in 2019, the City of Modesto Urban Area General Plan updates the previous iteration completed in 2008 and provides a planning horizon to 2035. The General Plan foresees the majority of future development occurring within an approximately 19,450-acre Planned Urbanizing Area (PUA), which is land within and outside the City's sphere of influence that is predominantly flat, vacant and/or developed with agricultural uses, and minimally, if at all, served with urban services and infrastructure, including roads. The General Plan projects population within the Modesto General Plan boundary to be approximately 390,000. This population is assumed to be reached at some time after the 2040 general plan horizon year (City of Modesto 2019). (City of Modesto 2019).
Stanislaus County General Plan (2016f)	The Stanislaus County General Plan guides the physical development, preservation and conservation of areas within the unincorporated areas of the County. The General Plan was updated in 2015 to incorporate changes that had occurred in terms of legislation, code, and local standards since the previous version and to provide a planning horizon to 2035 (Stanislaus County 2016f). The Housing Element of the General Plan anticipates that most of the future residential growth in Stanislaus County to occur within the limits of the incorporated cities. Any concentrated growth in unincorporated Stanislaus County is anticipated to take place in the communities of Denair, Diablo Grande, Keyes, and Salida, which are guided by community or specific plans and are served by special districts which provide sewer and water, necessary to accommodate development. In 2010, the population of unincorporated Stanislaus County was 110,236. This number is projected to increase to 125,879 by 2030 (Stanislaus County 2016e).
City of Ceres General Plan 2035 (2018)	The City of Ceres General Plan formalizes a long-term vision for the physical evolution of Ceres and outlines policies, standards, and programs to guide day-to-day decisions concerning Ceres' development through the year 2035 (City of Ceres 2018). The General Plan designates land uses for and applies its policies and standards to an area defined as the City's Planning Area, which includes the City's Urban Growth Area. The Planning Area is bounded by the Tuolumne River on the north, Carpenter Road on the east, Grayson Road on the south, and Washington Road on the west, encompassing approximately 14,400 acres (City of Ceres 2018). The Urban Growth Area encompasses all land envisioned for development as part of Ceres through the year 2015. This area

Document	Summary
	is further divided into two phases of development to ensure orderly development and prevent premature conversion of agricultural lands.
City of Turlock General Plan (2012)	The General Plan governs all City actions relating to Turlock's growth and development. It is both a long-range vision and a guide to ongoing decision-making and near-term actions. The defined policies, maps, standards, and guidelines outline what actions must be implemented in order to accommodate population and employment growth over a 20-year time period. Guiding policies in each chapter are statements of vision and overall intent. There are approximately 8,730 acres in the current city limits (not including the County islands), and an additional 8,560 acres of land are contained within the Study Area outside of city limits. According to their General Plan Land Use designations, infill sites (those that are vacant or substantially underutilized) have a maximum capacity for approximately 5,000 new housing units. However, given site constraints, property owners' intentions, and other factors, it is likely that only a portion of these sites will actually develop over the next 20 years; an estimate is 60 percent (3,000 units). The remainder of the development needed to house Turlock's projected growth would be within new neighborhoods in master plan areas, several of which are outside of the current city limits. The WMP would affect North, Central, and South Turlock (see Figure 1-2), all of which are infill areas. Turlock has a number of unincorporated "County Islands," areas of unincorporated county land that are surrounded by incorporated Turlock on all sides. Generally, the county islands are not served by City infrastructure or services; some have no curb and gutter improvements and their roads are not maintained to City standards. Similarly, Stanislaus County is technically responsible for their public safety services. Turlock has an interest in incorporating the county islands and bringing their public infrastructure up to City standards, as this would help ameliorate public health and safety concerns. Turlock is in the process of negotiating a cost-sharing strategy with the County that would split the cost burden between the two jurisdictions.

Notes: PUA = Planned Urbanizing Area

18.4.2 Cumulative Impact Setting

This section describes the cumulative impact setting for which the Proposed Program could contribute to a cumulative impact.

Aesthetics

The visual setting of Stanislaus County is characterized by a combination of agricultural, rural development, suburban, and open space land uses. Due to the county's flat topography, expansive and long-range views of natural landscapes including the Diablo Range are accessible. Waterways including the Tuolumne River, Stanislaus River, and San Joaquin River, also provide scenic viewing opportunities.

Agricultural Resources

Stanislaus County is a major agricultural county in California. The County consists of over 425,000 acres of Important Farmland (CDOC 2016) and has over 575,000 acres of farmland under Williamson Act contracts (Stanislaus County 2015b). The success of agriculture in Stanislaus County is largely due to its favorable climate and the flat, fertile soils (Stanislaus County 2015b). However, while overall production trends for leading commodities have continued to grow, the County's agricultural industry is under threat from population growth/urban development and increased production costs. CDOC reports that while the period 2014-2016 saw an overall increase in Important Farmland acreage in Stanislaus County of over 6,700 acres, the County lost over 2,700 acres of Prime Farmland (CDOC 2016).

Biological Resources

Numerous species of plant and animal life are found in Stanislaus County which have aesthetic, recreational, economic, scientific, and educational value to the citizens of the area. Much of the area including Modesto and its surrounding areas is developed for urban and agricultural uses, but the Tuolumne and San Joaquin Rivers provide habitats various species. Most of the special-status wildlife species that have been identified as occurring within the County are associated with these riparian areas, as well as the annual grassland/vernal pool complexes on the eastern side of the county and the lands west of Interstate 5 (Stanislaus County 2016f).

Cultural, Tribal Cultural, and Paleontological Resources

A number of cultural resources have been identified in the Modesto urban area, including four sites recorded at the Central California Information Center, including habitation sites, burials, and artifacts concentrations located near the Stanislaus and Tuolumne Rivers, Dry Creek, and terraces above waterways (City of Modesto 2019). However, information on prehistoric cultural resources in the Modesto area is limited and is often obtained as a result of development or other proposed activities where archaeological research is required (City of Modesto 2019). Additionally, numerous historic structures and properties within the City of Modesto have been listed on the NRHP, California State Points of Historical Interest, and the City of Modesto Landmark Preservation Sites list (City of Modesto 2019). Within greater Stanislaus County, there are 20 NRHP listings, 5 state landmarks, and 7 points of historical interest (Stanislaus County 2016f), but none are located within the Proposed Program's outlying service areas. Paleontological resources have been found in the Modesto Formation of Stanislaus County. Paleontological resources have been found in the Modesto Formation of Stanislaus County.

Hydrology and Water Quality

The Tuolumne River is the primary watercourse in the Modesto area. Dry Creek also passes through portions of the City before joining the Tuolumne. The San Joaquin River passes through Stanislaus County southeast of Modesto, flowing in a southeast-northwest direction. The Stanislaus River flows roughly east to west north of Modesto and makes up the northern boundary of Stanislaus County. The Tuolumne River in the area of Modesto and the San Joaquin River are designated as impaired for a number of water quality contaminants, as shown in Table 12-2 in Chapter 12, *Hydrology and Water Quality,* likely as a result of urban and agricultural runoff in the watershed. Water quality contaminants include chlorpyrifos, diazinon, mercury, pesticides, among others.

Areas of groundwater contamination also exist in the Modesto and Turlock Groundwater Sub-basins. Historically, groundwater levels in the Modesto area have declined over past decades, but completion of the MRWTP in 1994, and subsequent importation of surface water supplies from the Modesto Irrigation District caused groundwater levels to rebound to some degree (STRGBA 2005). More recent data indicates that from 2007 to 2017 groundwater levels in the Modesto area decreased from 0 to 20 feet, with isolated areas of greater reductions (DWR 2017). Some of this decrease may be attributable to the recent drought in California, which lasted in its most severe form from roughly 2013-2014, though moderate drought conditions continued for up to years afterwards in some areas of the state, including in the Modesto area through February 2017.

Noise and Vibration

Numerous sensitive land uses (e.g., residential dwellings, schools, hospitals) are found in the City of Modesto and in proximity to the proposed components. Dominant existing noise and vibration sources vary within the area of the Proposed Program, but include industrial facilities (e.g., canneries), agricultural activities, railroads, air traffic (near the Modesto City-County Airport), and vehicular traffic. Railroad lines operated by multiple companies, as well as Highways 33, 99, 132, 108, and 219, create elevated ambient noise levels in large portions of the Program area. In general, ambient noise tends to decrease as one moves outside of the urban areas of Modesto and Ceres.

Transportation and Traffic

Primary transportation routes in the Program area include SR 33, 99, SR 132, SR 108, and SR 219. Proposed components would be installed within and along numerous local roads within the City of Modesto and surrounding area. In addition to commute traffic, goods movement is a potential source of congestion on area highways and roads. Transport of agricultural commodities has long been an important function in Stanislaus County, and the County also is an important food processing region for the State (Stanislaus County 2016f). Additionally, the large urbanized areas of Stanislaus County, such as Modesto, require millions of tons of goods each year to maintain their economic activities (Stanislaus County 2016f). In agricultural areas outside of the City, movement of agricultural equipment on public roadways may also be encountered.

Utilities and Service Systems

The Proposed Program would have little to no impact on wastewater and would not require the construction of new or expanded stormwater facilities or require new wastewater service. Therefore, these aspects are not discussed here.

The primary landfill within the Modesto area, and the only active landfill in Stanislaus County, is the Fink Road Sanitary Landfill. This landfill handles nonhazardous municipal solid waste. As of 2012, it had a remaining capacity of over 8 million cubic yards and an estimated closure date of 2023 (CalRecycle 2017).

18.4.3 Cumulative Impact Analysis

Impact CUM-1: Cumulative Impacts on Aesthetics *(Less than Significant with Mitigation)*

Several projects identified in Table 18-3 involve new development throughout Modesto and the County. For example, in northeastern Modesto, the Marketplace Shopping Center Project is planned within one mile of a new storage tank to be constructed under the Proposed Program. Residences and recreationists located in close proximity to these facilities may have views of both the new water storage tank and shopping center. Additionally, as discussed in Chapter 4, *Aesthetics and Visual Resources,* the Proposed Program would support planned growth in the City's service area which would involve conversion of agricultural lands. Given the large scale of the new water storage tanks, the facilities in combination with projects listed in Table 18-3 and other planned growth, would not substantially alter the Program area's rural and open space landscape. Cumulative impacts on aesthetics and visual resources would be considered significant and the Program's contribution, if left unmitigated, may be considerable.

Construction of Program components could adversely affect the visual quality and visual character of a particular site during construction, but Mitigation Measure AES-1 would reduce this impact by requiring that construction staging areas be located away from public areas. Other projects in the Modesto area, particularly new development projects and future water infrastructure projects, could alter the visual landscape in the study area. However, with implementation of Mitigation Measure AES-2 to incorporate aesthetic considerations into the design of these components, the Proposed Program would not make a considerable contribution to any significant cumulative impacts pertaining to aesthetics and visual resources. Therefore, the Program's contribution to this cumulative impact would be **less than significant with mitigation**.

Impact CUM-2: Cumulative Impacts on Agriculture (*Significant and Unavoidable*)

Several projects identified in Table 18-3 could result in conversion of agricultural land, including Important Farmland, to non-agricultural uses. Additionally, build out of the City of Modesto, Stanislaus County, City of Ceres, and City of Turlock General Plans would convert agricultural land to non-agricultural use. As described in Chapter 5, *Agricultural Resources,* the Proposed Program would result in the conversion of Prime Farmland or Unique Farmland to non-agricultural use associated with development of four storage tanks and six groundwater wells in the Program area.

Given the importance of agriculture to Stanislaus County and that loss of Prime Farmland has been occurring in recent years and is an ongoing concern with increasing urban development in the region, the loss of Prime Farmland is a significant cumulative impact, and the Proposed Program's contribution would be considerable.

As described in Chapter 5, LAFCO's Agricultural Preservation Policy (2015) and Policy 2.15 in the *Stanislaus County General Plan*, which require that agricultural land converted to residential use be replaced at a 1:1 ratio, do not apply to the Proposed Program. While the Stanislaus County's Farmland Mitigation Program provides a mechanism for establishing conservation easements, that program is designed to address loss of Farmland resulting from residential development and not public infrastructure projects such as the Proposed Program. Furthermore, the City has determined that the cost of establishing a conservation easement would substantially increase

the cost of the Proposed Program and burden on ratepayers which would not be acceptable and purchasing an agricultural easement over off-site agricultural land would not ultimately avoid or reduce the impact of converting Farmland. Additional mitigation (e.g., restoration of Farmland) is not considered feasible. Based on this, no feasible mitigation measures have been identified. This impact of the Proposed Program would be significant and unavoidable at the project level, and a considerable contribution to significant cumulative impacts related to loss of Farmland. Therefore, the Program's contribution to this cumulative impact would be **significant and unavoidable.**

Impact CUM-3: Cumulative Impacts on Air Quality and GHG Emissions (*Significant and Unavoidable*)

As stated in Table 18-3 above, cumulative impacts of air quality are evaluated in Chapter 6, *Air Quality* (Impact AQ-3) and Chapter 10, *Greenhouse Gas Emissions and Energy* (Impacts GHG-1 and GHG-2).

Impact CUM-4: Cumulative Impacts on Biological Resources *(Less than Significant with Mitigation)*

Construction projects in the Program area, such as those listed in Table 18-3, as well as elsewhere in Stanislaus County would have the potential to impact biological resources. Ground-disturbing construction activities could directly injure or kill wildlife, while development of new areas may result in permanent loss of habitat. Given that many of the special-status species known to occur in Stanislaus County are found in riparian areas, this may be particularly true for projects that are located along the Tuolumne River, Dry Creek, or the San Joaquin River. This is considered a cumulatively significant impact.

The Proposed Program would involve various construction activities that could impact wildlife, plants, and fish, which, left unmitigated, would be considered a considerable contribution to this cumulative impact.

However, implementation of **Mitigation Measures BIO-1** through **BIO-15** would avoid and/or minimize impacts. In addition, compliance with the NPDES General Construction Permit, the City of Modesto's Standard Specifications related to erosion control, and implementing **Mitigation Measure HYD/WQ-1** regarding a frac-out contingency plan for trenchless pipeline installation methods would serve to avoid and minimize impacts on water quality that could affect fish and aquatic life. Considering that the Program would not convert large areas of sensitive habitat and would avoid or minimize temporary effects to the maximum extent practicable, with implementation of the above-mentioned mitigation measures, its contribution to cumulative impacts on biological resources would not be considerable. Therefore, this impact would be **less than significant with mitigation.**

Impact CUM-5: Cumulative Impacts on Cultural, Tribal, and Paleontological Resources (*Less than Significant with Mitigation*)

While unlikely, it is possible that construction of WMP components in the Program study area could impact buried cultural or archaeological resources. Any project that would disturb the ground surface would have the potential to disturb buried cultural, archaeological, or paleontological resources. Therefore, many of the projects listed in **Table 18-3**, as well as currently

unknown projects that may be constructed in accordance with the City of Modesto, City of Ceres, City of Turlock, and Stanislaus County General Plans, could impact buried archaeological or paleontological resources. Such projects also could affect above-ground historical structures depending on the nature of the project and location. For these reasons, cumulative impacts on cultural and paleontological resources are considered significant.

If the Proposed Program were to impact resources or groups of resources, which are also being impacted by other projects, the Proposed Program's contribution to cumulative impacts, if left unmitigated, would be potentially considerable. However, along with implementing the City's standards and policies, the Proposed Program would implement Mitigation Measure CR-1 to avoid and/or minimize impacts to cultural and tribal cultural resources. This would include requirements to conduct cultural resources awareness training before beginning construction on CIP projects. With implementation of this measure, the Proposed Program would not substantially affect cultural, tribal cultural, and paleontological resources and would not contribute considerably to any cumulative impacts on such resources in the Program area or greater Stanislaus County. Therefore, this impact would be **less than significant with mitigation.**

Impact CUM-6: Cumulative Impacts on Hydrology and Water Quality *(Significant and Unavoidable)*

Projects listed in Table 18-3, and those that may be constructed in the future in accordance with the City of Modesto, City of Ceres, City of Turlock, and Stanislaus County General Plans, could adversely affect hydrology and water quality (e.g., via stormwater discharges from construction sites). In particular, projects located near the Tuolumne River, Dry Creek, Stanislaus River, or San Joaquin River would have potential to affect water quality in these water courses, which is already substantially compromised. The existing impairments to water quality in the region are considered to be a cumulatively significant impact. The Proposed Program, if left unmitigated, would result in discharges to impaired water bodies and therefore would make a considerable contribution to this impact.

The Proposed Program's impacts on hydrology and water quality, apart from groundwater supply impacts, would be avoided and/or minimized through compliance with the NPDES General Construction Permit, the City's Standard Specifications related to erosion control, and implementation of Mitigation Measures HYD/WQ-1, which would require preparation and implementation of a frac-out contingency plan for trenchless pipeline installation methods.

While discharges of pollutants to the Tuolumne, Stanislaus, and San Joaquin Rivers may be considered a contribution to a significant cumulative impact given the existing contamination in these water bodies, the mitigation measures prescribed in the DEIR would avoid or reduce any such discharges to minimal levels. Additionally, although not specifically identified, the sources of the existing contaminants in the Tuolumne, Stanislaus, and San Joaquin Rivers shown in Table 12-2 in Chapter 12, *Hydrology and Water Quality,* are more likely attributed to agricultural and urban runoff, rather than construction-related stormwater discharges, as many of the contaminants are pesticides.

Several of the CIP projects listed in Table 18-3 could add impervious surface area to the region or require additional use of groundwater supplies. The new impervious surface area, concentrated largely within or near urban areas, would not substantially affect groundwater recharge because

the majority of groundwater recharge within the Modesto and Turlock Subbasins occurs via percolation of irrigation water in the vast agricultural lands in the area. However, any additional groundwater use by the projects listed in Table 18-3 and the Proposed Program's groundwater needs could contribute to declining groundwater levels and potential overdraft of the aquifer. As discussed in Impact HYD/WQ-2, although the Sustainable Groundwater Management Act (SGMA) process and the future development of a groundwater sustainability plan (GSP) would include measures or allocations to prevent groundwater overdraft, these GSP measures or allocations have not yet been developed and the aquifers' sustainable yields may be exceeded by the Proposed Program (in combination with other users) before these measures and allocations are in place. Thus, while it is the intent of the City to avoid use of groundwater in a manner which would contribute to overdraft, because overall use of groundwater in the relevant aquifers is partially outside of the City's control, and the GSP has not yet been developed to address this issue, the Proposed Program's groundwater use has been conservatively concluded to make a considerable contribution to the cumulative groundwater use and cumulatively exceedance of the local aquifers' sustainable yields. Therefore, following mitigation, the Proposed Program's contribution to cumulative impacts on hydrology and water quality could be considerable. This impact would be **significant and unavoidable.**

Impact CUM-7: Cumulative Impacts Related to Noise and Vibration (*Less than Significant*)

Other projects in the immediate area of the proposed components could add to, or exacerbate, noise generated by construction and/or operation of the proposed CIP projects. Several projects listed in Table 18-3 fit this description. Additionally, projects that may be constructed in the future in accordance with applicable jurisdictions' general plans could be located in immediate proximity to the proposed CIP projects. Because the schedule for the projects listed in Table 18-3 and that for specific CIP projects under the Proposed Program is unknown and/or is subject to change, this analysis makes the conservative assumption that overlaps would occur, potentially producing significant cumulative effects.

As described in Chapter 14, *Noise,* Proposed Program construction and operation would not generate noise in excess of standards established in the local general plan or noise ordinance, depending on the specific characteristics of the proposed components. This would not be a considerable contribution to cumulative impacts. **Mitigation Measures NOI-1** through **NOI-4** would reduce these effects through a variety of means.

In conclusion, temporary or periodic increases in ambient noise levels caused by the Proposed Program (after mitigation) would not make a considerable contribution to significant cumulative noise impacts. Therefore, it is **less than significant with mitigation.**

Impact CUM-8: Cumulative Impacts Related to Transportation (*Less than Significant*)

Depending on the timing of construction activities, other projects located in the immediate vicinity of the proposed components listed in Table 18-3 or included in general plans could overlap in duration with Program construction activities, exacerbating temporary effects on transportation and traffic. These projects, as well as other development that may be constructed in accordance with the City of Modesto, City of Ceres, City of Turlock, and Stanislaus County General Plans could add substantial vehicle trips associated with residential and commercial uses,

which could contribute to a long-term reduction in LOS and operating conditions on roads and highways in the area, creating a significant cumulative impact.

As described in Chapter 16, *Transportation and Traffic,* the Proposed Program would include trenching within the roadway for installation of new and replacement water lines, as well as off-hauling of construction debris and spoils to the landfill. These activities could temporarily create congestion on local streets, which would be largely confined to the immediate area of the Program components.

Because the Program would not add substantial vehicle trips over the long-term and its impacts on transportation and traffic would be temporary, it would not contribute considerably to cumulative impacts on transportation and traffic. Therefore, this impact would be **less than significant.**

Impact CUM-9: Cumulative Impacts on Utilities and Service Systems (*Beneficial*)

During construction, measures would be implemented to avoid any interruptions to utilities and service systems. Over the long-term, the Proposed Program would not generate the need for additional stormwater or wastewater infrastructure or increased solid waste disposal needs. Additionally, the Proposed Program would provide necessary water supply infrastructure to support planned development. As such, the Proposed Program is anticipated to be **beneficial** from the standpoint of cumulative impacts related to utilities and service systems.

Chapter 19
ALTERNATIVES

19.1 Overview

This chapter describes the CEQA requirements related to evaluation of alternatives in an EIR, presents the alternatives development process for the Proposed Program, describes the alternatives analyzed in detail and those considered but eliminated from detailed analysis, provides environmental impact analysis of the alternatives considered, presents a comparison of alternatives, and identifies the environmentally superior alternative.

19.2 CEQA Requirements

CEQA requires that an EIR evaluate a reasonable range of potentially feasible alternatives to the Proposed Program, including the No Project Alternative. The No Project Alternative allows decision-makers to compare the impacts of approving the action against the impacts of not approving the action. Although no clear rule exists for determining a reasonable range of alternatives to a proposed project or program, the State CEQA Guidelines provide guidance that can be used to define the range of alternatives for consideration in the environmental document.

The alternatives described in an EIR must feasibly accomplish most of the basic project objectives, should avoid or substantially lessen one or more of the significant impacts of the Proposed Program, and must be potentially feasible (State CEQA Guidelines Section 15126.6[a]). In determining whether alternatives are potentially feasible, Lead Agencies are guided by the general definition of feasibility found in State CEQA Guidelines Section 15364: “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.” In accordance with State CEQA Guidelines Section 15126.6(f), the Lead Agency should consider site suitability, economic viability, availability of infrastructure, general plan consistency, other regulatory limitations, and jurisdictional boundaries in determining the feasibility of alternatives to be evaluated in an EIR. An EIR must briefly describe the rationale for selection and rejection of alternatives and the information that the Lead Agency relied on in making the selection. It also should identify any alternatives that were considered by the Lead Agency but were rejected as infeasible during the scoping process and briefly explain the reason for their exclusion (State CEQA Guidelines Section 15126.6[c]).

An EIR’s analysis of alternatives is required to identify the environmentally superior alternative among all those considered (State CEQA Guidelines Sections 15126.6(a) and 15126.6(e)(2). If the “no project” alternative is identified as the environmentally superior alternative, then the EIR must also identify an environmentally superior alternative among the other alternatives.

These guidelines were used in developing and evaluating the alternatives to the Proposed Program, as described below.

19.3 Alternatives Development Process

The Proposed Program's purpose and objectives, as well as its significant environmental impacts, were considered while developing alternatives. In accordance with the requirements of CEQA, alternatives were developed to achieve most of the Proposed Program's basic objectives while avoiding or substantially lessening one or more of its significant adverse environmental impacts. Alternatives development was also based on potential feasibility. A reasonable range of potentially feasible alternatives is presented in Section 19.5, "Alternatives Analysis," describing their impacts as well as benefits.

19.3.1 Program Objectives

As stated in Chapter 2, *Project Description,* the objectives of the Proposed Program are as follows:

- To implement and support the City's economic goals and General Plan by planning for, and providing water infrastructure in a timely and cost-effective manner to serve new and existing development.
- To clearly define the City's long-term water supply needs (from both groundwater and the Modesto Irrigation District's [MID's] surface water supplies), and identify the associated infrastructure required to deliver these supplies to existing and future customers.
- To provide the flexibility, system redundancy and reliability at a reasonable cost to accommodate possible changing future conditions (regulatory, climate, additional conservation, etc.).
- To repair and replace aging water infrastructure.
- To ensure adequate water infrastructure and services are available to serve new growth within the General Plan area, the City's SOI, and the outlying service areas.
- To plan for state-of-the-art facilities that reliably and economically meet changing regulatory requirements.
- To provide safe and reliable water supply by planning for and constructing appropriately sized storage facilities, redundancies, and alternate (back up) power supplies for key facilities.
- To provide adequate storage capacity to meet operational, fire flow and emergency storage needs.
- To maintain system pressures that meet regulatory requirements and peak demand conditions.
- To provide transmission and distribution pipelines to safely and reliably convey water throughout the water system.
- To provide safe and reliable water that meets regulatory water quality requirements.

- To evaluate a groundwater aquifer storage and recovery program.
- To sustainably utilize and protect groundwater resources.

19.3.2 Significant Environmental Impacts of the Proposed Program

A number of impacts have been identified as significant, but would be mitigated to a level of less-than-significant through implementation of mitigation measures. These impacts are listed in Table ES-1 in the *Executive Summary* of this Draft EIR (DEIR).

19.3.3 Significant and Unavoidable Environmental Impacts of the Proposed Program

The following impacts have been identified as significant and unavoidable:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use (Impact AG-1)
- Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use (Impact AG-3)
- Conflict with or Obstruct Implementation of an Applicable Air Quality Plan (Impact AQ-1)
- Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard (Impact AQ-3)
- Generate a Substantial Amount of GHG Emissions (Impact GHG-1)
- Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs (Impact GHG-2)
- Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level (Impact HYD/WQ-2)
- Cumulative Impacts on Agriculture (Impact CUM-2)
- Cumulative Impacts on Air Quality and GHG (Impact CUM-3
- Cumulative Impacts on Hydrology and Water Quality (Impact CUM-6)

19.4 Alternatives Considered and Eliminated

The following alternatives were considered, but ultimately were eliminated from further analysis for one or more of the following reasons: (1) they would not sufficiently meet most of the Proposed Program objectives; (2) they were determined to be infeasible; or (3) they would not avoid or substantially lessen one or more significant impacts of the Proposed Program:

- **Reduced Program Alternative:** Under this alternative, only a portion of the identified WMP components would be constructed to address rehabilitation/repair needs, capacity issues, and water supply shortfall issues. This alternative was eliminated from consideration because it would not meet the City's responsibility to provide water supply capacity for both existing demand and planned growth.

- **Contiguous Service Area Only Alternative:** Under this alternative, only those CIPs identified within the contiguous service area would be implemented. This alternative was eliminated from consideration because it would not meet the City's responsibility to serve the outlying service areas included within the adopted service area.

- **Alternate Sites Alternative:** The locations of existing facilities needing improvements are known and identified in the CIPs. The exact locations of some new facilities have yet to be finalized; however, in some cases tentative sites have been identified. In general, under the Proposed Program, CIP sites with significant environmental impacts would not be developed, and would be replaced by alternate sites with lesser environmental impacts. Therefore, this alternative was eliminated from consideration because many of the CIPs are site specific, and replacing those sites would require extensive redesign of the City's water infrastructure. For new CIPs not tied to existing facilities, the process of identifying suitable sites already takes into consideration the environmental impacts of those components. Thus, this alternative would not be anticipated to ultimately reduce significant environmental impacts of the Proposed Program and could increase those impacts.

19.5 Alternatives Analysis

The following alternatives were considered for the Proposed Program:

- No Program Alternative

- Deferred Implementation Alternative

- Alternative Sources of Water Supply

These alternatives were identified in the context of the primary environmental concerns raised during EIR scoping, and the significant impacts of the Proposed Program. Section 19.5.3 summarizes the alternatives considered and compares them to the Proposed Program.

19.5.1 No Program Alternative

Characteristics of this Alternative

Under this alternative, no new water supply infrastructure would be constructed or upgraded. Operation of the City's water treatment, pumping, storage, and conveyance infrastructure would continue similar to existing conditions. The existing storage tanks and booster pump stations, groundwater wells, and transmission/distribution pipeline network would continue to operate. Facilities that are currently operating in the contiguous service area and the outlying service areas would continue functioning, but capacity issues would not be addressed and would likely increase over time as the population of the contiguous service areas is projected to increase by

approximately 52 percent (from 255,906 to 388,579) by 2050. The Del Rio and Grayson areas would experience some growth until buildout. The City's outlying water service area in Turlock is already at buildout.

Impact Analysis

Aesthetics

Under this alternative, significant and unavoidable impacts on visual character or quality would be avoided. Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts on scenic vistas, scenic resources, and light and glare would not occur.

Agricultural Resources

Under this alternative, significant and unavoidable impacts of direct conversion of Important Farmland would be avoided. Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts on zoning for agricultural use or Williamson Act contracts would not occur.

Air Quality

Under this alternative, significant and unavoidable impacts of conflicts with applicable air quality plans, violation of air quality standards, and cumulatively considerable net increases in criteria pollutants would be avoided. Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts on sensitive receptors from pollutant concentrations and increases in objectionable odors would not occur.

Biological Resources

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts on biological resources would not occur.

Cultural, Tribal, and Paleontological Resources

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts on archaeological, tribal, or paleontological resources or human remains would not occur.

Geology, Soils, and Seismicity

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to geology, soils, and seismicity would not occur.

Greenhouse Gas Emissions and Energy Resources

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to greenhouse gas emissions, consumption of energy, and energy demand would not occur.

Hazards and Hazardous Materials

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to routine transport, use, or disposal of hazardous materials; upset and accident conditions; proximity of hazardous materials to schools; location on a hazardous materials site or in an airport land use plan; interference with an emergency response plan; or exposure to wildfire would not occur. The potential exists for fire risk to increase as a result of the City's failure to address shortfalls or needed expansion of water supply to meet fire flow requirements.

Hydrology and Water Quality

Under this alternative, significant and unavoidable impacts of groundwater depletion and interference with groundwater recharge would be avoided. Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to violation of water quality standards, drainage patterns, groundwater recharge, siltation, runoff, and flooding would not occur. However, under this alternative, more wells could go out of production due to water quality concerns, without the installation of new wells or wellhead treatment to address the issue. Therefore, this could adversely affect the City's water supply as groundwater resources may be less available.

Land Use and Planning

Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to land use and planning would not occur. It is assumed that the City would not approve development which would result in demand for water supply that cannot be met under the No Program Alternative. As such, this alternative would impede attainment of the City's land use plans and policies which rely upon the water supply that would be made available by the Proposed Program.

Noise and Vibration

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to increases in ambient noise levels, groundborne noise or vibration levels, and other noise and vibration impacts would not occur.

Population and Housing

Under this alternative, impacts of long-term inducement of substantial population growth, and the secondary impacts of growth, would be reduced. Because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to inducement of population growth and displacement of population would not occur.

Transportation

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to effectiveness of the circulation system, congestion management programs, design hazards, emergency access, and alternative transportation would not occur.

Utilities and Service Systems

Under this alternative, because no new construction or additional operation of infrastructure would result aside from ongoing operations, impacts related to expansion of wastewater or stormwater drainage facilities, solid waste disposal, and need for additional permitted landfill capacity would not occur. The potential exists for increased impacts related to the need for new or expanded water supply or entitlements as a result of the No Program Alternative, if growth in population and housing proceeds in the absence of additional water supply infrastructure and/or if the existing infrastructure becomes deteriorated or otherwise incapable due to pressure or groundwater quality issues of providing adequate water supplies to the City's water service area.

19.5.2 Deferred Implementation Alternative

Characteristics of this Alternative

Under the Deferred Implementation Alternative, the schedule for construction of all Program-level WMP components would be delayed by 5 years compared to the schedule for implementation of the Proposed Program. Under this alternative, new water supply infrastructure would be constructed or upgraded as indicated for the Proposed Program, but at a later date. Similarly, operation of the City's water treatment, pumping, storage, and conveyance infrastructure would be improved and expanded, but at a slower pace. Maintenance and addition of storage tanks and booster pump stations, groundwater wells, and the transmission/distribution pipeline network would continue, but some shortfalls in capacity or pressure flows may result from the delay in implementation of identified CIPs. Facilities in the contiguous service area and the outlying service areas would continue to operate, but capacity and pressure issues may not be addressed in a timely manner. Development in the City's water service area may be delayed to the extent that construction of necessary infrastructure to support such development would be delayed under this alternative.

Impact Analysis

Aesthetics

Under this alternative, significant and unavoidable impacts on visual character or quality would still occur but would take place later in time. Because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts on scenic vistas, scenic resources, and light and glare would occur but on an extended timeline.

Agricultural Resources

Under this alternative, significant and unavoidable impacts of direct conversion of Important Farmland could be delayed but would remain. Because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts on zoning for agricultural use or Williamson Act contracts would occur later in time.

Air Quality

Under this alternative, significant and unavoidable impacts of conflicts with applicable air quality plans, violation of air quality standards, and cumulatively considerable net increases in criteria pollutants would remain. Because new construction and additional operation of infrastructure

would be implemented as under the Proposed Program, similar impacts on sensitive receptors from pollutant concentrations and increases in objectionable odors would occur, but later in time.

Biological Resources

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts on biological resources would occur, but later in time. Extending the timeframe for implementation of CIPs could allow additional flexibility in timing for site-specific improvements that would allow avoidance of special-status species.

Cultural, Tribal, and Paleontological Resources

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts on archaeological, tribal, or paleontological resources or human remains would occur but later in time.

Geology, Soils, and Seismicity

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to geology, soils, and seismicity would occur but later in time.

Greenhouse Gas Emissions and Energy Resources

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to increased GHG emissions and conflicts with GHG reduction policies; wasteful, inefficient, and unnecessary consumption of energy; and increase in energy demand would occur but later in time.

Hazards and Hazardous Materials

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to routine transport, use, or disposal of hazardous materials; upset and accident conditions; proximity of hazardous materials to schools; location on a hazardous materials site or in an airport land use plan; interference with an emergency response plan; or exposure to wildfire would occur but later in time. The potential exists for fire risk to increase if the extended timeline results in delays in addressing shortfalls or needed expansion of water supply to meet fire flow requirements.

Hydrology and Water Quality

Under this alternative, potential for significant and unavoidable impacts of groundwater depletion would be delayed but could still occur. Because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to violation of water quality standards, drainage patterns, groundwater recharge, siltation, runoff, and flooding would occur, but later in time.

Land Use and Planning

By delaying construction of facilities, this alternative may not fully meet the City's land use plans, which could result in greater impacts than under the Proposed Program.

Noise and Vibration

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to increases in ambient noise levels, groundborne noise or vibration levels, and other noise and vibration impacts would occur but later in time.

Population and Housing

Under this alternative, impacts of long-term inducement of substantial population growth, and related secondary impacts, would remain, but would be delayed as growth would be impeded by the lack of adequate water supply infrastructure.

Transportation

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to effectiveness of the circulation system, congestion management programs, design hazards, emergency access, and alternative transportation would occur but later in time.

Utilities and Service Systems

Under this alternative, because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts related to expansion of wastewater or stormwater drainage facilities, solid waste disposal, and need for additional permitted landfill capacity would occur but later in time.

19.5.3 Alternative Sources of Water Supply

Characteristics of this Alternative

Under this alternative, alternative sources of water supply would be used to address existing system deficiencies and meet increases in demand. This would alter the mosaic of capital improvements needed to deliver water to City customers. This alternative would not ultimately alter the amount of water to be used; however, it would rely on a greater range of sources for that water, aside from groundwater and surface water. Different capital facilities would be required to utilize this water throughout the City's service area compared to those proposed under the Program. The actual facilities would depend upon the sources selected and their relative contributions to the overall supply. The additional sources identified for this alternative are assumed to be in addition to alternative water supply sources already being developed by the City, such as water conservation through the City's water shortage contingency plan, in-lieu groundwater recharge, and Aquifer Storage and Recovery (ASR).

Alternative sources of water supply under this alternative could include the following:

- **Additional Sources of Potable Water:** A MRWTP Phase Three Expansion project may be possible if there is a sizable future conversion of agricultural land to urban uses that would allow for a corresponding redistribution of MID's existing surface water rights.

- **Development of Recycled Water Options:** Recycled water could be used in future Comprehensive Planning Districts. This additional supply, however, may affect potable

water supply needs by supporting additional and future irrigation of golf courses and parks with non-potable water supply sources. The existing non-potable water supply sources, however, may be subject to cut-backs during dry years; the City would need to use groundwater to make up the difference. Recycled water supplies are not subject to cut-backs and, therefore, could reduce groundwater extractions during dry years.

Impact Analysis

Aesthetics

Under this alternative, some new aboveground facilities would be constructed that could have adverse effects on visual resources. These impacts could be greater or less than those of the Proposed Program, depending upon the facilities. For facilities that would be different from those of the Proposed Program, impacts would occur in different locations.

Agricultural Resources

Because new construction and additional operation of infrastructure would be implemented as under the Proposed Program, similar impacts on zoning for agricultural use or Williamson Act contracts would occur with this alternative.

In addition, one of the potential sources of water supply under this alternative would be water previously used for agriculture. As such, it would be dependent upon the conversion of agricultural lands to non-agricultural uses.

Air Quality

The new facilities that would be built under this alternative could result in some construction-related and operational emissions. These impacts could be greater or less than those of the Proposed Program, depending upon the extent of construction required to implement the various water supply options.

Biological Resources

The new facilities that would be built under this alternative could result in impacts to biological resources. These impacts could be greater or less than those of the Proposed Program, depending upon the extent of construction required to implement the various water supply options.

Cultural, Tribal, and Paleontological Resources

The new facilities that would be built under this alternative could result in impacts to cultural, tribal and paleontological resources. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

Geology, Soils, and Seismicity

The new facilities that would be built under this alternative would result in impacts to geology, soils and mineral resources that are similar to those of the Proposed Program. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

Greenhouse Gas Emissions and Energy Resources

The new facilities that would be built under this alternative would result in impacts to greenhouse gas emissions and energy resources that are similar to those of the Proposed Program. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

Hazards and Hazardous Materials

Under this alternative, construction and operation of the proposed facilities could result in the release of, or exposure to, hazardous materials. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

Hydrology and Water Quality

Under this alternative, new facilities would be constructed that could cause impacts to water quality or affect flooding conditions. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

The alternative, by using alternative means of addressing system deficiencies and meeting future water demand, would reduce the need for the sources of potable water identified for the Proposed Program (i.e., groundwater and surface water supplies from MID). As such, the impacts related to use of those water sources would be avoided. However, these new sources of water could have their own set of environmental impacts. While the water supply options evaluated under this alternative are very general in nature, examples of impacts include: reductions or changes of instream flows and related effects on water quality and/or instream habitat, injury to other legal holders of water rights, and third-party effects, such as changes in land uses associated with changed water usage patterns. Appropriate mitigation would need to be developed to address any such impacts. No water supplies would be tapped without a prior agreement with their water rights holders.

While altered approaches to groundwater management may be implemented as part of this alternative, the alternative would be required to comply with SGMA and the region's GSP and thus would not involve groundwater pumping beyond the long-term sustainable yield of the aquifer. Therefore, it would not result in overdraft conditions.

Land Use and Planning

Similar to the Proposed Program, this alternative would not result in any development that would have potential to physically divide an established community. This alternative would be consistent with relevant general plans by providing the necessary infrastructure and sources of water to support the development envisioned in those plans.

Noise and Vibration

Under this alternative, construction and operation of the proposed facilities could generate new sources of noise. These impacts could be greater or less than those of the Proposed Program, depending on the extent and location of new facilities.

Population and Housing

This alternative would provide infrastructure that would remove an obstacle to growth. The alternative would therefore be considered growth-inducing and would have related secondary impacts that are similar to those of the Proposed Program.

Transportation

The new facilities that would be built under this alternative would result in impacts to transportation and traffic that are similar to those of the Proposed Program. These impacts could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities.

Utilities and Service Systems

Under this alternative, construction of new facilities could affect the provision of public services, such as fire and police protection. These impacts could be greater or less than those of the Proposed Program, depending upon the duration of construction and location of new facilities. The alternative would have similar impacts as the Proposed Program in terms of the volume of potable water required. The alternative would not generate substantial need for wastewater and stormwater infrastructure, solid waste disposal, schools, or parks.

19.5.4 Comparison of Alternatives

Table 19-1 compares each of the alternatives analyzed above to the Proposed Program by environmental topic. For each topic, significant impacts of the Proposed Program are summarized; each alternative is noted as having less, similar, or greater impacts in comparison to the Proposed Program.

Table 19-1. Summary of Alternatives and Comparison to the Proposed Program

Impact Category	Proposed Program	No Program Alternative	Deferred Implementation Alternative	Alternative Sources of Water Supply
Aesthetics and Visual Resources	Short-term and long-term degradation of visual character or quality; substantial source of light and glare	Less	Delayed	Similar
Agricultural Resources	Direct or indirect conversion of Important Farmland	Less	Delayed	Similar
Air Quality	Conflict with applicable air quality plans; violate air quality standards; cumulatively considerable net increase in criteria pollutants; expose sensitive receptors to substantial pollutant concentrations	Less	Delayed	Similar

Impact Category	Proposed Program	No Program Alternative	Deferred Implementation Alternative	Alternative Sources of Water Supply
Biological Resources	Impacts on special-status plants, vernal pool branchiopods, VELB, special-status fishes, western pond turtle, burrowing owl, raptors including special-status species, passerine species and birds protected under the MBTA, riparian habitat and other sensitive natural communities, federal protected wetlands, wildlife movement, local ordinances or policies	Less	Delayed	Similar
Cultural, Tribal, and Paleontological Resources	Impacts on historical, archaeological, tribal, or paleontological resources or human remains	Less	Delayed	Similar
Geology, Soils, and Seismicity	Impacts from expansive soils; erosion; or subsidence, liquefaction, or collapse	Less	Delayed	Similar
Greenhouse Gas Emissions and Energy Resources	Substantial GHG emissions or conflict with applicable plan or policy	Less	Delayed	Similar
Hazards and Hazardous Materials	Upset and accident conditions involving the release of hazardous materials	Less	Delayed	Similar
Hydrology and Water Quality	Violate water quality standards or otherwise degrade water quality; deplete groundwater supplies; alter drainage patterns	Less	Delayed	Less
Land Use and Planning	No significant impacts	Greater (potential to conflict with land use plans, policies, and regulations)	Greater (potential to conflict with land use plans, policies, and regulations)	Similar
Noise and Vibration	Violate noise standards; excessive groundborne vibration or noise; increase in ambient noise levels	Less	Delayed	Similar

Impact Category	Proposed Program	No Program Alternative	Deferred Implementation Alternative	Alternative Sources of Water Supply
Population and Housing	Inducement of substantial population growth	Less	Delayed	Greater
Transportation	No significant impacts	Less	Delayed	Similar
Utilities and Service Systems	No significant impacts	Less	Delayed	Similar

19.6 Environmentally Superior Alternative

Of the alternatives evaluated in detail above, the No Program Alternative is considered environmentally superior as, with one exception, it would reduce or avoid the impacts of the Proposed Program. This alternative, however, would result in increased impacts related to land use and planning as growth planned by the City would not be able to proceed because necessary infrastructure to support development would not be constructed.

Under CEQA, if the "no project" alternative is identified as environmentally superior, the EIR shall also identify an environmentally superior alternative among the other alternatives. Therefore, the Deferred Implementation Alternative, has been selected as environmentally superior; this alternative would avoid impacts during the interim period during which the program would be delayed (although the impacts would eventually occur). The Deferred Implementation Alternative would result in increased impacts related to land use and planning as growth planned by the City would not be able to proceed in the interim period while necessary infrastructure to support development is not completed. As such, the Deferred Implementation Alternative would not as effectively meet program objectives, as necessary infrastructure to address system deficiencies and support planned development would be delayed.

The Alternative Sources of Water Supply Alternative is not considered to be environmentally superior because, while it would reduce some impacts through use of alternative water supplies, it would be anticipated to have impacts that are, on the whole, similar to those of the Proposed Program.

For this reason, the Proposed Program has been selected for implementation, as it would have the same impacts over the long term and would more fully meet Program objectives.

NOTICE OF PREPARATION

Notice of Preparation of a Draft Environmental Impact Report for the Water Master Plan

Date: August 26, 2016

To: State Clearinghouse, and Responsible and Trustee Agencies

The City of Modesto (City) will serve as the Lead Agency under the California Environmental Quality Act in preparing an Environmental Impact Report (EIR) for the Water Master Plan (Program or Proposed Program). The Proposed Program is located in the City of Modesto and other communities in Stanislaus County. The City is seeking the views of your agency regarding the scope and content of the environmental information which is germane to your agency's statutory responsibilities in conneclion with the Proposed Program. Your agency may need to use the subject EIR when considering any necessary permit or other approval for lhe Program. Interested parties and individuals are also invited to comment on alternatives to, concerns with. and environmental issues or potential effects of the project. Please share this notice with anyone you feel may be interested in the Program.

The Proposed Program description, location, and the potential environmental effects are contained in the attached materials and available at http://www.modestogov.com/847/Water-Plans-Reports.

Public Scoping Meeting: A public scoping meeting will be held to receive agency and public comments on the scope of the EIR for the Proposed Program.

Date and Time: September 6, 2016 at 5:00 pm

Location: City Hall
1010 10th Street, Room 2001
Modesto, CA 95354

Due to the time limits mandated by State law, your written response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to: Jack Bond, Senior Civil Engineer
City of Modesto Utilities Department
P.O. Box 642 (1010 10th Street)
Modesto, CA 95353

Aviso de Preparación de un reporte preliminar de impacto ambiental para el Plano Maestro de Agua

Fecha: 26 de agosto de 2016

Para: State Clearinghouse, y Agencias Responsables y Fideicomisarios

La Ciudad de Modesto (Ciudad) va servir como la agencia principal bajo la Ley de Calidad Ambiental de California (California Environmental Quality Act, CEQA) en preparación de un informe de impacto ambiental (Environmental Impact Report, EIR) para el Plano Maestro de Agua del 2016 (Programa Propuesto). El Programa Propuesto está localizado en la Ciudad y en otras comunidades del Condado de Stanislaus. La Cuidad está buscando el punto de vista de su agencia en relación con la cobertura y el contenido de la información ambiental cual es relacionado a las responsabilices legales de su agencia en conexión con el Programa Propuesto. Su agencia pueda necesitar el uso del sujeto informe de impacto ambiental cuando considere cualquier permiso necesario o alguna aprobación para el Programa Propuesto. Partidos o individuos interesados también son invitados a comentar sobre alternativas para, preocupaciones sobre, y asuntos ambientales o efectos potenciales del Programa Propuesto. Por favor comparta este aviso con cualquier persona que usted piense que tuviera interés sobre el Programa Propuesto.
La descripción, localidad, y posibles efectos ambientales del Programa Propuesto, están contenidos en los materiales incluidos.

Junta Pública: Una Junta Publica sobre la cobertura se va a llevar acabo para recibir comentarios de las agencias y el público sobre la cobertura del informe de impacto ambiental por el Programa Propuesto.

Fecha y Tiempo:	El 6 de septiembre del 2016 a las 5:00 pm
Lugar:	Municipio (City Hall) 1010 10th Street, Room 2001 Modesto, CA 95354

Debido a los límites de tiempo establecidos por las leyes del estado, debe mandar su repuesta en escrito lo más pronto posible pero **no más tarde de 30 días después de recibir este aviso**.

Por favor mande su respuesta a:	Jack Bond, Senior Civil Engineer City of Modesto Utilities Department P.O. Box 642 (1010 10th Street) Modesto, CA 95353 jbond@modestogov.com

Notice of Preparation

August 26, 2016

To: Reviewing Agencies

Re: Water Master Plan
SCH# 2016082069

Attached for your review and comment is the Notice of Preparation (NOP) for the Water Master Plan draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Jack Bond
City of Modesto
P.O. Box 642
1010 Tenth Street
Modesto, CA 95353

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Project Description: *(please use a separate page if necessary)*

The Proposed Program would consist of a Capital Improvement Program (CIP) for system-wide implementation needed to ensure adequate water infrastructure and services are available to meet water demand requirements under both existing and future developed conditions. The CIPs proposed in the Master Plan include water storage tanks, groundwater wells, wellhead treatment or blending facilities, pump stations, extension of water pipelines, and repair or replacement of water pipelines. Other CIPs include installation of back-up power generators at various booster pump stations for tanks and wells. Additionally, the Master Plan includes construction of a new corporation yard and an aquifer storage recovery program. The CIPs would be implemented within the City's contiguous and outlying service areas.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Fecha 8/25/16

A. Project Description

1. Introduction

As the lead agency responsible for compliance with the California Environmental Quality Act (CEQA), the City of Modesto (City) has determined that the newly developed 2016 Water Master Plan (Program or Proposed Program) has potential to result in a significant impact on the physical environment, and has decided to prepare an Environmental Impact Report (EIR) to provide ample opportunity for public disclosure and participation in the planning and decision making process. The Proposed Program would consist of several Capital Improvement Projects (CIPs) collectively intended for system-wide implementation needed to deliver safe and reliable water, which would effectively meet water demand requirements under both existing and future developed conditions. Further details of the Proposed Program are provided below.

The purpose of the draft EIR process is to identify and evaluate possible environmental impacts of the Program, and consider mitigation measures and feasible alternatives to avoid, reduce, or compensate for any significant impacts on environmental resources, while still achieving the primary Program objectives.

This document, which serves as the Notice of Preparation (NOP) required by CEQA and the State CEQA Guidelines (California Code of Regulations [CCR] Title 14, Section 15000 et seq.), contains a brief description of the Program, including its goals and objectives, and possible environmental impacts. It also provides an overview of the opportunities for participation in review of the EIR, along with contact information.

2. Background

The City periodically reevaluates its water service system through development of Water Master Plans (also referred to as Water System Engineer's Reports [WSERs]). The Proposed Program updates and replaces the City's 2010 WSER and includes a variety of CIPs to improve the City's water service system.

The City has been providing potable water service to its urban area since 1895 through the purchase and acquisition of several private water companies and, as a result, has become the primary domestic water purveyor in Stanislaus County. In the early 1990s, the City, Modesto Irrigation District (MID), and the Del Este Water Company formed a partnership to use a portion of MID's surface water rights for municipal uses. The resulting Modesto Regional Water Treatment Plant (MRWTP) was completed in 1995. The MRWTP, in addition to providing water storage and delivery, initially provided 30 million gallons per day (mgd) of treated surface water to the City. In combination with groundwater resources, the MRWTP meets the City's water supply needs for those municipal customers within the City's Sphere of Influence (SOI) north of the Tuolumne River (southern boundary of MID's service area), including the communities of Salida and Empire. For a number of years, the City and MID have been working together on the MRWTP Phase Two Expansion, which recently became operational and has capacity to treat an additional annual average of 12 mgd, for an annual average total of up to 42 mgd. The initial

phase of the MRWTP significantly reduced the City's reliance on groundwater pumping and eliminated the emerging groundwater overdraft condition at the time.

Water treatment, pumping, storage, and conveyance infrastructure is operated and maintained by the City's Utilities Services Department, Water Operations Division. Potable water resources delivered by the City's system to customers originate from two sources: treated surface water purchased from MID and groundwater pumped from the many wells scattered throughout the contiguous service area and the outlying service areas. The MRWTP is owned and operated by MID and is located approximately 10 miles east of the city limits near the Modesto Reservoir. Outlying areas do not receive treated water from the MRWTP and rely solely on groundwater. The key components of the City's water system are storage tanks, groundwater wells, and a transmission/distribution pipeline network.

In addition to making improvements related to the City's water system components, the City is proposing to implement an aquifer storage and recovery program.

3. Program Purpose and Objectives

The goal of the 2016 Water Master Plan is to accommodate the water supply needs of the population and land uses described in the City's Urban Area General Plan Amendment (General Plan Amendment) and community plans of service areas outlying the City's urban area or SOI. The Proposed Program is intended to meet the following objectives:

- Implement the City's economic goals and Urban Area General Plan by planning for, and providing, sewer infrastructure in a timely and cost-effective manner to serve new and existing development.
- Continue the City's policy of providing affordable and attractive water rates.
- Repair and replace aging water infrastructure.
- Ensure adequate water infrastructure and services are available to serve new growth within the City's SOI.
- Provide an adequate funding mechanism to pay for necessary improvements.
- Require new development to pay for infrastructure necessary to serve it.
- Plan for state-of-the-art facilities that reliably and economically meet the changing regulatory requirements.

4. Program Location

The Proposed Program is located in the City of Modesto and other communities in Stanislaus County (see **Figure** 1). The project area encompasses two distinct customer location categories: (1) the contiguous service area and (2) outlying service areas. The City's contiguous service area is limited to the current SOI, Salida, North Ceres, and some unincorporated

Stanislaus County "islands" within and adjacent to the SOI (Empire is within the SOI). The outlying service areas include Del Rio, Ceres (Walnut Manor), Grayson, and a portion of the City of Turlock. These areas are shown in **Figure 2**. Collectively, the contiguous service area and outlying service areas constitute the "study area" for the EIR.

5. Existing Facilities and Operations

The City supplies water to its SOI and outlying areas identified above via surface water supplies (treated water from the MRWTP) and groundwater supplies. Existing City water supply and treatment infrastructure includes storage tanks, groundwater wells, and transmission/distribution pipelines.

6. Program Description

The Proposed Program is the collection of CIPs proposed in the 2016 Water Master Plan. These CIPs include improvements to existing water storage tanks, and construction and operation of new water storage tanks, groundwater wells, wellhead treatment or blending facilities, pump stations, extension of water pipelines, and repair or replacement of water pipelines. Other CIPs include installation of generators for back-up power at various booster pump stations for tanks and wells, upgrades to the Supervisory Control and Data Acquisition (SCADA) system to improve the City's management of the water system, and installation of fencing and security measures to be implemented at well and tank sites. Additionally, the 2016 Water Master Plan includes construction of a new corporation yard and an aquifer storage recovery program.

The CIPs would be implemented within the City's contiguous and outlying service areas. The exact locations of some of the proposed new facilities have yet to be finalized; where tentative sites have been identified, these locations will be evaluated in the draft EIR.

7. Topics to Be Analyzed in the EIR

The City has prepared this NOP pursuant to CEQA Guidelines Section 15082. Based on the Proposed Program's potential for significant impacts on the environment, the City has decided to prepare an EIR. The EIR will further assess the Proposed Program's effects on the environment, identify significant impacts, and indicate feasible mitigation measures to reduce or eliminate potentially significant environmental impacts. An analysis of alternatives to the Proposed Program will also be included in the EIR. Topics to be analyzed in the EIR include, but are not necessarily limited to, the following:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Geomorphology
- Land Use and Planning
- Noise and Vibration
- Recreation

- Transportation/Traffic
- Tribal Cultural Resources
- Utilities and Service Systems
- Water Quality
- Cumulative Impacts
- Irreversible Impacts

Responses received to this NOP may modify or add to the preliminary assessment of potential issues addressed in the EIR.

8. Environmental Process and Public Scoping Meeting

This NOP initiates the CEQA process through which the City will refine the range of issues and project alternatives to be addressed in the draft EIR. Comment is invited on the proposal to prepare the EIR and on the scope of issues to be included in the EIR.

Please submit any comments within 30 days of receipt of this notice to the City (see *Contact Information* below). In conjunction with the 30-day review period for the NOP, the City will hold a scoping meeting to provide an additional opportunity to learn about the project, ask questions, and provide comments about the scope and content of the information to be addressed in the draft EIR. The scoping meeting will be held at 5:00 pm on September 6, 2016 at the following location:

City Hall
1010 Tenth Street, Room 2001
Modesto, CA 95354

After the 30-day review period for the NOP is complete and all comments are received, a draft EIR will be prepared in accordance with CEQA, as amended (Public Resources Code [PRC] Section 21000 et seq.), and the State CEQA Guidelines (PRC Section 15000 et seq.).

Once the draft EIR is completed, it will be made available for a 45-day public review and comment period. Copies of the draft EIR will be sent directly to those agencies commenting on the NOP, and will also be made available to the public at a number of locations, including the City's offices and public libraries in the area. Information about availability of the draft EIR will also be posted on the following website: http://www.modestogov.com/847/Water-Plans-Reports.

9. Contact Information

For further information, contact:

Jack Bond, Senior Civil Engineer
City of Modesto Utilities Services Department
1010 Tenth Street, Suite 4500
Modesto, CA 95354
P.O. Box 642, Modesto, CA 95353
jbond@modestogov.com

Additional information relevant to the Program and the draft EIR can also be found online at the following website: http://www.modestogov.com/847/Water-Plans-Reports.

City of Modesto Water Master Plan

Join us for a
CEQA public scoping meeting
on the
Water Master Plan

The City of Modesto (City) is preparing an environmental impact report (EIR) for the Water Master Plan (Proposed Program) pursuant to the California Environmental Quality Act (CEQA). The Proposed Program is located in the City of Modesto and other communities in Stanislaus County and would consist of a Capital Improvement Program (CIP) for system-wide implementation needed to deliver safe and reliable water, which will effectively meet water demand requirements under both existing and future developed conditions. The City requests input from interested individuals, public agencies, and other parties regarding the scope and content of the EIR during the public scoping period. The scoping period begins on August 26, 2016 and ends on September 26, 2016. During this period, the City will hold a public meeting on the following date and location.

_____

September 6, 2016 at 5:00 P.M.
City Hall
1010 10th Street, Room 2001
Modesto, CA 95354

To submit comments, contact the following:

Jack Bond
City of Modesto Utilities Department
P.O. Box 642
Modesto, CA 95353
jbond@modestogov.com

If special assistance is required to participate in the public scoping meeting, please contact Michael Stevenson (Michael@horizonh2o.com, 510-986-1852). Auxiliary aides and services are available to individuals with disabilities upon request.

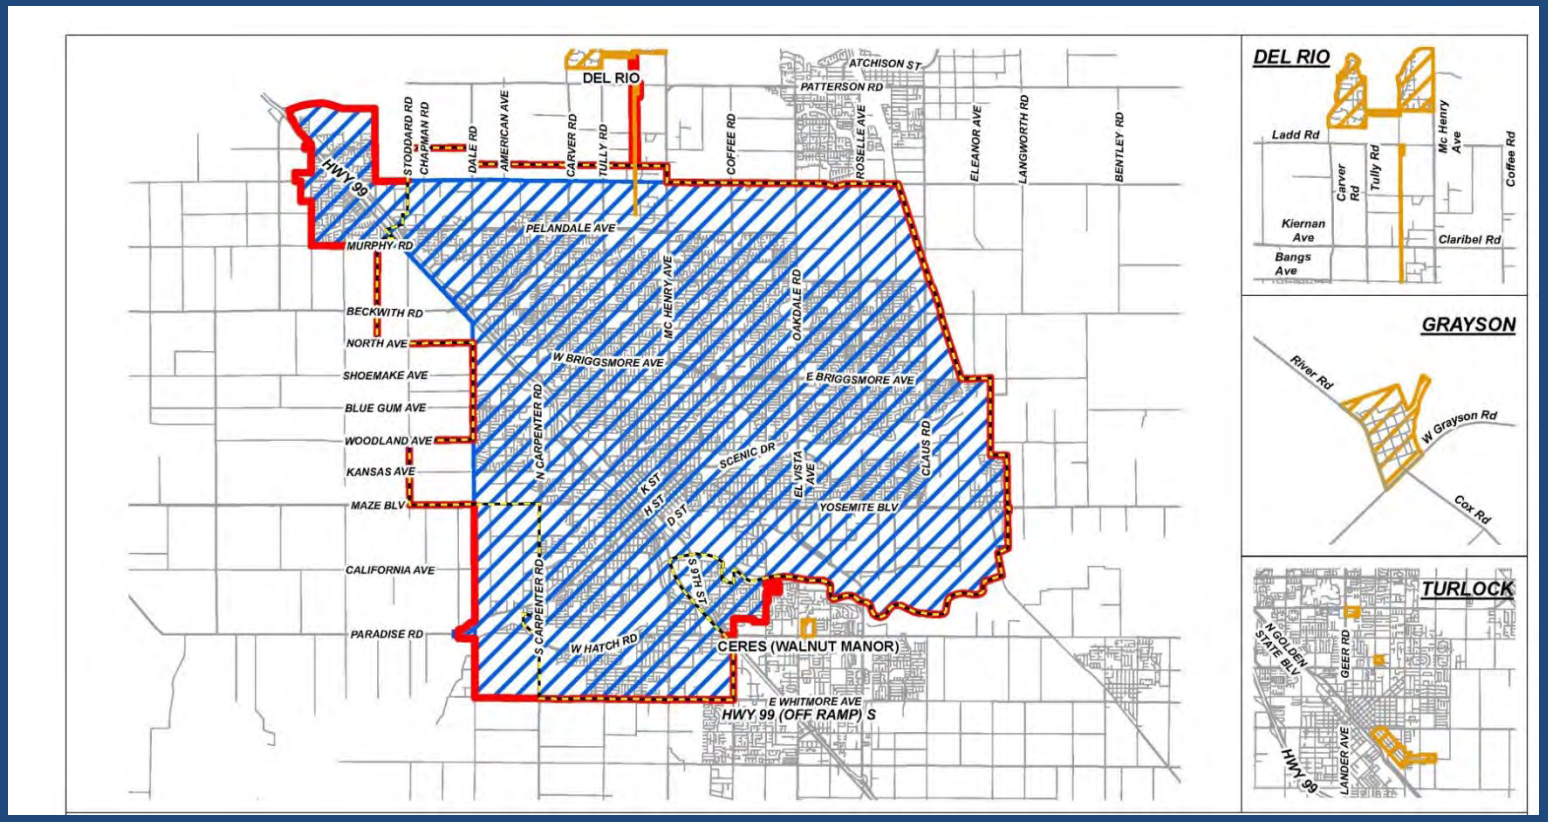
City of Modesto

Water Master Plan

CEQA Scoping Meeting – September 6, 2016



Introductions

City of Modesto

- Jack Bond - Project Manager

Horizon Water and Environment

- Michael Stevenson – Principal-in-Charge
- Debra Lilly – CEQA Project Coordinator

Horizon
WATER and ENVIRONMENT

Meeting Agenda

- Meeting purpose and protocol
- Project overview
- Overview of the California Environmental Quality Act
- Receipt of public comment

Horizon
WATER and ENVIRONMENT

Meeting Purpose

CEQA Scoping: To allow the public and agencies to provide input on the scope and content of the project's environmental impact analysis.

Scoping comments inform the scope and nature of the CEQA environmental analysis.

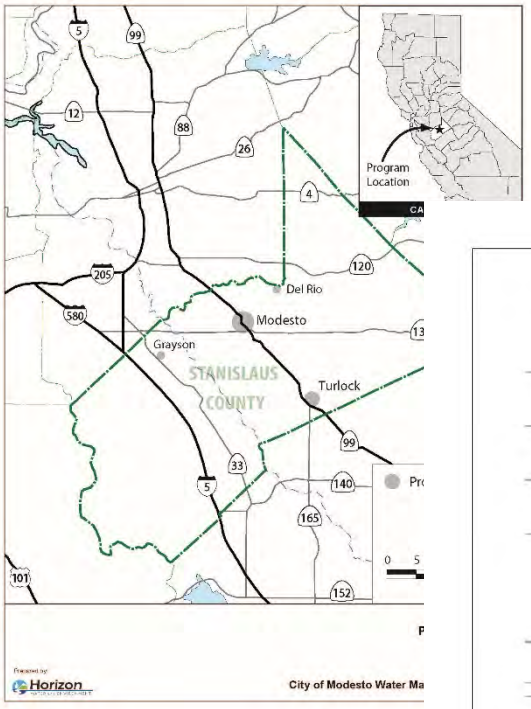
Horizon
WATER and ENVIRONMENT

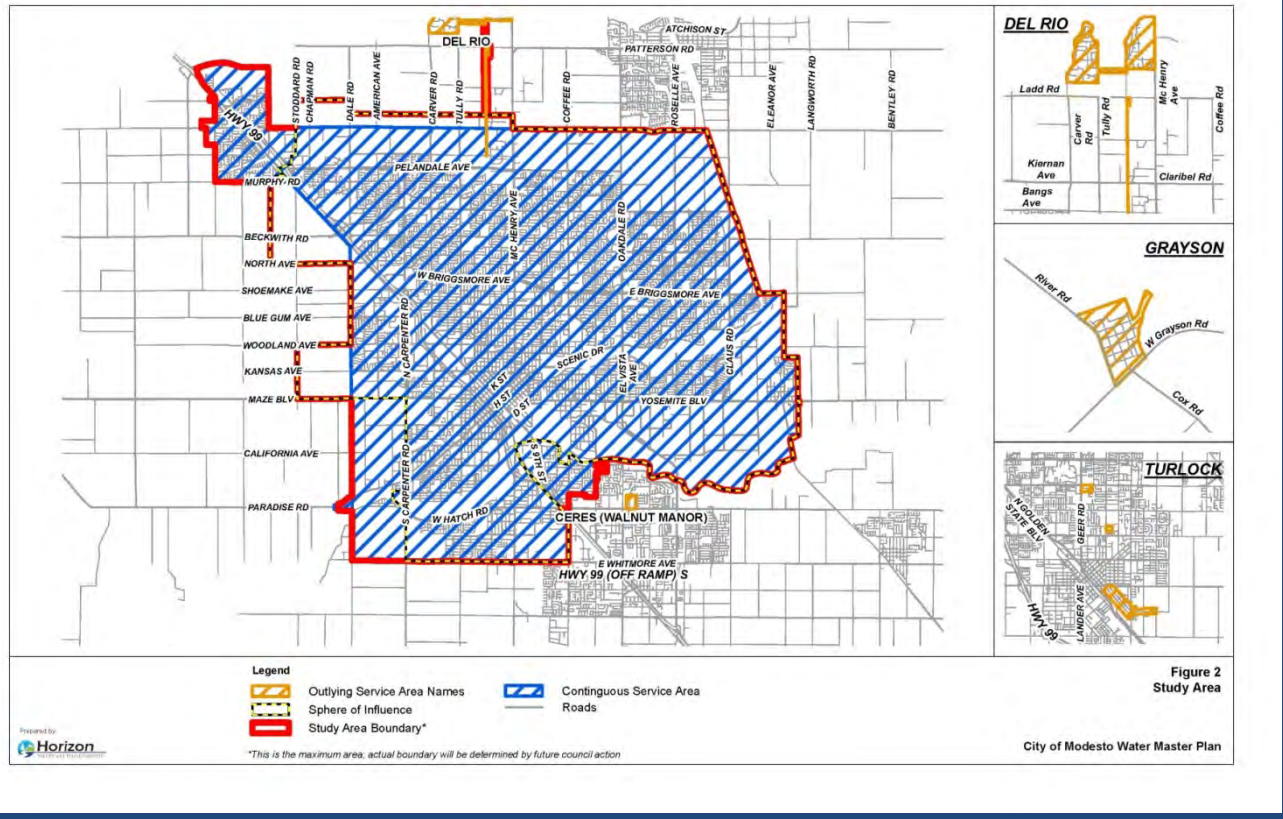
Meeting Protocol

- Please silence cell phones.
- One person speaks at a time; please do not interrupt a speaker.
- Make clear and succinct comments in order for us to effectively capture the comment in notes.
- Be respectful of each other and differing points of view.

Horizon
WATER and ENVIRONMENT

Program Location





Program Objectives

- Implement the City's economic goals and Urban Area General Plan by planning for, and providing, water infrastructure in a timely and cost-effective manner to serve new and existing development.
- Continue the City's policy of providing affordable and attractive water rates.
- Repair and replace aging water infrastructure;
- Ensure adequate water infrastructure and services are available to serve new growth within the City's Sphere of Influence;
- Provide an adequate funding mechanism to pay for necessary improvements; and
- Require new development to pay for infrastructure necessary to serve it.
- Plan for state-of-the-art facilities that reliably and economically meet the changing regulatory requirements.

Horizon
WATER and ENVIRONMENT

Program Elements

Program Elements	Improvements
Storage Tanks and Pump Stations	Del Rio/South Modesto tanks, and other new tanks
	Install new back-up generators
	Replace deficient water pumps
	Improve existing tanks (maintenance)
Groundwater Wells	Install wellhead treatment
	Construct new wells
Pipelines	Replace/upgrade deficient water mains, extend water mains to new areas, new transmission pipes
Misc. Water System Improvements and Programs	Install automated water meters and upgrade existing meters
	Water System Evaluation and water quality studies, UWMP updates (every 5 years), GW Management Program, water system security, SCADA upgrades
	New corporation yard (store materials for water projects)

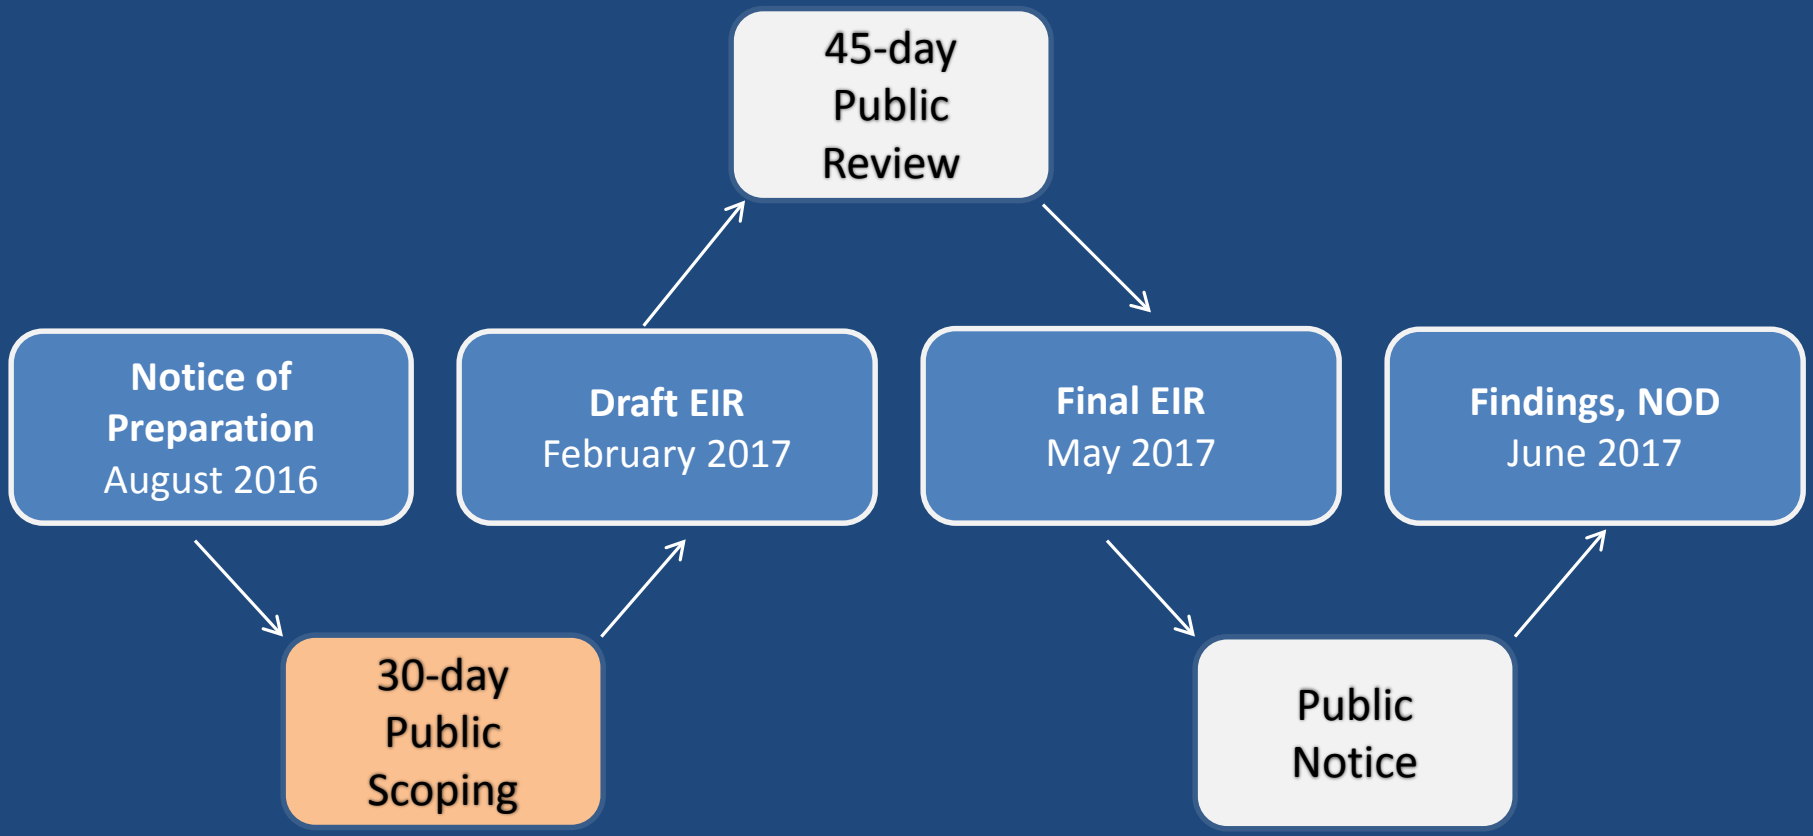
CEQA Overview

Basic purposes of CEQA (State CEQA Guidelines, Section 15002):

- Inform governmental decision makers and public about potential, significant environmental effects of proposed activities.
- Identify ways that environmental damage can be avoided or significantly reduced.
- Prevent significant, avoidable damage to environment by requiring changes in projects through the use of alternatives or mitigation measures when governmental agency finds changes to be feasible.
- Disclose to public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

Horizon
WATER and ENVIRONMENT

EIR Process



Horizon WATER and ENVIRONMENT

CEQA Resource Topics

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise and Vibration
- Public Services
- Recreation
- Transportation/Traffic
- Tribal Cultural Resources
- Utilities and Service Systems
- Population and Housing
- Cumulative impacts

Horizon
WATER and ENVIRONMENT

Purpose of Scoping

To provide the public and agencies the opportunity to provide input on the scope and content of the environmental impact analysis.

Scoping comments can include information on:

- ✓ Potential environmental issues
- ✓ Potential mitigation measures
- ✓ Characteristics of the existing environment
- ✓ Resources that may be cumulatively affected

STANISLAUS COUNTY ENVIRONMENTAL REVIEW COMMITTEE

September 30, 2016

Jack Bond, Senior Civil Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4500 / PO Box 642
Modesto, CA 95354

SUBJECT: ENVIRONMENTAL REFERRAL – CITY OF MODESTO UTILITIES DEPARTMENT – 2016 WATER MASTER PLAN – NOTICE OF PREPARATION OF DRAFT ENVIRONMENTAL IMPACT REPORT

Mr. Bond:

Thank you for the opportunity to review the scope for the above-referenced project.

The Stanislaus County Environmental Review Committee (ERC) has reviewed the subject project and has several significant concerns with the project as presented.

Sphere of Influence

The Sphere of Influence (SOI) as presented is incorrectly depicted in Figure 2. West of McHenry Avenue, Figure 2 shows the SOI boundary too far north and incorrectly encompasses the southeast portion of Salida.

The western SOI boundary depicted in Figure 2 shows the SOI incorrectly stretching west of Dakota Avenue between Murphy Road and North Avenue and to Dakota Avenue between Woodland Avenue and Maze Boulevard. Attached is a Local Agency Formation Commission (LAFCO) map detailing Modesto's adopted SOI.

Study Area Boundary

Stanislaus County cannot support the inclusion of the areas known as the Beckwith Triangle and Wood Colony in the master plan as proposed. We strongly urge The City of Modesto to remove these areas from the plan and study area.

Stanislaus Community Plan

The proposed Study Area Boundary includes only a portion of the unincorporated community of Salida. Stanislaus County would hope for your consideration to include the entire Salida Community Plan area, including Amendment Area 1, into the Study Area Boundary. The attached map details the Salida Community Plan, which includes areas to the north, east and west of the existing Salida community. Zoning designations for the area are shown on the map and include: Planned Industrial; Business Park; Commercial; Residential; and Agricultural (for the proposed Stanislaus River Park).

The ERC appreciates the opportunity to comment on this project. I would encourage additional discussion between City and County leadership on these issues at our collective earliest convenience.

Sincerely,

Patrick Cavanah
Management Consultant
Environmental Review Committee

USFWS IPaC Resource List

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Not for consultation

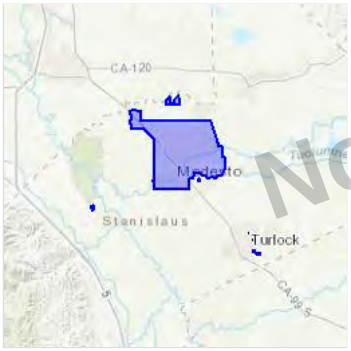
Project information

NAME

Modesto Water Master Plan

LOCATION

San Joaquin and Stanislaus counties, California



DESCRIPTION

The goal of the Water Master Plan is to accommodate the water supply needs of the population and land uses described in the City of Modesto's General Plan, along with the City's other water customers in the outlying service areas of Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock.

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act requires Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local offce and a species list which fulfills this requirement can only be obtained by requesting an o cial species list from either the Regulatory Review section in IPaC (see directions below) or from the local eld o ce directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Log in to IPaC.
2. Go to your My Projects list.
3. Click PROJECT HOME for this project.
4. Click REQUEST SPECIES LIST.

Listed species[1] are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service.

1. Species listed under the Endangered Species Athreatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.

The following species are potentially affected by activities in this location:

Not for consultation

Mammals

NAME	STATUS
Fresno Kangaroo Rat Dipodomys nitratoides exilis There is a nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/5150	Endangered

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any activity that results in the take (to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct) of migratory birds or eagles is prohibited unless authorized by the U.S. Fish and Wildlife Service[3]. There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Conservation measures for birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Year-round bird occurrence data http://www.birdscanada.org/birdmon/default/datasummaries.jsp

The migratory birds species listed below are species of particular conservation concern (e.g. Birds of Conservation Concern) that may be potentially affected by activities in this location. It is not a list of every bird species you may find in this location, nor a guarantee that all of the bird species on this list will be found on or near this location. Although it is important to try to avoid and minimize impacts to all birds, special attention should be made to avoid and minimize impacts to birds of priority concern. To view available data on other bird species that may occur in your project area, please visit the AKN Histogram Tools and Other Bird Data Resources. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

What does IPaC use to generate the list of migratory bird species potentially occurring in my speci ed location?

Landbirds:

Migratory birds that are displayed on the IPaC species list are based on ranges in the latest edition of the National Geographic Guide, Birds of North America (6th Edition, 2011 by Jon L. Dunn, and Jonathan Alderfer). Although these ranges are coarse in nature, a number of U.S. Fish and Wildlife Service migratory bird biologists agree that these maps are some of the best range maps to date. These ranges were clipped to a specific Bird Conservation Region (BCR) or USFWS Region/Regions, if it was indicated in the 2008 list of Birds of Conservation Concern (BCC) that a species was a BCC species only in a particular Region/Regions. Additional modifications have been made to some ranges based on more local or refined range information and/or information provided by U.S. Fish and Wildlife Service biologists with species expertise. All migratory birds that show in areas on land in IPaC are those that appear in the 2008 Birds of Conservation Concern report.

Atlantic Seabirds:

Ranges in IPaC for birds off the Atlantic coast are derived from species distribution models developed by the National Oceanic and Atmospheric Association (NOAA) National Centers for Coastal Ocean Science (NCCOS) using the best available seabird survey data for the offshore Atlantic Coastal region to date. NOAANCCOS assisted USFWS in developing seasonal species ranges from their models for specific use in IPaC. Some of these birds are not BCC species but were of interest for inclusion because they may occur in high abundance off the coast at different times throughout the year, which potentially makes them more susceptible to certain types of development and activities taking place in that area. For more refined details about the abundance and richness of bird species within your project area off the Atlantic Coast, see the Northeast Ocean Data Portal. The Portal also offers data and information about other types of taxa that may be helpful in your project review.

About the NOAANCCOS models: the models were developed as part of the NOAANCCOS project: Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf. The models resulting from this project are being used in a number of decision-support/mapping products in order to help guide decision-making on activities o the Atlantic Coast with the goal of reducing impacts to migratory birds. One such product is the Northeast Ocean Data Portal, which can be used to explore details about the relative occurrence and abundance of bird species in a particular area o the Atlantic Coast.

All migratory bird range maps within IPaC are continuously being updated as new and better information becomes available.

Can I get additional information about the levels of occurrence in my project area of specific birds or groups of birds listed in IPaC?

Landbirds:

The Avian Knowledge Network (AKN) provides a tool currently called the "Histogram Tool", which draws from the data within the AKN (latest,survey, point count, citizen science datasets) to create a view of relative abundance of species within a particular location over the course of the year. The results of the tool depict the frequency of detection of a species in survey events, averaged between multiple datasets within AKN in a particular week of the year. You may access the histogram tools through the Migratory Bird Programs AKN Histogram Tools webpage.

The tool is currently available for 4 regions (California, Northeast U.S., Southeast U.S. and Midwest), which encompasses the following 32 states: Alabama, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New York, North, Carolina, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin.

In the near future, there are plans to expand this tool nationwide within the AKN, and allow the graphs produced to appear with the list of trust resources generated by IPaC, providing you with an additional level of detail about the level of occurrence of the species of particular concern potentially occurring in your project area throughout the course of the year.

Atlantic Seabirds:

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAANCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Facilities

Wildlife refuges

Any activity proposed on National Wildlife Refuge lands must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGES AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Not for consultation

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

This location overlaps the following wetlands:

FRESHWATER EMERGENT WETLAND

- PEMC
- PEMCx
- PEMA
- PEMF

FRESHWATER FORESTED/SHRUB WETLAND

- PFO/EMC
- PFOA
- PSSA
- PSSC
- PSSCx

FRESHWATER POND

- PUBKh
- PUBFx
- PUBF
- PUBKx
- PUBHx

RIVERINE

- R2UBH
- R2USA

Not for consultation

A full description for each wetland code can be found at the National Wetlands Inventory website: https://ecos.fws.gov/ipac/wetlands/decoder

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Tribal Cultural Resources Technical Information

This page intentionally left blank

Ione Band of Miwok Indians
A Federally Recognized Sovereign Tribe

2tMarch 2016

City of Modesto
Community & Economic Development
Brent Sinclair, AICP Director
1010, 10 Street, Suite 3330
P.O. Box 642
Modesto CA. 95353

RE: Formal Request for Tribal Consultation Pursuant to the California Environmental Quality Act (CEQA), Public Resources Code section 21080.3.1, subds. (b), (d) and (e) for City of Modesto

Dear Mr. Sinclair

This letter constitutes a formal request for tribal consultation for the first phase of planning under the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21080.3.1 subdivisions (b), (d) and (e)) for the mitigation of potential project impacts to tribal cultural and environmental resources for the above referenced project. The Ione Band of Miwok Indians requests formal notice and information for all projects within your agency's jurisdiction.

The Ione Band of Miwok Indians requests consultation on the following topics listed below, which shall be included in consultation if requested (Public Resources Code section 21080.3.2, subd. (a)):

- Alternatives to the project
- Recommended mitigation measures
- Significant effects of the project

The Ione Band of Miwok Indians also requests consultation on the following discretionary topics listed below (Public Resources Code section 21080.3.2, subd. (a)):

- Type of environmental review necessary
- Significance of tribal cultural resources, including any regulations, policies or standards used by your agency to determine significance of tribal cultural resources
- Significance of the project's impacts on tribal cultural resources
- Project alternatives and/or appropriate measures for preservation or mitigation that we may recommend, including, but not limited to:

(1) Avoidance and preservation of the resources in place, pursuant to Public Resources Code section 21084.3, including, but not limited to, planning and construction, geotechnical tests, utility location, and pedestrian surveys to avoid harming the resources (including water, endangered tribal plant resources, and endangered animal resources), and to protect the cultural and natural context, or planning greenspace, parks or other open space, to incorporate the resources with culturally appropriate protection and management criteria;

(2) Treating the resources with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resources, including but not limited to the following:

- Protecting the cultural character and integrity of the resource
- Protecting the traditional use of the resource
- Protecting the confidentiality of the resource

(3) Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places

(4) Protecting the resource

Additionally, the Ione Band of Miwok Indians would like to receive any cultural resources assessments or other assessments that have been completed on all or part of the project's potential "area of project effect" (APE), including, but not limited to:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

   - A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE
   - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response
   - Notification of whether the probability is low, moderate, or high that cultural resources are located in the APE
   - Notification if a records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE
   - Notification if a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present

2. The results of any archaeological inventory survey that was conducted, including:

   - Any report that may contain site forms, site significance, and suggested mitigation measures
   - All information regarding site locations, Native American human remains, and associated funerary objects; such information should be placed in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code Section 6254.10.

3. The results of any Sacred Lands File (SFL) check conducted through the Native American Heritage Commission. The request form can be found at **http://www.dot.ca.gov/hq/env/cultural/#templates** under Compliance Document Templates. Click on the link *Sacred Lands Inventory Form* to download the pdf. USGS 7.5- minute quadrangle name, township, range, and section are required for the search.
4. Any ethnographic studies conducted for any area including all or part of the potential APE

5. Any geotechnical reports regarding all or part of the potential APE

We would like to remind your agency that CEQA Guidelines section 15126.4, subdivision (b)(3) states that preservation-in-place is the preferred manner of mitigating impacts to archaeological sites. Section 15126.4, subd. (b)(3) of the CEQA Guidelines has been interpreted by the California Court of Appeal to mean that "feasible preservation in place must be adopted to mitigate impacts to historical resources of an archaeological nature unless the lead agency determines that another form of mitigation is available and provides superior mitigation of impacts." *Madera Oversight Coalition v. County of Madera* (2011) 199 Cal.App.4th 48, disapproved on other grounds, *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013) 57 Cal.4th 439.

The Ione Band of Miwok Indians expects to begin consultation within 30 days of your receipt of this letter. Please contact the Cultural Committee of the Ione Band of Miwok Indians.

Thank you.

Sincerely,

Randy Yonemura

RE: California Environmental Quality Act Public Resources Code section 21080.3, subd. (b) Request for Formal Notification of Proposed Projects Within the Northern Valley Yokut Tribe's Geographic Area of Traditional and Cultural Affiliation.

Dear Brent Sinclair

As of the date of this letter, in accordance with Public Resources Code Section 21080.3.1,subd. (b)Northern Valley Yokut Tribe, which is traditionally and culturally affiliated with a geographic area within your agency's geographic area of jurisdiction, requests formal notice of and information on proposed projects for which your agency will serve as a lead agency under the California Environmental Quality Act (CEQA), Public Resources Code section 21000 et seq.

Pursuant to Public Resources Code section 21080.3.1, subd. (b), and until further notice, we hereby designate the following person as the tribe's lead contact for purposes of receiving notices of proposed projects from your agency:

Katherine Erolinda Perez
MLD
990 North Fine Rd. Linden CA, 95236
Phone number: (209) 887-3415
Cell Phone Number: (209) 649-8972
Fax Number: (209) 887-3415
Email: canutes@verizon.net

We request that all notices be sent via certified U.S. Mail with return receipt. Following receipt and review of the information your agency provides, within the 30-day period by Public Resources Code section 21080.3.1,subd. (d), the Northern Valley Yokut Tribe may request consultation, as defined by Public Resources Code section 21080.3.1,subd. (b), pursuant to Public Resources Code section 21080.3.2 to mitigate any project impacts a specific project may cause to tribal resources.

If you have any question or need information, please contact our lead contact person listed above.

Sincerely,
Katherine Erolinda Perez
MLD Katherine Perez

Lois Martin, Chairperson
Southern Sierra Miwuk Nation
P.O. Box 186
Mariposa, CA 95338

Subject: City of Modesto Utilities Department Water Master Plan Environmental Impact Report

Dear Chairperson Martin,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Water Master Plan (WMP) (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its water service system through development of a water master plan (also referred to as Engineer's Reports). The proposed Plan updates and replaces the City's 2010 Water System Engineer's Report, and includes a variety of Capital Improvement Program (CIP) projects to improve the City's water service system.

The proposed Plan would consist of a CIP for system-wide implementation needed to deliver safe and reliable water, which will effectively meet water demand requirements under both existing and future developed conditions. The Plan covers a contiguous area that includes the City's Sphere of Influence (SOI), Salida, North Ceres, and some unincorporated areas within and adjacent to the SOI including Empire. Outlying service areas included in the Plan are Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock (Figure 1).

The CIPs proposed in the WMP include improvements to existing water storage tanks, groundwater wells, pump stations, and pipelines; and construction and operation of new water storage tanks, groundwater wells, wellhead treatment or blending facilities, pump stations, extension of water pipelines, and repair or replacement of water pipelines. Other CIPs include installation of generators for back-up power at various booster pump stations for tanks and wells, Supervisory Control and Data Acquisition (SCADA) system upgrades to improve the City's management of the water system, and installation of fencing and security measures at well and tank sites. Additionally, the WMP includes construction of a new corporation yard, and an aquifer storage recovery program.

The CIPs would be implemented within the City's contiguous and outlying service areas. The exact locations of some of the proposed new facilities have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

Pursuant to Public Resources Code Section 21080.3.1 *et seq*., the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. If you wish to request the consultation, or if you have any questions, please contact:

Jack Bond
Senior Environmental Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4600
Modesto, CA 95354
Phone: (209) 577-5424
Email: jbond@modestogov.com

If you do not contact us within 30 days following receipt of this letter, the City of Modesto Utilities Department will proceed with processing the above referenced application with the assumption that the project will not have a potential effect on tribal cultural resources. If consultation is requested, please provide the name and contact information of the designated lead contact person as part of your request. The City will contact the designated person to set a meeting date to begin consultation within 30 days of our receipt of your request.

More detailed information about this project is available, at your request. Thank you for giving this matter your prompt attention.

Sincerely,

June 29, 2016

Neil Peyron, Chairperson
Tule River Indian Tribe
P.O. Box 589
Porterville, CA 93258

Subject: City of Modesto Utilities Department Water Master Plan Environmental Impact Report

Dear Chairperson Peyron,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Water Master Plan (WMP) (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its water service system through development of a water master plan (also referred to as Engineer's Reports). The proposed Plan updates and replaces the City's 2010 Water System Engineer's Report, and includes a variety of Capital Improvement Program (CIP) projects to improve the City's water service system.

The proposed Plan would consist of a CIP for system-wide implementation needed to deliver safe and reliable water, which will effectively meet water demand requirements under both existing and future developed conditions. The Plan covers a contiguous area that includes the City's Sphere of Influence (SOI), Salida, North Ceres, and some unincorporated areas within and adjacent to the SOI including Empire. Outlying service areas included in the Plan are Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock (Figure 1).

The CIPs proposed in the WMP include improvements to existing water storage tanks, groundwater wells, pump stations, and pipelines; and construction and operation of new water storage tanks, groundwater wells, wellhead treatment or blending facilities, pump stations, extension of water pipelines, and repair or replacement of water pipelines. Other CIPs include installation of generators for back-up power at various booster pump stations for tanks and wells, Supervisory Control and Data Acquisition (SCADA) system upgrades to improve the City's management of the water system, and installation of fencing and security measures at well and tank sites. Additionally, the WMP includes construction of a new corporation yard, and an aquifer storage recovery program.

The CIPs would be implemented within the City's contiguous and outlying service areas. The exact locations of some of the proposed new facilities have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

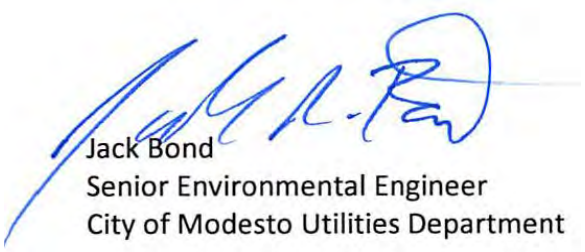
Pursuant to Public Resources Code Section 21080.3.1 *et seq*., the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. If you wish to request the consultation, or if you have any questions, please contact:

Jack Bond
Senior Environmental Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4600
Modesto, CA 95353
Phone: (209) 577-5424
Email: jbond@modestogov.com

If you do not contact us within 30 days following receipt of this letter, the City of Modesto Utilities Department will proceed with processing the above referenced application with the assumption that the project will not have a potential effect on tribal cultural resources. If consultation is requested, please provide the name and contact information of the designated lead contact person as part of your request. The City will contact the designated person to set a meeting date to begin consultation within 30 days of our receipt of your request.

More detailed information about this project is available, at your request. Thank you for giving this matter your prompt attention.

Sincerely,



Jack Bond
Senior Environmental Engineer
City of Modesto Utilities Department

Draft Mitigation Monitoring and Reporting Program

This page intentionally left blank

MITIGATION MONITORING AND REPORTING PROGRAM SUMMARY TABLE

The following mitigation monitoring and reporting program (MMRP) summary table includes the mitigation measures identified in the City of Modesto (City) Wastewater Master Plan (WMP) Program Environmental Impact Report (EIR). For each mitigation measure, this table identifies monitoring and reporting actions that shall be carried out, the party responsible for implementing these actions, and the monitoring schedule. This table also includes a column where responsible parties can check off monitoring and reporting actions as they are completed. It is the responsibility of the Contractor to ensure that actions required for all of the mitigation measures listed herein are included in the project plans and specifications. It is the responsibility of the City to review and confirm that all of the mitigation measure actions described herein are in the project plans and specifications.

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
Aesthetics					
AES-1	**Locate Staging Areas Away from Public Areas and Install Screening.** For components located in residential areas and near public parks or trails, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences, major roadways, parks and other public areas. To the extent practicable, staging areas shall be sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials.	1. Include requirements in project plans and specifications. 2. Identify staging area locations that meet the requirements described in the measure. 3. In instances where on-street or on-site staging areas are necessary, implement screening methods.	1. Confirm that measure is included in plans and specifications. 2. Confirm that selected staging areas comply with requirements of the measure. 3. If necessary, confirm that screening methods are implemented appropriately.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to construction.	
AES-2	**Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting.** Where wells, tanks, pump stations and other above-ground facilities are located in proximity to or are readily visible from residential areas, recreational areas, or public roadways, the facility and fencing shall be designed to be consistent with the surrounding setting, to the maximum extent feasible. The following design elements shall be	1. N/A	1. Design facilities in accordance with considerations described in the measure.	1. During design phase.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	used to enhance the aesthetic appearance of proposed facilities and to integrate them with the existing visual setting: ▪ New storage tanks and pump station buildings shall be set back from public views and, upon completing Mitigation Measure AES-2, the City and/or contractor shall consider partially burying tanks to minimize view obstructions. ▪ Proposed facility designs shall integrate elements such as color, materials, and pattern of the surrounding landscape. ▪ The exterior of aboveground facilities shall be painted or include appropriate concrete admixtures to achieve low-glare, earth-tone colors that blend with the surrounding terrain and visual setting. ▪ Wherever possible, use of unpainted metallic surfaces and other reflective sources that may cause increased levels of reflectivity shall be eliminated. ▪ Wherever possible, install native landscaping and/or fencing to help screen views of the water treatment plant, pump station, and water storage tanks from public roads and adjacent residences. ▪ Any outdoor night lighting shall be motion-activated and include baffles that direct lighting onto the facility and minimize light spillage onto adjoining properties.				

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
Agricultural Resources					
	No feasible mitigation measures, such as restoration of Prime Farmland that has been previously converted or participation in an agricultural conservation easement program, have been identified to reduce impacts on agricultural resources to a less-than-significant level. Therefore, they would be **significant and unavoidable**.	–	–	–	
Air Quality					
AQ-1	**Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM_{10}** The following controls are required to be implemented by the City or its contractor at all construction sites. ▪ All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover. ▪ All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/suppressant. ▪ All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid	1. Include emission reduction measures into the project plans and specifications. 2. Implement and document emission reduction measures.	1. Confirm emission reduction measures are incorporated into the project plans and specifications. 2. Confirm emission reduction measures are implemented properly.	1. During development of the plans and specifications. 2. During construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	fugitive dust emissions through the application of water during work or by presoaking. ▪ When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained. ▪ All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.) ▪ Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/suppressant. ▪ Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday. ▪ Any site with 150 or more vehicle trips per day will prevent carryout and trackout.				
AQ-2	**Implement Enhanced Control Measures for Construction Emissions of PM_{10}** The following measures will be implemented by the City or its contractor at construction sites when required to	1. Include enhanced emission control measures into	1. Confirm enhanced emission control	1. During preparation of plans and specifications.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	mitigate significant PM_{10} impacts as determined by SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements): 1. Limit traffic speeds on unpaved roads to 15 miles per hour (mph). 2. Install sandbags or other erosion-control measures to prevent silt runoff. The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or that warrant additional emissions reductions for any other reason. 1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site. 2. Install wind breaks at windward sides of construction areas. 3. Suspend excavation and grading activity when winds exceed 20 miles per hour (mph). 4. Limit the area subject to excavation, grading, and other construction activity at any one time. 5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.	project plans and specifications. 2. Implement and document enhanced emission control measures.	measures are included in project plans and specifications. 2. Confirm that enhanced emission control measures are implemented properly.	2. During construction.	
AQ-3	**Implement Control Measures for Operation Emissions of PM_{10} and for Ozone Precursors (ROG and NOx)** In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its	1. N/A 2. If necessary, and if directed by the City, install	1. For new or modified facilities, conduct site-	1. Prior to or during design phase.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	contractor shall install equipment with Best Available Control Technology, as indicated in a site-specific air quality analysis, to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified water system sites when required to mitigate significant PM10 and ozone impacts, due to exceedance of Air Quality Thresholds of Significance.	equipment with Best Available Control Technology at new or modified facility sites.	specific air quality analysis to determine if operational emissions will exceed SJVAPCD thresholds. 2. If thresholds will be exceeded, ensure that equipment with Best Available Control Technology is installed.	2. If necessary, include equipment specifications during development of plans and specifications. Install equipment during construction.	
Biological Resources					
BIO-1	**Perform Focused Surveys for Special-status Plant Species.** Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site, as determined by the botanist. If special-status plants may be directly or indirectly	1. N/A 2. Provide the City with advance notice of construction schedule and anticipated start date. Support site access for qualified biologist.	1. Retain a qualified biologist to conduct focused surveys. 2. Ensure qualified biologist conducts focused surveys prior to	1. Prior to construction. 2. Prior to construction. 3. Prior to construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	affected, then Mitigation Measure BIO-2 shall be implemented.	3. Do not start construction until focused surveys have been conducted and, if necessary, Mitigation Measure BIO-2 has been implemented.	implementation of construction activities. 3. If special-status plants are identified that may be directly or indirectly affected by activities, ensure that Mitigation Measure BIO-2 is implemented.		
BIO-2	**Avoid, Minimize, and Compensate for Impacts on Special-status Plant Species.** If special-status plants are detected, the City shall implement the following measures to avoid, minimize and compensate for impacts on special-status plant species: ▪ The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally-sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally sensitive area fencing will be installed at least 200 feet from the	1. If necessary, redesign or modify Program components to avoid or minimize impacts on special-status species. 2. Incorporate requirements prohibiting activities within fenced environmentally-sensitive areas	1. Confirm that modified design would avoid or minimize special-status plant species. 2. Confirm that requirements prohibiting activities within fenced environmentally-sensitive areas are included in	1. During design phase. 2. During preparation of plans and specifications. 3. Prior to start of construction. 4. Prior to construction. 5. During and/or after construction. Annual monitoring	

Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally sensitive area. ▪ If avoidance is not feasible, the City will consult with either CDFW or USFWS, or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following components: relocation methods that will minimize the potential loss of plants from relocation, management plans and success criteria by which the mitigation can be measured for success, and regular monitoring to ensure that the plants are successfully transplanted. Success criteria shall require that at least 75% of the plants survive. The	into plans and specifications. 3. Protect any special-status plant species occurrences near a Program component site with environmentally-sensitive area fencing. 4. N/A 5. If directed by the City, implement the Rare Plant Plan prepared by the qualified botanist.	plans and specifications. 3. Confirm that environmentally-sensitive area fencing is appropriately implemented, if such fencing is necessary to protect special-status species. 4. If avoidance is not feasible, consult with CDFW and/or USFWS to determine feasibility of special-status plant species transplantation. If feasible, retain qualified botanist to prepare Rare Plant Plan. 5. If necessary (i.e., avoidance is not feasible),	would occur for 5 years after planting.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	Rare Plant Plan will include specific, measurable triggers for adaptive management actions that will be necessary to ensure survival. ▪ The Rare Plant Plan will specify annual monitoring of the mitigation site for at least five years after planting, and will assess factors such as population size and density, recruitment, and individual plant health and vigor. Monitoring will also assess whether the mitigation requires adaptive management actions, such as collection and sowing of additional seed, tillage/disturbance within existing populations to induce establishment, installation of container plants, and control of exotic invasive vegetation (such as yellow star thistle) to ensure successful plant establishment and survival. The site will be evaluated at the end of the 5-year monitoring period to determine whether the mitigation has met the success criteria identified in the Rare Plant Plan. If success criteria are not met at that time, then mitigation activities and monitoring will continue until success criteria are met. ▪ As part of the Rare Plant Plan, the City, in conjunction with a qualified restoration ecologist and/or botanist and the consulting agency, if any, will identify a suitable on- or off-site location for mitigation, and appropriate methods for seed collection, propagation, relocation, maintenance, and monitoring. Mitigation sites will be located within the range of the affected plant and contain		confirm Rare Plant Plan is appropriately prepared by a qualified individual, and appropriately implemented (including 5-year monitoring requirements).		

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	suitable habitat sites. For annual plant species, the seed crop from the individuals to be lost will be collected and then sown on appropriate habitat located on the mitigation site. The individuals will not be removed until seeds have been collected. For perennial plant species, both the seed and the plants themselves will be salvaged and relocated to the mitigation site. The individuals will not be removed until seeds have been collected. Seed from the populations that will be affected may be collected and propagated at a native plant nursery prior to planting in order to increase the potential for establishment and survival.				
BIO-3	**Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** Prior to implementation of proposed projects in areas that could contain habitat for vernal pool branchiopods, the City will retain a qualified biologist to conduct surveys to determine whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City will avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.	1. N/A 2. If necessary, and if habitat is present on-site, implement buffer zone identified by qualified biologist and/or USFWS to protect habitat.	1. Retain a qualified biologist to conduct surveys for vernal pools and wetlands. 2. If surveys find potential special-status invertebrate species habitat, confirm that an adequate buffer zone is implemented to	1. Prior to construction. 2. Prior to initiation of construction activities.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
			protect resources.		
BIO-4	**Minimize and Compensate for Impacts on Branchiopods, Western Spadefoot, and Their Habitat.** If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided the City shall implement the following measures: ▪ After construction, restore surface topography and drainage to pre-construction conditions; and ▪ Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.	1. If impacts to habitat could not be avoided per Mitigation Measure BIO-3, restore surface topography and drainage to pre-construction conditions to minimize impacts. 2. N/A 3. If instructed by the City, implement off-site compensation plan for impacts to vernal pool branchiopods and/or western spadefoot.	1. If impacts could not be avoided per Mitigation Measure BIO-3, ensure that surface topography and drainage is restored to pre-construction conditions following construction. 2. Consult with USFWS and CDFW to determine appropriate ratios for off-site compensation for impacts to vernal pool branchiopods and/or western spadefoot.	1. Following construction. 2. As soon as it is determined that impacts to species/habitat cannot be avoided per Mitigation Measure BIO-3. 3. Following consultation with USFWS/CDFW and development of compensation approach.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
			3. Either implement compensation plan, instruct the contractor to do so, or hire a third party to perform the needed work.		
BIO-5	**Mitigation Measure BIO-5: Avoid Impacts on VELB Habitat.** The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to the VELB would not be expected to be substantial and therefore would not require mitigation. For proposed improvements that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017g). This shall include the following avoidance measures:	1. Incorporate requirement to avoid riparian habitat and/or elderberry shrubs into plans and specifications. 2. Make any necessary accommodations to allow biologist to conduct survey for elderberry shrubs/VELB habitat. 3. Avoid riparian habitat and/or elderberry shrubs whenever possible. If	1. Confirm that requirement to avoid riparian habitat and/or elderberry shrubs is included in project plans and specifications. 2. Retain qualified biologist to conduct surveys for the presence of elderberry shrubs that may be required. 3. If elderberry shrubs are	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to, and during, construction. 4. As soon as it is evident that elderberry shrubs cannot be avoided during construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	▪ If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal. ▪ The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities. ▪ No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level. ▪ A qualified biologist shall provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for noncompliance. ▪ A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of	necessary, and VELB habitat is present on-site, implement avoidance measures described in mitigation measure. 4. N/A	present, ensure that avoidance measures are implemented. 4. If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.		

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	monitoring shall depend on the project specifics and should be discussed with USFWS. ▪ As much as feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the flight season of the VELB (March-July). ▪ If required, trimming of elderberry shrubs shall occur between November and February and shall avoid the removal of any branches or stems that are ≥ 1 inch in diameter. ▪ Herbicides shall not be used within the drip-line of the shrub. Insecticides shall not be used within 98 feet of an elderberry shrub. All chemicals shall be applied using a backpack sprayer or similar direct application method. ▪ Mechanical weed removal within the drip-line of the shrub shall be limited to the season when VELB adults are not active (August-February) and shall avoid damaging the elderberry. ▪ Erosion control shall be implemented and the affected area shall be re-vegetated with appropriate native plants. If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.				
BIO-6	**Implement VELB Compensatory Mitigation, if Necessary.** The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by	1. Take all measures to preserve any elderberry shrub encountered that	1. Ensure that any elderberry shrub removed during	1. During or prior to construction, if elderberry	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	the project shall be transplanted to a USFWS-approved location per Mitigation Measure BIO-7. Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS. Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre(s) of credits: acre(s) of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used. Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.	must be removed, such that the shrub may be transplanted per Mitigation Measure BIO-7. 2. If on-site mitigation is selected as the compensatory mitigation approach, implement any measures of the mitigation plan to which the contractor is delegated responsibility. 3. N/A	construction is preserved and transplanted per Mitigation Measure BIO-7, if feasible. 2. In coordination with USFWS, develop a compensatory mitigation approach following requirements set forth in mitigation measure. Either implement approach or delegate certain responsibilities to contractor. 3. Confirm that compensatory mitigation is satisfactorily provided.	shrubs are encountered. 2. Once it is determined that avoidance of elderberry shrubs is infeasible. Compensatory mitigation shall be provided after approach is confirmed by USFWS. 3. After implementation of compensatory mitigation plan/approach.	
BIO-7	**Transplant Elderberry Shrubs if Avoidance Is Not Feasible.**	1. N/A	1. Retain a qualified	1. Prior to construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to Mitigation Measure BIO-6, the shrub shall be transplanted. Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The transplanting guidelines below shall be followed: ▪ A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures. ▪ Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the CNDDB.	2. Under direction of the qualified biologist, transplant elderberry shrubs that cannot be avoided following the guidelines and requirements in the mitigation measure.	biologist to oversee transplantation activities, should such activities be necessary. 2. Confirm that any elderberry shrubs that cannot be avoided are transplanted appropriately in accordance with the guidelines contained in the mitigation measure, and that exit-hole surveys are reported to CDFW and USFWS.	2. After it is determined that elderberry shrubs cannot be avoided.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	▪ Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. ▪ Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (www.tcia.org/).				
BIO-8	**Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.** Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, and sloughs where suitable habitat exists. If a western pond turtle is located within the construction area, it will be relocated out of this area (with authorization from the CDFW), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented. ▪ The City or its contractors will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating turtles. ▪ If a turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been conducted. 3. In coordination with the qualified biologist, relocate any discovered turtles outside of the construction area and erect exclusion fence to prevent re-entry. Implement minimization measures described in the mitigation measure, as	1. Retain a qualified biologist to conduct preconstruction surveys for western pond turtle in any suitable habitat. 2. Confirm that surveys are conducted in accordance with the mitigation measure prior to initiation of construction activities. 3. For any turtles discovered in the project	1. Prior to construction. 2. Prior to initiation of construction activities. 3. Prior to, or during, construction, if necessary.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	downstream from the project site (with authorization from CDFW). ▪ The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat. ▪ If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).	directed by the biologist.	area, ensure these individuals are relocated out of the area and that exclusion fence is installed to prevent re-entry. Also, confirm that minimization measures are implemented in the event that turtles or their habitat are present.		
BIO-9	**Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas if Necessary.** Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season (February 1 through August 31), surveys must be performed before work is resumed. If no burrowing owls or signs of burrowing owls are detected during the survey, no	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been completed. Provide any needed support/assistance to the qualified	1. Retain a qualified biologist to conduct the preconstruction surveys for burrowing owls. 2. If burrowing owls are located on or within 250 feet	1. Prior to construction. 2. Prior to construction. 3. Prior to construction / after it is determined that occupied burrows cannot be avoided.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented. If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season. Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (CDFG 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW. If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow. If occupied burrows are relocated, the City shall enhance or create burrows in adjacent habitat at a 1:1 ratio (burrows destroyed to burrows enhanced or created) one	biologist in establishing no-work buffers around occupied burrows, if such burrows are discovered. 3. Provide any needed support/assistance to the qualified biologist and the City in implementing a passive owl relocation plan, if such a plan is deemed necessary.	of the construction site, ensure that no-work buffers are established around occupied burrows in accordance with mitigation measure. Confirm appropriate buffer distances with CDFW. 3. If occupied burrows cannot be avoided, ensure that passive owl relocation techniques are appropriately implemented. Enhance or create burrows in adjacent habitat at a 1:1 ratio one week		

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	week prior to implementation of passive relocation techniques. If burrowing owl habitat enhancement or creation takes place, the City shall develop and implement a monitoring and management plan to assess the effectiveness of the mitigation. The plan shall be subject to the approval of CDFW.		prior to implementation of passive relocation techniques. Obtain approval from CDFW for owl relocation plan.		
BIO-10	**Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species.** The City shall implement the following measures. ▪ If ground and vegetation disturbing activities occur between February 1 and August 31, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests. ▪ If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated	1. N/A 2. Do not initiate ground- and vegetation-disturbing activities between February 1 and August 31 until a nesting raptor survey has been conducted. If nesting raptors are detected, provide any needed support to the qualified biologist and/or the City in establishing no-disturbance	1. Retain a qualified biologist to conduct the nesting raptor survey. 2. If nesting raptors are detected, ensure that an appropriate 500-foot no-disturbance buffer is established around the nest.	1. Prior to construction. 2. Prior to construction, if necessary.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.	buffers around the nest(s). Do not conduct activities within the buffer(s) until directed by the biologist.			
BIO-11	**Compensate for Loss of Raptor Foraging Habitat.** The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's Hawk foraging habitat mitigation bank that covers the Proposed study area, such as the Dutchman Creek Conservation Bank. The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program components are assumed to be within 1 mile of an active Swainson's Hawk nest tree. Mitigation credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows: ▪ 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active	1. N/A	1. Provide off-site compensation for losses of raptor foraging habitat through one of the methods described in the mitigation measure. Confirm that off-site mitigation is sufficient to compensate for impacts following the ratios outlined in the measure.	1. After the acreage of any permanent impacts to raptor foraging habitat is determined.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawk; or ▪ 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands. The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.				
BIO-12	**Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary.** The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If	1. N/A 2. Do not initiate construction activities during the bird breeding season until surveys have been conducted. Provide any assistance or accommodation necessary to the	1. Retain a qualified biologist to conduct the preconstruction surveys for nesting birds. 2. Confirm that surveys are appropriately conducted within 14 days	1. Prior to construction. 2. Prior to construction. 3. Prior to and during construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	the survey indicates that no active nests are found, no further mitigation shall be required. If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned construction activities, and baseline level of human activity. The buffers will be clearly marked in the field with flagging or fencing. No work shall commence within the buffer until the young have fledged or the nest is deemed inactive.	biologist conducting the survey. 3. In the event that active nests are identified, provide any needed assistance to the qualified biologist in establishing the no-disturbance buffers. Do not conduct construction activities within the buffers until directed by the biologist.	of construction activity that would occur during the bird breeding season. 3. In the event that active nests are identified, ensure that no-disturbance buffers are established around nests in accordance with the measure.		
BIO-13	**Avoid and Minimize Impacts on Federally Protected Wetlands.** The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands. If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of Mitigation Measure BIO-14. For all activities greater than one acre of disturbance, a SWPPP	1. N/A 2. Avoid wetlands to the extent feasible. 3. If wetlands cannot be avoided, following construction, restore surface	1. If complete avoidance of wetlands is not possible, perform or commission a wetland delineation study for the project site, to	1. Prior to construction. 2. During construction. 3. Following construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters. Mitigation Measure HYD/WQ-1 would also be implemented to minimize construction-related effects on wetlands and waters. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.	topography and drainage to pre-construction conditions. Additionally, where appropriate, revegetate impacted wetland areas with site-adapted native plant species.	be used during implementation of Mitigation Measure BIO-14. 2. Confirm that wetlands are avoided during construction activities to the extent feasible. 3. In the event that wetlands cannot be avoided, confirm that wetland areas are restored to pre-construction conditions.		
BIO-14	**Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.** The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be	1. Do not initiate work in areas defined as water of the U.S. and State until the City has obtained the appropriate	1. For work within areas defined as waters of the U.S. and State, obtain appropriate regulatory permits.	1. Prior to initiation of construction activities within waters. 2. At a time acceptable to	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA Nationwide Permit and/or the Final Rule on Compensatory Mitigation for Losses of Aquatic Resources (73 Fed. Reg. 19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.	regulatory permits. 2. N/A	2. For areas where wetland impacts occur, provide compensatory mitigation by one of the methods described in the mitigation measure.	the regulatory agencies.	
BIO-15	**Install Temporary Trench Plates over Open Trenches.** The City shall implement the following measure. During open-cut construction of pipelines, the City shall install temporary trench plates over open trenches at the end of each work day.	1. Incorporate requirement into project plans and specifications. 2. Cover open trenches with trench plates at the end of each work day.	1. Confirm that requirement is included in plans and specifications. 2. Confirm that contractor is covering trenches appropriately at the end of each work day.	1. During preparation of plans and specifications. 2. During construction.	
Cultural Resources					
CR-1	**Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work.**	1. Coordinate with the City to	1. Arrange for workers to	1. Prior to construction	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	The City shall implement the following measures. Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive information about the kinds of archaeological materials that could be present and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.	provide workers information about potential buried cultural resources.	receive information about potential buried cultural resources	2. During construction, if necessary	
Hydrology & Water Quality					
HYD/ WQ-1	**Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods.** The City of Modesto's drilling contractor for trenchless pipeline installation activities (e.g., horizontal directional drilling or microtunneling) shall prepare and implement a frac-out contingency plan prior to conducting Proposed Program construction activities involving these methods. At a minimum, the frac-out contingency plan shall include the following components/measures:	1. N/A 2. Implement all preventative measures identified in mitigation measure. Make accommodations for geotechnical engineer,	1. Incorporate requirements into plans and specifications. 2. Ensure that all preventative measures are implemented. Retain geotechnical	1. During preparation of plans and specifications. 2. During construction, if necessary.	

Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
▪ Require a geotechnical engineer or qualified geologist to make recommendations regarding the suitability of the formations to be bored to minimize the potential for frac-out conditions. ▪ Require that a qualified archaeologist and biologist survey for and recommend protection measures for sensitive cultural and biological resources at the location of the entry and exit points and along the boring route. ▪ Include worker training measures to ensure that all field personnel understand their responsibility for timely reporting of frac-outs to their supervisors. Supervisors must then report frac-outs to CDFW as described in the last bullet below. ▪ Maintain necessary response equipment on-site or at a readily accessible location and in good working order. ▪ Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003): ▪ For a terrestrial frac-out: – Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud.	archaeologist, and biologist to survey area and make recommendations. Coordinate worker training for field personnel. 3. For any frac-outs that occur, notify the appropriate agencies and implement the appropriate measures, as specified in the measure.	engineer and qualified archaeologist and biologist to make recommendations to minimize impacts. Arrange for field personnel to receive training. 3. For any frac-outs that occur, confirm that proper protocols were followed to contain the frac-out and minimize impacts.		

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	– Based on consultation with CDFW (see below), either: ▪ Use a mobile vacuum truck to pump the drilling mud from the contained area and recycle it to the return pit; or ▪ Leave the drilling mud in place to avoid potential damage from vehicles entering the area. – Once excess drilling mud is removed, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. ▪ For an aquatic frac-out: – Monitor frac-out for 4 hours to determine if the drilling mud congeals (bentonite will usually harden, effectively sealing the frac-out location). – Based on consultation with CDFW (see below), either: ▪ If the drilling mud congeals, take no other action that would potentially suspend sediments in the water column. ▪ If drilling mud does not congeal, erect isolation/containment environment (underwater boom and curtain). ▪ If the fracture becomes excessively large, call in a spill response team to contain and				

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	clean up excess drilling mud in the water. Keep phone numbers of spill response teams on-site. – If the spill affects an area that is vegetated, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. ▪ Notify and consult with CDFW in the event of a frac-out. Restore vegetation damaged by drilling fluid to pre-construction conditions.				
Noise					
NOI-1	**Employ Noise-Reducing Construction and Maintenance Practices.** The following measures will be implemented by the City or its contractor to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected: ▪ locating stationary equipment as far as practical from noise-sensitive land uses, ▪ using electrified or otherwise quieter equipment when practical, ▪ using sound-control devices on equipment that are more effective than devices originally provided on the equipment, ▪ using noise-reducing enclosures around noise-generating equipment, and	1. Include noise reduction measures in project plans and specifications. 2. Implement and document noise reduction measures. In coordination with the City, develop haul routes that avoid sensitive receptors to the extent feasible.	1. Confirm that noise reduction measures are included in project plans and specifications. 2. Confirm that noise reduction measures are implemented properly. Work with Contractor to identify haul routes that avoid sensitive receptors.	1. During preparation of plans and specifications. 2. During construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	▪ installing temporary barriers between noise sources and noise sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission. When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.				
NOI-2	**Limit Nighttime Construction Noise.** The City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays or that the project has received a variance or special permit following procedures outlined in the applicable noise ordinance to operate outside of these hours.	1. Include measure in project plans and specifications. 2. Do not conduct construction activities in close proximity to a residence outside of the hours specified in the measure. Document compliance with this requirement.	1. Confirm that measure is included in project plans and specifications. 2. Confirm that Contractor follows requirements specified in the mitigation measure.	1. During development of plans and specifications. 2. During construction.	
NOI-3	**Employ Noise-Reducing Methods During Operations.** The City will implement noise-reducing methods so that noise from well operations and emergency generators does not exceed County noise-level standards at adjacent residences. Example measures may include but are not limited to:	1. N/A 2. If necessary, and if directed by the City, implement noise-reducing measures at new	1. For new or modified facilities, conduct site-specific noise analysis to determine if	1. Prior to or during the design phase. 2. Incorporate measures during design	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	▪ using sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available. ▪ locating stationary equipment as far as practical from noise-sensitive land uses, ▪ using electrified or otherwise quieter equipment when practical, ▪ using sound-control devices on equipment that are more effective than devices originally provided on the equipment, ▪ installing permanent barriers between noise sources and noise-sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission, and ▪ limiting operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.	or modified facility sites.	County noise-level standards will be exceeded at adjacent residences during facility operations. 2. If standards will be exceeded, implement noise-reducing measures to reduce noise to below standards.	phase. Implement measures during construction.	
NOI-4	**Implement Vibration Reduction Measures.** The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors:	1. Include measures in project plans and specifications. 2. Implement and document vibration-	1. Confirm that measures are included in project plans and specifications. 2. Confirm that measures are	1. During development of plans and specifications. 2. During construction.	

Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
▪ Ensure proper tuning of vibration-causing equipment. ▪ Use vibration damping devices to the extent feasible. ▪ Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings. ▪ Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible. ▪ Use electric stationary equipment (e.g., generators) where feasible. ▪ Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment, particularly if construction activities are conducted after 7:00 pm. For all construction	reducing measures.	implemented properly.		

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	activities occurring within 60 feet of residences at any time of day, install a temporary noise and vibration barrier between the project site and the nearest sensitive receptors. Following the completion of construction activities within that distance, the barrier will be removed.				

MITIGATION MONITORING AND REPORTING PROGRAM SUMMARY TABLE

The following mitigation monitoring and reporting program (MMRP) summary table includes the mitigation measures identified in the City of Modesto (City) Water Master Plan (WMP) Program Environmental Impact Report (EIR). For each mitigation measure, this table identifies monitoring and reporting actions that shall be carried out, the party responsible for implementing these actions, and the monitoring schedule. This table also includes a column where responsible parties can check off monitoring and reporting actions as they are completed. It is the responsibility of the Contractor to ensure that actions required for all of the mitigation measures listed herein are included in the project plans and specifications. It is the responsibility of the City to review and confirm that all of the mitigation measure actions described herein are in the project plans and specifications.

Aesthetics					
AES-1	**Locate Staging Areas Away from Public Areas and Install Screening.** For components located in residential areas and near public parks or trails, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences, major roadways, parks and other public areas. To the extent practicable, staging areas shall be sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials.	1. Include requirements in project plans and specifications. 2. Identify staging area locations that meet the requirements described in the measure. 3. In instances where on-street or on-site staging areas are necessary, implement screening methods.	1. Confirm that measure is included in plans and specifications. 2. Confirm that selected staging areas comply with requirements of the measure. 3. If necessary, confirm that screening methods are implemented appropriately.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to construction.	
AES-2	**Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting.** Where wells, tanks, pump stations and other above-ground facilities are located in proximity to or are readily visible from residential areas, recreational areas, or public roadways, the facility and fencing shall be designed to be consistent with the surrounding setting, to the maximum extent feasible. The following design elements shall be used to enhance the aesthetic	1. N/A	1. Design facilities in accordance with considerations described in the measure.	1. During design phase.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	appearance of proposed facilities and to integrate them with the existing visual setting: ▪ New storage tanks and pump station buildings shall be set back from public views and, upon completing Mitigation Measure AES-2, the City and/or contractor shall consider partially burying tanks to minimize view obstructions. ▪ Proposed facility designs shall integrate elements such as color, materials, and pattern of the surrounding landscape. ▪ The exterior of aboveground facilities shall be painted or include appropriate concrete admixtures to achieve low-glare, earth-tone colors that blend with the surrounding terrain and visual setting. ▪ Wherever possible, use of unpainted metallic surfaces and other reflective sources that may cause increased levels of reflectivity shall be eliminated. ▪ Wherever possible, install native landscaping and/or fencing to help screen views of the water treatment plant, pump station, and water storage tanks from public roads and adjacent residences. ▪ Any outdoor night lighting shall be motion-activated and include baffles that direct lighting onto the facility and minimize light spillage onto adjoining properties.				

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
Agricultural Resources					
	No feasible mitigation measures, such as restoration of Prime Farmland that has been previously converted or participation in an agricultural conservation easement program, have been identified to reduce impacts on agricultural resources to a less-than-significant level. Therefore, they would be **significant and unavoidable**.	–	–	–	
Air Quality					
AQ-1	**Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM_{10}** The following controls are required to be implemented by the City or its contractor at all construction sites. ▪ All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover. ▪ All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/suppressant. ▪ All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid fugitive dust emissions through the application of	1. Include emission reduction measures into the project plans and specifications. 2. Implement and document emission reduction measures.	1. Confirm emission reduction measures are incorporated into the project plans and specifications. 2. Confirm emission reduction measures are implemented properly.	1. During development of the plans and specifications. 2. During construction.	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	water during work or by presoaking. ▪ When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained. ▪ All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.) ▪ Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/suppressant. ▪ Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday. ▪ Any site with 150 or more vehicle trips per day will prevent carryout and trackout.				
AQ-2	**Implement Enhanced Control Measures for Construction Emissions of PM_{10}** The following measures will be implemented by the City or its contractor at construction sites when required to mitigate significant PM_{10} impacts as determined by	1. Include enhanced emission control measures into project plans and specifications.	1. Confirm enhanced emission control measures are included in	1. During preparation of plans and specifications. 2. During	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements): 1. Limit traffic speeds on unpaved roads to 15 miles per hour (mph). 2. Install sandbags or other erosion-control measures to prevent silt runoff. The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or that warrant additional emissions reductions for any other reason. 1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site. 2. Install wind breaks at windward sides of construction areas. 3. Suspend excavation and grading activity when winds exceed 20 miles per hour (mph). 4. Limit the area subject to excavation, grading, and other construction activity at any one time. 5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.	2. Implement and document enhanced emission control measures.	project plans and specifications. 2. Confirm that enhanced emission control measures are implemented properly.	construction.	
AQ-3	**Implement Control Measures for Operation Emissions of PM_{10} and for Ozone Precursors (ROG and NOx)** In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its contractor shall install equipment with Best Available	1. N/A 2. If necessary, and if directed by the City, install equipment with	1. For new or modified facilities, conduct site-specific air	1. Prior to or during design phase. 2. If necessary, include	

	Mitigation Measure	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	Control Technology, as indicated in a site-specific air quality analysis, to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified water system sites when required to mitigate significant PM10 and ozone impacts, due to exceedance of Air Quality Thresholds of Significance.	Best Available Control Technology at new or modified facility sites.	quality analysis to determine if operational emissions will exceed SJVAPCD thresholds. 2. If thresholds will be exceeded, ensure that equipment with Best Available Control Technology is installed.	equipment specifications during development of plans and specifications. Install equipment during construction.	

Biological Resources					
BIO-1	**Perform Focused Surveys for Special-status Plant Species.** Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site, as determined by the botanist. If special-status plants may be directly or indirectly affected, then Mitigation Measure BIO-2 shall be implemented.	1. N/A 2. Provide the City with advance notice of construction schedule and anticipated start date. Support site access for qualified biologist. 3. Do not start construction until focused surveys have been conducted and, if necessary, Mitigation Measure BIO-2 has been implemented.	1. Retain a qualified biologist to conduct focused surveys. 2. Ensure qualified biologist conducts focused surveys prior to implementation of construction activities. 3. If special-status plants are identified that may be directly or indirectly affected by activities, ensure that Mitigation Measure BIO-2 is implemented.	1. Prior to construction. 2. Prior to construction. 3. Prior to construction.	

BIO-2	**Avoid, Minimize, and Compensate for Impacts on Special-status Plant Species.** If special-status plants are detected, the City shall implement the following measures to avoid, minimize and compensate for impacts on special-status plant species: ▪ The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally-sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally sensitive area fencing will be installed at least 200 feet from the edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally sensitive area. ▪ If avoidance is not feasible, the City will consult with either CDFW or USFWS, or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following	1. If necessary, redesign or modify Program components to avoid or minimize impacts on special-status species. 2. Incorporate requirements prohibiting activities within fenced environmentally-sensitive areas into plans and specifications. 3. Protect any special-status plant species occurrences near a Program component site with environmentally-sensitive area fencing. 4. N/A 5. If directed by the City, implement the Rare Plant Plan prepared by the qualified botanist.	1. Confirm that modified design would avoid or minimize special-status plant species. 2. Confirm that requirements prohibiting activities within fenced environmentally-sensitive areas are included in plans and specifications. 3. Confirm that environmentally-sensitive area fencing is appropriately implemented, if such fencing is necessary to protect special-status species. 4. If avoidance is not feasible, consult with CDFW and/or USFWS to determine feasibility of special-status plant species transplantation. If feasible, retain qualified botanist to prepare Rare	1. During design phase. 2. During preparation of plans and specifications. 3. Prior to start of construction. 4. Prior to construction. 5. During and/or after construction. Annual monitoring would occur for 5 years after planting.	

BIO-3	**Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** Prior to implementation of proposed projects in areas that could contain habitat for vernal pool branchiopods, the City will retain a qualified biologist to conduct surveys to determine whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City will avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.	1. N/A 2. If necessary, and if habitat is present on-site, implement buffer zone identified by qualified biologist and/or USFWS to protect habitat.	1. Retain a qualified biologist to conduct surveys for vernal pools and wetlands. 2. If surveys find potential special-status invertebrate species habitat, confirm that an adequate buffer zone is implemented to protect resources.	1. Prior to construction. 2. Prior to initiation of construction activities.	

BIO-4	**Minimize and Compensate for Impacts on Branchiopods, Western Spadefoot, and Their Habitat.** If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided the City shall implement the following measures: ▪ After construction, restore surface topography and drainage to pre-construction conditions; and ▪ Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.	1. If impacts to habitat could not be avoided per Mitigation Measure BIO-3, restore surface topography and drainage to pre-construction conditions to minimize impacts. 2. N/A 3. If instructed by the City, implement off-site compensation plan for impacts to vernal pool branchiopods and/or western spadefoot.	1. If impacts could not be avoided per Mitigation Measure BIO-3, ensure that surface topography and drainage is restored to pre-construction conditions following construction. 2. Consult with USFWS and CDFW to determine appropriate ratios for off-site compensation for impacts to vernal pool branchiopods and/or western spadefoot. 3. Either implement compensation plan, instruct the contractor to do so, or hire a third party to perform the needed work.	1. Following construction. 2. As soon as it is determined that impacts to species/habitat cannot be avoided per Mitigation Measure BIO-3. 3. Following consultation with USFWS/CDFW and development of compensation approach.	

BIO-5	**Mitigation Measure BIO-5: Avoid Impacts on VELB Habitat.** The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to the VELB would not be expected to be substantial and therefore would not require mitigation. For proposed improvements that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017g). This shall include the following avoidance measures: ▪ If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal. ▪ The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities. ▪ No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level. ▪ A qualified biologist shall provide training for all	1. Incorporate requirement to avoid riparian habitat and/or elderberry shrubs into plans and specifications. 2. Make any necessary accommodations to allow biologist to conduct survey for elderberry shrubs/VELB habitat. 3. Avoid riparian habitat and/or elderberry shrubs whenever possible. If necessary, and VELB habitat is present on-site, implement avoidance measures described in mitigation measure. 4. N/A	1. Confirm that requirement to avoid riparian habitat and/or elderberry shrubs is included in project plans and specifications. 2. Retain qualified biologist to conduct surveys for the presence of elderberry shrubs that may be required. 3. If elderberry shrubs are present, ensure that avoidance measures are implemented. 4. If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to, and during, construction. 4. As soon as it is evident that elderberry shrubs cannot be avoided during construction.	

BIO-6	**Implement VELB Compensatory Mitigation, if Necessary.** The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by the project shall be transplanted to a USFWS-approved location per Mitigation Measure BIO-7. Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS. Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre(s) of credits: acre(s) of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used. Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.	1. Take all measures to preserve any elderberry shrub encountered that must be removed, such that the shrub may be transplanted per Mitigation Measure BIO-7. 2. If on-site mitigation is selected as the compensatory mitigation approach, implement any measures of the mitigation plan to which the contractor is delegated responsibility. 3. N/A	1. Ensure that any elderberry shrub removed during construction is preserved and transplanted per Mitigation Measure BIO-7, if feasible. 2. In coordination with USFWS, develop a compensatory mitigation approach following requirements set forth in mitigation measure. Either implement approach or delegate certain responsibilities to contractor. 3. Confirm that compensatory mitigation is satisfactorily provided.	1. During or prior to construction, if elderberry shrubs are encountered. 2. Once it is determined that avoidance of elderberry shrubs is infeasible. Compensatory mitigation shall be provided after approach is confirmed by USFWS. 3. After implementation of compensatory mitigation plan/approach.	

BIO-7	**Transplant Elderberry Shrubs if Avoidance Is Not Feasible.** The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to Mitigation Measure BIO-6, the shrub shall be transplanted. Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The transplanting guidelines below shall be followed: ▪ A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures. ▪ Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the CNDDB. ▪ Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. ▪ Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (www.tcia.org/).	1. N/A 2. Under direction of the qualified biologist, transplant elderberry shrubs that cannot be avoided following the guidelines and requirements in the mitigation measure.	1. Retain a qualified biologist to oversee transplantation activities, should such activities be necessary. 2. Confirm that any elderberry shrubs that cannot be avoided are transplanted appropriately in accordance with the guidelines contained in the mitigation measure, and that exit-hole surveys are reported to CDFW and USFWS.	1. Prior to construction. 2. After it is determined that elderberry shrubs cannot be avoided.	

BIO-8	**Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.** Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, and sloughs where suitable habitat exists. If a western pond turtle is located within the construction area, it will be relocated out of this area (with authorization from the CDFW), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented. ▪ The City or its contractors will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating turtles. ▪ If a turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed downstream from the project site (with authorization from CDFW). ▪ The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat. ▪ If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been conducted. 3. In coordination with the qualified biologist, relocate any discovered turtles outside of the construction area and erect exclusion fence to prevent re-entry. Implement minimization measures described in the mitigation measure, as directed by the biologist.	1. Retain a qualified biologist to conduct preconstruction surveys for western pond turtle in any suitable habitat. 2. Confirm that surveys are conducted in accordance with the mitigation measure prior to initiation of construction activities. 3. For any turtles discovered in the project area, ensure these individuals are relocated out of the area and that exclusion fence is installed to prevent re-entry. Also, confirm that minimization measures are implemented in the event that turtles or their habitat are present.	1. Prior to construction. 2. Prior to initiation of construction activities. 3. Prior to, or during, construction, if necessary.	

BIO-9	**Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas if Necessary.** Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season (February 1 through August 31), surveys must be performed before work is resumed. If no burrowing owls or signs of burrowing owls are detected during the survey, no further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented. If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season. Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (CDFG 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW. If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow. If occupied burrows are relocated, the City shall enhance	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been completed. Provide any needed support/assistance to the qualified biologist in establishing no-work buffers around occupied burrows, if such burrows are discovered. 3. Provide any needed support/assistance to the qualified biologist and the City in implementing a passive owl relocation plan, if such a plan is deemed necessary.	1. Retain a qualified biologist to conduct the preconstruction surveys for burrowing owls. 2. If burrowing owls are located on or within 250 feet of the construction site, ensure that no-work buffers are established around occupied burrows in accordance with mitigation measure. Confirm appropriate buffer distances with CDFW. 3. If occupied burrows cannot be avoided, ensure that passive owl relocation techniques are appropriately implemented. Enhance or create burrows in adjacent habitat at a 1:1 ratio one week prior to implementation of passive	1. Prior to construction. 2. Prior to construction. 3. Prior to construction / after it is determined that occupied burrows cannot be avoided.	

BIO-10	**Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species.** The City shall implement the following measures. ▪ If ground and vegetation disturbing activities occur between February 1 and August 31, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests. ▪ If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.	1. N/A 2. Do not initiate ground- and vegetation-disturbing activities between February 1 and August 31 until a nesting raptor survey has been conducted. If nesting raptors are detected, provide any needed support to the qualified biologist and/or the City in establishing no-disturbance buffers around the nest(s). Do not conduct activities within the buffer(s) until directed by the biologist.	1. Retain a qualified biologist to conduct the nesting raptor survey. 2. If nesting raptors are detected, ensure that an appropriate 500-foot no-disturbance buffer is established around the nest.	1. Prior to construction. 2. Prior to construction, if necessary.	

BIO-11	**Compensate for Loss of Raptor Foraging Habitat.** The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's Hawk foraging habitat mitigation bank that covers the Proposed study area, such as the Dutchman Creek Conservation Bank. The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program components are assumed to be within 1 mile of an active Swainson's Hawk nest tree. Mitigation credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows: ▪ 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawk; or ▪ 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands. The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be	1. N/A	1. Provide off-site compensation for losses of raptor foraging habitat through one of the methods described in the mitigation measure. Confirm that off-site mitigation is sufficient to compensate for impacts following the ratios outlined in the measure.	1. After the acreage of any permanent impacts to raptor foraging habitat is determined.	

BIO-12	**Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary.** The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If the survey indicates that no active nests are found, no further mitigation shall be required. If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned construction activities, and baseline level of human activity. The buffers will be clearly marked in the field with flagging or fencing. No work shall commence within the buffer until the young have fledged or the nest is deemed inactive.	1. N/A 2. Do not initiate construction activities during the bird breeding season until surveys have been conducted. Provide any assistance or accommodation necessary to the biologist conducting the survey. 3. In the event that active nests are identified, provide any needed assistance to the qualified biologist in establishing the no-disturbance buffers. Do not conduct construction activities within the buffers until directed by the biologist.	1. Retain a qualified biologist to conduct the preconstruction surveys for nesting birds. 2. Confirm that surveys are appropriately conducted within 14 days of construction activity that would occur during the bird breeding season. 3. In the event that active nests are identified, ensure that no-disturbance buffers are established around nests in accordance with the measure.	1. Prior to construction. 2. Prior to construction. 3. Prior to and during construction.	

BIO-13	**Avoid and Minimize Impacts on Federally Protected Wetlands.** The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands. If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of Mitigation Measure BIO-14. For all activities greater than one acre of disturbance, a SWPPP shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters. Mitigation Measure HYD/WQ-1 would also be implemented to minimize construction-related effects on wetlands and waters. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.	1. N/A 2. Avoid wetlands to the extent feasible. 3. If wetlands cannot be avoided, following construction, restore surface topography and drainage to pre-construction conditions. Additionally, where appropriate, revegetate impacted wetland areas with site-adapted native plant species.	1. If complete avoidance of wetlands is not possible, perform or commission a wetland delineation study for the project site, to be used during implementation of Mitigation Measure BIO-14. 2. Confirm that wetlands are avoided during construction activities to the extent feasible. 3. In the event that wetlands cannot be avoided, confirm that wetland areas are restored to pre-construction conditions.	1. Prior to construction. 2. During construction. 3. Following construction.	

BIO-14	**Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.** The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA Nationwide Permit and/or the Final Rule on Compensatory Mitigation for Losses of Aquatic Resources (73 Fed. Reg. 19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.	1. Do not initiate work in areas defined as water of the U.S. and State until the City has obtained the appropriate regulatory permits. 2. N/A	1. For work within areas defined as waters of the U.S. and State, obtain appropriate regulatory permits. 2. For areas where wetland impacts occur, provide compensatory mitigation by one of the methods described in the mitigation measure.	1. Prior to initiation of construction activities within waters. 2. At a time acceptable to the regulatory agencies.	
BIO-15	**Install Temporary Trench Plates over Open Trenches.** The City shall implement the following measure. During open-cut construction of pipelines, the City shall install temporary trench plates over open trenches at the end of each work day.	1. Incorporate requirement into project plans and specifications. 2. Cover open trenches with trench plates at the end of each work day.	1. Confirm that requirement is included in plans and specifications. 2. Confirm that contractor is covering trenches appropriately at the end of each work day.	1. During preparation of plans and specifications. 2. During construction.	

Cultural Resources					
CR-1	**Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work.** The City shall implement the following measures. Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive information about the kinds of archaeological materials that could be present and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.	1. Coordinate with the City to provide workers information about potential buried cultural resources.	1. Arrange for workers to receive information about potential buried cultural resources	1. Prior to construction 2. During construction, if necessary	

Hydrology & Water Quality

HYD/ WQ-1	**Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods.** The City of Modesto's drilling contractor for trenchless pipeline installation activities (e.g., horizontal directional drilling or microtunneling) shall prepare and implement a frac-out contingency plan prior to conducting Proposed Program construction activities involving these methods. At a minimum, the frac-out contingency plan shall include the following components/measures: ▪ Require a geotechnical engineer or qualified geologist to make recommendations regarding the suitability of the formations to be bored to minimize the potential for frac-out conditions. ▪ Require that a qualified archaeologist and biologist survey for and recommend protection measures for sensitive cultural and biological resources at the location of the entry and exit points and along the boring route. ▪ Include worker training measures to ensure that all field personnel understand their responsibility for timely reporting of frac-outs to their supervisors. Supervisors must then report frac-outs to CDFW as described in the last bullet below. ▪ Maintain necessary response equipment on-site or at a readily accessible location and in good working order. ▪ Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003): ▪ For a terrestrial frac-out: – Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud. – Based on consultation with CDFW (see below)	1. N/A 2. Implement all preventative measures identified in mitigation measure. Make accommodations for geotechnical engineer, archaeologist, and biologist to survey area and make recommendations. Coordinate worker training for field personnel. 3. For any frac-outs that occur, notify the appropriate agencies and implement the appropriate measures, as specified in the measure.	1. Incorporate requirements into plans and specifications. 2. Ensure that all preventative measures are implemented. Retain geotechnical engineer and qualified archaeologist and biologist to make recommendations to minimize impacts. Arrange for field personnel to receive training. 3. For any frac-outs that occur, confirm that proper protocols were followed to contain the frac-out and minimize impacts.	1. During preparation of plans and specifications. 2. During construction, if necessary.	

Noise					
NOI-1	**Employ Noise-Reducing Construction and Maintenance Practices.** The following measures will be implemented by the City or its contractor to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected: ▪ locating stationary equipment as far as practical from noise-sensitive land uses, ▪ using electrified or otherwise quieter equipment when practical, ▪ using sound-control devices on equipment that are more effective than devices originally provided on the equipment, ▪ using noise-reducing enclosures around noise-generating equipment, and ▪ installing temporary barriers between noise sources and noise sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission. When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.	1. Include noise reduction measures in project plans and specifications. 2. Implement and document noise reduction measures. In coordination with the City, develop haul routes that avoid sensitive receptors to the extent feasible.	1. Confirm that noise reduction measures are included in project plans and specifications. 2. Confirm that noise reduction measures are implemented properly. Work with Contractor to identify haul routes that avoid sensitive receptors.	1. During preparation of plans and specifications. 2. During construction.	

NOI-2	**Limit Nighttime Construction Noise.** The City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays or that the project has received a variance or special permit following procedures outlined in the applicable noise ordinance to operate outside of these hours.	1. Include measure in project plans and specifications. 2. Do not conduct construction activities in close proximity to a residence outside of the hours specified in the measure. Document compliance with this requirement.	1. Confirm that measure is included in project plans and specifications. 2. Confirm that Contractor follows requirements specified in the mitigation measure.	1. During development of plans and specifications. 2. During construction.	

NOI-3	**Employ Noise-Reducing Methods During Operations.** The City will implement noise-reducing methods so that noise from well operations and emergency generators does not exceed County noise-level standards at adjacent residences. Example measures may include but are not limited to: ▪ using sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available. ▪ locating stationary equipment as far as practical from noise-sensitive land uses, ▪ using electrified or otherwise quieter equipment when practical, ▪ using sound-control devices on equipment that are more effective than devices originally provided on the equipment, ▪ installing permanent barriers between noise sources and noise-sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission, and ▪ limiting operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.	1. N/A 2. If necessary, and if directed by the City, implement noise-reducing measures at new or modified facility sites.	1. For new or modified facilities, conduct site-specific noise analysis to determine if County noise-level standards will be exceeded at adjacent residences during facility operations. 2. If standards will be exceeded, implement noise-reducing measures to reduce noise to below standards.	1. Prior to or during the design phase. 2. Incorporate measures during design phase. Implement measures during construction.	

NOI-4	**Implement Vibration Reduction Measures.** The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors: ▪ Ensure proper tuning of vibration-causing equipment. ▪ Use vibration damping devices to the extent feasible. ▪ Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings. ▪ Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible. ▪ Use electric stationary equipment (e.g., generators) where feasible. ▪ Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment, particularly if construction activities are conducted after 7:00 pm. For all construction activities occurring within 60 feet of residences at any time of day, install a temporary noise and vibration barrier between the	1. Include measures in project plans and specifications. 2. Implement and document vibration-reducing measures.	1. Confirm that measures are included in project plans and specifications. 2. Confirm that measures are implemented properly.	1. During development of plans and specifications. 2. During construction.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-209

RESOLUTION APPROVING THE 2017 WATER MASTER PLAN AS COMPLETE

WHEREAS, Council had an approved contract with West Yost & Associates to develop a City Water Master Plan (WMP) to update the City's 2010 Water System Engineer's Report, and

WHEREAS, the WMP evaluates the City's existing and long-term water supply needs utilizing a conjunctive use portfolio of surface and groundwater sources, and

WHEREAS, the WMP establishes water system performance criteria to reliably provide water demands under daily, seasonal, emergency, and water shortage event conditions, and

WHEREAS, the WMP considers necessary measures to deliver safe and reliable water that meets regulatory water quality requirements, and

WHEREAS, the WMP provides the flexibility, system redundancy, and reliability to accommodate possible changing future conditions due to regulation and climatic conditions, and

WHEREAS, the WMP serves as a roadmap in identifying water infrastructure needed to serve both existing and future users via build-out of the City's planned water service area, and

WHEREAS, having a current and comprehensive WMP is a critical step in keeping ahead of the replacement requirements of an aging infrastructure system and the demands of expanding urban growth, and

WHEREAS, the WMP has identified a Capital Improvement Program for water system facilities that will be required for the build-out of the City's Water Service Area, and

WHEREAS, West Yost & Associates has completed the 2017 Water Master Plan.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the 2017 Water Master Plan as complete.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Ah You, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-210

RESOLUTION APPROVING THE SUBMISSION OF THE TRANSPORTATION DEVELOPMENT ACT TRANSIT CLAIM TO THE STANISLAUS COUNCIL OF GOVERNMENTS FOR FISCAL YEAR 2019-20 IN THE AMOUNT OF $15,409,739, AND A REGIONAL TRANSIT CLAIM IN THE AMOUNT OF $915,459

WHEREAS, the greatest portion of the City's funding for the Transit Service Program is made available under the Transportation Development Act (TDA), which includes Local Transportation Fund (LTF) funds and State Transit Assistance (STA) funds, and

WHEREAS, the Stanislaus Council of Governments (StanCOG) has informed the Finance Department that TDA funds have been apportioned by the State to StanCOG for allocation to public transit agencies pursuant to Article 4 of Chapter 4 of the California Public Utilities Code (PUC), and

WHEREAS, the City has prepared its TDA claim for Fiscal Year 2020-21 pursuant to these sections of the California PUC, and

WHEREAS, the City's Transit TDA Claim for Fiscal Year 2020-21 is $15,409,739, and

WHEREAS, the City's Transit TDA Claim for Fiscal Year 2020-21 for Regional Projects is $915,459, and

WHEREAS, the total Transit Operating Budget for Fiscal Year 2020-21 is $21,549,739, and

WHEREAS, Council action authorizing submission of the Claim is required by StanCOG pursuant to Section 99233.11 of the California PUC before any TDA funding can be released to the City.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves submission of the TDA transit claim for Fiscal Year 2020-21 to StanCOG in the amount of $15,409,739 and a Regional Transit Claim for $915,459.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-211

RESOLUTION APPROVING A SECOND AMENDMENT TO THE LEASE AGREEMENT WITH STANISLAUS COUNTY FOR STANISLAUS REGIONAL TRANSIT TO USE THE MODESTO TRANSPORTATION CENTER, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO SIGN THE AMENDMENT

WHEREAS, Stanislaus County leases bus bays at the Transportation Center for the Stanislaus Regional Transit (StaRT) bus system, and

WHEREAS, the original lease was for a five-year period effective July 1, 2009, with options for three additional five-year extensions, and

WHEREAS, in 2018, the Stanislaus Council of Government (StanCOG) allowed the City to begin requesting regional Transportation Development Act (TDA) funds for the operation of the Transportation Center and Amtrak Station as they are used by more than one operator, and

WHEREAS, prior to 2018, the City had included the facilities in its transit operation claim, and

WHEREAS, since regional dollars are allocated to the City for transit operations it is appropriate to reduce the lease payment from Stanislaus County to the City, and

WHEREAS, the amended lease agreement provides compensation to the City for these services, and

WHEREAS, the amended lease agreement is $1,000/month for the remainder of the lease term.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a second amendment to the lease agreement with Stanislaus County for Stanislaus Regional Transit to use the Modesto Transportation Center.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to sign the amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-212

RESOLUTION APPROVING A TEN-YEAR LEASE AGREEMENT WITH SAN JOAQUIN JOINT POWERS AUTHORITY, FOR THE USE OF THE AMTRAK RAIL STATION AT 1700 HELD DRIVE, MODESTO FOR A TOTAL AMOUNT OF $1.00 PER YEAR PLUS SHARED UTILITIES COSTS FOR THE TERM OF THE AGREEMENT, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO SIGN THE AGREEMENT

WHEREAS, the Amtrak Station located at 1700 Held Drive, Modesto has been occupied and used by Amtrak for passenger rail transportation service operations since the building opened in 1999, and

WHEREAS, the previous 20-year lease agreement expired in October 2019, and

WHEREAS, a new agreement is needed for them to continue occupancy for rail service operations, and

WHEREAS, the San Joaquin Joint Powers Authority (SJJPA) contacted the City of Modesto Transit staff to advise that they will be assuming control of the property through a lease agreement with the City of Modesto and subleasing it to Amtrak, and

WHEREAS, the SJJPA has been establishing lease agreements along the San Joaquin Valley rail corridor to gain control of the stations serviced by the Amtrak San Joaquins Rail line, and

WHEREAS, Amtrak has informed the City of Modesto that they will be entering a sublease agreement with SJJPA in a separate agreement between the two parties, Amtrak and SJJPA, and

WHEREAS, the station will continue to operate as it has since the initial agreement was established in 1999, and

WHEREAS, the previous agreement was initially for ten years with two five-year options and the annual rent for occupancy was $1 per year for the entire duration of the agreement, and

WHEREAS, for the ten years of the proposed agreement, the SJJPA will pay $1 per year to the City of Modesto for the use of the rail station, and

WHEREAS, in addition, the SJJPA will pay a monthly fee in the amount of $1,600 to share the costs of landscape maintenance and janitorial services. This amount was derived from the current amounts paid by the City for landscaping ($892) plus the janitorial services ($2,249) divided by two and rounded up to $1,600.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a ten-year lease agreement with San Joaquin Joint Powers Authority, for the use of the Amtrak Rail Station at 1700 Held Drive, Modesto for a total amount of $1.00 per year plus shared utilities costs for the term of the agreement.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to sign the agreement, in a form approved by the City Attorney.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-213

RESOLUTION APPROVING THE IMPLEMENTATION OF A FARE CAPPING PROGRAM WITH TOKEN TRANSIT ON MODESTO AREA EXPRESS

WHEREAS, the City's fixed route transit system currently uses cash, magnetic striped fare cards, and the Token Transit mobile ticketing application for fare payment to allow bus riders to pay for rides on Modesto Area Express (MAX), and

WHEREAS, on June 26, 2018, by Resolution 2018-256, Council authorized an agreement with Token Transit to provide mobile ticketing services for MAX for an amount not to exceed $178,000, and a termination date of June 30, 2023, and

WHEREAS, Token Transit has developed new functionality within the existing program to allow for fare capping services, and

WHEREAS, fare capping allows users to get credit for buying smaller trips and passes and earn their way toward a longer period pass, and

WHEREAS, the fare capping policy can help anyone but can especially assist those with low income ride the bus more often, and

WHEREAS, low-income individuals often only have funds enough for that day or week, and

WHEREAS, this functionality is only available in the Token Transit system, and

WHEREAS, this new fare payment option should promote new ridership. As the MAX system becomes easier to use and understand, the more likely people will utilize the bus for their transportation needs.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves approving the implementation of a fare capping program with Token Transit on Modesto Area Express.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-214

RESOLUTION APPROVING AN INCREASE OF THE DIRECTOR OF UTILITIES AUTHORITY TO ISSUE CHANGE ORDERS ON THE DEL RIO TANK NO. 14, WELL NO. 68, AND PUMP STATION PROJECT FROM 35 PERCENT ($2,628,793) TO 38 PERCENT ($2,854,117) OF THE ORIGINAL CONSTRUCTION CONTRACT PRICE OF $7,510,835 WITH MOUNTAIN CASCADE INC., OF LIVERMORE, CA

WHEREAS, on October 2, 2018, by Resolution No. 2018-432, Council approved a contract with Mountain Cascade Inc. (MCI) of Livermore, CA in the amount of $7,510,835 to construct the Del Rio Tank No.14, Well No. 68 & Pump Station Project, and

WHEREAS, the original amount authorized to the Director of Utilities to issue change orders was 8 percent ($600,867), and

WHEREAS, on April 23, 2019, by Resolution No. 2019-432, Council approved an increase in Director's authority to issue change orders from 8 percent ($600,687) to 35 percent ($2,628,793) of the original construction contract price of $7,510,835 with Mountain Cascade Inc., of Livermore, CA for unforeseen conditions resulting in the water treatment system necessary for the completion and operation of the Del Rio Tank 14, Well No. 68 and Pump Station Project, and

WHEREAS, the project is currently under construction and additional work is needed to complete the project including additional site grading and paving, vehicle impact protection bollards, and unforeseen adjustments needed in the design and construction, and

WHEREAS, an increase in Director's authority from $2,628,793 (35%) to a not-to-exceed amount of $2,854,117 (38%) of the original construction contract price of

$7,510,835 with Mountain Cascade Inc., of Livermore, CA, will be needed to complete the project improvements, and

WHEREAS, the administrative and field inspection costs associated with ensuring the additional change order work conforms to the City's standards of construction and quality.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes an increase in Director's Authority to issue change orders for the Del Rio Tank No. 14, Well No. 68, and Pump Station Project from 35 percent ($2,628,793) to 38 percent ($2,854,117) of the original construction contract price of $7,510,835 with Mountain Cascade Inc., of Livermore, CA.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-215

RESOLUTION APPROVING A FIRST AMENDMENT TO THE AGREEMENT WITH NV5, OF MANTECA, CA, FOR CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES FOR THE DEL RIO TANK NO. 14, WELL NO. 68, AND PUMP STATION PROJECT IN AN AMOUNT NOT TO EXCEED $199,692, FOR A TOTAL AMOUNT NOT TO EXCEED $1,199,692, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, this project will construct a 0.25-million gallon steel water tank, a 1,000 gallon-per-minute (gpm) well production pump, a 2.45 million gallon-per-day booster pump station, a 1.4 acre-foot retention basin, and a 16-inch transmission main installation from the intersection of St. John Road and Country Club Drive, south to Ladd Road, and

WHEREAS, on October 2, 2018, by Resolution No. 2018-432, Council awarded the construction contract to Mountain Cascade Inc. (MCI) of Livermore, CA., in the amount of $7,510,835 for the Del Rio Tank No.14, Well No. 68 & Pump Station Project, and

WHEREAS, due to the limited availability of the City's Construction Administration staff and recent staffing transitions, staff recommended utilizing a consultant to provide construction management, inspection and materials testing services through completion of the construction phase, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a), "Exceptions to Formal Bidding Requirements," this agreement for professional services is exempt from the bidding requirements of Modesto Municipal Code 8-3.203., and

WHEREAS, for the construction management and inspection services, a Request for Proposals (RFP) was issued to the prequalified list of firms for construction management and inspection services for this project, and

WHEREAS, on October 2, 2018, by Resolution No. 2018-433, Council approved an agreement with NV5, of Manteca, CA, for construction management and inspection services for the Del Rio Tank No.14, Well No. 68 & Pump Station Project in an amount not to exceed $1,000,000, plus $120,000 for additional services (if needed), for a total amount not to exceed $1,120,000, and

WHEREAS, the project was scheduled to be complete by January 31, 2020; however, the project schedule has been extended due to unforeseen conditions resulting in the inclusion of a water treatment system necessary for the completion and operation of the Del Rio Tank 14, Well No. 68 and Pump Station Project, and

WHEREAS, the inclusion of a water treatment system has resulted in an extended construction schedule and additional inspections with anticipated completion schedule of August 2020, and

WHEREAS, City staff recommends approving an amendment to the agreement with NV5, to provide additional construction management, inspection and materials testing services.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a First Amendment to the current agreement with NV5 for construction management and inspection services for Del Rio Tank No.14, Well No. 68 & Pump Station Project, in the amount of $199,692 for a total amount not to exceed $1,199,692.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-217

RESOLUTION ACCEPTING THE MELLIS PARK IMPROVEMENTS PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $354,223 TO ANV CONTRACTORS, OF ATWATER, CALIFORNIA

WHEREAS, the existing pavilion, constructed in 1996 out of large wooden cross beams, was designed to shade the picnic tables and provide a vibrant area for both large groups and families to enjoy the park, and

WHEREAS, after sustaining 25+ years of weathering, the structure was deteriorating and was requiring demolition or replacement, and

WHEREAS, due to the high popularity of the park as a picnic destination, staff proposed to replace the wooden beam shade structure with a lighter and more durable, metal design, and

WHEREAS, the newly designed structure plan greatly increased Americans with Disabilities Act compliancy as well as provides longevity to the shade structure, and

WHEREAS, the Mellis Park renovation is one of the projects approved in the 2018/19 CIP budget, and

WHEARAS, as a U.S. Department of Housing and Urban Development (HUD) entitlement community, the City is required to develop an Annual Action Plan that describes proposed activities funded with CDBG, HOME Investment Partnerships, and Emergency Solutions Grant funds, and

WHEREAS, staff reviewed all of the current projects within the Program Year 2018-2019 Annual Action Plan and determined which projects would be able to move forward within the grant deadlines, and

WHEREAS, a park renovation project in Mellis Park was identified as a project that could meet the allocation deadline, and

WHEREAS, bids were advertised on December 21, 2018, and

WHEREAS, bids were publicly opened on January 22, 2019, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, ANV Contractors, Inc., of Atwater, California, was the apparent responsible and responsive bidder, and

WHEREAS, on February 12, 2019, by Resolution No. 2019-60, Council awarded a contract to ANV Contractors, Inc., of Atwater, California, California for the construction of the Mellis Park Improvements Project in the amount of $323,390, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of March 18, 2019, and all contract work was completed by May 20, 2019, and

WHEREAS, the total project costs were $449,177 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $450,600 which included $355,729 for the construction contract and contingency with ANV Contractors, Inc., and

WHEREAS, there were five change orders on this project with an overall increase of $30,833, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Mellis Park Improvements Project is hereby accepted as complete from contractor ANV Contractors, Inc., of Atwater, California, CA, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $354,223, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 5th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-221

RESOLUTION APPROVING AMENDMENT #2 TO THE COOPERATIVE AGREEMENT WITH THE CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS) FOR THE STATE ROUTE 132 WEST FREEWAY/EXPRESSWAY - PHASE 1 PROJECT TO MODIFY THE FUNDING TABLE TO CORRECT THE AMOUNT OF STATE HIGHWAY OPERATION AND PROTECTION PROGRAM (SHOPP) FUNDS APPROVED FOR THE PROJECT AND TO APPROVE PAYMENT OF $599,197 FOR DEPARTMENT FURNISHED MATERIALS AND $31,500 FOR CONSTRUCTION ENGINEERING TESTING AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AMENDMENT

WHEREAS, the State Route 132 West Freeway/Expressway – Phase 1 Project (Project) proposes to construct a two-lane highway on a new alignment in Stanislaus County and the City of Modesto from State Route 99 just south of Kansas Avenue to Dakota Avenue; and

WHEREAS, the California Department of Transportation (Caltrans) required that the City of Modesto enter into the Cooperative Agreement prior to submitting a request for funding authorization to Caltrans; and

WHEREAS, the Cooperative Agreement sets forth the roles and responsibilities of the City and Caltrans with respect to the Project; and

WHEREAS, on August 8, 2018, per Resolution 2018-315, the City Council approved the Cooperative Agreement for the Project; and

WHEREAS, on June 25, 2019, per Resolution 2019-298, the City Council approved Amendment #1 to the Cooperative Agreement for the Project; and

WHEREAS, in August, 2019, City staff was notified by Caltrans that a second amendment to the Cooperative Agreement was needed to correct the amount of State Highway Operation and Protection Program (SHOPP) funds available for the project and

to authorize payment of $599,197 for Department Furnished Materials and $31,500 for Construction Engineering Testing performed by Caltrans; and

WHEREAS, these costs were anticipated when the construction project account was created and sufficient funding is currently available in CIP#101119. The funding source for both of these items is Regional Measure L funds. The Measure L funds were approved for this project via agreement with the Stanislaus Council of Governments (StanCOG) on September 24, 2019 by Resolution 2019-436.

NOW, THEREFORE, BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the Second Amendment to the Cooperative Agreement with the California Department of Transportation (Caltrans) for the State Route 132 West Freeway/Expressway-Phase 1 Project to modify the funding table to correct the amount of State Highway Operation and Protection Program (SHOPP) funds approved for the Project and to approve payment of $599,197 for Department Furnished Materials and $31,500 for Construction Engineering Testing.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the Amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-222

RESOLUTION ACCEPTING THE LAKEWOOD NEIGHBORHOOD STREET IMPROVEMENTS PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $2,220,476 TO AMERICAN PAVEMENT SYSTEMS, OF MODESTO, CALIFORNIA

WHEREAS, in November 2016, the voters of Stanislaus County approved the county wide, 25-year, half- cent sales tax increase known as Measure L, and

WHEREAS, on July 5, 2017, by Resolution No. 2017-269, Council approved a list of proposed projects including the Lakewood Neighborhood Street Improvements project to be funded with Measure L tax proceeds in Fiscal Year 2017-18, and

WHEREAS, on March 13, 2018, by Resolution No. 2018-124, Council amended the approved list of projects to be funded with Measure L tax proceeds in Fiscal Year 2017-2018 and necessary budget adjustments, and

WHEREAS, the amendment to the list of projects allocated $649,758 for construction to the Lakewood Neighborhood Street Improvements Project, and

WHEREAS, bids were advertised on May 1, 2018, and

WHEREAS, bids were publicly opened on May 22, 2018, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and American Pavement Systems, of Modesto, California, was the apparent responsible and responsive bidder, and

WHEREAS, on August 8, 2018, by Resolution No. 2018-308, Council awarded a contract to American Pavement Systems, of Modesto, California for the construction of the Lakewood Neighborhood Street Improvements project in the amount of $2,202,576, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of September 10, 2018, and all contract work was completed by May 21, 2019, and

WHEREAS, the total project costs were $2,738,169 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $2,899,758 which included $2,378,782 for the construction contract and contingency with American Pavement Systems, and

WHEREAS, per Policy 1.028, approved by Council Resolution on July 19, 1994, the Directors Authority to approve change orders is 8% of original contract price. There were five change orders on this project with an overall increase of $17,900, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Lakewood Neighborhood Street Improvements Project is hereby accepted as complete from contractor American Pavement Systems, of Modesto, California, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $2,220,476, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-223

RESOLUTION AUTHORIZING USE OF THE BOND OPPORTUNITIES FOR LAND DEVELOPMENT (BOLD) PROGRAM; AUTHORIZING THE CALIFORNIA MUNICIPAL FINANCE AUTHORITY TO ACCEPT APPLICATIONS FROM PROPERTY OWNERS, CONDUCT PROCEEDINGS AND LEVY SPECIAL TAXES WITHIN THE TERRITORY OF THE CITY OF MODESTO PURSUANT TO THE MELLO-ROOS COMMUNITY FACILITIES ACT OF 1982, AS AMENDED; AND APPROVING RELATED ACTIONS, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ALL DOCUMENTS

WHEREAS, the California Municipal Finance Authority (the "CMFA") is a joint exercise of powers authority the members of which include numerous cities, counties and other local agencies in the State of California (the "State"); and

WHEREAS, the CMFA provides financing services to its members, and the City of Modesto (the "City") is a member of CMFA; and

WHEREAS, the CMFA has established the Bond Opportunities for Land Development Program (the "BOLD Program") to allow the financing through the levy of special taxes under the Mello-Roos Community Facilities Act of 1982, as amended (the "Act") of certain public facilities and development impact fees that finance public facilities (together, the "Improvements") to be owned by local agencies in the State; and

WHEREAS, the BOLD Program creates an opportunity for new developments to utilize the Act to finance Improvements for construction and/or acquisition by the City, without the necessity of the City creating and administering the community facilities districts ("CFDs"); and

WHEREAS, the City desires to allow the owners of property being developed within its jurisdiction ("Participating Developers") to participate in the BOLD Program and to allow CMFA to conduct proceedings under the Act to form CFDs, to levy special

taxes within such CFDs, and to issue bonds secured by such special taxes to finance Improvements, provided that such Participating Developers voluntarily agree to participate and consent to the levy of such special taxes and the incurrence of such indebtedness; and

WHEREAS, eligible property owners within the jurisdiction of the City may in the future elect to be Participating Developers, and CMFA may conduct proceedings under the Act to form a CFD, levy special taxes within such CFD and issue bonds secured by such special taxes to finance Improvements; and

WHEREAS, the City will not be responsible for the conduct of any proceedings under the Act for the formation of any CFD; the levy or collection of special taxes for any CFD or any required remedial action in the case of delinquencies in any special tax payments; or the issuance, sale or administration of any bonds issued in connection with the BOLD Program; and

WHEREAS, pursuant to Government Code Section 6586.5, notice was published at least five days prior to the adoption of this resolution at a public hearing, which was duly conducted by this City Council concerning the public benefits of the BOLD Program and the financing of the Improvements.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Modesto as follows:

1. The use of the BOLD Program in connection with the financing of Improvements is hereby authorized and approved. The appropriate City officials and staff are hereby authorized and directed to allow BOLD Program participation to be available

to property owners who are subject to the payment of fees for new development and/or who are conditioned to install public improvements in connection with new development.

2. The City Council hereby finds and declares that the issuance of bonds by CMFA in connection with the BOLD Program will provide public benefits, including without limitation, savings in bond preparation and certain bond issuance costs and the more efficient delivery of local agency services to residential and commercial development within the City.

3. In connection with the issuance of bonds by CMFA for the BOLD Program, a form of acquisition agreement, joint community facilities agreements or similar agreement will be required to be entered into by the City and CMFA, and the City Manager, the Finance Director or a designee of either of them (each, an "Authorized Officer") is hereby delegated authority to enter into such an acquisition agreement, joint community facilities agreement, or similar agreement for and on behalf of the City.

4. The Authorized Officers are hereby authorized and directed to allow and approve BOLD Program participation available for property owners who are subject to the payment of fees for new development and/or who are conditioned to install public improvements in connection with new development, including signing developer applications or other documents evidencing the official intent of the City to reimburse itself in connection with each project from the proceeds of tax-exempt obligations issued by CMFA as part of the BOLD Program, and to advise such owners requesting participation in the BOLD Program that the City has approved the BOLD Program; provided, that the CMFA shall be responsible for providing applications and processing of documentation and related materials at its own expense.

5. This Resolution shall take effect immediately upon its adoption. The City Clerk is hereby authorized and directed to transmit a certified copy of this resolution to the Secretary of the CMFA.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-224

RESOLUTION APPROVING THE 2020-2025 CONSOLIDATED PLAN AND ACCEPTING HUD PROGRAM FUNDS AWARDED THROUGH THE PROGRAM YEAR 2020-2021 ANNUAL ACTION PLAN, ADOPTING THE ANALYSIS OF IMPEDIMENTS TO FAIR HOUSING CHOICE, APPROVING THE CITIZEN PARTICIPATION PLAN AS REQUIRED BY THE U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT DEPARTMENT (HUD), AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO NEGOTIATE AND EXECUTE ANY RELATED PROGRAM AGREEMENTS, CONTRACTS, OR OTHER DOCUMENTATION REQUIRED FOR IMPLEMENTATION OF THE 2020-2025 CONSOLIDATED PLAN AND PROGRAM YEAR 2020-2021 ANNUAL ACTION PLAN; TO SUBMIT APPLICABLE DOCUMENTATION AND PROVIDE TECHNICAL ALTERATIONS, AS REQUIRED BY HUD, AND TO INCORPORATE COMMENTS RECEIVED PRIOR TO THE CLOSE OF THE PUBLIC COMMENT PERIOD

WHEREAS, the City of Modesto is an entitlement grantee under the U.S. Department of Housing and Urban Development (HUD) Office of Community Planning and Development (CPD) which allocates the following program funds to the City of Modesto through a formula based allocation: Community Development Block Grant (CDBG), HOME Investment Partnerships (HOME), and Emergency Solutions Grant (ESG); and

WHEREAS, as an entitlement community, HUD requires entitlement grantees adopt a comprehensive, long-term plan known as the Five-Year Consolidated Plan for the use of HUD funds allocated to the City, and

WHEREAS, the Consolidated Plan, analyzes the City's housing and community development needs, with a priority focus on low and moderate-income individuals, households, and neighborhoods, and describes five-year strategies for meeting those needs, and

WHEREAS, the City partnered with Cloudburst Consulting Group Inc, in July 2019 to assist with the Consolidated Plan and the outreach to the community, and

WHEREAS, the City conducted a robust citizen participation marketing process consisting of multiple posts on social media, newspaper publications, notification on the Stanislaus County Continuum of Care (CoC) and other local special interest group list servs, distribution of marketing materials to targeted neighborhood groups, online surveys, and in person presentations and announcements to active neighborhood collaborative groups, and

WHEREAS, the City held fourteen (14) public community meetings, with at least one (1) meeting being in each Council district and Spanish translation was made available, and

WHEREAS, the City facilitated several stakeholder meetings gathering input from the Continuum of Care (CoC) as well as the Stanislaus Homeless Alliance (SHA), and

WHEREAS, several targeted outreach meetings were held to gather input form organizations that specialize in several areas including but not limited to housing, service delivery, organizations addressing special needs, infrastructure, and public works, and

WHEREAS, community outreach was also conducted via survey and a total of two-hundred and twenty-two (222) surveys were collected, and

WHEREAS, the Consolidated Plan's Needs Assessment, Market Analysis, and the community engagement process served to inform the prioritization of projects outlined in the 2020-2021 Annual Action Plan as well as the goals and priority needs that will guide the City's use of HUD funds over the next five (5) years, and

WHEREAS, according to the proposed Consolidated Plan, the primary areas that the City will address with HUD funds are the development of affordable housing, addressing and preventing homelessness, enhancing infrastructure and public facilities, providing public services to low income households, and Economic development, and

WHEREAS, it is important to note that the Consolidated Plan complements the City's Vision, Mission, Goals and Strategies document known as the City's 2020-2025 Strategic Plan adopted by City Council on August 14, 2019, and

WHEREAS, the Program Year (PY) 2020-2021 Annual Action Plan (AAP) represents the first year of the City's 2020-2025 Consolidated Plan and identifies the expected resources to be available and projects to be undertaken, to address the community priority needs as identified in the 2020-2025 Consolidated Plan **attached** in **Exhibit A**, and

WHEREAS, the PY 2020-2021 allocations are $1,900,954 in Community Development Block Grant (CDBG), $164,546 in Emergency Solutions Grant (ESG), and $934,812 in HOME investment partnership (HOME) funds, and

WHEREAS, CDBG funds support a range of eligible activities to benefit low and moderate-income individuals, families, and neighborhoods; these eligible activities include, but are not limited to public services, affordable housing, housing rehabilitation, property acquisition, acquisition or rehabilitation of public facilities, special economic development activities, and program administration in support of the implementation eligible activities, and

WHEREAS, CDBG, ESG, and HOME funds must be allocated to eligible activities to support the goals and objectives identified within the Consolidated Plan to address community needs, and

WHEREAS, projects proposed for PY 2020-2021 are listed in **Exhibit B**, and

WHEREAS, the Regional Analysis of Impediments to Fair Housing Choice (AI) is developed to understand the potential barriers to fair housing choice that residents within Stanislaus County may face and identify impediments that will work to inform future policy and programs., and

WHEREAS, this document was prepared in partnership with the Cloudburst Consulting Group, Inc with the collaboration of Stanislaus Urban County, City of Turlock, and Stanislaus Regional Housing Authority, and

WHEREAS, the AI is included in **Exhibit C**, and

WHEREAS, the Citizen Participation Plan outlines the outreach and participation by low- and moderate-income persons, particularly those living in blighted areas, in areas where HUD funds are proposed to be used and by residents of predominantly low- and moderate-income neighborhoods and encourages participation in all stages of the Consolidated Planning process by all residents, including minorities and non-English speaking persons, as well as persons with mobility, visual, or hearing impairments, and residents of assisted housing developments and recipients of tenant-based assistance, and

WHEREAS, in compliance with the HUD approved waiver for the Citizen Participation Plan requirements, a 30-day public period to review and comment on the draft documents opened April 12, 2020 and will close with a public hearing at the City

Council meeting on May 12, 2020 and citizen participation was conducted completely online and Plan is available on the City of Modesto Website.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the 2020-2025 Consolidated Plan, accepting HUD program funds awarded through the Program Year 2020-2021 Annual Action Plan, adopting the Analysis of Impediments to Fair Housing Choice, and approving the Citizen Participation Plan as required by the U.S. Department of Housing and Urban Development Department (HUD), a copy of which is on file with the City Clerk.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is authorized to negotiate and execute any related program agreements, contracts, or other documentation required for implementation of the 2020-2025 Consolidated Plan and Program Year 2020-2021 Annual Action Plan authorization.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is authorized to submit all applicable documentation and provide technical alterations, as required by HUD and to incorporate comments received prior to the close of the public comment period.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

Executive Summary

ES-05 Executive Summary

Introduction

The City of Modesto is an "entitlement grantee" under the U.S. Department of Housing and Urban Development (HUD) Office of Community Planning and Development (CPD) programs. HUD requires entitlement grantees adopt a comprehensive, long-term plan for the use of its HUD funds known as the Five-Year "Consolidated Plan" (Consolidated Plan) which analyzes the City's housing and community development needs, with a priority focus on low- and moderate- income individuals, households, and neighborhoods, and describes long-term strategies for meeting those needs.

The Consolidated Plan is required by HUD for continued participation in HUD's CPD programs including Community Development Block Grant (CDBG), HOME Investment Partnerships (HOME), and Emergency Solutions Grant (ESG) funds. The overall goal of the these CPD programs is to develop viable urban communities by providing promoting integrated approaches that provide decent housing, suitable living environments, and expanding economic opportunities for low- and moderate-income persons.

The Consolidated Plan serves as:

- A planning document, built through a participatory process, for the City of Modesto (City)
- An application for federal funds under HUD's CDBG formula grants programs.
- A strategy to implement HUD's programs; and
- A method to allocate funds to specific projects and activities for the first fiscal year of the Consolidated Plan.

This Consolidated Plan will cover fiscal years 2020 to 2024. It is important to note that in the case of Modesto, the fiscal year begins July 1 and ends on June 30. Therefore, this Consolidated Plan will be in effect from July 1, 2020 to June 30, 2025, cover five (5) full fiscal years. Within this document, when referencing the length of projects, goals, or funding, these refer to fiscal years.

It is important to note that during the development of this Consolidated Plan the City of Modesto was put in a position to react to the unique coronavirus, COVID-19. The outbreak of COVID-19 dramatically shifted economic conditions of jurisdictions throughout the Country. Data reflected in this report does not consider the economic realities that COVID-19 impacted on the communities throughout the County. The City will receive federal funding to address COVID-19 challenges. The City has made an attempt to include allocations and strategies in this Consolidated Plan with the information available during the development of this document. However, if HUD's direction shifts from what is outlined in this Plan, an amendment to this Consolidated Plan and/or Action Plan may need to be conducted at a later time.

The City of Modesto has recently updated its *Vision, Mission, Goals and Strategies* document – the 2020-2025 Strategic plan was adopted by City Council on August 14, 2019. The City has outlined ten (10) goals within three (3) target areas, those target areas are: Quality of life, Economic vitality, and Governance and service delivery. The strategies outlined in this Consolidated Plan and Annual Action Plan align with

the strategies and vision articulated in the City's Planning document. For full view of the City's *Vision, Mission, Goals and Strategies* document, please see: http://modestogov.com/330/Reports-and-PublicationsSummary of the objectives and outcomes identified in the Plan

The City has identified several areas where funds will be focused. Not all areas highlighted here will receive the same level of funding. The Needs Assessment, Market Analysis, and the community engagement process served to inform the prioritization of projects outlined in the 2020 Annual Action Plan as well as the goals and priority needs that will guide the City's use of HUD funds over the next five (5) years. The primary areas that the City will address with HUD funds are:

- Affordable housing development
- Addressing and Preventing homelessness
- Enhance Infrastructure and Public Facilities
- Providing Public Services to Low Income Households (Includes Fair Housing Services)
- Community and Economic development

Evaluation of past performance

The City utilizes resources identified in the Strategic Plan and Annual Action Plan sections of this Plan to carry out programs and activities. The City continues to take an active role in the production and development of affordable housing, addressing the social and economic needs of low- and moderate-income individuals and the special needs populations within the City.

The Community Development Block Grant (CDBG), Emergency Solutions Grant (ESG), and the HOME Investment Partnership (HOME) provided operating funds for many local programs, allowing the City to make progress towards the goals outlined in the Strategic Plan.

Housing programs funded through the CDBG, ESG and HOME Programs assisted in stabilizing neighborhoods by providing affordable housing rehabilitation and enforcing City building codes that are designed to assure the community's housing stock is safe and sanitary.

CDBG and ESG funded public service programs strove to alleviate the problem of gaps in human service needs throughout the City by offering various programs such as emergency rental assistance and homeless case management. In light of continuing decreases in funds and increased construction costs, staff and subrecipients continue to explore alternative strategies to provide decent affordable housing, create economic development opportunities, and ensure suitable living environments.

At least once per year, staff conducts formal onsite monitoring of CDBG, ESG and HOME funded projects implemented by subrecipients. These visits are conducted more frequently if the subrecipient is new or is having difficulty meeting program or contract requirements.

The City is proud to highlight the following projects it took part on via partnerships with local service providers (note: these projects have been completed or currently under development):

Kansas House:

The Kansas House project is a collaborative project in partnership with the City of Modesto, Stanislaus County and the Housing Authority of the County of Stanislaus (HACS). The project will provide Permanent Supportive Housing (PSH) for those who are homeless or at risk of becoming homeless. Placement is based on referrals by service providers, and residents may include single men and women, partners, and single parents with a child or adult siblings.

The HACS acquired the Kansas Street property late 2019 and the total project cost is estimated at $7,600,000 million, including acquisition costs. The City of Modesto contributed $2,500,000 of CDBG funding (derived from NSP program income) toward the acquisition of this property. This project will provide housing opportunities to approximately 200 homeless individuals.

Edwards Estates Homeownership Project:
This project will assist two households at the highest level in the housing continuum through homeownership. In partnership with Great Valley Housing Development corporation, the City provided HOME CHDO funds for the construction of two single family homeownership units to be sold to first time homebuyers. Proceeds from the sale of the first two units will be used to assist in the construction of additional units for a total of up to 35 homebuyer units.

Youth Navigation Center:
The City was proud to partner with the Center for Human Services, a local youth service provider, for the acquisition of property to establish a stop service hub providing a continuum of services for young people (13-24 years old) who are experiencing crisis, housing instability, and/or homelessness. The Youth Navigation Center will create a space where existing services, currently at different sites, will be relocated and new services developed, creating a clear pathway for youth/young adults.

Mellis Park Improvements Project
The City awarded CDBG funds for public improvements Mellis Park located in one of Modesto's low-income census area. Improvements included: removal and replacement of the picnic area including picnic structure, concrete paving, drinking fountain and barbeque units to accommodate a ADA accessible recreational facility which included ADA tables, ADA parking stalls, ADA drinking fountain, ADA curb ramp, safety lighting, and accessible concrete paths to park facilities

Summary of citizen participation process and consultation process
The City offered a variety of engagement methods for both stakeholders and the public to participate in the Consolidated Plan process. The City also took special consideration to include low- and moderate-income communities; hosting community meetings in low- and moderate-income census tracts. The City takes an active role in gathering public feedback and input into the Consolidated Plan. The details of the engagement process are outlined in the next section, Process, and are highlighted below:

- Public community meetings
- Community survey
- Stakeholder meetings and presentations

- Stakeholder interviews (via phone, in-person, and email)

The public community meetings were district-based, having at least one meeting within each of Modesto's six districts. Meeting times were typically held in the evening to accommodate participation of the greatest number of households. At each meeting Spanish translation was made available and email/phone follow-up conversations were offered to anyone who had additional input after the meeting had ended.

The community survey was disseminated in both English and Spanish through City channels. The survey link was placed on the City website and shared with faith-based groups, service providers, nonprofits and stakeholders throughout the City.

Summary of public comments

Please see Appendix A – Public Comments

Summary of comments or views not accepted and the reasons for not accepting them

All comments made at public and stakeholder meetings were accepted and integrated where possible into the Consolidated Plan process. No comments or input were left out of the Appendix A – Public Comments.

Summary

The City makes every effort to coordinate and align this Consolidated Plan with the strategic plans of other organizations that share the mission of fulfilling public needs, especially serving those low- and moderate-income households. This Consolidated Plan will outline the needs of communities and will culminate in the Strategic Plan where those needs are met with goals and strategies to address the needs identified in this Consolidated Plan. The City conducted a robust outreach effort within the City and ensured any individual or organization that wished to voice there individual needs, the needs of their community, or the needs of a population they serve were included.

The Process

PR-05 Lead & Responsible Agencies

Describe agency/entity responsible for preparing the Consolidated Plan and those responsible for administration of each grant program and funding source

Agency Role	Name	Department/Agency
Lead Agency	Modesto, CA	Community and Economic Development Department
CDBG Administrator	Modesto, CA	Community and Economic Development Department
HOME Administrator	Modesto, CA	Community and Economic Development Department
ESG Administrator	Modesto, CA	Community and Economic Development Department

The City is the lead agency responsible for preparation of the Consolidated Plan and for administration of each grant program and its associated funding source(s). Primary oversight of the City's HUD entitlement grant programs comes from the Citizens' Housing and Community Development Committee (CH&CDC). This committee is appointed by the City Council and is comprised of representatives from the City Council, Planning Commission, Housing Rehabilitation Loan Committee, Human Relations Commission and/or Citizens Redevelopment Advisory Commission and several citizens-at-large. Generally, the citizens-at-large represent low-income and racial minority groups. The CH&CDC makes funding recommendations to the City Council regarding HUD CDBG, HOME, ESG, and/or State funded programs related to housing and community development.

The CH&CDC meets approximately once a month. These are meetings that are publicly noticed, are open to the public and are generally held at Tenth Street Place, 1010 Tenth Street, Modesto, California. Public comments are both encouraged and welcomed.

To avoid a perceived conflict of interest, any CH&CDC member who is also a member of a board of directors or is employed by an agency that applies for or receives CDBG, ESG, HOME, or other HUD funding , is ineligible to vote on funding decisions involving their respective agencies.

Consolidated Plan Public Contact Information

The following are various ways in which an interested party can contact the City of Modesto CEDD staff with comments regarding the City's Consolidated Plan:
Telephone: (209) 577-5211
Hearing Impaired: Dial 711, and ask for 209-577-5211
Email: housing@modestogov.com
In person: 1010 Tenth Street, Suite 3100, Modesto, California
Mail: City of Modesto,
Community Development Division,
P.O. Box 642.
Modesto, California 95353

PR-10 Consultation

Introduction

The City follows the Citizen Participation Plan the City Council has approved as the guide for engaging with citizens and consultation with respective entities. The City of Modesto encourages citizen participation in the Consolidated Plan process and views itself as an active partner in the process; directly engaging with the public and facilitating opportunities for citizens and stakeholders to engage with the process.

The City continuously reviews and improves delivery systems, including feedback loops. This section will outline the efforts made by the City to include public and stakeholder input into the Consolidated Plan process

Provide a concise summary of the jurisdiction's activities to enhance coordination between public and assisted housing providers and private and governmental health, mental health and service agencies.

The City is an active member of several committees and working groups that represent organizations in housing and social services. For example, the City regularly attends the Stanislaus Community System of Care (CSOC) which is the local Stanislaus County Continuum of Care (CoC) meetings (note: the CSOC and CoC may be referenced interchangeably throughout this document). The CoC is comprised of service providers from multiple sectors including but not limited to housing providers, private and governmental health, mental health, youth services, senior services, and lived experience). These meetings are held monthly and work to address potential issues and gaps in the service delivery system and create a transparent and collaborative service delivery system for the entire County.

The City also has both inter/intradepartmental coordination through regular meetings and discussions. The Community Development Division (CDD) regularly meets with sub-recipients and partners of HUD-funded programs. Similarly, the City also engages in Memorandums of Understanding (MOUs) to clearly dictate program goals and reporting requirements to ensure all governmental and non-governmental organizations involved in HUD-funded programs understand expectations.

The City works closely with the Housing Authority of the County of Stanislaus (HACS) as well as the Stanislaus County Affordable Housing Corporation (STANCO). This working relationship is evident through consistent productive partnerships on projects and regular communication to address needs and shifting trends.

The City works closely with the Stanislaus County Department of Behavioral Health and Recovery Services (BHRS) in the system delivery of housing services. BHRS provides Housing Support Services Program provides an array of support services for individuals facing barriers that include low income, severe mental illness, substance abuse, and other disabling conditions. The program offers a combination of affordable housing and support services designed to help individuals and families use housing as a platform for wellness and recovery following a period of homelessness, hospitalization or incarceration. The goal of Housing Support Services is to assist individuals in obtaining employment, independent living skills, recovery and increased self-sufficiency. In addition, BHRS provides Employment Support Services to individuals with psychiatric disabilities who are working towards Employment and Housing goals. The program provides an opportunity for individuals with severe mental health disabilities to work in the community. Often times, BHRS and City HUD funding resources are leveraged together when partnering with local affordable housing developers such as the HACS and STANCO.

The City also coordinates with the Stanislaus County Community Services Agency (CSA) which is responsible for the administration of multiple housing and homeless programs associated with the administration of the General Assistance, CalWORKs, Welfare to Work, Child Welfare, and Adult Services programs. The housing and homeless programs include the Housing Assistance Program (HAP), the Transitional Housing Plus Program (THP+), the Housing Support Program (HSP), the Housing Disability Advocacy Program (HDAP), the Homeless Emergency Aid Program (HEAP), and Homeless Housing, Assistance, and Prevention Program. As with BHRS, the City partners with housing developers and CSA in the delivery of services and/or affordable housing projects to serve the target populations.

Describe coordination with the Continuum of Care and efforts to address the needs of homeless persons (particularly chronically homeless individuals and families, families with children, veterans, and unaccompanied youth) and persons at risk of homelessness.

The City is an active member of the Stanislaus County CoC as well as the Stanislaus Homeless Alliance (SHA). The CoC and the SHA support all service delivery mechanisms as they relate to working to end and address homelessness. Both the CoC and the SHA are further described in section NA-40 of this Consolidated Plan.
The City regularly coordinates with the CoC, the SHA, as well as individual stakeholders including during the development of this Consolidated Plan. Coordination with the CoC consists of:

- Meetings with the CoC at large as well as the CoC subcommittees such as the CoC Advisory Council, Community Projects & Grant Review Committee, HMIS Governance Committee, Point in Time Housing Inventory Count Committee, Homeless Populations and Subpopulations Committee, Funding and Resource Committee, Housing Committee, and the Planning and Development Committee.
- The City of Modesto currently leads weekly Coordinated Entry meetings in an effort to fill vacant housing units in the community.
- The City regularly coordinates with service providers including but not limited to Community Housing and Shelter services, BHRS, CSA, the HACS, STANCO, and County Veterans Services in efforts to address the needs of homeless persons (particularly chronically homeless individuals and families, families with children, veterans, and unaccompanied youth) and persons at risk of homelessness. Coordination with these entities occurs via monitoring meetings, CoC meeting interactions, client service referrals, and or/program planning.

Describe consultation with the Continuum(s) of Care that serves the jurisdiction's area in determining how to allocate ESG funds, develop performance standards and evaluate outcomes, and develop funding, policies and procedures for the administration of HMIS.

Consultation with the CoC occurs by having members of the CoC participate on the City's CDBG/ESG application scoring committee to determine how to best allocate CDBG and ESG program funds. Award recommendations are then vetted through the CoC and CH&CDC committees for endorsement and forward to City Council.

To develop performance standards and evaluate outcomes of projects and activities assisted by ESG funds, the City of Modesto uses performance measures captured annually by HMIS to evaluate the outcomes of projects assisted with ESG funds. The performance measures will help evaluate the performance to determine the most effective services and assist with future allocation of ESG funds.

The City collaborates with the CoC to implement the Homeless Management Information System (HMIS). HMIS allows agencies and providers to identify and document gaps in service as well as maintaining accurate data regarding housing and service needs as seen from the community. The CoC

encourages greater participation from non-HUD funded organizations into HMS by providing CDBG funding for acquisition of necessary HMIS equipment and technical assistance.

These include length of homelessness, returns to homelessness, number of sheltered homes persons, employment and income growth for persons, homeless for the first time, and exit and retention to permanent housing.

The City participates in monthly HMIS Subcommittee meetings. These meetings serve to provide guidance and information to end users with regards to system implementation according to HUD's HMIS Data and Technical Standards. The subcommittee reviews system updates and changes, data quality, system performance, and any HUD or related updates. In addition, ongoing training is provided with focus on User Policies and Responsibilities, federal reporting, data quality, coordinated entry, along with agency office hours and one on one support.

The City is also part of the Community of Practice (CoP) Initiative. This initiative provided an opportunity for the community to access HUD technical assistance through an online, group learning, peer-to-peer collaborative approach. This collective approach provided a better understanding of the current strengths and challenges within the COC and provided resources and expertise to improve system process.

The City led the recent Data Quality Plan update with a focus on data quality for both federally funded and non-federally funded projects to ensure accurate reporting, and an overall picture and transparency of homelessness within the COC. All organizations participating in HMIS are required to adhere to the Data Quality Plan. The implementation of the plan provides the COC an understanding of program performances and assists with the determination that the appropriate strategies and resources are deployed.

Describe Agencies, groups, organizations and others who participated in the process and describe the jurisdictions consultations with housing, social service agencies and other entities

	Agency/Group/Organization	Parent Resource Center
	Agency/Group/Organization Type	Services – Children Services – Education Child Welfare Agency

	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the	The South Modesto Partnership was consulted via the public meeting that took place in South Modesto districts as well as email. Meetings and email correspondence identified community needs, conditions, and strategies.

	consultation or areas for improved coordination?	
9	**Agency/Group/Organization**	**Project Sentinel**
	Agency/Group/Organization Type	Services – Fair Housing
	What section of the Plan was addressed by Consultation?	Housing Need Assessment Non-Homeless Special Needs
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	Project Sentinel was consulted via a telephone conference. The meeting consisted of identifying primary needs of Project Sentinel clients as it pertains to fair housing and services.
10	**Agency/Group/Organization**	**Stanislaus Homeless Alliance (SHA)**
	Agency/Group/Organization Type	Regional organization Planning organization Publicly funded institution/System of care
	What section of the Plan was addressed by Consultation?	Housing Need Assessment Homeless Needs – Chronically homeless Homeless Needs – Families with children Homeless Needs – Veterans Homeless Needs – Unaccompanied youth Homelessness Strategy Anti-poverty strategy
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The City consulted with the SHA and all its partner members in several ways. The City facilitated a meeting with the entire group, going over Consolidated Plan overview and then discussing system level needs, gaps, and strategies moving forward to address homelessness and housing in the City.
11	**Agency/Group/Organization**	**Stanislaus County System of Care (CoC)**
	Agency/Group/Organization Type	Regional organization Planning organization Publicly funded institution/System of care
	What section of the Plan was addressed by Consultation?	Housing Need Assessment Homeless Needs – Chronically homeless Homeless Needs – Families with children

		Homeless Needs – Veterans Homeless Needs – Unaccompanied youth Homelessness Strategy Anti-poverty strategy
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The City consulted with the CoC and all its partner members in several ways. The City facilitated a meeting with the entire group, going over Consolidated Plan overview and then discussing system level needs, gaps, and strategies moving forward to address homelessness and housing in the City.
12	**Agency/Group/Organization**	**Modesto Department of Information Technology**
	Agency/Group/Organization Type	Other government – Local Services – Broadband Internet Service Providers
	What section of the Plan was addressed by Consultation?	Market Analysis
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The City IT Department was consulted via email about the broadband needs and the projected systems moving forward impacting households and their access to broadband.
13	**Agency/Group/Organization**	**Stanislaus County Office of Emergency Services**
	Agency/Group/Organization Type	Agency – Emergency Management
	What section of the Plan was addressed by Consultation?	Market Analysis
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The County Office of Emergency Services was consulted via email, discussing disaster relief plans, emergency planning, and existing strategies on addressing the variety of possible natural disasters the region faces.
14	**Agency/Group/Organization**	**Stanislaus County Affordable Housing Corporation**
	Agency/Group/Organization Type	Housing Regional organization Planning organization
	What section of the Plan was addressed by Consultation?	Housing Need Assessment Public Housing Needs Market Analysis

	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The Stanislaus County Affordable Housing Corporation was consulted via telephone conference and discussed needs of public housing residents as well as the needs for services of all low- and moderate-income households in the communities served.
15	**Agency/Group/Organization**	**Sutter Health**
	Agency/Group/Organization Type	Health Agency
	What section of the Plan was addressed by Consultation?	Housing Need Assessment
	How was the Agency/Group/Organization consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?	The County Office of Emergency Services was consulted via email, outlining the greatest needs, highlighting what is working well, and what f populations are seeing an increased need for services.

Identify any Agency Types not consulted and provide rationale for not consulting

The City sought wide input from agencies and organizations serving the community in any capacity. No agency or organization was specifically left out of the consultation process.

Describe other local/regional/state/federal planning efforts involved in preparing the Plan

Name of Plan	Lead Organization	How do the goals of your Strategic Plan overlap with the goals of each plan?
General Plan	City of Modesto	The plan outlines community growth strategies and the need to include housing and services among those strategies
City Strategic Plan	City of Modesto	This plan highlights the key areas the City plans to address, including quality of life, economic development goals, and the creation of a homelessness and housing plan.
Housing Element	City of Modesto	The goals overlap where needs are identified: additional affordable housing.
Plan to Address Homelessness in Stanislaus County	County CoC	The goal of addressing and ending homelessness is a shared goal between the City and the CoC
Public Housing Agency (PHA) Plan	Stanislaus County Housing Authority	Both include the need to increase affordable housing stock and integrate quality services

Describe cooperation and coordination with other public entities, including the State and any adjacent units of general local government, in the implementation of the Consolidated Plan

In addition to those organizations and plans listed above, the City regularly coordinates with other public institutions such as schools and hospitals in efforts to increase service delivery systems and/or better understand needs of the communities in which they serve.

The City will be coordinating with the State of California as the State rolls out new funding sources such as the Permanent Local Housing Allocation (PLHA) that will assist in addressing local housing and homelessness needs. The City will align these and any other resources made available by the State with HUD funds to maximize the impact on local needs.

PR-15 Citizen Participation

Summary of citizen participation process/Efforts made to broaden citizen participation
Summarize citizen participation process and how it impacted goal-setting

The City conducted a robust citizen participation marketing process consisting of multiple posts on social media, newspaper publications, notification on CoC and other local special interest group list servs, distribution of marketing materials to targeted neighborhood groups, online surveys, and in person presentations and announcements to active neighborhood collaborative groups.

The City held a total of fourteen (14) public community meetings, with at least one (1) meeting being each Council district. Each community meeting was held at a public space and Spanish translation was made available. These meetings consisted of a Consolidated Plan overview, and then allowed for conversation about needs, priorities within the community, and any changes or shifts that are happening that may be addressed through HUD-funded programs.

The City also facilitated several stakeholder meetings gathering input from the Continuum of Care (CoC) as well as the Stanislaus Homeless Alliance (SHA). These meetings consisted of a Consolidated Plan overview and then also set aside time to discuss needs in the service delivery system, potential gaps, and strategies to address the goal of ending homelessness.

There was also targeted outreach for organizations that are involved in housing, service delivery, organizations addressing special needs, infrastructure and public works. This targeted outreach resulted

in email and phone communication gathering input on needs and priorities within the respective organization.

A community survey was made available to the community, asking for input on priorities within the community. The survey was designed specifically for Consolidated Plan input and reflects the needs of the community from the citizens' perspective.

A summary of all meetings as well as the community survey are included in Appendix A – Public Comments.

NOTE: The live public community meetings to introduce each of the draft documents to the public were canceled due to the COVID-19 pandemic. Draft documents were made available for online review and advertised via social media, local newspaper, and housing, CoC, and community list servs.

Needs Assessment

NA-05 Overview

Needs Assessment Overview

The Needs Assessment examines needs related to affordable housing, special needs housing, community development and homelessness for the City of Modesto.

The Needs Assessment identifies those needs with the highest priorities which form the basis for the Strategic Plan section and the programs and projects to be administered.

Below are highlights from each section within the Needs Assessment. Please see each section for further detail.

NA-10- Housing Needs Assessment

- Of all households in Modesto, 36% are paying more than 30% of their monthly incomes towards housing costs (including utilities)
- Of those Modesto households earning 0-80% (29,570) of the area median income, 68% are cost burdened (20,108).

- Low-income renter households experience housing problems at higher rates when compared to low-income owner households.
    - Nearly 50% of all renter-households earn less than 80% AMI and experience a housing problem; 17% of owner-households earn less than 80% AMI and experience a housing problem

NA-15-30 - Disproportionately Greater Need

- Considering cost burden, Black/African American and Pacific Islander households experience a disproportionate greater need as compared to other race and ethnic groups in Modesto
    - A disproportionate greater need is defined as a group that experiences a housing problem at a rate of greater than ten percentage points.

NA-35 - Public Housing

- There is a total of 647 public housing units
    - Of those units, 72 are qualified as accessible units
- The greatest needs identified among those public housing units are grab bars, ramps for entry, and lower level units

NA-40 - Homeless Needs Assessment

- The 2019 PIT Count reported 809 unsheltered and 591 sheltered persons experiencing homelessness
- The Salvation Army added 50 beds to its original Berberian Emergency Shelter for a total of 206 beds
- The Salvation Army has recently added 182 beds in coordination with the closure of the Modesto Outdoor Emergency Shelter (MOES)
- An on-site referral service center is in development at the Salvation Army, with the aim of providing the array of CoC services to those experiencing homelessness as well as those at-risk of homelessness
- The Kansas House project, currently being renovated, will add 103 permanent supportive housing units to house homeless individuals who exited from MOES.

NA-45 - Non-Homeless Special Needs Assessment

- About 14% of the Modesto population is aged 65 or older, this ratio is expected to increase over the lifecycle of this Consolidated Plan
- Some of the most common needs brought up within public meetings were:
    - Affordable units near transportation/work opportunities
    - Additional affordable housing units that accommodate larger families (5 members or more)

NA-50 - Non-Housing Community Development Needs

- Through survey and public consultations, the following non-housing needs were identified (not an exhaustive list).
    - Homeless facilities and service centers
    - Park and community programming for youth and seniors
    - Childcare support
    - Public Facilities

NA-10 Housing Needs Assessment

Summary of Housing Needs

The data throughout this document is generated from the United States Census Bureau and the Department of Housing and Urban Development (HUD). The Comprehensive Housing Affordability Strategy (CHAS) dataset is a custom tabulation developed by the Census Bureau, derived from American Community Survey (ACS) data. The most recent CHAS data used in this document - the 2012-2016 5-year estimate -- are determined for each jurisdiction that receives HUD funding. Because 2016 is the latest available CHAS dataset, this document will utilize 2016 data throughout. Utilizing 2016 throughout the document will make for clearer comparisons and make for a consistent narrative across all sections of the Consolidated Plan.

Because CHAS data is derived from ACS data, Census definitions dictate the definitions of the variables discussed in these tables:
Small Family Household: A household with two-four members
Large Family Household: A household with five or more members
Elderly: Ages 62-74
Frail Elderly or Extra Elderly: Ages 75+
Household: All people living in a housing unit. Members of a household can be *related* or *unrelated*.
Family: Related individuals living in the same household
Nonfamily: Unrelated individuals living in the same household

The term Area Median Income (AMI) and HUD Area Median Family Income (HAMFI) are interchangeable when the terms are being used to explain CHAS data derived from ACS data. For consistency throughout this document, only the term AMI will be used. It is important to note that within this document, AMI refers to the entire City of Modesto. Throughout this document data tables compare populations based on income ranges. These income ranges are categorized based on AMI and are used by HUD to determine eligibility to certain programs.
Of the programs Modesto receives HUD funds for, each program targets household income as a percentage of the area median income (AMI) at slightly different ranges.

- CDBG -> 0%-80% AMI
- HOME -> 0%-60% AMI
- ESG -> 0%-30% AMI

HUD defines the following income brackets as low-moderate income.

- Extremely Low Income = <30% AMI
- Low Income = 30-50% AMI
- Moderate Income 50-80% AMI

HUD entitlement programs, CDBG, ESG, and HOME, operate under federally established income limits. The following table provides the 2016 income limits subject to annual adjustments by HUD.

2016 HUD Income Limits: Modesto, CA

Household Size	30% of Median Very Low Income	50% of Median Low Income	80% of Median Moderate Income	100% of Median
1	$12,400	$20,650	$33,000	$41,300
2	$16,020	$23,600	$37,700	$47,200
3	$20,160	$26,550	$42,400	$53,100
4	$24,300	$29,450	$47,100	$58,900
5	$28,440	$31,850	$50,900	$63,700
6	$32,580	$34,200	$54,650	$68,400
7	$36,550	$36,550	$58,450	$73,100
8	$38,900	$38,900	$62,200	$77,800

Source: U.S. Department of Housing and Urban Development (HUD); huduser.gov

The 2016 Income limits are highlighted here because the Comprehensive Housing Affordability Strategy (CHAS) data that is used throughout this Needs Assessment section is 2012-2016 data. By using the same years dataset, better comparisons and assumptions can be made. The tables throughout this section utilize the 30%, 50%, 80%, and 100% AMI categories; the above table offers context to those numbers, highlighting the actual income of households that are experiencing housing problems. To offer a comparison showing the growth of HUD Income Limits from 2016, the 2019 income limits are highlighted below. The housing and non-housing issues addressed in this Consolidated Plan will be addressing present issues, so although it is clear to make comparisons using 2016 data, it is also important to recognize the households and their incomes projects and activities within this Consolidated Plan will work to address.

2019 HUD Income Limits: Modesto, CA

Household Size	30% of Median Very Low Income	50% of Median Low Income	80% of Median Moderate Income	100% of Median
1	$13,650	$22,700	$36,300	$45,400
2	$16,910	$25,950	$41,500	$51,900
3	$21,330	$29,200	$46,700	$58,400
4	$25,750	$32,400	$51,850	$64,800
5	$30,170	$35,000	$56,00	$70,000
6	$34,590	$37,600	$60,150	$75,200
7	$39,010	$40,200	$64,300	$80,400

8	$42,800	$42,800	$68,450	$85,600

Source: U.S. Department of Housing and Urban Development (HUD); huduser.gov

Modesto General Characteristic Changes

	Base Year: 2000	Most Recent Year: 2016	% Change
Change in Population	188,856	208,512	10%
Change in Number of Households	67,179	75,377	12%
Change in Median Household Income	$56,743 (2016 Dollars)	50,996	-10%

Source: 2000 Census & 2012-2016 ACS

As of 2016, Modesto had a population of just under 210,000. This is a 10% increase from 2000 and a 3% increase from 2011 (the last time the Consolidated Plan was submitted). This modest increase matches Stanislaus County's growth rate over the same period. Considering the change in median household income, Modesto household wages have generally not kept pace with inflation. When adjusting for inflation, the median household income has decreased by 10% from 2000 to 2016. This rate is very similar to the County and other cities within the County; their median household incomes mostly falling between 0% to 15% between 2000 and 2016 when adjusting for inflation.

The following tables identify the percentage of households in Modesto within each income bracket. The HUD Area Median Family Income (HAMFI) is a calculation of median income completed by HUD. Throughout this document Area Median Income (AMI) and HAMFI may be considered interchangeable.

Number of Households Table

	0-30% HAMFI	>30-50% HAMFI	>50-80% HAMFI	>80-100% HAMFI	>100% HAMFI
Total Households	8,525	8,885	12,160	6,680	34,925
Small Family Households	3,100	3,085	5,070	2,820	17,370
Large Family Households	700	1,160	1,890	925	3,875
Household contains at least one person 62-74 years of age	1,414	1,985	2,785	1,510	7,935
Household contains at least one person age 75 or older	1,070	1,510	1,755	855	2,955
Households with one or more children 6 years old or younger	1,645	1,844	3,204	1,214	5,390

Source: 2012-2016 CHAS

The following tables identify the percentage of households in Modesto within each income bracket. The HUD Area Median Family Income (HAMFI) is a calculation of median income completed by HUD. Throughout this document Area Median Income (AMI) and HAMFI may be considered interchangeable.

Housing Needs Summary Tables

The following tables identify housing needs by both income bracket and by renter/owner. The housing problems are identified as follows:

1. Units lacking complete kitchen facilities;
2. Units lacking complete bathroom facilities;
3. Housing cost burden of more than 30 percent of the household income (for renters, housing costs include rent paid by the tenant plus utilities and for owners, housing costs include mortgage payments, taxes, insurance, and utilities); and
    a. A cost burden over 50% is considered severely-cost burdened
4. Overcrowding which is defined as more than one (1) person per room, not including bathrooms, porches, foyers, halls, or half-rooms.
    a. Overcrowding that is more than 1.5 persons per room, is considered severely overcrowded

The tables below outline those renter-households and owner-households that experience one of the housing problems described above. Among renters and owners, cost burden and severe cost burden is the greatest housing problem experienced. For renter households with 0-50% AMI, severe cost burden is very likely, while for 30% cost burden, those renter households earning 50-80% are most likely to experience cost burden.

Owner Housing Problems

	Owner				
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**>80-100% AMI**	**Total**
Substandard Housing – No complete plumbing or kitchen facilities	15	-	4	-	70
Severely Overcrowded – >1.51 people per room	40	4	60	50	310
Overcrowded - 1.01-1.5 people per room	25	50	245	150	820
Housing cost burden greater than 50% of income	1,275	1,285	1,055	265	4,060
Housing cost burden greater than 30% of income	165	705	1,670	1,235	6,360
Zero/negative Income	170	-	-	-	170

Renter Housing Problems

	Renter				
	0-30% AMI	>30-50% AMI	>50-80% AMI	>80-100% AMI	Total
Substandard Housing – No complete plumbing or kitchen facilities	245	105	80	100	745
Severely Overcrowded – >1.51 people per room	245	210	225	25	745
Overcrowded - 1.01-1.5 people per room	355	480	495	180	2,050
Housing cost burden greater than 50% of income	4,050	3,165	745	85	8,065
Housing cost burden greater than 30% of income	700	1,495	3,880	935	7,545
Zero/negative Income	435	-	-	-	435

Source: 2012-2016 CHAS

The tables below outline severe housing problems experienced by both renters and owners. The severe housing problems are:

1. Units lacking complete kitchen facilities;
2. Units lacking complete bathroom facilities;
3. Housing cost burden of more than 50 percent of the household income (for renters, housing costs include rent paid by the tenant plus utilities and for owners, housing costs include mortgage payments, taxes, insurance, and utilities); and
4. Overcrowding which is defined as more than one (1.5) persons per room, not including bathrooms, porches, foyers, halls, or half-rooms.

Severe Owner Housing Problems

	Owner				
	0-30% AMI	>30-50% AMI	>50-80% AMI	>80-100% AMI	Total
Having 1 or more housing problems	1,525	2,045	3,030	1,695	11,615
Having no housing problems	140	730	1,950	2,025	26,520
Household has negative income, but no housing problems	170	-	-	-	170

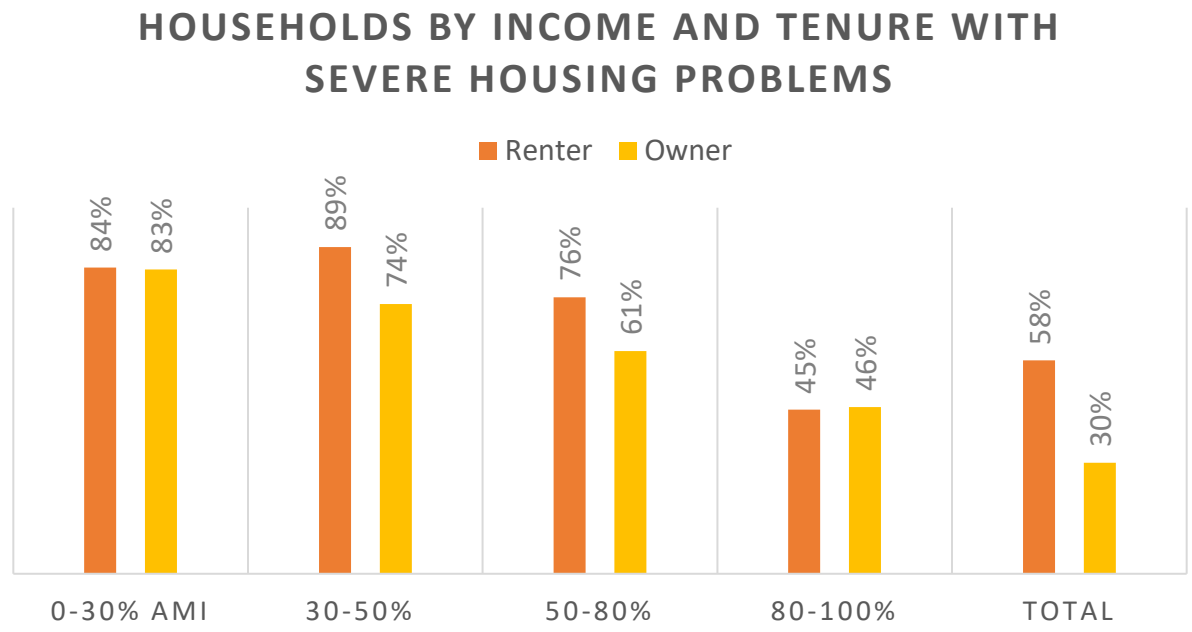
Source: 2012-2016 CHAS

Severe Renter Housing Problems

	Renter				
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**>80-100% AMI**	**Total**
Having 1 or more housing problems	5,600	5,455	5,425	1,325	19,150
Having no housing problems	660	655	1,755	1,630	13,280
Household has negative income, but no housing problems	435	-	-	-	435

Source: 2012-2016 CHAS

The graph below outlines the chart above, households experiencing severe housing problems. It is mostly notable that renter households experience severe housing problems at nearly double the rate of owner households. This discrepancy is mostly found in the 30-80% income range for renter households. Both renter and owner households that earn less than 30% of the area median income experience problems above an 80% rate.



Source: 2012-2016 CHAS

The two tables below highlight 30% cost burden for both renter and owner households. Each table identifies household subtypes. The subtypes are:

Small Family Household: A household with two-four members
Large Family Household: A household with five or more members
Elderly: Ages 62-74
Other: Non-family households, most typically single-person households

Owner Cost Burden > 30%

	Owner			
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**Total**
Small Related	400	515	995	1,910
Large Related	20	260	665	945
Elderly	780	1,040	895	2,715
Other	254	200	280	734

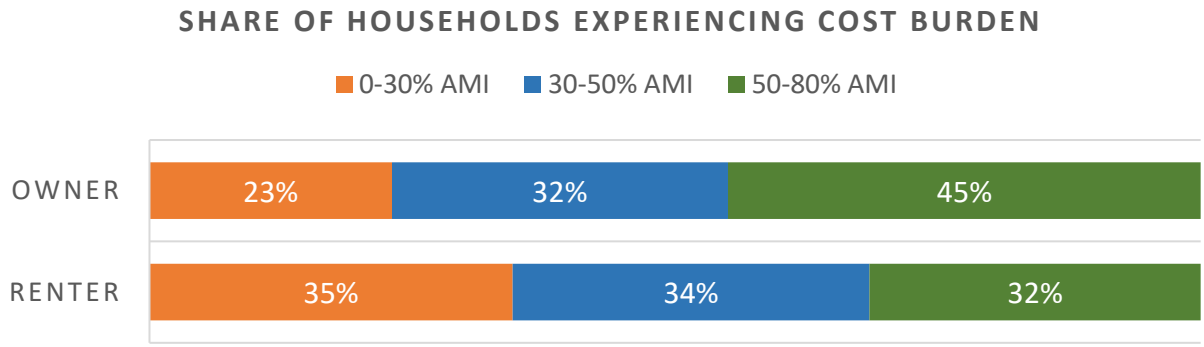
Large Related	560	805	610	1,975
Elderly	1,005	1,020	890	2,915
Other	1,620	1,335	1,185	4,140
Total need by income	5,520	5,420	5,035	15,975

Source: 2012-2016 CHAS

The graph below highlights the cost burden experienced by households earning less than 80% AMI in Modesto. While renter households are relatively evenly distributed across income brackets, a plurality of low- moderate-income owner households experiencing cost burden are earning 50-80% of the area median income.



Source: 2012-2016 CHAS

The two tables below highlight severe cost burden for both renters and owners, further broken down by household subtype. Severe cost burden is when a household is paying more than 50% of their income towards housing (including utilities). The household subtypes are:

Small Family Household: A household with two-four members
Large Family Household: A household with five or more members
Elderly: Ages 62-74
Other: Non-family households, most typically single-person households

Owner Severe Cost Burden > 50%

	Owner			
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**Total**
Small Related	375	375	435	1,185
Large Related	10	125	210	345
Elderly	630	690	290	1,610

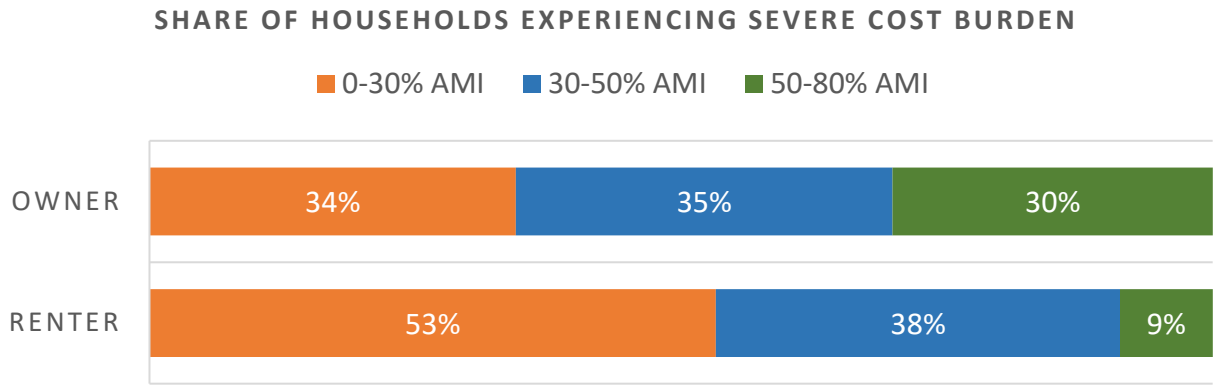
Renter Severe Cost Burden > 50%

	Renter			
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**Total**
Small Related	2,210	1,450	335	3,995
Large Related	530	485	130	1,145
Elderly	695	575	165	1,435
Other	1,365	915	155	2,435
Total need by income	4,800	3,425	785	9,010

Source: 2012-2016 CHAS

The graph below shows that of all renter households experiencing severe cost burden (greater than 50% of household income towards housing costs), those renter households earning less than 30% of the area median income make up the majority. In looking at owner households experience severe cost burden, those households are more evenly distributed across income brackets.



Source: 2012-2016 CHAS

The tables below highlight overcrowding among both renter and owner households. Although not a problem as common as cost burden, this issue is still indicative of a housing supply that does not offer affordable units large enough for those families that may require more than two bedrooms.

Owner Crowding (More than one person per room)

	Owner				
	0-30% AMI	**>30-50% AMI**	**>50-80% AMI**	**>80-100% AMI**	**Total**

Describe the number and type of single person households in need of housing assistance.

According to the 2016 American Community Survey (ACS) there are about 17,000 single-person households in Modesto. About 55% of the single-person households are renter households. Of all renter households, 29% are single-person, while of all owner households, 20% are single-person households.

The tables above show that approximately 40% of all households in Modesto earn less than 80% AMI. Also, from the tables above; it is known that of those low- and moderate-income households approximately 75% experience at least one housing problem. We can apply these rates to the single-person households identified above in order to estimate the number of single-person households that are in need of housing assistance.

Given the 17,000 single-person households in Modesto, we can conservatively estimate that 40% are low- and/or moderate-income households, 6,800 households. Of those 6,800 single-person households we can then assume that approximately 75% experience at least one housing problem and are in need

of housing assistance. Assuming these estimates we can conclude that 5,100 single-person households are in need of housing assistance.

Estimate the number and type of families in need of housing assistance who are disabled or victims of domestic violence, dating violence, sexual assault and stalking.

Through data provided by the Modesto Police Department, in 2019 there were a total of 201 cases of domestic violence that involved someone already experiencing homelessness. Of those 201 cases, 17 had documented as having at least one child as part of the case. These households experiencing homelessness and fleeing a domestic violence situation need a variety of housing and supportive services to regain stability. This is especially true of those households experiencing homelessness, fleeing domestic violence, and with children. This number does not include those households that were not already experiencing homelessness.

The number and type of families living with a disability are discussed in detail in the section below, NA-45. There is no dataset available that estimates the number of individuals experiencing dating violence, sexual assault, and stalking and also in need of housing assistance.

What are the most common housing problems?

The tables above outline that overwhelmingly the most common housing problem experienced by households in Modesto is cost burden, both at 30% and at 50% cost burden.

Of all households in Modesto, 36% are households that experience cost burden (>30% household income towards housing costs). This numbers both go up significantly to 68% when only considering those households earning 80% AMI or less.

Overcrowding is a housing problem experienced by a smaller number of households; however, this housing problem has increased over time. Overcrowding is often seen in housing markets that are tight where lower income households may be put into positions where they rent a unit that is affordable but does not adequately fit their household.

Are any populations/household types more affected than others by these problems?

In Modesto low- and moderate-income renter households experience housing problems at higher rates. In the City 50% of renter households earn less than 80% AMI ***and*** experiencing a housing problem. While 17% of all owner households are low-income households experiencing a housing problem.

Small family households make up the majority of the households experiencing housing problems followed by elderly households. The rate of housing problems experienced by elderly households is however greater than small family households, meaning those elderly households make up a smaller portion of households throughout the City, however they do experience housing problems at a higher rate.

Describe the characteristics and needs of Low-income individuals and families with children (especially extremely low-income) who are currently housed but are at imminent risk of either

residing in shelters or becoming unsheltered 91.205(c)/91.305(c)). Also discuss the needs of formerly homeless families and individuals who are receiving rapid re-housing assistance and are nearing the termination of that assistance

The fewer financial resources a household has, the greater their risk of homelessness. Throughout the City, those households earning less than 50% AMI are more likely to be in unstable work situations more prone to intermittent work schedules or part-time wages without benefits. A household with little financial resources is a medical emergency or a layoff at work away from being unsheltered or unstably housed. These households, both with working members and those households on disability or fixed income with total financial resources that do not allow them to save money towards future economic development opportunities or the funding of emergencies are at the greatest risk of becoming homeless.

The success of those receiving assistance for housing placement comes from the dedication of case management. During the case management, which last from six months to a year depending on the program, teaches recipients life skills including but not limited to budgeting, basic household maintenance, and personal grooming. Along with teaching and reinforcing these skills, it is most beneficial to get families engaged in a support system that fosters the skills for long term success. One local program incentivizes this behavior through a step-down approach to the financial benefits and requiring a dollar for dollar match. For every dollar provided in rental assistance the recipient is required to put an equal amount in savings. This sets the household up to have a year of rental savings.

As Households are nearing the end of their RRH assistance, they are encouraged through learned behaviors over the course of their case management to stay engaged with the system to ensure wrap-around services are being utilized its maximum potential.

If a jurisdiction provides estimates of the at-risk population(s), it should also include a description of the operational definition of the at-risk group and the methodology used to generate the estimates:

The Stanislaus County System of Care (SCSOC) uses HMIS to collect and track data on housing and services to persons experiencing homelessness and at-risk of homelessness. The SCSOC utilize HUD's official definition of at-risk for homelessness released in January 2012. There are three categories to the definition: 1. Individuals and Families 2. Unaccompanied Children and Youth 3. Families with Children and Youth.

For a complete list of defining characteristics for each category please see the following link -> https://files.hudexchange.info/resources/documents/AtRiskofHomelessnessDefinition_Criteria.pdf

Specify particular housing characteristics that have been linked with instability and an increased risk of homelessness

The household characteristics that are most closely linked to housing instability and increased risk of homelessness are cost burden and household income. Those households that are both low-income *and* cost burdened are the most vulnerable because these households have the least capacity for saving income towards addressing emergency situations that may arise. This issue is compounded in the extremely tight housing market in Modesto.

NA-15 Disproportionately Greater Need: Housing Problems

Introduction

According to HUD, disproportionate need refers to any need for a certain race/ethnicity that is more than ten (10) percentage points above the demonstrated need for the total households within the jurisdiction at a particular income level. The tables and analyses below identify the share of households by race/ethnicity and income level experiencing one or more of the four housing problems outlined by HUD guidelines. When the ten-percentage point threshold is reached, that number is highlighted in yellow.

The four housing problems are:

1. Lacks complete kitchen facilities
2. Lacks complete plumbing facilities
3. More than one person per room
4. Cost Burden greater than 30%

Disproportionate need for each race/ethnicity is determined by calculating the share of the total number of households with one or more housing problems from each race/ethnicity and comparing that figure to the share of all Modesto households at that income level that experience the problem. (Share of Race/Ethnicity = "# of households for that race/ethnicity with one or more housing problem / total # of households for that race/ethnicity). The "Share" column identifies what percentage of the population in that row is experiencing a housing problem. A group experiencing housing problems ten percentage points above *Jurisdiction as a whole* is considered to be experiencing a disproportionate need.

0%-30% of Area Median Income

Housing Problems	One or more housing problems	No housing problems	No income & no housing problems	Share

NA-20 Disproportionately Greater Need: Severe Housing Problems

Introduction

Note that the tables below identify *severe* housing problems, as opposed to the tables above that identified non-severe housing problems. Severe housing problems differ from non-severe in two instances. Those differences are underlined below:

The four *severe* housing problems are:

1. Lacks complete kitchen facilities
2. Lacks complete plumbing facilities
3. More than 1.5 persons per room
4. Cost Burden greater than 50%

According to HUD, disproportionate need refers to any need for a certain race/ethnicity that is more than ten (10) percentage points above the demonstrated need for the total households within the jurisdiction at a particular income level. The tables and analyses below identify the share of households by race/ethnicity and income level experiencing one or more of the four housing problems outlined by HUD guidelines. When the ten-percentage point threshold is reached, that number is highlighted in yellow.

Disproportionate need for each race/ethnicity is determined by calculating the share of the total number of households with one or more housing problems from each race/ethnicity and comparing that figure to the share of all Modesto households at that income level that experience the problem. (Share of Race/Ethnicity = "# of households for that race/ethnicity with one or more housing problem / total # of households for that race/ethnicity). The "Share" column identifies what percentage of the population in that row is experiencing a housing problem. A group experiencing housing problems ten percentage points above *Jurisdiction as a whole* is considered to be experiencing a disproportionate need.

NA-25 Disproportionately Greater Need: Housing Cost Burdens

Introduction

According to HUD, disproportionate need refers to any need for a certain race/ethnicity that is more than ten (10) percentage points above the demonstrated need for the total households within the jurisdiction at a particular income level. The tables and analyses below identify the share of households by race/ethnicity and income level experiencing one or more of the four housing problems outlined by HUD guidelines. When the ten-percentage point threshold is reached, that number is highlighted in yellow.

The four housing problems are:

1. Lacks complete kitchen facilities
2. Lacks complete plumbing facilities
3. More than one person per room
4. Cost Burden greater than 30%

Disproportionate need for each race/ethnicity is determined by calculating the share of the total number of households with one or more housing problems from each race/ethnicity and comparing that figure to the share of all Modesto households at that income level that experience the problem. (Share of Race/Ethnicity = "# of households for that race/ethnicity with one or more housing problem / total # of households for that race/ethnicity). The "Share" column identifies what percentage of the population

in that row is experiencing a housing problem. A group experiencing housing problems ten percentage points above *Jurisdiction as a whole* is considered to be experiencing a disproportionate need.

Asian	2,525	850	865	80	40%
American Indian, Alaska Native	195	45	120	0	46%
Pacific Islander	190	200	55	0	57%
Hispanic	11,180	5,140	4,660	115	47%

Source: 2012-2016 CHAS

Discussion

Black / African American and Pacific Islander households experience cost burden at a disproportionate rate compared to the jurisdiction as a whole. While 40% of all households in Modesto experience cost burden, 60% of African American households and 57% of Pacific Islander households experience cost burden.

NA-30 Disproportionately Greater Need: Discussion

Are there any Income categories in which a racial or ethnic group has disproportionately greater need than the needs of that income category as a whole?

There are several instances where a racial or ethnic group experience disproportionate housing needs in Modesto. All of those instances are highlighted above in sections NA-15 through NA-25 in the discussion part of each section.

If they have needs not identified above, what are those needs?

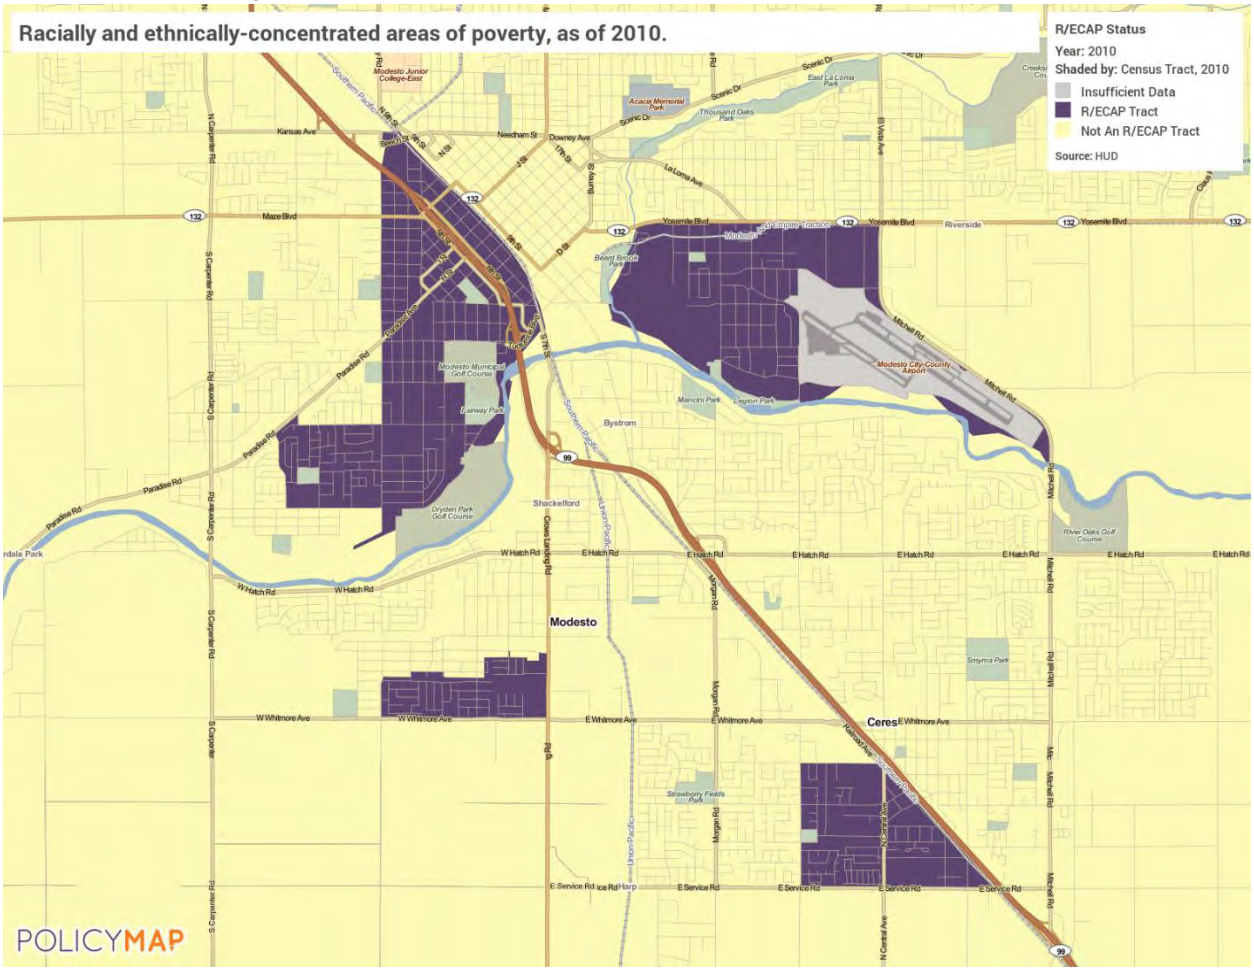
No other needs are identified. Special needs populations are addressed in section NA-40 of this Consolidated Plan.

Are any of those racial or ethnic groups located in specific areas or neighborhoods in your community?

According to 2010 Census data, there are five (5) Racial/Ethnic Concentrated Areas of Poverty (R/ECAP) census tracts within Stanislaus County, one of which is completely within Modesto bounds, while the four remaining are completely in or at least partially within County bounds near Modesto.

These R/ECAP census tracts are defined as: Census tracts where more than half the population is non-White and 40% or more of the population is in poverty OR where the poverty rate is greater than three times the average poverty rate in the area.

Modesto Area R/ECAPs



It is important to note that the R/ECAP census tracts are located all near the County pockets that exist within Modesto. The map below makes clear where those County pockets are in relation to the map that highlights the R/ECAPS near Modesto. The black box within the map below corresponds to the geography of the R/ECAP map above.

Section 504 Needs Assessment: Describe the needs of public housing tenants and applicants on the waiting list for accessible units:

The Housing Authority of the County of Stanislaus has identified the following needs to be the greatest among those tenants and applicants on the waiting list for accessible units:

- Grab bars
- Ramps for front and rear home entry
- Walk in showers
- ADA toilets
- Lower level units
- Service animal permitted

What are the number and type of families on the waiting lists for public housing and section 8 tenant-based rental assistance? Based on the information above, and any other information available to the jurisdiction, what are the most immediate needs of residents of public housing and Housing Choice voucher holders?

The Housing Authority County of Stanislaus (HACS) reported the following number of households on each program's waiting list:

- Public Housing Waiting List: 8,000 households
- Section 8 Waiting List: 10,000 households

The HACS does not have specific information as to the type of families or demographics.

The HACS has identified the following needs to be the most immediate needs of residents:

- Community engagement
- Transportation assistance
- Workforce assistance
    - vocational training
    - resume building
    - job search assistance
- Childcare
- Financial literacy
- Credit counseling/repair

How do these needs compare to the housing needs of the population at large?

The needs outlined above are similar to those needs identified to the population at large, excluding the need for affordable housing. The population at large has also indicated a need for support in increasing wages from employment, childcare, and transportation assistance as well, based on input received at the community meetings.

NA-40 Homeless Needs Assessment

Introduction

The City will continue to partner with local service providers and agencies with the goal of reducing and ending homelessness via street outreach, homeless prevention, and rapid rehousing. In addition, the City will work with the Community System of Care on addressing the emergency shelter and transitional housing needs of homeless persons as well as continuing to find creative approaches to addressing homelessness and special needs populations.

The Strategic Plan to end homelessness in Modesto is a county-wide effort led by the Stanislaus County Continuum of Care, known as the Stanislaus Community System of Care (SCSOC). As of 2017, the Stanislaus County Housing and Support Services Collaborative (which acted as the Continuum of Care) and the Homelessness Action Council merged efforts in an effort to eliminate duplication of efforts and to coordinate available resources. The SCSOC is staffed by a 25 member Council representing all major sectors of the County including government (City, County), service providers, public, homelessness advocates, and three reserved spots for individuals with lived experience.

The SCSOC meets monthly and continually work to coordinate services and improve relationships and the homelessness service system. The SCSOC has been utilizing a Homeless Management Information System (HMIS) since 2012.

In January 2019, the SCSOC adopted the *Plan to Address Homelessness in Stanislaus County*, a guiding document to coordinate services and organize around common principles. The plan outlines five (5) core strategies:

1. Outreach and Engagement
    a. Improve outreach with a focus on engaging those not currently involved with the system of care
2. Coordinated Access
    a. Fully implement and sustain a countywide coordinated entry system
3. Creation and Access to Housing
    a. Increase affordable housing options and improve access to temporary, transitional, and permanent supportive housing options
4. Supportive Services
    a. Increase availability and alignment of services and resources
5. Strengthening the System of Care
    a. Increase community awareness and participation among county civic and government leaders

Please see the following link to view the entire plan -> https://csocstan.com/blog/plan-to-end-homelessness-in-stanislaus-county/

The following tables are all numbers from the most recent Point in Time (PIT) Count, 2019.

Modesto 2019 Point-In-Time Count

(The tables below reflect data for the City of Modesto only)

Population	Estimate the # of persons experiencing homelessness on a given night	
	Unsheltered	**Sheltered**
Persons in Households with Adult(s) and Child(ren)	52	201
Persons in Households with Only Children	2	2
Persons in Households with Only Adults	755	388
Chronically Homeless Individuals	162	67
Chronically Homeless Families	129	61
Veterans	57	45
Unaccompanied Child	24	27
Persons with HIV	14	1
Total	**809**	**591**

Data Source: 2019 PIT Count

Modesto Homelessness by Race/Ethnicity

Race:	Unsheltered	Sheltered
White	616	414
Black or African American	69	104
Asian	15	10
American Indian, Alaska Native	36	16
Pacific Islander	6	8

Data Source: 2019 PIT Count

Ethnicity:	Unsheltered	Sheltered
Hispanic	170	229
Non-Hispanic	599	361

Data Source: 2019 PIT Count

If data is not available for the categories "number of persons becoming and exiting homelessness each year," and "number of days that persons experience homelessness," describe these categories for each homeless population type (including chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth):

The PIT count does identify the number of persons becoming homelessness in a year for each category. As for those exiting homeless each year, the CoC system performance measures identify the number and location of exit from homelessness each year. The chart below highlights those individuals as well as those individuals that exit homelessness and return to homelessness.

Modesto Homelessness by Race/Ethnicity

	Total # of persons exiting homelessness to a permanent housing destination	Return to homelessness in:			Total Returns to homelessness within 2 years
		Less than 6 months	6-12 months	13-24 months	
Exit from Street Outreach	2	0	1	0	1
Exit from Emergency Shelter	650	93	35	65	193
Exit from Transitional Housing	86	8	4	4	16
Exit from Safe Haven	219	7	10	9	26
Exit from Permanent Housing	957	108	50	78	236
Total Returns to Homelessness		216	100	156	472

Source: Stanislaus County CoC 2018 System Performance Measures

Estimate the number and type of families in need of housing assistance for families with children and the families of veterans.

Based on the 2019 PIT Count, in Modesto there were:

- 253 persons in households with adult(s) and child(ren)
  - Of those 253 persons, 52 were unsheltered
- 190 chronically homeless families
  - Of those 253 families, 129 were unsheltered
- 102 veterans
  - Of those 102 veterans, 57 were unsheltered

Describe the Nature and Extent of Homelessness by Racial and Ethnic Group.

It is important to note that not at all individuals counted in the 2019 PIT count identified their race or ethnicity, so the tables below do not all add up to all of those individuals counted in the 2019 PIT Count. Within Modesto the following tables show the percentage of those counted in the 2019 PIT Count by race and ethnicity.

Race:	Unsheltered	Sheltered
White	48%	32%
Black or African American	5%	8%
Asian	1%	1%
American Indian, Alaska Native	3%	1%
Pacific Islander	0%	1%

Data Source: 2019 PIT Count

Ethnicity:	Unsheltered	Sheltered
Hispanic	13%	17%
Non-Hispanic	44%	27%

Data Source: 2019 PIT Count

Describe the Nature and Extent of Unsheltered and Sheltered Homelessness.

In Modesto approximately half of those individuals experiencing homelessness during the 2019 PIT Count were counted as unsheltered. Specifically, in Modesto 43% of those counted in the 2019 PIT were counted as unsheltered. In looking at who those unsheltered individuals are, persons in households with only adults make up the vast majority of those unsheltered individuals. Of those unsheltered in Modesto, 93% were persons in households with adults only.

In 2019 there was a temporary outdoor emergency shelter established to address the growing need; the Modesto Outdoor Emergency Shelter (MOES). This shelter closed in December 2019. To protect the individuals that could no longer be able to stay at the MOES, 182 new low barrier shelter beds were added at the newly opened Access Center Emergency Shelter which is located adjacent to the Salvation Army Berberian Shelter. The Berberian Shelter side also increased their capacity by an additional 50 beds for a total of 206 available beds at the Berberian Shelter. This is being funded through private donations, the City of Modesto, Stanislaus County Foundation investments, and HEAP funds.

Discussion

Homelessness in Modesto and Stanislaus County has experienced an increase since the development of the last Consolidated Plan in 2014-2015. The 2014 PIT Count reflected 1,156 homeless individuals in Modesto, while the 2019 PIT count identified 1,400 homeless individuals. The largest shift in sub-populations since 2014 has been the increase in unsheltered homelessness. Accounting for about 40% in 2014, the 2019 PIT count identified that 58% of homeless individuals were unsheltered.

NA-45 Non-Homeless Special Needs Assessment

Introduction

There are a variety of subpopulations of households that are not homeless but still may require specialized supports to maintain an independent living situation. The subpopulations covered in this section will be: persons with disabilities, elderly, youth, persons with HIV/AIDS, victims of domestic violence, and farmworkers. The facilities and services available to these subpopulations are discussed in greater detail in the Market Analysis (MA-35) section of this Consolidated Plan.

Describe the characteristics of special needs populations in your community:

Persons with Disabilities:

The tables below outlines the number of individuals with the associated disability type.

Disability by Type

Disability Type	# of persons	% of Total Population
Hearing Difficulty	9,121	4.4%
Vision Difficulty	6,266	3.0%

Cognitive Difficulty	11,982	6.2%
Ambulatory Difficulty	16,285	8.4%
Self-Care Difficulty	7,110	3.7%
Independent Living Difficulty	12,509	8.1%

Source: 2017 ACS

Of disability categories outlined in the above table, those individuals aged 65 and above makeup the majority of those experiencing hearing and ambulatory difficulty. Vision difficulty is experienced more commonly among all age ranges, skewing slightly higher among older populations.

Elderly:

According to the 2017 American Community Survey (ACS), about 14% of the population in Modesto are over the age of 65. When considering special needs for the elderly, several key elements are at play:

- This age group is more likely to be on a fixed income, with fewer opportunities to increase income
- The elderly population is often more susceptible to injury and illness
- Those over the age of 65 are more likely to need services associated with a disability, particularly a physical disability that then limits the types of housing available

Retirement homes do offer an alternative type of housing that may deliver on the needed services; however, these homes are not affordable to many, and many elderly individuals prefer to "age in place." A complicating factor to those elderly individuals that desire to age in place is their ability to upkeep their home to a condition that is both suitable in general and then suitable for any special need they may have. Home repair programs, social programming, and transportation are critical to this demographic.

What are the housing and supportive service needs of these populations and how are these needs determined?

With all of the special needs populations, needs are mostly determined by local agencies, government and non-government alike. Some examples of these agencies are Disability Resource Agency for Independent Living (DRAIL), the County Area Agency on Aging, The County Aging and Veteran Services Agency, Catholic Charities, Society of Disabilities, Stanislaus County Affordable Housing Corporation, Behavioral Health, Modesto Independent Living Center, among others.

The local agencies best understand the populations they serve, and their needs are discussed in regularly scheduled meetings.

Some of the needs regularly brought up in meetings are as follows:

- More affordable housing units for those earning less than 50% - 80% AMI
- Affordable units near transit/work opportunities to make for reasonable commutes

- Units that can accommodate varying family sizes; namely studios or units built for a single occupant, and also families that are greater than five

Discuss the size and characteristics of the population with HIV/AIDS and their families within the Eligible Metropolitan Statistical Area:

California recently became the first state in the nation to allow pharmacies to dispense HIV prevention drugs without a doctor's prescription through passage of S.B 159. This law will allow California residents to obtain both the pre-exposure and post-exposure prescriptions at a pharmacist's discretion. Stanislaus County has seen an uptick in the number of residents living with HIV; going from 560 active cases in 2013 to 776 cases in 2017 (California HIV Surveillance Report – 2017).

NA-50 Non-Housing Community Development Needs

Describe the jurisdiction's need for Public Facilities:

The need for public facilities has increased as the City has continued to grow; and the need for certain kinds of facilities has grown more given the kinds of populations that have grown most notably in Modesto.

- ❖ Homeless Facilities (i.e. shelters)
    - The Modesto Outdoor Emergency Shelter (MOES) was closed at the end of 2019. This is a need that has been consistently brought up in community meetings and ranks the highest within community survey results.
    - As a result of MOES closing, the newly opened Access Center Emergency Shelter added 182 beds to provide low barrier emergency shelter to those individuals who were in MOES.
    - Salvation Army Berberian Shelter increased its capacity with another 50 additional beds for a total of 206 beds.
    - Stanislaus County began operation of a service referral center, known as the Access Center, that will be located at the Salvation Army Berberian Shelter site. The center is staffed by service providers that are part of the CoC – the aim is to address those experiencing homelessness or at-risk of becoming homeless with services at a single location.
    - The Salvation Army also has a formal partnership with the local Veterans Administration, providing transitional housing and associated services.
    - In partnership with the City of Modesto and other entities, the Center for Human Services will open a Youth Navigation Center. The Youth Navigation Center will be in Modesto and will be a one stop service hub providing a continuum of services for young people (13-24 years old) who are experiencing crisis, housing instability, and/or homelessness.
- ❖ Parks/Recreational Facilities

- There is a desire from community members for additional programming in recreational centers for youth and seniors. Specifically, after-school programming for youth and social activities for seniors
- The City of Modesto assisted with ADA improvements and replacement of a shade structure in Mellis Park in West Modesto, a low income census tract in the community
- During the community input process, a Community Center was brought up as a need for South Modesto

❖ Childcare Center/Facility

- This need was expressed through survey results and several community meetings. Modesto is the economic center of the County and many families live here for work. As housing becomes tighter and more expensive, low- and moderate-income families will find this support increasingly useful.

How were these needs determined?

These needs were highlighted in the City-wide survey as well as community/public meetings that focused on community needs on both housing and non-housing issues. Also, local plans and regional strategic plans support the needs listed above. Finally, as with all community needs, local organizations (government and non-government) that work directly with the community are consulted regularly to discuss changing or developing needs within the community.

Describe the jurisdiction's need for Public Improvements

Similar to public facilities' needs, public improvement needs grow as the City and the County continue to grow.

❖ Sidewalks, curbs, gutters, & bus stops

- This was the top need identified in the community survey and regularly came up in public meetings that were held in areas consisting of large numbers of County pockets. Bus stop improvements often came along with sidewalk improvements and on nearly every occasion this came up, it was on connection with County pockets within Modesto. Bus stop improvements specifically were making them wheelchair accessible especially near bus stops where those utilizing a wheelchair need accessible sidewalks to access bus stops. Also, rain/wind covers for bus stops throughout the City was often brought up in public meetings.

❖ Storm drain improvements

- This need is similar to the one above in that most often this need was referenced in conjunction with County pockets.

❖ Accessibility improvements

- This need is most often referenced in conjunction with sidewalks and curb cuts as well as bus stops and building access.

There were two additional needs that were regularly brought up in public meetings or added often enough in write-in comments within the survey to acknowledge here:

1. Tree maintenance
    a. Tree maintenance is a need throughout the City; it is noted that Mayor Ted Brandvold indicated that this is the need his office most often receives.
2. Garbage dumping
    a. In many public meetings it was a concern of residents that illegal garbage dumping is taking place.

How were these needs determined?

These needs were highlighted in the City-wide survey as well as community/public meetings that focused on community needs on both housing and non-housing issues. Also, local plans and regional strategic plans support the needs listed above. As with all community needs, local organizations (government and non-government) that work directly with the community are consulted regularly to discuss changing or developing needs within the community.

Describe the jurisdiction's need for Public Services

The Continuum of Care (CoC) for the County continues to develop efficiencies and build relationships across organizations to limit service gaps in the system of care. The needs outweigh the available resources in the City; however, some of the highest-level needs are:

- Homelessness prevention services
    - The number of individuals experiencing homelessness in Modesto and Stanislaus County has grown over the past several years. There are many factors contributing to this: tight housing market, changes in laws/regulations, limited shelter beds, among others.
    - In several consultations homelessness prevention came up as an important part of providing supportive services and having clients engage in such services. This is because from the view of several service providers, the most difficult individuals to engage with services now form a large portion of those identified in the 2019 PIT Count and having those individuals stably housed is critical when considering their engagement with supportive services.
- Substance abuse services
    - This was the second highest vote-getter in the community survey. The community considers there to be a close connection between the increase in homelessness throughout the region and substance use. Understanding that making substance abuse recovery services more readily available will support the initiatives working to end homelessness in the City and Region.
- Workforce development
    - This need was identified as being targeted specifically to those individuals experiencing homelessness, however it is understood that this need encompasses those experiencing homelessness and also those that are at-risk of becoming homeless due to economic circumstances. It is expected that the City will continue to grow, increasing pressure on the housing market, it will be imperative that those that work in the City are able to

afford homes within the City. Workforce development has the potential to assist those households earning less than 80% AMI to increase their financial circumstances.

How were these needs determined?

Public service needs were identified through outreach to agencies and stakeholders providing services within the City as well as the City-wide community survey.

Housing Market Analysis

MA-05 Overview

Housing Market Analysis Overview:

The data used throughout the Housing Market Analysis is derived from the 2012-2016 American Community Survey (ACS). This is the data that HUD prepopulates tables with and the years also used the Needs Assessment section.

The following gives a brief overview of the Market Analysis results, with more detailed information included in each corresponding section.

MA-10: Number of Housing Units

- As of 2016, Modesto has 75,377 housing units, 74% of which are single-family homes
- Rental homes have a varying range of sizes; 23% are one-bedrooms or studios, 38% are 2-bedroom homes, and 39% of rental homes have 3 or more bedrooms.
- Of all owner-occupied homes, 87% are homes with 3 or more bedrooms.

MA-15: Cost of Housing

- The housing market for both owners and renters has steadily risen following the housing crisis in the early 2010's.
- The lowest point for home values according to Zillow came in November 2011, reaching $122,100.
- As of late 2019, the median rental rate in Modesto is $1,495 and the median home value is $306,913.
- Since 2010, the rental market is up nearly 70% and home values are up an estimated 110%.

MA-20: Condition of Housing

- Just over 50% of all renter-occupied housing units have at least one housing condition (cost burden, over-crowding, or substandard condition).
- 31% of owner-occupied housing units have a housing condition in Modesto
- Considering the age of the housing stock in Modesto, 55% of owner-occupied housing was built before 1980, while 61% of renter-occupied housing was built before 1980.

MA-30: Homeless Facilities

- There a number of organizations within the Continuum of Care (CoC) that operate beds at varying level of services:

    - Emergency Shelter beds -> 734 (511 in Modesto)
    - Transitional Shelter beds -> 214 (202 in Modesto)
    - Permanent Supportive Housing beds -> 620 (615 in Modesto)
- There is a total of 1,568 beds combining emergency shelter, transitional shelter, and permanent supportive housing beds; of those, 1,328 are located in Modesto.
    - There are some beds within each category that prioritize those that are chronically homeless, veterans, or unaccompanied youth.

MA-35: Special Needs Facilities and Services

- Primary needs for those special-needs populations are accommodations for mobility such as wheelchairs, grab bars, and adequately wide hallways and entry ways.
- There is a need for additional incentive to have those receiving services for substance abuse disorders to remain stably housed in housing circumstances that allow maximum support and wrap-around services as needed.
- The consultation with the CoC identified several types of services that are in need throughout the County:
    - Those individuals with mental health and/or addiction issues need supportive services at each step of their process across the spectrum of housing options
    - Successes were identified in households exiting transitional housing into permanent housing when connected with employment opportunity/trainings
- Specifically, life skills, budgeting and financial literacy, and mental health supports were listed as the top kinds of services needed

MA-40: Barriers to Affordable Housing

- Development fees
    - Zoning change feeds, impact fees, land dedications, school district fees, and site improvement requirements all may contribute to the lack of available affordable housing within the City
        - The City plans regularly investigates policies and works with the appropriate departments and stakeholders to mitigate those policies and fees that may minimize affordable housing developments
- State of California SB2 Planning Grants Program (PGP): The City will utilize State SB2 PGP program funds to develop an Affordable Housing plan to identify opportunity sites for affordable housing; funds will also be used to of exploring zoning code amendments to facilitate housing development.

MA-45: Non-Housing Community Development Assets

- The Modesto, and the larger Stanislaus County, expects the economy to continue to grow and unemployment rates to continue trending downward.
    - The industries with the largest employment in Modesto are:
        - Trade, Transportation, and Utilities
        - Education
        - Health Care and Social Assistance

        - Government
        - Retail Trade
        - Manufacturing
    - Those industries expected to see the greatest growth through 2026 are:
        - Education
        - Health Care and Social Assistance
        - Leisure and Hospitality
        - Transportation, Warehousing, and Utilities
- The unemployment rate has fallen for several years in a row, reaching 13.6% in Modesto for all workers in 2016
    - The unemployment rate for certain age groups is far less:
        - Ages 35-44 -> 8.5%
        - Ages 45-54 -> 8.1%
        - Ages 55-59 -> 5.3%
        - Ages 60-64 -> 5.5%

MA-60: Broadband Needs of Housing

- Broadband competition in Modesto is similar to other cities of similar size and employer makeup.

MA-10 Housing Market Analysis: Number of Housing Units

Introduction

In order to draw a fair comparison between CHAS calculations and conditions presented in the Needs Assessment, the following sections utilize 2012-2016 ACS five-year estimates. The 2016 dataset is used because the 2016 CHAS data is the latest release, 2017 data is expected to be release in late 2020. Throughout this section there are datapoints that reflect 2018 or 2019 to supplement the 2016 data that corresponds to the Needs Assessment section.

Based on such figures, single-unit detached properties make up the large majority of Modesto's housing stock. Multi-family units of five or more units make up about 14% of the housing market in the City, which it typical in moderately dense cities. Single-unit attached homes are those homes that may share an outside wall, commonly referred to as a "townhouse" or "rowhouse." Meanwhile, manufactured housing, such as mobile homes and RVs, make up about 2% of total stock. Such housing is often found in more economically and environmentally vulnerable areas.

The table below indicates the number of housing units located in each building type. For example, there are 7,541 housing units located in buildings where there are between 2-4 units in the building.

Residential properties by number of units

Property Type	Number	%
1-unit detached structure	52,945	70.2%
1-unit, attached structure	3,191	3.4%
2-4 units	7,541	10.0%
5-19 units	5,310	7.1%
20 or more units	5,392	7.2%
Mobile Home, boat, RV, van, etc.	1,609	2.1%
Total	75,377	100.0%

Source: 2012-2016 ACS

Looking at renter households, just under a quarter of all renter households are in units that have one bedroom or less (23.5%). A large share of renter-occupied units are in homes that have two bedrooms or more.

Renter Unit Size by Tenure

	Renters	
	Number	**%**
No bedroom	1,653	5.0
1 bedroom	6,067	18.5
2 bedrooms	12,334	37.5
3 or more bedrooms	12,815	39.0

Source: 2012-2016 ACS

Looking at owner households, the large majority have three bedrooms or more, with only 13.2% of all owner households having two bedrooms or less.

Owner Unit Size by Tenure

	Owners	
	Number	**%**
No bedroom	173	0.05
1 bedroom	159	0.04
2 bedrooms	4,700	12.3
3 or more bedrooms	33,272	86.9

Source: 2012-2016 ACS

Describe the number and targeting (income level/type of family served) of units assisted with federal, state, and local programs.

Located within Modesto, there are 202 transitional housing units, 804 permanent supportive housing units, and 754 affordable housing units. These federally assisted units vary in type from beds located within emergency shelters to multi-family units in Modesto spread across eighteen (18) separate properties.

As described in the 2015-2023 Housing Element, Modesto supports a variety of multi-family affordable housing units through new construction as well as acquisition and rehabilitation. The targeting for the City-assisted units are income-based, focusing on supporting those households that are earning below

80% AMI. The Stanislaus County Affordable Housing Corporation (STANCO) also supports units throughout the City. STANCO, through partnerships with local service providers, targets those with needs beyond financial support and integrates behavioral health supports into housing. For a full list of the units that STANCO supports, please see section MA-30.

The HACS operates several complexes within Modesto that all target low- and moderate-income households. More specifically, several complexes are for seniors where there are units with 1- to 3-bedroom units. The housing authority also has complexes that are specifically geared for small and/or large families. Units in the Brighton Village complex in Modesto are 3-bedroom with a minimum of three persons and a maximum of seven persons.

Provide an assessment of units expected to be lost from the affordable housing inventory for any reason, such as expiration of Section 8 contracts.

The Housing Authority of the County of Stanislaus is the largest landlord of multifamily and senior housing for low- and moderate-income populations within the City. The Housing Authority owns and manages over 1,400 rental units in Modesto. As of June 2019, 60 of those units were deemed "high-risk" according to the California Housing Partnership. These units are Parkview Christian Estates (60 units); both are Section 8 contract and deemed at-risk due to their latest affordability year ending soon, 2021 and 2020 respectively. Cameron Villa Apartments (68 units) were previously considered "high-risk" but secured Low Income Housing Tax Credits award for the rehabilitation of this project increasing its affordability by 30 years.

Does the availability of housing units meet the needs of the population?

Based on data within the Needs Assessment section, the community survey results, and feedback from public community meetings, the availability of affordable housing units does not currently meet the needs of the population. Indicative of the growing housing costs in the City and throughout the County, the number of cost-burdened households has increased as housing costs have increased. This points to a need for affordable housing of varying sizes throughout the City to meet the need of those cost-burdened families. As indicated in the 2015-2023 Housing Element, the following highlights several of the primary housing needs:

- Shortage of housing supply in California
- Affordable housing units are being lost as they are sold in the private market
- Limited availability of large rental units for large-households
- Increase in single-parent households indicates a future need for one and two bedroom units that are affordable on a single income
    - This need also points to the need for childcare support
- The overall high rates of cost-burden, and particularly those that are renting, indicate that there are limited affordable options for low-income renter households of all sizes and even fewer options for those households to purchase a home
- In the extremely tight housing market, affordable housing is being lost to units being sold given a large increase in home values.

Describe the need for specific types of housing

The immediate need is for rental housing that is affordable for families and individuals earning 80% AMI or less. As indicated in the Housing Element, overcrowding among large-households indicates a need for additional affordable rental units that can accommodate households with 5+ members. Similarly, an increase in single-parent households indicates a need for small and affordable units where a single income and the cost of childcare still make the units affordable.

The expected growth in Modesto, 60% over the next 10 years and 100% over 20 years, paired with the relative affordability of the region compared to the Bay Area, indicates the need for housing units that can accommodate a growing elderly population. According to the State of California demographic projections, the population that is 70+ years old are expected to grow by 37% between 2020 and 2030 within Stanislaus County. As Modesto is the center of the County for primary healthcare services and social support services, it can be expected that Modesto will experience an increased need for housing that is suitable to elderly households.

In all public meetings the need for more affordable units of all sizes across the entire City was regularly heard.

MA-15 Housing Market Analysis: Cost of Housing

Introduction

The cost of housing in Modesto has steadily risen since about 2012. Like other cities across the county, recovery from the mortgage crisis of 2008 has been slow. According to Zillow data, the Modesto housing market peaked in March and April of 2006, with the Zillow Home Value Index reaching $355,000. The lowest point in the housing market according to the same Zillow Index came in November of 2011, at $122,100. As costs edge back to pre-housing crisis levels, affordable housing will be at the forefront of development needs and will also be a City priority.

The tables below reflect Zillow housing data within the City, giving a timeline of changes from 2000 to current conditions. While the cost of owning a home has fluctuated by over 100% since 2000, the rental market has been more stable, although still seeing a substantial increase of nearly 70% since 2000.

Cost of Housing

	Base Year: 2000	2010	2016	2018	% Change (2000-2018)
Median Home Value	$126,000	$282,500	$208,000	$265,100	110.4%
Median Contract Rent	$551	$819	$852	$929	68.6%

Source: 2000 Census, 2006-2010 ACS, & 2012-2016 ACS

Zillow Data	2000	2005	2010	2015	2019	% Change (2010 to 2019)
Zillow Home Values	127,400	327,200	139,700	2013,800	306,913	119.7%
Zillow Rental Values	-	-	1,244	1,246	1,495	20.1%

Source: Zillow

The table below highlights the ranges of rent typically being paid in Modesto as of 2016. The table shows that most renters in Modesto are paying above $1,000 in rent each month, given that the table's data is from 2016, and the rents have risen since then, it can be assumed that a greater percentage of Modesto renters are paying more than what the table may show. It is also important to note that the fair market rent (FMR) for a 2-bedroom unit is near $1,000, about 45% below the median rental value according to Zillow.

Gross Rent Paid

Rent Paid	Number	%
Less than $500	367	1.3%
$500-999	3,696	13.1%
$1,000-1,499	9,513	33.8%
$1,500-1,999	7,568	26.9%
$2,000 or more	7,028	24.9%

Source: 2012-2016 ACS

The table below is a calculation made by HUD to determine the number of units deemed affordable for each income bracket. Affordability in this instance means that a household is not paying more than 30% of monthly gross incomes towards housing costs including utilities.

Housing Affordability

% Units affordable to Households earning	Renter	Owner
30% HAMFI	1,145	No Data
50% HAMFI	3,210	1,770
80% HAMFI	15,265	5,919
100% HAMFI	No Data	10,132
Total	**19,620**	**17,821**

Source: 2012-2016 ACS

The table above identifies the number of units that are affordable to each income bracket. Understandably, those with the lowest income have the fewest housing options that are affordable. There is a total of 17,410 households in Modesto earning 50% AMI or less. Although there is not data as to the number of units affordable to owners at 30% AMI; the data still indicates a severe shortage of homes that are affordable especially for those low-income households in Modesto.

The Fair Market Rent and HOME rents outlined below are HUD calculations that work to inform payment standards for the Housing Choice Voucher program among other HUD programs. The Fair Market Rent (FMR) is the basis for determining the maximum monthly subsidy for a family receiving housing assistance through a HUD program. Keep in mind that about 60% of those households renting in Modesto are in units that are two-bedrooms or less. The FMR rate and the High and Low HOME rents

seemingly are operating at a value that is slightly less than what a unit rents for in Modesto.

2016 Monthly Rent

Monthly Rent ($)	Efficiency (no bedroom)	1 Bedroom	2 Bedroom	3 Bedroom	4 Bedroom
Fair Market Rent	$634	$717	$936	$1,337	$1,615
High HOME Rent	$634	$717	$889	$1,018	$1,116
Low HOME Rent	$542	$581	$697	$806	$900

Source: HUD Fair Market Rent – Huduser.gov

Considering the table above and comparing the fair market rent (FMR) to the median 2016 contract rent of $852, the data shows that the median contract rent falls between the FMR for a 1-bedroom and 2-bedroom unit. However, there is a discrepancy between Zillow data and ACS data, with Zillow data showing higher rental values; above $1,200 where ACS shows $852.

Is there sufficient housing for households at all income levels?

As noted in the Needs Assessment, particularly the cost burden data, there is not sufficient affordable housing for those households earning less than 80% AMI; particularly those renter households. According to the Stanislaus County Regional Housing Needs Assessment (RHNA), Modesto accounts for 6,361, or 30%, of the 21,330 new units needed to accommodate population and job growth throughout the County. Similarly, the RHNA identifies that in Modesto 39.88% of those units should be made affordable, meaning that 2,537 affordable units were deemed to be needed in Modesto at the creation of the most recent RHNA. When referring to the RHNA, affordable means affordable for those low- and -very low-income households, meaning those households earning less than 50% AMI.

As outlined in the RHNA, the need for net new housing units by income bracket is as follows:

- Very-low income -> 1,546 units
- Low-income -> 991 units
- Moderate-income -> 1,100
- Above moderate-income -> 2,724

These numbers indicate a significant need for affordable housing among all income brackets, however especially a need on the edges of the spectrum, those very low-income households and those above moderate-income households.

How is affordability of housing likely to change considering changes to home values and/or rents?

Housing prices are expected to increase as the City continues to grow and the region also continues to bring in new businesses and households which increase pressure on the housing market. This concern of affordable housing shortage is potentially exacerbated by a regional housing crisis occurring in the San Francisco Bay Area. As housing is more affordable in Modesto and Stanislaus County as compared to the Bay Area, the housing market is able to more readily be occupied by those households earning wages from the Bay Area, which are typically much higher than Modesto wages. This effect has the potential to

continue to drive housing prices up. As a result, housing will become increasingly more unaffordable to households working in Modesto.

How do HOME rents / Fair Market Rent compare to Area Median Rent? How might this impact your strategy to produce or preserve affordable housing?

The HOME and FMR rental rates are slightly below the median rental rates according to Zillow data. Zillow aggregates all rental types, so the $1,508 may skew a bit higher than what rental rates for one- and two-bedroom units. According to rentjungle.com the average 2-bedroom unit is $1,245 as of March 2020 and rentcafe.com indicates that the average rent in Modesto is $1,257.

2020 Rental Rates

	Rental Cost
One-Bedroom FMR (2020)	$885
Two-Bedroom FMR (2020)	$1,105
Three-Bedroom FMR (2020)	$1,567
Zillow Average (All unit sizes)	$1,508
Rentjungle.com (two-bedroom)	$1,245
Rentcafe.com (all units sizes)	$1,257

Source: HUD FMR; Zillow Housing Data; Rentjungle.com; Rentcafe.com

The rental rates table highlights the differences that exist between the fair market rent (FMR) and the current rate in Modesto. The market is difficult for both renters and owners at this point in time. That being the case, homebuyers that are unable to obtain financing or are unable to find an affordable unit to purchase are relegated to the rental market. The rental market then gets increasingly tight for those renters. This rental market that is becoming increasingly unaffordable for those earning less than 80% AMI is a reason the City prioritizes limited resources for affordable rental housing.

MA-20 Housing Market Analysis: Condition of Housing

Describe the jurisdiction's definition for "substandard condition" and "substandard condition but suitable for rehabilitation

According to HUD, substandard housing conditions within the City of Modesto include the following:

- Violation of State building and housing codes;
- Lack of adequate plumbing, kitchen, or heating facilities; and
- Overcrowding conditions (defined as being occupied by more than one person per room, including living and dining rooms but excluding bathrooms and kitchen).

A housing unit is considered to be in “Standard Condition” if the unit:

- Is structurally sound and provides adequate shelter from the weather elements and a securable interior environment
- Has operable indoor plumbing (a minimum of one of each: wash basin, water closet, bathing facilities, kitchen sink)
- Has an adequate, safe electrical system
- Has a sanitary food preparation facility
- Has no presence of environmental health concerns such as mold and lead
- Meets and or exceeds HUD Housing Quality Standards (HQS).

A housing unit is considered to be in "substandard condition but suitable for rehabilitation" if the housing unit:

- Does not meet one or more of the conditions required for a dwelling to be in "standard condition" and the cost to bring the dwelling into compliance does not exceed 75 percent of the value of the house and property.
- Has been declared unfit or unsafe for occupancy by a government agency and the cost to bring the dwelling into compliance does not exceed 75 percent of the value of the house and property.

The table below highlights both owner-occupied and renter-occupied households and their rate of experiencing housing conditions. The table shows that renter households are more likely to experience a housing condition as defined above. While 58% of renter-occupied homes in Modesto have a housing condition, 31% of owner-occupied units experience such housing conditions.

Condition of Units

Condition of Units	Owner-Occupied		Renter-Occupied	
	Number	**%**	**Number**	**%**
With one selected Condition	11,339	30%	16,907	51%
With two selected Conditions	277	1%	2,174	7%
With three selected Conditions	0	0%	69	0%
With four selected Conditions	0	0%	0	0%
No selected Conditions	26,688	70%	13,719	42%
Total	**38,304**		**32,869**	

Source: 2012-2016 ACS

Despite renter-occupied homes having more housing conditions to report, the age of the housing stock is relatively similar when comparing owner-occupied and renter-occupied homes. Renter-occupied homes are very slightly more likely to be built before 1979; while 61% of renter-occupied homes are

built prior to 1979, 55% of owner-occupied homes are built before 1979.

Year Unit Built

Year Unit Built	Owner-Occupied		Renter-Occupied	
	Number	**%**	**Number**	**%**
2000 or later	5,646	15%	2,709	8%
1980-1999	11,907	31%	9,935	30%
1950-1979	17,863	47%	16,867	51%
Before 1950	2,888	8%	3,358	10%
Total	**38,304**		**32,869**	

Source: 2012-2016 ACS

Considering the age of housing stock in Modesto, lead-based paint is a primary risk when looking at homes built before 1979. Lead-based paint was banned in 1978, therefore in looking at the tables above and below we can get a sense of the amount of homes in Modesto that may be at risk of still having lead-based paint.

The table below identifies that renter-occupied homes are slightly more likely to have risk of lead-based paint present. Of the nearly 41,000 homes in Modesto built before 1980, nearly half are renter-occupied homes. The difference the table outlines is that of all renter-occupied homes in Modesto, 62% are built before 1980, whereas of all owner-occupied homes, 54% are built before 1980. Of all those homes built before 1980 with children present, just over half are renter-occupied homes.

Risk of Lead-Based Paint Hazard

Risk of Lead-Based Paint Hazard	Owner-Occupied		Renter-Occupied	
	Number	**%**	**Number**	**%**
Total Number of Units Built Before 1980.	20,751	54%	20,225	62%
Housing units built before 1980 with children present	3,537	10%	4,535	14%

Source: 2012-2016 ACS & 2012-2016 CHAS

Vacant Units

	Total
Available for Rent	1,123
Rented, not occupied	150
For sale only	432
Sold, not occupied	170
For seasonal, recreational, or occasional use	161
Other vacant	1,281
Total	3,317

Source: 2018 American Community Survey

Data identifies a total of 3,317 vacant units within Modesto. This number includes both renter and owner units, however, no specific data set is available to estimate the number of rental units that are currently available in the market. American Community Survey data from 2018 suggests that of all

vacant units in the City, about one-third are available to rent. The number reflected by the ACS data is perceived to be high locally, given the extremely tight housing market.

Describe the need for owner and rental rehabilitation based on the condition of the jurisdiction's housing.

Generally, the housing stock across the City is well maintained. However, certain neighborhoods are impacted by deferred maintenance. The 2016 City of Modesto Housing Element estimated 15,000 housing units in need of rehabilitation and 500 housing units require complete replacement. Many areas with older housing stock correspond with areas of higher concentrations of low- and moderate-income households. Those low- and moderate-income owner households are more likely to defer maintenance due to financial constraints. Those landlords renting to low- and moderate-income households are more apt to defer maintenance because the return on investment may not be economical. Renter occupied units tend to be older; although there is nearly an equal amount of owner-occupied housing units in the City; a greater proportion of renter-occupied housing was built pre-1980. Another important note to consider is that renter-occupied housing is often less likely to be rehabilitated in a tight housing market. In a tight housing market, landlords are able to consistently fill vacancies, which minimizes incentives for a renter-occupied rehabilitation.

This is particular importance where there are concentrations of households earning less than 80% AMI. As the Needs Assessment points out, these households experience housing problems at higher rates, meaning they are more vulnerable to substandard housing because their options are more limited than other households throughout the City. There is a need for landlords to be reminded of code requirements and upkeep standards, especially in those neighborhoods where households are most likely to be low and moderate-income.

On September 24, 2019 the City of Modesto Council approved the creation of the Rental Housing Safety Program. The program will support efforts to maintain the supply of safe, decent, and sound affordable housing through conservation and rehabilitation of existing housing stock. The program will require property owners to ensure basic safety items such as:

- Hot and cold running water
- Electrical power (No generators)
- Heat
- Functioning sewer system
- Safe entry door
- Safe exits
- No mold or other infestations
- Smoke and Carbon Monoxide Detectors
- Functioning Mechanical Systems
- Properly Functioning Windows
- Water heaters properly secured

- Address numbers legible from the street
- Stairways in good condition
- Roofs free of tarps

Property owners will be required to conduct an annual inspection of their rental unit and make repairs as necessary, then certify that the unit meets minimum standards of the program. Up to ten (10) percent of all rental units in the self-certification program will be selected for inspections.

In a community meeting held in District 4, hosted by the Airport Neighborhood Collaborative, a concern was raised of rental units in the District being in disrepair and the property owners indicating to tenants that rent would be increased if repairs were complete. This concern highlights a need for code enforcement in ways that protect tenants.

The City's Housing Division has partnered with the Neighborhood Preservation Unit for referrals of any homes that have code violations that may be able to benefit from the City's Homeowner Rehabilitation Program.

Estimate the number of housing units within the jurisdiction that are occupied by low or moderate income families that contain lead-based paint hazards.

According to the tables above, the American Community Survey (ACS) and the Comprehensive Housing Affordability Strategy (CHAS) data estimate that nearly 21,000 owner-occupied units and 20,000 renter-occupied units were built before 1980. Knowing that 42% of all households in the City are considered low- moderate-income we can apply this percentage to all housing units across the City to estimate the number of low- moderate-income households that are living in units built before 1980, thus at greater risk of being exposed to lead-based paint hazards.

Assuming 42% of owner-occupied and renter-occupied housing units in the City are low and/or moderate-income households we can determine the following:

- An estimated 8,820 owner-occupied households in the City are both low and/or moderate-income and also live in a housing unit built before 1980
- An estimated 8,400 renter-occupied households in the City are both low and/or moderate-income and also live in a housing unit built before 1980

MA-25 Public And Assisted Housing

Describe the supply of public housing developments:

There are 647 public housing units, most of which are scattered throughout the City. Of these public housing units, most of the structures were developed in the 1950's.

Describe the number and physical condition of public housing units in the jurisdiction, including those that are participating in an approved Public Housing Agency Plan

There are a total of 647 housing units controlled by the Housing Authority of the County of Stanislaus (HACS). Physical condition of the public housing units: Good/Fair. Most of the public housing units were built in the 1950's as this includes normal wear and tear, or only slight defects which are normally corrected during the course of regular maintenance and inspections.

Public Housing Condition

Public Housing Development	Most Recent Inspection Score
Scattered Site	91
Scattered Site	85
Scattered Site	88

Orangeburg Manor	76
Ralston Tower	87
Colonial Farms	74

Source: Huduser.gov / Physical Inspection Scores

Describe the restoration and revitalization needs of public housing units in the jurisdiction:

In Consultation with the Housing Authority of the County of Stanislaus, they have described the greatest restoration needs to be plumbing, electrical, and exterior painting throughout the stock of housing controlled by HACS.

Describe the public housing agency's strategy for improving the living environment of low- and moderate-income families residing in public housing:

HACS is currently working on supportive housing programs that include transitional housing to help people prepare for independent living and permanent supportive housing for people with long-term or chronic service needs. Maintain transitional and supportive housing for people who have bene homeless or at risk of homelessness.

The Family Self-Sufficiency Program is a five-year voluntary program designed to help families achieve self-sufficiency by providing case management and referrals to supportive social services not limited to:

1. Child Care/Transportation/Budgeting/Counseling
2. Education (H.S. diploma, GED, Community College and Four-Year institutions)
3. Job Search and Work Skills/Legal Services
4. Parenting Skills/Health/Food & Nutrition
5. Career Guidance Counseling
6. Communication Skills/Stress Management
7. Drug & Alcohol Counseling
8. Stress Management/Self-Esteem/Motivation
9. Homeownership

The Family Self-Sufficiency program works in conjunction with the Program Coordinating Committee to create an effective delivery system of supportive services to provide critical tools to help families on their path to self-sufficiency. This committee has been established to create an established partnership and linking services with the intention of assisting residents by offering up to date possible resources, moving along the housing continuum, available in the county.

The HACS' efforts to improving the living environment of low- and moderate-income families residing in public housing include creating housing opportunities among the entire housing continuum. An example of this is the Edwards Estates Homeownership Project. This project consists of the construction of 35 single family homeownership units to be sold to first time homebuyers. This project will provide the opportunity to public housing residents become homeowners.

MA-30 Homeless Facilities and Services

Introduction

Homeless facilities and services are coordinated through the Continuum of Care in the County, the Stanislaus Community System of Care (SCSOC). The agencies that are part of the SCSOC provide several types of housing and services:

- Emergency shelter for families, adult individuals, and youth
- Rapid Re-Housing (RRH) for families and adult individuals

- Transitional housing for families and adult individuals
- Permanent Supportive Housing (PSH) for adult individuals

Available homelessness resources are summarized below in the table and then listed in detail following the table.

Facilities Targeted to Homeless Persons

	Emergency Shelter Beds		Transitional Housing Beds	Permanent Supportive Housing Beds	
	Year Round Beds	**Voucher / Seasonal / Overflow Beds**	**Year Round Beds**	**Year Round Beds**	**Under Development**
Households with Adult(s) and Child(ren)	37	39	50	249	
Households with Only Adults	313	96	125	315	
Total Beds	734	155	202	804	140
Subset of Total Bed Inventory (where available)					
Chronically Homeless Households	N/A	N/A		272	
Veterans	0	0	16	227	
Unaccompanied Youth	22		16		

Source: HUD 2018 Continuum of Care Homeless Assistance Programs: Housing Inventory Count Report (HIC)

Describe mainstream services, such as health, mental health, and employment services to the extent those services are use to complement services targeted to homeless persons

- **AspiraNet** provides vocational education and job training through its California Department of Education Workability program
- **Behavioral Health and Recovery Services (BHRS)** administers Stanislaus County's behavioral health and recovery services. (Inpatient, PSH Supportive Service, Street Outreach, Telecare, ACCESS Team)
- **Central Valley Opportunity Center (CVOC)** is a nonprofit employment training and service provider serving the counties of Stanislaus, Merced, and Madera.
- **Community Services Agency (CSA) - STANWORKS** oversees the County's Welfare-To-Work program which helps CalWORKS customers find and keep a job. CalWORKS is a State welfare program that gives cash aid and services to eligible needy California families.
- **Community Services Agency (CSA) – Welfare-To-Work program** also includes assisting with job training to upgrade persons to higher paying jobs. This agency's mission is to protect children and adults, who are at risk, preserve families, provide temporary economic assistance, promote personal responsibility in the areas of job readiness and self-sufficiency, and practice program and system integrity through innovative and effective business strategies
- **Disability Resource Agency for Independent Living (DRAIL)** is a nonprofit corporation that provides to persons with disabilities.

- **Downtown Streets Team:** a program that is designed to provide homeless individuals skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed.
- **Employment Development Department (EDD)** is a State agency that provides services to Individuals in Californian under Unemployment Insurance, State Disability Insurance, workforce investment, and Labor Market Information programs. , and assisting disadvantaged recipients in becoming self-sufficient.
- **Golden Valley Health Center (Corner of Hope Homeless Outreach Program)** provides free health services including dental, vision, general medical and mental health services.
- **Health Services Agency (HSA)** in partnership with local hospitals and physician groups supplements and promotes a health delivery system that ensures that Stanislaus County residents have access to quality health care.
- **Homeless Employment Litter Program:** This project will result in the employment of homeless individuals to pick up litter around our city streets and state highways around Modesto.
- **Interfaith Ministries of Greater Modesto** serves hundreds of individuals and families in the City, with emergency food and clothing.
- **Job Corps,** administered by The U.S. Department of Labor, is a no-cost education and vocational training program for persons between the ages of 16 and 24 who qualify as low income
- **National Alliance on Mental Illness (NAMI)** provides employment assistance, by providing informational resources, detailing vocational programs available to persons with a mental illness, legal protections, and health coverage options.
- **Opportunity Stanislaus** provides Workforce Investment Act services to the residents of Stanislaus County.
- **The Salvation Army Modesto Corps** provides an array of services to the homeless, including Emergency shelter and the new Access Center Low Barrier Shelter.
- **Stanislaus County Department of Aging & Veterans Services** provides assistance and advocacy to the men and women who served in the Armed Services of America, their dependents, and survivors and the general public in obtaining benefits and entitlements from the U.S. Department of Veterans Affairs, Department of Defense, and State and local agencies.
- **TeleCare Corporation** manages one of Stanislaus County's Regional Service Teams, providing outpatient and intensive community support mental health services to an estimated 350 to 400 adults living in eastern Modesto. .
- **Turning Point** (Empowerment Center) offers programs in seven California counties to assist persons with a mental illness.
- **The United Samaritans Foundation** operates four mobile food service trucks from their facilities in Turlock, Hughson, and Modesto, delivering nutritious lunches to nine Stanislaus communities five days per week.
- **The Valley Mountain Regional Center** provides a variety of resources to children and adults with developmental disabilities in Stanislaus, San Joaquin, Amador, Calaveras, and Tuolumne counties.
- **The U.S. Department of Veterans Affairs** provides numerous benefits and services to veterans and their families including health care, vocational rehabilitation, education, and home loans.

List and describe services and facilities that meet the needs of homeless persons, particularly chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth. If the services and facilities are listed on screen SP-40

Institutional Delivery Structure or screen MA-35 Special Needs Facilities and Services, describe how these facilities and services specifically address the needs of these populations.

- **Bennett Place** contains 18 units that are reserved for persons who have a serious mental illness (SMI) or serious emotional disturbance (SED) and are homeless or at risk for homelessness.
- **The Berberian Emergency Shelter** provides up to 206 cold weather beds to unaccompanied homeless adult men and women and up to 30 year-round beds to homeless persons with special medical needs.
- **The Berberian Transitional Living Facility** provides 20 beds for homeless male and female veterans and 20 beds for unaccompanied homeless males and females for up to 24 months.
- **Catholic Charities** provides a variety of programs and services with a new office location as of 2019 in Modesto. Catholic Charities provides transportation services, housing and case management services, low-cost healthcare, and childcare as well as immigration and legal services.
- **Children's Crisis Center of Stanislaus County (CCC)** provides childcare and shelter services to abused, neglected, and at-risk children in the community.
- **Community Housing and Shelter Services (CHSS)** provides opportunities to households with and without children to obtain and maintain permanent housing.
- **Community Impact of Central Valley (CICV)** provides services to individuals with HIV/AIDS through the Housing Opportunities for Persons with AIDS Program (HOPWA).
- **Cricket, Guardian, Marsha's, Sawyer, and Verda's Houses** provides shelter for children who may be involved in a family crisis or a conflict situation.
- **Family Promise of Greater Modesto** provides shelter at church sites and case management support for finding permanent affordable housing.
- **Haven Women's Center of Stanislaus County** provides shelter services and outreach to homeless women and children in the South Stanislaus County area and within the City. Services include those for victims of domestic violence.
- **Homeless Prevention and Rapid Re-Housing Program (HPRP)** provides rental assistance in conjunction with intensive case management.
- Housing Authority of the County of Stanislaus administers 222 Shelter Plus Care Certificates and HUD-VASH vouchers which help provide permanent supportive housing to homeless veterans.
- **Hutton House** is an emergency shelter for runaway, homeless, and youth in crisis who are ages 13-17.
- **Low Barrier Youth Shelter/Youth Access Center** a one stop service hub providing a continuum of services for young people (13-24 years old) who are experiencing crisis, housing instability, and/or homelessness.
- **Meadow Glen** is a 32-unit permanent rental supportive housing serving very low-income foster youth aged out of foster care.
- **Miller Pointe** is a 15-unit permanent rental housing project serving very low-income households.
- **Mission Emergency Shelter** provides beds for temporary shelter to house up to 100 unaccompanied adult men and women and up to 90 women and children for a maximum stay of fourteen days.
- **The Modesto Men's Gospel Mission and Women's Mission** provides a limited stay of seven nights on the floor, and three nights out, and also serves two meals a day.

- **New Life Program Residential** is an on-site program, operated by the Modesto Gospel Mission, for up to 41 unaccompanied adult men and women who need specialized help to return to societal living. This program is operated by the Modesto Gospel Mission.
- **Pathways** is a transitional living and support services program that focuses on youth who have "aged out" of the foster care placement system.
- **The Salvation Army Modesto Corps** provides an array of services to the homeless.
- **Salvation Army Veteran Emergency Shelter:** provides shelter services to homeless individuals who are U.S. Veterans.
- **Stanislaus County Affordable Housing Corporation (STANCO)** operates eight properties for permanent affordable housing and conducts outreach to place people in supportive housing. STANCO also operates 33 transitional beds for homeless families with children and 37 beds for unaccompanied adult homeless males and females.
    - **STANCO Transitional Housing**
    - California – 36 beds and 4 units
    - Garden Gate – 3 beds and 1 unit
    - Ricardo – 3 beds and 1 unit
    - Locust – 3 beds and 1 unit
    - Garvey – 13 beds
    - REST House - 5 beds
    - **STANCO Permanent Supportive Housing**
    - 24 beds
- **Turning Point Community Programs** provides integrated, cost-effective mental health services, employment and housing for adults, children and their families that promote recovery, independence and self-sufficiency.
- **Turning Point Respite Center at Garden Gate** provides a safe home-like environment for up to 12 homeless mentally ill persons nightly.

MA-35 Special Needs Facilities and Services

Introduction

Services made available to those populations with specific needs are an important component of keeping households stably housed, minimizing risks of homelessness or becoming precariously housed. The services throughout the City are increasingly delivered with efficiency and coordination as the Stanislaus Community System of Care (the County Continuum of Care) improves its systems and communication across service providers.

Including the elderly, frail elderly, persons with disabilities (mental, physical, developmental), persons with alcohol or other drug addictions, persons with HIV/AIDS and their families, public housing residents and any other categories the jurisdiction may specify, and describe their supportive housing needs

Considering each sub-population, below are the specific needs:

Elderly, frail elderly, and persons with physical, mental, and developmental disabilities:

- In rental units, reasonable modifications that address mobility needs such as grab bars, ramps instead of stairs, and/or adequately wide hallways and doors for wheelchair access should it be required
- Access to organized social activities; whether this be through public transit or shuttle services provided by senior centers
- Affordable and quality in-home care, both physical care such as nurses and non-physical care such as social workers and/or case managers
- Those persons with developmental and/or mental disabilities need a variety of housing options with varying levels of independence, access to differing levels of supportive services.

Persons with HIV/AIDS and their families

- The Community Impact of Central Valley (CCIV) provide services to individuals with HIV/AIDS through the HOPWA program. Persons with HIV/AIDS are significantly more vulnerable to becoming homeless during their lifetime.
    - Those persons with HIV/AIDS are in need of ongoing medical care, and thus need access to affordable housing options within reasonable distance to location of care.
    - From this need, stems the need for rental assistance, security deposit assistance, mortgage assistance, payment for utilizes, and food provisions.

Persons with Alcohol or other drug addictions

- In several consultations with community stakeholders, the concern of substance abuse and drug addiction was brought up in conjunction with the increase in visible homelessness
    - It is felt by stakeholders that there needs to be more incentives for those seeking treatment to remain in treatment and then more robust wrap-around services upon an individual leaving treatment

The Stanislaus County Behavioral Health and Recovery Services (BHRS) offers over thirty years of experience in the delivery of community mental health and substance abuse services. Services offered at Stanislaus Recovery Center include adult assessments, residential, withdrawal management (social model), intensive outpatient treatment for substance use and co-occurring disorders. SRC is an intricate part of the continuum of care in Stanislaus County's Behavioral Health & Recovery Services. The City will continue to partner with BHRS wherever the opportunity arises.

Describe programs for ensuring that persons returning from mental and physical health institutions receive appropriate supportive housing

Residential care facilities provide supportive housing for persons with disabilities. The types of facilities available in the City include:

- Group Homes: Facilities of any capacity and provide 24-hour non-medical care and supervision to children in a structured environment. Group homes provide social, psychological, and behavioral programs for troubled youths.

- Adult Residential Facilities: Facilities of any capacity that provide 24-hour nonmedical care for adults ages 18 through 59, who are unable to provide for their own daily needs. Adults may be physically handicapped, developmentally disabled, and/or mentally disabled.
- Residential Care Facilities for the Elderly: Facilities that provide care, supervision and assistance with activities of daily living, such as bathing and grooming. They may also provide incidental medical services under special care plans. These facilities are regulated by the State Department of Social Services (DSS).
- Permanent Supportive Housing (PSH): These are multi-family buildings where service providers and housing providers work together to provide permanent housing, case management and health care services to the most vulnerable populations within the community. These programs are regulated by Stanislaus County Behavior Health and Recovery Services (BHRS).

Specify the activities that the jurisdiction plans to undertake during the next year to address the housing and supportive services needs identified in accordance with 91.215(e) with respect to persons who are not homeless but have other special needs. Link to one-year goals. (91.220(2))

The "91.215(e)" above references how a jurisdiction plans to prioritize housing and supportive services to persons who are not homeless but may require supportive housing such as elderly, persons with disabilities, and public housing residents.

The City understands that those households that are most vulnerable need additional supports to obtain stability in housing. The City proposes to utilize ESG funds to support emergency shelter activities within the CoC and the coordinated entry system that matches the right services to the households given their individual circumstance, this includes taking into consideration special needs in both housing and supportive services. The City uses CDBG funds to support non-homeless special needs populations through public services that are funded through a request for proposal (RFP) process.

MA-40 Barriers to Affordable Housing

Describe any negative effects of public policies on affordable housing and residential investment.

There are a number of codified policies in Modesto that may contribute to the current lack of affordable housing.

Development Fees:

- Zoning Change Fee
    - Should a development or housing unit be proposed for a site where it is not consistent with the General Plan and/or should a project be proposed for a site it is not currently permitted by zoning, a fee of up to $5,231 is required depending on the zoning change needed.
    - These costs could potentially stifle the development of housing in areas where it may otherwise be reasonable

        - Given a low supply of housing affordable to low- and/or moderate-income households, these costs may inhibit housing choice for those households
- Impact Fee, land dedications, site improvements
    - The costs to integrate necessary infrastructure (streets, sidewalks, storm drains, etc.) are bore by the developer, but are ultimately passed on to the consumer
    - These costs contribute to pricing out low- and/or moderate-income households for affordability reasons
    - The City may provide fee waivers in some cases and/or fee deferrals in others allowing construction to move forward with less up-front costs
- School district fees
    - School fees range from $2.97 to $4.66 per square foot; with an average of $3.82 per square foot
    - These may add significant costs to larger developments, contributing to the pricing out of low- and/or moderate-income households

The City of Modesto regularly analyzes City building codes, market constraints, and housing/non-housing development policies, be it through the Consolidated Plan process, the Analysis of Impediments update, or the Housing Element update. The City acknowledges that outdated building codes and land use policies inhibit the development of housing for all income levels and the City understands the importance of regularly analyzing how local policies and ordinances impact the housing market for those households earning less than 80% of the area median income.

To assist in mitigating barriers to affordable housing, the City will utilize State SB2 PGP program funds to develop an Affordable Housing plan to identify opportunity sites for affordable housing; funds will also be used to of explore zoning code amendments to facilitate housing development.

MA-45 Non-Housing Community Development Assets

Introduction

The County Seat of Stanislaus County, Modesto has industry centered in food processing and manufacturing (due to the agricultural San Joaquin Valley surrounding the City), healthcare, and businesses services. These industries are also expected to grow over the next decade, indicating that many of the businesses in these sectors will continue to expand and bring in additional job opportunities to the region. The unemployment rate has fallen steadily since recovery from the housing crisis in the late 2000's early 2010's. Although wage growth has not kept pace with housing costs, as unemployment shrinks and businesses expand and compete for labor, the region is hopeful that wages will increase as unemployment decreases.

Economic Development Market Analysis

Business Activity

The largest employers in Modesto are predominantly food/manufacturing, healthcare, and government.

The table below highlights those largest employers in Modesto.

Employer	Industry	# Of Employees
Manufacturing		
E. & J. Gallo	Winery	6,700
Del Monte Foods Inc	Fruit Products	2,010
Stanislaus Foods	Canning	1,875
Foster Farms Dairy	Dairy Products	850
Frito Lay	Snack Products	637
Pacific Southwest Containers	Container Manufacturing	430
Non-Manufacturing		
Stanislaus County	County Government	4,480
Modesto City Schools	Education District	3,556
Doctors Medical Center	Health Care	2,600
Memorial Medical Center	Health Care	2,400
Save Mart Supermarkets	Retail Grocer	1,650
City of Modesto	City Government	1,500
Stanislaus County Office of Education	Education District	1,300
Sylvan School District	Education District	917
Modesto Junior College	Education Institution	842
Vituity	Medical Billing/Coding	800
Storer Coachways	Transportation	500
Modesto Irrigation District	Water & Electric Utility	450
Costco	General Merchandise	210

Employment Growth

Within the next ten years, the largest industry employment gains in the Modesto Metropolitan Statistical Area (MSA) by percentage growth are projected to be: Health Care and Social Assistance; Private Educational Services; Transportation, Warehousing, and Utilities; the Federal Government; and Leisure and Hospitality. By number of employees, Health Care and Social Assistance; Private Educational Services; and Trade, Transportation, and Utilities are projected to have the largest gains.

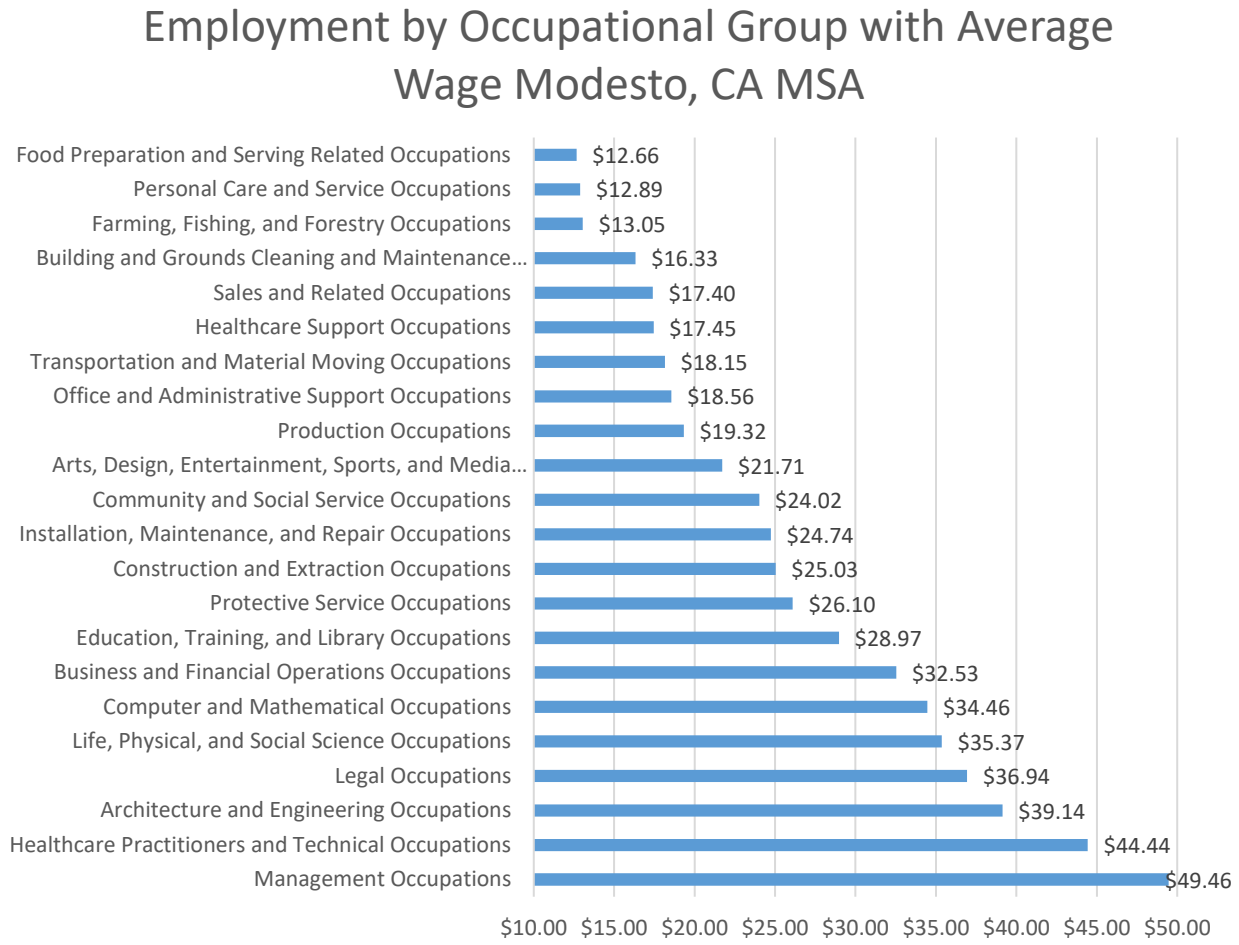
The gain in jobs will come with uneven local income gains. Those sectors projected to have the largest gains in employment are service sectors jobs, more typically lower-paying jobs, and those high-education jobs such as legal, engineering, and medical which typically pay higher-end wages. Steadily

lower unemployment rates will support wage growth in service sector jobs, however the housing market is currently outpacing wage growth.

Healthcare and social assistance, the industry with the largest projected gains, has several occupational groups with a wide average wage range. Jobs in Personal Care and Service Occupations, including personal home care aides and home health aides, pay, on average, $12.89 per hour or $26,810 per year. These jobs will nationally account for 70 percent of all new jobs in the next ten years, a ratio that will likely occur in Modesto as well given the projected growth of the elderly population.

Healthcare Practitioners and Technical Occupations will likely also grow within the City and include doctors, dentists, registered nurses, and physical therapists. These jobs currently pay $44.44 per hour or $92,430 per year. (Bureau of Labor Statistics) These jobs will continue to grow, especially with Kaiser Permanete, Doctors Medical Center, Memorial Hospital, and Valley Children's Regional Center employing high numbers in this occupation group.

The table below shows the average wage for the different types of occupations and industries within Modesto. Those with the highest average wages are those with higher education levels. Those industries with the largest expected growth are healthcare, education, technologies, transportation, and warehousing. The average wages among those industries are in the top 50% of the wages outlined in the table below.



Source: Bureau of Labor Statistics May 2018 OES Estimates

The table below shows that as of 2016, there was about 97,000 people in the Modesto civilian labor force, with an unemployment rate of 13.6%. The unemployment rate steadily decreases with age, reaching the lowest rate of 6.5% among those 55-59 years of age. As the economy continues to improve, the unemployment rate among all age groups is expected to continue to decline. This low rate of unemployment should support wage growth.

Labor Force

Total Population in the Civilian Labor Force	98,215
Civilian Employed Population 16 years and over	88,099
Unemployment Rate	10.3%
Unemployment Rate for Ages 16-19	32.1%
Unemployment Rate for Ages 20-24	18.1%
Unemployment Rate for Ages 25-29	11.2%
Unemployment Rate for Ages 30-34	11.2%
Unemployment Rate for Ages 35-44	8.5%
Unemployment Rate for Ages 45-54	8.1%
Unemployment Rate for Ages 55-59	5.3%
Unemployment Rate for Ages 60-64	5.5%
Unemployment Rate for Ages 65-74	4.3%
Unemployment Rate for Ages 75+	5.3%

Source: 2014-2018 ACS

The table below identifies the largest occupation sectors in Modesto. Those top sectors outlined below reflect the tables above showing the industries throughout Modesto. Those largest sectors are reflective of both manufacturing and non-manufacturing jobs.

Occupations by Sector

	Number of People
Management, business and financial	23,900
Farming, fisheries and forestry occupations	1,996
Service	16,350
Sales and office	21,884
Construction, extraction, maintenance and repair	9,308
Production, transportation and material moving	12,196

Source: 2012-2016 ACS

The table below highlights the commute times experienced by those working in Modesto. An estimated nearly 70% of all persons working in Modesto take less than 30 minutes to commute to and from work each day.

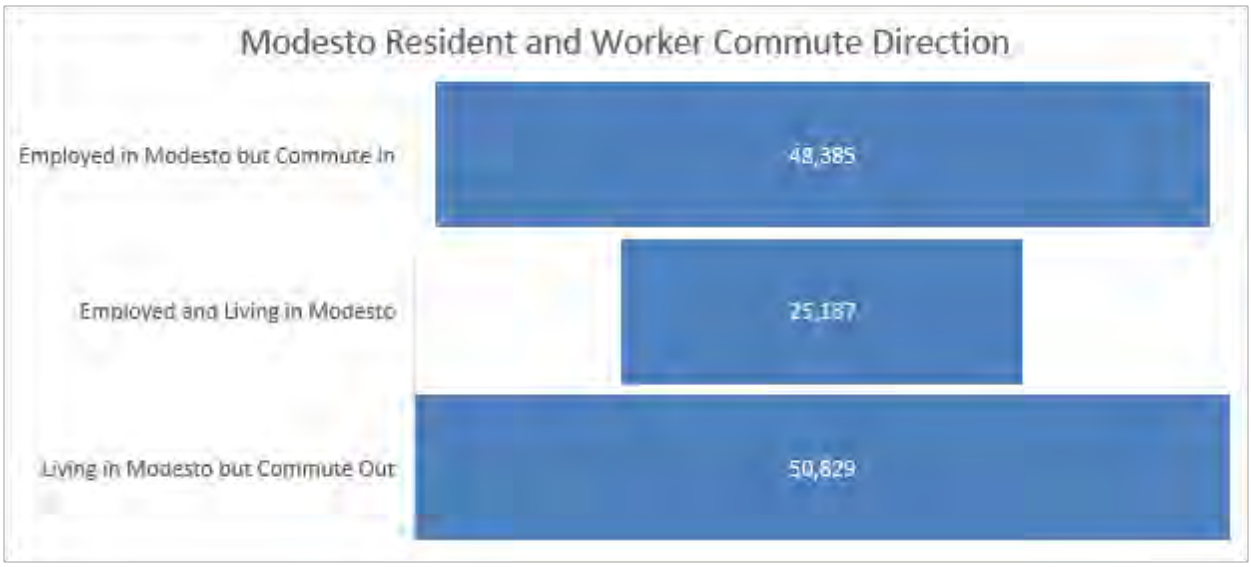
Travel Time

Travel Time	Number	Percentage
< 30 Minutes	53,977	69%
30-59 Minutes	14,759	19%
60 or More Minutes	9,018	12%
Total	**77,753**	

Source: 2012-2016 ACS

According to the graphic below, despite the large number of employers within Modesto, more than double the number of Modesto residents commute out of the City daily than stay within the City to

work. About an equal number of people commute into the City for work as commute out, indicating an imbalance in the types of housing or neighborhoods within the City to nearby employment.



Source: U.S. Census Bureau, LEHD Origin-Destination Employment Statistics 2017

Of those residents commuting out, almost half are workers making more than $3,333 per month as shown below. This is most likely indicative of those workers commuting to the Bay Area and elsewhere for higher paying jobs and commuting back to a home in Modesto for more affordable housing relative to the areas where high-tech jobs have increased the housing market substantially.

Resident Wages: Residents Who Commute Out for Employment

Income	Number	Percent
Workers Earning $1,250 per month or less	8,677	17.1%
Workers Earning $1,251 to $3,333 per month	18,225	35.9%
Workers Earning More than $3,333 per month	23,927	47.1%

Source: U.S. Census Bureau, LEHD Origin-Destination Employment Statistics 2017

The table below shows the population in Modesto that are in the labor force. The table breaks down the parts of the labor force by education attainment. The table shows that the rate of unemployment get lower given more education. In this case, about 5% of those with a bachelor's degree or higher are unemployed; while 10% of those with some college or associate's degree are unemployed and 14% of those with a high school education are unemployed. This does not necessarily indicate that more education is always the solution for unemployment, rather a quality match of training and skills to the available jobs is important to consider.

Educational Attainment by Employment Status (Population 16 and Older)

Educational Attainment	In Labor Force		
	Civilian Employed	Unemployed	Not in Labor Force
Less than high school graduate	8,562	2,267	7,264
High school graduate (includes equivalency)	17,847	2,730	8,511
Some college or Associate's degree	26,459	2,952	9,581
Bachelor's degree or higher	15,621	880	3,123

Source: 2012-2016 ACS

The table below shows Modesto residents by age and educational attainment. Of those aged 25 to 65, the majority of the population has a high school degree or higher.

Educational Attainment by Age

	Age				
	18–24 yrs	25–34 yrs	35–44 yrs	45–65 yrs	65+ yrs
Less than 9th grade	172	1,140	2,014	5,253	3,911
9th to 12th grade, no diploma	2,279	2,829	2,385	4,472	2,818
High school graduate, GED, or alternative	7,696	8,052	7,101	14,035	7,446
Some college, no degree	9,034	10,123	6,894	12,989	6,643
Associate's degree	877	2,345	2,004	4,679	2,258
Bachelor's degree	948	3,361	3,527	6,150	3,242
Graduate or professional degree	39	1,200	1,605	3,781	1,781

Source: 2012-2016 ACS

The table below outline the median earnings by workers in Modesto when considering their education levels. As is true in most cities, the greater an individual's education, the greater their earning power. This is also true in Modesto where hose with bachelor's degree earn about 80% more than those with a high school diploma.

Educational Attainment – Median Earnings in the Past 12 Months

Educational Attainment	Median Earnings in the Past 12 Months
Less than high school graduate	20,206
High school graduate (includes equivalency)	29,963
Some college or Associate's degree	35,774
Bachelor's degree	55,080
Graduate or professional degree	76,549

Source: 2012-2016 ACS

The table below shows the level of education as a portion of the entire population. Comparing California, to Stanislaus County, to Modesto, the table shows that just over half of all Modesto residents

have a high school diploma or some college with no degree. There is a near equal number of Modesto residents with less than a high school education than there are those with a bachelor's degree or higher.

Education of Population 25 years and over	California	Stanislaus County	Modesto
Less than 9th grade	9.90%	12.20%	9.20%
9th to 12th grade, no diploma	8.00%	10.20%	9.30%
High school graduate (includes equivalency)	20.60%	28.10%	27.30%
Some college, no degree	21.70%	25.20%	27.30%
Associate's degree	7.80%	7.80%	8.40%
Bachelor's degree	20.10%	11.10%	12.10%
Graduate or professional degree	11.90%	5.40%	6.20%

Source: 2012-2016 ACS

Based on the Business Activity table above, what are the major employment sectors within your jurisdiction?

The "Management, business and financial" and "Sales and office" employment sectors are the largest within Modesto.

Describe the workforce and infrastructure needs of the business community:

The following Economic Development Focus and Priorities were identified by the City of Modesto in the Stanislaus County Comprehensive Economic Development Strategy 2019-2024

Strengthen Infrastructure for Core Business Clusters

Ensure critical infrastructure is in place and that plans anticipate industry growth and demand trends:

- Water and Wastewater for Industrial Users including Food and Beverage
- Improve Rail and Road transport for manufacturers and distribution services
- Improve Air transport for specialty manufacturing and executive needs
- Competitive city-wide High-Speed Networking and Internet Services. 20 Gbps Fiber Optic Network to support Business, Government services and future connectivity initiatives.

Support Economic Recovery and Resilience

Support Manufacturing and Export

- Recruit companies in NAICS sectors that complement and/or advance core clusters
- Leverage eleven Federally designated Opportunity Zones
- Improve network and internet availability and reliability with redundant fiber optic network
- Support Job "InSourcing" – keep sustainable jobs in USA

- Support public and private workforce development initiatives to increase skilled labor supply in specific competencies and roles identified by anchor businesses
- Support venture incubation including UC Merced Modesto Venture Lab and private training and co-working programs
- Develop a plan and promote development of a Tech/Venture Zone
- Support repurposing and reuse of reclaimed brownfield land
- Support higher quality of life developments
- Develop a new downtown master plan emphasizing infill, densification, affordable housing and transit-centered development
- Continue development of master plan for Tuolumne River Regional Park. Regional Park will enhance recreation and travel destination opportunities and improve management and mitigation of regional flood hazard along Modesto's main riparian corridor

Describe any major changes that may have an economic impact, such as planned local or regional public or private sector investments or initiatives that have affected or may affect job and business growth opportunities during the planning period. Describe any needs for workforce development, business support or infrastructure these changes may create.

The City has been actively seeking and supporting programs that create economic growth in various sectors. Below are some of the activities that will have a significant impact over the foreseeable future.

Major changes with economic impact: investments or initiatives, public or private

Construction

- State of California – New County Courthouse - $279million construction project funded by State of California to open 2023. This is creating jobs in both the construction and extended services being offered at the new site.

Transportation

- San Joaquin Joint Powers Authority – Ace Rail Extension commuter service through Modesto funded by SB132 and renovation of Modesto Transit Center with service to begin by end 2022. SJJPA funding $0.4million for parking lot reconfiguration. $3.9milion planned in two Phases refurbish and modernize Modesto transit center – Phase 1 $2.2million to refurbish building and landscaping - $1.2million from StanCOG, $1million Federal; Phase 2 - $1.7million to add parking and walkway. (Adam Barth quoted in ModestoBee 2/18/18).
- SR-132 Highway transit upgrade in two phases $82million and $132million to help connect Modesto commerce to I-5 freeway ($ per Caltrans district 10 site).
- Measure L local roadway, bicycle and pedestrian transportation projects FY19-20 - $ 7,182,734 funded by special sales tax
- Modesto bus fleet modernization – 5 electric buses FY19-FY20 plus charging stations. (Public Works for best total $investment figure)

Private investment

- Entekra – New offsite home construction manufacturing center, $35million capital investment, 250 new jobs
- Canopy Growth - New contract bottling and cbd/hemp infused product manufacturing center, Phase 1 of 2 plant purchase $17million + capital improvements 100-150 new jobs
- Sovena Oils – New food oil plant coming online 2020, $9million investment, 30 employees.

Brownfield remediation

- 40 acres owned by FMC Corporation on Graphics Way (should be early-mid 2020 that the final remediation action plan is accepted by the California Water Board). Zoned for commercial development.

Workforce development needs arising from investments and initiatives above

- VOLT Institute-Workforce development assistance - plant maintenance mechanics for new manufacturing centers. This program is filling an essential need creating job placement opportunities within a livable wage job sector for the unemployed and underemployed.
- Downtown Streets Team and Ready to Work (RTW) are creating jobs and labor activities for chronically homeless individuals to assist with cleaning streets and receive on the job training and support to get them to a level of placement though another permanent job.

How do the skills and education of the current workforce correspond to employment opportunities in the jurisdiction?

Despite better skill/education within Modesto's current workforce than the surrounding County, more workforce training will be needed to align the City with local and regional models for economic growth, particularly in business, healthcare and education; Modesto currently has a smaller percentage of college graduates than the California average. The Stanislaus County Comprehensive Economic Development Strategy notes that "The communities of Stanislaus will need to continue to diversify and strive to better prepare and develop the workforce with the skills and technology awareness to make our locations attractive to new clusters and expanded, non-agricultural employment sectors." The Economic Development Strategy's educational priorities of "Developing specialized education including higher education, career technical education, and workforce development" and "Supporting the development of college level program infrastructure" will help both local economic growth and wage potential within Modesto.

Describe any current workforce training initiatives, including those supported by Workforce Investment Boards, community colleges and other organizations. Describe how these efforts will support the jurisdiction's Consolidated Plan.

Opportunity Stanislaus is a primary workforce development organization in the County and in Modesto. There have been recent successes in development of training initiatives through partnership with the private sector. Opportunity Stanislaus developed the VOLT Institute, located in Modesto, to offer training for maintenance and technology positions. VOLT was developed in consultation with local businesses to address their needs for machine maintenance and continuing education among their workforce. After initial success and continued discussions with local businesses, VOLT has recently began offering a course on programmable logic controls in partnership with the Automation Group. The Continuing Education (CEs) and multi-day workshops VOLT offers also contributes to a workforce that is directly linked to local companies that are looking to hire. A large portion of those attending VOLT are already employed and the additional training may increase wages or offer opportunities to move laterally into a position with higher earning potential. VOLT does offer scholarships to those in need on a case-by-case basis.

Modesto Junior College (MJC) has a Workforce Development Team that is made available to organizations and businesses to customize trainings to meet workforce needs. MJC offers options across the range of sectors currently working in Modesto and works to pair students to available jobs through internship programs. MJC offers a variety of course lengths, from certificates and CEs to two- and four-year degrees.

Both VOLT and MJC work to contribute to this Consolidated Plan by placing their efforts in wage growth and employment stability. Providing quality and affordable housing is one aspect of minimizing cost burden and housing problems experienced by residents, however these efforts need to be paired with an employment angle as well. VOLT and MJC offer programs and often direct placement opportunities to employment that produces stability and wages that may allow a household to obtain market-rate rent or homeownership.

The Stanislaus County Workforce Development team partners with local school districts and the junior college to work towards continuity in workforce development. Offering free workshops and trainings, Stanislaus County Workforce Development works to connect local residents to available training and educational opportunities that will realistically lead to job placement.

The City currently contracts with the “Downtown Streets Team” (DST), a program that is designed to help “Team Members” (clients) activate skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed. These include things like maintaining a schedule, teamwork, accountability, self-confidence and more. DST team members rebuild all of these as well as regain a sense of pride in and stewardship of their community. In addition, Team Members gain valuable experience that they can list at the top of their resume to overcome long experience gaps.

Does your jurisdiction participate in a Comprehensive Economic Development Strategy (CEDS)?

Yes, the City of Modesto was a development partner for the Stanislaus County Comprehensive Economic Development Strategy 2019-2024

If so, what economic development initiatives are you undertaking that may be coordinated with the Consolidated Plan? If not, describe other local/regional plans or initiatives that impact economic growth.

The Stanislaus County Comprehensive Economic Development Strategy outlines several Modesto initiatives that will work to support this Consolidated Plan

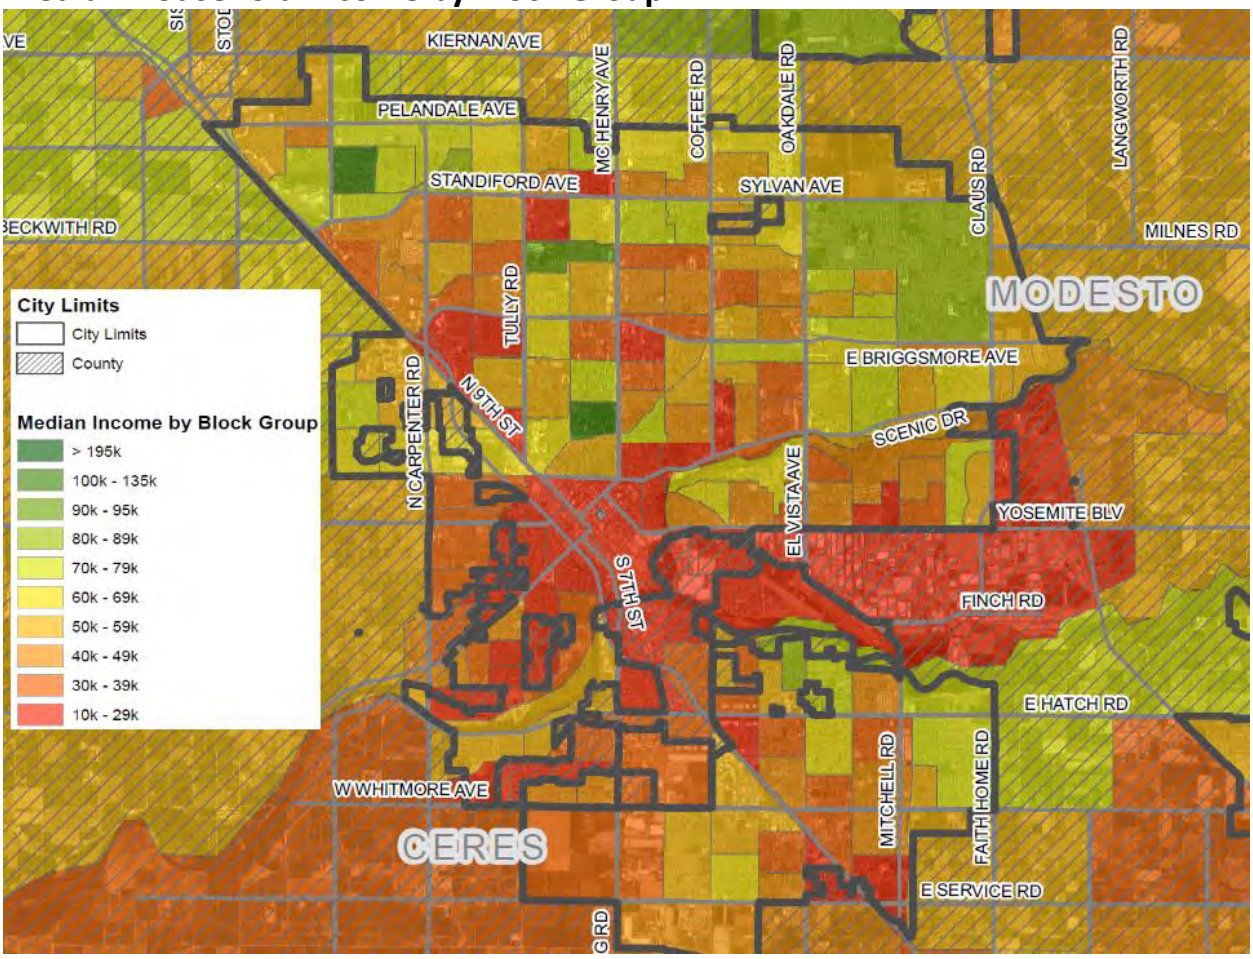
- Update to Modesto General Plan
    - By clearly outlining the economic plan for the future, it can more easily be incorporated to development plans such as this one.
    - The Modesto General Plan update is discussed in more detail in the Strategic Plan of this document.
- The Downtown Mater Plan (DMP) is currently under development. A City Council workshop was held on December 17, 2019 and the draft DMP is expected to be completed in the first quarter of 2020.
- The City plans to continue development of the Tuolumne Regional Park Plan
- LinkModesto: Fiber Network Infrastructure Master Plan was finalized in 2017 with the goal of developing a city-wide fiber network providing low-cost, effective, and resilient information and communication technologies for Modesto.
    - The support of this infrastructure from the City will encourage new business and support existing businesses through an increase in technology capacity.
- Support and promote passenger rail service improvements and general public transportation growth
    - An improved public transportation system will work to minimize traffic congestion as well as allow employees to move more freely across the city, in turn potentially increasing housing options.

MA-50 Needs and Market Analysis Discussion

Are there areas where households with multiple housing problems are concentrated? (include a definition of "concentration")

While there is no data source that geographically identifies where households with multiple housing problems are, a map showing median income by block group will offer where concentrations of low- and moderate-income households may be. Because cost burden is the most widely experienced housing problem, the map below depicts the parts of the City where those households may be located.

Median Household Income by Block Group



Source: Stanislaus County GIS

The map above reiterates closely what was identified in the NA-30 section where Racial/Ethnic Concentrations of Poverty (R/ECAP) were identified. Those areas in South and West Modesto, District 2 have several R/ECAP census tracts. Most higher earning block groups are North of downtown, then spreading both East and West moving further North.

Community meetings in all districts reflected the lack of affordable housing and the gap that exists between wages and housing costs. However, in those communities with greater low- and moderate-income populations, there was greater turnout of community members identifying the issues of housing costs and access to opportunities such as education and transit.

Are there any areas in the jurisdiction where racial or ethnic minorities or low-income families are concentrated? (include a definition of "concentration")

A Racial/Ethnic Concentrated Areas of Poverty (R/ECAP) census tract is defined as: Census tracts where more than half the population is non-White and 40% or more of the population is in poverty OR where the poverty rate is greater than three times the average poverty rate in the area.

According to 2010 Census data, there are five (5) R/ECAP census tracts within Stanislaus County, one of which is completely within Modesto bounds, while four are completely in or at least partially within

County bounds near Modesto. Those R/ECAP census tracts are located in South Modesto or South of Modesto in County property.

What are the characteristics of the market in these areas/neighborhoods?

As identified in the map, median household incomes in some of those block groups are low and have not risen enough to keep pace with the housing market. Many residents in these areas with extremely low-income have issues meeting basic needs and rely on supports to acquire food, childcare, and/or transportation. Additionally, those persons with a disability and seniors have compounded issues often with fewer financial resources and additional health care costs.

The Needs Assessment and Market Analysis found that there are not enough homes affordable to those low- and moderate-income households. As housing costs continue to rise in the region and incomes do not keep pace with those cost increases, this will further limit housing options and opportunities for those low- and moderate-income households.

Are there any community assets in these areas/neighborhoods?

Every neighborhood in Modesto has assets that community members look to as adding value. These assets are community centers, places of worship, schools, libraries, and parks. Public assets are dispersed throughout the City and the City continues to invest in both development of new community assets as well as the improvement of existing assets.

Assets include the Community Center located in Marshall Park. This Facility was constructed on 2005 and is currently under repayment through the City's Section 108 loan. The City often funds improvement projects that expands community enrichment programs like the kitchens at the Senior Center and Airport Neighborhood Community Centers.

Are there other strategic opportunities in any of these areas?

There is opportunity in each of these communities to capitalize on. However, given limited funding not all projects that would assuredly add value to a neighborhood can be pursued. The City makes efforts to leverage State or other Federal funds where possible to bring in additional funds to develop and support projects that add assets desired by the community.

The City was awarded an $8.5 million grant to renovate Cesar E. Chavez Park, located in West Modesto, that will include building an aquatic center with pool and splash pad, soccer field, lighted picnic pavilion and a plaza for skateboarders as well as renovating the park's existing features. This project will have a positive impact on the neighborhood and community as a whole.

The City applied for funding for two other parks: Mellis Park and Mancini Park. The City will apply through the next round of Proposition 68 funding with the intent to bring additional asset improvements to the Community.

MA-60 Broadband Needs of Housing

Describe the need for broadband wiring and connections for households, including low- and moderate-income households and neighborhoods.

The internet is becoming increasingly integrated into the economy, education, and social life. As such, new technologies require faster speeds to take advantage of all the tools the internet offers. Low- and moderate-income households are more likely to be without broadband than are households with more income as broadband may be viewed as a luxury when considering the choices of medical care, transportation costs, and education. As carriers in the region begin to roll out 5G wireless capabilities, these services will augment existing wired services. As 5G services are further developed, the availability of direct Wi-Fi services will become available as an alternative to current wired offerings. It is assumed that wired broadband will continue to dominate the market, however 5G options will begin to become available at a fairly rapid pace.

In order to increase local accessibility to free WIFI, the city has opened Free public WIFI access to the to the immediate areas surrounding the downtown Tenth Street Place building. This being open to the public, allows anyone including homeless and low-income households without access to WIFI, if they have a WIFI accessible device, they can easily access key online services.

Describe the need for increased competition by having more than one broadband Internet service provider serve the jurisdiction.

Competition across Modesto is commensurate with other metropolitan areas across the United States. The primary providers are AT&T, Xfinity Comcast, Spectrum, Hughes Net, and Viasat. Comparing prices of the three largest providers (AT&T, Xfinity, and Spectrum), the average cost for the lowest plan that qualifies as broadband is about $45/month. Increased competition and the ability for residents to reasonably switch providers will work to keep prices down.

Given competition among broadband carriers, the primary role of City government will be to assist in the permitting process for carriers to implement infrastructure plans as carriers roll out 5G and as wired broadband continue to expand.

Percent of Households by Number of Internet Service Providers

Jurisdiction	No providers	1 or more providers	2 or more providers	3 or more providers
Modesto	0.0	100	100	100
Stanislaus County	0.0	100	100	100
Nationwide	0.10	99.9	98.7	89.3

Source: FCC Broadband Mapping – broadbandmap.fcc.gov

The Modesto and Stanislaus County area at-large is well above the national average considering broadband access and competition. Lack of broadband provider competition leaves room for market rigidity – allowing providers to not offer affordable options for low- or moderate-income families. Ultimately, the lack of market options when considering broadband access disproportionately impacts low- and moderate-income households because they often have few financial resources to spend on what may be deemed non-essentials, such as broadband services. However, Modesto has relatively high broadband coverage with multiple providers. For those households that do struggle for broadband access, all city libraries offer free internet access.

MA-65 Hazard Mitigation

Describe the jurisdiction's increased natural hazard risks associated with climate change.

Describe the vulnerability to these risks of housing occupied by low- and moderate-income households based on an analysis of data, findings, and methods.

Based on the Regional Hazard Mitigation Plan adopted in July 2018, the following hazards were assessed and reviewed based on their risks in conjunction with climate changes.

Earthquake Hazard

The impact of climate change on earthquakes is unclear. There are some articles that claim climate change and drought, resulting from climate change, may increase the likelihood of earthquakes, but there seems to be no consensus within the scientific community.

Within the City limits of Modesto, the risk is to the vulnerable populations is unknown.

Landslide Hazard

Climate change may impact storm patterns in California, increasing the probability of more frequent, intense storms with varying duration. Increase in global temperature could affect the snowpack and its ability to hold and store water. Warming temperatures also could increase the occurrence and duration of droughts, which would increase the probability of wildfire, reducing the vegetation that helps to support steep slopes. Tree mortality resulting from drought, pests or any other threat could also pose an increase to landslides. Currently, Stanislaus County is not experiencing tree mortality as severe as other areas of California due to the drought and bark beetle. However, any future loss of trees would reduce the protection of steep slopes and thereby increase the probability for landslide occurrences.

Within the City limits of Modesto, the risk is minimal to the vulnerable populations.

Dam Failure Hazard

An article published by researchers D. E. Rheinheimer and J.H. Viers from the University of California at Davis discusses the effects of climate change on reservoir operations. The article is titled Combined Effects of Reservoir Operations and Climate Warming on the Flow Regime of Hydropower Bypass Reaches of California's Sierra Nevada. This article and others imply that climate change will impact the traditional operation measures and flow regimes used for dams as river conditions and water levels are fluctuating. Climate change may increase drought which lessens the water available or may produce intense sudden storms. Reservoir operators may need to change operations to mitigate the impact of climate change on rivers and the ecosystem.

The vulnerable populations within the City limits of Modesto could be impacted by a Dam failure. Probability of this is considered very low, but in the event, it is noted that; vulnerable populations are downstream from a potential dam failure. The populations most vulnerable are those that have the least time to evacuate and need assistance. Populations that may need assistance to evacuate include the elderly, disabled and young. The vulnerable population also includes those who may not have adequate warning to evacuation from emergency notification systems. The loss of life is impacted by the amount of early warning time first responders and the public has prior to the incident.

Flood Hazard

The impact of climate change may lessen the flood risk in some areas including Stanislaus County. Climate change may increase drought and lessen snowpack in the mountains resulting in less water in the region. Climate change may produce unpredictable weather patterns that results in strong or slow-moving storms that could cause localized flooding. It is anticipated that climate change will cause the sea level to rise. It is unclear how the rising sea level impacts of coastal flooding and coastal erosion may impact inland areas including Stanislaus County.

The vulnerable populations within the City limits of Modesto could be impacted by extreme flooding and the probability is considered high for recurrence as there is an incident recorded approximately every 14 years. Probability of this is considered high, emergency officials have received notice of potential flooding before the incident giving first responders time to notify and evacuate residents. The more vulnerable populations are those who are not able to self-evacuate including the elderly, young and those with disabilities. The homeless population is vulnerable in a flood incident and may need expanded notification and relocation efforts. Law enforcement and fire departments have coordinated the notification of homeless in past incidents. Drivers who ignore warnings of flood are also a population of concern particularly in the west side of the County at Eastin Road and Orestimba Creek. The county maintains crossing guards for this section, but they are sometimes ignored.

Wildfire Hazard

California has experienced a significant drought over the past five years. The drought has stressed all ranges of fuel in the wildland in Stanislaus County producing extreme fire behavior. The areas most affected by the drought would be the river bottom fuels and the fuels in the extreme west and east foothill portions of the County.

Though the risk in our County is extremely high, these areas are located well west and east of the City limits of Modesto. The only current risk to the vulnerable residents of the City would be air quality should an event arise within the County's State Responsibility Areas (SRA). Air Quality mitigation and emergency protocols are managed by the San Joaquin Air Quality District.

Strategic Plan

SP-05 Overview

Strategic Plan Overview

The Strategic Plan section of the Consolidated Plan is meant to clearly outline the City's priority needs, goals, and strategies for resource allocation of funds it receives on an annual basis from the Housing and Urban Development Department (HUD). Those HUD funds are The Community Development Block Grant (CDBG), The HOME Investment Partnerships Program (HOME), and Emergency Solutions Grant (ESG) programs. These three (3) sources of funding, in conjunction with other state and local leveraged resources will fund projects and activities that work to achieve the goals outlined in this section of the Consolidated Plan.

The goals and priority needs identified in this Consolidated Plan are informed by a specific process that the City carried out over a period of four months. The process involved the following ways of gathering feedback and input from the community and stakeholders:

- Resident survey (online and in-person)
- Telephone consultations and interviews from stakeholder organizations
- Public meetings, held by council district
- Direct feedback from City staff
- Stanislaus Community System of Care (CoC)
- Monthly City Manager Reports
- City Beat
- City Strategic Plan

This Strategic Plan is informed through the ways outlined above and in conjunction with the Needs Assessment and the Market Analysis sections.

The City of Modesto has recently updated its *Vision, Mission, Goals and Strategies* document – the 2020-2025 Strategic plan was adopted by City Council on August 14, 2019. The City has outlined ten (10) goals within three (3) target areas, those target areas are: Quality of life, Economic vitality, and Governance and service delivery. All the strategies outlined in this section align with the strategies and vision articulated in the City's Planning document. For a full view of the City's *Vision, Mission, Goals and Strategies* document, please see: http://modestogov.com/330/Reports-and-Publications

SP-10 Geographic Priorities

Describe the basis for allocating investments geographically within the jurisdiction (or within the EMSA for HOPWA)

HUD allows for the designation of priority areas that may be a primary focus of revitalization efforts. For the purpose of the Consolidated Plan, priority areas are loosely defined and are not strict and do not require any specific allocation of resources, matching, or partnerships. At this time, the City does not have nor plan to pursue any official HUD designated geographic based priority areas. The City funds program activities City-wide based on the low/mod block groups as defined by HUD on specific program eligibility (CDBG, HOME, and ESG) and in accordance with the priority needs listed in this section.

SP-25 Priority Needs

Priority Needs

The following priority needs have been established based upon on data from the Needs Assessment, Market Analysis, public meetings, and community survey results.

It is the City's intention to identify priority needs in a way that will allow the City to develop projects should new partnership opportunities or funding streams not identified within this plan arise during the lifecycle of this Consolidated Plan. Projects and activities will be funded at the City's discretion among

all priorities as deemed necessary based on local needs determined on an annual basis or during the program year.

1	**Priority Need Name**	**Affordable Housing**
	Priority Level	High
	Population	Extremely Low Low Moderate Middle Large Families Families with Children Elderly Public Housing Residents Chronis Homelessness Individuals People with Mental Illness People with Chronic Substance Use Disorders Veterans Survivors of Domestic Violence People with Physical disabilities People with Alcohol or Other Addictions
	Geographic Areas Affected	City-wide
	Associated Goals	Improve Quality and Increase Affordable Housing
	Description	Use HOME funds to leverage funding for the construction of new affordable rental housing units through partnerships with the State, the housing authority, and using tools such as land banking, the revolving loan fund, and housing set-aside funds. Use CDBG funds for home repair, acquisition of property for affordable housing, disability access/improvements, first time homebuyers, lead based paint services, energy efficiency improvements and similar projects.
	Basis for Relative Priority	Based on the Needs Assessment, Market Analysis, public meetings, and survey results, the high housing cost burden and low vacancy rates create a great demand for affordable housing for all households in the City, especially those earning below 80% of the area median income and those households that have special needs.
2	**Priority Need Name**	**Addressing and Preventing Homelessness**
	Priority Level	High
	Population	Extremely Low Low Income Large Families

		Families with Children Elderly Frail Elderly Public Housing Residents Chronic Homelessness Individuals People with Mental Illness People with Chronic Substance Use Disorders Veterans Survivors of Domestic Violence Unaccompanied Youth People with Mental Disabilities People with Physical Disabilities People with Developmental Disabilities People with Alcohol or Other Addictions
	Geographic Areas Affected	City-wide
	Associated Goals	Work Towards Ending Homelessness
	Description	Addressing the individuals and families that are experiencing homelessness was among the top needs identified in public meetings and the survey results from the communities. There is a need to provide services to those experiencing homelessness and temporary shelter situations so the homeless individuals and families may regain housing stability.
	Basis for Relative Priority	Data from the Needs Assessment and Market Analysis and public outreach indicate that addressing homelessness in Modesto and throughout the region is a top priority. As housing costs continue to rise and wages at lower income brackets have not kept pace with those increases, more families become at risk for homelessness.
3	**Priority Need Name**	**Enhance Infrastructure and Public Facilities**
	Priority Level	High
	Population	Extremely Low Low Moderate Large Families Families with Children Elderly Frail Elderly Public Housing Residents Chronis Homelessness Individuals People with Mental Illness People with Chronic Substance Use Disorders Veterans

		Survivors of Domestic Violence People with Mental Disabilities People with Physical Disabilities People with Developmental Disabilities People with Alcohol or Other Addictions Non-Housing Community Development
	Geographic Areas Affected	City-wide
	Associated Goals	Enhance Infrastructure and Public Facilities
	Description	Addressing this need will work to improve the physical structures throughout the City in CDBG program eligible areas. Improved infrastructure allows for further development of housing and community assets, increasing community outcomes and parlaying into additional affordable housing.
	Basis for Relative Priority	Through public meetings, survey results, and consultations, the need for improvements to streets, curbs, sidewalks, bus stops, street lighting, and gutters was identified.
4	**Priority Need Name**	**Public Services**
	Priority Level	High
	Population	Extremely Low Low Moderate Large Families Families with Children Elderly Frail Elderly Public Housing Residents Chronis Homelessness Individuals People with Mental Illness People with Chronic Substance Use Disorders Veterans Survivors of Domestic Violence People with Mental Disabilities People with Physical Disabilities People with Developmental Disabilities People with Alcohol or Other Addictions Non-Housing Community Development
	Geographic Areas Affected	City-wide
	Associated Goals	Access to Jobs, Education, and Other Services

	Description	Housing and general cost of living expenses continue to increase. Low- and moderate-income households may need support services to obtain and maintain standard affordable housing. Providing support services including but not limited to childcare, after-school programs for youth, recreational activities for seniors and supportive services for at-risk populations will assist low-and moderate-income households obtain and maintain standard affordable housing.
	Basis for Relative Priority	Based on feedback through public meetings held throughout the City and the community survey, the need for social and supportive services has increased since the development of the last Consolidated Plan. The City will plan to reach the public services cap using CDBG funds given the need justified through community feedback and the data analysis conducted in the Needs Assessment section of this Consolidated Plan.
5	**Priority Need Name**	**Community and Economic Development**
	Priority Level	High
	Population	Extremely Low Low Moderate Large Families Families with Children Elderly Frail Elderly Public Housing Residents Chronis Homelessness Individuals People with Mental Illness People with Chronic Substance Use Disorders Veterans Survivors of Domestic Violence People with Mental Disabilities People with Physical Disabilities People with Developmental Disabilities People with Alcohol or Other Addictions Non-Housing Community Development
	Geographic Areas Affected	City-wide
	Associated Goals	Enhance Infrastructure and Public Facilities Access to Jobs, Education, and Other Services
	Description	In an effort to stimulate the economy, the City proposes to address its economic goals through various programs. The creation and retention of full-time equivalent jobs will be provided via grant, rebate and loan programs. As the cost of living rises, there is a need to assist low- and

		moderate-income households increase their incomes. Job training and educational opportunities afford low- and moderate-income households an opportunity to increase their earning. The City will continue to explore new partnerships with businesses, developers and service providers to address community and economic development goals.
	Basis for Relative Priority	Based on the Needs Assessment and consultations there is a need to increase the number of jobs paying a living wage and there is a need to match existing job openings with trained individuals. Additionally, COVID-19 has created a need to assist businesses and developers with the retention and creation of jobs. Under community development, specific concerns regarding tree maintenance and illegal trash dumping were brought up in several public meetings as well as write-in comments on the community survey.

SP-30 Influence of Market Conditions

Influence of Market Conditions

The following table describes market conditions that may influence the City's investment of funds in affordable housing types as outlined below:

Affordable Housing Type	Market Characteristics that will influence the use of funds available for housing type
Tenant Based Rental Assistance (TBRA)	The City is not planning to use HOME funds for TBRA.
New Unit Production	Community Outreach, Stakeholders, and data from the Needs Assessment and Market Analysis indicate that low-income households are cost burdened and experience housing problems at a higher rate. The City plans to prioritize the creation of new affordable units understanding the housing and land market continue to increase in costs.
Rehabilitation	Data from the Needs Assessment and Market Analysis as well as outreach efforts for the development of this plan indicate that low-income households experience housing problems at a higher rate. These housing problems may include substandard housing. The City will prioritize the rehabilitation of existing housing, especially owner-occupied housing and rental housing serving special needs populations. The vacancy rates have steadily declined; this tightening of the market has increased cost in acquiring both rental and ownership rehabilitation opportunities.
Acquisition, including preservation	Similar to above, data and community outreach indicates that cost burden and housing problems are more likely among those households earning less than 80% AMI. The City will prioritize the preservation of existing affordable rental housing, especially those at risk of conversion to market rate. It is understood that the housing market continues to become more costly and all of the activities listed above will in turn also become more costly. The City will

	prioritize those projects where the funding will impact the greatest number of people in the greatest need.

SP-35 Anticipated Resources

Introduction

There are several potential funding sources to implement the strategies contained in the 2020 - 2024 Consolidated Plan. These sources include, but are not limited to:

- Funds covered under the Consolidated Plan: CDBG, HOME, and ESG
- Funds provided under various programs of the California Department of Housing and Community Development and the California Housing Finance Agency
- State and federal tax credits and mortgage credit certificates
- Tax exempt bond proceeds;
- Sources leveraged by local partners when contributing HUD Funds to projects including but not limited to Federal Home Loan Bank Affordable Housing Program

Anticipated Resources

Program	Source of Funds	Uses of Funds	Expected Amount Available Year 1				Expected Amount Available Reminder of ConPlan
			Annual Allocation:	Program Income:	Prior Year Resources	Total:	
CDBG	public - federal	Acquisition Admin and Planning Economic Development Housing Public Improvements Public Services	$1,900,954	$800,000	$1,069,442	$3,770,396	$7,603,816
HOME	public - federal	Acquisition Homebuyer assistance Homeowner rehab Multifamily rental new construction Multifamily rental rehab New construction for ownership TBRA	$934,812	$400,000	$4,935,068	$6,269,880	$3,739,248
ESG	public - federal	Conversion and rehab for transitional housing Financial Assistance Overnight shelter	$164,549	$0	$0	$164,549	$658,196

		Rapid re-housing (rental assistance) Rental Assistance Services Transitional housing					

Explain how federal funds will leverage those additional resources (private, state and local funds), including a description of how matching requirements will be satisfied

Leveraging HUD resources allows the City to use local, state and other funds to combine with federal resources to maximize reach and impact of the City's HUD funded programs. Through the vetting of project applications for HUD funding, the City emphasizes the importance of leveraging to potential applicants. In Program Year 2019, the City developed a new project scoring system that places higher weight and rewards project applicants with higher level of leveraged funds. Upon project award, the City verifies that leverage funds pledged in the project application have been awarded/committed to the respective applicant/project.

Entitlement Funds:

The following are the HUD matching requirements for the ESG and HOME programs:

- **ESG Match Requirements:**
  For the ESG program, the City requires that ESG sub-recipients provide a dollar-for-dollar match for ESG funds received. Typically, the City is able to generate significantly more match than the amount required through its allocation of CDBG funds for ESG activities and primarily through the cash and non-cash contributions provided by ESG sub-recipients as a result of the generosity of their donors, supporters, and other funders.

  Cash contributions mean cash expended for allowable ESG costs, while noncash contributions mean the value (using a method reasonably calculated to establish fair market value) of any real property, equipment, goods, and services contributed to an ESG activity, provided that if these had to be paid with ESG funds, the costs would have been allowable.

  Specific sources of cash contributions include: private individual donors, CDBG funds, local fundraising cash, state funds, local funds, foundation grants, and in-kind contributions (value of in-kind contributions must be reasonable and the method used to establish value must be provided).

- **HOME Match Requirements:**
  The 25% HOME match requirements are met through the contributions or layers of funds that the developers provide for each HOME -assisted project. The match includes private financing, waiver or deferral of development fees approved by the City Council, Tax Credit Allocations, and any other eligible source. The City also has accumulated a match surplus from previous years.

The City intends to satisfy this requirement by allocating sufficient funds from the Affordable Housing Fund for this purpose.

Interdepartmental Leveraging

In the past, HUD funds have been used with resources from other City departments in the implementation of projects related to public facilities, infrastructure improvements, and park improvement projects. Through these projects HUD funds have been used in combination with local funds such as the City's Water Fund and resources related to parks projects.

In addition, the City encourages the construction Very Low and Low Income Housing development projects within the City and provides Capital Facility Fee (CFF) deferral, credit and exemption of CFF fees.

State Housing and Community Development Sources

In addition to federal resources, the State of California provides funding for affordable housing development, homebuyer programs, transit-oriented development, special needs housing, and infrastructure. Most projects that the City supports are through partnerships with local organizations who leverage significant amounts of resources. The following is a list of sources that, through such partnerships, the City has either directly or indirectly accessed in the past or seeks to access in the future:

- Low-Income Housing Tax Credit Program: administers both federal and State programs that encourage private investment in affordable housing.
- Permanent Local Housing Allocation (PLHA) Program:
- Affordable Housing and Sustainable Communities (AHSC) Program: funding for Green House Gas reducing-transit oriented affordable housing development and transportation-related infrastructure.
- Mental Health Services Act (HMSA): State funds administered at the county level to serve low-income mental health services clients.
- Housing Related Parks Program: Competitive funding for Parks that support affordable housing projects.
- SB 2 – The Building Homes and Jobs Act: provides a "permanent source" of funding for affordable housing by imposing a $75 fee on each recorded document up to a maximum of $225 per transaction per parcel, estimated to generate $200 to $300 million annually, statewide. The legislation requires that for moneys collected on and after January 1, 2018 until December 31, 2018, that 50% of the funds go to local governments, and for money's collected after January 1, 2019, that 70% be provided to local governments.
- Homeless Emergency Aid Program (HEAP): a $500 million block grant program designed to provide direct assistance to cities and counties to address the homelessness crisis throughout California. HEAP funds are intended to provide funding to Continuums of Care (CoCs) and large cities with populations over 330,000, so they may provide immediate emergency assistance to people experiencing homelessness or those at imminent risk of homelessness.

- California Emergency Solutions and Housing (CESH) Program: provides funds for a variety of activities to assist persons experiencing or at risk of homelessness as authorized by SB 850.
- Homeless Housing, Assistance, and Prevention Program (HHAP): HHAP is a block grant program designed to provide jurisdictions with one-time grant funds to support regional coordination and expand or develop local capacity to address their immediate homelessness challenges.

If appropriate, describe publicly owned land or property located within the jurisdiction that may be used to address the needs identified in the plan

One of the challenges in building new affordable homes is acquiring land suitable for housing. In 2019, the State of California took several actions to make state and local public lands available for affordable housing development including:

- An executive order to make excess state land available for affordable housing
- Connecting affordable housing developers to local surplus land and strengthening enforcement of the Surplus Lands Act
- Requiring cities and counties to inventory and report surplus and excess local public lands to include in a statewide inventory

During this Consolidated Plan period, the City will work to identify of City owned properties to meet this requirement with the intent to continue to add to the City's affordable housing stock. The intent is to transfer eligible properties to non-profit organizations to utilize the properties for low income households or rehabilitate the units and sell them to a low-income household.

Additionally, the City, as the successor housing entity to the former Redevelopment Agency of the City of Modesto, owns a parcel that will be utilized to develop 74 affordable housing units for low and very low-income households. The City is working with EAH, a non-profit affordable housing developer, to obtain project construction financing including State grants and tax credits to leverage HOME funding.

SP-40 Institutional Delivery Structure

Explain the institutional structure through which the jurisdiction will carry out its consolidated plan including private industry, non-profit organizations, and public institutions.

Responsible Entity	Responsible Entity Type	Role	Geographic Area Served
Community and Economic Development Department	Departments and agencies	Economic Development Homelessness Non-homeless special needs Ownership Planning Rental neighborhood improvements public facilities public services	City-wide
Parks, Recreation and Neighborhoods Department	Departments and agencies	Planning neighborhood improvements public facilities	City-wide
Housing Authority of the County of Stanislaus	PHA	Homelessness Ownership Planning Public Housing Rental Housing	City-wide
Stanislaus County	Government	Economic Development Homelessness Non-homeless special needs Planning Public Housing	City-wide
Public Works Department	Departments and agencies	Planning neighborhood improvements public facilities	City-wide
Police and Fire Departments	Departments and agencies	Planning	City-wide
Modesto City Schools	Public institution	Homelessness Non-homeless special needs Planning neighborhood improvements	City-wide

		public facilities public services	
California Association for the Physically Handicapped	Non-profit organizations	Non-homeless special needs public facilities	City-wide

Assess of Strengths and Gaps in the Institutional Delivery System

The comprehensive nature of the delivery system in the City is one of its strengths. The delivery system includes public agencies, private firms, and non-profit organizations that have involvement in housing, providing services, homelessness, and community development issues. Each type of organization involved contributes its own knowledge and trust with the community in which they serve, which ensures a more comprehensive approach to solving housing and community development problems.

The City of Modesto has been a key partner in the Focus on Prevention initiative which began in 2014 and aimed at improving the coordination among service providers and engaging multiple community sectors to address underlying causes and needs of underserved population groups. The City's active involvement in the Stanislaus Community System of Care (CSOC), which acts as the local Continuum of Care, is key in ensuring that there's coordination between public and assisted housing providers and private governmental health, mental health and service agencies.

The Stanislaus Community System of Care has steadily improved communication and coordination since the development of the last Consolidated Plan. The group is led by a 25-member council representing all major sectors of the community, government, non-profit, service and housing agencies, and healthcare. There are regularly scheduled meetings where all groups gather and discuss potential gaps in the system, ways to further coordinate to create system efficiencies, and methods of sharing resources in a way that best serves the community. This intentional increased coordination at the local and County level have so far proven to be a key strength in the delivery of services. It has further allowed for local needs to bubble up to a place with wider knowledge and resources while the issues maintain local context and conditions.

Working alongside the CoC is the Stanislaus Homelessness Alliance (SHA). The SHA aims to develop a unified vision and strategy with clear outcomes. The SHA is comprised of elected officials and non-government community leaders with the appropriate level of authority necessary to implement homelessness strategies and initiatives within the community. The SHA meets monthly and documents all meeting activities within the Stanislaus County CoC website at: https://csocstan.com/get-involved/sha/

There is always room for improvement. The comprehensive nature of the delivery system creates places where interests and resources from the different entities involved will not always align. Coordination among the various agencies can sometimes be difficult, even among agencies within the same organization. Because the system involves government agencies, and both nonprofit and for-profit agencies, there is room for a difference of opinion in how to address certain issues that may arise. These issues will continue to be resolved through open and clear communication and the implementation and evolution of the recently established Coordinated Entry System for housing and homeless services.

*Blank cells indicate the service is not targeted to that particular population

Describe how the service delivery system including, but not limited to, the services listed above meet the needs of homeless persons (particularly chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth)

The City funds and is an active partner in the service delivery system. The City has several different services to respond to the needs of the homeless, including shelter and preventative services. Such services include those directed at the social and health needs of homeless families and individuals. These wrap-around services are targeted to the general homeless population as well as to specific populations such as youth, foster youth, veterans, chronically homeless and families with children.

The homeless response task force quickly assembled and from October 2018 to February 2019, established and opened the Modesto Outdoor Emergency Shelter (MOES) on February 20, 2019. This area under the 9th Street Bridge at the Tuolumne River Regional Park was set up to provide the necessary access and a safer and more secure place for those staying at this shelter. Since then, MOES was managed in collaboration with the Stanislaus County Community Services Agency and a local non-profit service provider to provide ongoing case management, connect the residents to services, and work with getting the clients housing ready. When MOES opened, the camp housed 415 residents, roughly one tent for every family.

The MOES was officially closed as of Wednesday, December 11th, 2019. A total of 182 individuals from the MOES site were relocated to the newly formed Access Center Emergency Shelter at 330 9th Street which officially opened on December 2, 2019. The Access Center is a low barrier shelter that allows persons be sheltered with less restrictions as those imposed by traditional homeless shelters.

Services provided to MOES residents during their stay included but not limited to assistance with form completion, obtaining birth certificates, case management, assistance benefits, identification cards, life skills, homeless court, disability services, education, employment services, food assistance, health services, housing search, medical intervention, material goods, mental health, counseling, mental health referrals, senior services, and social security assistance.

The City will continue to partner with the respective entities for the continued operation of the Access Center which is now an integral part of the area's service delivery system.-

Even with such a comprehensive approach, certain populations remain hard to house. Such as those chronically homeless persons who are severely mentally ill and those afflicted by chronic substance abuse disorders. The City of Modesto will continue to work with its partners to assist chronically homeless individuals within the housing continuum.

Describe the strengths and gaps of the service delivery system for special needs population and persons experiencing homelessness, including, but not limited to, the services listed above

While there are programs that are targeted to meet the needs of special needs homeless such as persons with HIV/AIDS, veterans, youth, aging-out foster youth, women and children, and the mentally ill, there are gaps in case management and housing opportunities for single individuals, couples, and homeless individuals with pets.

In recent years, there have been several significant local efforts at closing gaps in the delivery of services to avoid the duplication of services and to provide services in the most effective and efficient manner. The following are key examples of the strengths in the current service delivery system:

1. Coordinated Entry: One of the most significant steps at closing the gaps of the service delivery system which has been recently implemented is the Coordinated Entry System. Coordinated Entry is a consistent, community wide intake and placement process through which people experiencing homelessness are efficiently connected to available housing services within the community. With Coordinated Entry, homeless individuals and families complete standard triage assessment survey that identifies the best type of services for that household. Participating programs accept referrals from the system, reducing the need for people to traverse the county seeking assistance at every provider separately. The process helps prioritize housing and homeless assistance based on vulnerability and severity of service needs to ensure that people who need assistance the most can receive it in a timely manner. The process also provides information about service needs and gaps to help plan assistance and identify needed resources in our community. The community has worked hard to improve on this process, and ensure that we are assisting poverty-level families not only with prioritizing them for their housing needs, but assessing all other needs. Now that these needs are assessed case managers will continue reaching out to the members to connect to applicable services until housing becomes available.

2. Another significant strength in the delivery system is the Community Assessment, Response, and Engagement (CARE) Multidisciplinary (MDT) personnel strategy. The CARE team is a joint strategy from the City of Modesto as well as Stanislaus County. The CARE team is made up of staff that are capable of engaging individuals and households in crisis, distressed in the moment for any number of reasons relating to mental or physical health. The creation of the CARE team was catalyzed by the urgent need to address a growing number of individuals that have extremely high contact rates with multiple local service agencies and may be found out in public visibly distressed and in need of support. This CARE team conducts regular outreach and engagement with what are most often the “hard to reach” individuals and households. The CARE team activity is tracked in detail through the CoC and its reporting.

3. Access Center: The City of Modesto and Stanislaus County partnered with the Salvation Army to construct an additional 182 bed, low barrier emergency shelter at 330 S. 9th Street, Modesto. The Salvation Army is the Operator of the new 182 bed Access Center Emergency Shelter. The shelter is intentionally low-barrier (showers, drug and alcohol testing are not required to enter) to eliminate reasons that individuals may choose not to enter emergency shelter and begin a

path to self-sufficiency. ACES was designed and constructed to allow homeless individuals to enter with pets, partners and possessions, the three most important impediments to entering shelter. When MOES closed in December 2019, over 500 homeless individuals previously camping at the site were eligible to transition to the new low barrier emergency shelter.

4. Downtown Streets Team (DST): DST employs a volunteer Structured Daily Activity (SDA) model in which those experiencing or at risk of homelessness volunteer on beatification projects within Modesto and Stanislaus County. Incentives for volunteering include, but are not limited to, intensive case management, employment navigation, service connection, and a non-cash basic needs stipend. The DST model is designed to help Team Members (clients) activate skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed. These include things like maintaining a schedule, team work, accountability, self-confidence and more. Through the SDA model, Team Members rebuild all of these as well as regain a sense of pride in and stewardship of their community. In addition, Team Members gain valuable experience that they can list at the top of their resume to overcome long experience gaps. SDA projects are generally beautification projects, which includes basic tasks such as litter cleanup in the community. Thus, the model inherently provides a public service and a public benefit in the communities the program serves.

The City works in close coordination with service providers and utilizes case management expertise of a household's individual circumstance to best navigate a family's next steps along the housing spectrum. For those special needs populations, local service providers work closely with the City and other organizations within the CoC to ensure an assessment of needs is completed and then matched with the right level of services and interventions.

Treatment for substance abuse disorder is available in the community, but there are limited opportunities for persons who are actively using substances to be housed other than an overnight emergency shelter. Overnight shelter for those who are severely mentally ill is also limited. Services and supportive housing (transitional and permanent) are available but those with the most severe mental illness often do not have housing that is coupled with the level of care they require. These populations are often housed temporarily through short-term confinement or institutionalization as the result of arrest by law enforcement, but struggle to find suitable permanent housing placements.

Provide a summary of the strategy for overcoming gaps in the institutional structure and service delivery system for carrying out a strategy to address priority needs

The primary mechanism behind the institutions that are delivering services and housing throughout the community is the CoC. The CoC has continued to evolve its partnerships and strengthen its communication and coordination among partners. An investment into the CoC will yield the most results with the goal of strengthening the service delivery system. There will rarely be enough funding to adequately meet the need of community, however as the communities within the County continue to

invest resources into the CoC, this will be the primary strategy in overcoming any gaps in the service delivery system that may be identified.

Through the CSOC's consistent collaboration with all the all the programs that address homeless and affordable housing issues within the region. This sets the tone of the collaborative efforts. Through these collaborative efforts the region pulls together to unify system delivery. Evidence of these practices through the provider engagement with coordinated entry, with this provider coordination is the ongoing case conference meetings that ensure housing first and housing readiness is efficiently being rolled out. The providers are unifying case management practices with a robust look at essential supportive services to ensure that the all the needs of the recipient are addressed.

The Stanislaus Homeless Alliance (SHA) was introduced as an entity that operates in close conjunction with the CoC. The SHA will work to offer clear strategies and a unified approach to homelessness within the County. The function of the SHA will be to leverage and support existing partnerships within the CoC, working to mitigate the opportunity for gaps to form within the service delivery structure. Addressing the shortfall of available resources to meet the need, the City will utilize state funding where possible to fill gaps and further leverage private funding when possible.

The Citizens' Housing and Community Development Committee is a committee appointed by the City of Modesto City Council. This committee makes funding recommendations to the City Council regarding HUD funding, and this committee is comprised of representatives from a wide range of government agencies as well as several citizens at-large. These at-large citizens are often represented by low-income and racial minority groups. This committee meets once a month and discusses needs, issues, and strategies on how to utilize available funding to best support the community. This committee, being comprised of members of the public and governmental organizations is well suited to identify service delivery gaps and coordinate strategies to and effective solutions to address those gaps in the service delivery system.

The City of Modesto will be a recipient of State of California's Permanent Local Housing Allocation (PLHA) Program funds. These funds will be used to provide affordable housing opportunities to low income and homeless families and individuals which will assist the City in carrying out its strategy to address the priority needs (affordable housing and addressing homelessness).

SP-45 Goals Summary

Goals Summary Information

The following table outlines the goals, funding, and what the funding aims to achieve. The Goal Outcome Indicator in the far-right column indicates the type of activity the funding will be used for and the desired quantity. These are the five-year goals being pursued in program years 2020 through 2024; not every goal will receive the exact same amount of funding each year as the amount of funds given from HUD will fluctuate.

Sort Order	Goal Name	Start Year	End Year	Category	Geographic Area	Priority Needs Addressed	Funding	Goal Outcome Indicator
1	Improve the Condition and Increase Supply of Affordable Housing	2020	2024	Affordable Housing	City-Wide	Affordable Housing	CDBG: $3,517,889 HOME: $4,172,267	400 Households Housing Units
2	Works Towards Addressing and Preventing Homelessness	2020	2024	Homeless	City-Wide	Addressing and Preventing Homelessness	CDBG: $837,078 HOME: $142,414 ESG: $761,040	9,400Persons assisted 40 Households assisted
3	Increase Access to Jobs, Education, and Other Services	2020	2024	Non-Housing Community Development	City-Wide	Community and Economic Development	CDBG: $338,175	7,000 Persons Assisted
4	Enhance Infrastructure and Public Facilities	2020	2024	Non-Housing Community Development	City-Wide	Community and Economic Development	CDBG: $3,559,736	6,000 Persons assisted
5	Administration	2020	2024	Administration	City-Wide	N/A	CDBG: $1,179,585 HOME: $359,379 ESG: $61,705	NA

Goal Descriptions

1	Goal Name	**Improve the Condition and Increase Supply of Affordable Housing**
	Goal Description	Through the Needs Assessment, the Market Analysis, public meetings, consultations with stakeholders, and survey results, the lack of affordable housing in the City consistently stood to be the number one issue. The activities tied to this goal will work to preserve and expand the supply of affordable housing.
2	**Goal Name**	**Addressing Homelessness**
	Goal Description	Homelessness has become an issue for the region as a whole, and because Modesto is the County Seat and the center for most supportive services, the goal of working towards ending homelessness is a goal for the HUD funding. The activities tied to this goal will support getting individuals and families out of homelessness as well as preventing from individuals and families from becoming homeless. The City is engaged in both supporting those agencies that provide services to those that are homeless as well as providing support in housing options across the spectrum: emergency shelters, transitional shelters, rapid re-housing, and permanent supportive housing.
3	**Goal Name**	**Increase Access to Jobs, Education, and Other Services**
	Goal Description	It is often most difficult for those with less education and currently lower wages to increase their economic prosperity. The activities tied to this goal will work to increase residents' job readiness through skill training, promotion of business, educational opportunities, and other strategies that may serve low-income populations in their attempts to seek economic opportunities.
4	**Goal Name**	**Enhance Infrastructure and Public Facilities**
	Goal Description	The investment in publicly owned facilities and infrastructure improves the community and neighborhoods in which they serve. This investment directly impacts housing development and economic growth of communities. The activities tied to this goal will improve parks, streets, sidewalks, lighting, ADA accessibility, among other activities that serve residents.
5	**Administration**	**Administration for CDBG, ESG, and HOME programs.**
	Goal Description	Funding for the administration of the CDBG, ESG, and HOME programs.

Estimate the number of extremely low-income, low-income, and moderate-income families to whom the jurisdiction will provide affordable housing as defined by HOME 91.315(b)(2)

The City has released a Request for Proposals (RFP) to select experienced and financially capable development organizations, including Community Housing Development Organizations (CHDO) to assist the City with implementing Affordable Housing Development projects.

The City estimates, based on prospective projects, approximately 90 to 100 housing units may be developed during the next five years to provide low and very low-income units to households. Additionally, the City expects that 25% of these units will serve very low-income households at or below 30% of the area median income. The City estimates the remaining units to be available to households that are between 60% to 80% of the area median income.

SP-50 Public Housing Accessibility and Involvement

Need to Increase the Number of Accessible Units (if Required by a Section 504 Voluntary Compliance Agreement)

The Housing Authority is not under a Section 504 Voluntary Compliance Agreement.

Activities to Increase Resident Involvements

The Housing Authority of the County of Stanislaus (HACS) provides homeownership resources to participants in the Housing Choice Voucher Program. The Family Self-Sufficiency (FSS) Program has established partnerships with a variety of community resources to refer participants for services including pre- and post-secondary education, health care, childcare, employment development, supported employment, and small business development including micro-loans. The FSS Program also encourages families to participate in financial wellness programs including financial literacy and credit repair with an emphasis on long-term financial stability for the purposes of homeownership. Supportive services are provided through the Stanislaus County Assistance Project, the Stanislaus County Department of Mental Health, or Stanislaus County Integrated Services Agency.

The Housing Authority previously implemented a services and communication "quality control" system that provides the Housing Authority with immediate customer feedback and identifies areas that may need improvement. The Housing Authority has also implemented a resident education program with regularly scheduled meetings and written communications on agency policy, rules, and leases.

Efforts to improve communications with residents and program participants include on site resident training/informational meetings, regular newsletters and flyers.

Efforts to improve communications with residents and program participants include: on site resident training/informational meetings, regular newsletters and flyers. The HACS has implemented a "curbside" appearance program. The focus of the program is the exterior of buildings, parking areas, play grounds and other areas of the complexes. Rodent and insect problems are addressed when residents report a problem and/or on Annual Inspections. In an effort to better education residents concerning these problems, information is regularly provided through the HACS newsletter. These actions have assisted the HACS in creating an atmosphere which emphasizes customer satisfaction and communication.

Further, the HACS has a Resident Advisory Board (RAB) which represents the residents assisted by the HACS. The RAB assists in the development of the HACS five-year Plan. Resident involvement will continue to be supported in an effort to enhance the service delivery by taking into account input from those with lived experience.

Reach- Stanislaus Housing Authority non-profit to provide scholarships to their residents.

These actions have assisted the Housing Authority in creating an atmosphere which emphasizes customer satisfaction and communication.

Is the public housing agency designated as troubled under 24 CFR part 902?

Not Applicable. The Housing Authority of the County of Stanislaus is a high Performer, not a troubled Public Housing Authority.

Plan to remove the 'troubled' designation

N/A

SP-55 Barriers to affordable housing

Barriers to Affordable Housing

There are a number of codified policies in Modesto that may contribute to the current lack of affordable housing.

Development Fees:

- Zoning Change Fee
    - Should a development or housing unit be proposed for a site where it is not consistent with the General Plan and/or should a project be proposed for a site it is not currently permitted by zoning, a fee of up to $5,231 is required depending on the zoning change needed.
    - These costs could potentially stifle the development of housing in areas where it may otherwise be reasonable
        - Given a low supply of housing affordable to low- and/or moderate-income households, these costs may inhibit housing choice for those households
- Impact Fee, land dedications, site improvements
    - The costs to integrate necessary infrastructure (streets, sidewalks, storm drains, etc.) are bore by the developer, but are ultimately passed on to the consumer
    - These costs contribute to pricing out low- and/or moderate-income households for affordability reasons
    - The City may provide fee waivers in some cases and/or fee deferrals in others allowing construction to move forward with less up-front costs
- School district fees
    - School fees range from $2.97 to $4.66 per square foot; with an average of $3.82 per square foot
    - These may add significant costs to larger developments, contributing to the pricing out of low- and/or moderate-income households

Accessory Dwelling Units (ADU):

- The ADU ordinance in Modesto was passed on October 1, 2019 through City Ordinance 3704-C.S. The ordinance is currently under further review to meet the demands of state law
- The ADU ordinance will be integrated into Modesto's Downtown Master Plan and the City will coordinate with the County to have "shelf-ready" plans to increase speed and availability in developing ADU's where appropriate.

The City of Modesto regularly analyzes City building codes, market constraints, and housing/non-housing development policies, be it through the Consolidated Plan process, the Analysis of Impediments update, or the Housing Element update. The City acknowledges that outdated building codes and land use policies inhibit the development of housing for all income levels and the City understands the importance of regularly analyzing how local policies and ordinances impact the housing market for those households earning less than 80% of the area median income.

The City was awarded State SB2 PGP program funds. To assist in mitigating any barriers to affordable housing, the City will utilize funds to develop an Affordable Housing plan to identify opportunity sites for affordable housing; funds will also be used to of explore zoning code amendments to facilitate housing development.

Strategy to Remove or Ameliorate the Barriers to Affordable Housing

The City has worked to eliminate internal barriers to the development of affordable housing through the following continuing efforts:

- Providing funding for land acquisition, secondary financing, and infrastructure costs
- Assisting qualified households to purchase homes utilizing the Homebuyer Assistance Program
- Exemption or deferral of Capital Facilities Fees for projects providing low-income housing
- Using the adopted streamlining process for environmental review; HEROS
- Continuing to work with non-profit housing agencies in the provision of supportive services and programs
- Using streamlined application review and permit processing

To mitigate the negative effects of public policies that serve as barriers to affordable housing, the City of Modesto has policies in its impact fee program for affordable housing. The current Capital Facility Fees (CFF) Policies and Procedures provide, with respect to very low- and low-income housing exemptions, the total number of housing exemptions granted are not to exceed two percent (2%) of the cumulative total CFF program housing units. The CFF Policies and Procedures also allow a Community Housing and Development Organization (CHDO) to submit an application and request CFF be waived on new affordable units for households earning sixty (60%) or less of the Area Median Income.

In 2017, the State of California passed a 15-bill housing package aimed at addressing the state's housing shortage and high housing costs. Specifically, SB 2, which is part of the 15-bill housing package, established a permanent source of revenue intended to increase the affordable housing stock in California.

In 2019, the State of California released a Notice of Funding Availability to all local governments in California for the SB2 Planning Grants Program (PGP). The PGP program is intended for the preparation, adoption, and implementation of plans that streamline housing approvals and accelerate housing production.

In response to the NOFA, the City of Modesto applied for and was awarded $625,000. Funds will be partially used for the development of an Affordable Housing Plan which will consist of two primary components:

1. The first is identification of opportunity sites for affordable housing, along with an analysis of potential barriers and/or constraints related thereto. This is intended to maximize residential development potential on sites that have meaningful capacity for residential development. Existing barriers to new residential development will be identified and examined. Strategies to reduce or eliminate these barriers will be documented.

2. The second primary component of this AHP project will consist of a series of zoning code amendments intended to facilitate housing development at new locations / sites / zoning districts where residential land uses may not be allowed under the current code. Zoning code amendments, in addition to other available remedies, will also be prepared to reduce / eliminate the barriers identified as described above.

The SB2 Planning grant will play a significant role in assisting the City address affordable housing needs and any barriers currently in place.

All of the goals from the City's 2015-2023 Housing Element are relevant to the Consolidated Plan, and several goals explicitly aimed at removing barriers to the development of housing within the City.

Goal Number 4 of the 2015-2012 Housing Element is "Ensure land use and zoning procedures accommodate housing," stating that the City will work to track changes in Housing Law as to be consistent with supportive of State and federal laws. The goal also aims to review local regulations periodically for the ability to accommodate projected housing demands. Goal number 5 is "Reduce government constraints," with the aim of continuing to identify any development fees, impact fees, and other municipal costs that may unduly constrain housing production.

The City is also currently in process as a partner in the development of the Regional Analysis of Impediments to Fair Housing Choice (AI) for Stanislaus County. The AI will analyze public policies, strategies, and housing market practices that could potentially create barriers to affordable housing for households within the City. The AI will also identify actions to be taken in order to alleviate any barriers identified.

SP-60 Homelessness Strategy

Describe how the jurisdiction's strategic plan goals contribute to:

Reaching out to homeless persons (especially unsheltered persons) and assessing their individual needs

The City participates in Continuum-wide planning to move individuals and families from homelessness to permanent housing and independent living through a network of housing linked to supportive services. The local Continuum of Care (CoC), Stanislaus Community System of Care, released its *Plan to Address Homelessness in Stanislaus County*[1] in January 2019. The plan contains five core strategies to address homelessness, each of those strategies aligns with the goals and efforts of this Consolidated Plan. Below is a table that outlines three of the core components of the *Plan to Address Homelessness in Stanislaus County* and how that component relates to this Consolidated Plan:

County Plan Component	City of Modesto Plan Overlap
Outreach and engagement	The City makes ESG funds available to organizations that conduct street outreach and engage with households directly. Through the use of ESG funds, the City supports a coordinated entry system (CES) and the individualized support that is the most efficient use of funds.
Creation of and access to housing	The City plans to use CDBG and HOME funds to support the creation and preservation of affordable housing. Housing is always part of the plan in addressing homelessness, and the City's Consolidated Plan places a large emphasis on the development of affordable housing for low- and moderate-income households.
Supportive services	The City supports this component through use of funds focused on public services (CDBG) as well as ESG funds that help fund organizations that offer direct services to those individuals and households experiencing homelessness.

Along with this adopted plan, in recent years the CoC has been strategized through working groups and with the introduction of the Stanislaus Homeless Alliance (SHA). This revamping of the CoC includes a partnership with HomeBase resulting in a more efficient CoC application and NOFA process with aims to increase CoC funding. All ESG sub-recipients that carry out emergency shelter activities have a street outreach component to its service provision. Additionally, these ESG sub-recipients also participate in the local Continuum of Care's point-in-time count, which affords them an opportunity to reach out to unsheltered persons.

The CoC will continue the implementation of the Coordinated Entry System (CES) as the to match those individuals experiencing homelessness to the services that best suit their needs including connecting homeless to housing opportunities. The CoC formed a CES Task Force that will continue to meet

[1] https://stancares.wpcomstaging.com/wp-content/uploads/2019/01/Plan-to-Address-Homelessness-in-Stanislaus-County.pdf

regularly to assist with the continued evolution and implementation of the CES and address any issues that arise. The CoC will provide continued training for participating service providers and continue developing any necessary tools to effectively manage the system. This matching of appropriate needs is the most effective use of resources and minimizes bottlenecks in the service delivery system.

The CoC has several programs that focus on outreach and individuals and family engagement. The Access Center is located in Modesto and has a team that goes out into the communities five (5) days a week to connect those experiencing homelessness with services and benefits. The OEC also provides assessments, referrals, and a physical entry point into the Coordinated Entry System.

The following are examples of local project efforts aimed at reaching out to homeless persons and assessing their needs which will be part of the City's Strategy. The City will continue to partner and be part of these efforts of reaching out to homeless individuals:

Center for Human Services – Street Outreach
Since Program Year 2018-19, the City of Modesto has provided ESG funds to Center for Human Services to conduct street outreach for homeless youth. The program's objective is to become familiar with youth hangouts and become a consistent presence among the youth with the end goal of engaging homeless youth and connecting them to services including but not limited to shelter to access shelter, housing, and/or support services. The City will continue to partner with Center for Human Services in order to continue reaching out to youth with the goal to engage them early enough to interrupt their homelessness cycle.

Community Assessment, Response, and Engagement (CARE) Multidisciplinary (MDT) personnel strategy:

The CARE Team mission is to facilitate the expedited identification, assessment, and linkage of homeless individuals to housing and supportive services within Stanislaus County subject to the provisions of the Welfare and Institutions Code (WIC) section 18999.8. This WIC Code section was added effective January 1, 2018, to authorize California counties to establish multidisciplinary personnel teams to address homelessness within the county.Every CARE Team member is tasked with conducting outreach and engagement. The strength of the CARE Team comes from the ability to leverage experience and expertise from multiple disciplines when assisting a CARE client. During the initial and on-going client contacts, rapport is developed, and client issues are identified and prioritized. When issues are general, CARE Team members will link the client to a resource; whereas when the need is more specific, the relevant team member provides specialized care. For example, when the CARE Team identifies a CARE client who has agreed to take a mental health assessment, the CARE Team clinician will respond to the location to provide brief counseling, and schedule and conduct the mental health assessment. The need for this type of service was identified during the CARE planning process, and by implementing this, the CARE program is utilizing an innovative approach to meet the needs of the CARE population.

Addressing the emergency and transitional housing needs of homeless persons

The City of Modesto is where most services (including shelter and transitional housing) are located in Stanislaus County. The City of Modesto funds shelter activities to the maximum extent possible with

CDBG Public Services and ESG funds. Other strategies designed to address homelessness, such as financial assistance and supportive housing are carried out through other City funding sources to build affordable housing designed to serve youth experiencing homelessness and other extremely low-income/homeless populations.

All individuals and families receiving services through the CoC are receiving care that is individualized. Meaning whether the individual/family is in an emergency shelter or a transitional shelter the most effective support the CoC can offer is that which directly meets the needs of the individual/family as opposed to a "one-sized-fits-all" type of support.

The service providers and stakeholders involved in the CoC meet monthly to discuss issues and concerns that arise, this discussion may also include a look forward to needs and gaps experienced by a specific sub-population. These meetings monthly meetings are an effective place to coordinate the support and care for those individuals and families that are in an emergency shelter or a transitional shelter.

The City will partner with shelter providers in Modesto such as The Salvation Army to provide emergency shelter and low barrier shelter services to homeless persons. The newly formed Access Center Emergency Shelter will provide low-barrier (showers, drug and alcohol testing are not required to enter) to eliminate reasons that individuals may choose not to enter emergency shelter and begin a path to self-sufficiency. ACES is designed to allow homeless individuals to enter with pets, partners and possessions, which are typically the three main impediments to entering into a homeless shelter.

With respect to transitional housing, the City will partner with local service providers to provide funding whenever possible for the operation of transitional living facilities such as:

Center for Human Services – Pathways Program: Pathways is a 16-bed transitional living program that addresses the need for shelter and support services for homeless youth 18 to 21 years of age. Shelter is provided up to 21 months. The Pathways Program provides basic life skills, interpersonal and jobs skills training, assistance with obtaining medial insurance and assistance related to advancing educational opportunities.

Stanislaus County Affordable Housing Corporation (STANCO): STANCO operates transitional housing facilities that provide housing opportunities for homeless persons with mental disabilities.

Helping homeless persons (especially chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth) make the transition to permanent housing and independent living, including shortening the period of time that individuals and families experience homelessness, facilitating access for homeless individuals and families to affordable housing units, and preventing individuals and families who were recently homeless from becoming homeless again.

The CoC continues to home in on system processes and address gaps in the service delivery that can be shored up to ensure that specific vulnerable sub-populations do not fall through the cracks. As the CoC

partnerships grow and each entity becomes more understanding of their role as well as the roles of other agencies, the system will yield more effective results for those individuals and families that are experiencing homelessness. The Coordinated Entry System (CES) is an effective tool in minimizing the number of days someone experiences homelessness.

The delivery of wrap-around services is critical to the long-term success of those individuals and families that have experienced homelessness but are now housed. Through the CoC, there are housing supports made available, offering financial assistance, security deposits, legal services, credit repair, utility payments, counseling, among others. It is understood by the CoC and its partners that the end goal is not to simply find housing, but to maintain stable housing.

Families and children experiencing homelessness are prioritized as reflected by CDBG and ESG allocations to sub-recipients that serve these subpopulations (CSA Partnership, Center for Human Services, Children's Crisis Center, Haven Women's Center, and Family Promise).

The City of Modesto's Homelessness Prevention and Rapid Re-Housing (HPRP) activities include the allocation of ESG funds for chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth so they may receive security deposit assistance. Another subpopulation that is targeted with ESG HP/RP financial assistance are families with dependent children.

The City of Modesto, its ESG subrecipients, the CSOC and other partners have been especially strategic in creating opportunities that will stably house, either in the short term or long term, and promote the self-sufficiency of these subpopulations of persons experiencing homelessness. ESG subrecipients have also had to find strategic ways to assist clients find housing and keep their housing. The following are recent strategies that have been implemented locally in which the City will continue to be a partner in as its strategy at helping homeless individuals transition from homelessness to housing.

Empire Migrant Center:
Supported by the FOP movement, the Stanislaus County Community Services Agency's (CSA) partners with the Housing Authority to house homeless families during the cold-weather months in vacant family units at the Empire Migrant Center. The Empire Migrant Center located at 5132 South Ave. is used as a cold-weather shelter for homeless families. The Empire Migrant center consists of 90 single family dwelling units used for farmworker housing during project from April to October each year. This project allowed CSA to use 21 of the 90 units to place homeless families in these units during the months of November through March. This project will be a multi-year partnership allowing CSA to place homeless families each winter in housing and provide case management services with a goal to permanently house homeless households.

Youth Navigation Center:
The Center for Human Services provides a wide range of services that strengthen and support youth and families. One of the biggest projects currently being developed is a Youth Navigation Center. The Youth Navigation Center will be in Modesto and will be a one stop service hub providing a continuum of services for young people (13-24 years old) who are experiencing crisis, housing instability, and/or homelessness. The Youth Navigation Center will create a space where existing services, currently at different sites, will be relocated and new services developed, creating a clear pathway for youth/young

adults. Most importantly, this Center will establish a coordinated system of care for this vulnerable population and will serve youth within Stanislaus County. Once completed, this project will provide the following services:

- Street outreach and engagement services
- Homeless prevention & diversion services
- Coordinated entry and assessment
- Crisis/Drop-in and Shelter for 13-17-year old persons (8 beds)
- Hutton House: Crisis/Drop-in and Low-Barrier Shelter for 18-24-year-old persons (24 beds)
- Pathways Program: Transitional Housing for 18-24-year-old persons (15 beds)
- Access to housing services including permanent housing slots designed for youth with diverse circumstances
- On-site education and employment services

Downtown Streets Team:
Another key effort led in Modesto aimed at reducing the number of people living in poverty and provide housing opportunities to homeless individuals is the Downtown Streets Team (DST). Downtown Streets Team employs a volunteer Structured Daily Activity (SDA) model in which those experiencing or at risk of homelessness volunteer on beatification projects within Modesto and Stanislaus County. Incentives for volunteering include, but are not limited to, intensive case management, employment navigation, service connection, and a non-cash basic needs stipend.

The DST model is designed to help "Team Members" (clients) activate skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed. These include things like maintaining a schedule, teamwork, accountability, self-confidence and more. Through the SDA model, Team Members rebuild all these as well as regain a sense of pride in and stewardship of their community. In addition, Team Members gain valuable experience that they can list at the top of their resume to overcome long experience gaps.

SDA projects are generally beautification projects, which includes basic tasks such as litter cleanup in the community. Thus, the model inherently provides a public service and a public benefit in the communities DST serves in.

Homeless Employment Litter Program
Similar to the Downtown Streets team project, the City is forming a new partnership with Ready to Work (a nonprofit organization which creates opportunities where individuals who are either experiencing or at-risk of homelessness gain employment support while generating clean streets) and the California Department of Transportation (CalTrans) to initiate the Homeless Employment Litter Program (HELP). This partnership will result in the employment of homeless individuals to pick up litter around our city streets and state highways around Modesto RTW has been very successful in transitioning individuals into full-time employment and permanent housing. Along with market level compensation, employees will receive an employment plan to help secure graduation from the program, as well as assistance with resume building, filling out applications, interviewing and much more. Complementary to a more beautiful city, the goal is to develop a platform that will give individuals all the tools needed to become self-sufficient.

Help low-income individuals and families avoid becoming homeless, especially extremely low-income individuals and families who are likely to become homeless after being discharged from a publicly funded institution or system of care, or who are receiving assistance from public and private agencies that address housing, health, social services, employment, education or youth needs

The *Plan to Address Homelessness in Stanislaus County* identifies discharge planning as a key part of the strategy in addressing homelessness throughout the County moving forward. Acknowledging that further collaboration among public institutions and other system of care providers needs to occur so that no individual or family is discharged into homelessness, the CoC continues to work on these issues through awareness campaigns and coordinated efforts to align services and resources among CoC partners. The City helps lead in the coordination of Continuum-wide services. Furthermore, homelessness prevention assistance, while scarce, is provided through an ESG sub-recipient (Community Housing and Shelter Services). Again, foster care youth and those exiting the foster care system will be served through the City partnership with the Housing Authority on the above-mentioned federal stimulus funded activity.

The City of Modesto will continue collaborative efforts with the local Continuum of to improve services to the homeless and those at risk of becoming homeless. The following are key highlights of the work that has been conducted and will continue to be implemented in our community to assist individuals and families avoid becoming homeless:

Focus on Prevention Homelessness Initiative
Over four years ago, the Stanislaus County Board of Supervisors launched the Focus on Prevention (FOP) countywide initiative with the aim to improve the quality of life for all Stanislaus residents and families, through coordinated prevention efforts that work across multiple community sectors and address root causes of homelessness and other issues. The City of Modesto has been a stakeholder in the FOP movement since its inception, supporting the efforts to assist residents in escaping homelessness.

Homeless Discharge Coordination:
The City of Modesto is actively engaged in homeless discharge coordination from health care facilities. Since April 2019, the Hospital Council of Northern California has coordinated monthly meetings with representatives from local hospitals, homeless shelters, public agencies, and stakeholder groups to plan for the discharge of homeless individuals from health care facilities to comply with SB 1152. The objective has been to create a community standard of care and greater connection and cooperation between discharging and receiving providers of services for the homeless.

The City partnered with Stanislaus County Affordable Housing Corporation (STANCO) on the 522 E. Granger Ave. project. This project will provide housing to individuals with serious mental illness who are homeless or at risk of homelessness.

During Program Year 2018-2019, the City also partnered with the HACS on projects such as 201 E. Coolidge, 416 E. Coolidge and 0 Vine Street.

- 201 E. Coolidge is a 40-unit multi-family housing complex providing affordable housing opportunities to low income families.

- 416 E. Coolidge will be a new construction project featuring eight (8) single family homes as permanent supportive housing for behavioral health clients.
- 0 Vine Street will be a two-phase project with 23 housing units for homeless veterans and 12 units for senior housing.

Homeless Prevention and Rapid Rehousing:
The City will continue to partner with local service providers by providing ESG funds used to assist with homeless prevention assistance to persons or families at risk of losing their housing. ESG funds will also be provided to rapidly rehouse persons who are homeless. Assistance will be provided with intensive case management services to reduce the risk of persons falling back into the cycle of homelessness.

SP-65 Lead based paint Hazards

Actions to address LBP hazards and increase access to housing without LBP hazards

The Market Analysis section of this Consolidated Plan estimates that 8,820 owner-occupied low-income households and 8,400 renter-occupied low-income households are living in units built before 1980. Because lead-based building materials was banned in 1979, this is the best available estimate of the number of households that may have lead-based materials to abate.

The City of Modesto has adopted policies which will continue to be implemented in its housing programs. The City's lead-based paint policy complies with HUD requirements relating to lead-based paint hazards. In alignment with HUD's requirements, lead-based paint remediation actions will depend on the level of subsidy provided on a project by project basis.

City staff provides the HUD approved "Protect Your Family From Lead in Your Home" pamphlet to homeowners when lead-based paint is found or presumed to be present. Homeowner Rehabilitation Program Policies & Procedures adhere to 24 CFR 35.100 Subpart J 35.930(b), 24 CFR 35.100 subpart J 35.930(c), and 24 CFR 35.100 subpart J 35.930(d). Contractors who are working in homes where lead-based paint is found or presumed to be present provides to the homeowners EPA pamphlet "The Lead-Safe Certified Guide to Renovate Right" prior to construction activities.

Housing rehabilitation projects will be subject to federal regulations for Lead-Based Paint and contractors must be certified in safe work practices when completing the rehabilitation work. Costs related to lead-based paint inspections, clearance and abatement will be included in the City's housing rehabilitation loan program which is paid from entitlement funds.

How are the actions listed above related to the extent of lead poisoning and hazards?

The City will continue to provide lead-based paint testing as a component of its housing repair and rehabilitation programs when required by HUD regulations. Given the age and condition of the City's housing stock, there are a significant number of homes where lead-based paint testing is needed.

How are the actions listed above integrated into housing policies and procedures?

The City's housing program guidelines include specific policies related to testing and abatement. When lead-based paint is present or presumed to be present, lead-safe work practices are required. In addition, all of the City's loan agreements for new projects prohibit the use of any lead-based paint.

SP-70 Anti-Poverty Strategy

Jurisdiction Goals, Programs and Policies for reducing the number of Poverty-Level Families

The City coordinates the efforts among many stakeholders to effectively support low-income households through the projects associated with this Consolidated Plan. In addition to supporting low-income households directly in Modesto, the City acknowledges the regional nature of many issues facing low-income households. That being so, the City takes its role seriously as a participating member of the CoC as well as the Stanislaus Homeless Alliance (SHA).

The vision of the City, as well as the organizations in which it participates is to develop and implement effective programs and projects that are coordinated and resourced efficiently. Addressing the goals and priority needs listed within this Consolidated Plan are the primary ways in which the City will work to reduce the number of families living in poverty.

The City is part of the County-wide 2020-2025 Analysis of Impediments to Fair Housing Choice (AI) as well. Within the AI, an analysis was completed to understand those policies that may disproportionately impact low-income households in negative ways, or those policies that inadvertently impact low-income households in ways that may limit their choices in both choice of housing and thus, employment.

Another strategy the City will use is to enter into community partnerships that provide economic development opportunities for low income households. Partnerships such as those with Opportunity Stanislaus, the local economic development and workforce agency, will seek to leverage any funds available to the city (federal and/or state) for the economic advancement of low-income families with the end goal to get them out of poverty levels.

The City may also work with its Economic Development Department to consider the creation of a CDBG special economic development program to assist existing small businesses with loans or grants that will result in the creation of jobs for low income individuals and/or assist low income persons with the creation of microenterprise businesses as another strategy at reducing the number of poverty-level families.

How are the Jurisdiction poverty reducing goals, programs, and policies coordinated with this affordable housing plan

The City’s goals include several that align with the goal of reducing poverty, including creating new affordable housing, expanding housing and services for the homeless, creating new jobs, and providing social services. The City plans to fund specific activities that address each of these goals during the lifecycle of the Consolidated Plan.

Much of the affordable housing plan coordination occurs at the CoC and SHA level where City efforts and initiatives are shared and updates are provided. By doing this, the City may receive feedback from both bodies and/or new ideas may arise for new partnerships and/or enhancement of service delivery.

An example of the coordination that exists within the CoC, the Modesto Downtown Streets Team (DST) program was implemented locally after

is a volunteer work-experience program that offers gift cards to individuals that work to beautify downtown Modesto. While those working on the teams exchange up to 20 hours each week beautifying the streets through trash clean up and similar activities, they receive time with an Employment Specialist with the goal of finding gainful employment. The DST has placed over 700 individuals into permanent work.

SP-80 Monitoring

Describe the standards and procedures that the jurisdiction will use to monitor activities carried out in furtherance of the plan and will use to ensure long-term compliance with requirements of the programs involved, including minority business outreach and the comprehensive planning requirements

For all HUD funded projects, the City has implemented a subrecipient capacity risk analysis criteria that is assessed at the time of application, as part of the application technical review. If the organization does not meet the organizational capacity standards, the project is not considered for funding.

Organizations that meet the capacity requirements, are then assessed for to determine the extent of monitoring. Program/project monitoring ranges from frequent desk audits (i.e., monthly review of project files – performance reports, invoices and supporting documentation, ensuring timely expenditure, tracking progress toward Consolidated Plan/Annual Action Plan goals, etc.) for all HUD funded activities to more extensive and less frequent (at least once every program year) on-site audits for “high-risk” if certain risk factors are identified during project implementation.

In accordance with 24 CFR, Section 92.252, HOME-assisted rental units are monitored and inspected for income certifications, housing quality standards, and other affordability criteria. There are different levels of monitoring that staff follow, beginning at project predevelopment and continuing through the period of affordability. Staff reviews each draw request. Staff meets with the developers to provide technical assistance if needed, and make periodic site visits to follow up on project progress. In addition, staff are constantly monitoring to see if the projects are meeting the standards established in the initial agreement, if costs are on target, and to check on quality of construction.

The City is currently developing a standardized monitoring plan for each HUD program that meets each program’s requirements. This monitoring plan will be used as a tool to establish monitoring schedule as well as specific documentation to collect/review depending on the project type.

Annual Action Plan

AP-15 Expected Resources

Introduction

During Program Year 2020-2021, the City of Modesto anticipates receiving $1,900,954 in Community Development Block Grant (CDBG) program funds, $934,812 in HOME Investment Partnership (HOME) program funds, and $164,549 in Emergency Solution Grant (ESG) program funds. From the repayment of various loans, staff anticipates receiving $550,000 in CDBG, $100,000 from HOME, $150,000 from NSP, and $100,000 in the Revolving Loan Fund for a total projected $400,000 in program income.

There are several potential funding sources to implement the strategies contained in the 2020 - 2024 Consolidated Plan. The funding from HUD is clearly outlined in this plan, and there are other funds that assist implementation for strategies outlined in this plan as well. The funds that may contribute to addressing the needs and goals outlined in this Consolidated Plan are:

- Funds covered under the Consolidated Plan: CDBG, HOME, and ESG
- Funds provided under various programs of the California Department of Housing and Community Development and the California Housing Finance Agency
    - Permanent Local Housing Allocation (PLHA)
- State and federal tax credits and mortgage credit certificates
- Tax exempt bond proceeds;
- The City's General Fund
- Private industry sources such as the Federal Home Loan Bank Board's Affordable Housing Program
- Sources leveraged by local partners when contributing HUD Funds to these projects including but not limited to Federal Home Loan Bank Affordable Housing Program

Anticipated Resources

Program	Source of Funds	Uses of Funds	Expected Amount Available Year 1				Expected Amount Available Remainder of ConPlan $
			Annual Allocation: $	**Program Income: $**	**Prior Year Resources: $**	**Total: $**	
CDBG	Public-federal	Acquisition Admin and Planning Economic Development Housing Public Improvements Public Services	1,900,954	$800,000	$1,069,442	$3,770,396	$7,603,816
HOME	public - federal	Acquisition Homebuyer assistance Homeowner rehab Multifamily rental new construction Multifamily rental rehab New construction for ownership TBRA	$934,812	$400,000	$4,935,068	$6,269,880	$3,739,248
ESG	public - federal	Conversion and rehab for transitional housing Financial Assistance Overnight shelter Rapid re-housing (rental assistance) Rental Assistance Services	$164,549	$0	$0	$164,549	$658,196

		Transitional housing					

Explain how federal funds will leverage those additional resources (private, state and local funds), including a description of how matching requirements will be satisfied

Leveraging HUD resources allows the City to use local, state and other funds to combine with federal resources to maximize reach and impact of the City's HUD funded programs. Through the vetting of project applications for HUD funding, the City emphasizes the importance of leveraging to potential applicants. In Program Year 2019, the City developed a new project scoring system that places higher weight and rewards project applicants with higher level of leveraged funds. Upon project award, the City verifies that leverage funds pledged in the project application have been awarded/committed to the respective applicant/project. The City continues to search for other Federal and State funding to use a leverage. As a result, as of 2020, the City will receive a Permanent Local Housing Allocation from the State that will further leverage Federal funding to assist with addressing the goals outlined in the 2020-2024 Consolidated Plan and Annual Action Plan.

The City of Modesto has access to a variety of federal and state resources to achieve its housing and community development goals. These funds include the following key programs in FY 2020-2021 and total just over $3.97 million:

- CDBG: $1,900,954
- HOME: $934,812
- ESG: $164,549
- PLHA: $969,747
- CARES ACT COVID-19 CDBG: $1,118,269
- CARES ACT COVID-19 ESG: $567,410

Specific funding sources will be utilized based on the opportunities and constraints of each program.

Entitlement Funds:

The following are the HUD matching requirements for the ESG and HOME programs:

ESG Match Requirements:

For the ESG program, the City requires that ESG sub-recipients provide a dollar-for-dollar match for ESG funds received. Typically, the City is able to generate significantly more match than the amount required through its allocation of CDBG funds for ESG activities and primarily through the cash and non-cash contributions provided by ESG sub-recipients as a result of the generosity of their donors, supporters, and other funders.

Cash contributions mean cash expended for allowable ESG costs, while noncash contributions mean the value (using a method reasonably calculated to establish fair market value) of any real property, equipment, goods, and services contributed to an ESG activity, provided that if these had to be paid with

ESG funds, the costs would have been allowable.

Specific sources of cash contributions include: private individual donors, CDBG funds, local fundraising cash, state funds, local funds, foundation grants, and in-kind contributions (value of in-kind contributions must be reasonable and the method used to establish value must be provided).

HOME Match Requirements:

The 25% HOME match requirements are met through the contributions or layers of funds that the developers provide for each HOME -assisted project. The match includes private financing, waiver or deferral of development fees approved by the City Council, Tax Credit Allocations, and any other eligible source. The City intends to satisfy this requirement by allocating sufficient funds from the Affordable Housing Fund for this purpose.

If appropriate, describe publicly owned land or property located within the jurisdiction that may be used to address the needs identified in the plan

The City, as the successor housing entity to the former Redevelopment Agency of the City of Modesto, owns a parcel that will be utilized to develop 74 affordable housing units for low and very low-income households. The City is working with EAH, a non-profit affordable housing developer, to obtain project construction financing including State grants and tax credits to leverage HOME funding.

One of the challenges in building new affordable homes is acquiring land suitable for housing. In 2019, the State of California took several actions to make state and local public lands available for affordable housing development including:

- An executive order to make excess state land available for affordable housing
- Connecting affordable housing developers to local surplus land and strengthening enforcement of the Surplus Lands Act
- Requiring cities and counties to inventory and report surplus and excess local public lands to include in a statewide inventory

During this Consolidated Plan period, the City will work to identify of City owned properties to meet this requirement with the intent to continue to add to the City's affordable housing stock. The intent is to transfer eligible properties to non-profit organizations to utilize the properties for low income households or rehabilitate the units and sell them to a low-income households.

AP-20 Annual Goals and Objectives

Goals Summary Information

#	Goal Name	Start Year	End Year	Category	Needs Addressed	Funding*	Goal Outcome Indicator
1	Improve the Condition and Increase Supply of Affordable Housing	2020	2024	Affordable Housing Non-Housing Community Development	Affordable Housing	CDBG: $703,578 HOME: $834,453	199 Household Housing Units
2	Work Towards Addressing and Preventing Homelessness	2020	2024	Homeless	Addressing and Preventing Homelessness	CDBG: $167,416 HOME: $28,483 ESG: $152,208	2,000 Persons Assisted 8 Households Assisted
3	Enhance Infrastructure and Public Facilities	2020	2024	Non-Housing Community Development	Enhance Infrastructure and Public Facilities	CDBG: $711,947	4,000 Persons assisted
4	Access to Jobs, Education, and Other Economic Development Services	2020	2024	Non-Housing Community Development	Public Services Community and Economic Development	CDBG: $67,635	1,400 Persons Assisted
5	Administration	2020	2024			CDBG: $380,190 HOME: $93,481 ESG: $12,341	NA

* Funding amounts are annual funding estimates.

Goal Descriptions

1	Goal Name	Improve the Condition and Increase Supply of Affordable Housing
	Goal Description	Through the Needs Assessment, the Market Analysis, public meetings, consultations with stakeholders, and survey results, the lack of affordable housing in the City consistently stood to be the number one issue. The activities tied to this goal will work to preserve and expand the supply of affordable housing.
2	Goal Name	Work Towards Addressing and Preventing Homelessness
	Goal Description	Homelessness has become an issue for the region as a whole, and because Modesto is the County Seat and the center for most supportive services, the goal of working towards ending homelessness is a goal for the HUD funding. The activities tied to this goal will support getting individuals and families out of homelessness as well as preventing from individuals and families from becoming homeless. The City is engaged in both supporting those agencies that provide services to those that are homeless as well as providing support in housing options across the spectrum: emergency shelters, transitional shelters, rapid re-housing, and permanent supportive housing.
3	Goal Name	Enhance Infrastructure and Public Facilities
	Goal Description	The investment in publicly owned facilities and infrastructure improves the community and neighborhoods in which they serve. This investment directly impacts housing development and economic growth of communities. The activities tied to this goal will improve parks, streets, sidewalks, lighting, ADA accessibility, among other activities that serve residents.
4	Goal Name	Access to Jobs, Education, and Other Economic Development Services
	Goal Description	In an effort to stimulate the economy, the City proposes to address its economic goals through various programs. The creation and retention of full-time equivalent jobs will be provided via grant, rebate and loan programs. As the cost of living rises, there is a need to assist low- and moderate-income households increase their incomes. Job training and educational opportunities afford low- and moderate-income households an opportunity to increase their earning. The City will continue to explore new partnerships with businesses, developers and service providers to address community and economic development goals.
5	Goal Name	Administration
	Goal Description	Funding for the administration of the CDBG, ESG, and HOME programs.

Estimate the number of extremely low-income, low-income, and moderate-income families to whom the jurisdiction will provide affordable housing as defined by HOME 91.215(b):

The City estimates, based on prospective projects, approximately 90 to 100 housing units may be developed during the next five years to provide low and very low-income units to households. Additionally, the City expects that 25% of these units will serve very low-income households at or below 30% of the area median income. The City estimates the remaining units to be available to households that are between 60% to 80% of the area median income.

The following are the City's one-year affordable housing goals:

One Year Goals for the Number of Households Supported Through		**Income Demographic**
Rental Assistance	8	Extremely Low
The Production of New Units	181	Extremely Low
Rehab of Existing Units	18	Low-Moderate
Acquisition of Existing Units	0	N/A
Total	207	

AP-35 Projects

Introduction

The projects to be undertaken in the 2020 program year (July 1, 2020 to June 30, 2021) are summarized below. The City will utilize funds available to address the goals outlined in this Consolidated Plan. The specific projects will target affordable housing opportunities through acquisition, rehabilitation and construction of housing. In addition, the City will provide public services including homelessness services and economic development activities. The City will also provide enhancements to public facilities and infrastructure.

Projects

Project #	Project Name
1	Program Planning and Administration
2	Housing Rehabilitation Administration Activity Delivery
3	Section 108 Loan Repayment
4	Economic Development
5	Public Facilities
6	Affordable Housing – Acquisition, Rehabilitation, homelessness
7	Public Services
8	Affordable Housing – Owner Occupied Housing Rehabilitation

Describe the reasons for allocation priorities and any obstacles to addressing underserved needs

The priority needs described in the Strategic Plan are:

- Affordable housing
- Addressing and preventing homelessness
- Enhance infrastructure and public facilities
- Public services
- Community and economic development

The funding allocation priorities remain closely connected to these identified needs. Those projects that demonstrate potential to create further progress in addressing these needs will be prioritized.

In the funding of all projects, and in providing assistance to specific beneficiaries, the City will ensure:

- Documentation of the low- and moderate-income status of individuals/households, or
- The area where a project benefit will be realized has a population where at least 51% of the residents are low-and moderate-income, or
- A slum and blight project meet the criteria for such projects. The availability of funding from both federal and State sources is a key determinant of the City's ability to address identified needs. Budget problems at both the Federal and State levels make funding for housing programs uncertain. Partly to make the most of limited resources, the City has formed partnerships with a variety of governmental, non-profit, and service agencies to combine resources to implement programs related to housing and community development needs.

The primary obstacle in addressing underserved needs is the limited financial resources made available to address the needs. Prioritization of funding and associated needs requires that some needs expressed by communities may not be addressed in a given program year.

Other obstacles in addressing needs are:

- Limited services to support the diverse population
- High and increasing cost of land throughout the County present obstacles by further limiting the quantity of projects the City can take on given finite financial resources to acquire land that is becoming increasingly expensive
- Increasing rental rates across the City presents an obstacle in that fewer households may be able to be supported given the funding allocated. The money spent on rental assistance may not go as far given increasing rental costs.
- Coordination gaps between service providers and agencies providing housing
    - Coordination continues to improve as the CoC becomes more efficient
- Prevailing wage requirements increase construction costs for housing, thus increasing the cost of affordable housing development, potentially limiting the number of affordable housing developments in the City
- Resident perceptions of various services may hinder them from accepting assistance
- Current housing market and economic conditions
- Education and dissemination of information to low- and moderate-income residents is a potential obstacle. Although the City has excellent relationships with neighborhood associations and organizations within the different districts in the City, there remains an obstacle of reaching the right people to ensure knowledge of programs available to them.

AP-38 Project Summary

Project Summary Information

1	**Project Name**	Program Planning and Administration
	Target Area	City-wide
	Goals Supported	Administration
	Needs Addressed	NA
	Funding	CDBG: $380,190 HOME: $93,481 ESG: $12,341 CARES Act CDBG: $223,653 CARES ACT ESG: $56,741
	Description	This project will fund administrative expenses related to the planning and administration of CDBG, HOME, and ESG activities including but not limited to development of HUD plans, contract development, project monitoring, and enforcement of federal regulations. 2	**Project Name**	Housing Rehabilitation Administration Activity Delivery (14H)
	Target Area	City-wide
	Goals Supported	Improve the Condition and Increase Supply of Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG: $250,000

	Description	Activity delivery costs related to carrying out housing rehabilitation activities (rental and owner occupied). Examples include appraisal, architectural, engineering, and other professional services; preparation of work specifications and work write-ups; loan processing; survey, site and utility plans; application processing; and other fees. Matrix Code: 14H Rehabilitation Administration Regulatory Citation: 570.202(b)(9) National Objective: N/A
	Target Date	6/30/2021
	Estimate the number and type of families that will benefit from the proposed activities	The City will facilitate housing rehabilitation projects for 15 eligible households per year at or below 80% of the Area Median Income.
	Location Description	Citywide/Low Income Census Tracts.
	Planned Activities	Housing Rehabilitation Activity Delivery
3	**Project Name**	Section 108 Loan Repayment
	Target Area	NA
	Goals Supported	NA
	Needs Addressed	NA
	Funding	CDBG: $319,441.70
	Description	Planned repayment of Section 108 Loan Principal/interest
	Target Date	6/30/2021
	Estimate the number and type of families that will benefit from the proposed activities	NA
	Location Description	NA
	Planned Activities	Repayment of Section 108 Loan
4	**Project Name**	Economic Development
	Target Area	NA
	Goals Supported	Access to Jobs, Education, and Other Economic Development Services
	Needs Addressed	Community and Economic Development
	Funding	CDBG: $250,000 CARES Act COVID19 CDBG: $800,000

	Description	Partnerships with businesses, developers and service providers to address community and economic development goals including but not limited to the creation and retention of full-time equivalent jobs through grant and loan programs. Matrix Code: 18A - Direct Financial Assistance to For-Profit Businesses Regulatory Citation: 570.203(b) National Objective: 570.208(4)
	Target Date	6/30/2024
	Estimate the number and type of families that will benefit from the proposed activities	CDBG: Assist 8 small businesses negatively impacted by COVID19; Retain minimum of 8 LMI jobs. One FTE created/retained for every $35,000 CARES Act COVID19 CDBG: Assist 20 small businesses negatively impacted by COVID19; Retain minimum of 20 LMI jobs. One FTE created/retained for every $35,000
	Location Description	Citywide
	Planned Activities	Economic Development Assistance
5	**Project Name**	Public Facilities
	Target Area	NA
	Goals Supported	Enhance Infrastructure and Public Facilities
	Needs Addressed	Enhance Infrastructure and Public Facilities
	Funding	CDBG:
	Description	Improve the physical structures throughout the City in CDBG program eligible areas including but not limited to construction or rehabilitation of public facilities and/or improving infrastructure conditions in LMA neighborhoods. Matrix Code: 03A – 04 Regulatory Citation: 570.201(c) National Objective: 570.208(a)(1)
	Target Date	6/30/2024
	Estimate the number and type of families that will benefit from the proposed activities	Approximately 4,000 individuals from LMA neighborhoods.
	Location Description	LMA neighborhoods within Modesto
	Planned Activities	Community Centers, park improvements, homeless facilities, and/or other eligible public facilities.
6	**Project Name**	Affordable Housing – Acquisition, Rehabilitation, Homelessness

	Target Area	NA
	Goals Supported	Improve the Condition and Increase Supply of Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG HOME
	Description	Use CDBG funds for acquisition and/or rehabilitation of property for affordable housing, disability access/improvements, first time homebuyers, lead based paint services, energy efficiency improvements and similar projects. Use HOME funds to leverage funding for the construction and/or rehabilitation of new affordable rental housing units through partnerships with the State, the housing authority, and using tools such as land banking, the revolving loan fund, and housing set-aside funds. Matrix Code: 01-02; 11-19E Regulatory Citation: 570201(a) or (c) National Objective: 570.208(a)(3)
	Target Date	6/30/2021
	Estimate the number and type of families that will benefit from the proposed activities	Assist 181 households below 80% AMI through the following activities: Kansas House (103), 416 E. Coolidge (8), 0 Vine Street Phase 1 (23), and Youth Navigation Center (47)
	Location Description	Citywide
	Planned Activities	Acquisition, Rehabilitation, Construction of affordable housing units
7	**Project Name**	Public Services
	Target Area	NA
	Goals Supported	Access to Jobs, Education, and Other Economic Development Services
	Needs Addressed	Public Services
	Funding	CDBG
	Description	Partner with local public service providers to provide essential public services to Modesto residents. Matrix Code: 03T – 05Z Regulatory Citation: 570201(e) National Objective: 570.208(a)(2)
	Target Date	06/30/2021

	Estimate the number and type of families that will benefit from the proposed activities	Assist over 2,500 individuals below 80% of AMI through public service activities
	Location Description	Citywide
	Planned Activities	General Public Service Activities
8	**Project Name**	Affordable Housing – Owner Occupied Rehabilitation
	Target Area	NA
	Goals Supported	Improve the Condition and Increase Supply of Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG
	Description	Provide direct financial assistance eligible households through the Homeowner Rehabilitation Program to address health and safety repairs. Matrix Code: 14A Regulatory Citation: 570.202(a)(1) National Objective: 570.208(a)(3) LMH
	Target Date	06/30/2021
	Estimate the number and type of families that will benefit from the proposed activities	Assist 18 households at or below 80% of the AMI
	Location Description	Citywide
	Planned Activities	Housing Rehabilitation

AP-50 Geographic Distribution

Description of the geographic areas of the entitlement (including areas of low-income and minority concentration) where assistance will be directed

HUD allows for the designation of priority areas that may be a primary focus of revitalization efforts. For the purpose of the Consolidated Plan, priority areas are loosely defined and are not strict and do not require any specific allocation of resources, matching, or partnerships. At this time, the City does not have nor plan to pursue any official HUD designated geographic based priority areas. The City funds program activities City-wide based on the low/mod block groups as defined by HUD on specific program eligibility (CDBG, HOME, and ESG) and in accordance with the priority needs listed in this section.

Rationale for the priorities for allocating investments geographically

The City of Modesto will use a place-based strategy during the planning period. The geographic distribution of funding is predicated somewhat on the nature of the activity to be funded. It is the City's intent to fund activities in the areas most directly affected by the needs of low-income residents and those with other special needs. The Annual Action Plan directs investment geographically to an area benefit neighborhood. The area benefit category is the most commonly used national objective for activities that benefit a residential neighborhood. An area benefit activity is one that benefits all residents in a particular area, where at least 51% of the residents are low- and moderate-income persons. Public infrastructure improvements are an area benefit activity when they are located in a predominately low- and moderate-income neighborhood. Where possible, the City of Modesto will distribute CDBG funds throughout the low- and moderate-income block groups located throughout the six city council districts.

Discussion

No additional discussion.

AP-55 Affordable Housing

Introduction

The City understands the importance of approaching affordable housing from multiple angles: both preserving and maintaining existing affordable housing stock as well as continually looking for opportunities to develop new affordable housing.

The City offers affordable housing programs to support and assist households in obtaining or maintaining their home. The City utilizes contracts on affordable housing units to ensure units remain affordable for a certain extended period of time. To mitigate the negative effects of public policies that may pose barriers to affordable housing, the City of Modesto has policies in its impact fee program for affordable housing. The current Capital Facility Fees (CFF) Policies and Procedures provide, with respect to very low- and low-income housing exemptions, the total number of housing exemptions granted are not to exceed two percent (2%) of the cumulative total CFF program housing units. The CFF Policies and Procedures also allow a Community Housing and Development Organization (CHDO) to submit an

application and request CFF be waived on new affordable units for households earning sixty (60%) or less of the Area Median Income.

Whenever possible, the City uses HUD resources to partner with local affordable housing developers and/or other public agencies to build affordable housing projects. This Action Plan identifies any such projects to be planned or carried out this Program Year.

One Year Goals for the Number of Households to be Supported	
Homeless	154
Non-Homeless	22
Special-Needs	31
Total	**207**

One Year Goals for the Number of Households Supported Through	
Rental Assistance	8
The Production of New Units	181
Rehab of Existing Units	18
Acquisition of Existing Units	0
Total	**207**

Discussion

- Rental Assistance (8 households; 4 homeless/4 non-homeless): Community Housing and shelter services will assist a minimum of eight (8) households with City ESG funds for homeless prevention assistance.
- Production of new Units (181 households): Completion of the Kansas House Project will provide103 new units for homeless households; The Vine Street Project will provide 23 new units to special needs households; 416 E. Coolidge will provide 8 new units, and Youth Navigation Center will provide 47 new units.
- Rehab of Existing Units (18 households): The City will seek to assist 18 households via the City's owner-occupied housing rehabilitation program.
- Acquisition of Existing Units: The City will work with local partners and look for opportunities to acquire additional properties to provide affordable housing opportunities.

AP-60 Public Housing

Introduction

In Stanislaus County, public housing needs, housing choice vouchers, and other specific HUD funds and services are addressed by two housing authorities:

- The Housing Authority of the County of Stanislaus (HACS), also serving Alpine, Amador, Calaveras, Inyo, Mariposa, Mono, Stanislaus, and Tuolumne Counties.
- The Riverbank Housing Authority administered by the Housing Authority of the County of Stanislaus.

Public housing sites can range from large apartment buildings to single-family houses. Housing Choice Vouchers (HCV, also often called the "Section 8" program) are a portable rent subsidy that can be used to pay for a portion of rent in private rental housing units. Project-Based Section 8 vouchers are private rental units in which the current occupant receives subsidized rent through the housing authority.

Housing Authorities are subject to the same state and federal fair housing laws as other housing providers and cannot discriminate on the basis of state or federally protected classes. Housing Authorities must also follow any local fair housing ordinances and may have additional tenant protections added by HUD.

Actions planned during the next year to address the needs to public housing

Collectively, the housing authorities in Stanislaus County provide access to 6,335 subsidized housing units including 736 public housing units, 1,060 project-based Section 8 units, and 4,460 housing choice vouchers, though these totals vary at any given time. Though there are technically two housing authorities, the HACS administers the programs of both the HACS and Riverbank housing authorities.

The HACS has been designated as a "high performing" public housing authority by HUD since 2008. This designation is given to public housing authorities (PHAs) that score above a 90 out of 100 points. PHA projects are assessed based on a physical inspection (40 points), financial condition (25 points), management system (25 points), and timely use of capital funds (10 points). The total PHA score is then created out of the average score for all projects weighted by the number of units.

Like many public housing authorities across the country, the housing authorities in Stanislaus County lack an adequate supply of funding for units and/or vouchers to meet the affordable housing needs within their service areas. This is reflected by long or closed waiting lists for potential units. In Stanislaus County, the average waiting time for a public housing unit is 10 years. Waiting lists for housing choice vouchers are only open occasionally and, even then, sometimes only for select applicants.

PHAs complete both an annual plan and a 5-year plan to help prioritize projects, development, funding, and programs. For 2019-2023, the HACS listed the following goals and objectives (among others) that help affirmatively further fair housing and increase housing choice:

1. Depending on the availability of federal and state funding, increase the inventory of affordable rental housing within the jurisdiction of the Housing Authority of the County of Stanislaus for extremely low to moderate income households.

Objectives:

- *Housing Choice Voucher Program – Continue to expand upon existing marketing and outreach efforts to attract new landlord participants to the Housing Choice Voucher Program.*
- *Development – Leverage private or other public funds to create additional housing opportunities. • Development – Subject to the availability of funding, develop or acquire 500 affordable housing units over the next five years.*

2. Conserve and upgrade the Affordable Housing Inventory in Stanislaus County.

Objectives:

- *Public Housing – Implement Asset-Based Community Development (ABCD) initiatives to engage and unite residents, associations and institutions from within each community for more sustainable communities and economic development.*
- *Administration – Partner with county and/or city in efforts to improve housing stock and create stable, viable neighborhoods.*

3. Increase assisted housing choices.

Objectives:

- *Housing Choice Voucher Program – Provide voucher mobility counseling at initial family briefings and during annual reexaminations.*
- *Housing Choice Voucher Program – Continue to maintain the 2-tiered Benefit Payment Standard (BPS) to ensure families have the ability to locate affordable housing in less poverty concentrated neighborhoods.*
- *Housing Choice Voucher Program - Continue to seek funding for the Individual Development & Empowerment Accounts (IDEA) and Workforce Initiative Subsidy for Homeownership (WISH) programs for graduating Family Self-Sufficiency (FSS) Program Participants.*

The City will continue to leverage opportunities and funding to address needs outlined in the City's Consolidated Plan and remain cognizant of goal and objective overlaps with the HACS.

Actions to encourage public housing residents to become more involved in management and participate in homeownership

The HACS has a Resident Advisory Board (RAB) which represents the residents assisted by the HACS. The RAB assists in the development of the HACS five-year Plan. Resident involvement will continue to be supported in an effort to enhance the service delivery by taking into account input from those with lived experience.

Efforts to improve communications with residents and program participants include: on site resident training/informational meetings, regular newsletters and flyers. The HACS has implemented a "curbside" appearance program. The focus of the program is the exterior of buildings, parking areas,

play grounds and other areas of the complexes. Rodent and insect problems are addressed when residents report a problem and/or on Annual Inspections. In an effort to better education residents concerning these problems, information is regularly provided through the HACS newsletter. These actions have assisted the HACS in creating an atmosphere which emphasizes customer satisfaction and communication

The Housing Authority of the County of Stanislaus (HACS) provides homeownership resources to participants in the Housing Choice Voucher Program. The Family Self-Sufficiency (FSS) Program has established partnerships with a variety of community resources to refer participants for services including pre- and post-secondary education, health care, childcare, employment development, supported employment, and small business development including micro-loans. The FSS Program also encourages families to participate in financial wellness programs including financial literacy and credit repair with an emphasis on long-term financial stability for the purposes of homeownership. Supportive services are provided through the Stanislaus County Assistance Project, the Stanislaus County Department of Mental Health, or Stanislaus County Integrated Services Agency.

These actions have assisted the Housing Authority in creating an atmosphere which emphasizes customer satisfaction and communication.

If the PHA is designated as troubled, describe the manner in which financial assistance will be provided or other assistance

The PHA is not designated as troubled; since 2008, the Housing Authority of the County of Stanislaus (HACS) has been designated as a “high performing” public housing authority by HUD. This designation is given to public housing authorities (PHAs) that score above a 90 out of 100 points. PHA projects are assessed based on a physical inspection (40 points), financial condition (25 points), management system (25 points), and timely use of capital funds (10 points). The total PHA score is then created out of the average score for all projects weighted by the number of units.

AP-65 Homeless and Other Special Needs Activities

Introduction

The City of Modesto participates in the County-wide Continuum of Care (CoC) to develop and implement regional goals and strategies to address and end homelessness. The CoC released its *Plan to Address Homelessness in Stanislaus County* in January 2019. A primary function and goal of the CoC is to increase housing stability and decrease incidents of homelessness in Stanislaus County by targeting services and funds to populations most in need, meeting both the immediate and long-term needs of households experiencing homelessness, and avoiding the duplication of services by coordinating with service providers and the CoC.

Along with this adopted plan, in recent years the CoC has been strategized through working groups and with the introduction of the Stanislaus Homeless Alliance (SHA). This revamping of the CoC includes a partnership with HomeBase resulting in a more efficient CoC application and NOFA process with aims to increase CoC funding.

In the coming year, the City will continue to partner with local service providers and agencies with the goa of reducing and ending homelessness via street outreach, homeless prevention, and rapid rehousing. In addition, the City will work with the CoC on addressing the emergency shelter and transitional housing needs of homeless persons as well as continuing to find creative approaches to addressing homelessness and special needs populations.

Describe the jurisdictions one-year goals and actions for reducing and ending homelessness including:

Reaching out to homeless persons (especially unsheltered persons) and assessing their individual needs

The City of Modesto has actively participated in CSOC's planning process to move individuals and families from homelessness to permanent housing and independent living through a network of housing linked to supportive services. The primary strategy document is the annual CSOC Application. Additionally, the City will continue to work with the CoC in the implementation of the continuum-wide Coordinated Entry System (CES) to match the right services to the households given their individual circumstance, this includes taking into consideration special needs in both housing and supportive services. The CoC formed a CES Task Force that will continue to meet regularly to assist with the continued evolution and implementation of the CES and address any issues that arise. The CoC will provide continued training for participating service providers and continue developing any necessary tools to effectively manage the system. This matching of appropriate needs is the most effective use of resources and minimizes bottlenecks in the service delivery system.

In the coming year, the City will continue to partner with organizations such as Center for Human Services (CHS) which conducts street outreach to unsheltered homeless youth. CHS' goal, through street outreach, is to engage with homeless youth and connect them to resources including housing at CHS' Hutton House, a runaway and homeless youth shelter (ages 13-17), or Pathways, a transitional living place for older youth (ages 18-21). In 2019, the City provided CDBG grant and loan funds to CHS to acquire a property that will be used to establish a Youth Navigation Center. This Youth Navigation Center will enhance current outreach efforts and services for the youth population with everything being available at one location.

Community Assessment, Response, and Engagement (CARE) Multidisciplinary (MDT) personnel strategy: The CARE team is a joint strategy from the City of Modesto as well as Stanislaus County. The CARE team is made up of staff that are capable of engaging individuals and households in crisis, distressed in the moment for any number of reasons relating to mental or physical health. The CARE team conducts regular outreach and engagement with what are most often the "hard to reach" individuals and households. The CARE team activity is tracked in detail through the CoC and its reporting. The City will continue to be a partner in the CARE team program in efforts to increase outreach and engagement to homeless households and individuals.

The Downtown Streets Team (DST) is aimed at reducing the number of people living in poverty and

provide housing opportunities to homeless individuals. DTS employs a volunteer Structured Daily Activity (SDA) model in which those experiencing or at risk of homelessness volunteer on beatification projects within Modesto and Stanislaus County. Incentives for volunteering include, but are not limited to, intensive case management, employment navigation, service connection, and a non-cash basic needs stipend.

The DST model is designed to help "Team Members" (clients) activate skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed. These include things like maintaining a schedule, teamwork, accountability, self-confidence and more. Through the SDA model, Team Members rebuild all of these as well as regain a sense of pride in and stewardship of their community. In addition, Team Members gain valuable experience that they can list at the top of their resume to overcome long experience gaps.

SDA projects are generally beautification projects, which includes basic tasks such as litter cleanup in the community. Thus, the model inherently provides a public service and a public benefit in the communities DST serves in.

Finally, the City of Modesto is actively involved in the Annual Point-In-Time (PIT) Count conducted throughout the CoC which includes all of Stanislaus County. The PIT Count includes staff and volunteers going out into the community and physically counting individuals experiencing homelessness as well as outreach efforts linking those individuals to services available within the community. Outreach efforts particularly seek to identify the numbers and needs of those individuals and households experiencing unsheltered homelessness.

Addressing the emergency shelter and transitional housing needs of homeless persons

Given Modesto is the county seat of Stanislaus County and the largest City within, Modesto is also the central point for many of the CoC's related supportive services. The City funds shelter activities to the maximum extent possible through CDBG Public Services and ESG funds.

The City partners with shelter providers in Modesto such as The Salvation Army to provide emergency shelter and low barrier shelter services to homeless persons. The newly formed Access Center Emergency Shelter will provide low-barrier (drug and alcohol testing are not required to enter) to reduce barriers for individuals choosing to enter an emergency shelter. ACES is designed to allow homeless individuals to enter with pets, partners, and possessions, which are often-cited impediments individuals have when entering a homeless shelter.

With respect to transitional housing, the City will partner with local service providers to provide funding whenever possible for the operation of transitional living facilities and emergency shelters such as:

Center for Human Services – Pathways Program: Pathways is a 16-bed transitional living program that addresses the need for shelter and support services for homeless youth 18 to 21 years of age. Shelter is

provided up to 21 months. The Pathways Program provides basic life skills, interpersonal and jobs skills training, assistance with obtaining medial insurance and assistance related to advancing educational opportunities.

Stanislaus County Affordable Housing Corporation (STANCO): STANCO operates transitional housing facilities that provide housing opportunities for homeless persons with mental disabilities. The City of Modesto provided funding for STANCO in 2019 for transitional housing of five (5) beds. The City will continue to look for partnership opportunities with STANCO and other providers to meet emergency and transitional shelter needs of residents.

Hutton House is an emergency shelter for runaway, homeless, and youth in crisis who are ages 13-17.

Pathways is a transitional living and support services program that focuses on youth who have "aged out" of the foster care placement system.

Children's Crisis Center of Stanislaus County (CCC) provides child care and shelter services to abused, neglected, and at-risk children in the community.

Cricket, Guardian, Marsha's, Sawyer, and Verda's Houses provides shelter for children who may be involved in a family crisis or a conflict situation.

Homeless Prevention and Rapid Re-Housing Program (HPRP) provides rental assistance in conjunction with intensive case management.

Community Housing and Shelter Services (CHSS) provides opportunities to households with and without children to obtain and maintain permanent housing.

Community Impact of Central Valley (CICV) provides services to individuals with HIV/AIDS through the Housing Opportunities for Persons with AIDS Program (HOPWA).

Family Promise of Greater Modesto provides shelter at church sites and case management support for finding permanent affordable housing.

Haven Women's Center of Stanislaus County provides shelter services and outreach to homeless women and children in the South Stanislaus County area and within the City. Services include those for victims of domestic violence.

Housing Authority of the County of Stanislaus administers 222 Shelter Plus Care Certificates and HUD-VASH vouchers which help provide permanent supportive housing to homeless veterans.

Miller Pointe is a 15-unit permanent rental housing project serving very low-income households.

Meadow Glen is a 32-unit permanent rental supportive housing serving very low-income foster youth aged out of foster care.

The Modesto Men's Gospel Mission and Women's Mission provides a limited stay of seven nights on the floor, and three nights out, and also serves two meals a day.

Mission Emergency Shelter provides beds for temporary shelter to house up to 100 unaccompanied adult men and women and up to 90 women and children for a maximum stay of fourteen days.

New Life Program Residential is an on-site program, operated by the Modesto Gospel Mission, for up to 41 unaccompanied adult men and women who need specialized help to return to societal living. This program is operated by the Modesto Gospel Mission.

The Salvation Army Modesto Corps provides an array of services to the homeless.

The Berberian Emergency Shelter provides 164 cold weather beds to unaccompanied homeless adult men and women and up to 30 year-round beds to homeless persons with special medical needs.

The Berberian Transitional Living Facility provides 20 beds for homeless male and female veterans and 20 beds for unaccompanied homeless males and females for up to 24 months.

Stanislaus County Affordable Housing Corporation (STANCO) operates eight properties for permanent affordable housing and conducts outreach to place people in supportive housing. STANCO also operates 33 transitional beds for homeless families with children and 37 beds for unaccompanied adult homeless males and females.

- **STANCO Transitional Housing**
- California – 36 beds and 4 units

- Garden Gate – 3 beds and 1 unit
- Ricardo – 3 beds and 1 unit
- Locust – 3 beds and 1 unit
- Garvey – 13 beds
- REST House - 5 beds
- **STANCO Permanent Supportive Housing**
- 24 beds

Bennett Place contains 18 units that are reserved for persons who have a serious mental illness (SMI) or serious emotional disturbance (SED) and are homeless or at risk for homelessness.

Turning Point Community Programs provides integrated, cost-effective mental health services, employment and housing for adults, children and their families that promote recovery, independence and self-sufficiency.

Turning Point Respite Center at Garden Gate provides a safe home-like environment for up to 12 homeless mentally ill persons nightly.

Salvation Army Veteran Emergency Shelter: provides shelter services to homeless individuals who are U.S. Veterans.

Catholic Charities provides a variety of programs and services with a new office location as of 2019 in Modesto. Catholic Charities provides transportation services, housing and case management services, low-cost healthcare, and childcare as well as immigration and legal services.

There is a total of 511 emergency shelter beds in Modesto and 223 within Stanislaus County (not in Modesto) for a total of 734 emergency shelter beds within the County. Additionally, there are 301 emergency shelter beds pending. The emergency shelter beds available in Modesto are from the following organizations:

Modesto Emergency Shelter Beds

Agency	Number of Beds
Center for Human Services	7
Community Housing and Shelter Services (CHSS)	155
Family Promise	14
Haven Women's Shelter	8
Modesto Gospel Mission	181
Salvation Army	140
Turning Point	3

TOTAL	**511**

Source: Stanislaus Homelessness Alliance Affordable Housing Presentation

Helping homeless persons (especially chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth) make the transition to permanent housing and independent living, including shortening the period of time that individuals and families experience homelessness, facilitating access for homeless individuals and families to affordable housing units, and preventing individuals and families who were recently homeless from becoming homeless again

The CoC continues to hone in on system processes and address gaps in the service delivery system to ensure that specific vulnerable sub-populations do not fall through the cracks. As the CoC partnerships grow and each entity becomes more understanding of their role as well as the roles of other agencies, the system will yield more effective results for those individuals and families that are experiencing homelessness. The Coordinated Entry System (CES) is an effective tool in minimizing the number of days someone experiences homelessness. As stated in the *Coordinated Entry System Policies and Procedures Manual*, the CoC works to assess households for the individual needs and make matches to available housing interventions. The case conferencing teams meet weekly to work through the households that have completed assessments. Each household experiencing homelessness or chronic homelessness is offered a standard assessment tool to ensure fairness and equitable access to available services and housing options across the continuum.

The delivery of wrap-around services is critical to the long-term success of those individuals and families that have experienced homelessness but are now housed. Through the CoC, there are housing supports made available, offering financial assistance, security deposits, legal services, credit repair, utility payments, counseling, among others. It is understood by the CoC and its partners that the end goal is not to simply find housing, but to maintain stable housing.

The City of Modesto's Homelessness Prevention and Rapid Re-Housing (HPRP) activities include the allocation of ESG funds for all household types including but not limited to chronically homeless individuals and families, families with children, veterans and their families, and unaccompanied youth so they may receive security deposit assistance. Another subpopulation that is targeted with ESG HP/RP financial assistance are families with dependent children.

The City of Modesto, its ESG subrecipients, the CoC, and other partners have been especially strategic in creating opportunities that will stably house and promote the self-sufficiency of these subpopulations of persons experiencing homelessness. ESG subrecipients have also had to find strategic ways to assist clients find housing and keep their housing. The following are recent strategies that have been implemented locally in which the City will continue to be a partner in as its strategy at helping homeless individuals transition from homelessness to housing:

Empire Migrant Center:

Supported by the FOP movement, the Stanislaus County Community Services Agency's (CSA) partners with the Housing Authority to house homeless families during the cold-weather months in vacant family

units at the Empire Migrant Center. The Empire Migrant Center located at 5132 South Avenue is used as a cold-weather shelter for homeless families. The Empire Migrant center consists of 90 single family dwelling units used for farmworker housing during project from April to October each year. This project allowed CSA to use 21 of the 90 units to place homeless families in these units during the months of November through March. This project will be a multi-year partnership allowing CSA to place homeless families each winter in housing and provide case management services with a goal to permanently house homeless households.

Youth Navigation Center:

The Center for Human Services provides a wide range of services that strengthen and support youth and families. One of the biggest projects currently being developed is a Youth Navigation Center. The Youth Navigation Center will be located in Modesto and will be a one stop service hub providing a continuum of services for young people (13-24 years old) who are experiencing crisis, housing instability, and/or homelessness. The Youth Navigation Center will create a space where existing services, currently at different sites, will be relocated and new services developed, creating a clear pathway for youth/young adults. Most importantly, this Center will establish a coordinated system of care for this vulnerable population and will serve youth within Stanislaus County. Once completed, this project will provide the following services:

- Street outreach and engagement services
- Homeless prevention & diversion services
- Coordinated entry and assessment
- Crisis/Drop-in and Shelter for 13-17-year-old individuals (8 beds)
- Hutton House: Crisis/Drop-in and Low-Barrier Shelter for 18-24-year-old individuals (24 beds)
- Pathways Program: Transitional Housing for 18-24-year-old individuals (15 beds)
- Access to housing services including permanent housing slots designed for youth with diverse circumstances
- On-site education and employment services

Downtown Streets Team:

Another key effort led in Modesto aimed at reducing the number of people living in poverty and provide housing opportunities to homeless individuals is the Downtown Streets Team (DST). Downtown Streets Team employs a volunteer Structured Daily Activity (SDA) model in which those experiencing or at risk of homelessness volunteer on beautification projects within Modesto and Stanislaus County. Incentives for volunteering include, but are not limited to, intensive case management, employment navigation, service connection, and a non-cash basic needs stipend.

The DST model is designed to help “Team Members” (clients) activate skills and attributes that are necessary to move toward employment, housing, and overall a better quality of living, but which are, through the experience of homelessness, often suppressed. These include things like maintaining a schedule, teamwork, accountability, self-confidence and more. Through the SDA model, Team Members rebuild all of these as well as regain a sense of pride in and stewardship of their community. In addition, Team Members gain valuable experience that they can list at the top of their resume to overcome long

experience gaps.

SDA projects are generally beautification projects, which includes basic tasks such as litter cleanup in the community. Thus, the model inherently provides a public service and a public benefit in the communities DST serves in.

Homeless Employment Litter Program

Similar to the Downtown Streets team project, the City is forming a new partnership with Ready to Work (a nonprofit organization which creates opportunities where individuals who are either experiencing or at-risk of homelessness gain employment support while generating clean streets) and the California Department of Transportation (CalTrans) to initiate the Homeless Employment Litter Program (HELP). This partnership will result in the employment of homeless individuals to pick up litter around our city streets and state highways around Modesto RTW has been very successful in transitioning individuals into full-time employment and permanent housing. Along with market level compensation, employees will receive an employment plan to help secure graduation from the program, as well as assistance with resume building, filling out applications, interviewing and much more. Complementary to a more beautiful city, the goal is to develop a platform that will give individuals all the tools needed to become self-sufficient.

Helping low-income individuals and families avoid becoming homeless, especially extremely low-income individuals and families and those who are: being discharged from publicly funded institutions and systems of care (such as health care facilities, mental health facilities, foster care and other youth facilities, and corrections programs and institutions); or, receiving assistance from public or private agencies that address housing, health, social services, employment, education, or youth needs.

The *Plan to Address Homelessness in Stanislaus County* identifies discharge planning as a key part of the strategy in addressing homelessness throughout the County moving forward. Acknowledging that further collaboration among public institutions and other system of care providers needs to occur so that no individual or family is discharged into homelessness, the CoC continues to work on these issues through awareness campaigns and coordinated efforts to align services and resources among CoC partners. The City helps lead in the coordination of Continuum-wide services. Furthermore, homelessness prevention assistance, while scarce, is provided through an ESG sub-recipient (Community Housing and Shelter Services). Again, foster care youth and those exiting the foster care system will be served through the City partnership with the Housing Authority.

The City of Modesto will continue collaborative efforts with the CoC to improve services to the homeless and those at risk of becoming homeless. The following are key highlights of the work that has been conducted and will continue to be implemented in our community to assist individuals and families avoid becoming homeless:

Focus on Prevention Homelessness Initiative

Over four years ago, the Stanislaus County Board of Supervisors launched the Focus on Prevention (FOP) countywide initiative with the aim to improve the quality of life for all Stanislaus residents and families, through coordinated prevention efforts that work across multiple community sectors and address root causes of homelessness and other issues. The City of Modesto has been a stakeholder in the FOP movement since its inception, supporting the efforts to assist residents in escaping homelessness.

Homeless Discharge Coordination:

The City of Modesto is actively engaged in homeless discharge coordination from health care facilities. Since April 2019, the Hospital Council of Northern California has coordinated monthly meetings with representatives from local hospitals, homeless shelters, public agencies, and stakeholder groups to plan for the discharge of homeless individuals from health care facilities to comply with SB 1152. The objective has been to create a community standard of care and greater connection and cooperation between discharging and receiving providers of services for the homeless.

Homeless Prevention and Rapid Rehousing:

The City will continue to partner with local service providers by providing ESG funds used to assist with homeless prevention assistance to persons or families at risk of losing their housing. ESG funds will also be provided to rapidly rehouse persons who are homeless. Assistance will be provided with intensive case management services to reduce the risk of persons falling back into the cycle of homelessness.

Foster care/youth facilities

One of the biggest youth service providers in Stanislaus County is the Center for Human Services (CHS). The City has an ongoing partnership with CHS in the planning and programing of services for youth terming out of foster care to prevent homelessness among this population. A prime example is the recent partnership with CHS on the first Youth Navigation Center to be located in Modesto which will provide a one-stop-shop service hub for youth experiencing or in danger of homelessness.

Corrections/Law Enforcement:

As part of the Coordinated Entry efforts, the City works with law enforcement agencies such as Modesto Police Department and Stanislaus County Sheriff and Probation Departments in discharge planning to

avoid discharge of inmates into homelessness.

AP-75 Barriers to affordable housing

Introduction:

The City's 2015-2023 Housing Element contains an analysis of the barriers that may exist in the development and/or preservation of affordable housing. Many factors may work independently to inhibit affordable housing, but more often there is an intersection of barriers that may impede affordable housing development and/or perseveration. Some of those barriers may include market mechanisms and circumstances, government codes and regulations, physical constraints, and environmental constraints.

Of those types of barriers, below is a summarized list of specific barriers:

- Market barriers
    - Construction costs
    - Land and labor costs
    - Loan/Credit issues for households
- Governmental barriers
    - Land use and zoning regulations
    - Permit fees
    - Residential development standards
    - Parking requirements
    - Development permit procedures
    - Building codes
- Environmental barriers
    - Natural disasters

There are a number of codified policies in Modesto that may contribute to the current lack of affordable housing.

Development Fees:

- Zoning Change Fee
    - Should a development or housing unit be proposed for a site where it is not consistent with the General Plan and/or should a project be proposed for a site it is not currently permitted by zoning, a fee of up to $5,231 is required depending on the zoning change needed.
    - These costs could potentially stifle the development of housing in areas where it may otherwise be reasonable
        - Given a low supply of housing affordable to low- and/or moderate-income households, these costs may inhibit housing choice for those households
- Impact Fee, land dedications, site improvements
    - The costs to integrate necessary infrastructure (streets, sidewalks, storm drains, etc.) are bore by the developer, but are ultimately passed on to the consumer

    - These costs contribute to pricing out low- and/or moderate-income households for affordability reasons
    - The City may provide fee waivers in some cases and/or fee deferrals in others allowing construction to move forward with less up-front costs
- School district fees
    - School fees range from $2.97 to $4.66 per square foot; with an average of $3.82 per square foot
    - These may add significant costs to larger developments, contributing to the pricing out of low- and/or moderate-income households

The City of Modesto regularly analyzes City building codes, market constraints, and housing/non-housing development policies, be it through the Consolidated Plan process, the Analysis of Impediments update, or the Housing Element update. The City acknowledges that outdated building codes and land use policies inhibit the development of housing for all income levels and the City understands the importance of regularly analyzing how local policies and ordinances impact the housing market for those households earning less than 80% of the area median income.

Actions it planned to remove or ameliorate the negative effects of public policies that serve as barriers to affordable housing such as land use controls, tax policies affecting land, zoning ordinances, building codes, fees and charges, growth limitations, and policies affecting the return on residential investment

The City works to remove barriers to the development and/or preservation of affordable housing through the following efforts:

- Providing funding for land acquisition, secondary financing, and infrastructure costs;
- Assisting qualified households to purchase homes utilizing the Homebuyer Assistance Program:
- Exemption or deferral of Capital Facilities Fees for projects providing low-income housing;
- Using the adopted streamlining process for environmental review; HEROS
- Continuing to work with non-profit housing agencies in the provision of supportive services and programs; and
- Using streamlined application review and permit processing.

To mitigate the negative effects of public policies that serve as barriers to affordable housing, the City of Modesto has policies in its impact fee program for affordable housing. The current Capital Facility Fees (CFF) Policies and Procedures provide, with respect to very low and low income housing exemptions, the total number of housing exemptions granted are not to exceed two percent (2%) of the cumulative total CFF program housing units. The CFF Policies and Procedures also allow a Community Housing and Development Organization (CHDO) to submit an application and request CFF be waived on new affordable units for households earning sixty (60%) or less of the Area Median Income.

In 2017, the State of California passed a15-bill housing package aimed at addressing the state's housing shortage and high housing costs. Specifically, SB 2, which is part of the 15-bill housing package,

established a permanent source of revenue intended to increase the affordable housing stock in California.

In 2019, the State of California released a Notice of Funding Availability (NOFA) to all local governments in California for the SB2 Planning Grants Program (PGP). The PGP program is intended for the preparation, adoption, and implementation of plans that streamline housing approvals and accelerate housing production.

In response to the NOFA, the City of Modesto applied for and was awarded $625,000. Funds will be partially used for the development of an Affordable Housing Plan (AHP) which will consist of two primary components:

3. The first is identification of opportunity sites for affordable housing, along with an analysis of potential barriers and/or constraints related thereto. This is intended to maximize residential development potential on sites that have meaningful capacity for residential development. Existing barriers to new residential development will be identified and examined. Strategies to reduce or eliminate these barriers will be documented.

4. The second primary component of this AHP will consist of a series of zoning code amendments intended to facilitate housing development at new locations / sites / zoning districts where residential land uses may not be allowed under the current code. Zoning code amendments, in addition to other available remedies, will also be prepared to reduce / eliminate the barriers identified as described above.

The SB2 Planning grant will play a significant role in assisting the City address affordable housing needs and any barriers currently in place.

All of the goals from the City's 2015-2023 Housing Element are relevant to the Consolidated Plan, and several goals are explicitly aimed at removing barriers to the development of housing within the City.

Goal Number 4 of the Housing Element is "Ensure land use and zoning procedures accommodate housing," stating that the City will work to track changes in Housing Law as to be consistent with supportive of State and Federal laws. The goal also aims to review local regulations periodically for the ability to accommodate projected housing demands. Goal number 5 is "Reduce government constraints," with the aim of continuing to identify any development fees, impact fees, and other municipal costs that may unduly constrain housing production.

The City is also a partner in the development of the Regional Analysis of Impediments to Fair Housing Choice (AI) for Stanislaus County. The AI will analyze public policies, strategies, and housing market practices that could potentially create barriers to affordable housing for households within the City. The AI will also identify actions to be taken in order to alleviate any barriers identified.

AP-85 Other Actions

Introduction:

Actions planned to address obstacles to meeting underserved needs

In alignment with local efforts and initiatives, the City's primary focus in 2020-2021 will be to use HUD resources to address the Consolidated Plan goals, all of which are high priority:

- Improve the Condition and Increase Supply of Affordable Housing
- Work Towards Addressing and Preventing Homelessness
- Enhance Infrastructure and Public Facilities
- Access to Jobs, Education, and Other Economic Development Services

This action plan identifies projects the City will undertake in pursuit of progress towards those goals outlined above.

Actions planned to foster and maintain affordable housing

Because there is a housing shortage in Modesto, one of the City's main strategies will be to use HUD funds to assist with property acquisition for conversion into affordable housing. In the development of the Strategic Plan, the City conducted a request for project proposals to identify potential projects that would assist in addressing the Consolidated Plan needs. The City will use projects identified via the RFP to maximize the use of HUD funds with the end goal of adding affordable housing units to the maximum extent possible.

Actions planned to reduce lead-based paint hazards

The Market Analysis section of the 2020-2024 Consolidated Plan estimates that 8,820 owner-occupied low-income households and 8,400 renter-occupied low-income households are living in units built before 1980. Because lead-based building materials was banned in 1979, this is the best available estimate of the number of households that may have lead-based materials to abate.

The City of Modesto has adopted policies which will continue to be implemented in its housing programs. The City's lead-based paint policy complies with HUD requirements relating to lead-based paint hazards. In alignment with HUD's requirements, lead-based paint remediation actions will depend on the level of subsidy provided on a project by project basis.

City staff provides the HUD approved "Protect Your Family From Lead in Your Home" pamphlet to homeowners when lead-based paint is found or presumed to be present. Homeowner Rehabilitation Program Policies & Procedures adhere to 24 CFR 35.100 Subpart J 35.930(b), 24 CFR 35.100 subpart J 35.930(c), and 24 CFR 35.100 subpart J 35.930(d). Contractors who are working in homes where lead-based paint is found or presumed to be present provides to the homeowners EPA pamphlet "The Lead-Safe Certified Guide to Renovate Right" prior to construction activities.

Housing rehabilitation projects will be subject to federal regulations for Lead-Based Paint and contractors must be certified in safe work practices when completing the rehabilitation work. Costs related to lead-based paint inspections, clearance and abatement will be included in the City's housing rehabilitation loan program which is paid from entitlement funds.

The following is the City's lead-based policy for reduction of lead paint hazards:

	Subsidy Amount		
	<$5,000	**$5,000-$25,000**	**>$25,000**
Approach to Lead Hazard Evaluation and Reduction	**"Do No Harm": Use lead safe work practices**	**Identify and control Lead hazards**	**Identify and Abate Lead Hazards**
Homeowner Notification	Yes	Yes	Yes
Lead Hazard Evaluation	Presume Presence of LBP (alternative: Paint testing of surfaces to be disturbed by rehabilitation)	Paint testing of surfaces to be disturbed by rehabilitation AND Risk assessment	Paint testing of surfaces to be disturbed by rehabilitation AND Risk assessment
Lead Hazard Reduction	Repair surfaces disturbed during rehabilitation, use lead-safe work practices, clearance test of work site upon completion.	Interim controls, lead- safe work practices, clearance test of unit upon completion.	Complete abatement, lead-safe work practices, clearance test of unit upon completion.

Actions planned to reduce the number of poverty-level families

Affordable housing is identified as the highest need in the City's 2020-2024 Strategic Plan. In order to address need for additional affordable housing the City of Modesto works with local affordable housing developers in efforts to identify new projects and/or ways to enhance the supply of affordable housing. Section AP-55 of this Action Plan outlines the City's 2020-2021 affordable housing goals for this year.

The City will enter community partnerships that provide economic development opportunities for low income households. Partnerships such as those with Opportunity Stanislaus, the local economic development and workforce agency, will seek to leverage any funds available to the city (federal and/or state) for the economic advancement of low-income families with the end goal to get them out of poverty levels. Opportunity Stanislaus developed the VOLT Institute, located in Modesto, to offer training for maintenance and technology positions. VOLT was developed in consultation with local businesses to address their needs for machine maintenance and continuing education among their workforce.

The City may also work with its Economic Development Department to consider the creation of a CDBG special economic development program to assist existing small businesses with loans or grants that will result in the creation of jobs for low income individuals and/or assist low income persons with the creation of microenterprise businesses as another strategy at reducing the number of poverty-level families.

Actions planned to develop institutional structure

The City of Modesto, through its engagement in local initiatives, is engaged in the Coordinated Entry system. Coordinated entry (also known as coordinated assessment system) is a consistent, community wide process to match people experiencing homelessness or at-risk of homelessness to community resources that are the best fit for their situation. In a community using coordinated entry, homeless individuals and families complete standard triage assessment survey that identifies the best type of services for that household. Participating programs accept referrals from the system, reducing the need for people to traverse the county seeking assistance at every provider separately. The process helps prioritize housing and homeless assistance based on vulnerability and severity of service needs to ensure that people who need assistance the most can receive it in a timely manner. The process also provides information about service needs and gaps to help plan assistance and identify needed resources in our community.

The intent is to provide coordinated entry to the entire geographic area through Access Points. Access Points are places–either virtual or physical–where an individual or family in need of assistance accesses the coordinated entry process. People experiencing homelessness can complete the assessment survey to participate in coordinated entry and are matched with community resources that best fit their situation. All locations and methods offer the same assessment approach and referrals using uniform decision-making processes. The Access Points in Stanislaus County include: 1) A centralized physical location (Access Center) in Stanislaus County where housing and support services, among others are provided, 2) 211 hotline system that screens and directly connects people to services, 3) Continuum of Care partners that provide assessments using the same tool county-wide, 4) A specialized Multi-disciplinary Outreach and Engagement Team that scouts the geographic area to provide access to those who might not want to engage at a physical access point.

The City works closely with the Stanislaus County Department of Behavioral Health and Recovery Services (BHRS) in the system delivery of housing services. BHRS provides Housing Support Services Program provides an array of support services for individuals facing barriers that include low income, severe mental illness, substance abuse, and other disabling conditions. The program offers a combination of affordable housing and support services designed to help individuals and families use housing as a platform for wellness and recovery following a period of homelessness, hospitalization or incarceration. The goal of Housing Support Services is to assist individuals in obtaining employment, independent living skills, recovery and increased self-sufficiency. In addition, BHRS provides Employment Support Services to individuals with psychiatric disabilities who are working towards Employment and Housing goals. The program provides an opportunity for individuals with severe mental health

disabilities to work in the community. Often, BHRS and City HUD funding resources are leveraged together when partnering with local affordable housing developers such as the HACS and STANCO.

Actions planned to enhance coordination between public and private housing and social service agencies

City of Modesto relies primarily on its (A) close consultation with the CSOC, which is made up of representative stakeholders and (B) monthly meetings with its public and private housing development partners, which include local private CHDOs (e.g., Habitat for Humanity, Stanislaus County and Stanislaus Affordable Housing Corporation, and Great Valley Housing Development Corporation (GVHDC)) and the Housing Authority (to enhance coordination in the areas of community housing and social services.

The City of Modesto relies on non-profit organizations and for-profit developers to build and acquire, develop, and rehabilitate affordable units. The City of Modesto will continue to work closely with these entities to ensure that each year as many new affordable units are developed or made available.

The City of Modesto also relies on the non-profit service sector to provide emergency shelter and transitional and special needs housing. The City of Modesto will continue to support eligible organizations and their activities with local, state and federal funding as it's made available and upon their governing entity's approval.

Discussion:

No additional discussion.

AP-90 Program Specific Requirements

Introduction:

The below section outlines specific program requirements for CDBG, HOME, and the ESG programs.

Community Development Block Grant Program (CDBG)

Reference 24 CFR 91.220(l)(1)

Projects planned with all CDBG funds expected to be available during the year are identified in the Projects Table. The following identifies program income that is available for use that is included in projects to be carried out.

1. The total amount of program income that will have been received before the start of the next program year and that has not yet been reprogrammed	0
2. The amount of proceeds from section 108 loan guarantees that will be used during the year to address the priority needs and specific objectives identified in the grantee's strategic plan	0
3. The amount of surplus funds from urban renewal settlements	0
4. The amount of any grant funds returned to the line of credit for which the planned use has not been included in a prior statement or plan.	0
5. The amount of income from float-funded activities	0
Total Program Income	0

Other CDBG Requirements

1. The amount of urgent need activities	0
2. The estimated percentage of CDBG funds that will be used for activities that benefit persons of low and moderate income	85%

HOME Investment Partnership Program (HOME)

Reference 24 CFR 91.220(l)(2)

1. **A description of other forms of investment being used beyond those identified in Section 92.205 is as follows:** The City of Modesto does not use form of investment within the local HOME program other than those identified in Section 92.205.

2. **A description of the guidelines that will be used for resale or recapture of HOME funds when used for homebuyer activities as required in 92.254, is as follows:**

When HOME funds are used for homebuyer activities, the City will follow the following guidelines:

Pursuant to 24 CFR 92.254(a)(5)(ii), the City requires that HOME funds be recaptured if the property does not continue to be the principal residence of the buyer for the duration of the Affordability Period secured by an Affordable Housing Covenant. The Recapture Provision shall apply to a HOME assisted property only when a Direct HOME Subsidy is provided to a homebuyer.

The Recapture provision will ensure that the City of Modesto recoups all or a portion of the HOME assistance to the homebuyers, if the housing does not continue to be the principal residence of the family for the duration of the affordability period.

Per, 24 CFR 92.254(a)(5)(ii)(A), In establishing recapture requirements, the City of Modesto is subject to the limitation that when the recapture requirement is triggered by a sale (voluntarily or involuntarily) of the housing unit, and there are no net proceeds or the net proceeds are insufficient to repay the HOME investment due, the City of Modesto will only recapture the net proceeds, if any. The net proceeds are the sales price minus superior loan repayment (other than HOME funds) and any closing costs.

Of the recapture options described in 92.254(a)(5)(ii)(A), the City of Modesto will use a the "Shared Net Proceeds" option as outlined in 24 CFR 92.254(a)(5)(ii)(A)(3). With this option, if the net proceeds are not sufficient to recapture the entire HOME investment, the City and original homebuyer will share the net proceeds.

To calculate the amount of net proceeds (or shared appreciation) to be returned to the City the following formula will be applied:

$$\frac{\text{HOME investment}}{\text{HOME Investment + Homeowner Investment}} \times \text{Net proceeds} = \text{HOME amount to be recaptured}$$

To calculate the amount of net proceeds (or shared appreciation) to available to the homebuyer the following formula will be applied:

$$\frac{\text{HOME investment}}{\text{Direct HOME Subsidy + Homeowner Investment}} \times \text{Net proceeds} = \text{HOME amount to be recaptured}$$

Since the HOME rule limits recapture to available net proceeds, the City will only recapture what is available from net proceeds. In this case, the City is not required to repay the difference between the total direct HOME subsidy and the amount the City is able to recapture from available net proceeds.

3. A description of the guidelines for resale or recapture that ensures the affordability of units acquired with HOME funds? See 24 CFR 92.254(a)(4) are as follows:

When HOME funds are used for resale or recapture, the City will follow the following guidelines:

Pursuant to 24 CFR 92.254(a)(5)(ii), the City requires that HOME funds be recaptured if the property does not continue to be the principal residence of the buyer for the duration of the Affordability Period secured by an Affordable Housing Covenant. The Recapture Provision shall apply to a HOME assisted property only when a Direct HOME Subsidy is provided to a homebuyer.

The Recapture provision will ensure that the City of Modesto recoups all or a portion of the HOME assistance to the homebuyers, if the housing does not continue to be the principal residence of the family for the duration of the affordability period.

Per, 24 CFR 92.254(a)(5)(ii)(A), In establishing recapture requirements, the City of Modesto is subject to the limitation that when the recapture requirement is triggered by a sale (voluntarily or involuntarily) of the housing unit, and there are no net proceeds or the net proceeds are insufficient to repay the HOME investment due, the City of Modesto will only recapture the net proceeds, if any. The net proceeds are the sales price minus superior loan repayment (other than HOME funds) and any closing costs.

Of the recapture options described in 92.254(a)(5)(ii)(A), the City of Modesto will use a the "Shared Net Proceeds" option as outlined in 24 CFR 92.254(a)(5)(ii)(A)(3). With this option, if the net proceeds are not sufficient to recapture the entire HOME investment, the City and original homebuyer will share the net proceeds.

To calculate the amount of net proceeds (or shared appreciation) to be returned to the City the following formula will be applied:

$$\frac{\text{HOME investment}}{\text{HOME Investment + Homeowner Investment}} \times \text{Net proceeds} = \text{HOME amount to be recaptured}$$

To calculate the amount of net proceeds (or shared appreciation) to available to the homebuyer the following formula will be applied:

$$\frac{\text{HOME investment}}{\text{Direct HOME Subsidy + Homeowner Investment}} \times \text{Net proceeds} = \text{HOME amount to be recaptured}$$

Since the HOME rule limits recapture to available net proceeds, the City will only recapture what is available from net proceeds. In this case, the City is not required to repay the difference between the total direct HOME subsidy and the amount the City is able to recapture from available net proceeds.

4. Plans for using HOME funds to refinance existing debt secured by multifamily housing that is rehabilitated with HOME funds along with a description of the refinancing guidelines required that will be used under 24 CFR 92.206(b), are as follows:

The City does not intend to use HOME funds for refinancing activities.

Emergency Solutions Grant (ESG)

Reference 91.220(l)(4)

1. Include written standards for providing ESG assistance (may include as attachment)

The City, in consultation with Continuum of Care stakeholders, developed policies and procedures for providing ESG assistance. The policies and procedures adopted are in accordance with HUD and HCD guidelines.

Standards for providing ESG homelessness prevention and rapid re-housing assistance include targeting households with dependent children and persons experiencing homelessness connected to or eligible to receive (within 6 months) assistance from mainstream benefits and services.

2. The City's ESG policies may be accessed at the following website: https://www.modestogov.com/DocumentCenter/View/6198/Section-5---Emergency-Solutions-Grants**If the Continuum of Care has established centralized or coordinated assessment system that meets HUD requirements, describe that centralized or coordinated assessment system.**

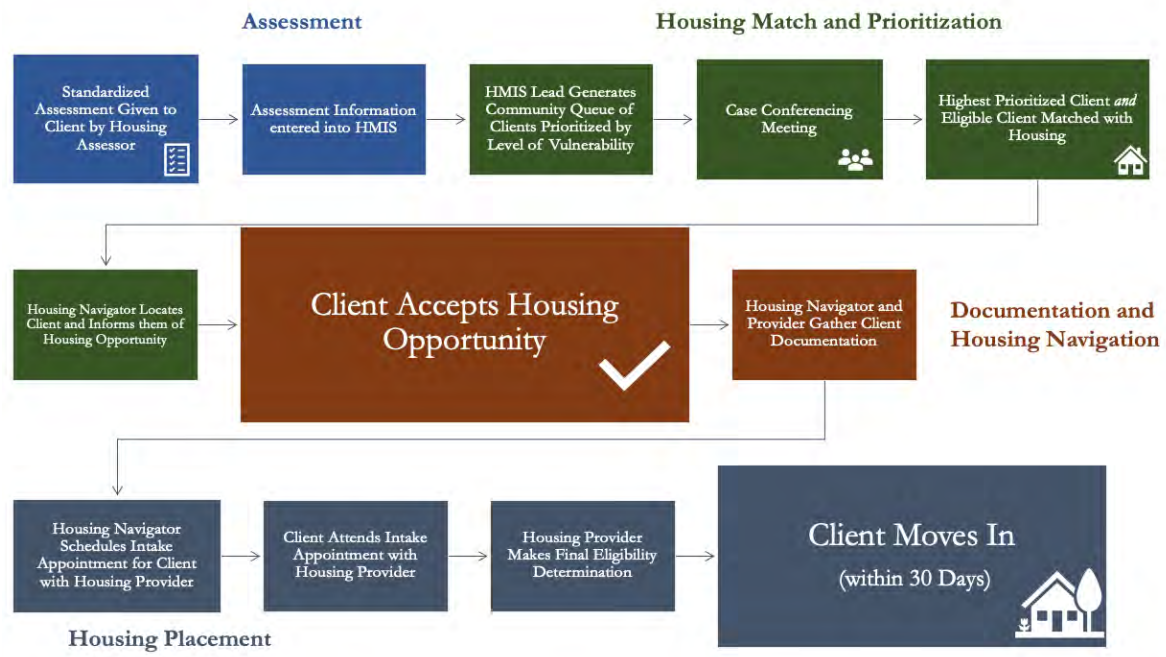
The CoC continues to work with partners and stakeholders in the implementation of the Coordinated Entry System (CES) process. Coordinated Entry (CE) is a consistent, community wide intake and placement process through which people experiencing homelessness are efficiently connected to available housing services within the community. With Coordinated Entry, homeless individuals and families complete standard triage assessment survey that identifies the best type of services for that household. Participating programs accept referrals from the system, reducing the need for people to traverse the county seeking assistance at every provider separately. The process helps prioritize housing and homeless assistance based on vulnerability and severity of service needs to ensure that people who need assistance the most can receive it in a timely manner. The process also provides information about service needs and gaps to help plan assistance and identify needed resources in our community. The community has worked hard to improve on this process and ensure that we are assisting poverty-level families not only with prioritizing them for their housing needs but assessing all other needs. Now that these needs are assessed case managers will continue reaching out to the members to connect to applicable services until housing becomes available.

Currently, the CoC holds weekly CE meetings/conference calls with housing/service providers where the list of homeless individuals who have been vetted through the CES process is reviewed for gauging individual housing readiness. Each individual is assessed as to housing readiness and is placed in any housing available within the community.

The *Coordinated Entry System Policies and Procedures Manual* was updated in January 2020. The manual outlines a process that consists of four (4) phases:

1. Assessment
    a. During this phase all community members experiencing homelessness or chronic homelessness are to be assessed by a Housing Assessor and their Standardized Assessment (uniform community assessment forms) score is placed a community queue for housing.
2. Housing Match and Prioritization
    a. The Case Conferencing Team will meet to review the community housing queue and begin to match eligible participants with housing opportunities. These Case Conferencing Teams meet weekly or more frequently based on need.
3. Documentation and Housing Navigation
    a. In this phase, official eligibility documentation, as standardized by the CoC, are gathered to prepare a household for an available housing intervention. The Housing navigator works with Housing Providers to guide a household through the referral and move-in process.
4. Housing Placement
    a. This phase includes ensuring that the households is ready for move-in and documenting client acceptance and move-in date in HMIS.

A detailed image below indicates specific steps within each phase.



For the full Coordinated Entry Policies and Procedures Manual, please find it at this link -> https://csocstan.com/coordinated-entry-system-ces-policies-and-procedures-manual/

3. Identify the process for making sub-awards and describe how the ESG allocation is made available

to private nonprofit organizations (including community and faith-based organizations).

The City of Modesto competitively awards ESG funding through an RFP process. This RFP process conforms to the City of Modesto's rigorous procurement process, including public noticing and utilizing its ZoomGrants online based system. The funding priorities as it relates to ESG are funding emergency shelter to the maximum extent possible and prioritizing rapid re-housing and homelessness prevention.

The RFP Process is undertaken through the following steps:

1. The City publishes a Notice of Funding Availability (NOFA)
2. The City holds are mandatory technical workshop for those organizations planning to apply for funds
3. The City conducts a technical review on all applications received
4. The City submits technical review notifications
5. Following technical review notifications, the City allows organizations one week to appeal their technical review determination
6. Grant presentations are made to the Modesto Grant Review Committee
7. Award notifications are made
8. Associated projects and planned activities are included in the Annual Action Plan that is presented to City Council
9. Sub-recipient grant agreements are finalized

4. If the jurisdiction is unable to meet the homeless participation requirement in 24 CFR 576.405(a), the jurisdiction must specify its plan for reaching out to and consulting with homeless or formerly homeless individuals in considering policies and funding decisions regarding facilities and services funded under ESG.

The City of Modesto works very closely with the CoC which is made up of a representative group of diverse stakeholders, including persons experiencing homelessness and those who at one time in their lives had experienced homelessness. The CoC bylaws, amended in May 2017, identify the CoC Council Members[2]. Those bylaws state that "3 people who are of have experienced homelessness" are to be members of the CSOC council, elected/appointed by the general membership of the CSOC.

Alongside working with the CSOC, the City regularly participates in Stanislaus Homeless Alliance (SHA) discussions when developing policies and funding recommendations regarding facilities and services funded under ESG.

***5.* Describe performance standards for evaluating ESG.**

To develop performance standards and evaluate outcomes of projects and activities assisted by ESG funds, the City of Modesto uses performance measures captured annually by HMIS to evaluate the outcomes of projects assisted with ESG funds. The performance measures will help evaluate the

[2] https://csocstan.com/wp-content/uploads/2020/02/CSOC-Bylaws.pdf

performance to determine the most effective services and assist with future allocation of ESG funds. These include: length of homelessness, returns to homelessness, number of sheltered homes persons, employment and income growth for persons, homeless for the first time, and exit and retention to permanent housing.

Discussion

The City of Modesto consults closely and regularly with the CoC and its HMIS, ESG/HPRP, and Supportive Housing Program (SHP) subcommittees, which develop policies and procedures for these programs and has played an active role in building the service infrastructure to sustain and improve the coordinated entry system. This consultation includes but is not limited to reports and presentations that are placed on the CoC monthly meeting agendas, weekly coordinated entry meetings to place individuals in housing, and ongoing coordination amongst service providers related to housing placement of homeless individuals.

Appendix A
Community Meeting Summaries & Survey Results

Meeting Date: 11/01/2019	District 2	Facility Name & Address: **The Center Church – South Modesto** 2019 Frazier Street Modesto, CA 95358

2 elected officials 11 community members

Notes:

- Big companies in the community don't pay enough to avoid overburdened households
- 40% of the issues are housing providers and expensive housing; 60% is the lack of available housing.
- Homelessness issues – Most homeless families are not ready for housing and need to learn basic skills for living alone
- Economic Development – Second chance programs and support for small businesses are needed
- Infrastructure – need a Community Center for South Modesto residents
- Need for additional law enforcement and code enforcement
- More oversight of the Housing Authority; address abuse of programs by some who receive assistance
- Need for Financial literacy programs that partner with the CRA programs in the area.
- Better Community outreach programs active in the communities
- Local private housing not being updated
- Infrastructure improvements were generally discussed in County area of the neighborhood and the City's ability to only invest in City jurisdiction.
    - Questions were asked about the possibility of the City and County investing HUD funds in areas bordered by both jurisdictions.
- Illegal dumping in alleys and roadways is an issue in the City and in County pockets

Appendix A
Community Meeting Summaries & Survey Results

Meeting Date: 11/06/2019	District 4	Facility Name & Address: **Airport Neighborhood Collaborative** 801 Empire Ave Modesto, Ca. 95354

2 elected officials and 24 community members

Notes:

- Safety concerns: poor to no lighting makes everyone feel insecure
- Safety concerns: cars traveling really fast and no speed bumps
- Would like to see a cover over the local bus stop and lighting
- Out of area investors are improving properties and charging too much for them.
- Landlords are not fixing basic needs and telling tenants that they will increase rent if they do the repairs
- There is a need funding for legal aid to assist low income tenants facing eviction. Little to no assistance currently exists.
- People are coming from out of the neighborhood to illegally dump trash and the homeowners are being help responsible for it.
- Would like to see building incentives (i.e. reduced fees, etc.) to develop housing on vacant and blighted lots. Would like to see a rental rehabilitation program accessible to landlords.
- This is mostly a rental community
- Request code enforcement to do a presentation
- More job opportunities and activities for youth
- Would like to see a homeless facility built in the neighborhood to get rid of vacant properties and camping.
- Teaching financial literacy to youth
- Build new housing and improve existing housing making them safe
- Policies and plans that support growth

Fair Housing Discrimination:

- Discrimination for workers in agriculture
- Lack accessibility to housing without a social security numbers
- What can the City do to improve the housing situation?
    - Have workshops for landlords and tenants to educate them on the rights
    - Bring in organizations like grocery stores in the neighborhood
- Modesto is growing too fast with no plan on maintaining the older neighborhoods.

Appendix A
Community Meeting Summaries & Survey Results

Meeting Date: 11/07/2019	District 2	Facility Name & Address: **West Modesto King Kennedy Center** 601 S. Martin Luther King Dr. Modesto, CA 95351

3 elected officials 30 community members

Notes:

- Community needs more development
- Can't move out of the neighborhood; it's not affordable
- Need more affordable housing both rental and homeownership opportunities
- More resources for police and public safety
- Homelessness policing is needed
- More policies for Homeless and associated services
- Lots of illegal dumping, mostly in county pockets
- Roads throughout the City need better maintenance
- More affordable housing for seniors
- Improve the overall neighborhood through upkeep of the infrastructure
- More accountability to the City and housing authority
- City is refusing to adhere to its Housing Element
- Job creation and activities for youth in the neighborhood
- Gangs are penetrating low income neighborhoods
- Better public transit
- Economic Development: need more grocery stores, cost are high and lack of options.

Fair Housing

- Project Sentinel does not work
- Real Estate officials directing individuals to buy in certain areas due to nationality or race
- Landlords not accepting section 8 vouchers
- Out of area investors are buying properties and pricing them too high
- No protections for landlords

Meeting Date: 11/13/2019	District 5	Facility Name & Address: **Fire House 9** 4025 Fara Biundo Drive Modesto, Ca. 95355

1 elected official and 1 community member(not local to Modesto)

- Homelessness and affordable housing are issues throughout the County
- Education for landlords and new state laws may be helpful in the affordability issues.
- Need more housing type housing options, other than single family homes.
- Based on customer feedback, family composition is the most prevalent housing discrimination type (community member's line of work = property management).

Appendix A
Community Meeting Summaries & Survey Results

Meeting Date: 11/16/2019	**CoC Meeting**	
Representatives from community service providers and those organizations that attend the regularly scheduled Continuum of Care (CoC) meetings were present. Notes from the meeting were: • High rental costs and past evictions are formidable obstacles when trying to find housing for those individuals and families involved with the CoC • Additional money for training would be beneficial in maintaining the Homeless Management Information System (HMIS) • Affordability and availability of housing is very limited for those households in need of services. • Developers are not developing in the Valley – a developer noted that regulations act as an impediment when considering development • Services are needed throughout the region – most notably substance abuse treatment, job skill training, and mental health services • Affordable housing is an issue throughout the City, this is often even more of an issue for those large families that require larger units. • Mixed-use housing could be a contributor to additional affordable housing units		
Meeting Date: 11/20/2019	**District 5**	**Facility Name & Address:** **Boy Scout Club House – Enslen Park** 400 Enslen Ave, Modesto, CA 95354
4 community members • Homelessness and affordable housing are issues throughout the County • Education for low income families to help break generational habits and to teach them to be good residents and neighbors. • Need more housing type housing options, other than single family homes.		
Meeting Date: 01/09/2020	**CH&CDC**	
No Comments Received		
Meeting Date: 02/12/2020	**SHA**	
No Comments Received		
Meeting Date: 02/20/2020	**CoC**	
No Comments Received		
Additional Comments: • Representative from the local Marine Corp league would like to see his office receive education on homeless veteran programs in the area. They are referring individuals to programs and losing community trust when they don't qualify.		

Appendix A
Community Meeting Summaries & Survey Results

The Modesto Community Survey was posted online, and links were emailed out to stakeholder and citizen groups. The survey was left open for two months, opening in late September and closing in late November. The survey was made available in both English and Spanish and was available online and hard copies were also made available with City staff entering the results into the online system afterwards. A total of 226 residents responded to the survey.

- 29 respondents took the survey in Spanish
- 197 respondents took the survey in English

The graphs below each represent a question from the survey. Each graphic combines the responses of the English and Spanish surveys into a single data point.

Economic Development
Public Facilities
Affordable Housing – Acquisition, Rehabilitation, homelessness
Public Services

Revolving Loan Fund Activities
Affordable Housing – Owner Occupied Housing Rehabilitation
Affordable Housing – Acquisition

Public Services
Up to 15% of the City's CDBG annual allocation may be used for public service activities, however, in response to COVID-19, HUD has waived the 15% threshold in FY 2020-2021 to allow communities to assist in the response to related public service needs.

Emergency Solutions Grant (ESG)

The ESG program supports essential services to homeless individuals and families through street outreach and engagement, rapid re-housing assistance, homeless prevention, and provision of vital services in emergency shelters. The City competitively awards ESG grants to eligible organizations that aid individuals and families experiencing homelessness and those at risk of experiencing homelessness.

HOME Investment Partnerships Program (HOME)

The HOME program supports projects that purchase, construct, and/or rehabilitate affordable housing for rent or homeownership to low income individuals.

The Annual Action Plan includes HOME funding recommendations for the following projects:

HOME Entitlement Program
Program Planning and Administration
Affordable Housing: Archway Commons Phase II
CHDO Set-Aside
CHDO Operating Support

EXECUTIVE SUMMARY

The Federal Fair Housing Act of 1968 banned discrimination against groups who historically faced unequal treatment in all types of housing. These groups are called "protected classes" under the law. It is important to acknowledge historical discrimination and segregation as well as current ongoing discrimination and barriers to housing choice. Housing barriers are influenced by policies and ordinances developed at all levels of government as well as commercial decisions such as mortgage lending criteria and housing development.

The Department of Housing and Urban Development (HUD) enforces the Federal Fair Housing Act, and as such requires communities receiving HUD funds to "affirmatively further fair housing" or make meaningful actions to remove barriers to housing choice.

The Analysis of Impediments to Fair Housing Choice (AI) is developed to identify the potential barriers ("impediments to fair housing choice") that residents of Stanislaus County may face by exploring housing, demographic, fair housing data, and neighborhood opportunity for outward signs of housing discrimination and indicators of patterns of discrimination that may not be obvious.

The impediments identified in this document will work to inform policy and programs throughout the County. The Stanislaus County Regional AI has been created as a collaborative document between the Stanislaus Regional Housing Authority, Stanislaus Urban County (including the cities of Ceres, Hughson, Newman, Oakdale, Patterson, Riverbank, and Waterford), the City of Modesto, and the City of Turlock.

Summary of Key Findings

1. There is currently a low supply of affordable housing and limits on new housing development, with long waitlists for existing affordable housing units. There is a particular shortage in housing for farmworkers and students.
2. Homeowner housing (both single-family homes and condos) values have increased steadily in all Stanislaus County municipalities since 2012. The highest values are in Oakdale, with a typical housing unit worth $368,000 in 2019. The lowest value for a typical house in 2019 is in Waterford, about $270,000.
3. California's Assembly Bill 686 (AB-686) sets forth many housing regulations including the requirement that all public agencies working within housing and community development must "affirmatively further fair housing".
4. Stanislaus County is projected to grow by 800,000 residents, a 37 percent increase, in the next 40 years. The County has grown more diverse in terms of race and ethnicity over the past 30 years, reflected in current geographic residence patterns and primary language spoken at home.
5. Housing affordability is affected by low wages, experienced on average at a higher rate by seniors on fixed incomes, those with at least one disability, and certain racial and ethnic groups.
6. 44 percent of Stanislaus County households earning $20,000 or less annually do not have Internet access, while only 6 percent of households making at least $75,000 do not have access.
7. Disability remains the highest reported category for fair housing discrimination in the County.

Analysis of Impediments Overview

The Analysis of Impediments to Fair Housing Choice (AI) is a requirement imposed on recipients of certain federal grants from the U.S. Department of Housing and Urban Development (HUD). The development of the AI is part of each HUD grant recipient's obligation to 'affirmatively further fair housing' (AFFH). Section 808 of the Fair Housing Act defines AFFH as a legal requirement that federal grantees conduct HUD funded programs in a manner that furthers fair housing within the jurisdiction.

To accept funding from HUD, entitlement grantees must certify to affirmatively further fair housing by taking actions to further the goals identified in this AI and to not take actions that are inconsistent with their obligation to affirmatively further fair housing. (24 CFR §91.225(a)(1))

The Community Development Block Grant (CDBG) program also requires jurisdictions to certify compliance with anti-discrimination laws found in Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d), the Fair Housing Act (42 U.S.C. 3601-3619), and implementing regulations. 24 CFR §91.225(b)(6)

This document is the Stanislaus Urban County, City of Modesto, City of Turlock, and the Stanislaus Regional Housing Authority's first regional AI. Previously, Stanislaus Urban County and the City of Turlock conducted a regional AI together for the 2020-2025 AI, the City of Modesto and the Housing Authority have joined the efforts.

Although the AI is not required as part of the annual submission to HUD, HUD recommends that each jurisdiction regularly update its AI. HUD has suggested that the AI be conducted at least as often as the Consolidated Plan, which is required every five years. The Stanislaus Urban County, the City of Modesto, and the City of Turlock's current Consolidated Plans are valid through June 2020. The Stanislaus Regional Housing Authority is required to submit a plan every 5 years and is currently working within the *5-Year Plan for Fiscal Years 2019-2023*.

An AI is conducted so that communities are provided an opportunity to examine their progress toward their goals of eliminating illegal housing discrimination and providing current and future residents access to equal housing opportunities. As part of the AI process, communities identify specific barriers ("impediments") to fair housing choice and create action steps to remove or reduce these barriers.

This AI document assesses the extent of fair housing issues among specific groups by analyzing data for all Stanislaus County cities and the general region in relation to housing, demographics, and neighborhood opportunity. This AI also analyzes conditions in the private market and public sector that may limit the range of housing choices or impede access to housing.

Geography

This Stanislaus County Regional AI is a collaborative document between the Stanislaus Regional Housing Authority the three entitlement grantees within the County:

- Stanislaus Urban County
- City of Modesto
- City of Turlock

Stanislaus Urban County includes all unincorporated areas of the County and the following cities:

- Ceres
- Hughson
- Newman

- Oakdale
- Patterson
- Riverbank
- Waterford

Throughout this document, the following geographic terms may be used. To be clear, below is an explanation of each geographic term.

- **Stanislaus County (countywide)**: Includes all cities within Stanislaus County as well as the unincorporated areas.
- **Stanislaus Urban County**: Includes the cities of Ceres, Hughson, Newman, Oakdale, Patterson, Riverbank, and Waterford. The Urban County also includes the unincorporated areas.
- **Unincorporated areas/County**: Areas of Stanislaus County that are not part of any municipality.
- **Entitlement Grantee**: The Community Development Block Grant (CDBG) entitlement grantees are Stanislaus Urban County, Modesto, and Turlock.
- **HOME Consortium**: The members of the HOME Consortium are the Stanislaus Urban County and the City of Turlock. The City of Turlock is the lead entity of the HOME Consortium.

BACKGROUND

Fair Housing Laws

Federal Law(s)

All municipalities in the United States are subject to the Fair Housing Act, administered and enforced by HUD.

In 1968, the Civil Rights Act was signed into law by President Lyndon Johnson to prohibit housing discrimination on the basis of race, religion, color, sex, and national origin. Title VIII of the act is also known as the Fair Housing Act. The law was passed after years of advocacy within the United States against overt race-, gender-, and religious-based discrimination and segregation in the sale and rental of housing. Additional protections were added for family status (women who are pregnant or the presence of children under 18) and disability in an amendment to the Fair Housing Act signed in 1988.

The Fair Housing Act applies to almost any person or group involved with housing in the United States, including landlords, realtors, homeowners associations (HOAs), mortgage lenders, and homeowners insurance companies. These people or groups cannot discriminate on the basis of race, religion, color, sex, national origin, familial status, or disability, which are also known as "protected classes." It is illegal to take any of the following actions on the basis of protected class:

- Refuse to rent or sell housing
- Refuse to negotiate for housing
- Otherwise make housing unavailable
- Set different terms, conditions, or privileges for sale or rental of a dwelling
- Provide a person different housing services or facilities
- Falsely deny that housing is available for inspection, sale, or rental
- Make, print, or publish any notice, statement, or advertisement with respect to the sale or rental of a dwelling that indicates any preference, limitation, or discrimination

- Impose different sales prices or rental charges for the sale or rental of a dwelling
- Use different qualification criteria or applications, or sale or rental standards or procedures, such as income standards, application requirements, application fees, credit analyses, sale or rental approval procedures, or other requirements
- Evict a tenant or a tenant's guest
- Harass a person
- Fail or delay performance of maintenance or repairs
- Limit privileges, services, or facilities of a dwelling
- Discourage the purchase or rental of a dwelling
- Assign a person to a particular building, neighborhood, or section of a building or neighborhood
- For profit, persuade or try to persuade homeowners to sell their homes by suggesting that people of a particular protected characteristic are about to move into the neighborhood (blockbusting)
- Refuse to provide or discriminate in the terms or conditions of homeowners insurance because of the race, color, religion, sex, disability, familial status, or national origin of the owner and/or occupants of a dwelling
- Deny access to or membership in any multiple listing service or real estate brokers' organization
- Refuse to make a mortgage loan or provide other financial assistance for a dwelling
- Refuse to provide information regarding loans
- Impose different terms or conditions on a loan, such as different interest rates, points, or fees
- Discriminate in appraising a dwelling
- Condition the availability of a loan on a person's response to harassment
- Refuse to purchase a loan

It is also illegal to threaten, coerce, intimidate, or interfere with anyone exercising a fair housing right or assisting others who exercise the right, or retaliate against a person who has filed a fair housing complaint or assisted in a fair housing investigation.

Exempted from the federal law are owner-occupied buildings with no more than four units, single-family houses sold or rented by the owner without an agent, and housing operated by religious organizations or private clubs that is limited to members. The State of California or local laws can add additional protections but cannot take away Fair Housing Act protections.

Table 1: Protected Classes in Stanislaus County by Enforcement Jurisdiction

Federal	State
• Race • Color • National Origin • Religion • Sex • Familial Status • Disability	• Source of Income • Marital Status • Sexual Orientation • Gender Identity • Domestic Partnership

Examples of illegal housing actions under the Fair Housing Act are:

- An apartment manager only offering apartment units to families with children within one half of an apartment building.

- A landlord giving a $10 application fee discount to housing applicants who attended the local high school.
- A realtor falsely declaring a house already has a purchase offer when showing a house to a couple who recently immigrated to the United States.
- An apartment manager running a credit check only on applicants under 30 years old.
-

Housing for Seniors

The Housing for Older Persons Act of 1995 (HOPA) creates an exception to Title VIII of the Fair Housing Act to allow for senior housing developments.

HOPA exempts specific types of housing for seniors ("older persons" in the law) from family status discrimination liability. To qualify for the "housing for older persons" exemption, the housing must fit certain criteria and comply with all the requirements of the exemption. These types of housing may be:

1. Provided under a state or federal program that the Secretary of HUD has determined to be specifically designed and operated to assist elderly persons (as defined in the state or federal program); or
2. Intended for, and solely occupied by persons 62 years of age or older; or
3. Intended and operated for occupancy by persons 55 years of age or older. (At least 80 percent of the units must have at least one occupant who is verified to be 55 years of age or older.) (Pub.L. 104–76, 109 Stat. 787, enacted December 28, 1995

All other Fair Housing Act protects apply to housing for seniors including the prohibition from discrimination on the basis of race, color, religion, sex, disability, or national origin. (The Fair Housing Act: Housing for Older Persons, HUD Office of Fair Housing and Equal Opportunity)

Additional Protections for Persons with Disabilities
:

Housing providers are required to make reasonable accommodations and allow reasonable modifications that allow persons with disabilities to enjoy their housing. Under the Fair Housing Act, a person with a disability includes: Individuals with a physical or mental impairment that substantially limits one or more major life activities; individuals who are regarded as having such an impairment; and individuals with a record of such an impairment. Major life activities include walking, seeing, hearing, speaking, breathing, and working.

An accommodation is a change in any rule, policy, procedure, or service needed in order for a person with a disability to have equal access to and enjoyment of their home. For example, allowing a service animal despite a "no pets" policy or allowing a tenant to mail in a rent check when others must physically deliver checks to a drop box.

A modification is a structural change made to the existing premises occupied or to be occupied by a person with a disability in order to afford such person full enjoyment of the premises. A ramp installed into the front entrance of a house where there are only stairs, changing doorknobs to levers for someone with a mobility disability, or allowing a tenant with a sight impairment to install visual doorbells are all examples of reasonable modifications.

Advertising:

All types of housing advertising are governed by the Fair Housing Act, including paper flyers, newspaper ads, advertising on websites, and lawn signs. Advertisements cannot show a preference, a limitation, or discrimination based on protected class. Examples of illegal advertisements are:

- A lawn sign outside an apartment building that includes "sorry, no kids."
- A realtor's flyer for an open house only distributed in local churches.
- Website ads that claim an apartment is "perfect for young professionals."

The National Fair Housing Alliance recommends that instead of focusing on who an ideal tenant would be or what type of person would likely not like a housing unit, an advertisement for housing should focus on the property characteristics and the amenities. Advertisements should be available to a broad number of people.

Additional Protections for Persons with Disabilities :

Housing providers are required to make reasonable accommodations and allow reasonable modifications that allow persons with disabilities to enjoy their housing. Under the Fair Housing Act, a person with a disability includes: Individuals with a physical or mental impairment that substantially limits one or more major life activities; individuals who are regarded as having such an impairment; and individuals with a record of such an impairment. Major life activities include walking, seeing, hearing, speaking, breathing, and working.

An accommodation is a change in any rule, policy, procedure, or service needed in order for a person with a disability to have equal access to and enjoyment of their home. For example, allowing a service animal despite a "no pets" policy or allowing a tenant to mail in a rent check when others must physically deliver checks to a drop box.

A modification is a structural change made to the existing premises occupied or to be occupied by a person with a disability in order to afford such person full enjoyment of the premises. A ramp installed into the front entrance of a house where there are only stairs, changing doorknobs to levers for someone with a mobility disability, or allowing a tenant with a sight impairment to install visual doorbells are all examples of reasonable modifications.

Section 504

Section 504 of the Rehabilitation Act of 1973 ("Section 504") states that "no qualified individual with a disability in the United States shall be excluded from, denied the benefits of, or be subjected to discrimination under" any program or activity that receives Federal financial assistance.

The law applies to housing with 5 or more units funded with Federal funds by requiring accessibility features in some dwelling units (a unit that is located on an accessible route and can be approached, entered, and used by individuals with physical disabilities) and all public areas in all new construction or substantial rehabilitation. At least 5 percent of new construction units in a federally funded development, or at least one unit, must meet accessibility standards to people with physical disabilities, and at least 2 percent, or at least one unit, must meet accessibility standards for hearing or visual disabilities. The standards for these units are found in the Uniform Federal Accessibility Standards (UFAS).

Section 504 regulations also apply to public buildings operated by agencies funded by federal assistance like housing authorities and schools.

Other Federal Laws

Other federal laws governing housing rights are:

- Title VI of the Civil Rights Act of 1964
- Age Discrimination Act of 1975
- Title II of the Americans with Disabilities Act of 1990
- Violence Against Women Act of 1994
- Equal Credit Opportunity of 1974

In addition, all HUD-funded housing programs are prohibited from discriminating based on sexual orientation, gender identity, or marital status under the 2016 Equal Access Rule.

While not law, the National Association of Realtors Code of Ethics prohibits licensed Realtors from discriminating based on sexual orientation. This code of ethics applies to all members of the California Association of Realtors.

California Law

The state of California expands Fair Housing Act protections under the Fair Employment and Housing Act (FEHA) enforced by the Department of Fair Employment and Housing within the Business, Consumer Services, and Housing Agency. All jurisdictions within California, including all in Stanislaus County, are governed by the FEHA, which prohibits discrimination in housing on the basis of race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, or genetic information.

Additional Protected Groups

The Unruh Civil Rights Act adds the additional protected classes: immigration status, primary language, citizenship, and arbitrary characteristics (age, occupation, etc.)

Until 2019, the definition of "source of income" in the FEHA did not include Section 8 Housing Choice Vouchers or other types of rental assistance. SB 329, passed in 2019, expands the definition of source of income to all "federal, state, or local public assistance and federal, state, or local housing subsidies," including Section 8 Housing Choice Vouchers. This law will go into effect January 1, 2020.

Another bill that went into effect January 1, 2020 (SB 222) adds Veterans and Military Status to the persons protected under the FEHA.

California Civil Code 1946.7 gives housing protections to victims of domestic violence, sexual assault, stalking, abuse of an elder or dependent adult, or human trafficking. Under this law, a landlord may not terminate a tenancy or fail to renew a tenancy based upon a tenant or a tenant's household member being a victim of one of these crimes.

Additional Protected Housing

The California FEHA covers additional types of housing not covered under the Federal Fair Housing Act. The California FEHA covers *any building, structure, or portion thereof that is occupied as, or intended for occupancy as, a residence by one or more families and any vacant land that is offered for sale or lease for the construction thereon of any building, structure, or portion thereof intended to be so occupied.*

An exception to this law is rent or lease of a portion of an owner-occupied single-family house to a person as a roomer or boarder living within the household. Though these types of houses are exempt from most FEHA requirements, in this type of housing, discriminatory advertisements are not allowed; the only exception is housing advertised as available only to persons of one sex where living spaces will be shared, e.g., "looking for female roommate."

AB 1497, which went into effect January 1, 2020, extends the types of housing covered by the FEHA to include housing posted to online hosting platforms like AirBnB or VRBO.
California's FEHA also applies to government actions for property, such as restrictive covenants, zoning laws, approval or denial of use permits, and other actions authorized under California's Planning and Zoning Law that make housing opportunities unavailable.

Housing for Seniors

In California, there is an exemption for seniors to the Unruh Civil Rights Act which prohibits discrimination based on sex, race, color, religion, ancestry, national origin, age, disability, medical condition, genetic information, marital status, or sexual orientation.
To restrict sale or rental of a property to seniors in California and be exempt from age discrimination under Unruh, the resident must:

1. Be 62 years of age or older; or
2. Be 55 years of age or older in a "senior citizen housing development".

A "Senior citizen housing development" is "a residential development developed, substantially rehabilitated, or substantially renovated for, senior citizens that has at least 35 dwelling units." Furthermore, the Unruh Civil Rights Act states:

> Any senior citizen housing development which is required to obtain a public report under Section 11010 of the Business and Professions Code and which submits its application for a public report after July 1, 2001, shall be required to have been issued a public report as a senior citizen housing development under Section 11010.05 of the Business and Professions Code. No housing development constructed prior to January 1, 1985, shall fail to qualify as a senior citizen housing development because it was not originally developed or put to use for occupancy by senior citizens. (51.3(b)(4))

Under California law, all the units in a dwelling must be designated for seniors rather than 80 percent of units under the FHA/HOPA. State law also allows a senior to live with someone 45 years of age or older that is their spouse, domestic partner, or person providing primary physical or economic support to the senior. The senior may also live with a disabled child or grandchild or disabled spouse/partner who must permanently reside in the household due to a disability. (Fair Housing Law Exemptions for Senior Housing, Community Housing Law, Sustainable Economies Law Center)

AB-686 Housing Discrimination: Affirmatively Furthering Fair Housing

The Fair Housing Act includes a requirement that the federal government work to dismantle segregation and to create equal housing opportunities or "affirmatively further fair housing." (AFFH) This law applies to all state and local governments that receive federal funding from HUD.

There is currently debate at the national level about the interpretation of affirmatively furthering fair housing within the Fair Housing Act. To establish control over how this law is interpreted and enforced

at the state level, California's Assembly Bill 686 (AB-686) was signed into law in 2018 and codifies California's commitment to "affirmatively further fair housing." The law defines the term "affirmatively furthering fair housing" as taking meaningful actions that "overcome patterns of segregation and foster inclusive communities free from barriers that restrict access to opportunity," and requires all public agencies working within housing and community development to affirmatively further fair housing.

Existing law requires the housing element to include an inventory of land suitable and available for development, and requires that inventory be used to identify sites that can be developed for housing within the planning period and that are sufficient to provide for the jurisdiction's share of the regional housing need for all income levels.

The new law requires the state, cities, counties, and public housing authorities to administer their programs and activities related to housing and community development in a way that affirmatively furthers fair housing. The law prohibits these authorities from taking actions inconsistent with their AFFH obligation and requires that the AFFH obligation be interpreted consistent with HUD's 2015 regulation, regardless of federal action regarding the regulation. To ensure AFFH obligations are incorporated into local housing decisions, AFFH analysis must be added to the housing element for plans that are due beginning in 2021. This includes an examination of issues such as segregation and resident displacement and identification of fair housing goals.

Other California Laws

Other state laws governing housing discrimination within California are:

Unruh Civil Rights Act: Provides protection from discrimination by all business establishments in California, including housing and accommodations, because of age, ancestry, color, disability, national origin, race, religion, sex, and sexual orientation.

Ralph Civil Rights Act (California Civil Code Section 51.7): Forbids acts of violence or threats of violence because of a person's race, color, religion, ancestry, national origin, age, disability, sex, sexual orientation, political affiliation, or position in a labor dispute. "Violence" under this law can take the form of verbal or written threats, physical assault or attempted assault, graffiti, vandalism, or property damage.

Bane Civil Rights Act (California Civil Code Section 52.1): Protects all people in California from interference by force, or threat of force, with an individual's constitutional or statutory rights, including a right to equal access to housing. The Bane Act also includes criminal penalties for hate crime, though convictions under the act are not allowed for speech alone unless that speech itself threatened violence. The rights protected under the Bane Act include the rights of association, assembly, due process, education, employment, equal protection, expression, holding of public office, housing, privacy, speech, travel, use of public facilities, voting, worship, and protection from bodily harm.

California Civil Code Section 1940.3: Prohibits landlords from questioning potential residents about their immigration or citizenship status. In most states, landlords are free to inquire about a potential tenant's immigration status and to reject applicants who are in the United States illegally. In addition, this law forbids local jurisdictions from passing laws that direct landlords to make inquiries about a person's citizenship or immigration status.

Government Code Sections 11135, 65008, and 65580-65589.8: Prohibit discrimination in programs funded by the State and in any land-use decisions.

Sections 65580-65589.8 require local jurisdictions to address the provision of housing options for special needs groups, including:

- Housing for persons with disabilities (SB 520)
- Housing for homeless persons, including emergency shelters, transitional housing, and supportive housing (SB 2)
- Housing for extremely low-income households, including single-room occupancy (SRO) units (AB 2634)
- Housing for persons with developmental disabilities (SB 812)

Local Law(s)

No local laws within Stanislaus Urban County, Turlock, or Modesto expand either protected classes or housing covered under the FEHA.

The Stanislaus County Housing Authority does not expand the definition of protected classes or housing covered under the FEHA but is required to follow additional housing regulations as directed by HUD.

AI Development Process

The development of the AI includes an analysis of laws, regulations, housing conditions, public policies, banking and mortgage data, as well as demographic and community characteristics. Paired with this analysis is feedback from the public through survey responses, public meetings, and phone consultations. Because the AI is developed in conjunction with Consolidated Plans, citizen participation requirements for the Consolidated Plans were often combined with feedback on fair housing issues.

Community Meetings

Community meetings were held in Modesto, Turlock, Stanislaus Urban County, and the Stanislaus County Housing Authority. The meetings were an opportunity for the public to learn about fair housing laws and share their issues and concerns regarding fair housing in the community. Meetings included the following:

Stanislaus Urban County: Meetings were held at Municipal Advisory Councils (MACs), advisory bodies of residents that exist to represent the local community to the Board of Supervisors. Meetings were also held with the Stanislaus Community System of Care and Stanislaus Homeless Alliance to talk about issues facing homeless individuals throughout the County.

Modesto: Meetings were ninety (90) minutes and covered both Consolidated Plan and AI topics. Modesto's community meetings were held in different aldermanic districts to ensure the variety of housing conditions and community opinions were captured.

Stanislaus County Housing Authority: Discussed fair housing and housing access issues at the Board of Commissioners Meeting.

Turlock: Held a meeting with the Turlock Community Collaborative, a network of public service agencies, businesses, and individuals in Turlock interested in improving the quality of life. The collaborative meets regularly to address needs in the community.

Meetings were held on the following dates and locations:

Modesto

- District 1 – October 29, 2019 @ Fire House #6
- District 2 – November 1, 2019 @ West Modesto King Kennedy Center
- District 2 – November 7, 2019 @ The Center Church
- District 3 – October 29, 2019 @ Trinity United Presbyterian Church
- District 4 – November 6, 2019 @ Airport Neighborhood Center
- District 5 – October 30, 2019 @ Veteran's Resource Center
- District 6 – November 12, 2019 @ St. Joseph's Catholic Church
- Public Hearing – April 16, 2020 @ Tenth Street Place
- Public Hearing – May 12, 2020 @ Modesto City Council

Stanislaus Urban County

- Salida MAC Meeting- October 22, 2019
- Empire MAC Meeting- October 23, 2019
- Knights Ferry MAC Meeting- October 24, 2019

DEMOGRAPHIC AND HOUSING MARKET ANALYSIS

Population Trends

Stanislaus County is currently home to about 531,000 residents, 39 percent of whom live in the City of Modesto, 21 percent in unincorporated areas, and 13 percent in the City of Turlock. The rest live in smaller cities and unincorporated communities throughout the County. Most of Stanislaus County is sparsely populated, with less than 200 people per Census Block. By comparison, some areas of Modesto and Turlock have over 1,000 people per Block. (See Map X)

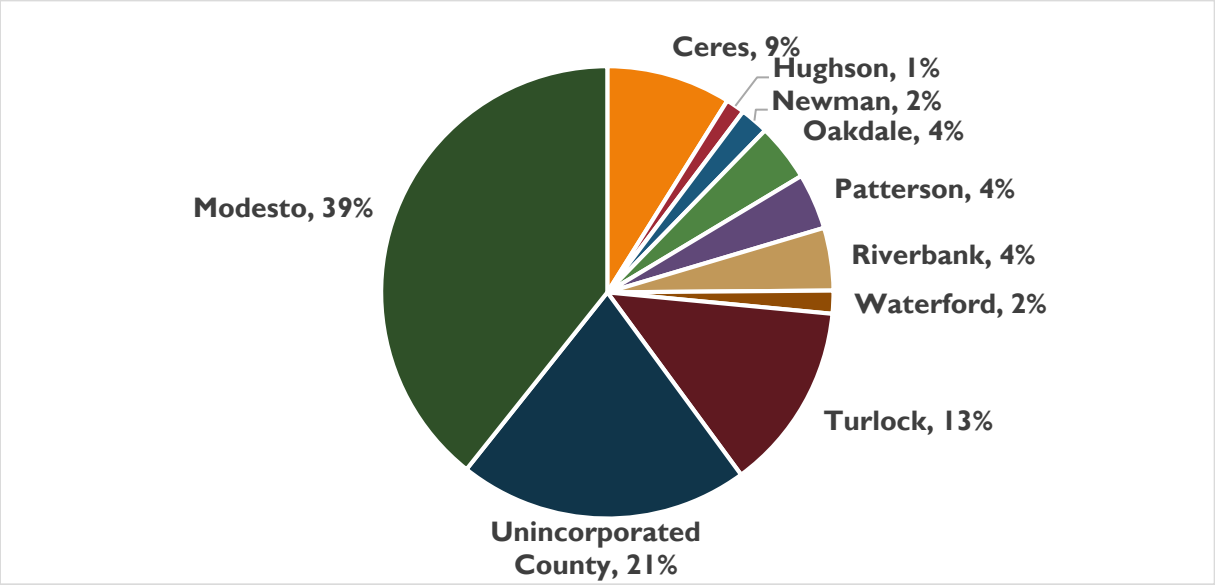
The County's population was born primarily in the United States, with 79 percent born in the County and 66 percent born in the State of California. Twenty percent of County residents were born in a foreign country.

Table 1. Stanislaus County Population by Municipality

Ceres	Hughson	Newman	Oakdale	Patterson	Riverbank	Waterford	Turlock	Stanislaus Urban County	Unincorporated County	Modesto
47,231	7,160	10,808	21,796	21,205	23,761	8,708	71,166	250,883	110,214	208,512

Source: 2012-2016 ACS

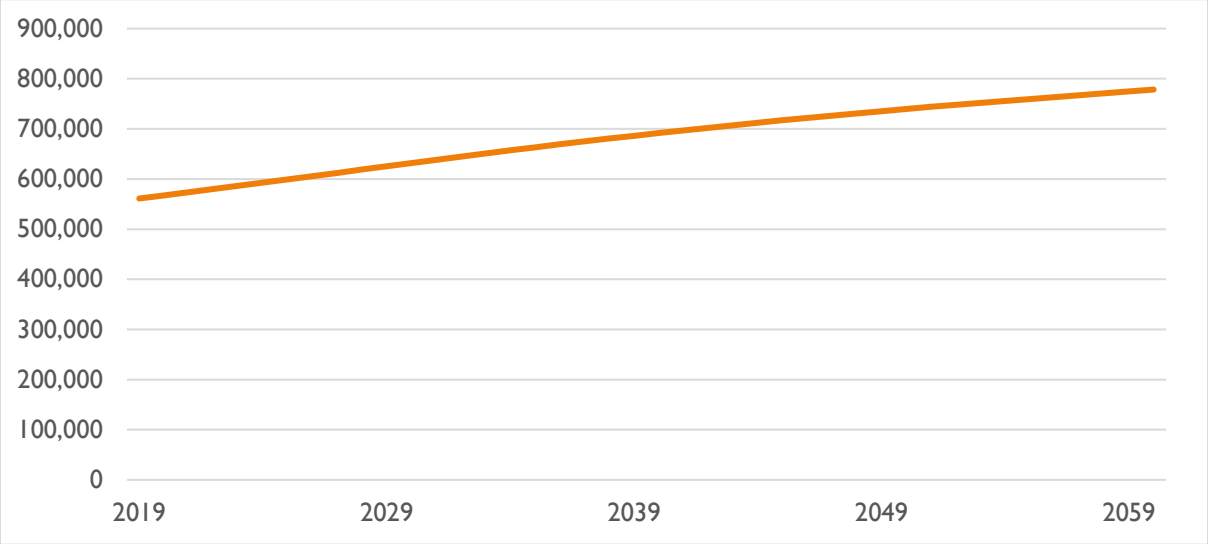
Chart 1. Population Share by Municipality in Stanislaus County



Source: 2012-2016 ACS

In the next 40 years, the Stanislaus County population is projected to grow to about 800,000 residents, a 37 percent increase. Most incorporated areas in the County are expected to grow by about 1 percent annually. The City of Patterson is anticipated to grow the most of all the incorporated areas. According to projections, Patterson will increase from containing 4 percent of the County's population to 6 percent of the population by 2060. (California Department of Finance)

Chart 2. Population Projections 2020-2060 in Stanislaus County



Source: Total Estimated and Projected Population for California and Counties, Demographic Research Unit, California Department of Finance, May 2019

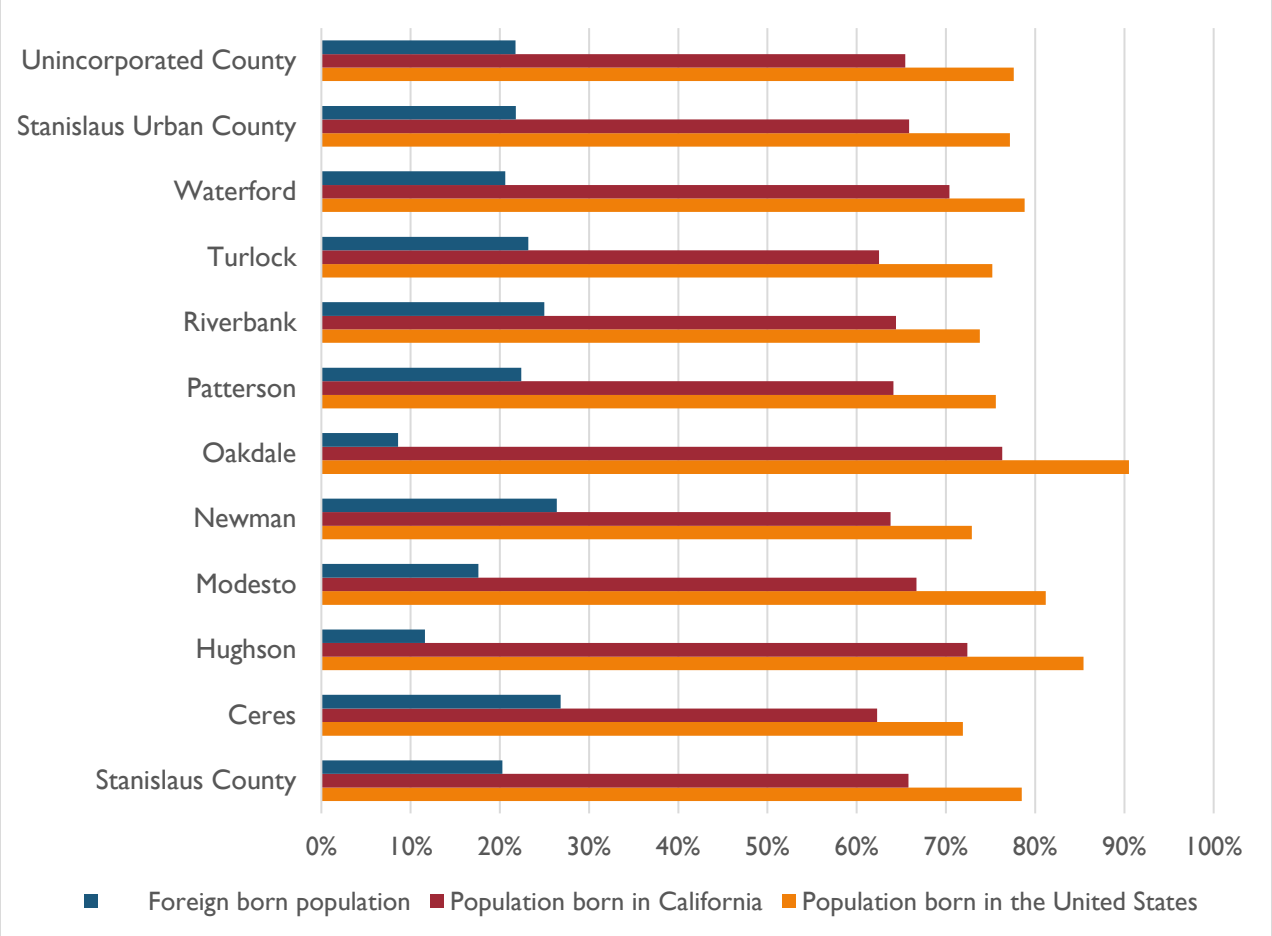
Race/ Ethnicity

Since 1980, the racial and ethnic makeup of the County has changed significantly and the County has become more diverse. For example, the County was 80 percent non-Hispanic White and 15 percent Hispanic or Latino (of any race) in the 1980 U.S. Decennial Census and by 2010, these figures were 47 percent and 42 percent, respectively. In addition, Asian residents grew from 1.4 to 6.7 percent of the population during the same timeframe, and non-Hispanic Black/ African American residents grew from 1.1 to 3.2 percent of the population.

The County's Hispanic or Latino population generally lives outside of Modesto and Turlock, a reflection of the population's connection to the local agricultural industry. (Map X)

In the next 40 years, Asian and Hispanic or Latino populations are expected to increase by the highest percentages compared to current population numbers. During this time period, the Asian population in Stanislaus County is expected to increase more than 150 percent, adding about 40,000 residents, and the Hispanic population by 100 percent, adding 214,000 residents. (Stanislaus County Forecast Summary, Eberhardt School of Business and Policy Research, 2016)

Chart 3. Place of Birth by Municipality



Source: 2012-2016 ACS

The Cities of Ceres, Riverbank, and Newman have the highest percentage of residents who were born in another country, while Hughson, Oakdale, and Waterford have the highest percentage of current residents who were born in California.

Chart 4. Population Race and Ethnicity in Stanislaus County, 1980

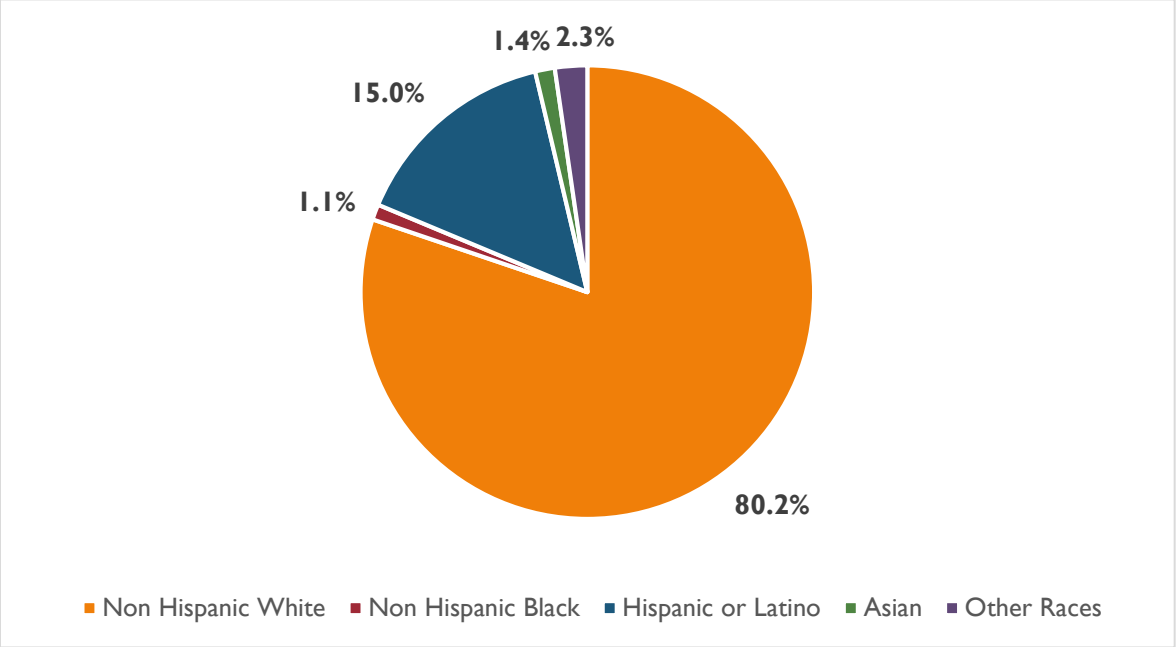


Chart 5. Population Race and Ethnicity in Stanislaus County, 2010

Language

The primary language spoken at home by residents over five years old varies by jurisdiction. Figure 6 indicates that English is the most prevalent language among residents of Hughson, Modesto, Oakdale, Patterson, Turlock, Waterford, and the Unincorporated County. In other communities such as Ceres, Newman, and Riverbank, the majority of residents prefer to speak a language other than English within their household.

Though many people who speak a language other than English at home are bilingual, there are also residents who report speaking English "less than very well". More than 20 percent of residents in Waterford, Newman, Ceres, and the Unincorporated County report speaking English less than "very well". While Spanish is the predominant language of these residents, Ceres, Turlock, and the Unincorporated County also have at least 5 percent of residents who speak another language and speak English less than "very well".

Communication with residents in these areas needs to be particularly aware of the language needs of some residents. Figure 7 presents the share of the population who speak English "less than very well" by language and jurisdiction. English language education services may also be needed to help non-English-speaking residents enter the workforce or increase opportunities for higher earnings.

Chart 6. Language Spoken at Home by Jurisdiction

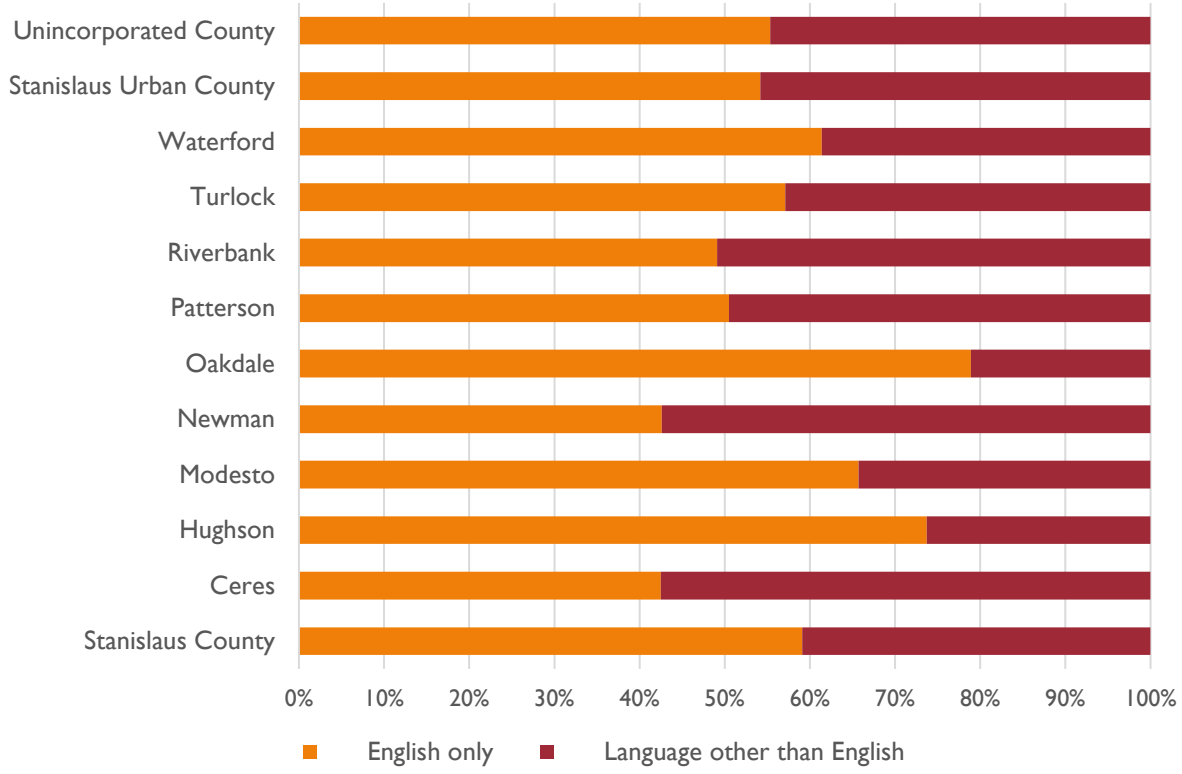

Chart 7. Population That Speaks English Less Than "Very Well" by Language and Jurisdiction.

Racial/Ethnic Concentrations

Racially or Ethnically Concentrated Areas of Poverty (R/ECAP) is a designation by HUD to measure areas where both race or ethnicity and poverty overlap. Such areas could be a sign of unequal housing opportunity on a population scale. A census tract can be designated as a R/ECAP when more than half the population is non-White and either 40 percent or more of the population is in poverty, or, the tract's poverty rate is greater than three times the average poverty rate in the area.

Within Stanislaus County, there are five census tracts considered R/ECAPs all within the area of the Cities of Modesto and Ceres. Figure 8 presents two maps depicting these areas.

Map 1. Racially or Ethnically Concentrated Areas of Poverty (R/ECAPs)

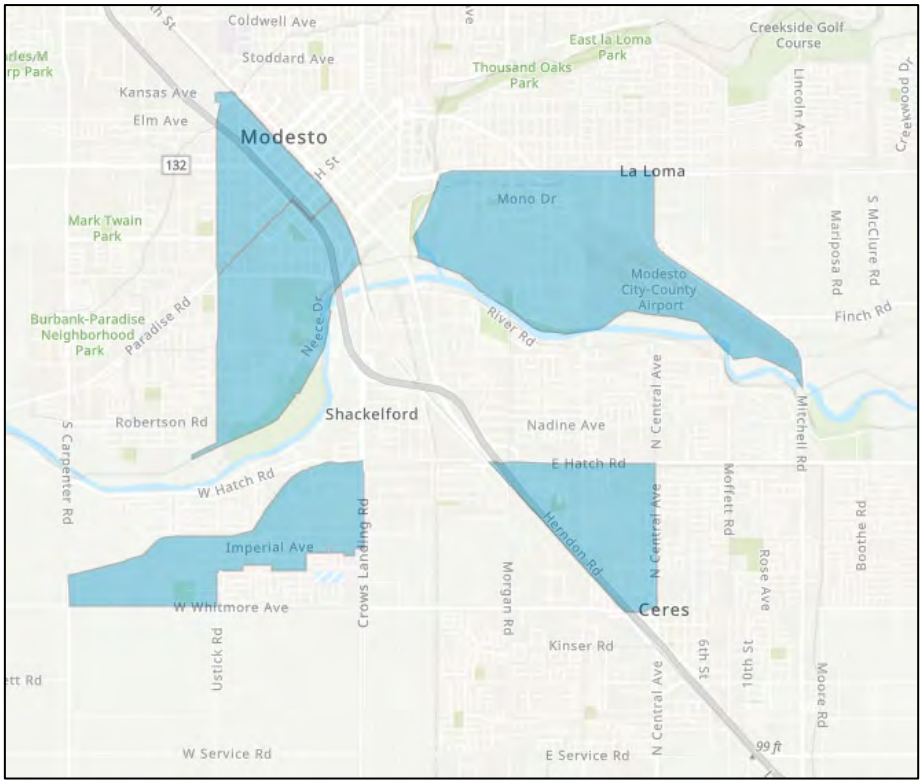
Map 2. Racially or Ethnically Concentrated Areas of Poverty (Zoomed)



Source: Racially or Ethnically Concentrated Areas of Poverty (R/ECAPs) HUD-eGIS Open Data http://hudgis-hud.opendata.arcgis.com/ ACS 2009-2013

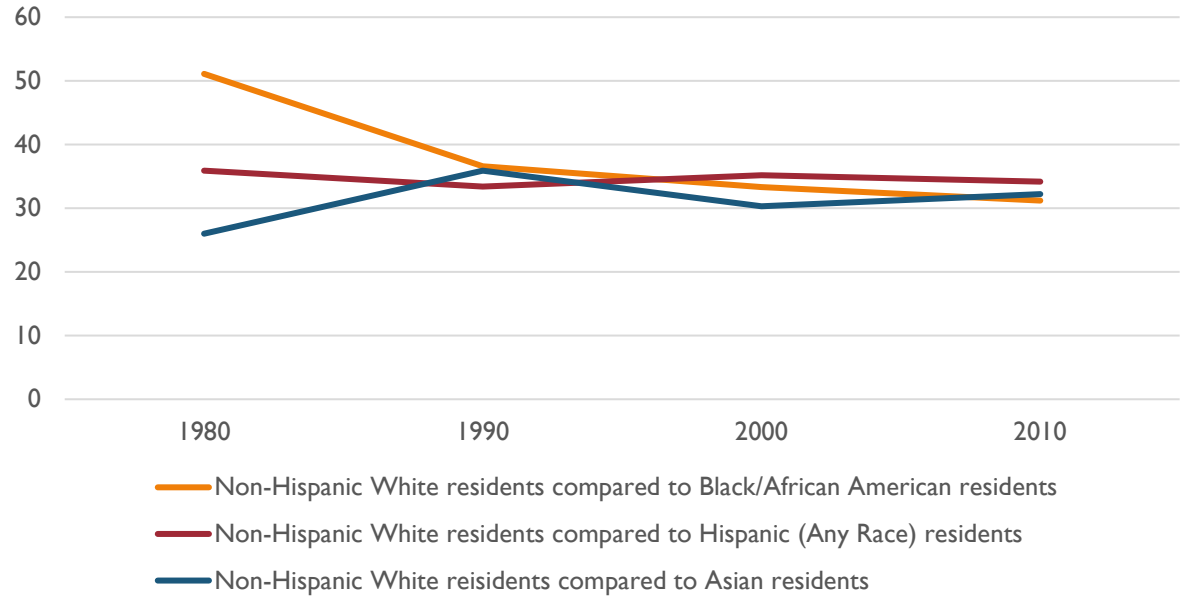
Dissimilarity Index

The "Dissimilarity Index" is a measure of whether members of one group are located evenly across census tracts. The value of this index ranges between 0 and 100, with low values indicating a low amount of segregation and high values indicating a high amount of segregation. The exact value represents the percentage of people who would need to move census tracts for the groups to be evenly distributed within the County. For example, if the County's dissimilarity index for White residents compared to Black/African American residents was 40, this would mean that 40 percent of Black/African American residents would need to move into other census tracts to make the White and Black/African American populations evenly distributed within the County. Note that when looking at race or ethnic Dissimilarity Index values, the values only account for the location of residents rather than those of incomes, housing, or neighborhood quality.

The Dissimilarity Index for Stanislaus County for non-Hispanic White residents compared to Black/African American residents shows that these residents have become more integrated within Stanislaus County between 1980 and 2010.

The Dissimilarity Index between Non-Hispanic White and Hispanic or Latino residents stayed constant within Stanislaus County between 1980 and 2010, indicating the increase in the Hispanic or Latino population has been proportional across the County. In other words, compared to the 1980 distribution by ethnicity, integration between non-Hispanic White residents and Hispanic or Latino residents in the County has not changed over time.

Chart 8. Dissimilarity Index: Stanislaus County

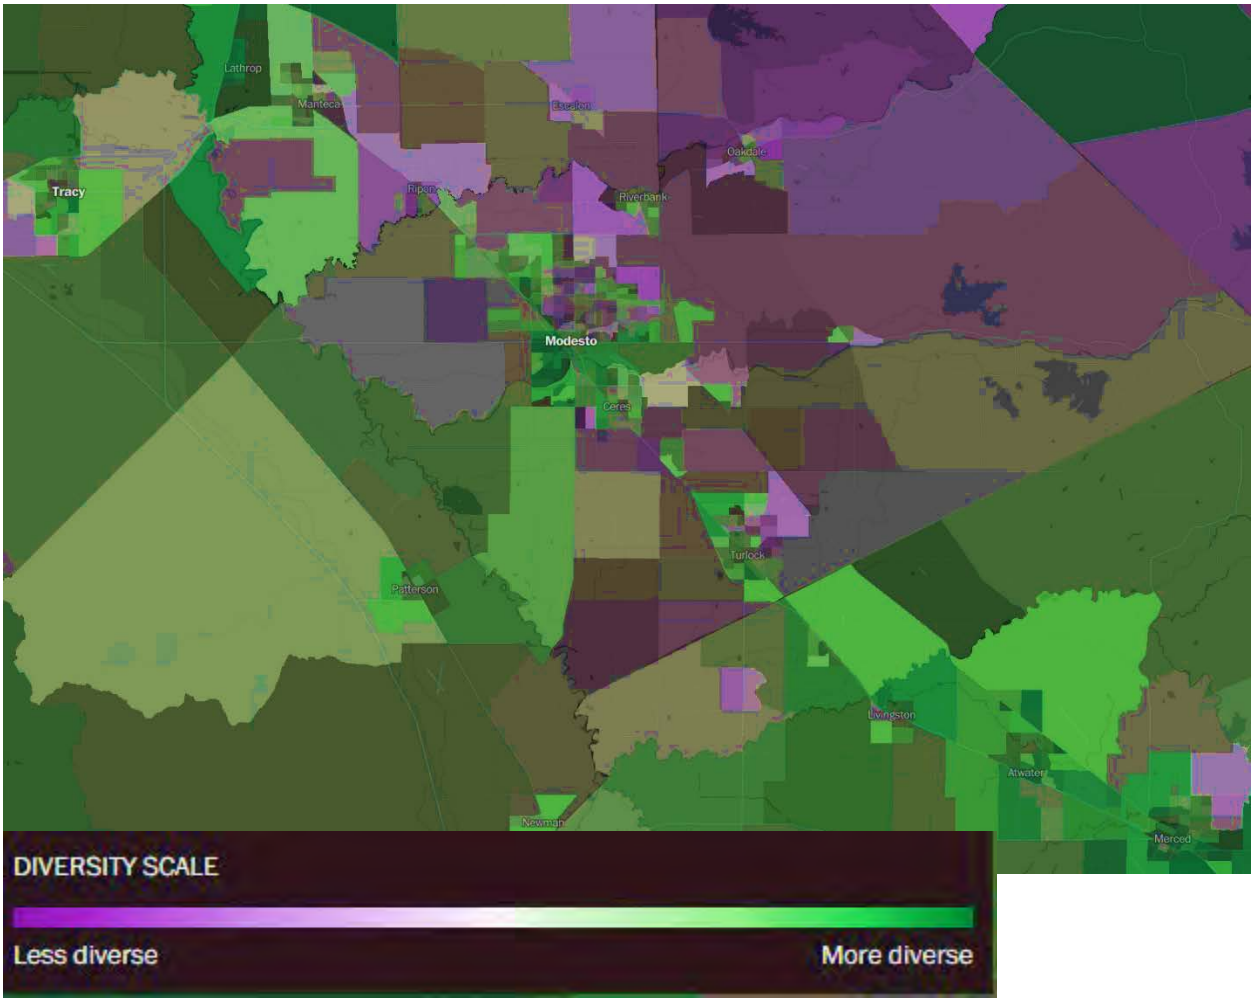


Source: Diversity and Disparities, American Communities Project, Brown University, Modesto MSA

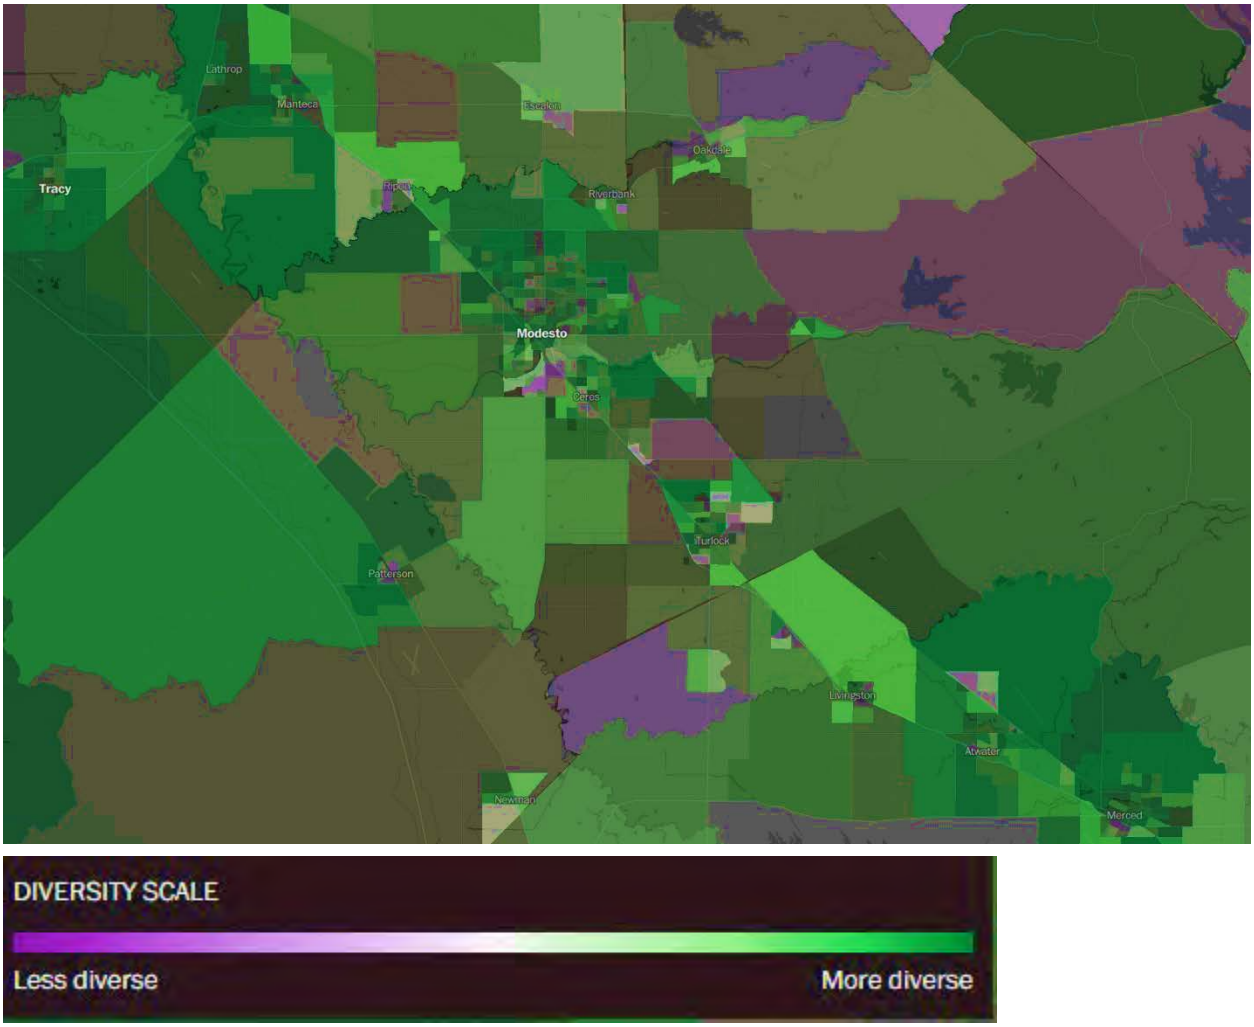
Entropy Index

A related calculation of diversity is an "entropy index", which measures the spatial distribution of race in a given area. The more clustered together a single racial group is, the less diverse that area is under this metric. If the group is distributed evenly throughout the County, then the area is considered more diverse. Between 1990 and 2016, Stanislaus county became more diverse under this measure, supporting the interpretation of the Dissimilarity Index.

Map 3. Entropy Index, 1990



Map 4. Entropy Index, 2016



Source: Washington Post: How integrated is your city? Diversity mapping tool. Published May 2, 2018.

Age and Disability

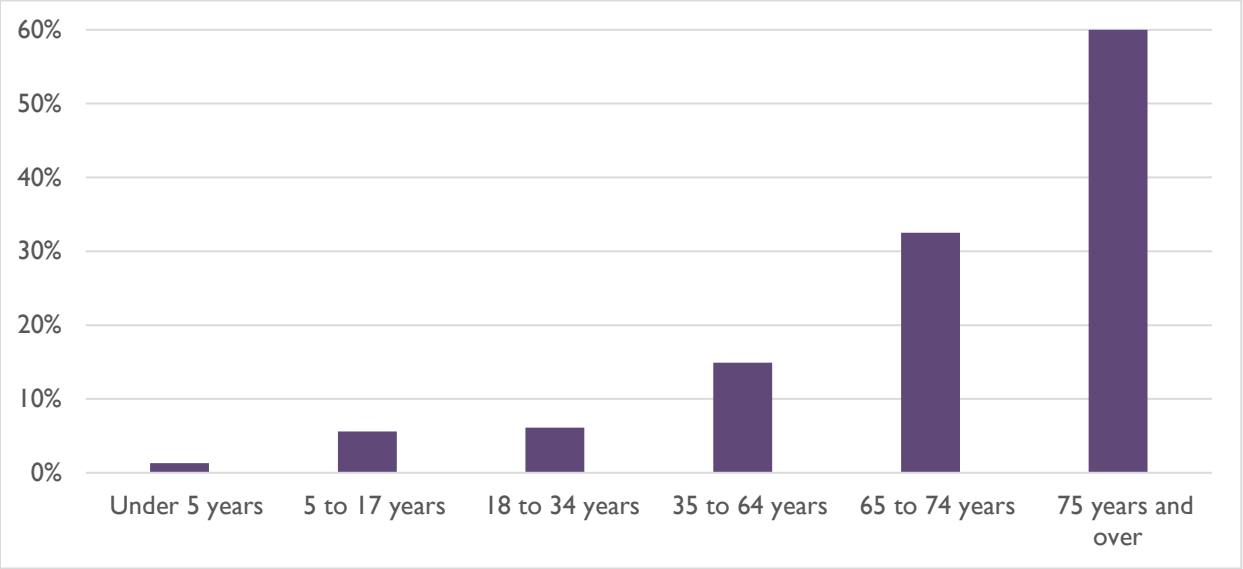
In Stanislaus County, about 44 percent of residents over age 65 report having some sort of disability. For individuals age 75 and over, this figure increases to 60 percent. Figure 12 depicts the share of the County population with a disability by age bracket. In comparison, Figure 13 presents the projected population growth by age in Stanislaus County. Between 2020 and 2040, the State of California Department of Finance anticipates the largest population growth in Stanislaus County for residents in two age brackets: those ages 30-48 and those over the age of 70.

In areas with a high number of seniors, there may be need for specific services and disability accommodations (changing a rule or policy for a person based on disability) and modifications (changing a physical structure for a person based on disability).

Disability accommodations and modifications may be needed in any number of venues like rental and homeowner housing, government service counters, community centers, and walkways. Services in demand for with disabilities include meal programs, home care and medical services, transportation, and other social services. Subsidies to provide these services to low- and moderate-income residents are

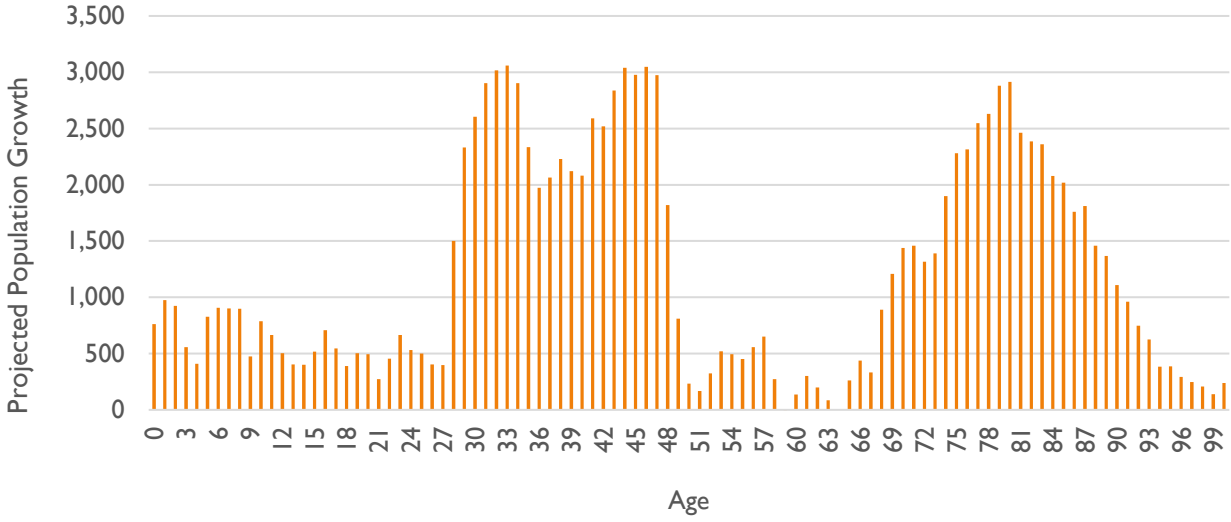
particularly needed in these areas. Between 2020 and 2040, the State of California Department of Finance anticipates population growth in Stanislaus County among two age categories: those 30 to 48 and those over the age of 70. (Chart 9)

Chart 9. Population with a Disability by Age in Stanislaus County



Source: 2012-2016 ACS 5-Year Average

Chart 10. Projected Population Change by Age 2020-2040



Source: State of California Department of Finance County Population Projections (2010-2060): County Population by Age (1-year increments) Baseline 2016

Income Trends

Disability and Income

About 9 percent of the County's population reports having a disability. Figure 14 presents the distribution of annual earnings for residents in Stanislaus County by disability status. The median annual earnings for a person with a disability is $24,404 in Stanislaus County. Without a disability, median annual earnings are $29,816, a difference of more than five thousand dollars annually. Likewise, of the population with a disability in the County, 21.4 percent are under the federal poverty level compared to just 14.1 percent of people without a disability.

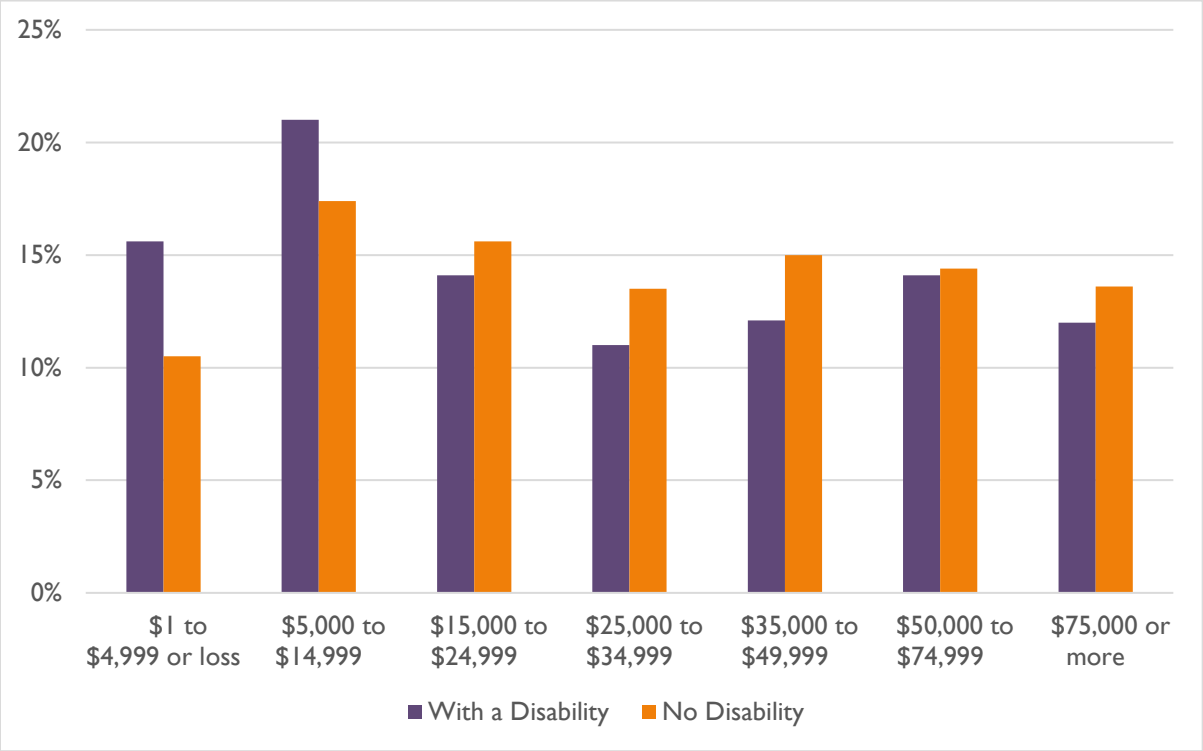
The income discrepancy is most likely due to the fact that the majority of the Stanislaus County population with a disability and over age 16 are not in the labor force (Table 2).

Table 2. Total Population and Population with a Disability in Labor Force in Stanislaus County

	Total Population	Population with a Disability
Employed	54.6%	19.7%
Not in Labor Force	38.2%	75.4%

Source: 2013-2017 ACS

Chart 11. Disability Status by Annual Income Brackets in Stanislaus County

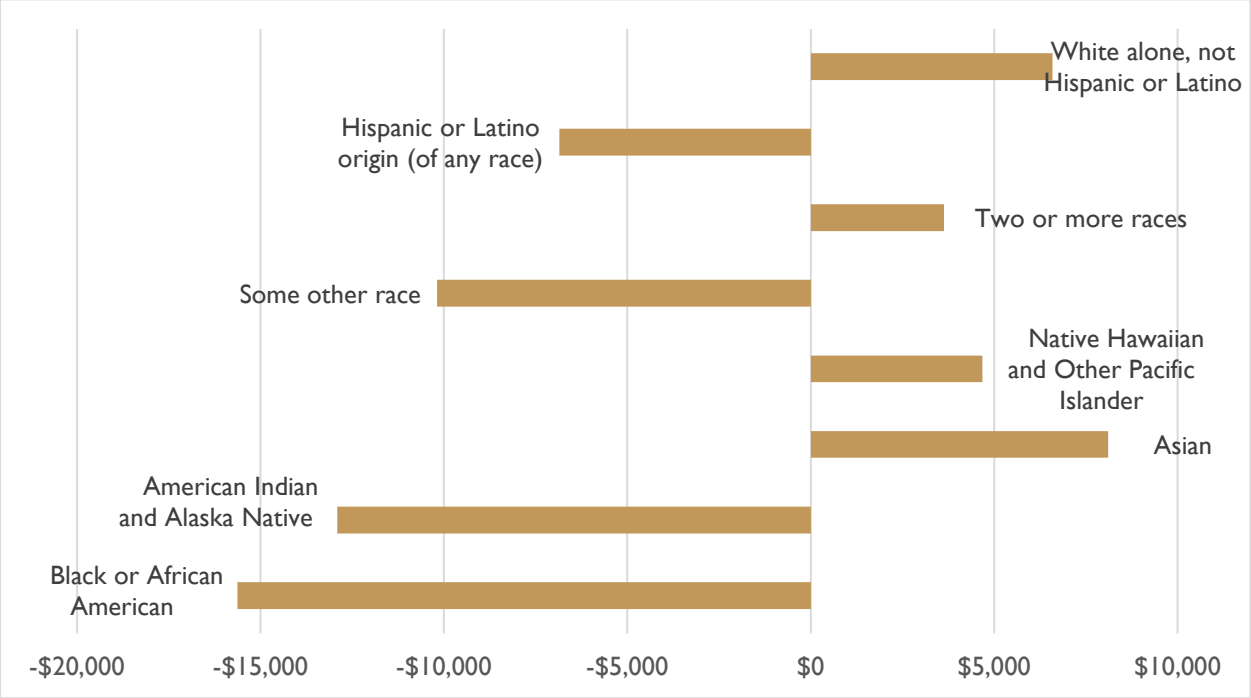


Source: 2013-2017 ACS

Race/Ethnicity and Income

The median household income in Stanislaus County is $54,260, which varies by over $15,000 per year depending on household race and ethnicity. Non-Hispanic White and Asian households earn more than $5,000 per year above the County median income, while Hispanic or Latino, American Indian and Alaska Native, Black/ African American, and people of another race make $5,000 to $15,000 less annually per household.

Chart 12. Difference in Annual Median Income from County Median Income by Race and Ethnicity



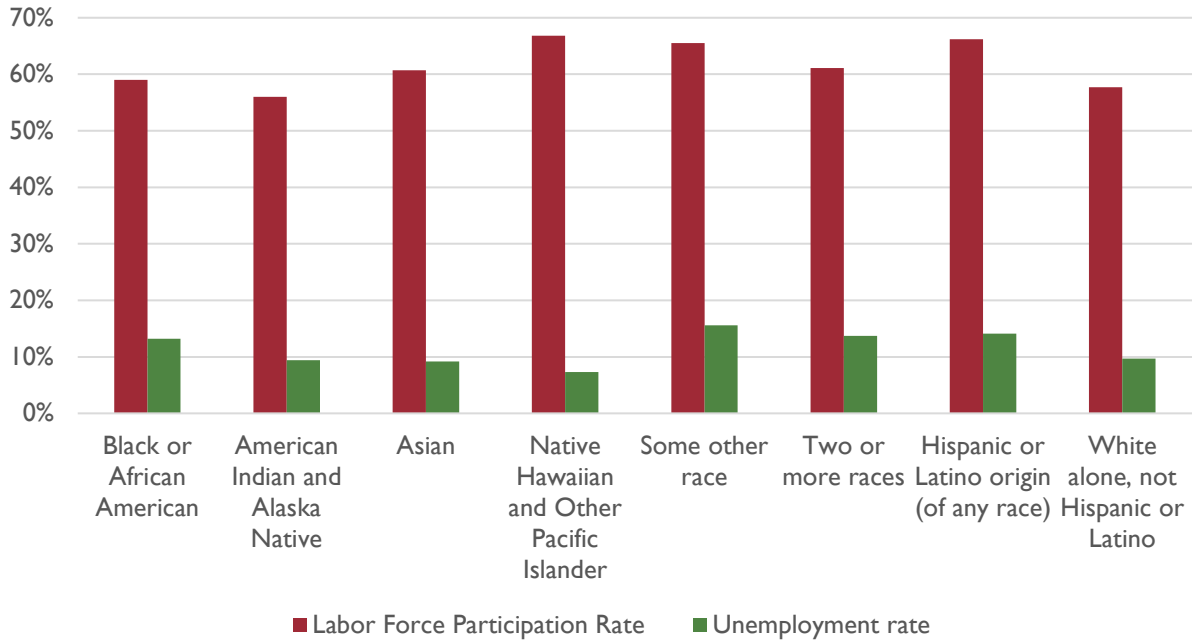
Source: 2013-2017 ACS

Employment Trends

Employment by Race/Ethnicity

Participation in the labor force as well as unemployment vary by race and ethnicity. There could be several reasons for this including historic differences in access to education, participation in industries which have undergone significant change, and different sized populations of retired individuals in each racial or ethnic group. Chart 13 depicts the share of individuals participating in the labor force and are unemployed by race and/or ethnicity.

Chart 13. Labor Force Participation and Unemployment by Race and Ethnicity



Source: 2013-2017 ACS

Commuting Time/Type

Countywide, more people both work and live in Stanislaus County (42 percent) than commute outside the County for work (33 percent). In comparison, a significant number of residents in both Turlock and Modesto commute outside the City for work. Access to and methods of transportation for employment can therefore be a determinant in an individual's ability to access and maintain various jobs. Charts 14, 15, and 16 depict the number of residents in Stanislaus County, Modesto, and Turlock who commute within or outside of the County for work.

Chart 14. Primary Job Inflow/Outflow: Stanislaus County

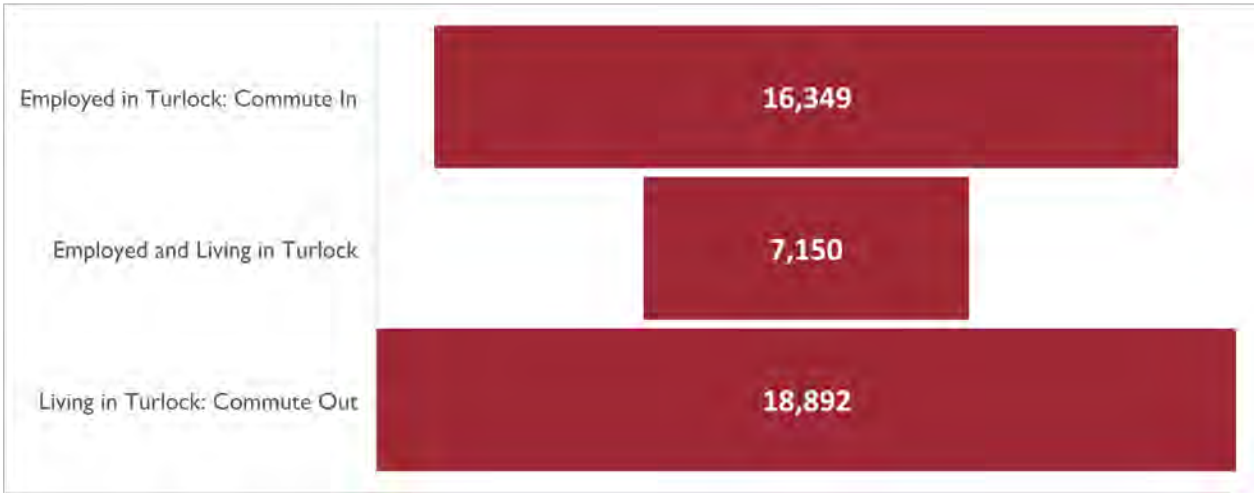
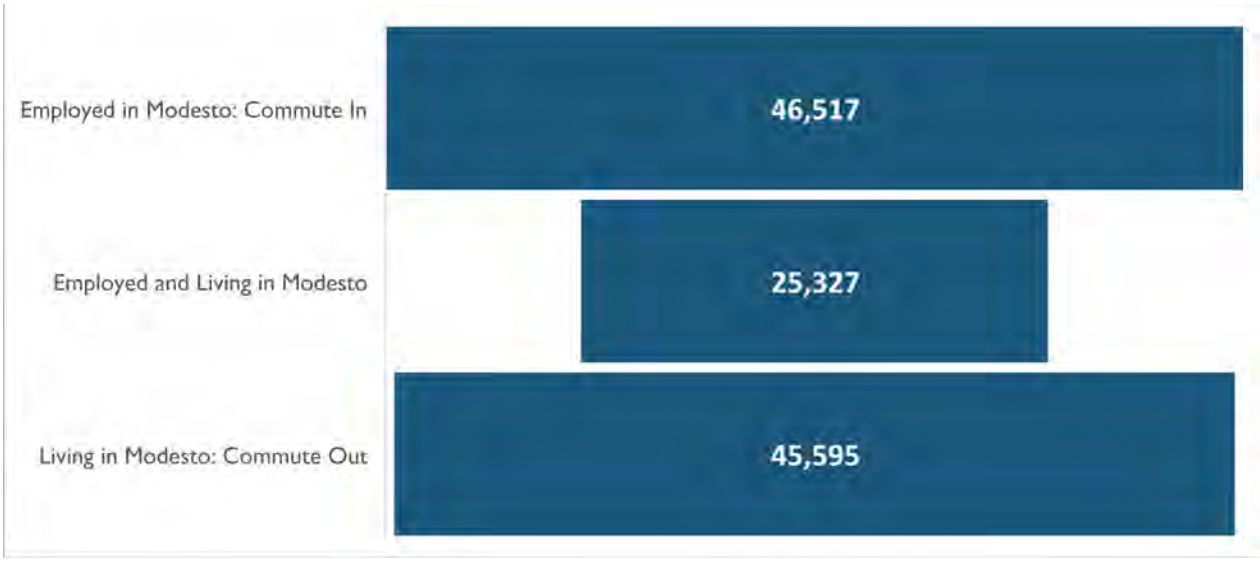
Chart 15. Primary Job Inflow/Outflow: City of Turlock



Source: U.S. Census OnTheMap

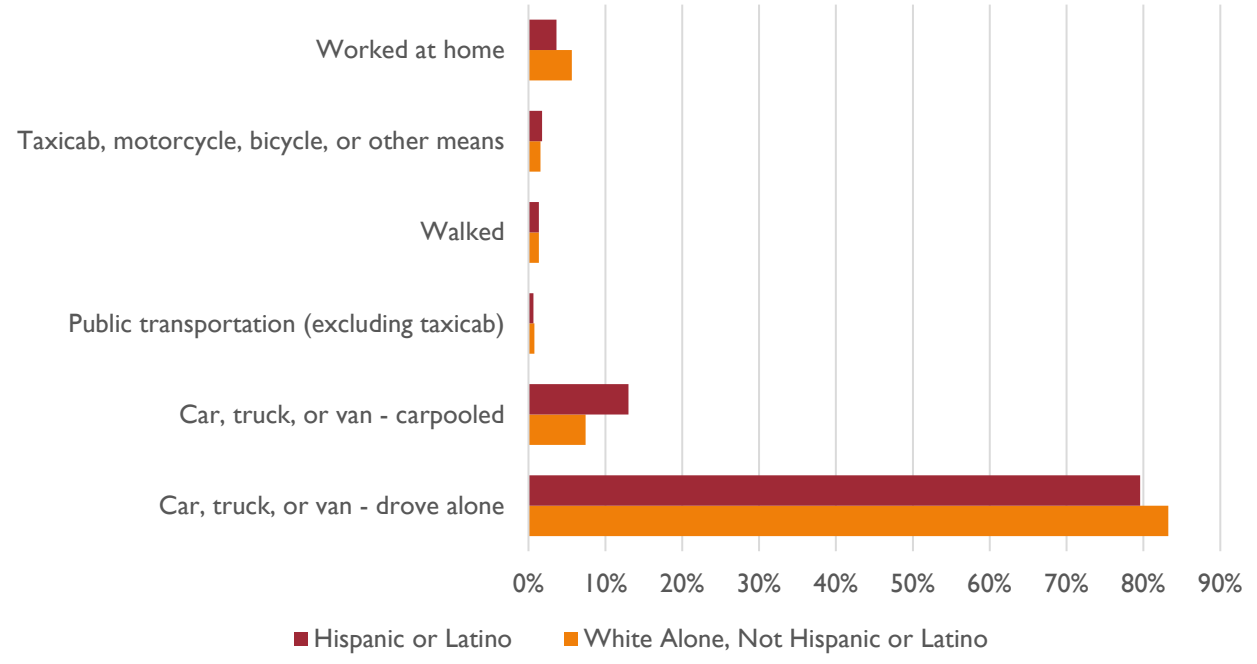
Chart 16. Primary Job Inflow/Outflow: City of Modesto



Source: U.S. Census OnTheMap

Chart 17 presents the different forms of transportation residents use to get to work for White Non-Hispanic and Hispanic/Latino residents. The chart indicates that there are slight differences in the commuting method between White, non-Hispanic residents and Hispanic or Latino residents in Stanislaus County. More Hispanic or Latino residents commute to work by shared car, truck, or van (carpooled) than White non-Hispanic residents, while more White non-Hispanic residents either drove alone or worked at home.

Chart 17. Means of Transportation to Work by Race and Ethnicity



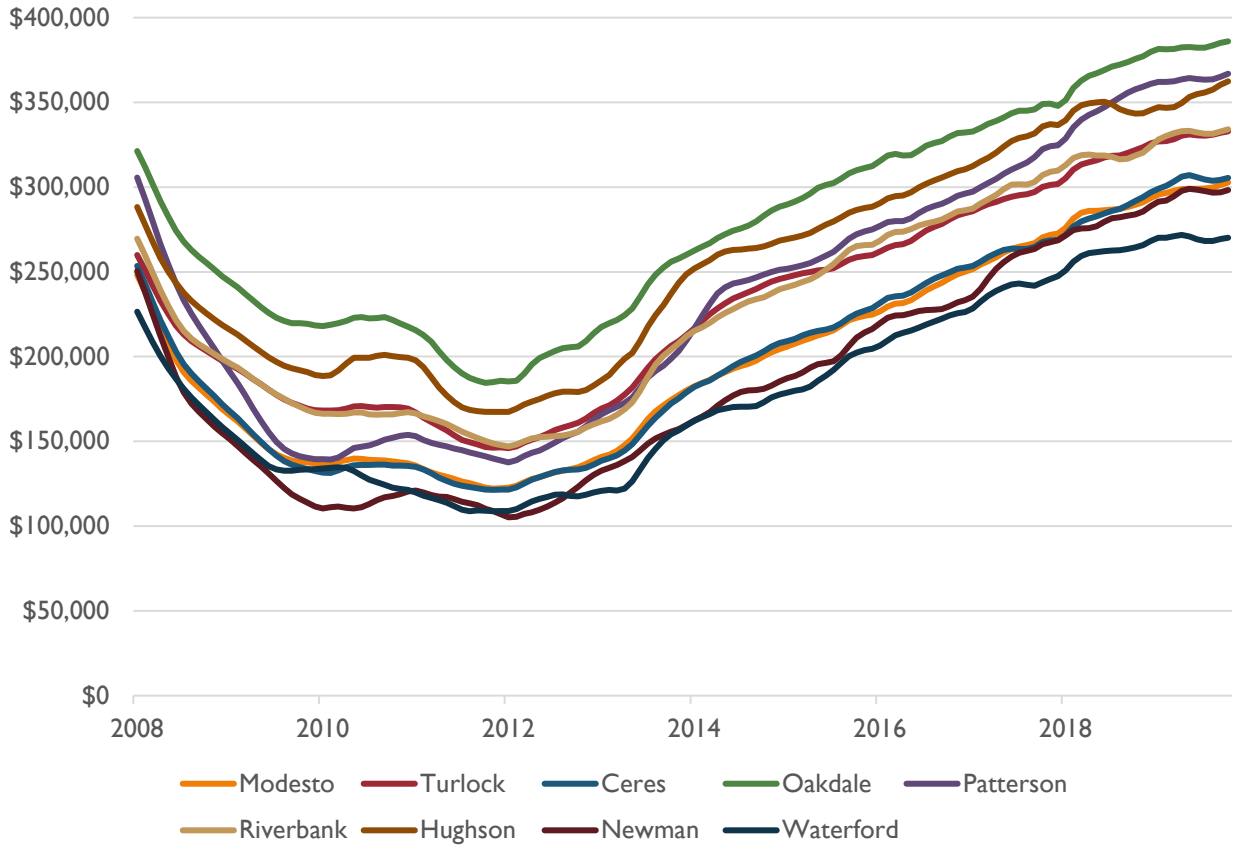
Source: 2013-2017 ACS 5-Year Estimates

Housing Trends

Homeowner housing (both single-family homes and condos) values have increased steadily across Stanislaus County since 2012. The highest values are in Oakdale, with a typical housing unit worth $368,000 in 2019. The lowest value for a typical house in 2019 is in Waterford, about $270,000.

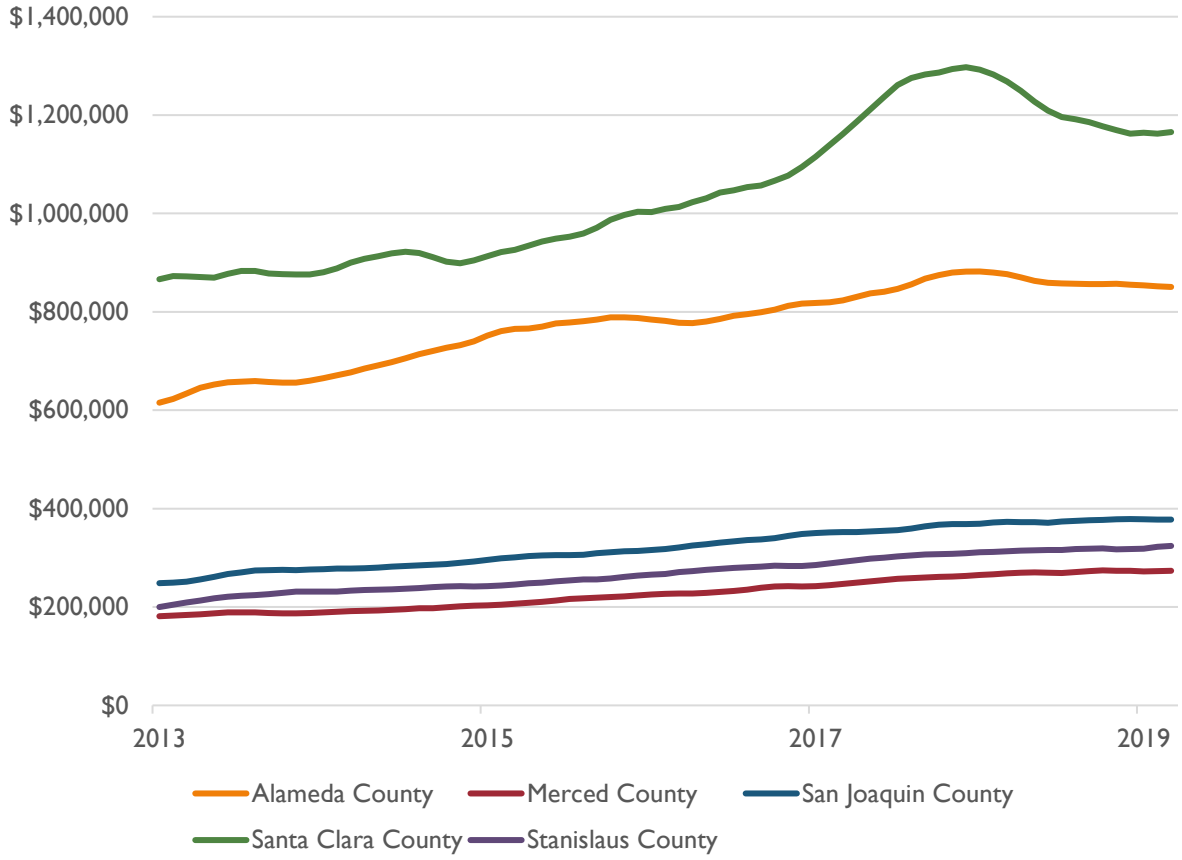
Regionally, homeowner housing values in counties surrounding Stanislaus County are divided between the Bay Area (Alameda, Santa Clara Counties) and those inland (Merced, Stanislaus, and San Juaquin Counties). Chart 18 presents typical home values for jurisdictions within Stanislaus County. In comparison, Chart 19 depicts the typical housing value in Stanislaus County and surrounding counties.

Chart 18. Typical Home Value (Zillow Home Value Index)



ZHVI All Homes (Single-Family Rental, Condo/Coop) Time Series

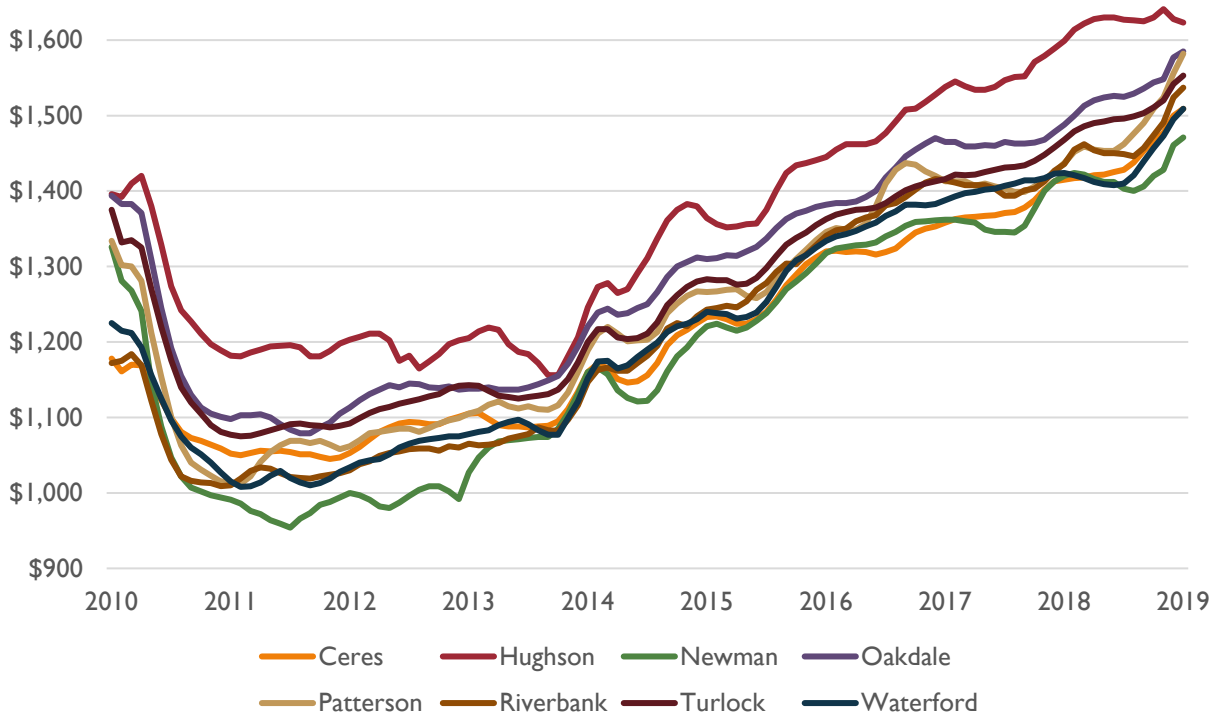
Chart 19. Typical Home Value in Regional Counties (Zillow Home Value Index)



Source: Zillow data: ZHVI All Homes (Single-Family Rental, Condo/Coop) Time Series

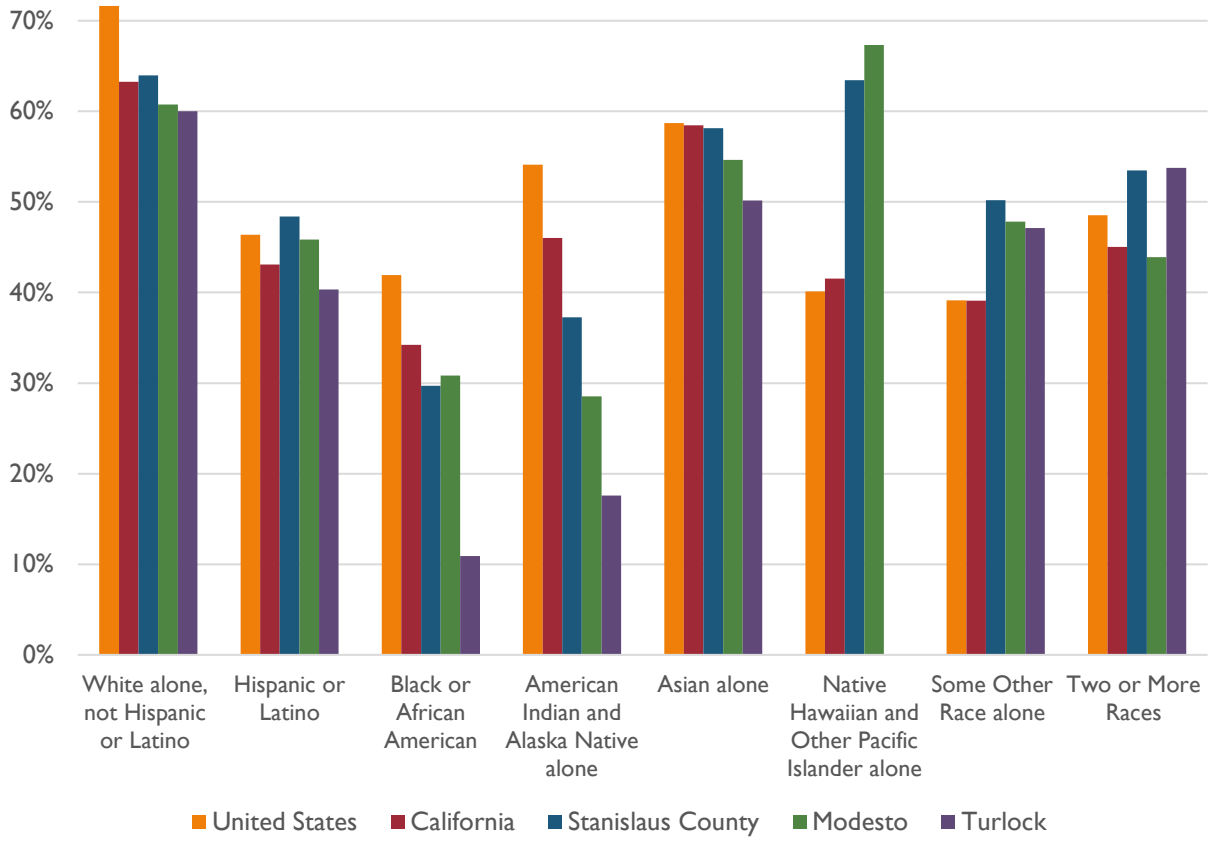
Chart 20 depicts the change in typical rental housing prices by jurisdiction in Stanislaus County. The figure indicates that rental housing prices have increased in all Stanislaus County municipalities, with the highest typical rental price in Hughson ($1,623) and the lowest in Newman ($1,471) as of 2019.

Chart 20. Typical Housing Rental Price (Zillow Rent Index)



Source: Zillow Data: ZRI Time Series

Chart 21. Homeownership Rate by Race and Ethnicity



Source: 2013-2017 ACS 5-Year Estimate

Chart 21 presents homeownership rates by race and ethnicity for residents of Stanislaus County, Turlock, and Modesto as well as California and the United States. For most race and/or ethnicities depicted, homeownership rates for the County and Entitlement Communities more closely resemble those for California than the United States. In addition, for some race/ethnic groups, homeownerships rates for Stanislaus County, Modesto, and Turlock are well above or below average. For instance, the homeownership rate for Black/African American residents in Turlock is 10.9 percent whereas the rate for Modesto is 30.8 percent, 29.7 percent for Stanislaus County, 34.2 percent for California, and 41.9 percent for the United States. This may be because of a small sample size or population of Black/African American residents in Turlock.

Access to Opportunity

Transportation

Transportation is a component in equal access to neighborhoods, employment, healthcare, and other services for those who cannot or choose not to drive a car due to factors like disability, financial constraints, or legal barriers. Most transportation in Stanislaus County is through personal vehicles, though public transportation exists as a regional bus system, city bus systems, ADA paratransit services (Dial-a-Ride), and interstate train system.

Stanislaus County has numerous public transportation and alternative transportation methods, particularly for seniors or those with mobility disabilities. Less than 10 percent of all workers commute using a shared vehicle or public transportation, however, partly due to the lack of transit options during non-traditional business hours.

Bus Systems

Stanislaus Regional Transit (StaRT) serves Stanislaus County with eight bus routes that travel throughout the County. All bus stops are shown on Map X

Ceres Area Transit (CAT) serves Ceres and the surrounding unincorporated area.

Modesto Area Express (MAX) offers bus service throughout the Modesto urban area with 21 routes.

Turlock Transit provides transit service with six routes within the City of Turlock.

Ride Services

Ceres Dial-A-Ride (CDAR) is a curb-to-curb demand service for use only by people with disabilities that prevents them from riding the CAT Scheduled Fix Route Bus System. CDAR is presently operated by Storer Transit Systems, Inc., under contract with the City of Ceres.

Modesto Area Dial-A-Ride (MADAR) is provided by the City of Modesto as a transportation service for persons with disabilities, and people 65 and older.

Stanislaus Regional Transit (StaRT) Dial-A-Ride is a pre-scheduled cur-to-curb service within the County. Dial-A-Ride is available in the following communities:

Newman Dial-A-Ride Newman, Crows Landing, Gustine
Oakdale Dial-A-Ride Oakdale
Patterson Dial-A-Ride Patterson, Westley, Grayson
Riverbank Dial-A-Ride Riverbank, Eastside

Stanislaus Regional Transit (StaRT) Shuttles is a curb-to-curb transportation service open to the general public between cities in the County. The following shuttles operate within the County:

Waterford/Modesto Shuttle: Modesto, Empire, Oakdale, Waterford, Hickman, Hughson, Ceres
Eastside Shuttle: Modesto, Oakdale, Riverbank
Turlock/Modesto Shuttle: Modesto, Keyes, Turlock, Denair

Stanislaus Regional Transit (StaRT) ADA Paratransit service is available to individuals with disabilities which prevent them from using fixed-route buses. The service is provided within a 3/4-mile radius of a StaRT Fixed Route bus and is a direct origin-to-destination shared-ride transit service.

Stanislaus Regional Transit (StaRT) Medivan takes pre-scheduled passengers from Modesto to non-emergency appointments at Bay Area Medical Centers Monday through Thursday.

BRIDGES Volunteer Driver Program provides reimbursement to individuals with a disability or senior citizens who are unable to drive or use public transit**.** Eligible participants select a volunteer driver

who is able to drive them to destinations. Participants receive $0.50 per mile to reimburse the volunteer driver.

Veterans Van Volunteer Driver Program (VetsVan) is a service through a partnership between the Stanislaus County Area Agency on Aging and the Veterans Service Office (VSO) that helps veterans get to medical appointments. VetsVan serves homebound veterans and occasionally those who are not able to take other forms of transportation due to a medical condition. Rides are provided by volunteer drivers and can take veterans to regional Veterans Affairs (VA) locations.

Turlock Transit Dial-a-Ride provides paratransit service to eligible individuals. Within a specified zone in Turlock, the service is available only to persons who have received ADA paratransit eligibility, those 65 years of age and over, Medicare card holders, or elementary school students. In other Turlock-area zones, the service is open to everyone.

Regional Rail

Amtrak stations on the San Joaquins regional line are located near Modesto and Turlock. The San Joaquins line runs to Bakersfield southbound and Oakland or Sacramento northbound. The San Joaquin Joint Powers Authority, of which StanCOG is a member, operates the line.

The Modesto Amtrak station was built in 1999 and has ADA Accessible bathrooms, waiting room, water fountain, ticket office, and platform. Denair Station near Turlock is an unstaffed Amtrak station. The train platform is ADA Accessible.

Altamont Commuter Express (ACE) is a commuter train used by residents of Stanislaus County. It runs between Stockton and San Jose and stops in the Bay Area.

Connecting Services

Modesto Area Express (MAX) offers commuter services to ACE, Amtrak, and Bay Area Rapid Transit (BART).

StaRT Commuter is a bus that transports commuters from Turlock and Patterson to the Dublin/Pleasanton BART station.

California Vanpool Authority (CalVans) *CalVans* operates as a Public Transit Agency that operates two programs: the Farmworker Vanpool Program and the General Public Vanpool program. CalVans supplies volunteer drivers with vans to drive themselves and others to work or school and pays for the gas, maintenance, repairs, and insurance.

Transportation Planning

StanCOG The Stanislaus Council of Governments (StanCOG) is the Metropolitan Planning Organization (MPO) for the Stanislaus Region tasked with, among other things, creation of the Regional Transportation Plan (RTP). The RTP is a 25-year plan that describes future needs and goals for all local transportation systems including roadways, transit, bicycle/pedestrian improvements and aviation. The last RTP published was the *2018 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/ SCS).

Non-Motorized Transportation Plan The *2013 Non-Motorized Transportation Master Plan*, details bicycle and pedestrian transportation in the County and is being updated in 2020. One stated goal of the

plan update is to "develop a non-motorized transportation network that focuses on equity and inclusivity to address the region's unique needs."

MOVE The California Social Services Transportation Improvement Act was passed in 1979 and allowed and suggested that each California county create a Consolidated Transportation Services Agency to coordinate the transportation needs of seniors, people with disabilities, and others with lowered mobility or special transportation needs. In 2010, StanCOG established the Consolidated Transportation Services Agency (CTSA) of the Stanislaus Region, now called "MOVE". MOVE works to reduce gaps in the region's public transit systems, assists other human services agencies with transportation technical assistance, and provides mobility training ("travel training").

Measure L In 2016, a one-half cent sales tax was approved by Stanislaus County voters ("Measure L"), to fund transportation in the County. Over the measure's lifetime of 25 years, 65 percent of the revenue will be used for local projects, $48 million for bicycle and pedestrian network improvements, and $20 million for need-based transportation services for seniors, veterans, and disabled residents. In all, Measure L is expected to collect $960 million dollars.

General Plan The "Circulation Element" of the Stanislaus County General Plan addresses transportation issues from a land-use perspective. It encourages land use that supports public transit and other transportation modes.

Transit Discrimination and Housing Choice Issues

Title VI of the Civil Rights Act of 1964 protects the right to not be excluded from participation in, or denied the benefits of, public transportation services on the basis of race, color, or national origin. People who believe that they have experienced discrimination or have been denied rights may file a complaint with California's Department of Fair Employment and Housing (DFEH) or with the Federal Transit Administration.

Public Transit Use

Chart 22 depicts the share of commuters in Stanislaus County by the method of transportation to work. The figure indicates that a very small percentage of workers in Stanislaus County take public transportation to commute to work. Only 0.7 percent, or 7 out of every 1,000 workers, take public transportation countywide. In Modesto, the largest city in the County, 0.9 percent take public transportation to work. Using a personal vehicle (whether alone or part of a rideshare/carpool) to travel to work takes far less time than taking public transportation in Stanislaus County. People driving alone to work take an average of 22 minutes, and people who share rides take an average of 26 minutes. Those who take public transportation take 47 minutes, more than double the time driving a vehicle alone. (Chart 23)

For those who do take public transportation, Chart 23 indicates that the majority begin work during traditional first-shift or "office" hours after 8:30 am. Almost no workers who begin work between midnight and 6:00 am use public transportation but rely on their own vehicle or a rideshare/carpool. A higher percentage of people who drive to work start working between midnight and 8:30 am.

Schools

Education outcomes are correlated with housing and neighborhood choice because success in education drives an individual's ability to participate in the labor force, occupation, and wage prospects. The collective educational success in an area is a factor in the local economy, average wages and overall housing and neighborhood quality. If educational outcomes are not equal among members of specific groups, the local economy and housing and neighborhood quality will be impacted.

Likewise, housing discrimination segregates some children into distressed neighborhoods and high-poverty, low-quality schools. Specific housing and neighborhood policies can help students' education outcomes by investing in current struggling neighborhoods where children already are and by enabling families to live in communities with higher-quality schools. While increasing educational outcomes is complex and both individual education intervention for students and work stabilizing neighborhood safety and quality are needed, HUD has found the effects of increased neighborhood stability (and home environment) to be a larger factor in increasing educational outcomes. (Breaking Down Barriers: Housing, Neighborhoods, and Schools of Opportunity, HUD Office of Policy Development and Research)

Within Stanislaus County, there are 25 individual school districts and about 115,000 students between kindergarten and 12th grade. Around 110,000 are enrolled in public schools and 5,000 in private schools. Among public school students in the County, 60 percent are Hispanic or Latino, 26 percent are non-Hispanic White, 4 percent are Asian, and the remaining are Black/ African American or Two or More Races. Twenty four percent of all students are learning English, slightly higher than 19 percent in California. Sixty-nine percent of students qualify for free and reduced-price meals based on household income. (Stanislaus County Office of Education Annual Report to the Community 2019)

Chart 24 presents the share of students by race and ethnicity in Stanislaus County. Over 60 percent of students in Stanislaus County schools are Hispanic or Latino, about 26 percent are non-Hispanic White, and the rest are another race, thought the demographics of students varies widely geographically. In Ceres, Newman-Crows Landing, and Riverbank School Districts, more than 75 percent of students are Hispanic or Latino. More than 50 percent of students are non-Hispanic White at Valley Home Joint Elementary, Gratton Elementary, Oakdale Joint Unified, Knights Ferry Elementary, Hickman Community Charter School, and Gratton Elementary. Only Stanislaus Union Elementary has more than 25 percent of students who are not Hispanic or Latino, or non-Hispanic White ("Other").
Graduation rates vary by student race, though not by large margins. Black/ African American students have the lowest graduation rate in the County at 74.4 percent and are also the most likely to be suspended. Filipino students have the highest graduation rate at 89.4 percent. (California Department of Education 2018-2019) These rates are both less than ten percentage points away from the countywide graduation rate of 83.9 percent. (Chart 27)

Students' ability to read, write, and speak English varies geographically as well. California students' English language ability is measured using the Initial English Language Proficiency Assessments of California (ELPAC). "English Only" (EO) students are native speakers of English with no additional language support needed. Initial Fluent English Proficient (IFEP) students need minimal language support, and "Reclassified Fluent English Proficient" (RFEP) are those students who, through learning English, are now at the IFEP level. "English Learners" need language education support to learn English for both social and academic use. (California Department of Education)

A number of schools and school districts have a large number of students who are English Learners, or not yet proficient at English for their grade level. Chart 26 indicates that Shiloh Elementary, Riverbank

Unified, Patterson Joint Unified, Paradise Elementary, Modesto City Elementary, Keyes Union, and Chatom Union all have more than a third of students who are considered English Learners.

Students still in the process of becoming proficient in English have the significant hurdle of language in the way when competing academically with their peers, though many English Learners achieve the level of RFEP in time, particularly at Modesto City High where more than 31 percent of students achieved the level of RFEP after starting out as English Learners. Turlock Unified, Riverbank Unified, Patterson Joint Unified, Newman-Crows Landing Unified, Hughson Unified, and Ceres United School Districts all have at least 15 percent of students who have achieved the level of RFEP.

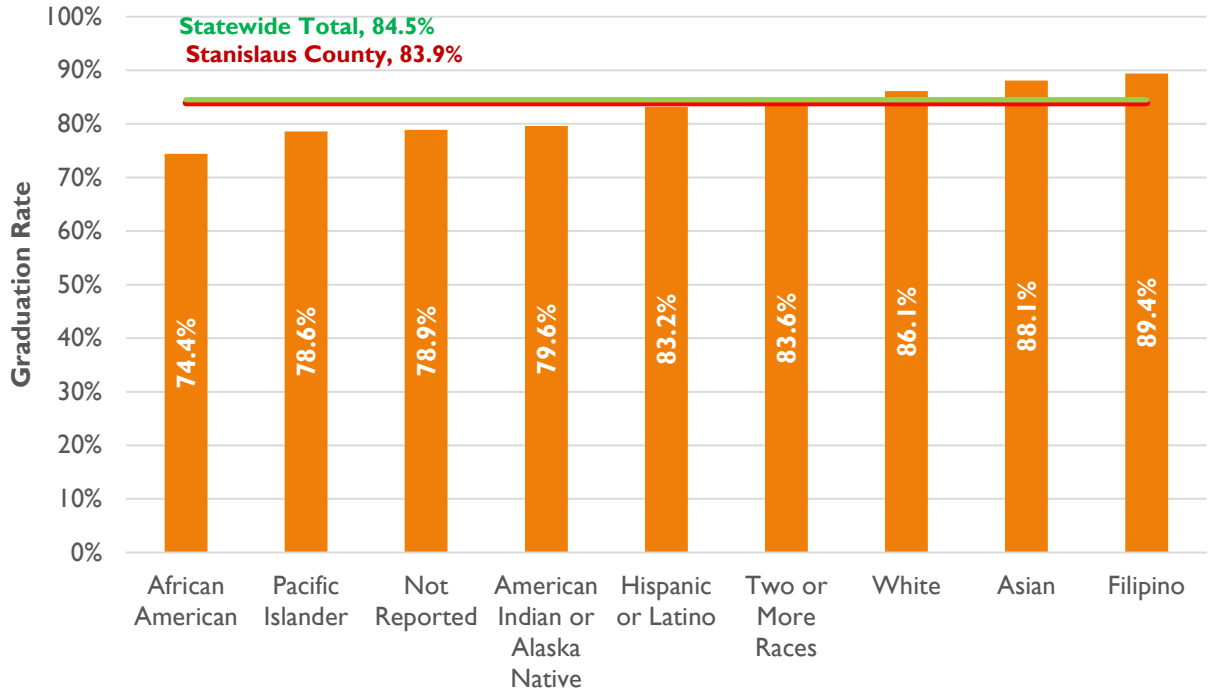
Chart 27. Cohort Graduation Rates by Race in Stanislaus County



Source: California Department of Education 2018-2019 Four-Year Adjusted Cohort Graduation Rates

Other groups of students may also face academic challenges due to physical or social circumstances. In addition to English Learners, California also calculates the number of students who are "socioeconomically disadvantaged" (students eligible for free or reduced priced meals and/or have parents/guardians who did not receive a high school diploma), migrant, homeless, foster youth, and those with a disability. These students typically need additional resources to succeed and the number of students in these categories helps determine funding from the State. Data on graduation rates and suspensions can also help a school or school district gauge success in meeting these students' needs.

Charts 28, 29, and 30 indicate that in Stanislaus County, foster and homeless youth have the lowest graduation rates and highest school dropout rates. Roughly half of all foster youth in the County graduate. Foster students also have the highest suspension rate of all student groups, with high rates for homeless and disabled students as well. (California Department of Education 2018-2019) In addition, almost 85 percent of migrant students graduate and during the 2018-2019 school year had a graduation rate higher than the County average.

Parks

Park access is a community amenity that may not be accessible proportionately to all resident demographics. The California Department of Parks and Recreation measures park access for all California communities as part of the Statewide Comprehensive Outdoor Recreation Program (SCORP), measuring the population density of areas physically farther than a half mile from a park and the density of parks in each census tract per 1,000 residents. The measurements help identify areas that are not within walking distance of a park and any populated areas with few parks per person. Figure 34 depicts areas across the County without park access within a half mile.

The Department of Parks and Recreation estimates that 24 percent of Stanislaus County residents live further than a half mile from a park, a proportion equal with the State of California. Stanislaus County residents also have a slightly higher number of people with adequate parkland density available per person than the California average. Fifty-eight percent of Stanislaus County residents live in areas with less than 3 acres of parks/open space per thousand residents (a benchmark for adequate park density) versus 62 percent of all Californians.

The Cities of Modesto and Turlock both have park access within a half mile for nearly all residents within city boundaries. The developed areas around the city boundaries, however, have gaps in park access. To a lesser extent, this pattern also exists for Patterson, Oakdale, Riverbank, Ceres, and Newman.

It is important that park access by members of protected classes be a part of the planning process and reflect the demographics in the community. The 2018 Stanislaus County Parks & Recreation Master Plan notes change in ethnicity in the County as there has been an overall increase in the County's Hispanic or Latino population. It states, "Stanislaus County's Hispanic/Latino population has increased from 31.7 percent of the total County population in 2000 to 43.6 percent by 2015. This statistic must be acknowledged as a driver for future County parks and recreation planning and programming efforts." (2018 Stanislaus County Parks & Recreation Master Plan)

Language is also a consideration in park planning within Stanislaus County's Parks & Recreation Master Plan. The report states that, "the provision of Spanish language materials is perhaps the greatest take-away for increasing presence specifically within the Hispanic/ Latino community. Provisions must be made in the form of bilingual parks signage, handouts, and other exhibits promoting Stanislaus County Parks and Recreation offerings and initiatives." (2018 Stanislaus County Parks & Recreation Master Plan) Acknowledgement of changing ethnicity and primary language of residents in the County will help ensure active participation and access to parks.

Although overall population demographics should be considered in park planning, geographic population demographics should also be used by all jurisdictions within the County to assess equal access to parks, especially small neighborhood parks where walking distance factors into park usage and demographics may shift.

Internet Access

Internet access is vital for households to participate fully in modern society. Those without this technology are at a disadvantage, such as students completing schoolwork, teens and adults applying for a job, or individuals taking online classes to expand workforce skills to gain or change employment. Internet access can help households take fewer vehicle trips, access medical information, and manage finances. (Broadband Survey: Digital Divide Persists in California but Schools Are Helping to Improve Access for Students, California Emerging Technology Fund, March 12, 2019)

In 2017, 90 percent of California households had access to the Internet and 74 percent had broadband Internet at home, an 8 percent increase in overall access and 4 percent increase in home broadband access since 2013. (California's Digital Divide, Public Policy Institute, March 2019) "Computer" use has expanded to include smartphones, tablets, laptops, and other similar devices. Figure 35 indicates that about as many households now access the Internet through a smartphone as a laptop or desktop computer.

Throughout California, several demographic groups have broadband Internet access rates below the State average. This includes households earning $20,000 per year or less, seniors (adults 65 years or older), Hispanic or Latinos with limited English proficiency, those with a disability, and adults who did not graduate high school. (Internet Connectivity and the "Digital Divide" in California Households: 2016 California Emerging Technology Fund/ The Field Poll)

Household income and age have the largest gaps in Internet access. In Stanislaus County, 44 percent of households earning $20,000 or less annually do not have Internet access, while only 6 percent of households making at least $75,000 do not have access. Across the state, about half of households without Internet access cite the cost of broadband service or a computer/device for their lack of access. Three in four of these households do not know they may qualify for discounted, income-based Internet service in California. (Broadband Survey: Digital Divide Persists in California but Schools Are Helping to Improve Access for Students, California Emerging Technology Fund, March 12, 2019)

About one third of Stanislaus County residents age 65 or older do not have Internet access. This percentage is only 28 percent in Modesto but 38 percent in Turlock. By comparison, 13 percent of those under 18 years of age do not have Internet access. This figure is assisted by the fact many schools assign a mobile computing device to students.

There are some differences in Internet access between different racial and ethnic groups. About 18.6 percent of Hispanic or Latino residents in Stanislaus County do not have Internet access compared to 14.3 of non-Hispanic Whites. (Access for both groups is improved within Modesto and Turlock.) It is worth noting that Hispanic or Latino Californians are more likely to use smart phones alone for Internet access, and among Spanish-speaking Hispanic or Latinos in California, almost half of all Internet access is only through use of a smart phone. (Internet Connectivity and the "Digital Divide" in California Households: 2016 California Emerging Technology Fund/ The Field Poll)

PUBLIC SECTOR POLICY REVIEW

Introduction

National, state, and local public policies affect fair housing choice and neighborhood availability by influencing the amount, cost, and location of available housing. Public policies also affect what amenities are available in a given neighborhood such as grocery stores, parks, and health clinics, and affect transportation options that connect the neighborhood to schools, jobs, and other regional opportunities. Policies that disproportionately limit housing and neighborhood opportunities for specific groups of people are considered impediments to fair housing or actions that do not actively affirmatively further fair housing.

Public policies designed and adopted with good intentions can result in unintended consequences when implemented if the effect is a restriction on fair housing choice for people who belong to a protected class. For this reason, it is worth reviewing both the intent of public policies and their consequences.

An assessment of government regulations, policies, and practices enacted by jurisdictions across Stanislaus County can help determine potential policy-created impediments to fair housing choice.

Federal Laws and Local Housing Choice

Fair Housing Amendment Act (FHAA) 1988

A significant update to the Fair Housing Act was enacted into law in 1988 that gave specific housing protections to people with disabilities in addition to any rights codified in earlier laws. Called the Fair Housing Amendment Act (FHAA), the update includes several protections that may influence public policies and laws at different levels of government. The law states that it is illegal to:

> Refuse to permit reasonable modifications, at the expense of the handicapped renter, except that a landlord may condition interior modifications where reasonable; to refuse to make reasonable accommodations in rules, policies, or services to afford handicapped individuals equal use and enjoyment of a dwelling; and to fail to design and construct multifamily dwellings with specified adaptive accessibility and usability designs.

The FHAA applies to local governments as well as private housing providers. Under the FHAA, local governments are required to "reasonably accommodate" housing for persons with disabilities in their land-use planning and policies. Jurisdictions must grant variances and zoning changes, if necessary, to make new construction or rehabilitation of housing for persons with disabilities feasible but are not required to fundamentally alter their zoning ordinance. The failure to allow for reasonable accommodations in policies to allow persons with disabilities to live in the community will violate the Fair Housing Act regardless of whether there is discriminatory intent.

Regarding multifamily dwelling design and construction, the law requires that state and local governments incorporate specific accessibility and usability standards into their new construction and design requirements as well as building codes.

Although most local governments are aware of state and federal requirements for landlords to provide reasonable accommodations, if specific reasonable accommodation policies or procedures are not present at the jurisdictional level, residents with disabilities may be unintentionally displaced or discriminated against. All jurisdictions within the County include reasonable accommodation policies to meet the needs of their communities. (29 U.S.C. § 794)

Americans with Disabilities Act (ADA) 1990

The Americans with Disabilities Act (ADA) gives broad protections to people with disabilities in the workplace, schools, transportation, and places (public or private) open to the general public. Title II of the ADA specifically applies to all state and local governments and protects individuals with disabilities from discrimination in programs, activities, and services funded by public entities.

When constructing or renovating new public buildings, State and local governments are required to follow specific architectural standards to make them accessible to people with physical disabilities. They must also relocate or provide access to programs in older buildings inaccessible to people with disabilities and have methods to communicate with people who have hearing, vision, or speech impairments.

Included within the category of State and local services are activities related to local planning and zoning. It can also include government activities like constructing sidewalks, creating snow removal policies, and managing public park reservations.

Title III of the ADA applies to public accommodations within non-government establishments such as retail stores, restaurants, movie theaters, and day care centers. Private transportation services are covered by Title III, as are nonprofit organizations, and any other venue open to the general public. This section of the ADA requires that public accommodations prohibit exclusion, segregation, and unequal treatment of people with disabilities. Public accommodations also must comply with architectural standards for new and renovated buildings; accommodate reasonable modifications to policies, practices, and procedures; and be able to communicate with people with hearing, vision, or speech disabilities. Additionally, public accommodations must remove barriers in existing buildings where it is possible without much difficulty or expense. Religious buildings without public funding are exempt. (42 U.S.C. §§ 12101 et seq., 28 CFR Parts 35-36) (*What is the Americans with Disabilities Act (ADA)?* ADA National Network, https://adata.org/learn-about-ada, Web. February 5, 2020.)

State Laws and Local Housing Choice

California has many housing laws related to housing, zoning and land-use, permitting, planning, and housing financing policies. These include:

Housing Permitting

- Cities and counties must allow for housing for persons with disabilities, homeless persons (including emergency shelters, transitional housing, and supportive housing), and extremely low-income households including single-room occupancy (SRO).
- Replacement housing when allowing conversion or demolition of housing occupied by low- and moderate-income households. (§ 65008 and § 65580-65589.8)

Growth Limits

- Public growth initiative ordinances are allowed under state law.
- Zoning regulations and ordinances that limit housing must state the rationale behind the regulations in terms of the city's police powers: the public health, safety, and welfare of the community. (§ 65863.6)

Inclusionary Zoning

- Inclusionary zoning is allowed under state law to increase the number of deed-restricted lower-income housing units in exchange for housing permitting. (§65589.8)

Density Bonuses

- Local governments are authorized to allow density incentives for private housing development in exchange for the inclusion of deed restricted lower- income housing units. (§§ 65915-65917)

Accessory Dwelling Units (ADUs)

- Accessory Dwelling Units (ADUs) or "Granny unit" regulations allow for specific types of secondary residential dwelling units through California law, with special consideration for units intended for adults over the age of 62. (§ 65852.1.)

Local Laws and Housing Choice

Occupancy Standards

Just as regulations on the definition of "family" can result in a disparate impact, restrictions on the allowable number of individuals within a housing unit can violate fair housing laws on the basis of family status.

Historically, strict occupancy standards have been used either by local jurisdictions or individual landlords to keep families from renting housing in an area. Families with children and large households often face discrimination in the housing market, particularly in rental housing, which can take the form of occupancy standards under the guise of health or safety regulations. As a result of being denied housing due to occupancy standards, families (particularly larger families with children) may not be able to live within their desired household makeup or may be forced to find poor quality housing that breaks local ordinances. Occupancy standards may therefore be an impediment to fair housing choice and may be found in zoning, health, land-use, building or other codes.

No State or federal fair housing laws create exact numeric values for occupancy standards. Both government and landlords can set an occupancy standard, but fair housing violations are decided on a case-by-case basis by the courts. The FHA states that, "nothing in this title shall limit the applicability of any reasonable local, state, or federal restrictions on the maximum number of occupants permitted to occupy a dwelling unit". The word 'reasonable' is the key word and is a matter of court interpretation.

The HUD standard for occupancy is two persons per bedroom, however this figure has not been codified into federal law. The California Department of Fair Employment and Housing (DFEH) has used the "two-plus-one" rule (two persons per bedroom plus an additional person) when considering a reasonable maximum standard in fair housing cases, though there have been key exceptions. The amount and distribution of "habitable space" in a housing unit, and the number and size of bedrooms, are also factors.

Under either federal or State occupancy guidelines a landlord cannot, for example, restrict occupancy to more than three persons in a three-bedroom unit, or increase the rent for a one-bedroom unit if a baby is added to the household by a couple. A city could not impose a one-person-per-bedroom provision in their zoning ordinance.

Other issues related to occupancy, such as lack of parking or gender of the children occupying one bedroom, should not be factors considered by the landlord when renting to a household.

A jurisdiction can use the Uniform Housing Code (Section 503(b)) to set maximum occupancy for residential units, a federal standard that has been adopted by California. Under this building code, a dwelling unit must have at least one room which is more than 120 square feet in area. Other habitable rooms, except kitchens, are required to have a floor area of at least 70 square feet. So, for the smallest housing unit legally permitted to be constructed, there may be two occupants. For every additional occupant there must be an additional 50 square feet. California Fire Code also determines residential occupancy standards, but the number of people per unit or per square foot generally imposes fewer limitations than the building code.

No Stanislaus County jurisdictions have additional occupancy limits beyond adopted building and fire code.

Rental Registration

Rental registration ordinances can help a municipality ensure housing conditions are safe and sanitary for renters who may not have the knowledge or ability to advocate for themselves and contact the proper authorities for housing issues. Correcting housing issues may require overcoming specific language, education, or other barriers (such as knowledge of health regulations and building code) and can be an impediment to housing choice when the burden of notification and inspection is placed on tenants and not the landlord. Provided the ordinances do not add conditions such as occupancy limits that restrict fair housing choice, these ordinances can be considered a best practice in affirmatively furthering fair housing. If a rental registration ordinance is not present, clear points of contact for code enforcement issues can help tenants navigate correcting housing issues.

Modesto's Rental Housing Safety Program (effective October 2019) applies to all rental residential housing units over 10 years old in the City or those inspected as part of a government program (e.g. the Housing Authority). The program, run by the Neighborhood Preservation Unit, requires rental properties to be registered with the City by the property owner and comply with all local health, building, and safety codes. Modesto does not have a rental registration ordinance that requires additional requirements of rental buildings beyond existing city code.

Rent Control

California's Costa-Hawkins Rental Housing Act, passed in 1995, prohibits local governments from using rent control on housing first occupied after February 1, 1995, and other specific types of housing such as condos, townhouses, and single-family homes. No cities in Stanislaus County, including Modesto, have rent-control ordinances.

Development Fees

Housing development imposes short- and long-term costs upon local government, such as the cost of providing site reviews, permitting and inspection, and maintaining General Plan and zoning regulations addressing housing development. Jurisdictions also charge impact fees to offset the cost of providing the infrastructure and public facilities that are required to serve new housing development. To help recoup costs and ensure that essential services and infrastructure are available when needed, Stanislaus County jurisdictions charge various types of development fees. The fee amounts vary based on the needs of each jurisdiction and the services provided.

The fees can be a significant factor in housing development throughout California by raising housing costs and disincentivizing new residential development, factors that contribute to statewide high housing costs. Among California jurisdictions, fees account for between six and eighteen percent of the price of housing. (Terner Center for Housing Innovation- UC Berkeley, It All Adds Up: The Cost of Housing Development Fees in Seven California Cities, March 2018)

As a best practice, the public and developers should be able to access a jurisdiction's current fee schedules to estimate fees as a part of total development project costs in advance.

Until 1978, property taxes were the primary revenue source for financing the construction of infrastructure and improvements for residential development in California. Proposition 13, passed in 1978, limited a local jurisdiction's ability to raise property taxes and increasing reliance on other funding sources to provide infrastructure, public improvements, and public services. An alternative funding source widely used among local governments in California is the development impact fee, which is charged to the project developers/owners, for publicly provided infrastructure that supports the development, including water and sewer facilities, parks, and transportation.

For jurisdictions to charge an impact fee, the California Mitigation Fee Act requires that the jurisdiction demonstrate the "nexus" between the type of development in question and the impact being mitigated by the proposed fee, and that fee amount be proportional to the impact caused by the development. Fees not covered by the California Mitigation Fee Act include inclusionary housing ordinance in-lieu fees, permit processing fees, utility connection fees, and fees included within specific development agreements between a jurisdiction and a developer.

Despite state law limiting direct impact fees, the fees can be a large part of a jurisdiction's total fee requirements for housing development. Because developers tend to pass these fees onto the final housing owner, the effects of reducing these fees on housing affordability depend on the amount of the fee reduction and current home prices. Because the eventual owner bears the brunt of fees, high fees limit development of lower-cost housing more than higher-cost housing. (Terner Center for Housing Innovation- UC Berkeley, Current Practices and Policy Considerations to Improve Implementation of Fees Governed by the Mitigation Fee Act, August 2019)

A reduction in development fees for low-income housing may help these projects become financially feasible. A jurisdiction deferring development fees until a certain time after project completion can also help add flexibility the project's upfront costs and assist in the development of low-income housing.

The General Plan and Zoning Ordinance

General Plan

The General Plan is a planning document that serves as a framework for cities and counties to establish long-term goals and policies to guide land use and development in the community. The State of California requires that all localities completing a General Plan include seven elements in their Plan: land use, circulation, housing, conservation, open space, noise, and safety. Some communities also must address environmental justice and/or air quality in their Plans and any community can add any additional elements in their General Plan that they desire. (§ 65302) Two of the required elements, the housing and land-use elements, can directly impact local housing markets because they define key parameters for housing development such as permitted density, required fees, and allowable zoning uses.

California law requires that local governments adequately plan to meet the existing and projected housing needs of all members of the community. The law acknowledges that for the private market to adequately address housing needs and demand, local governments must adopt land-use plans and regulatory systems that provide opportunities for, and do not constrain, housing development. The state outlines requirements for each community's Housing Element of the General Plan, which are then subject to review by the California Department of Housing and Community Development (HCD) for compliance with State law before they can be adopted by the local government. The Housing Element of the General Plan details a local government's strategy to address their jurisdiction's housing needs and regulates existing and future housing development opportunities. A Housing Element must:

- Identify sites which will be made available through appropriate zoning and development standards that have adequate services and facilities needed to facilitate and encourage the development of a variety of types of housing for all income levels in order to meet the community's housing goals;
- Assist in the development of adequate housing to meet the needs of low- and moderate-income households;
- Address, and if appropriate and legally possible, remove governmental constraints to the maintenance, improvement, and development of housing;
- Conserve and improve the condition of the community's existing affordable housing stock; and
- Promote housing opportunities for all persons regardless of race, religion, sex, marital status, ancestry, national origin, color, familial status, disability, sexual orientation, gender identification, or any other arbitrary factor.

Within a Housing Element, a jurisdiction specifically details how a set number of housing units can be produced that meet the housing needs of different income groups, a housing goal called the Regional Housing Needs Assessment (RHNA). The RHNA projects how many and what types of housing units will be needed within the jurisdiction. In their General Plan Housing Element, jurisdictions show how the given allocations could be met through zoning, available sites, funding, local regulations, etc. and how the jurisdiction is addressing impediments to housing development.

Though these goals are not a mandate for housing production, actions taken by a jurisdiction to make these units possible should result in additional housing units being developed because of high housing demand. For lower-income housing unit goals, each jurisdiction needs to identify sites that meet specific criteria which should accommodate projects that could support lower income housing.

The RHNA housing goals are calculated based on a jurisdictions projected population demographics during the future RHNA cycle, particularly the number of people within "low-" (50 to 80 percent of AMI), "very low-" (30 to 50 percent of AMI), and "extremely low-" (0 to 30 percent of AMI) household income categories. A region's Council of Governments (COG) allocates the actual housing numbers per jurisdiction. In Stanislaus County, this body is the Stanislaus Council of Governments (StanCOG).

The Land-Use Element of the General Plan also influences housing choice by defining uses for specific geographic areas including allowable development densities and the general description of what the community would like to see the land used for such as residential, commercial, industrial, open space, and agricultural purposes. As it applies to housing, the Land-Use Element establishes a range of residential land-use categories, specifies densities (typically expressed as dwelling units per acre [du/ac]), and suggests the types of housing appropriate in a community. While the Land-Use Element establishes different parameters for residential development, it is a jurisdiction's zoning ordinance which details the specific development standards for the community. In other words, the Land-Use Element serves as a guiding

framework for a community's land-use policy, while the zoning ordinance is the explicit code that lays out permitted uses within each zone.

Land-Use Elements may also describe other community components related to housing choice like transportation plans including bicycle and pedestrian routes, flood zones and information on known hazards, and social equity analysis.

Zoning Ordinance

A jurisdiction's zoning ordinance is the section of its municipal code that details and sets requirements for the specified land-use designations laid out in the General Plan. A zoning ordinance establishes zoning districts that correspond with the locality's land-use element and contains two key components: a set of legal descriptions for each zone and an official zoning map. Each zone description sets development standards and permitted uses for each zoning district to govern the density, type, and design of different land uses for the purpose of protecting the health, safety, and welfare of the community. (§ 65800-65863).

As the zoning ordinance relates to fair housing, several of its components can restrict housing development and access (and through them, housing choice) by constricting the local supply of housing units or discriminating against protected groups outlined in state and federal law. While the Fair Housing Act does not pre-empt local zoning laws, it does apply to municipalities and other local government entities and prohibits them from enacting or implementing land-use policies that exclude or otherwise discriminate against protected persons. Local policies that are "facially neutral" (that is, they apply to all persons, not just those included in a protected group) could be violations of the Fair Housing Act if they have a disparate impact or discriminatory effect on protected persons, whether intentionally or not. For instance, land-use policies such as density or design requirements that make residential development prohibitively expensive, limitations on multi-family housing, or a household occupancy standard may be considered discriminatory if it can be proven that these policies have a disproportionate impact on minorities, families with children, or people with disabilities.

As part of the Housing Element, jurisdictions are required to evaluate their land-use policies, zoning provisions, and development regulations, and make efforts to mitigate any constraints identified within the Plan as restrictions to housing choice. One type of zoning law that courts have ruled as having a disparate impact on people with disabilities is definitions of the term "family" that allow any number of related persons to live together but limit the number of unrelated persons who may live together. Although applicable to groups of unrelated and non-disabled persons (e.g., college students, nuns, etc.), these laws may be deemed to have a disparate impact on persons with disabilities who often need to live in group settings for both programmatic and financial reasons. Although a seemingly neutral policy, such ordinances can disproportionally harm specific groups.

The Fair Housing Act addresses this type of limited housing choice by prohibiting state and local land use and zoning laws, policies, and practices to discriminate based on a characteristic protected under the Fair Housing Act. Both intentional and unintentional discrimination that is a result of public policy is in violation of the Fair Housing Act. The U.S. Supreme Court affirmed that unintentional discrimination caused by land use and zoning laws and without a legitimate purpose is illegal in *Texas Department of Housing and Community Affairs v. Inclusive Communities Project, Inc*, stating that "unlawful practices include zoning laws and other housing restrictions that function unfairly to exclude minorities from certain neighborhoods without any sufficient justification." (135 S. Ct. 2507 2015) These laws have a discriminatory effect ("disparate impact") on persons in a particular group, whether intentional or not.

In 2016, HUD and the U.S. Department of Justice (DOJ) released a Joint Statement updating guidance about how the federal Fair Housing Act applies to state and local public policies like land use (including as found within a General Plan) and zoning laws. Examples of discrimination given in the statement include:

- Placing a moratorium on the development of multifamily housing because of concerns that the residents will include members of a particular protected class.
- Citing individuals who are members of a particular protected class for violating code requirements for property upkeep while not citing other residents for similar violations.
- Requiring a proposed development provide additional security measures based on a belief that persons of a particular protected class are more likely to engage in criminal activity.
- Requiring an occupancy permit for persons with disabilities to live in a single-family home while not requiring a permit for other residents of single-family homes.

Reasonable Accommodation in Zoning

Land use and zoning discrimination based on protected characteristics related to disability is also prohibited under Title II of the Americans with Disabilities Act ("ADA"), Section 504 of the Rehabilitation Act of 1973 ("Section 504"), and Title VI of the Civil Rights Act of 1964. Residents who are disabled have a right under these laws to request a reasonable accommodation or modification to zoning ordinance requirements that restrict their use or enjoyment of their residence, usually in the form of a zoning variance.

Not all reasonable accommodation requests are required to be granted but those that are reasonable and necessary for the applicant should be granted if they do not conflict with the needs of the community. For this reason, an official reasonable accommodation policy for local planning and zoning committees may help guide accommodation decisions and treat applicants as uniformly as possible based on findings of fact. (A Primer on Disability for Land Use and Zoning Law, Journal of Law, Property, and Society Vol. 4 March 2018)

In Stanislaus County, all jurisdictions have a reasonable accommodation policy within their zoning ordinance except for Modesto who references a reasonable accommodation policy in their General Plan. Table 3 outlines the source of each jurisdiction's policy.

Table 3. Reasonable Accommodation Policies by Jurisdiction

Jurisdiction	Reasonable Accommodation Policy
Ceres	Policy outlined in Ch 18.110 of Zoning Ordinance
Hughson	Policy outlined in Ch 17.03.062 of Zoning Ordinance
Modesto	Housing Element references a reasonable accommodation policy but no mention in the Municipal Code
Newman	Zoning Ordinance cites the city's reasonable accommodation policy (Ch 1.19)
Oakdale	Zoning Ordinance cites the city's reasonable accommodation policy (36-18.32)
Patterson	Zoning Ordinance outlines the City's reasonable accommodation policy (Ch 18.89)
Riverbank	Zoning Ordinance cites the city's reasonable accommodation policy (Ch 153.221)
Turlock	Part of the city's past Housing Element stated working towards complying with federal reasonable accommodation provisions
Waterford	Zoning Ordinance outlines the city's reasonable accommodation policy (Ch 17.03.010)
Stanislaus County	Zoning Ordinance outlines the County's reasonable accommodation policy (Ch 21.86)

Zoning Definitions

A community's zoning ordinance could restrict access to housing for individuals or groups of people based on the official definitions of specific terms. The terms "family", "disability" or "disabled person", "elderly", "homeless shelter" or "emergency shelter", "group home", "rooming house", and any number of other terms could be impediments to housing choice if they are interpreted to conflict with the Fair Housing Act (FHA) or California's Fair Employment and Housing Act (FHEA).

Federal Fair Housing Act Definitions

Disabled person: An individual with mental or physical impairments (including hearing, mobility, and visual impairments, cancer, chronic mental illness, HIV/AIDS, or mental retardation) that substantially limits one or more major life activities.

Note: the FHA uses the term "handicap" instead of "disability".

Familial Status: Includes children under the age of 18 living with parents or legal custodians, pregnant women, and people securing custody of children under the age of 18.

Family

A key definition that can restrict housing choice within a zoning code is "family" if a jurisdiction's zoning ordinance defines the term in a way that conflicts (in theory or in practice) with the FHA or FHEA. For instance, a landlord may refuse to rent to a pair of college students living together, unmarried couples, or a family with foster children due to the fact these households do not fit within the jurisdiction's definition of a "family". A landlord may also use the definition of a family as an excuse for refusing to rent to a

household based on other hidden reasons, such as household size, race, or gender identity. Even if the code provides a broad definition, deciding what constitutes a "family" should be avoided to prevent confusion or give the impression of bias or housing restriction, especially definitions that restrict how many household members may live together (other health or building codes may still apply) or how members of a family may be related (i.e., by blood, marriage or adoption, etc.)

All Stanislaus County jurisdictions' definitions of "family" appear to comply with state and federal fair housing law by avoiding describing the nature of the relationship between members of the household or the number of people that can belong to the household (except in alignment with building code).

Disability

Just as limitations on the definition of "family" can impact protected groups by restricting access to and availability of housing options, the terms "disabled individuals," "disability," and other similar references to people with a disability can be impediments to housing choice when narrowly defined in a jurisdiction's zoning code or defined in a way that conflicts with fair housing law.

No jurisdictions in Stanislaus County define "disability" in their zoning ordinance in a way that conflicts with fair housing laws. Hughson, Turlock, and Waterford define "disability" in documents other than their zoning ordinance that still appear to apply to housing decisions. Should there be any discrepancies between the Cities' definitions and fair housing act laws that result in housing restriction for people with disabilities, the Cities' definition could be found to be in violation of fair housing laws. These definitions should be examined in the context of a jurisdiction's entire legal code.

As a note, the Federal Fair Housing Act and California Fair Employment and Housing Act do not define "disability" as including psychoactive substance use disorders resulting from the current unlawful use of illegal substances or current users of illegal substances. The inclusion of this provision by Ceres and Modesto does not conflict with either fair housing law.

Other Zoning Definitions

Additional definitions of housing types or allowable residents of certain housing can also be impediments to fair housing choice. (For all zoning definitions reviewed, see Appendix 1)

Turlock's zoning ordinance definition of "housing for the elderly" has the possibility of violating federal or California law regarding housing for seniors as the definition restricts this type of housing to "persons sixty (60) years of age or older or couples where either the husband or wife is sixty (60) years of age or older.)

The Turlock zoning code states that "Housing for the elderly" shall mean "a building or group of buildings containing dwellings where the occupancy of the dwellings is restricted to persons sixty (60) years of age or older or couples where either the husband or wife is sixty (60) years of age or older." This does not include a development that contains convalescent or nursing facilities. § 9-1-202

The federal HOPA modifying the FHA definition of senior housing includes housing intended and operated for occupancy by persons 55 years of age or older and at least 80 percent of the units with an occupant who is verified to be 55 years of age or older. California law considers housing for seniors to be for those 62 years of age or older or 55 years of age or older in a (designated) "senior citizen housing development".

The Turlock and California laws do not match precisely as there is a discrepancy in the definition of "senior housing" between Turlock (60 years of age or older) and California's senior housing definition (62 years of age or older or 55 years of age or older in a designated "senior citizen housing development".) (Section 43-53.7 of the Civil Code)

There is also a difference in the allowable household relationships of senior housing residents with a non-spouse domestic partner, primary physical/economic support person, and/or disabled child, grandchild, or partner under the age of 60.

Turlock's definition of allowable residents in senior housing also includes the terms "husband" and "wife" while California law allows residents of senior housing to live with someone 45 years of age or older that is their spouse, domestic partner, or person providing primary physical or economic support to the senior. California law also includes the provision that the senior may live with a disabled child or grandchild or disabled spouse/partner who must permanently reside in the household due to a disability. (Section 43-53.7 of the Civil Code)

All other zoning definitions appear to have no conflict with fair housing laws or restrict housing choice.

Density Bonuses

A density bonus is a local incentive to increase the number of deed-restricted housing units for lower-income households by private housing developers in exchange for an increase in building height, housing density (units/acre) or building footprint (also measured as a "floor area ratio") above what allowed by right within the zoning ordinance.

While local governments create their own density bonus policies, jurisdictions in California are subject to the State's Density Bonus Law (§ 65915-65918) which incentivizes affordable and senior housing with up to a 35 percent increase in unit density. There is also a component of the law which allows density bonuses for commercial developments that incorporate affordable housing as well.

The law requires jurisdictions to provide a specified minimum density bonus for creating affordable housing units. The number and type of affordable units determine the minimum density bonus percentage to which the development is entitled by right. Eligible projects have at least:

- 5 percent of the units affordable to "very-low income" households (under 50 percent of AMI)
- 10 percent of the units affordable to "low-income" households (under 80 percent of AMI)
- 10 percent of the units affordable to "moderate-income" households (under 120 percent of AMI) if the project units are condominiums.
- 10 percent of the units are for transitional foster youth, disabled veterans, or homeless persons and charge "very-low income" rents.

The state density bonus law also applies to senior housing projects and projects that include a childcare facility. These projects, with at least 35 units, follow California's Unruh definition of "senior housing" and receive a density bonus up to 35 percent based on the amount of housing developed. (§65915 – 65918) As of January 2020, all jurisdictions within Stanislaus County have zoning ordinances that include density bonuses that comply with state law.

Parking Requirements

The number of parking spaces required for housing developments can reduce the project's density and increase per unit development costs, lowering the number of affordable housing units produced and ultimately constricting the availability of housing types in a community. Though not as severe an impediment to housing development as in larger cities such as San Francisco or Los Angeles, multifamily, affordable, and/or senior housing projects in Stanislaus County cities can be impacted by parking requirement policies. Exceptions to parking requirements for affordable and/or senior housing developments helps solve this development constraint, sometimes offered along with density bonuses.

Under California laws for accessory dwelling units (ADUs) effective January 1, 2020, cities cannot require parking within one half mile of public transit or when a garage is converted to an ADU. All Stanislaus County parking requirements for ADUs need to reflect this new statewide requirement. Jurisdictions are in the process of updating their ordinances to comply with the States new ADU requirements and, in the meantime, must apply all applicable State standards regardless of local ordinance requirements.

For multifamily developments, several communities do not differentiate between smaller and larger units. For one-bedroom units in multifamily buildings, parking requirements over one unit can be an impediment to building housing, particularly housing for seniors and persons with disabilities if parking requirements are not modified for these types of housing developments.

Some jurisdictions in California will also waive or reduce parking requirements when certain scenarios apply, such as a development's proximity to public transit or a car-share vehicle. While not current policy within Stanislaus County jurisdictions, parking requirements could be established that incentivize local goals such as mass transit from smaller cities into Modesto, or regionally from Stanislaus County to the Bay Area or Sacramento.

Land Use Densities and Designations

The allowable density range of land designated for residential land use is a particularly important government policy that, in combination with local economic conditions, strongly influences a jurisdiction's overall housing unit production. Areas with higher housing unit densities allow developers to take advantage of economies of scale in development which reduces the per-unit cost of land and improvements. This ultimately can reduce overall development costs of housing construction. Lowering the cost of housing through density also increases the feasibility of producing affordable housing.

If allowable residential density is lowered by a jurisdiction, California law requires the local government justify that any density reduction, rezoning, or downzoning that occurs and show that the density reduction is consistent with its General Plan and meeting the RHNA.

California Department of Housing and Community Development assumes housing units built with densities above 20 du/ac are affordable to extremely low-, very low-, and low-income households and encourages zones with this density permitted.

All jurisdictions in Stanislaus County allow higher single-family residential density (6 to 14 du/ac) in some zones as described in their General Plan.

Despite the economic and regulatory incentives for higher density development, all the jurisdictions in Stanislaus County allow for lower density, single-family housing units within areas zoned for higher-density use. Called "pyramid zoning" or "cumulative zoning", this public policy could restrict fair housing choice

by limiting access to and availability of affordable multi-family housing units that otherwise would have been required in this location.

Table 4. Housing Element Status Compliance

Jurisdiction	Document Status	Compliance Status	Date Reviewed
Stanislaus County	Adopted	IN	4/27/2016
Ceres	Adopted	IN	3/15/2016
Modesto	Adopted	IN	4/18/2017
Hughson	Adopted	IN	1/6/2016
Newman	Adopted	IN	8/4/2016
Oakdale	Adopted	IN	7/24/2016
Patterson	Adopted	IN	2/25/2016
Riverbank	Conditional	IN	5/21/2018
Turlock	Adopted	IN	4/25/2016
Waterford	Adopted	IN	12/17/2018

All Stanislaus County jurisdictions (including the Unincorporated County) have Housing Elements that HCD considers in compliance. One housing element (Riverbank) was submitted in May 2018 and is currently under review.

Review of Housing Opportunity

When a jurisdiction's zoning ordinance allows for a diverse range of housing types, a community can actively ensure access to fair housing choice. While this aspect of a zoning ordinance is related to housing density, diversity of housing types helps ensure a mixture of different housing unit sizes, styles, and ownership structures.

Single- and Multi-Family Uses

Single- and multi-family units, which include detached and attached single-family homes, duplexes, townhomes, condominiums, and rental apartments, are generally allowed across residential zones in Stanislaus County. Each jurisdiction's zoning ordinance specifies the zones in which each of these housing types is permitted by right. For areas that require special permits and review, additional costs and processing time can limit housing project developments, especially multifamily developments intended for lower-income households.

Accessory Dwelling Units (ADUs)

Accessory dwelling units (ADUs), also called "secondary dwelling units" or "granny flats" are attached or detached housing units that typically reside on the same property as another unit, such as a single-family home. These units offer independent living facilities for one or more inhabitants, including permanent provisions for living, sleeping, cooking, and sanitation. ADUs can increase dwelling unit density in a neighborhood and increase the abilities of extended families to live together, such as adult children and/or seniors who wish to live near each other yet still desire separate living facilities. In many high-cost

communities, this type of housing also offers a more affordable option for low-income households because they often rent for less than apartments of comparable size. They can also create more affordable homeowner housing by adding to the homeowner's income.

In the State of California, local jurisdictions are required to amend their zoning ordinances to accommodate accessory dwelling units in the community, though a separate ADU ordinance is not required. ADUs units cannot be prohibited in residential zones unless a local jurisdiction justifies the choice in that such action may limit housing opportunities in the region and that the jurisdiction finds that ADUs would adversely affect the public health, safety, and welfare in residential zones. Cities and counties that adopt an ADU ordinance must submit the ordinance to HCD within 60 days for an ordinance review.

The State's ADU law also requires use of a ministerial, rather than discretionary, process for reviewing and approving second dwelling units. A "ministerial process" is a process that can follow set standards like the zoning and building code without needing approval by a commission or board, e.g. a permit to replace a roof approved by a building department. In addition to avoiding a lengthy committee-approval process, a ministerial process is not required to be reviewed under the California Environmental Quality Act (CEQA) which can also add time delays and administrative burden to the building process.

All Stanislaus County jurisdictions allow ADUs within some zones and comply with State law while others are still in the ordinance revision process. Each jurisdiction individually specifies which zones and under what conditions ADUs are permitted within the zoning ordinance. The review process and scope of additional requirements for ADUs, such as parking standards, vary by jurisdiction as well.

Mobile Home Parks & Manufactured Housing

Mobile homes and manufactured housing represent a type of housing that is usually affordable in areas with high housing prices. A "mobile home" is a manufactured home built prior to 1976 when HUD instituted new standards for this type of housing, while "manufactured housing" is similar housing created after this time.

In California, the Manufactured Housing Act of 1980 regulates manufactured housing. (California Health and Safety Code Division 13, Part 2 Section 18000). Mobile or Manufactured Housing residents and owners in California also follow the California Mobile Home Residency Law. (§ 798) Federal laws governing manufactured housing are within Title 42, U.S. Code, Chapter 70, Section 5401.

Most jurisdictions in Stanislaus County permit mobile home parks in at least one residential zone except for Modesto. The communities that allow mobile home parks usually require either a Conditional Use Permit or allow the housing by right in zones designated specifically for mobile home development.

Individual manufactured houses on permanent foundations are allowed in all jurisdictions in at least some residential zones. State law requires local governments to permit manufactured or mobile homes on a permanent foundation that meet federal safety and construction standards in all single-family residential zoning districts (§65852.3).

Table 5. Mobile & Manufactured Home Ordinance Requirements

Jurisdiction	Mobile Home Parks		Manufactured Homes	
	Permitted? (Yes/No)	Review Process	Permitted? (Yes/No)	Review Process
Ceres	Yes	Allowed with a Conditional Use Permit in some residential zones	Yes	Permitted across most residential zones
Hughson	Yes	Allowed with a Conditional Use permit in all residential zones	Yes	Conditional Use permit/Permitted
Modesto	No	Allowed only in Planned Development zones	Yes	Permitted in all residential zones
Newman	Yes	Permitted in Mobile Home Park District	Yes	Permitted in the Mobile Home Park District
Oakdale	Yes	Allowed in multiple residential zones and the review process depends on number of proposed units.	Yes	Permitted in most residential zones
Patterson	Yes	Allowed with a Conditional Use permit in higher density zones (MR and HR)	Yes	Permitted in all residential zones
Riverbank	Yes	Allowed with a Use Permit in all residential zones	Yes	Permitted in all residential zones
Turlock	Yes	Allowed with a Conditional Use Permit in residential zones	Yes	Permitted in lower density residential zones and with a minor discretionary permit in higher density zones
Waterford	Yes	Permitted in Mobile Home Park District	Yes	Permitted in the Mobile Home Park District
Stanislaus County	Yes	Allowed with a Use Permit in all residential zones	Yes	Permitted in all residential zones

Residential Care Facilities

The Lanterman Developmental Disabilities Services Act, passed in California in 1969, is a State law that says that mentally and physically disabled persons and their families are entitled to live in residential surroundings like people without disabilities. It also establishes a process to determine what services are needed for disabled individuals and their families and how those services will be provided. (California Welfare and Institutions Code §4500 – §5121)

The law requires that local zoning allow residential properties used for the care of six or fewer persons with mental health disorders or other disabilities. A state-authorized, certified or licensed family care home, foster home, or group home serving six or fewer persons with disabilities, or dependent and neglected children, on a 24-hour-a-day basis is considered a "residential use" that must be permitted in all residential zones. No local agency can impose stricter zoning or building and safety standards on these homes than are required of the other permitted residential uses in the same zone.

According to the California Department of Social Services Community Care Licensing Division, the following definitions of adult and/or senior residential care facilities apply:

- **Adult Residential Facilities (ARF):** Facilities of any capacity that provide 24-hour non-medical care for adults ages 18 through 59 who are unable to provide for their own daily needs. Adults may be physically handicapped, developmentally disabled, and/or mentally disabled.
- **Continuing Care Retirement Community (CCRC):** Long-term continuing care for adults over 60 years old that provides housing, residential services, and nursing care, usually in one location.
- **Residential Care Facilities for the Elderly (RCFE):** Facilities that provide care, supervision and assistance with activities of daily living, such as bathing and grooming. They may also provide incidental medical services under special care plans.

According to public data provided by the California Department of Social Services Community Care Licensing Division, there are 147 state-licensed residential care facilities for adult and senior populations in Stanislaus County, including 86 residential care facilities for the elderly and 61 adult residential facilities. These facilities provide a total of 3,388 beds. Tables 6 and 7 present the number of facilities and beds (facility capacity) by jurisdiction and reveals that, while residential care facilities are located within most areas of Stanislaus County, the majority of beds are located in Modesto and, to a lesser degree, Turlock. Additional beds are concentrated in Hughson, Patterson, and Riverbank.

All jurisdictions allow Residential Care Facilities (with 6 or fewer persons) in at least some residential zones by right. For facilities serving more than six people, all communities accommodate these units in some form in their zoning ordinance. Specifically, all localities allow for larger facilities subject to either a conditional use or development permit in residential and/or commercial zones.

P = Permitted
C = Conditional/Special Use Permit
X = Prohibited
(blank) = No mention in Zoning Ordinance

Note that the Lanterman Act only applies to state-licensed residential care facilities. Other facilities, such as transitional and supportive housing, are not covered. California law does require local jurisdictions to include information about these types of non-licensed facilities in their Housing Element in the context of discussing housing for low-income individuals and those with disabilities.

Emergency Shelters

HUD defines an emergency shelter as a facility whose primary purpose is to provide temporary shelter – usually up to six months – and accommodations for individuals experiencing homelessness. These facilities can be operated by government or private nonprofit entities and may serve general homeless populations or specialize assisting a targeted group such as individuals leaving a domestic violence situation, homeless youth, or families with children. In addition to shelter and meals, emergency shelters may offer additional services such as case management, counseling, employment assistance, job training, or transportation.

Under California's Housing Element laws, jurisdictions must identify and accommodate at least one year-round emergency shelter by right in their zoning ordinance as well as allow shelters in additional zones with a conditional use permit. Furthermore, jurisdictions can only subject emergency shelters to the same development and management standards applicable to residential or commercial developments in the same zone.

In Stanislaus County, all jurisdictions permit emergency shelters in at least one zone. In most cases, cities allow emergency shelters by right in commercial or industrial zones. Most do not permit shelters in residential zones, but those that do often allow emergency shelters in areas zoned for higher density or mixed use. Table 9 depicts permitted types of housing in residential, commercial, and industrial zones by jurisdiction.

Transitional and Supportive Housing

Transitional housing programs are another form of housing assistance for individuals experiencing homelessness. Oftentimes, transitional housing couples housing accommodations with supportive services such as case management, employment assistance, and health services to help individuals live independently. Program duration varies, although entities that receive funding from HUD typically assist individuals for no more than 24 months. In California, the Housing Element law states that transitional housing includes "buildings configured as rental housing developments, but operated under program requirements that require the termination of assistance and recirculating of the assisted unit to another

eligible recipient at a predetermined future point in time that shall be no less than six months from the start of assistance."[1]

Another form of assisted housing, supportive housing, are facilities that offer accommodations and supportive services usually for a specific low-income population such as those with chronic health conditions, mental or physical disabilities, or substance use disorder. Supportive services can be provided either at the same location as the housing unit (on-site) or at a different location (off-site). In general, supportive services aim to assist residents in living independently in their community and can include programs to help achieve better health outcomes, complete daily living activities, and connect to other resources in the area. Supportive housing typically does not impose limits on the duration of assistance, and in California, the state's Housing Element law defines supportive housing as having no such limitation on a resident's length of stay.[2]

The State of California extends legal protection to specific groups protected under the Lanterman Developmental Disabilities Act. These include emancipated minors, families with children, seniors, young adults aging out of the foster care system, individuals exiting an institutional setting, veterans, and the homeless.[3] Furthermore, state law considers both transitional and supportive housing as 'residential uses' which means that a local jurisdiction cannot subject this type of housing to additional requirements that would not be applicable to other similar residential uses in the same zone. For example, a local government cannot impose supplemental permitting requirements on transitional or supportive housing units when it does not require the same of other, similar housing types in the same zone. Across Stanislaus County, all jurisdictions comply with state law.

Single-Room Occupancy (SRO)

Single-room occupancy (SRO) units, sometimes called lodging, rooming, or boarding units, are one-room units meant for one individual. Unlike an efficiency unit or a studio apartment, SROs are not required to have an independent kitchen or bathroom, however many do. California's Housing Element law requires that jurisdictions accommodate housing for extremely low-income households, including single-room occupancy units. Across Stanislaus County, most jurisdictions comply with the law by allowing SROs with a conditional use permit in higher-density residential zones.

Farmworker Housing

Farmworker housing refers to housing accommodations provided for farmworkers, day laborers, and other agricultural employees covered by state law. Under California's Employee Housing Act, jurisdictions must consider housing for six or fewer employees as a residential use and allow this type of housing anywhere single-family units are permitted. (California Health and Safety Code Division 13, Part 1, Section 17000)

For farmworker housing as a specific subset of employee housing, the Act considers housing with 36 beds or 12 units as an agricultural use and to be permitted in zones where other agricultural uses are permitted. Across Stanislaus County, most jurisdictions comply with state law by allowing farmworker housing in areas zoned for agricultural use. Two jurisdictions, Hughson and Modesto, do not explicitly reference farmworker housing in their zoning ordinances but each accommodates this type of housing. Modesto elaborates on its policy in the City's 2015-2023 Housing Element which explains that farmworker housing

[1] California Code, https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=GOV&sectionNum=65582
[2] Housing Element law, section (g): https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=GOV&sectionNum=65582
[3] Ibid

"may be developed in any zone where residential uses are permitted."[4] Likewise, in its 2019-2023 Housing Element, Hughson explains that farmworker housing can be developed by right in areas zoned for multifamily use and that the City's zoning ordinance currently needs to be updated to fully comply with state law by permitting farmworker housing in all areas where single-family units are allowed. The City also points out, however, that agricultural uses are not permitted anywhere within city limits, and therefore, the zoning ordinance does not need to permit housing with 36 beds or 12 units as an agricultural use because this state regulation does not apply.[5]

Ceres, Waterford, and Riverbank all additionally permit farmworker housing by right, and Patterson with a conditional use permit, in at least some residential zones.

Affordable Housing Development Policies and Programs

Minority and special needs households are disproportionately affected by a lack of adequate and affordable housing in the region. While affordability issues are not directly fair housing issues, expanding access to housing choice for these groups cannot ignore that affordability is a significant issue for many households. When rent-restricted or non-restricted low-cost housing is concentrated in certain geographic locations, access to housing by lower-income and minority groups in other areas can be limited and therefore an indirect impediment to fair housing choice. Furthermore, various permit processing and development impact fees charged by local government can result in increased housing costs and therefore be a barrier to the development of affordable housing. Other policies and programs, such as inclusionary housing and growth management programs, can either facilitate or inhibit the production of affordable housing.

Because land-use policies influence the development and spectrum of available housing in a community, the intensity and scope of different policies can be a useful indicator for impediments to fair housing choice.

Table 10. Growth Management and Inclusionary Zoning Policies

Jurisdiction	Growth Management Plan	Inclusionary Zoning Policy
Ceres	Ceres has policies that guide growth but it doesn't have any policies that impose limits on development each year	Does not appear to have an inclusionary program
Hughson	General Plan mentions wanting direct and focus growth towards development of the Primary SOI to "ensure an appropriate rate of growth" and "preserve Hughson's existing small-town character"; part of this plan involves focuses on infill development	2015-2023 Housing Element states that Hughson is continuing to "evaluate developing an inclusionary zoning program"
Modesto	Modesto has a Community Growth Strategy that outlines different policies for specific geographic areas	Modesto has considered implementing inclusionary programs in the past and has deemed such program infeasible
Newman	City states that it promotes development of housing at a balanced mix of housing types while "protecting the single-family character of neighborhoods" Newman also has maximum allowable densities for the number of units per acre	City does not appear to have an inclusionary program
Oakdale	City identifies growth and revitalization areas to direct development and protects rural areas from growth; explicitly links job growth to housing growth; follows the "San Joaquin Valley Blueprint Smart Growth Principles"	City does not appear to have an inclusionary program
Patterson		Inclusionary Housing Program: Chapter 18.86 of City Code
Riverbank	City has an 'unrestricted growth policy'	Does not appear to have an inclusionary program
Turlock	City has a "New Growth Areas and Infrastructure Element that guides its growth management strategy; part of the strategy involves creating master plans for designated areas	Does not appear to have an inclusionary program
Waterford	City does not appear to have growth policies that limit development	Does not appear to have an inclusionary program
Stanislaus County	Voters approved Measure E in 2008 which requires majority approval to rezone/re-designate land; County is committed to preserving agricultural lands	County doesn't appear to have an inclusionary program

Sources: Zoning Ordinance for each jurisdiction

Growth Management Policies

Growth management policies aim to control the progression and speed of development, balancing the needs of a community's existing residents while preparing for the community's future. Growth management policies can become impediments to housing choice, however, when the policy hinders the jurisdiction meeting local affordable housing needs. Growth management policies are not usually condensed within a single policy or program but exist within a collection of codes, plans, or ordinances that direct the rate and intensity of new development.

Urban growth boundaries (the outermost extent of anticipated urban development), limits on the total number of dwelling units that may be permitted, or special conditions on new development can all be considered growth management policies. State housing law mandates a jurisdiction facilitate the development of a variety of housing to meet the jurisdiction's fair share of regional housing needs. Any growth management measure that compromise a jurisdiction's ability to meet its regional housing needs may have an exclusionary effect of limiting housing choices.

Local jurisdictions within Stanislaus County have various local policies and voter initiatives that may impact housing development directly and indirectly including those that aim to support the conservation of agricultural land. Agriculture is the area's number one industry for economic output and employment, creating a multiplier effect for job creation. The conservation of agricultural land is important to the overall economic health of the community but must be balanced with the needs for housing to support the local workforce in all economic sectors of the community. Over time, as available land not impacted by growth measures begins to decline, there may be a direct impact on the development of affordable housing. However, changes in state laws regarding vehicle miles traveled and greenhouse gas reduction requirements, and the increasing costs of extending infrastructure outward, have led to many jurisdictions looking for increased infill development opportunities. Grant funding available for infrastructure, such as sewer and water line extensions and improvements, allows jurisdictions to increase their density within exiting urbanized areas.

Inclusionary Housing Programs

Inclusionary housing or inclusionary housing policies increase the supply of affordable housing by requiring developers to set aside a certain number of new housing units for low- and moderate-income households. These policies ensure that at least a share of new housing in a community is affordable for lower-income populations. The policy tends to be most effective in areas experiencing rapid and a strong demand for housing.

A typical inclusionary housing program will require developers to set aside anywhere from 10 to 30 percent of new housing units for low- and moderate-income households. These policies and programs can be either voluntary or mandatory. Voluntary programs often require developers to negotiate with public officials, but do not specifically mandate the provision of affordable units. Mandatory programs are usually codified in the zoning ordinance and require a contract with the jurisdiction for the creation of the housing units prior to obtaining a building permit.

In 2017, Assembly Bill 1505 was passed by the state legislature to allow cities and counties to adopt inclusionary housing ordinances after a period of legal uncertainty since 2009. The bill was signed into law January 1, 2018. (§ 65850.01) Patterson is the first city in Stanislaus County have an inclusionary housing ordinance. (Chapter 18.86 City Code) Hughson notes in their 2015-2013 that the City is continuing to "evaluate developing an inclusionary zoning program". In the 2009-2014 City of Modesto Housing Element, an inclusionary housing element was deemed infeasible.

The rental housing market conditions may create the incentive for these types of policies in the future if housing costs continue to increase.

Affordable Housing Development

HUD Funding and Tax Credits

Housing with HUD funding to create income-restricted units are found throughout Stanislaus County. About half of these units are in Modesto with many units in both Ceres and Turlock. Modesto's HUD-funded affordable housing stock makes up more than 70 percent of the affordable housing in the County.

While HUD subsidized units are one source of funding for affordable housing units, affordable housing units developed without HUD funding also help the jurisdiction meet lower income housing requirements of the Housing Element. Low-Income Housing Tax Credits (LIHTC), general funds, and state housing funds are also used to develop affordable units. Stanislaus County's recent housing production using LIHTC, however, is low compared to the rest of the state. In 2016-2018, only 55 low-income housing units were created in the County compared to 18,803 in the rest of the State. Table 11 presents the number of affordable housing units with HUD funding by jurisdiction. In this table, 'affordable housing' includes all HUD-subsidized units including public housing and various types of tenant-based and project-based rental assistance. Table 12 includes affordable housing units subsidized by LIHTC.

Table 11. Affordable Housing Units with HUD Funding by Jurisdiction

Jurisdiction	Affordable Units (2018)	Total Occupied Rental Housing Units (2018)	Total Housing Units (2018)	Percent of Housing Stock Affordable	Percent of All Affordable Units in County

Regional Housing Needs

As part of California's housing element law, the Stanislaus Council of Governments (StanCOG) creates a Regional Housing Needs Assessment (RHNA) to determine future housing needs for the area for residents in different income categories (very low, low, moderate, and above moderate). This assessment quantifies the housing needs for each jurisdiction in the County which guides local government land-use planning and resource prioritization during the General Plan Housing Element update every eight years. ~~Modesto additionally completes an update four years into the planning cycle.~~

Overall, the California Department of Housing and Community Development (HCD) determined a final RHNA of 21,330 housing units needed in Stanislaus County for the planning period of January 1, 2014 to September 30, 2023 (the 5th RHNA Cycle). StanCOG, with consultation from the Valley Vision Stanislaus Steering Committee, then created the RHNA allocation per jurisdiction for each income group. Table 13 includes the RHNA allocation by income category for jurisdictions in Stanislaus County and Table 14 presents the progress of each jurisdiction in meeting their respective allocation. Table 15 summarizes the RHNA allocation by jurisdiction and income level.

Table 13. RHNA Allocation of Affordable Housing Units

Jurisdiction	Income Category				
	Very Low	Low	Mod	Above Mod	TOTAL
Ceres	622	399	446	1104	2,571

Source: California Housing and Community Development (HCD)

Table 14 suggests that progress in meeting these housing goals has been slow, particularly for very low-income housing units. For the first three years of the eight-year 5th plan, only Riverbank has issued building permits for more than one percent of their housing goal. For low-income units, Modesto, Riverbank, Turlock, and the Unincorporated County made progress creating units.

Turlock made significant progress in meeting its moderate-income housing goals. In three years, the City has permitted 94.3 percent of its eight-year housing goal of 627 units in this income category. Oakdale is also on track to meet its housing goal, permitting 84 of 210 units (40 percent) in three years. Ceres, Modesto, and the Unincorporated County also saw progress toward meeting their moderate-income housing goals. In total 870 moderate-income housing units were permitted countywide in the first three years of the 5th RHNA Cycle.

Most housing units created have been in the above moderate-income category, with 1,332 permits issued for housing in this income category. Hughson permitted 71 above moderate-income housing units, more than three-quarters of its housing goal. Oakdale and the Unincorporated County were also making significant progress in this category at 48.8 and 44.0 percent, respectively. Modesto only permitted 15.6 percent of its above moderate-income housing unit goals, but this amounts to 425 units. Riverbank, Turlock, and Waterford all permitted housing in this income category as well.

Table 15. RHNA Totals

Other Policies and Programs Impacting Housing Choice

Building Codes

Building codes, such as the California Building Standards Code and the Uniform Housing Code, protect the health, safety, and welfare of the public. Additional building restrictions within local building codes may not be warranted, however, and deter housing construction or neighborhood improvement.

The California Building Standards Code is published every three years by order of the California legislature and applies to all jurisdictions in the State of California unless otherwise annotated. Adoption of the compilation of codes by local government is both a legal mandate and a best practice because it ensures a high level of safety for citizens regarding construction and maintenance of structures. The most recent edition of the California Building Standards Code was updated in 2019 and became effective January 1, 2020.

Other codes commonly adopted across California include the California Mechanical Code, California Plumbing Code, California or National Electric Code, Uniform Housing Code, and California Fire Code.

California Environmental Quality Act (CEQA)

While not directly intended to impact housing choice, the California Environmental Quality Act (CEQA), signed into law in 1970, is a statewide law that applies to all discretionary projects proposed to be conducted or approved by a public agency. The primary purpose of CEQA is to disclose significant environmental effects of a proposed project to the public and to limit these impacts when possible. CEQA also requires that public agencies publicly disclose the decision-making process behind project approval for the purpose of public participation in the environmental review process.

CEQA has been updated several times between 2011 and 2019 to streamline infill development and update exemptions to transit-oriented and mixed-use development, among other updates. Affordable Housing in urban areas is also exempt under certain circumstances. (14 CCR § 15194)

Public Housing Authorities

In Stanislaus County, public housing needs, housing choice vouchers, and other specific HUD funds and services are addressed by two housing authorities:

- The Stanislaus Regional Housing Authority, serving Alpine, Amador, Calaveras, Inyo, Mariposa, Mono, Stanislaus, and Tuolumne Counties. (SRHA)
- The Riverbank Housing Authority administered by SRHA.

Public housing sites can range from large apartment buildings to single-family houses. Housing Choice Vouchers (HCV, also often called the "Section 8" program) are a portable rent subsidy that can be used to pay for a portion of rent in private rental housing units. Project-Based Section 8 vouchers are private rental units in which the current occupant receives subsidized rent through the housing authority.

Housing Authorities are subject to the same state and federal fair housing laws as other housing providers and cannot discriminate on the basis of state or federally protected classes. Housing Authorities must also follow any local fair housing ordinances and may have additional tenant protections added by HUD.

Public Housing Authority Planning

Collectively, the housing authorities in Stanislaus County provide access to 6,335 subsidized housing units including 736 public housing units, 1,060 project-based Section 8 units, and 4,460 housing choice vouchers, though these totals vary at any given time. Though there are technically two housing authorities, the SRHA administers the programs of both the SRHA and Riverbank housing authorities.

The SRHA has been designated as a "high performing" public housing authority by HUD since 2008. This designation is given to public housing authorities (PHAs) that score above a 90 out of 100 points. PHA projects are assessed based on a physical inspection (40 points), financial condition (25 points), management system (25 points), and timely use of capital funds (10 points). The total PHA score is then created out of the average score for all projects weighted by the number of units.

Like many public housing authorities across the country, the housing authorities in Stanislaus County lack an adequate supply of funding for units and/or vouchers to meet the affordable housing needs within their service areas. This is reflected by long or closed waiting lists for potential units. In Stanislaus County, the average waiting time for a public housing unit is 10 years. Waiting lists for housing choice vouchers are only open occasionally and, even then, sometimes only for select applicants.

PHAs complete both an annual plan and a 5-year plan to help prioritize projects, development, funding, and programs. For 2019-2023, the SRHA listed the following goals and objectives (among others) that help affirmatively further fair housing and increase housing choice:

1. Depending on the availability of federal and state funding, increase the inventory of affordable rental housing within the jurisdiction of the Stanislaus Regional Housing Authority for extremely low to moderate income households

Objectives:

- Housing Choice Voucher Program – Continue to expand upon existing marketing and outreach efforts to attract new landlord participants to the Housing Choice Voucher Program.

- Development – Leverage private or other public funds to create additional housing opportunities. • Development – Subject to the availability of funding, develop or acquire 500 affordable housing units over the next five years.

2. Conserve and upgrade the Affordable Housing Inventory in Stanislaus County.

Objectives:

- Public Housing – Implement Asset-Based Community Development (ABCD) initiatives to engage and unite residents, associations, and institutions from within each community for more sustainable communities and economic development.
- Administration – Partner with County and/or City in efforts to improve housing stock and create stable, viable neighborhoods.

3. Increase assisted housing choices.

Objectives:

- Housing Choice Voucher Program – Provide voucher mobility counseling at initial family briefings and during annual reexaminations.
- Housing Choice Voucher Program – Continue to maintain the 2-tiered Benefit Payment Standard (BPS) to ensure families have the ability to locate affordable housing in less poverty concentrated neighborhoods.
- Housing Choice Voucher Program - Continue to seek funding for the Individual Development & Empowerment Accounts (IDEA) and Workforce Initiative Subsidy for Homeownership (WISH) programs for graduating Family Self-Sufficiency (FSS) Program Participants.

(Housing Authority of the County of Stanislaus, DBA Stanislaus Regional Housing Authority Streamlined Annual PHA Plan Fiscal Years 2019-2020)

Public Housing Authority Resident Demographics

Between October 1st, 2018 and January 31st, 2020, 702 households in Stanislaus County were assisted through public housing, representing 3.9 percent of all public housing households in California.

Chart 35 depicts the share of public housing households by income level in Stanislaus County, California, and the United States. About 40 percent of all public housing residents assisted by the PHAs are considered "extremely low-income", with a County annual household income average of $23,825. Chart 36 indicates that Stanislaus County public housing residents have a slightly higher average income than the rest of the state. In California, 62 percent are extremely low income and the annual household average income is $20,664. The higher income within Stanislaus County is at least partially offset by higher tenant rent contributions than the California average. Chart 37 depicts the average monthly tenant payment for public housing residents in Stanislaus County, California, and the United States. More public housing households pay more than $501 per month than any other payment category. The average monthly tenant contribution toward rent in Stanislaus County is $573, versus $495 in California.

Chart 38 presents the share of public housing household types in Stanislaus County, California, and the United States. The most common household type within public housing is female-headed households with children, with even more households within this category in both California and Stanislaus County than the rest of the United States. Stanislaus County also has a slightly higher percentage of disabled elderly

residents (with or without children) than the rest of the state and country. Households in Stanislaus County public housing tend to be larger than those in the rest of California and the United States.

Appointed Boards/ Commissions

Department of Fair Employment and Housing

California's Department of Fair Employment and Housing (DFEH) enforces California's civil rights laws including fair housing laws found in the Fair Employment and Housing Act (FEHA), Unruh Civil Rights Act, Disabled Persons Act, and Ralph Civil Rights Act. The DFEH is tasked with the following:

- Engage in public outreach and provide training and technical assistance to employers, business establishments, and housing providers regarding their responsibilities under the law.
- Investigate discrimination complaints and cases of systemic discrimination.
- Facilitate mediation and resolution of disputes involving civil rights.
- Enforce the laws by prosecuting violations in civil court.

Within DFEH, the Fair Employment and Housing Council (FEHC) implements California's employment and housing anti-discrimination regulations, conducts inquiries, and holds hearings on civil rights issues. Council members on the FEHC are appointed by the governor.

Local Boards/Committees

Modesto, Turlock, and Stanislaus County all have committees, commissions, or local boards that discuss issues related to Fair Housing and Affirmatively Furthering Fair Housing. Table 16 outlines which jurisdictions in the County have committees that directly address low-income housing, issues of concern for specific racial or ethnic groups, or disability. Hughson, Newman, Patterson, Riverbank, and Waterford do not appear to have any such committees or commissions.

Table 16. Stanislaus County Local & County Boards and Committees

Jurisdiction	Committees/ Commissions	Duration/Frequency	Committee Purpose
Ceres	Housing Loan Committee	Meets as needed	Makes recommendations on down payment assistance loans.
Modesto	Equal Opportunity/Disability Commission - Human Relations Commission (meet jointly)	Meets as needed	Tasked with advising and assisting the City Manager in matters related to equal opportunity and individuals with disabilities; primary responsibility is making recommendations for furthering human relations in the community and make referrals concerning fair housing.
Modesto	Disability Access Appeals Board	Meets as needed	The Disabled Access Appeals Board hears and rules on appeals of Chief Building Official orders based on disabled access laws; and interprets and advises staff on disabled access laws.
Modesto	Citizens Housing & Community Development Committee	Second Thursday of every month	Review City's HUD funds and makes recommendations to City Council on CDBG, HOME, and ESG grants.
Modesto	Housing Rehabilitation Loan Committee	First Thursday of every month	Make recommendations to the Citizens Housing & Community Development Committee on how procedures and policies for housing rehabilitation loan funds and down payment assistance.
Oakdale	Housing Loan Committee	Meets as needed	Make recommendations to the Committee on down payment assistance and housing rehabilitation loan funds
Turlock	Joint Taskforce on Diversity and Inclusion (CTSS-JTDI) (City of Turlock and California State University - Stanislaus)	One a month on a Wednesday	Goal of building relationships between the City, Stanislaus State University, and the community to coordinate, encourage, and implement initiatives to promote an inclusive community.
Turlock	Housing Loan Committee	As needed	Make recommendations to the Committee on procedures and policies for housing rehabilitation loan funds and down payment assistance.
Stanislaus County	Stanislaus County Equal Rights Commission	Every other month on the third Wednesday	Primarily work on promoting equal rights in employment opportunities.

Stanislaus County	Cultural Competency, Equity, and Social Justice Committee (CCESJC) of the Stanislaus County Department of Behavioral Health and Recovery Services	Second Monday of each month	Aim to provide culturally competent services to clients' works with several partners and offer mental health training to public.
County-wide	Stanislaus Community System of Care (CSOC aka CoC)	Third Thursday of each month	Works to address potential issues and gaps in the service delivery system and create a transparent and collaborative service delivery system for the entire County related to housing and homelessness.
County-wide	Stanislaus Homeless Alliance	Second Wednesday of each month	A collaborative entity formed to align homelessness services, planning, and funding among stakeholders in Stanislaus County.

Language Accommodations

National origin discrimination does not directly include the use of language from a foreign country, but, because of the connection between language and foreign geographic areas, HUD has issued guidance clarifying that discrimination against people who do not speak, read, or write English proficiently (with "Limited English Proficiency" or "LEP") is prohibited under the Fair Housing Act.

HUD notes that in the United States, 34 percent of people who are Asian and 32 percent of people who are Hispanic or Latino are LEP compared to only 2 percent of non-Hispanic Whites. For those born outside the United States, 61 percent born in Latin America and 46 percent born in Asia are LEP. Because language and national origin correlate so closely, a housing applicant or resident's lack of English proficiency is often used as justification for housing discrimination as a stand-in for discrimination based on race, ethnicity, and/or national origin. (Office of General Counsel Guidance on Fair Housing Act Protections for Persons with Limited English Proficiency, September 15, 2016)

This connection between LEP and national origin was made by the U.S. Supreme Court in 1974 in *Lau v. Nichols* who determined that language was an aspect of national origin and therefore protected by Title VI of the Civil Rights Act which prohibits discrimination on the basis of race, color, and national origin in programs and activities receiving federal financial assistance. (414 U.S. 563 1974) In addition, LEP Executive Order (Executive Order 13166) signed into law in 2000 gives LEP residents access to federally conducted and federally funded programs and activities. The LEP Executive Order applies to both federal agencies, including HUD, and those who receive federal funds such as local governments and nonprofits. If an organization or their activities are at least partially funded by federal dollars, all the funding recipient's operations are covered by the law, even if only one part of the recipient's programs or activities and funded by federal assistance. (Limited English Proficiency Federal Interagency Website, LEP.gov)

California law additionally protect those with LEP statewide through protections based on "ethnic group identification" which includes the definition of this protected class as including "linguistic characteristics". This law applies to any program that is "conducted, operated, or administered by the state or by any state agency, is funded directly by the state, or receives any financial assistance from the state." (§ 11135) The Dymally-Alatorre Bilingual Services Act also protects LEP residents of California by requiring that state and local government agencies serving an area with a "substantial number of non-English-speaking people" be able to effectively communicate with those LEP persons though bilingual staff and translated materials. For local and state government agencies, this applies to agencies where the population served is at least 5 percent LEP. The communication covered under the Act includes forms, applications, questionnaires, advertisements, and official notices. (§§7290-7299.8)

A "LEP household" is defined by the U.S. Census Bureau's American Community Survey as those in which no one 14 and over either 1) speaks English at home or 2) speaks a language other than English at home and speaks English 'very well'. In Stanislaus County, 8.9 percent of all households are LEP, and 6.4 percent in Modesto.

Where Dymally-Alatorre applies in Stanislaus County based on LEP demographic percentages, jurisdictions should be able to effectively communicate with the public in English and Spanish in all housing, fair housing, and all other community services and programs to ensure equal access for LEP persons.

Evidence of Housing Discrimination

Fair Housing Complaints

In California, the Department of Fair Employment and Housing (DFEH) is responsible for enforcing fair housing laws along with the HUD Office of Fair Housing and Equal Opportunity (HUD FHEO). Residents of Stanislaus County who feel they have a been a victim of housing discrimination can submit their complaint to either agency. If a complaint is filed with the national FHEO, it will automatically be filed with DFEH at the state level for investigation. If a complaint is filed with DFEH and may also violate the federal Fair Housing Act, DFEH will automatically file the complaint with HUD FHEO as well, although DFEH will be the agency that investigates the allegation.

HUD FHEO and DFEH also partner with state and local agencies in HUD's Fair Housing Assistance Program to report fair housing complaints on behalf of individuals. Member agencies assist individuals in filing fair housing violation complaints with state and national agencies. Fair Housing Assistance Program agencies also conduct housing enforcement activities including compliant investigation, conciliation between parties, and fair housing education and outreach. In Stanislaus County, Project Sentinel is the primary organization that performs these roles in the community in addition to also working with broad tenant and landlord issues.

Project Sentinel investigates complaints on behalf of residents who feel they may be victims of housing discrimination, provides outreach and education to housing providers, and assists residents file complaints with state and federal enforcement agencies such as DFEH and HUD FHEO.

Housing Discrimination Complaints

Information about housing discrimination complaints to DFEH and HUD is tracked annually by each agency. The agency tracks where the alleged fair housing violation occurred geographically, on what protected-class basis, and the date of the complaint.

The true number of fair housing violations that occur within an area is difficult to determine, especially for those who fear retaliation and/or the loss of immediate housing if the violation is reported. This is often, unfortunately, the same group most likely to experience fair housing violations: low-income residents, those with families, racial and ethnic minorities, and those without housing references or good credit. The National Fair Housing Alliance estimates that, on a national level, less than 1 percent of all fair housing violations are reported.

Chart 42 depicts the share of housing discrimination complaints by basis of the complaint. In California, disability was the most common basis for housing discrimination complaints to DFEH in 2018, accounting for 33 percent of all complaints. Race, age, and familial status were the next most frequent bases for housing discrimination complaints to DFEH. Retaliation, national origin, and sex/gender were also common. Complaints can be made on more than one basis.

Charts 43, 44, and 45 present the count of housing discrimination complaints by basis in Stanislaus County, Modesto, and Turlock. These figures mirror statewide patterns with disability as the most cited basis for housing discrimination in complaints made between 2014 and 2019 for each jurisdiction. Familial status and gender status were the next most common at the County level and in Modesto while familial status and race were the next most common in Turlock. Table 17 indicates that Modesto had a significant number of complaints (165) compared to other jurisdictions in the County. This may be because Project Sentinel has a physical office in Modesto but could also be due to the amount of outreach or advertising to the public in Modesto, partnerships with other organizations, or the number of fair housing violations occurring. The larger number may therefore reflect successful community outreach as opposed to a greater prevalence of housing discrimination.

PRIVATE SECTOR POLICY REVIEW

Mortgage Lending

This analysis primarily relies on lending data made publicly available through the Home Mortgage Disclosure Act (HMDA). The act requires that financial institutions, including banks, savings associations, credit unions, and other lenders, annually disclose mortgage data to the public. This data serves a variety of purposes including determining whether lenders are meeting community housing needs, supporting public officials in investments to encourage development, and identifying potential patterns of discriminatory lending.[6] It is important to note that HMDA data by itself is insufficient to conclusively identify instances of discrimination in lending. Rather, analysis of HMDA data is useful for exploring discrepancies in lending outcomes and identifying areas of concern.

The most recent HMDA data available to the public is for 2018. Appendix X of this report includes detailed tables with data on the disposition of loan applications, types, and outcomes for Stanislaus County (all jurisdictions), Modesto, Turlock, and the Unincorporated County, which in 2018, included data for the following areas: Denair, Empire, Grayson, Hickman, Keyes, Knight Ferry, La Grange, Monterey Park, Riverdale Park, Salida, Valley Home, Vernalis, and Westley. Several tables compare data for these jurisdictions in 2018 to figures from 2008 and 2013 to analyze changes over time. Other tables explore differences in lending outcomes by applicant characteristics, including income level and race/ethnicity. Some tables are only applicable to Stanislaus County due to insufficient sample sizes for the other three jurisdictions.

General Overview

Data from 2018 indicates that about 16,000 loans originated in Stanislaus County, with 8,034 (50.2 percent) originating in Modesto, 2,327 (14.5 percent) in Turlock, and 1,739 (10.9 percent) in the Unincorporated County. Compared to previous years, the number of loan originations at the County-level has decreased, however, loan applications for individual jurisdictions have fluctuated over time. For example, in 2008, Stanislaus County had 26,824 originations and by 2013, this figure decreased to 24,588 applications. In comparison, in 2008, Modesto had 12,151 applications while Turlock had 2,162 and the Unincorporated County had 2,442. Five years later, these figures were 12,090 in Modesto, 3,984 in Turlock, and 2,893 in the Unincorporated County.

Regarding loan outcomes, a little over half of all applications (9,056 loans or 56.6 percent) were approved and almost a fifth (2,839 loans or 17.7 percent) were denied. The remaining applications were either marked incomplete (3.9 percent), withdrawn by the applicant (12.3 percent), or marked as having another outcome (9.5 percent). Of the jurisdictions analyzed, loans originating in Turlock experienced the highest approval rate of 59.5 percent while applications in the Unincorporated County cumulatively witnessed the lowest approval rate of 54.4 percent. When it came to loan denial rates, loan applications in Modesto had the lowest rate at 16.9 percent while loans in the Unincorporated County had the highest rate at 20.0 percent. Notably, approval rates across Modesto, Turlock, Stanislaus County, and the Unincorporated County are slightly higher than the national approval rate of about 53.4 percent.

[6] "Background and Purpose," Home Mortgage Disclosure Act, FFIEC, accessed 11/19/2019, https://www.ffiec.gov/hmda/history.htm.

Characteristics of Loan Applicants.

Most individuals who initiated loan applications in Stanislaus County were White with 63.7 percent of applicants identifying as such in 2018. Hispanic individuals (of any race) comprised the second largest share that year, representing 26.8 percent of applicants. Black/ African American applicants made up 2.1 percent of applicants while Asian applicants comprised 5.6 percent. Over time, the demographic composition of loan applicants fluctuated little. In 2008, White applicants represented 68.2 percent of individuals applying for a loan while 26.9 percent of applicants were Hispanic, 1.6 percent were Black/ African American, and 4.5 percent were Asian. Five years later, these figures barely changed. More recently in 2018, the shares of White and Asian applicants have decreased slightly while the percentages of Black/ African American and Hispanic applicants have increased.

In comparison to the demographics of the total population for Stanislaus County, the data suggests that people of color are underrepresented among individuals applying for mortgage loans. Notably, Black/ African American applicants across all three years appear to be disproportionately less likely to apply for a loan relative to the number of Black/ African American individuals in the community. Unequal representation of applicants by race and ethnicity could suggest inequitable access to lending opportunities.

Loan Outcomes by Type and Purpose

HMDA data classifies loans by type and purpose. Loan types include conventional purchase loans and government-backed loans that are guaranteed by the federal government including the Federal Housing Administration (FHA), Veterans Affairs (VA), and USDA Rural Housing Service or Farm Service Agency (RHS/FSA). Loan purposes include classifications such as home purchase, home improvement, and refinancing. It is important to note that following changes to data reporting requirements in 2018, HMDA data now reflects different classifications for loan purpose. Whereas in the past, financial institutions were required to report the purpose of a loan as either home purchase, home improvement, or refinancing, these are no longer the only options. For refinancing loans, lenders now must disaggregate this data as either home refinancing or cash-out refinancing. In addition, loan purpose data now captures loans that fall outside any of these classifications (i.e., loans that are neither for home improvement, home purchase, home refinancing, nor cash-out refinancing). This has implications for the comparison of 2018 data to that from prior years. Specifically, some loan purpose data which was previously captured is no longer reportable, while other data is now captured. It is important to keep this in mind when comparing older data to data released in 2018 and beyond.

In Stanislaus County, almost three-quarters of all loan applications were conventional purchase loans (72.6 percent) while the remaining (27.4 percent) were government-backed loans. The distribution of loan type is generally consistent across jurisdiction and the three years analyzed. When considering loan purpose, most loans in Stanislaus County were home purchase loans in 2018. A review of the distribution of loan purpose in 2008, 2013, and 2018 reveals that each jurisdiction witnessed significant decreases in the share of home purchase loans from 2008 to 2013 and then a rebound from 2013 to 2018. For instance, in 2008, 53.6 percent of loans in Stanislaus County were home purchase loans, 5.9 percent were for home improvement, and 40.6 percent were for refinancing. Five years later, the share of home purchase loans dropped to 32.4 percent, home improvement loans decreased to 2.5 percent, and refinancing loans jumped to 65.1 percent. By 2018, home purchase loans comprised 43.0 percent of loans in Stanislaus County, home improvement loans represented 7.8 percent, 14.7 percent were for home refinancing, and 27.1 percent for cash-out refinancing. This trend was apparent in Modesto, Turlock, the Unincorporated County, and Stanislaus County and most likely reflects conditions in the housing market following the financial crisis in 2008.

Loan Outcomes by Race and Ethnicity

Applicant Race and Ethnicity

One method to explore whether barriers to lending opportunities exist in a community is to analyze discrepancies in outcomes by an applicant's demographic characteristics. Disaggregating lending outcomes by applicant race and ethnicity is one way to search for such differences. Table 28 depicts lending outcomes by applicant race and ethnicity for Modesto, Turlock, Stanislaus County, and the Unincorporated County. The table indicates that although the overall approval rate in Stanislaus County in 2018 was 56.6 percent, this figure varied considerably based on an applicant's race or ethnicity. White applicants experienced the highest approval rate at 63.8 percent, whereas Asian applicants witnessed the lowest approval rate at 55.4 percent. Furthermore, Hispanic applicants had an approval rate of 59.7 percent and Black/ African American applicants had an approval rate of 57.1 percent. A similar pattern is apparent in Modesto, Turlock, and the Unincorporated County. For most years, approval rates for White applicants were the highest within each jurisdiction. There are a few exceptions, though. For example, in 2013, Asian applicants experienced the highest approval rate of 65.4 percent in Modesto while Hispanic applicants had the highest rate at 59.5 percent across the Unincorporated County.

When considering changes in approval rates over time, Table 28 suggests that County-level rates have increased. For instance, in 2008, Stanislaus County had an approval rate of 43.7 percent. Five years later, this figure was 56.4 percent, and by 2018, it was 56.6 percent. While Modesto and the Unincorporated County experienced peak approval rates in 2013, the differences between the rates for 2013 and 2018 are minimal at 0.4 and 0.5 percent, respectively.

It is also notable that approval rates for all groups have grown significantly since 2008. For example, from 2008 to 2018, Black/ African American applicants in Modesto witnessed a 24.9 percentage point increase in their approval rate. Similarly, Hispanic applicants in Turlock witnessed an increase in approval rates of 21.7 percentage points over the same period. Other large increases include a 23.8 percentage point increase for Black/ African American applicants in the Unincorporated County, however, the sample size of Black/ African American applicants was quite small at 27 in 2008 and 31 in 2018.

Table 28. Loan Outcomes by Applicant Race & Ethnicity

Source: 2008, 2013, 2018 HMDA data

Census Tract Minority Share

In addition to exploring lending outcomes by applicant race and ethnicity, this analysis considered how outcomes differed by the percentage of minority residents located in the same census tract. Due to historical patterns of discrimination such as redlining, an analysis that considers the influence of an area's demographic composition can see if such locational characteristics correlate with disparities in loan outcomes. One way to do this is to disaggregate the data by census tract minority share, or in other words, the percentage of minority residents in a census tract. For this analysis, "minority" refers to individuals who identify as Hispanic (of any race) or belonging to a race other than white. Table 19 presents loan outcomes for Stanislaus County by the proportion of minority residents in each tract. Since HMDA data for each application includes demographic and income data derived from the American Community Survey on a loan's corresponding census tract, the analysis used this data to classify each tract into a minority share bracket. Each of the five minority share brackets represents a range of 20 percentage points in order of increasing concentration.

Table 19. Outcomes by Census Tract Minority Share in Stanislaus County

Tract Minority Share	Total Applicants		Approved		Declined		Other	
	#	%	#	%	#	%	#	%

Source: 2008, 2013, 2018 HMDA data

Notably, Table 19 indicates that the number of applications originating from census tracts in the lowest bracket, 0-19 percent, reached zero by 2013 and represented only 0.1 percent of total applications in 2018. There could be a few reasons for this. For one, individuals from tracts with low proportions of minority residents could have stopped applying for loans after 2008. Another possibility is that census tracts which were previously classified in the 0-19 percent minority share bracket have since diversified

and now fall within a different bracket. It is also possible that the large number of applications with redacted information (labeled as "NA" in the table) has distorted the distribution, creating the impression that virtually no applications originated in low minority share tracts after 2008. The explanation could even be a combination of all three possibilities. This uncertainty is important to keep in mind when analyzing the data.

When considering approval rates by minority share bracket, it appears that rates gradually decreased as the proportion of minority residents in a census tract increased. Table 19 indicates that tracts in the 60-79 percent and 80-100 percent minority share brackets witnessed lower approval rates than tracts with lower proportions of minority residents. The only exception is in 2018, where there were 16 applications from tracts classified in the lowest bracket and none were approved. Although inconclusive, this information suggests that the demographic composition of an application's corresponding census tract could influence the likelihood of a loan being approved.

Loan Outcomes by Income Level

Applicant Income Level

Another method to search for discrepancies in lending outcomes is to explore differences by applicant income. This analysis assigned applicants in Stanislaus County to a corresponding income level relative to the county's area median income (AMI) for family households.[7] The parameters to define the lower and upper bounds for each level follow the same thresholds used in HMDA data. Table 20 presents the AMI for Stanislaus County for 2008, 2013, and 2018 and defines the following income levels:

Table 20. Area Median Income for Family Households in Stanislaus County

Area Median Income (in thousands)	2008		2013		2018	
	$58		$57		$61	
	Lower	Upper	Lower	Upper	Lower	Upper
Low (0-49% AMI)	$0	$29	$0	$28	$0	$30
Moderate (50-79% AMI)	$29	$46	$28	$45	$30	$48
Middle (80-119% AMI)	$47	$69	$45	$67	$49	$72
Upper (>= 120% AMI)	$70	∞	$68	∞	$73	∞

Area median income for family households, rounded to the nearest thousandth.
Source: ACS 5-year estimates (2005-2009, 2009-2013, 2013-2017)

Using these income levels, Table 21 presents the loan outcomes for applicants in Stanislaus County for 2008, 2013, and 2018. For each of the three years analyzed, most individuals applying for a loan fell into the upper income bracket. For example, upper income individuals represented 45.3 percent of applicants in 2008, 43.6 percent of applicants in 2013, and 49.2 percent of applicants in 2018. Furthermore, the shares for applicants among the remaining income levels decreased as the income bracket decreased. In other words, there were fewer applicants in the lower income brackets.

Regarding approval rates, upper-income applicants generally experienced the highest rates. For instance, in 2018, upper income individuals had an approval rate of 64.7 percent whereas low income applicants had an approval rate of 38.8 percent. The only exception occurred in 2008, where moderate income

[7] The area median income for family households is typically greater than area median income for all households in a jurisdiction. This analysis uses family household AMI to better reflect the earnings of prospective homeowners.

applicants, or individuals earning between 50-79 percent AMI, experienced the highest approval rate at 49.3 percent while upper income applicants had an approval rate of 48.3 percent.

In addition, Table 4 suggests that while overall approval rates increased over time, the gap between the highest and lowest income brackets lessened in 2013 and has since increased. For example, in 2008, the approval rate for low-income applicants was 37.0 percent. By 2013, this figure was 53.7 percent, and by 2018, it was 38.8 percent. Conversely, in 2008, 48.3 percent of loan applications for upper-income applicants were approved, while in 2013, this figure was 62.9 percent. By 2018, the approval rate for upper-income applicants was 64.1 percent. In other words, there was an 11.3 percentage point gap in approval rates between the highest and lowest income bracket applicants in 2008. In 2013, this gap represented 9.2 percentage points, and in 2018, it was 25.9 percentage points.

Census Tract Income Level

Similarly to exploring the influence of a community's demographic composition on loan outcomes, this analysis also considered the effect of census tract income. Using the same income brackets described in Table 20, this analysis ranked each applicant's corresponding census tract into an income bracket based on the tract's median income relative to area median income for Stanislaus County. Table 22 depicts lending outcomes for applicants based on the income level of their respective census tract.

Table 22 indicates that not only has the share of low-income census tracts been quite small for each of the three years analyzed, but it has been decreasing over time. This could signify that fewer applicants from low income tracts are applying for loans, fewer tracts are classified as low income, or a combination of both factors. Moreover, Table 22 indicates that approval rates tended to increase as income levels increased. For example, in 2008, loans from low income census tracts were approved 37.9 percent of the time while this figure was 40.5 percent for moderate income tracts, 43.5 percent for middle income tracts, and 45.9 percent for upper income tracts. This pattern repeated in 2013. In 2018, loan applicants from moderate income tracts had the lowest approval rate at 51.8 percent, followed by middle income tracts at 56.3 percent, low income tracts at 56.4 percent, and upper income tracts at 56.6 percent.

Loan Outcomes by Race/Ethnicity and Income Level

Tables 23 and 24 consider the combined effects of applicant race/ethnicity and income level. Table 23 depicts loan outcomes by applicant income level and race/ethnicity while Table 24 explores lending outcomes by applicant race/ethnicity and census tract income. Although disaggregating outcomes by tract minority share and median income would be a useful method to uncover discrepancies by locational characteristics, the HMDA data for Stanislaus County do not contain a sufficient sample of census tracts across each of the minority share brackets to allow for this type of analysis. Instead, Table 24 explores the intersection of applicant race and ethnicity by census tract income level. In addition, this analysis did not disaggregate lending outcomes by race/ethnicity and income level for each jurisdiction due to an insufficient sample size.

A comparison of Table 23 and 24 suggests that when considering the combined effects of race and income, there appears to be a clearer pattern based on applicant income as opposed to census tract income. For example, in Table 23, within each race or ethnicity, approval rates seem to increase as applicant income increases. In Table 24, however, the combined effects of applicant race/ethnicity and census tract income do not appear to produce any distinct patterns regarding approval rates. This could suggest that census tract income does not influence discrepancies in lending outcomes as much as other factors. It could also be explained by limitations in the data, which for some races and ethnicities, provided a small sample size. For instance, black applicants applying for loans in low-income census tracts had an approval rate of 100.0 percent in 2013 because there were two such applicants, both of whom had their loans approved. Although further information and analysis is required to determine the degree of correlation between race, ethnicity, and income on lending outcomes, Tables 23 and 24 indicate that discrepancies exist in Stanislaus County.

Loan Outcomes by Financial Institution

Lastly, this analysis considered how lending outcomes differed in Stanislaus County depending on which financial institution processed the loan application. Tables 25 and 26 present the top ten lenders for Stanislaus County in 2018 in order of market share. Table 26 indicates that Quicken Loans captured 15.0 percent of the market in 2018, followed by Bank of America at 11.8 percent, and JP Morgan Chase Bank at 11.5 percent. Table 25 distinguishes which of the county's top lenders were also among the top ten lenders for Modesto, Turlock, and the unincorporated areas. The table indicates that the most popular financial institutions at the county-level were also among the most popular in the other three jurisdictions.

Table 25. Top Ten Lenders in Stanislaus County by Jurisdiction

Source: 2008, 2013, 2018 HMDA data						

Table 26 presents the loan outcomes for Stanislaus County applicants in 2008, 2013, and 2018. Firstly, it is interesting to note the change over time for each institution's market share in the county. For example, in 2008, Quicken Loans had a small presence in Stanislaus County with a market share of 2.2 percent whereas Bank of America captured 28.1 percent of the market. Ten years later, Quicken Loans had the largest market share of any financial institution in the county at 15.0 percent while Bank of America's share had fallen by over sixteen percentage points. These shifts most likely reflect the significant changes in the mortgage industry following the 2008 financial crisis.

When considering differences in approval rates by institution, there is clearly a wide gap between the lowest and highest rates. Specifically, U.S. Bank had the lowest approval rate in 2018 at 33.1 percent whereas American Pacific Mortgage Corporation had the highest at 85.4 percent. Combined, the county's top ten lenders represented 51.8 percent of all approved loans and 51.3 percent of all denied loans across Stanislaus County in 2018. Table 9 also indicates that approval rates fluctuated within the same institution over time. For instance, in 2008, Flagstar had an approval rate of 71.8 percent in Stanislaus County, yet five years later this figure was 48.3 percent, and by 2018 it was 54.3 percent. It is unclear why these rates changed so dramatically within individual institutions.

An analysis of the rates for withdrawn and closed applications for the county's top 10 lenders shows great variation by financial institution and year. In mortgage lending, fallout refers to a loan application that is withdrawn by the borrower before the loan is finalized. Typically, for-profit lenders should have little fallout, and none that varies by race or ethnicity. A significant disparity in fallout could suggest screening, differential processing, HMDA action misclassification, and/or the potential of discouragement of minority applications. Closed applications refer to applications that are closed by the lender due to incompleteness. A high rate of incomplete loans can indicate a lack of financial literacy on the part of the borrower. Insufficient lender assistance during the application process can also lead to high levels of incomplete

applications. The lack of lender assistance may be discriminatory in motive or outcome; however, HMDA data cannot be used to prove motive.

In Stanislaus County, there was a wide range for rates of withdrawn and closed applications. For example, in 2018, rates ranged from a low of 9.2 percent at American Pacific Mortgage Corporation to a high of 36.6 percent for Flagstar. Some individual institutions also experienced considerable fluctuation in their rates for withdrawn and closed applications. Bank of America, for instance, reported 9.9 percent of loan applications as withdrawn or closed in 2008. In 2013, this figure was 20.7 percent, and in 2018 it was 14.9 percent.

REAL ESTATE ASSOCIATION POLICIES

There are two predominant real estate groups active in Stanislaus County. The first group is associated with the National Association of Realtors (NAR) and includes a state and local chapter. The second group is associated with the National Association of Real Estate Brokers (NAREB) and also includes a state and local chapter. The term "realtor" is a registered collective membership mark of the NAR with its use signifying an individual's affiliation with the organization.[8] As such, the NAREB uses the term "realtist" to distinguish its affiliates from the NAR.

Both organizations outline specific professional standards and codes of ethics for their members to follow. The following section provides a broad overview of each organization's standards as they apply to fair housing.

National Association of Realtors

As one of nation's predominant trade association for real estate professionals, the NAR aims to shape policies impacting the industry. On its website, the organization includes a statement on its commitment to diversity and inclusion which reads:

NAR fully embraces perspectives from all walks of life—regardless of race, ethnicity, gender, religion, age, sexual orientation, gender identity, disability, national origin, socioeconomic status, political affiliation or any other qualities by which we may define ourselves.[9]

Furthermore, the NAR publishes a code of ethics for members which details standards for real estate professionals. As with the organization's diversity and inclusion statement, in some cases the code surpasses requirements outlined by federal law. For example, Article 10 of the code states that realtors shall not deny equal services on the basis of sexual orientation and gender identity in addition to other groups protected by federal law. Each year, NAR publishes its Professionalism in Real Estate Practice handbook, which provides guidance for professionals in applying the Code of Ethics.

State and Local Branches of NAR

The NAR has state and local branches across the country, and in California, these include the California Association of Realtors (CAR) and the Central Valley Association of Realtors (CVAR). In addition to adopting the ethics standards set by the NAR, the state branch promotes its own diversity and inclusion programs, such as the Latino Initiative Voices in Action program, which provides educational materials for members on homeownership opportunities and fraud prevention.

[8] National Association of Realtors, "About NAR," accessed 2/25/2020, https://www.nar.realtor/about-nar.
[9] Ibid.

National Association of Real Estate Brokers

The National Association of Real Estate Brokers (NAREB) was established in 1947 as national trade association for African American real estate professionals with the goal of promoting economic improvement, equal opportunity, and civil rights for minority communities. Although historically the NAREB was founded by and for African American real estate professionals, today the organization promotes "democracy in housing," or fair housing opportunities for all; however, the organization continues to advocate predominantly for African American homeownership.[10]

Similar to the NAR, the NAREB follows a strict code of ethics stating that "any Realtist shall not discriminate against any person because of race, color, religion, sex, national origin, disability, familial status, or sexual orientation in the sale or rental of real property, in advertising the sale or rental of real property, in the financing of real property, or in the provision of professional services."[11] The NAREB Code of Ethics furthermore states that "a Realtist shall not be instrumental in establishing, reinforcing, or extending any agreement or provision that restricts or limits the use or occupancy of real property to any person or group of persons on the basis of race, color, religion, sex, national origin, disability, familial status, or sexual orientation."[12]

State and Local Branches of NAREB

As with the NAR, NAREB has state and local affiliates across the country including the California Association of Real Estate Brokers (CAREB) and the Central Valley Realists Association. Both branches uphold the national organization's code of ethics.

IMPEDIMENTS TO FAIR HOUSING CHOICE

Communities identify specific barriers ("impediments") to fair housing choice and create action steps to remove or reduce these barriers.

Modesto

The *City of Modesto Analysis of Impediments to Fair Housing Choice for Fiscal Years 2015-2020* did not directly identify any fair housing impediments for the City of Modesto. The 2018-2019 CAPER for Modesto identifies the following fair housing concerns:

1. *Access to information about housing availability and choices among recent immigrants who are disproportionately lower income.*
2. *Lack of access to adequate housing due to poor credit history, insufficient funds for moving expenses, and other factors among financially vulnerable groups, such as female-headed households with children and the homeless.*
3. *Barriers faced by large, low-income and moderate-income families due to occupancy restrictions imposed by rental property owners.*
4. *The need to assist homeowners who have experienced foreclosure, who are disproportionately minority households, to find alternative living arrangements.*

[10] National Association of Real Estate Brokers, "NAREB History," accessed 2/25/2020, http://www.nareb.com/our-history/.
[11] California Department of Real Estate, "3. Trade and Professional Organizations," in *A Real Estate Guide*, accessed 2/25/2020, pages 39-40, https://dre.ca.gov/files/pdf/refbook/ref03.pdf.
[12] Ibid, 40.

Within the last Analysis of Impediments document, the City listed following goals to improve housing access:

- *Supporting organizations that provide fair housing education, homebuyer education, and landlord tenant mediation;*
- *Offering housing rehabilitation and homebuyer assistance;*
- *Working with nonprofit organizations to reduce barriers to housing and to increase the supply of affordable housing;*
- *Promoting economic development to increase job opportunities; and*
- *Participating in partnerships with public and private organizations to improve job skills among Modesto's lower-income households.*

Stanislaus Urban County and Turlock

Stanislaus Urban County and City of Turlock Regional Analysis of Impediments to Fair Housing Choice Fiscal Years 2015–2020 identified the following impediments and corresponding actions:

Affordable Housing

1. Impediment: Insufficient supply of affordable housing.

1.1 Action: Continue to provide assistance to preserve existing affordable housing and to create new affordable housing.
1.2 Action: Continue to offer regulatory relief and incentives for the development of affordable housing.
1.3 Action: Continue to ensure the availability of adequate sites for the development of affordable housing.

2. Impediment: Shortage of subsidies and strategies to promote affordable, accessible housing for low-, very low-, and extremely low-income households, including protected classes.

2.1. Action: Continue to pursue available and appropriate State and Federal funding sources to support efforts to construct housing meeting the needs of lower-income households.

2.2. Action: Continue to support the Stanislaus Housing Authority Section 8 Housing Choice Voucher (HCV) Rental Assistance Program, including distribution of program information at the public counters for the Stanislaus County Department of Planning and Community Development, City of Turlock Housing Services, and all Stanislaus Urban County member jurisdictions. Stanislaus County and the City of Turlock will hold periodic meetings with representatives of the Housing Authority of the County of Stanislaus to discuss actions Stanislaus County, the City of Turlock, and Stanislaus Urban County member jurisdictions can take to coordinate housing program implementation.

2.3 Action: Follow through on the Housing Element policies and programs.

Private Practices and Mortgage Lending

3. Impediment: Differential origination rates based on race, ethnicity, and location.

3.1. Action: When selecting lending institutions for contracts and participation in local programs, Stanislaus County, the City of Turlock, and Stanislaus Urban County member jurisdictions may prefer those with a Community Reinvestment Act (CRA) rating of "Outstanding" and may exclude those with a rating of "Needs to Improve" or "Substantial Noncompliance" according to the most recent examination

period published by the Federal Financial Institutions Examination Council (FFIEC). In addition, the Stanislaus Urban County and the City of Turlock may review an individual institution's most recent HMDA reporting as most recently published by the FFIEC.

3.2 Action: Strengthen partnerships with lenders to discuss lenders' community reinvestment goals, including home mortgages, home improvement loans, and community development investments to be made in low- and moderate-income neighborhoods in the Stanislaus Urban County and in the City of Turlock.

4. Impediment: Limited coordination with real estate industry.

4.1 Action: Work cooperatively with the real estate industry to develop ways for local agents to become more familiar with Stanislaus Urban County and City of Turlock housing and rental assistance programs. 4.2 Action: Encourage Realtors to seek fair housing training.

Fair Housing Education and Enforcement

5. Impediment: Limited knowledge of fair housing rights.

5.1 Action: Conduct more outreach to educate tenants, and owners and agents of rental properties, regarding their fair housing rights and responsibilities.

5.2 Action: Provide educational literature in English, Spanish, and other appropriate languages

.

6. Impediment: Discrimination in rental housing.

6.1 Action: Support efforts to enforce fair housing rights and provide redress to persons who have been discriminated against.

6.2 Action: Support efforts to increase the awareness of discrimination against all Federal and State protected classes.

Government Barriers

7. Impediment: Local development standards and their implementation, e.g., zoning, building, or design standards, may constrain development of housing opportunities for minority and low-income households.

7.1 Action: Review zoning and related regulations to determine the degree of adequate opportunity in the community for affordable housing to exist and to develop new affordable housing options.

8. Impediment: Inadequate access to employment opportunities, transportation, and public and social services, and infrastructure to support increased housing opportunities for lower-income households.

8.1 Action: Examine possible gaps in public infrastructure and services, especially for the needs of persons with disabilities, seniors, and low-income residents via a Disadvantaged Unincorporated Communities assessment. If significant gaps are found, explore methods to address the gaps and incorporate public improvements and services into local infrastructure and service plans.

Impediment Actions Taken 2015-2019

Over the past five years, Modesto and Stanislaus Urban County & Turlock have taken actions towards removing or reducing impediments to fair housing choice identified in the 2015-2019 AI documents and as best practices to Affirmatively Further Fair Housing.

Affordable Housing Actions

Modesto established its Relocation Assistance Program in June 2009 to reimburse tenants for relocation expenses when forced to move from a property found to have severe code violations threatening the life, health, and safety of residents.

Stanislaus County continues to send out an annual Notice of Funding Availability (NOFA) to inform nonprofits of CDBG and ESG funding resources. The County also provides Grant Technical Workshops to explain grant requirements and provide educational materials to organizations.

The County continues to operate its Focus on Prevention Initiative to encourage new partnerships between private and nonprofit organizations for affordable housing development and homelessness services.

The Housing Authority of the County of Stanislaus (HACS) operates seasonal migrant housing units and continues to work with local government agencies and family resource centers to promote migrant housing opportunities. Staff meet with migrant service providers to educate staff about affordable housing resources.

In 2018, Stanislaus County and the Cities of Modesto, Turlock, Oakdale, Newman and Patterson declared a shelter crisis allowing the governments to adopt local procedures for the development of homeless shelters. During this period, ordinary zoning provisions for homeless facilities are suspended. Modesto has used the declaration to help the local Salvation Army shelter add an additional 182 beds.

In 2016, the County Community Development staff met with organizations such as World Relief Modesto to determine whether local affordable housing alignment efforts could be considered a part of the Focus on Prevention effort to help address the influx of refugees into Stanislaus County from countries such as Syria.

Modesto partnered with local affordable housing providers to increase the supply of affordable housing units by adding 157 affordable housing units and rehabilitating 155 rental housing units. Modesto also provided owner-occupied housing rehabilitation assistance to 73 households and first-time homebuyer assistance to three low/moderate income households.

In 2019, the City of Modesto approved a Rental Hosing Safety Inspection program. The program is intended to maintain the supply of safe, decent, and sound affordable housing through the conservation and rehabilitation of the City's existing housing stock. Up to ten percent of all rental units in the Self-Certification program shall be selected (based on statistical information) for inspections. This program has been approved but awaiting implementation.

Stanislaus County extended sewer services to the Parklawn and Airport Neighborhoods allowing for expanded infill development housing opportunities and is underway with the planning for sewer extension in the West Modesto area.

In partnership with the City of Oakdale, Stanislaus County has partnered with the Housing Authority on the development of a 56-unit affordable housing development in the City of Oakdale on property acquired by the Stanislaus Urban County utilizing Neighborhood Stabilization Program funding and has contributed approximately $3 Million to construction of the development.

In partnership with the Housing Authority, Stanislaus County has partners to develop six affordable housing units on NSP acquired properties, utilizing both NSP funding and funding from the Successor Housing Agency to the former Stanislaus County Redevelopment Agency.

Stanislaus County has hosted convenings of both for profit and non-profit housing developers to identify opportunities and constraints in the development of affordable housing throughout the community.

Stanislaus County has waived and deferred its Public Facilities Fees to aid in the development of numerous affordable housing development projects within the incorporated areas.

Stanislaus County has partnered with the Housing Authority to utilize the Empire Migrant Housing for a cold-weather family shelter.

Private Practices and Mortgage Lending Actions Taken 2015-2020

Stanislaus Urban County previously identified the need to support homeowners who had experienced foreclosure with finding alternative living arrangements. Though the mortgage crisis has subsided, staff continue to monitor local foreclosure rates for developments in foreclosure trends that could have a harmful effect on the community.

In 2016, the City of Modesto partnered with affordable housing programs to assist first time buyers purchase a home and provides referrals for alternative living arrangements for homeowners who experienced a foreclosure.

Fair Housing Education and Enforcement Actions

The County and Turlock continue to partner with Project Sentinel to provide fair housing services and conduct fair housing testing. In program year 2015-2016, the organization conducted four fair housing tests in Newman, Ceres, Oakdale, and Valley Home in response to allegations or claims of practices that may have violated fair housing law. In Newman, the fair housing test found partial compliance with the law regarding reasonable accommodation for service/assistance animals for an individual with a disability. In Ceres, the fair housing test did not find evidence of discrimination regarding familial status. In Oakdale, the fair housing test found evidence of a violation of fair housing law regarding reasonable accommodation for service/assistance animals for an individual with a disability. In Valley Home, the fair housing test did not find evidence of discrimination on the basis of national origin. When applicable, Project Sentinel sent property owners educational letters to elaborate on applicable sections of fair housing law. The organization also continues to monitor and follow up with properties that were required to take corrective action.

Modesto continues to work with Project Sentinel to provide fair housing services. During the past five years, Project Sentinel opened a total of 122 fair housing discrimination cases for investigation and provided fair housing education and tenant/landlord mediation to over 5,500 individuals.

Other Actions

Over the last five years, Modesto has provided economic development assistance to two microenterprise businesses in Modesto.

Modesto promoted economic development by financially supporting Opportunity Stanislaus to provide job training opportunities to low- and moderate-income persons in the industrial maintenance mechanics field via the VOLT Institute.

Stanislaus County has approved Crows Landing Industrial Business Park, a 1,528 acre site that will bring jobs to the County, development opportunities, and preserve agricultural land by reusing the former Crows Landing airfield. The development has the potential to provide for approximately 15,000 new locally based jobs for an existing workforce that currently commutes outside of the County to obtain jobs with sustainable wages.

Impediments to Fair Housing Choice 2020-2025

Summary of impediments and corresponding action items

1. Turlock's zoning definitions do not match as there is an age discrepancy (between 55-60) in the definition of "senior housing" and difference in the allowable household relationships of senior housing residents with a non-spouse domestic partner, primary physical/economic support person, and/or disabled child, grandchild, or partner under the age of 60.

   Action: Consider revision of zoning ordinance definition of "senior housing" in Turlock to align with Section 43-53.7 of the Civil Code of the State of California.

2. In Stanislaus County, 44 percent of households earning $20,000 or less annually do not have Internet access, while only 6 percent of households making at least $75,000 do not have access. In the state, about half of households without Internet access cite the cost of broadband service or a computer/device for their lack of access. A statewide survey indicates three in four of these households do not know they may qualify for discounted, income-based Internet service in California.

   Action: Pursue conducting, funding, and/or facilitating Internet service financial assistance education and outreach activities that target low-income residents of Stanislaus County.

3. There is a limited knowledge of fair housing rights among the general population.

   Action: Support outreach activities that educate tenants, the owners and agents of rental properties, and all others who interact with housing transactions regarding their fair housing rights and responsibilities.

   Action: Provide educational literature in English, Spanish, and other appropriate languages.

   Action: Provide education and fair housing referral information to organizations who interact with and serve low-income or protected class populations in order to identify potential fair housing violations.

4. Discrimination in rental housing often occurs without legal complaint and opportunity for redress/ resolution to fair housing violations.

   Action: Support enforcement of fair housing rights through advocacy and legal support for those persons who allege incidents of fair housing discrimination.

5. There is support and assistance need for homeowners who have experienced foreclosure, homeowners and renters who are members of a protected class, and others who must find affordable living arrangements.

   Action: Finance, facilitate, and otherwise support affordable housing programs within all Stanislaus County jurisdictions, including those that support the creation or preservation of affordable housing, rehabilitation of substandard housing, and/or assistance to homeowners and renters in need of disability modifications.

   Action: Continue to support the Stanislaus Housing Authority Housing Choice Voucher (HCV) Rental Assistance Program, including distribution of program information at government buildings.

   Action: Promote economic development and job training activities to increase job opportunities and wages of low-income residents in order to increase overall household income and reduce housing cost burden.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-225

RESOLUTION APPROVING THE ALLOCATION OF FUNDS OUTLINED IN THE PROGRAM YEAR 2020-2021 ANNUAL ACTION PLAN BUDGET PROPOSAL SUBMITTED TO THE U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO TAKE THE NECESSARY STEPS TO IMPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, each year the City of Modesto receives Community Development Block Grant (CDBG), HOME Investment Partnership Grant (HOME) and Emergency Solutions Grant (ESG) funds from the U.S. Department of Housing and Urban Development (HUD), and

WHEREAS, the CDBG and HOME grant programs also generate program income and revolving loan fund income which further fund the grant programs and are to be used under similar rules and regulations as grant funding, and

WHEREAS, HUD requires these amounts to be presented to the City Council each year in an Annual Action Plan (AAP), and

WHEREAS, the Program Year 2020-2021 Annual Action Plan proposed budget submitted to the U.S. Department of Housing and Urban Development which is **attached** hereto as **Exhibit A**, and incorporated herein by reference, and

WHEREAS, funding availability and specific project and activity budgets consistent with the AAP are managed in HUD's online Integrated Disbursement and Information Management (IDIS) system and the City's financial system simultaneously, and

WHEREAS, according to HUD rules and regulations, substantial amendments to an AAP must be presented to the City Council for approval, while unsubstantial amendments, remaining consistent with the AAP, can be made in IDIS by City staff, and

WHEREAS, funding availability and specific project and activity budgets consistent with the AAP are managed in HUD's online Integrated Disbursement and Information Management (IDIS) system and the City's financial system simultaneously, and

WHEREAS, synchronization of the City's financial system and IDIS necessitates budget adjustments within the City's financial system, and

WHEREAS, budget adjustments are necessary to revise CDBG, HOME and ESG budgets included in the City of Modesto 2020-2021 Annual Operating, Multi-Year and Capital Improvement Budgets, and

WHEREAS, budget amendments performed under the authority of this resolution will be presented to the Finance Committee and the Council as part of the existing Monthly Budget Adjustment Report process, and

WHEREAS, the authority of this resolution will not be used to satisfy any HUD rules or regulations requiring information to be presented to the City Council or the public.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the allocation of funds outlined in the Program Year 2020-2021 Annual Action Plan proposed budget which is **attached** hereto as **Exhibit A**, and incorporated herein by reference.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-226

RESOLUTION AUTHORIZING THE CITY MANAGER TO APPROVE THE SUBMITTAL OF GRANT APPLICATIONS THAT EXCEED $100,000 AND/OR HAVE A LOCAL MATCH REQUIREMENT FOR FINANCIAL RELIEF RELATED TO THE IMPACT OF COVID-19

WHEREAS, the COVID-19, better known as the Coronavirus, has created a global pandemic by devastating communities and the world economy, and

WHEREAS, the impact to the city of Modesto and the Stanislaus County region has been consistent and, to date, in Stanislaus County there is 411 individuals with the virus, and 14 deaths, and

WHEREAS, based on information from the County Public Health Office and reports made available by the US Center for Disease Control these numbers are expected to rise and the impact to our local economy is projected to get worse, and

WHEREAS, as a response to this virus, President Trump and Governor Newsom have urged people to stay home and have ordered all non-essential businesses to close, and

WHEREAS, while vitally important for maintaining public health, the order for non-essential businesses to close and the stay at home orders have dramatically reduced the amount of sales tax that businesses are collecting and the financial impact to the City is estimated to amount to $4.5 million, and

WHEREAS, to support small businesses, Governor Newsom released an Executive Order that defers payment of up to $50,000 in sales tax for businesses with less than $5 million in taxable sales, and

WHEREAS, in Modesto, there is about 210 businesses that are eligible to defer their sales tax and if each of these decide to defer, the total estimated financial impact to the City would amount to an additional $6.8 million, and

WHEREAS, the following funding opportunities have deadlines are quickly approaching and the following list includes examples of such funding opportunities that the City is eligible to apply for:

- US Department of Justice: Coronavirus Emergency Supplemental Funding Program
- Federal Aviation Administration: General Aviation Airport Grant
- Federal Transit Administration: Public Transportation Agency Safety Plan and Emergency Relief
- Federal Highway Administration; Infrastructure Grant

WHEREAS, currently, Administrative Directive 7.2 (Grant Management) requires the City Council to approve of any grant application that exceeds $100,000 and any grants that require a local match, and

WHEREAS, grant applications related to COVID-19 have approaching deadlines that require staff to act quickly in order to apply and submit all necessary requirements, and

WHEREAS, to meet the approaching deadlines, staff requests the authority from City Council to apply for the grants that are listed above and future grants with an award value that exceed $100,000 and have a local match requirement, with the approval of the Director of Finance and the City Manager, and

WHEREAS, with this approval, staff will prepare and apply for grants made available to help alleviate the impact of COVID-19 based on eligibility and as approved by the Director of Finance and the City Manager, and

WHEREAS, as award notifications are made available, staff intends to provide reports on a bi-monthly basis to the Finance Committee that include detail on grants that have been applied for under this authority, and

WHEREAS, as staff becomes aware that the City has been awarded a grant, staff will be returning to the City Council for acceptance of the award.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the City Manager to approve the submittal of grant applications that exceed $100,000 and/or have a local match requirement for financial relief related to the impact of COVID-19.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-227

RESOLUTION APPROVING THE SUBMITTAL OF THE STAFFING FOR ADEQUATE FIRE AND EMERGENCY RESPONSE (SAFER) GRANT TO FUND 9 RELIEF FIREFIGHTERS

WHEREAS, the COVID-19, better known as the Coronavirus, has created a global pandemic by devastating communities and the world economy, and

WHEREAS, the impact to the city of Modesto and the Stanislaus County region has been consistent and, to date, in Stanislaus County there is 411 individuals with the virus, and 14 deaths, and

WHEREAS, based on information from the County Public Health Office and reports made available by the US Center for Disease Control these numbers are expected to rise and the impact to our local economy is projected to get worse, and

WHEREAS, to help alleviate the impact of COVID-19, the state and federal governments have passed legislation that makes funding available to local governments, and

WHEREAS, one of these opportunities includes the Staffing for Adequate Fire and Emergency Response (SAFER) grant which is one of three grant programs that comprise the Department of Homeland Security Federal Emergency Management Agency's focus on enhancing the safety of the public and firefighters with respect to fire and fire-related hazards, and

WHEREAS, the Modesto Fire Department is seeking to apply for this grant to fund 9 relief firefighters, and

WHEREAS, if awarded, the SAFER grant would provide financial support for a 3-year period and provide the following contributions: Year 1: 75%, Year 2: 75%, Year 3: 35%, and

WHEREAS, the City's contribution for the retention of these firefighters for the duration of the grant is estimated to amount to $197,093, and

WHEREAS, the total net overtime savings to the fire department is estimated to amount to $926,168, and

WHEREAS, following the performance period, there is no obligation to retain the SAFER funded positions, and

WHEREAS, as staff becomes aware that the City has been awarded this grant, staff will be returning to the City Council for acceptance of the award, and

WHEREAS, staff recommends the submittal of the SAFER grant to fund 9 relief firefighters to help achieve savings in the fire department.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the City Manager to approve the submittal of the SAFER grant to fund 9 relief firefighters to help achieve savings in the fire department.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 12th day of May, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-228

RESOLUTION APPROVING THE MEASURE L MASTER FUNDING AGREEMENT WITH THE STANISLAUS COUNCIL OF GOVERNMENTS (STANCOG) FOR FISCAL YEARS 2020 – 2025 AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, in November of 2016, Stanislaus County voters approved a county-wide, 25-year, half-cent sales tax increase known as Measure L, and

WHEREAS, the Stanislaus Council of Governments (StanCOG), as the Local Transportation Authority, administers the proceeds from the one-half cent sales tax, and

WHEREAS, the Measure L Master Funding Agreement (Original Agreement) was approved by Council per Resolution 2017-505 on December 12, 2017, and

WHEREAS, the Original Agreement delineates the requirements of the Measure L funds that are allocated to the jurisdictions within Stanislaus County for local streets and roads, traffic management and bike and pedestrian improvements, and Transit Provider funds for Transit Services, as authorized by the Measure L Expenditure Plan, and

WHEREAS, each of the member agencies of StanCOG were required to enter into the Original Agreement prior to receiving Measure L fund disbursements, and

WHEREAS, the Original Agreement expires on June 30, 2020, and

WHEREAS, in order to continue receiving Measure L funds after June 30, 2020, it is necessary for the City to enter into a Measure L Master Funding Agreement with StanCOG for Fiscal Years 2020-2025 (Agreement), and

WHEREAS the Agreement will have an expiration date of June 30, 2025, and

WHEREAS, the only significant change between the Original Agreement and the Agreement, is that the Agreement reflects changes made to Transit Services and Transit Providers operations, primarily changes to the operation of Ceres Area Transit, and

WHEREAS, the change in Transit Services consolidates Ceres Transit with Modesto Transit as approved by City Council per Resolution 2020-186 on April 14, 2020, increasing the amount of Measure L funding that Modesto receives for Transit Services from 52% to 59%.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Measure L Master Funding Agreement with Stanislaus Council of Governments (StanCOG) for Fiscal Years 2020-2025.

BE IT FURTHER RESOLVED, that the City Manager or his designee is authorized to execute the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-229

RESOLUTION APPROVING THE 2020-2025 PERMITTING EFFICIENCY ACTION PLAN AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO IMPLEMENT THE PROVISIONS OF THE ACTION PLAN

WHEREAS, the City of Modesto Development Services Team is dedicated to an efficient, understandable, and timely plan review process; and

WHEREAS, the City of Modesto commissioned studies of its plan review processes in 2001, 2006, and 2018; and

WHEREAS, the purpose of the most recent Moss Adams study was to assess the economy, efficiency, and effectiveness of the City of Modesto's permitting processes; and

WHEREAS, the study identified ten findings and ten recommendations which were grouped into three tiers: Enterprise Solutions, Strategic Solutions, and Tactical Solutions; and

WHEREAS, the Permitting Efficiency Task Force made up of key staff from Building Safety, Planning, Land Development Engineering, Parks Planning, Utilities, and Fire Prevention, was created to develop an Action Plan based on the recommendations set forth in the Moss Adams study; and

WHEREAS, the Building Safety Division will be the lead in coordinating significant projects and the responsibility of ensuring that significant projects are coordinated is assigned to the Chief Building Official; and

WHEREAS, the Permitting Efficiency Action Plan provides timelines for various project types; and

WHEREAS, the implementation of the Permitting Efficiency Action Plan includes other various action steps to enhance the development plan review process; and

WHEREAS, the Permitting Efficiency Task Force will provide quarterly updates on key performance indicators to the Economic Development Committee.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it herby adopts the 2020-2025 Permitting Efficiency Action Plan.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to implement the provisions of the 2020-2025 Permitting Efficiency Action Plan.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-230

RESOLUTION ACCEPTING THE PUBLIC IMPROVEMENTS FOR VINTAGE UNIT ONE SUBDIVISION, LOCATED NORTH OF THE VINTAGE FAIR MALL, AUTHORIZING THE CITY CLERK TO FILE A NOTICE OF COMPLETION WITH THE STANISLAUS COUNTY RECORDER'S OFFICE, AND TO RELEASE SECURITIES UPON EXPIRATION OF STATUTORY PERIODS

WHEREAS, NRB Investments, LLC, a California limited liability company ("OWNER") and the developer, Modesto Roselle, LLC, a California limited liability company ("SUBDIVIDER"), is the subdivider of a tract of land consisting of 15.2 acres being subdivided into 43 residential lots and 2 Landscaping lots situated in the City of Modesto, known as the VINTAGE UNIT ONE SUBDIVISION ("SUBDIVISION"), and

WHEREAS, modifications are still needed to two roundabouts on Vintage Drive (at Bluebird Drive and Landmark Circle), and

WHEREAS, in correspondence dated January 7, 2020, Florsheim Homes has requested that outstanding modifications to two roundabouts on Vintage Drive be deferred and accepted with Vintage Phase Two, and

WHEREAS, the deferral will allow the modifications to be completed with the next phase of construction, and

WHEREAS, the City Engineer has verified that all required PUBLIC IMPROVEMENTS for this project have been satisfactorily completed and all inspection fees have been paid, and

WHEREAS, City crews will assume maintenance responsibilities upon acceptance of the PUBLIC IMPROVEMENTS, which includes the water main, sanitary sewer main, storm drainage facilities, landscape and irrigation, street trees, sidewalk and

ADA ramps, streets (with the exception of two roundabouts on Vintage Drive), curbs and gutters, and street lights, and

WHEREAS, pursuant to the Subdivision Agreement, SUBDIVIDER has filed a Faithful Performance Bond in the amount of $3,551,416 for VINTAGE UNIT ONE SUBDIVISION, and

WHEREAS, pursuant to the Subdivision Agreement, SUBDIVIDER has filed a Payment Bond in the amount of $1,775,708 for VINTAGE UNIT ONE SUBDIVISION, and

WHEREAS, pursuant to the Subdivision Agreement, SUBDIVIDER has filed a Warranty Bond in the amount of $355,141.60 for VINTAGE UNIT ONE SUBDIVISION, and

WHEREAS, the developer has requested that the improvements be accepted and the securities be released, and

WHEREAS, the City Engineer has indicated that it would be in order for the City Council to accept said PUBLIC IMPROVEMENTS as complete and has certified that the work covered has been satisfactorily completed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto as follows:

1. The said PUBLIC IMPROVEMENTS constructed by the SUBDIVIDER are hereby accepted, and the City Clerk is hereby authorized to file a Notice of Completion.

2. The City Clerk is hereby authorized to release the Subdivision Faithful Performance Bond in the amount of $3,551,416 for VINTAGE UNIT ONE SUBDIVISION, upon recordation of the Notice of Completion.
3. The City Clerk is hereby authorized to release the Payment Bond in the amount of $1,775,708 for VINTAGE UNIT ONE SUBDIVISION, sixty (60) days after recordation of the Notice of Completion, provided no claim is made thereon.
4. The City Clerk is hereby authorized to release the Warranty Bond in the amount of $355,141.60 for VINTAGE UNIT ONE SUBDIVISION one year and one day after the effective date of this resolution, provided no claim is made thereon.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-231

RESOLUTION APPROVING A DEVELOPMENT PLAN FOR PLANNED DEVELOPMENT ZONE, P-D(608) AND RESCINDING RESOLUTION NO. 2019-536

WHEREAS, in 1974 the property located at 722 Kansas Avenue was developed with a 103-room motel with 95 off-street parking spaces, prior to annexation of the site into the City of Modesto on July 24, 1978 as part of the Kansas Avenue Annexation to the City of Modesto, and

WHEREAS, the site and surrounding area was zoned as General Commercial (C-2) Zone as part of the annexation, and

WHEREAS, the amount of parking spaces at the site is considered legal but non-conforming as the City's parking standards for hotels and motels is one space per each guest room, and the site provides 95 spaces, a shortage of eight parking spaces for motel and hotel uses, and

WHEREAS, the General Plan Land Use designation of the site was amended from Redevelopment Planning District (RPD) to Industrial (I) in the General Plan update adopted on March 5, 2019, and

WHEREAS, Policy III.A.2 of the General Plan provides that rezonings involving less than five acres in size may occur even if not consistent with the land use designation of the site if the rezoning can be found consistent with the Land Use goals and policies of the General Plan, and

WHEREAS, a verified application for an amendment to Section 30-3-9 of the Zoning Map was filed by the Housing Authority of Stanislaus County on October 7, 2019, to reclassify 2.66 acres from the General Commercial Zone, C-2, to Planned

Development Zone, P-D(608) to facilitate the conversion of the existing motel at the site comprised of 103 guest rooms into 103 permanent supportive housing units, comprised of studio efficiency units for a target population with an immediate need for housing, with parking at 35 spaces fewer than required by the City's Zoning Code for multi-family residential uses, property located at 722 Kansas Avenue, described as follows:

C-2 to P-D(608)

All that portion of the Southeast Quarter of Section 30, Township 3 South, Range 9 East, Mount Diablo Base and Meridian, described as follows:

Parcel One:

All that portion of Lots 4 and 5 of Maze Ranch Subdivision, in the County of Stanislaus, State of California, according to the Official Map thereof filed in the Office of the Recorder of Stanislaus County, California, on March 19, 1909, Volume 4 of Maps, Page 18, described as follows:

Commencing at the Northeast corner of said Lot 5, thence West along the North line thereof, 66.2473 feet, more or less, to the Northwest corner of the property conveyed to Vesta B. Smith, a Single Man, by Deed recorded March 30, 1948 as Instrument No. 7022; thence South along the West line of said Smith Property, 10.86 feet to a point on the South line of Parcel No. 1 of the property conveyed to Vesta B. Smith, Et Ux, to the State of California by Deed dated September 22, 1958 and recorded October 2, 1958, Volume 1506 of Official Records, Page 62, Instrument No. 24671; thence continuing South along the said West line of the Smith Property, 125 feet to the True Point of Beginning of this Description; thence East parallel with the South line of Parcel No. 1 of the State of California property above referred to, 150 feet; thence North parallel with the said West line of the Smith parcel 125 feet to a point on the South line of Parcel No. 1 of the said State of California property; thence East along the last said South line 115 feet, more or less, to a point on the East line of the West 2-1/4 acres of North Half of Lot 4 above referred to; thence South along the last said East line, 232 feet, more or less, to a point on the North line of the parcel of land described as Parcel No. 2 in the Deed from Vesta B. Smith, Et Ux, to the State of California, above referred to; thence along the last said North line, the following two Courses and Distances: South 83 Degrees 55' 51" West 194.03 feet and North 89 Degrees 47' 00" West 116.63 feet to a point on the West line of the property conveyed to Vesta B. Smith first above mentioned; thence North along the last said West line 123 feet, more or less, to the True Point of Beginning.

Parcel Two:

A portion of the North Half of Lot 4 of Maze Ranch Subdivision, in the County of Stanislaus, State of California, according to the Official Map thereof, filed in the Office of the Recorder of Stanislaus County, California, on March 19, 1909, Volume 4 of Maps, Page 18, described as follows: Commencing at the Northeast corner of said Lot 4; thence along the North line of said Lot, North 89 Degrees 47' 00" West 242.93 feet; thence South 0° 35' 00" East 10.84 feet to the True Point of Beginning; thence

(1) South 89° 47' 15" East, 92.01 feet; thence
(2) South 34° 50' 54" East, 212.03 feet; thence
(3) South 39° 17' 14" West, 50.47 feet; thence
(4) South 83° 55' 51" West, 179.85 feet; thence
(5) North 0° 35' West 232.45 feet to the True Point of Beginning.

Excepting any and all rights of ingress to or egress from the above described Parcel over and across Courses No. (2), (3) and (4) herein above described, as excepted and reserved in the Deed from the State of California recorded October 14, 1965, Volume 2062 of Official Records, Page 101, Instrument No. 40303.

Also including the southerly one-half of Kansas Avenue and the westerly one-half of the right-of-way of California State Highway 99, all being immediately adjacent to the above-described property.

Containing 2.66 acres, more or less.

APN 029-015-021

WHEREAS, after a public hearing held on November 4, 2019, in the Tenth Street Place Chambers located at 1010 Tenth Street, Modesto, California, it was found and determined by the Planning Commission, by its Resolution No. 2019-31, that rezoning of the property as requested will not be detrimental to the public health, safety or welfare because the rezone to Planned Development will provide for the development of permanent supportive housing units, and the conversion of motel rooms into studio

efficiency units will be done in accordance to all applicable City Standards and adopted Building Codes, the requested zone change will result in an orderly planned use of land because the conversion of the motel into permanent supportive housing units will be compatible with the surrounding commercial uses including nearby grocery stores and restaurants, and the requested zone change is in accordance with the community objectives as set forth in the Modesto Urban Area General Plan and any applicable specific plans(s) because a)While the site is within the Industrial (I) land use designation of the General Plan, Policy III.A.2 of the General Plan provides that rezonings involving less than five acres in size may occur even if not consistent with the land use designation of the site if the rezoning can be found consistent with the Land Use goals and policies of the General Plan and b) The General Plan Land Use goal of Great, Safe Neighborhoods encourages a mix of housing types affordable to all income levels. The rezone to facilitate the conversion of the motel into permanent supportive housing for local population with an immediate need for housing meets this goal; therefore the rezoning is in accordance with community objectives as set forth in the General Plan, and

WHEREAS, it was also found and determined by the Planning Commission that the requested reduction in parking of 35 parking spaces will not adversely affect surrounding uses because the site provides 95 existing parking spaces would adequately serve the project because the tenants will be a target population with low to very-low income levels, many of whom will not have vehicles, and the site is within one quarter-mile of the nearest transit stop, Modesto Area Express (MAX) Line 26, and

WHEREAS, said matter was set for a public hearing of the City Council to be held on December 3, 2019, in the Tenth Street Place Chambers located at 1010 Tenth

Street, Modesto, California, at which date and time said duly noticed public hearing was held, and

WHEREAS, after said public hearing the Council found and determined that the application of the Housing Authority of Stanislaus County for a Planned Development Zone will not be detrimental to the public health, safety or welfare, will result in an orderly planned use of land, and is in accordance with the community objectives as set forth in the Modesto Urban Area General Plan and any applicable specific plans(s) for the reasons set forth in Planning Commission Resolution No. 2019-31 and quoted above, and

WHEREAS, the Council has introduced Ordinance No. 3717-C.S. on the 26th day of May 2020, reclassifying the above-described property from General Commercial (C-2) Zone, to Planned Development Zone, P-D(608).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto as follows:

1. DEVELOPMENT PLAN. The development plan for Planned Development Zone, P-D(608), is hereby approved subject to the following conditions:

    1. Prior to the issuance of a building permit, all development shall conform to the Development Plan titled "Building Improvements, SRHA Rehab 2019, 722 Kansas Avenue, Modesto CA 95351", as stamped approved by the City Council on December 3, 2019.

    2. Prior to the issuance of a building permit, any variation from the approved site plan or building elevations on file with the City must be reviewed and approved by the Director of Community and Economic Development or designee.

    3. Any public improvements that are missing damaged or not to current City standards shall be designed per City standards in accordance with City Code (Article 7-1.701), standards and specifications. Such improvements may include, but not be limited to curb & gutter, drive

approach, sidewalk, ADA access ramps, fire hydrants and street lights. All public improvement plans shall be designed by a Registered Engineer, reviewed and approved by the City Engineer prior to issuance of an Encroachment or Building permit.

4. The improvement plans shall include all landscaping, parking and common areas, and any and all easements required for the establishment of new utilities and the preservation of existing utilities.

5. All existing underground and aboveground utilities, irrigation, and electrical lines shall be protected, relocated, or removed as required by the utility companies and City Engineer or designee. Easements for utilities, irrigation and electrical lines to remain shall be reserved as required.

6. Prior to the issuance of a building permit, plans for the residential units shall incorporate construction techniques to achieve an interior noise limit of 45 decibels or less, to the satisfaction of the Chief Building Official.

7. Prior to issuance of a building permit, plans for any new trash enclosures shall demonstrate the use of building materials, colors and finishes which are consistent or compatible with those used in the major buildings of the development, as approved by the Community and Economic Development Director.

8. Climbing vines shall be included in the landscape surrounding any new trash enclosures and CMU block walls to prevent tagging.

9. All signs shall comply with the sign requirements of the R-3 Zone.

10. Prior to the issuance of a Grading, Demolition, or Building Permit, Developer shall submit a plan for trash enclosures to be sufficiently elevated to prevent stormwater run-on from parking lot and floor of enclosures shall be graded to drain into adjacent landscape areas.

11. All aspects of this project to comply with current City of Modesto Standards and also current California Building, Fire, Electrical, Mechanical, Plumbing, Energy codes adopted by the City of Modesto.

12. Improvement plans shall demonstrate the provision of onsite fire hydrants as required.

13. Developer shall provide bicycle parking as required by the California Green Building Standards Code.

14. All department Conditions of Approval for the project shall be included with building plans and shall be continuously maintained on-site during project construction to the satisfaction of the Chief Building Official.

15. All landscaping, fences, and walls shall be maintained and the premises shall be kept free of weeds, trash, and other debris.

16. At the time of issuance of a building permit, the developer shall pay development impact fees at the established rate. Such fees may include but are not limited to, sewer and water connection fees, community facility fees, building permit and plan check fees.

17. Prior to Certificate of Occupancy, the applicant shall enroll and participate in the City's Crime-Free Multi-Family Housing Program as administered by the Modesto Police Department.

18. The property owner and developer shall, at their sole expense, defend, indemnify and hold harmless the City of Modesto, its agents, officers, directors and employees, from and against all claims, actions, damages, losses, or expenses of every type and description, including but not limited to payment of attorneys' fees and costs, by reason of, or arising out of, this development approval. The obligation to defend, indemnify and hold harmless shall include but is not limited to any action to arbitrate, attack, review, set aside, void or annul this development approval on any grounds whatsoever. The City of Modesto shall promptly notify the developer of any such claim, action, or proceeding and shall cooperate fully in the defense.

In addition, the following recommended Conditions of Approval are mitigation measures from the Modesto Urban Area General Plan Master Environmental Impact Report that are applicable to the project:

19. Implement noise-reducing construction practices as conditions of approval where substantial construction-related noise impacts would be likely to occur, such as with extended periods of pile driving, or where construction is expected to continue or where sensitive receptors would be affected by construction noise. Conditions of approval may include, but are not limited to:

    - Require construction equipment, including air compressors and pneumatic equipment to have properly maintained mufflers;

- Require impact tools to be equipped with shrouds or shields;
- Require that the quietest equipment available be used; and,
- Require selection of haul routes that affect the fewest number of people. (Policy VII-G.3.b)

20. Construction activities shall comply with the requirements of the City's Stormwater Management Plan under its municipal NPDES stormwater permit, and the State Water Resources Control Board's General Permit for Discharges of Storm Water Associated with Construction Activity. (Policy VI.G.3)

2. DEVELOPMENT SCHEDULE. The following development schedule is hereby approved for said Planned Development Zone, P-D(608):

The entire construction program be accomplished in one phase, construction to begin on or before November 4, 2021, and completion to be not later than November 4, 2023.

3. CHANGES IN DEVELOPMENT PLAN. Any changes in the above approved development plan shall be made in accordance with the provisions of Section 10-7.108 of the Modesto Municipal Code.

4. COMPLIANCE WITH CODE PROVISIONS, ETC. In all other respects said planned development shall be accomplished in accordance with and in strict adherence to the provisions of Article 1 of Chapter 7 of Title 10 of the Modesto Municipal Code relating to Planned Development Zones and other applicable City laws, rules, regulations and procedures.

5. EFFECTIVE DATE. This resolution shall not become effective unless and until the ordinance reclassifying the above-described property to Planned Development Zone, P-D(608), becomes effective.

BE IT FURTHER RESOLVED that the conditions of project approval set forth herein include certain fees, dedication requirements, reservations requirements, and other

exactions, and that pursuant to Government Code Section 66020(d)(1), these conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations, and other exactions.

BE IT FURTHER RESOLVED that Council hereby rescinds Resolution No. 2019-536, adopted by the City Council on December 3, 2019, due to clerical error.

BE IT FURTHER RESOLVED that the applicant is hereby further notified that the ninety (90) days approval period in which a protest of these fees, dedications, reservations, and other exactions, pursuant to Government Code Section 66020(a) can be filed, begins on December 3, 2019, and that if a protest is not filed within this ninety (90)-day period complying with all of the requirements of Section 66020, the applicant will be legally barred from later challenging such exactions.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-232

RESOLUTION APPROVING THE SUBMITTAL OF A GRANT FUNDING APPLICATION FOR THE CITY OF MODESTO'S ACTIVE TRANSPORTATION PROGRAM IN THE AMOUNT OF $6,985,000 FOR THE ENCINA AVENUE AND LINCOLN AVENUE PEDESTRIAN/BICYCLE TRAIL CORRIDOR PROJECT AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO CONDUCT ALL NEGOTIATIONS, EXECUTE AND SUBMIT ALL DOCUMENTS

WHEREAS, the State Active Transportation Program was created by Senate Bill 99 (Chapter 359, Statutes of 2013) and Assembly Bill 101 (Chapter 354, Statutes of 2013) to encourage increased use of active modes of transportation, such as biking and walking, and

WHEREAS, Pursuant to the statutes, the goals of the Active Transportation Program are to:

- Increase the proportion of trips accomplished by biking and walking
- Increase the safety and mobility of non-motorized users
- Advance the active transportation efforts of regional agencies to achieve greenhouse gas reduction goals as established pursuant to Senate Bill 375 (Chapter 728, Statutes of 2008) and Senate Bill 391 (Chapter 585, Statutes of 2009)
- Enhance public health, including reduction of childhood obesity through the use of programs including, but not limited to, projects eligible for Safe Routes to School Program funding
- Ensure that disadvantaged communities fully share in the benefits of the program

WHEREAS, staff is seeking approval to submit a grant application for State Active Transportation Program Cycle 4 grant funding in the amount of $6,985,000 by proposing a 2.6 mile pedestrian/bicycle path East-West along Encina Avenue from N. Conejo Avenue to Lincoln Avenue and North-South along Lincoln Avenue from Dry Creek Trail to Yosemite Boulevard, and

WHEREAS, all improvements are planned to be within existing public right-of-way with no anticipated land acquisition, and

WHEREAS, as part of the application process staff will conduct community outreach meetings which are intended for citizens, stakeholders and school representatives from within the project area to identify and discuss pedestrian and traffic calming project improvements. Schools include Capistrano Elementary, El Vista Elementary and La Loma Junior High, and

WHEREAS, on March 5, 2020 staff presented to the Citizens Transportation Sale Tax Commission the Encina Avenue and Lincoln Avenue Pedestrian/Bicycle Trail Corridor Project and received positive feedback regarding the project and the use of local Measure L funds as a source of match money.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the filing of an application for the development of the Encina Avenue and Lincoln Avenue Pedestrian/Bike Trail Corridor Project; and

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-233

RESOLUTION APPROVING A LICENSE AGREEMENT WITH MODESTO ON ICE, INC., AN S CORPORATION, TO OPERATE A SEASONAL ICE-SKATING RINK, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE LICENSE AGREEMENT

WHEREAS, the City determined the downtown would benefit from increased activity with the installation of a seasonal ice-skating rink on a portion of the Modesto Centre Plaza parking lot located at the intersection of 11th and L Streets, and

WHEREAS, on October 29, 2015, the City entered into a four-year License Agreement with Modesto on Ice, a California Limited Liability Company, to operate a seasonal ice-skating rink, and

WHEREAS, on February 5, 2019, by Resolution No. 2019-43, Council approved another License Agreement for five more years, and

WHEREAS, Modesto on Ice, LLC, was sold in 2020 to David and Kathleen Halsey, doing business as Modesto on Ice, Inc., an S Corporation, and

WHEREAS, Modesto on Ice, Inc. desires to continue operation in downtown and enter into a new License Agreement for five seasons starting on November 2, 2020 through January 31, 2025, and

WHEREAS, each season will commence on the first Tuesday of November and end on January 31st, and

WHEREAS, Modesto on Ice will pay rental fees, including water and electricity fees, for use of the southeast corner of the Modesto Centre Plaza parking lot.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a License Agreement with Modesto on Ice, Inc., an S Corporation.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is authorized to execute the License Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-234

RESOLUTION APPROVING THE FIRST AMENDMENT TO THE MASTER SERVICES AGREEMENT WITH FORENSIC LOGIC FOR A THREE-YEAR SOFTWARE LICENSE SERVICE RENEWAL FOR COPLINK AT A TOTAL NOT TO EXCEED $181,061; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE NECESSARY DOCUMENTS

WHEREAS, since 2011 the City of Modesto Police Department (MPD) personnel have used COPLINK to search for, and analyze, crime clues from multiple criminal data bases across the State of California; and

WHEREAS, COPLINK is used by participating law enforcement agencies in California, Oregon and Arizona to share, store and standardize criminal data; and

WHEREAS, MPD maintains and manages the Law Enforcement Networking System (LENS) node infrastructure and software necessary to store the local crime data, and network connectivity that allows access by other participatory COPLINK nodes; and

WHEREAS, Forensic Logic has a second application, Law Enforcement Agency Portal (LEAP) Search, which is a secure, cloud-based information portal deployed as a law enforcement search engine; and

WHEREAS, this LEAP Search portal will expand our users search nationwide by joining the largest network of law enforcement agencies in America; and

WHEREAS, MPD, Information Technology and COPLINK Node administrators have worked together determine the most cost-effective approach to maintain this vital crime data intelligence to the law enforcement community; and

WHEREAS, Forensic Logic is the only manufacturer that provide COPLINK data and application migration services for COPLINK; and

WHEREAS, this new proposal provides the Modesto Node numerous benefits which include 1) extending our existing master agreement, 2) the addition of the LEAP Search tool at a generous volume discount, 3) standardizes our costs for 3 years so there is no uplift charge or yearly increase, 4) additional services such as the ability for MPD to perform additional data integrations at no cost, migration of COPLINK to their current cloud platform, on-site training, and transition to COPLINKX when available; and

WHEREAS, once the application has been migrated to the COPLINK cloud platform, the Modesto Police Department's Information Technology staff will be able to reduce their maintenance of 4 physical servers; and

WHEREAS, the Modesto Police Department's Fiscal Year 2019/2020 Budget has $75,000 allocated for our COPLINK renewal and will apply that amount toward the $181,060.50 for this three-year agreement. The remaining $106,060.50 will be paid out of the department's Supplemental Law Enforcement Services Funds (SLESF).

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Modesto that it hereby approves the first amendment to the master service agreement with Forensic Logic for a three-year software license service renewal for COPLINK at a total not to exceed $181,061.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the necessary documents, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-235

RESOLUTION ACCEPTING THE 2018 EDWARD BYRNE MEMORIAL JUSTICE ASSISTANCE GRANT IN THE AMOUNT OF $147,207 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE NECESSARY DOCUMENTS

WHEREAS, the Police Department was awarded a grant in partnership with the Stanislaus County Sheriff' department in the sum of $147,207 from the Department of Justice for the purchase of additional License Plate Readers and the associated software; and

WHEREAS, the Modesto Police Department has sought to reduce the number of crimes and vehicle thefts by implementing an effective License Plate Readers program with modern crime fighting technology; and

WHEREAS, acceptance of said $147,207 grant will assist the department in best utilizing License Plate Readers technology as part of its commitment to intelligence-led policing; and

WHEREAS, the term of this grant will be through September 30, 2021.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the 2018 Edward Byrne Justice Assistant Grant in the amount of $147,207 from the Department of Justice.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the necessary award documents.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-236

RESOLUTION AMENDING THE FISCAL YEAR 19-20 MULTI-YEAR PROJECT BUDGET TO APPROPRIATE REVENUE AND EXPENSES IN THE AMOUNT OF $147,207 RELATED TO THE 2018 EDWARD BYRNE MEMORIAL JUSTICE ASSISTANCE GRANT; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO IMPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, the Police Department acquired a grant award in the amount of $147,207 from the Department of Justice for the purchase of additional License Plate Readers and associated software, and

WHEREAS, there is no local match required for this grant, and

WHEREAS, certain budgetary adjustments are necessary to account for the programing of revenues and offsetting expenses.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2019-2020 Multi-Year Project Budget by $147,207 to the revenue and expense budget of the 2018 BJAG Project, 101260.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-237

RESOLUTION APPROVING AN AWARD AND AGREEMENT FOR A DIGITAL RADIO COMMUNICATION SYSTEM TO FISHER WIRELESS SERVICES INC. OF MODESTO, CA IN THE AMOUNT OF $180,480 FOR THE FIRST YEAR, AND YEARS TWO THROUGH FIVE $23,634 PER YEAR WITH A TOTAL AMOUNT NOT TO EXCEED $275,016 FOR A FIVE-YEAR TERM, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the Modesto Area Express (MAX) bus system operates 17 fixed routes around Modesto and two commuter routes, and

WHEREAS, the system currently uses an analog radio system for drivers to communicate with dispatchers and supervisors, and

WHEREAS, the current analog system does not provide the coverage required and the quality is poor with interference from other co-channel users, and

WHEREAS, a Request for Bids was issued by the City to select, through a competitive bid process, a Contractor to provide a hosted wide area digital radio communications system and new radios for the MAX transit buses and the paratransit vehicles, and

WHEREAS, Fisher Wireless Services Inc. is the largest provider of local and regional two-way networked radio service in the United States, and

WHEREAS, Fisher Wireless Services Inc. is providing a digital radio communication system that will include base consoles, portable radios, talk groups, call back features, wireless headsets, microphones, and radio audio interfaces, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow the formal bid procedures. An award of Request for Bids for Digital Radio

Communication System and agreement for a digital radio communications system for Public Works Transit Division use to Fisher Wireless Services Inc. of Modesto, California conforms to the Modesto Municipal Code because the City complied with the formal bid procedures and Fisher Wireless Services Inc. was the lowest responsive and responsible bidder.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approved an award and agreement for a digital radio communication system to Fisher Wireless Services Inc. of Modesto, CA in the amount of $180,480 for the first year, and years two through five $23,634 per year with a total amount not to exceed $275,016 for a five-year term.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-238

RESOLUTION APPROVING THE AWARD AND AGREEMENT FOR CUSTODIAL SERVICES TO KELLERMEYER BERGENSONS SERVICES, SALT LAKE CITY, UT, FOR A FIVE-YEAR AGREEMENT WITH ONE 1-YEAR EXTENSION OPTION, FOR AN ANNUAL ESTIMATED COST OF $215,820 AND A TOTAL AMOUNT NOT TO EXCEED $1,257,554 OVER SIX YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City is seeking a contractor to provide custodial services in the following City owned buildings: Amtrak Station, Bus Maintenance Facility and Downtown Transit Center, and

WHEREAS, the contractor will furnish all labor, cleaning chemicals, supplies, paper products, soap, tools, equipment and insurance necessary to perform the assigned duties, and

WHEREAS, the contractor will be responsible for cleanliness and sanitation of the building, exterior passenger waiting areas, all furniture, and other fixtures both inside and outside of the building including windows and building surfaces on the outside of the building above street level, and

WHEREAS, a Request for Proposals (RFP) was issued by the City to select, through a competitive process, a contractor to provide to provide custodial services to three City owned transit buildings, and

WHEREAS, the RFP complied with Federal Transit Administration (FTA) requirements, and

WHEREAS, Kellermeyer Bergensons Services was determined to be responsible and reasonable for the City of Modesto.

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow the formal bid procedures. An award of Request for Proposals for Custodial Services and agreement for Public Works Transit Division use to Kellermeyer Bergensons Services, Salt Lake City, UT conforms to the Modesto Municipal Code because the City complied with the formal bid procedures and Fisher Wireless Services Inc. was the lowest responsive and responsible bidder.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the award and agreement for custodial services to Kellermeyer Bergensons Services, Salt Lake City, UT, for a five-year agreement with a one 1-year extension option, for an annual estimated cost of $215,820 and a total amount not to exceed $1,257,554 over six years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-239

RESOLUTION ACCEPTING THE UPGRADE TRAFFIC SIGNALS 2015 PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $568,802 TO TIM PAXIN'S PACIFIC EXCAVATION, INC., OF ELK GROVE, CALIFORNIA

WHEREAS, the City of Modesto's Highway Safety Improvement Program (HSIP) (212) Upgrade Traffic Signals 2015 project removed all the existing traffic signal standards at the intersections of Paradise Rd. and Martin Luther King Dr., Dale Rd. and Veneman Ave., and Kansas Ave. and North Emerald Ave., and replaced the old standards with new signal standards in accordance with the roadway geometry and Caltrans Standard Specifications, 2015, and

WHEREAS, this project upgraded pedestrian push buttons to Americans with Disabilities Act (ADA) compliant pedestrian push buttons, and

WHEREAS, new conduit and signal interconnect cable was installed and existing curb ramps were removed and replaced with new ADA compliant curb ramps where possible, and

WHEREAS, this project also installed Emergency Vehicle Pre-emption and new detection at intersections, and brought the street name signage into compliance with the new Manual on Uniform Traffic Control Devices (MUTCD), and

WHEREAS, bids were advertised on September 22, 2019, and were publicly opened on October 16, 2019, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and Tim Paxin's Pacific Excavation, Inc., of Elk Grove, California, was the apparent lowest responsible and responsive bidder, and

WHEREAS, on January 22, 2019, by Resolution No. 2019-14, Council awarded a contract to Tim Paxin's Pacific Excavation, Inc., of Elk Grove, California for the construction of the Upgrade Traffic Signals 2015 project in the amount of $518,561, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of April 8, 2019, and all contract work was completed by October 9, 2019, and

WHEREAS, the total project costs were $673,956 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $756,061 which included $570,561 for the construction contract and contingency with Tim Paxin's Pacific Excavation, Inc., and

WHEREAS, the City's "Change Order Approval Policy" enacted by Council Resolution No. 94-443 on July 19, 1994, and updated by Resolution No. 2019-326 on July 9, 2019, established a contract change order authority of up to and not to exceed 10% of the original contract price, and

WHEREAS, there were four change orders on this project with an overall increase of $50,241, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Upgrade Traffic Signals 2015 project is hereby accepted as complete from contractor Tim Paxin's Pacific Excavation, Inc., of Elk Grove, California, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities, and authorize payments totaling $568,802.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-240

RESOLUTION APPROVING AN AGREEMENT WITH TRC ENGINEERS, INC., FOR CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES FOR THE COFFEE ROAD PAVEMENT REHABILITATION PROJECT IN AN AMOUNT NOT TO EXCEED $198,436, PLUS $19,844 FOR ADDITIONAL SERVICES (IF NEEDED) FOR A TOTAL AMOUNT NOT TO EXCEED $218,280, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT AND ADDITIONAL SERVICES UP TO A CUMULATIVE AMOUNT OF 10% OR $19,844

WHEREAS, plans and specifications have been prepared for the Coffee Road Pavement Rehabilitation Project and Community and Economic Development staff recommended approval by the City Council, and

WHEREAS, the bids received for the Coffee Road Pavement Rehabilitation Project were publicly opened at 11:00 a.m. on March 10, 2020, and later tabulated by the Director of Community and Economic Development for the consideration by the City Council, and

WHEREAS, the Director of Community and Economic Development recommended that the bid of $2,630,349 received from United Pavement Maintenance, Inc., of Hughson, California be accepted as the lowest responsible and responsive bid, and

WHEREAS, on April 14, 2020, by Resolution No. 2020-161, Council awarded the construction contract to United Pavement Maintenance, Inc., of Hughson, California, in the amount of $2,630,349, for the Coffee Road Pavement Rehabilitation Project, and

WHEREAS, due to current workload and staffing vacancies, coupled with the design-build nature of the access ramps, the City's Construction Administration Office sought to retain the services of a Construction Management and Inspection Firm, and

WHEREAS, on February 28, 2020, a Request for Proposals (RFP) was issued for Construction Management and Inspection Services to Construction Management firms the City has utilized, and

WHEREAS, in accordance with City's policy, Administrative Directive 3.1 Selection Procedures for Professional Consultants Who Provide Architectural and Engineering Services for Capital Projects, TRC Engineers, Inc., was selected as the most qualified firm.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves an Agreement with TRC Engineers, Inc., in an amount not to exceed $198,436, plus $19,844 for additional services (if needed), for a total amount not to exceed $218,280, for Construction Management and Inspection Services for the Coffee Road Pavement Rehabilitation Project.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement and additional services if needed in the amount of cumulative amount of 10% or $19,844, for a total amount not to exceed $218,280, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-241

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MODESTO RELATING TO WATER REFUNDING REVENUE CERTIFICATES OF PARTICIPATION, 2008 SERIES A; APPROVING THE FORMS OF AND AUTHORIZING THE EXECUTION AND DELIVERY OF A SECOND AMENDMENT TO THE REIMBURSEMENT AGREEMENT AND A FEE LETTER AND APPROVING THE FORM OF AND AUTHORIZING THE DISTRIBUTION OF A SUPPLEMENT TO AN OFFICIAL STATEMENT IN CONNECTION THEREWITH; AND AUTHORIZING CERTAIN OTHER RELATED ACTIONS

WHEREAS, the City of Modesto is a charter city and municipal corporation duly organized and existing under and by virtue of the Constitution and laws of the State of California (the "City"); and

WHEREAS, the City has caused to be executed and delivered the $47,625,000 City of Modesto, California Water Refunding Revenue Certificates of Participation, 2008 Series A (the "2008 Certificates"); and

WHEREAS, in connection with the issuance of the 2008 Certificates, Bank of America, N.A., as liquidity facility provider, the City, and the Modesto Public Financing Authority (the "Authority") previously entered into a Standby Certificate Purchase Agreement, dated as of May 1, 2008 (the "2008 Liquidity Agreement"), relating to the performance of certain duties with respect to the remarketing of the 2008 Certificates; and

WHEREAS, the 2008 Liquidity Agreement was subsequently replaced with an irrevocable direct-pay letter of credit (as extended, the "Letter of Credit") issued by JPMorgan Chase Bank, N.A. ("JPMorgan") pursuant to the terms of a Reimbursement Agreement, dated as of July 1, 2011, as amended by a First Amendment to the Reimbursement Agreement, dated as of June 5, 2014, by and between the City and

JPMorgan, and a fee letter, dated July 14, 2011, as amended and restated as of June 5, 2014, between JPMorgan and the City; and

WHEREAS, the Stated Expiration Date of the Letter of Credit was previously extended from July 14, 2014 to July 14, 2017 and from July 14, 2017 to June 15, 2020; and

WHEREAS, the City has determined to be in its best interest to again extend the Stated Expiration Date of the Letter of Credit; and

WHEREAS, in connection with the extension of the Letter of Credit, the City and JPMorgan will enter into a Second Amendment to the Reimbursement Agreement ("Second Amendment") and a new Fee Letter (the "Fee Letter"); and

WHEREAS, the City proposes to execute and deliver Supplement No. 4 to the Official Statement (the "Supplement"), relating to the 2008 Certificates, and to authorize the distribution of the Supplement to prospective and actual purchasers of the 2008 Certificates; and

WHEREAS, all acts, conditions and things required by the laws of the State of California to exist, to have happened and to have been performed precedent to and in connection with the consummation of the transactions authorized hereby do exist, have happened and have been performed in regular and due time, form and manner as required by law, and the City is now duly authorized and empowered, pursuant to each and every requirement of law, to consummate such transactions for the purpose, in the manner and upon the terms herein provided.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Modesto, as follows:

Section 1. Findings. The City Council hereby specifically finds and determines that the actions authorized hereby constitute and are with respect to the public affairs of the City and that the statements, findings and determinations of the City set forth above and in the preambles of the documents approved herein are true and correct and that the consummation of the transactions contemplated therein shall result in significant public benefits to the City.

Section 2. Approval of the Second Amendment and Fee Letter. The City Council hereby approves the extension of the Letter of Credit. The Second Amendment and the Fee Letter proposed to be executed and entered into by the City, in the forms presented at this meeting and on file with the City Clerk, are hereby approved, and each of the City Manager and the Finance Director, acting singly, is hereby authorized and directed, for and in the name and on behalf of the City, to execute and deliver the Second Amendment and the Fee Letter in substantially said forms, with such changes therein as such officer executing the Second Amendment and the Fee Letter may require or approve, such approval to be conclusively evidenced by the execution and delivery thereof.

Section 3. Approval of Supplement to Official Statement. The Supplement, in the form presented at this meeting and on file with the City Clerk, is hereby approved. Each of the City Manager and the Finance Director, acting singly, is hereby authorized and directed, for and in the name and on behalf of the City, to execute and deliver the Supplement in substantially said form, with such changes therein as such officer executing the Supplement may require or approve, such approval to be conclusively evidenced by the execution and delivery thereof. Each of the City Manager and the Finance Director, acting singly, is hereby authorized and directed to cause the

Supplement, in substantially said form, with such changes therein as such officer may require or approve, to be distributed to potential and actual purchasers of the 2008 Certificates.

Section 4. Attestations. The City Clerk is hereby authorized and directed to attest the signature of the City Manager and the Finance Director and to affix and attest the seal of the City, as may be required or appropriate in connection with the documents approved by this Resolution.

Section 5. Other Actions. The City Manager and the Finance Director, or their designees, of the City are hereby authorized and directed, jointly and severally, to do any and all things and to execute and deliver any and all documents which they may deem necessary or desirable in order to consummate the transactions authorized hereby and to carry out, give effect to and comply with the terms and intent of this Resolution, the Second Amendment, the Fee Letter and the Supplement; and all such actions heretofore taken by such officers are hereby ratified, confirmed and approved.

Section 6. Effective Date. This Resolution shall take effect immediately upon its passage.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 26th day of May, 2020, by Councilmember Madrigal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION OF THE MODESTO PUBLIC FINANCING AUTHORITY RELATING TO WATER REFUNDING REVENUE CERTIFICATES OF PARTICIPATION, 2008 SERIES A; APPROVING THE FORM OF AND AUTHORIZING THE DISTRIBUTION OF A SUPPLEMENT TO AN OFFICIAL STATEMENT IN CONNECTION THEREWITH; AND AUTHORIZING CERTAIN OTHER RELATED ACTIONS

WHEREAS, the Modesto Public Financing Authority (the "Authority") is a joint exercise of powers authority duly organized and existing pursuant to the Modesto Public Financing Joint Exercise of Powers Agreement, dated as of December 5, 1989, by and between the City of Modesto (the "City"), a charter city and municipal corporation duly organized and existing under and by virtue of the Constitution and laws of the State of California, and the Industrial Development Authority of the City; and

WHEREAS, the City has caused to be executed and delivered the $47,625,000 City of Modesto, California Water Refunding Revenue Certificates of Participation, 2008 Series A (the "2008 Certificates"); and

WHEREAS, in connection with the issuance of the 2008 Certificates, Bank of America, N.A., as liquidity facility provider, the City, and the Authority previously entered into a Standby Certificate Purchase Agreement, dated as of May 1, 2008 (the "2008 Liquidity Agreement"), relating to the performance of certain duties with respect to the remarketing of the 2008 Certificates; and

WHEREAS, the 2008 Liquidity Agreement was subsequently replaced with an irrevocable direct-pay letter of credit (as extended, the "Letter of Credit") issued by JPMorgan Chase Bank, N.A. ("JPMorgan") pursuant to the terms of a Reimbursement Agreement, dated as of July 1, 2011, as amended by a First Amendment to the

Reimbursement Agreement, dated as of June 5, 2014 (the "Reimbursement Agreement"), by and between the City and JPMorgan, and a Fee Letter, dated July 14, 2011, as amended and restated as of June 5, 2014 (the "Original Fee Letter"), between JPMorgan and the City; and

WHEREAS, the Stated Expiration Date of the Letter of Credit was previously extended from July 14, 2014 to July 14, 2017 and from July 14, 2017 to June 15, 2020; and

WHEREAS, the City has determined to be in its best interest to again extend the Stated Expiration Date of the Letter of Credit; and

WHEREAS, in connection with the extension of the Letter of Credit, the City and JPMorgan will enter into a Second Amendment to the Reimbursement Agreement and a new Fee Letter; and

WHEREAS, the Authority proposes to execute and deliver Supplement No. 4 to the Official Statement (the "Supplement"), relating to the 2008 Certificates, and to authorize the distribution of the Supplement to prospective and actual purchasers of the 2008 Certificates; and

WHEREAS, all acts, conditions and things required by the laws of the State of California to exist, to have happened and to have been performed precedent to and in connection with the consummation of the transactions authorized hereby do exist, have happened and have been performed in regular and due time, form and manner as required by law, and the Authority is now duly authorized and empowered, pursuant to each and every requirement of law, to consummate such transactions for the purpose, in the manner and upon the terms herein provided.

NOW, THEREFORE, BE IT RESOLVED by the Governing Board of the Authority, as follows:

Section 1. Findings. The Governing Board hereby specifically finds and determines that the statements, findings and determinations of the Authority set forth above and in the preambles of the documents approved herein are true and correct.

Section 2. Approval of Supplement to Official Statement. The Supplement, in the form presented at this meeting and on file with the Secretary of the Authority, is hereby approved. Each of the Chairperson, Vice Chairperson, Executive Director, and Auditor and Treasurer of the Authority (each, an "Authorized Officer"), acting singly, is hereby authorized and directed, for and in the name and on behalf of the Authority, to execute and deliver the Supplement in substantially said form, with such changes therein as such officer executing the Supplement may require or approve, such approval to be conclusively evidenced by the execution and delivery thereof. Each Authorized Officer, acting singly, is hereby authorized and directed to cause the Supplement, in substantially said form, with such changes therein as such officer may require or approve, to be distributed to potential and actual purchasers of the 2008 Certificates.

Section 3. Attestations. The Secretary of the Authority is hereby authorized and directed to attest the signature of each Authorized Officer in connection with the documents approved by this Resolution.

Section 4. Other Actions. Each Authorized Officer is hereby authorized and directed, jointly and severally, to do any and all things and to execute and deliver any and all documents which such Authorized Officer may deem necessary or desirable in order to consummate the transactions authorized hereby and to carry out, give effect to and

comply with the terms and intent of this Resolution and the Supplement; and all such actions heretofore taken by such Authorized Officers are hereby ratified, confirmed and approved.

Section 5. Effective Date. This Resolution shall take effect immediately upon its passage.

The foregoing resolution was introduced at a meeting of the Modesto Public Financing Authority held on the 26th day of May, 2020, by Authority Member Madrigal, who moved its adoption, which motion being duly seconded by Authority Member Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-242

RESOLUTION APPROVING A STATE OF CALIFORNIA LOCAL GOVERNMENT PLANNING SUPPORT GRANT PROGRAM APPLICATION IN THE AMOUNT OF $500,000 FOR THE PURPOSE OF FUNDING VARIOUS HOUSING-REALTED PROJECTS AND AUTHORIZING THE DIRECTOR OF COMMUNITY AND ECONOMIC DEVELOPMENT TO FILE THE GRANT APPLICATION

WHEREAS, pursuant to Health and Safety Code 50515 et. Seq, the State of California Department of Housing and Community Development (Department) is authorized to issue a Notice of Funding Availability (NOFA) as part of the Local Government Planning Support Grants Program (hereinafter referred to by the Department as the Local Early Action Planning Grants Program or LEAP), and

WHEREAS, the Modesto City Council desires to submit LEAP grant application package ("Application"), on the forms provided by the Department, for approval of grant funding for projects that assist in the preparation and adoption of planning documents and process improvements that accelerate housing production and facilitate compliance to implement the sixth cycle of the regional housing needs assessment, and

WHEREAS, the Department has issued a NOFA and Application on January 27, 2020, in the amount of $119,040,000 for assistance to all California jurisdictions, and

WHEREAS, a public meeting was held on June 2nd, 2020, at the Modesto City Hall, in the basement Council Chambers, located at 1010 10th Street, Modesto, California, at which time and place Modesto's LEAP grant application submittal was considered by the Modesto City Council.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Community and Economic Development Director is hereby authorized and directed to apply for and submit to the Department the Application.

BE IT FURTHER RESOLVED that the Director of Community and Economic Development is hereby authorized to execute all necessary grant documents, agreements, MOUs and other documentation required by the LEAP Grants Program on behalf of the City of Modesto.

BE IT FURTHER RESOLVED that in connection with the LEAP grant, if the Application is approved by the Department, the City of Modesto Director of Community and Economic Development is authorized to submit the Application, enter into, execute, and deliver on behalf of the Applicant, a State of California Agreement (Standard Agreement) for the amount of $500,000, and any and all other documents required or deemed necessary or appropriate to evidence and secure the LEAP grant, the Applicant's obligations thereto and all amendments thereto.

BE IT FURTHER RESOLVED that the City shall be subject to the terms and conditions as specified in the NOFA, and the Standard Agreement provided by the Department after its approval. The Application and any and all accompanying documents are incorporated in full as part of the Standard Agreement. Any and all activities funded, information provided, and timelines represented in the Application will be enforceable through the fully executed Standard Agreement, the Applicant hereby agrees to use the funds for eligible uses and allowable expenditures in the manner presented and specifically identified in the approved Application.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-243

RESOLUTION APPROVING A WILL SERVE LETTER AND OUTSIDE SERVICE AGREEMENT WITH OSIEL LUNA AND KARINA LUNA HUSBAND AND WIFE AS JOINT TENANTS, TO CONNECT TO THE CITY OF MODESTO'S EXISTING SEWER SYSTEM FOR THE PROPERTY LOCATED AT 605 MAZE BLVD (APN: 030-005-008), AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO THE SIGN THE WILL SERVE LETTER AND EXECUTE THE OUTSIDE SERVICE AGREEMENT

WHEREAS, Osiel Luna and Karina Luna, husband and wife as joint tenants own residential property located at 605 Maze Blvd which is located outside of Modesto City Limits and inside the City's Sphere of Influence, and

WHEREAS, the property located at 605 Maze Blvd, is not connected to City's sewer system and is requesting a sewer connection due to a failing septic system, and

WHEREAS, on November 25, 2014, by Resolution No. 2014-473, Council approved amending City Council Policy 5.002, and

WHEREAS, on December 9, 2014, City Council approved adoption of Ordinance No.3612-C.S. amending City of Modesto Municipal Code Section 11-1.05, and

WHEREAS both of these amendments included language allowing the City Manager, upon the recommendation of the Director responsible for utility system planning to approve standard agreements of service for extension of sewer services into certain unincorporated areas without City Council approval, and

WHEREAS, the property located at 605 Maze Blvd is not located within one of those designated areas and therefore requires City Council approval prior to allowing the sewer connection, and

WHEREAS, City staff has completed an analysis and determined that it is reasonable for the City of Modesto to provide sewer service to this property, and

WHEREAS, consistent with adopted LAFCO Policy 15, the extension of sewer service is proposed to remedy a health and safety concern in an area with failing septic system, and

WHEREAS, the sewer connection fees shall be paid and associated permits will be obtained prior to connecting to the City sewer system, and

WHEREAS, the property owner has executed an Outside Service Agreement for sewer service with the City as required to receive sewer service outside the City limits.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Will Serve Letter and Outside Service Agreement for sewer service for the property located at 605 Maze Blvd (APN: 030-005-008) in Modesto.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to sign the Will Serve letter and execute the Outside Service Agreement for sewer service.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-244

RESOLUTION OF INTENTION TO ANNEX TERRITORY TO CITY OF MODESTO COMMUNITY FACILITIES DISTRICT NO. 2004-1 (VILLAGE ONE #2) AND TO AUTHORIZE THE LEVY OF A SPECIAL TAX WITHIN THE TERRITORY PROPOSED TO BE ANNEXED (ANNEXATION #18)

WHEREAS, pursuant to Chapter 2.5 Division 2 of Title 5 (commencing with Section 53311) of the California Government Code, commonly known as the "Mello-Roos Community Facilities Act of 1982" (the "Act"), proceedings for the annexation of territory to an existing community facilities district may, pursuant to Article 3.5 of the Act, be instituted by the adoption by the legislative body of a resolution of intention to annex such territory, and

WHEREAS, pursuant to the Act, this Council did, by its Resolution No. 2004-199, adopted on April 6, 2004 (the "Resolution of Formation"), establish the City's Community Facilities District No. 2004-1 (Village One #2) (the "District"), and

WHEREAS, pursuant to the Act, this Council did, by its Resolution No. 2004-681, adopted on December 14, 2004, clarify the Rate and Method of Apportionment with respect to the Maximum Special Taxes to be generated by a parcel that has been rezoned, and

WHEREAS, pursuant to the Act, this Council did, by its Resolution No. 2004-683, adopted on December 14, 2004 ("Resolution of Creation of Tax Zone #2), create Tax Zone #2 within the District, and

WHEREAS, the One-Time Facilities Special Tax component of the special taxes is higher in Tax Zone #2 than in Tax Zone #1, and

WHEREAS, pursuant to California Streets and Highways Code Section 3113.5, this Council did, by its Resolution No. 2005-566, adopted on November 9, 2005, direct that all prior modifications, amendments and annexations to the District be consolidated into a single map of the District, specifically all prior boundary maps and amendments thereto related to formation of the District and Annexation Nos. 1 through 10 to the District, and

WHEREAS, on November 23, 2005, said boundary maps were consolidated into a single map entitled "Consolidation of Boundary Maps of Community Facilities District No. 2004-1 (Village One #2)" and recorded with the County Recorder of the County of Stanislaus at Book 4 of Maps of Assessments and Communities Facilities Districts, at Page 33 (the "Consolidated Boundary Map"), and

WHEREAS, subsequent to the recordation of the Consolidated Boundary Map, additional territory was annexed to the District through Annexations Nos. 11, 12, 13, 14, 15, 16, and 17, and

WHEREAS, this Council hereby determines that the public convenience and necessity require the annexation of additional certain territory to the District, and

WHEREAS, the territory to be annexed is within the City limits, and

WHEREAS, it is intended that the territory be annexed to Tax Zone #2.

NOW, THEREFORE, BE IT RESOLVED, by Council of the City of Modesto that the Council finds and orders the following:

1. The above recitals are true and correct.

2. The current boundaries of the District are shown on the Consolidated Boundary Map as supplemented by the map entitled "Annexation Map No. 11 of

Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 4 of Maps of Assessment and Community Facilities Districts, at Page 36, the map entitled "Annexation Map No. 12 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 4 of Maps of Assessment and Community Facilities Districts, at Page 42, the map entitled "Annexation Map No. 13 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 4 of Maps of Assessment and Community Facilities Districts at Page 57, the map entitled "Annexation Map No. 14 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 4 of Maps of Assessment and Community Facilities Districts at Page 98, the map entitled "Annexation Map No. 15 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 5 of Maps of Assessment and Community Facilities Districts at Page 52, and the map entitled "Annexation Map No. 16 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 5 of Maps of Assessment and Community Facilities Districts at page 67, and the map entitled "Annexation Map No. 17 of Community Facilities District No. 2004-1 (Village One #2)" on file with the County Recorder at Book 5 of Maps of Assessment and Community Facilities Districts at page 87. The territory proposed to be annexed to the District (the "Territory") is described in Exhibit A, attached hereto.

3. The boundaries of the Territory are also shown on the map thereof, entitled "Annexation Map No. 18 of Community Facilities District No. 2004-1 (Village One #2)", City of Modesto, County of Stanislaus, State of California," on file in the office of the City Clerk, which map is hereby approved and adopted. Pursuant to

Sections 3110.5 and 3113 of the California Streets and Highways Code, the City Clerk shall endorse her certificate on the original and one copy of the map evidencing the date and adoption of this Resolution, file the original in her office and, not later than fifteen (15) days after the adoption of this Resolution, file a copy of the map with the County Recorder of the County of Stanislaus. The map shall contain the legends provided in Sections 3110 and 3110.5 of the California Streets and Highways Code; including a reference to the title, book, page and recording date of the original boundary map of the District.

4. The public facilities and services to be provided for the District are set forth in the Resolution of Formation. It is intended that these same facilities and services be provided to the Territory.

5. The special taxes to be levied in the District are set forth in the Resolution of Formation. It is intended that the same special taxes be levied in the Territory, except that the increase of the One-Time Facilities Special Tax component of the special taxes, as authorized by the Resolution of Creation of Tax Zone #2, shall be levied in the Territory.

6. A public hearing on this Resolution will be held at 5:30 p.m., or as soon thereafter as practicable, on Tuesday July 14, 2020, at the regular meeting place of the City Council, City Council Chambers, Basement Level, 1010 Tenth Street, Modesto, California 95354, such time being not less than 30 or more than 60 days following the adoption hereof.

7. At the hearing, any interested persons for or against the annexation of the Territory to the District, and the levy of the special taxes therein, may appear and will be

heard and considered. Any protest may be made orally or in writing. However, any protests pertaining to the regularity or sufficiency of the proceedings shall be in writing and clearly set forth the irregularities and defects to which the objection is made. All written protests shall be filed with the City Clerk on or before the time fixed for the public hearing. Written protests may be withdrawn in writing at any time before the conclusion of the hearing.

8. The City Clerk is directed to publish, not later than seven days prior thereto, a notice of the hearing, in the form required by the Act, in a newspaper of general circulation published in the area of the District, being the Modesto Bee, and otherwise in accordance with Section 6061 of the California Government Code, stating (a) the text or a summary of this Resolution, (b) the time and place of the hearing, and (c) that all interested persons for or against the proposed annexation or the levying of the special tax therein will be heard.

9. If a majority (but at least six) of the registered voters residing within the District or a majority (but at least six) of the registered voters residing within the Territory, or the owners of one-half or more of the area of the land in the District and not exempt from the special tax, or the owners of one-half or more of the Territory, file written protests against the proposed annexation, and the protests are not withdrawn so as to reduce the value of the protests to less than a majority, no further proceedings to annex the Territory to the District, or to levy in the Territory the special taxes to be levied in the District, shall be taken for a period of one year from the date of the decision of the Council on the issues discussed at the hearing.

10. At the conclusion of the hearing, if the Council determines to annex the Territory to the District, it will submit the levy of the special taxes to the qualified electors of the Territory in a special election.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-245

RESOLUTION APPROVING THE FIRST AMENDMENT INCREASING THE AGREEMENT AMOUNT WITH GOODWIN CONSULTING GROUP (GCG), FOR THE ADMINISTRATION OF THE CITY COMMUNITY FACILITIES DISTRICTS SERVICES BY $111,900 FROM $155,200 TO A NEW TOTAL AMOUNT NOT TO EXCEED $267,100, AND EXTENDING THE TERM OF THE AGREEMENT FROM JUNE 30, 2020 TO JUNE 30, 2022, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, on May 8, 2018, by Resolution 2018-170, the City entered into a three-year Professional Consultant Services agreement with Goodwin Consulting Group in the amount of $155,200 for the annual administration of Community Facilities Districts (CFDs), and

WHEREAS, the City has determined that CFDs and Assessment Districts (ADs) are necessary funding mechanisms to construct and maintain infrastructure for new development areas, and

WHEREAS, since 1996, the City of Modesto has formed fourteen Community Facilities Districts ("CFDs") pursuant to the "Mello-Roos Community Facilities Act of 1982", and

WHEREAS, the City has been working with Goodwin Consulting Group in the annual administration of the fourteen CFD's, since 2001, and

WHEREAS, as part of the annual CFD administration services, Goodwin Consulting Group will oversee the preparation and dissemination of SEC-required continuing disclosure reports to the municipal bond market, arbitrage rebate and yield reduction calculations for tax-exempt bond issues, annual reporting to the California Debt and Investment Advisory Commission, bond payoff calculations for property owners, inquiries from taxpayers, and tax delinquency monitoring and foreclosure assistance, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a), Exceptions to Formal Bidding Requirements, the agreement is for professional services and, therefore, exempt from the bidding requirement, and

WHEREAS, the Goodwin Consulting Group contract will be paid through the annual maintenance tax of each CFD, and

WHEREAS, the City would like to extend the term of the agreement with Goodwin Consulting Group from June 30, 2020 through June 30, 2022 for a new total amount not to exceed $267,100.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the first amendment with Goodwin Consulting Group for administration of the City Community Facilities Districts services by $111,900 from $155,200 to a new total amount not to exceed $267,100, and extending the term of the agreement from June 30, 2020 to June 30, 2022.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-246

RESOLUTION APPROVING THE PURCHASE OF NINE (9) FORD POLICE INTERCEPTORS TO SONORA FORD, SONORA, CA, FOR A TOTAL AMOUNT NOT TO EXCEED $357,632 AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE PURCHASE ORDER

WHEREAS, the replacement of nine (9) Police Interceptors was approved by the City Manager and City Council with the adopted Fiscal Year 2019-2020 budget; and

WHEREAS, the strategic replacement of vehicles and equipment is essential in maintaining current operations, facilities, and/or services; and

WHEREAS, these vehicles are classified as emergency response vehicles and will replace various police patrol units that have been involved in collisions and are considered a total loss or units that have reached their mileage cap of 125,000 miles; and

WHEREAS, Modesto Municipal Section 8-3.203 requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid; and

WHEREAS, on February 19, 2020, the Purchasing Division issued RFB 1920-24 for Nine (9) Ford Police Interceptors on the City's website under the commodity code 07000 for Automotive Vehicles and Related Transportation Equipment; and

WHEREAS, eleven (11) companies chose to download the RFB document, three companies chose to respond, none of the bidders were local vendors; and

WHEREAS, on March 17, 2020 bids were formally opened in the City Clerk's office, Sonora Ford, Sonora, CA, was the lowest responsive and responsible bidder; and

WHEREAS, based on providing the overall lowest responsive and responsible bid which conforms to the Modesto Municipal Code, 8-3.203, City staff recommends the award of bid for nine (9) Ford Police Interceptors to Sonora Ford, Sonora, CA.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the purchase of nine (9) Ford Police interceptors to Sonora Ford, Sonora, CA for a total amount not to exceed $357,632.

BE IT FURTHER RESOLVED, that the Purchasing Manager, of her designee, is hereby authorized to execute the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-247

RESOLUTION APPROVING THE AWARD OF PROPOSAL AND AGREEMENT FOR FUEL CARD-LOCK SERVICES TO STAN BOYETT & SON, INC. DBA BOYETT PETROLEUM, MODESTO, CA FOR A FIVE-YEAR AGREEMENT WITH TWO ONE-YEAR EXTENSION OPTIONS FOR AN ANNUAL ESTIMATED COST OF $1,800,000, AND A TOTAL AMOUNT NOT TO EXCEED $12,600,000 OVER SEVEN YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto Fleet Services is required to maintain fuel services for all of the City of Modesto's owned vehicles and equipment; and

WHEREAS, by providing designed fuel cards for vehicles and equipment valid at various approved Boyett Petroleum gas stations in and around the City of Modesto for city-owned vehicles and equipment to obtain fuel; and

WHEREAS, on September 6, 2019 the Stanislaus County General Services Agency (GSA) and the City of Modesto Purchasing Division issued Request for Proposal No. 19-48-AH for Fuel Card-Lock Services; and

WHEREAS, notice of solicitation was posted on the County's website and emailed directly to vendors; and

WHEREAS, on October 18, 2019 proposals were formally opened at the Stanislaus County GSA office. One company chose to respond; and

WHEREAS, Stan Boyett & Son dba Boyett Petroleum, Modesto, CA was the awarded proposer based on the evaluation criteria; and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid; and

WHEREAS, an award of bid and agreement for Fuel Card-Lock Services, for citywide use to Stan Boyett & Son dba Boyett Petroleum, Modesto, CA, conforms to the Modesto Municipal Code because the City complied with the formal bid procedures alongside the General Services Agency, Stanislaus County Purchasing Division and Boyett Petroleum was the only bidder.

NOW, THEREFORE, BE IT RESOLVED by the Council and the City of Modesto that it hereby approved the award of proposal and agreement for Fuel Card-Lock Services to Stan Boyett & Son dba Boyett Petroleum, Modesto, CA for a five (5) year agreement with two (2) one-year extension options for an annual cost of $1,800,000 and a total amount not to exceed $12,600,000 over seven years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement in form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-248

RESOLUTION APPROVING THE EXTENSION OF THE COMPOST FACILITY FLEXIBLE SALES PRICING PILOT PROGRAM APPROVED ON APRIL 2, 2019 FOR TWO ADDITIONAL YEARS EFFECTIVE JUNE 1, 2020 THROUGH MAY 31, 2022, AND ESTABLISHING A $60 TIP FEE, PLUS AN ANNUAL CONSUMER PRICE INDEX ADJUSTMENT, FOR CUSTOMERS OUTSIDE CITY OF MODESTO

WHEREAS, the City of Modesto Compost Facility began operation in January 1997 due to the City's waste being comprised of a high level of compostable materials and the City being designated as a City of Trees, and the Compost Facility would provide a way for the City to handle its own green waste and forestry materials, and

WHEREAS, the City also rolled out a two-can residential garbage and recycling collection program which provided a green can for all residential waste, and

WHEREAS, over time that green can functionality has expanded to include all yard waste, paper waste and food waste, and

WHEREAS, the Compost Facility's primary and state mandated purpose is to process the City's diverted yard waste, paper waste, and food waste materials into a reusable soil amendment, this keeping materials from the landfill and lowering our disposal rate, and

WHEREAS, compost is also donated to community gardens and landscape projects, parks, schools, churches, and for use in our own City projects, and

WHEREAS, annually the Facility receives approximately 55,000 tons of raw compostable waste materials and processes it into about 25,000 tons of compost, and

WHEREAS, in Fiscal Year 2017-2018 SCS Engineers, Inc. was hired to conduct a comprehensive review of the City's solid waste system, including the compost facility and

AMENDED ON JUNE 8, 2021 BY RESOLUTION 2021-218

its operations, and

WHEREAS, one of the findings discussed the changes in state law that made organic recycling and composting mandatory, and the demands that would have on the facility operationally and financially, but there was no discussion on what the impacts of the new influx of materials would be, or what would happened to the quality of the compost or the market conditions, and

WHEREAS, AB1826 and SB1383 mandate organics recycling resulting in a 75% diversion of organics materials out of landfills and into composting facilities, yet there are no laws mandating the public or private sectors purchase the finished product back, and

WHEREAS, the new supply of material is estimated to be over 20 million tons annually which creates an overabundance of product inventory statewide and the competition makes pricing and materials quality key factors for moving the project, and

WHEREAS, the new supply of incoming organics material is heavily contaminated with glass, plastics, and trash, and

WHEREAS, an increase in public education and enforcement will help over time, but expensive machinery and labor-intensive efforts are needed long term to separate out the contamination, and

WHEREAS, due to the contamination levels, compost sales have dropped by 40% and created an oversupply of product at the facility and storing the material can lead to permit violations, and

WHEREAS, this product needs to be moved in order to continue processing incoming material, and while some of the product can be spread on City land, due to the glass it is not feasible to use it in City parks or sports fields, and nut farmers have even

diminished their use of the product, and

WHEREAS, on June 12, 2018, by Resolution No. 2018-240, Council approved the pricing for compost product sales with an annual Consumer Price Index (CPI) adjustment each year, and on April 2, 2019, by Resolution No. 2019-140, Council approved a flexible pricing pilot program for one year to help with the oversupply of product and to determine its effectiveness in moving product, and

WHEREAS, under the flexible pricing pilot program, the Integrated Waste Program Manager was able to advertise and offer discounted pricing such as seasonal or oversupply specials up to 50% off the product as necessary to make room on the site to try and stay in compliance with state law, and

WHEREAS, since the Flexible Sales Pricing Pilot Program was approved, the Compost Facility recorded approximately 15 bulk-sale customers (purchases over 100 tons) receiving as much as 50% off, and

WHEREAS, the bulk purchases totaled 10,384 tons through early January 2020 when in comparison to the same time period of April 2018 through January 2019, the bulk sales were only 6,249 tons, and

WHEREAS, the ability to move product is a critical component of our composting operations and permit regulations, and the pilot showed it was evident that having the ability to negotiate pricing and offer competitive rates was a benefit to the facility, and

WHEREAS, staff would like to further extend the pilot program for two more years offering up to 75% specials for seasonal and oversupply demands to try to keep the Compost Facility in permit compliance and add room for incoming product processing, and

WHEREAS, staff continues to receive calls and inquiries about taking in more product from outside the City of Modesto, and due to limited capacity and the need to be selective, staff is proposing establishing a non-Modesto customer tip fee of $60/ton, and

WHEREAS, the tip fee is a critical revenue element in addressing the ever-increasing labor, equipment, and regulatory costs to process material from the mandated state diversion requirements, and

WHEREAS, under the current tip fee of $27.59/ton there is an estimated budget shortfall of $400,000 in FY 2020/2021 especially as the need to replace aging equipment is at the forefront, and

WHEREAS, a tip fee increase to non-Modesto customers will help increase revenues and assist in reducing the budget shortfall without impacting City of Modesto customers, as well as affording the facility the opportunity to be more selective in the material allowed in which will help control labor costs, equipment usage, and improve the quality of the finished product which ultimately impacts sales, and

WHEREAS, surveys conducted indicate that the average tip fee for landfills, transfer stations, and compost facilities ranges from $45/ton to $90/ton, and

WHEREAS, the facility has customers willing to pay and even do long-term contracts with good quality material for $60/ton.

NOW, THEREFORE, BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the extension of the Compost Facility Flexible Sales Pricing Pilot Program to become effective June 1, 2020 through May 31, 2022 wherein the Integrated Waste Program Manager would be able to advertise and offer discounted pricing such as. seasonal or oversupply specials up to 75% off of the compost product for sale, and

establish a $60/ton tip fee, plus annual CPI, for customers outside City of Modesto.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-249

RESOLUTION APPROVING A REVISED LIST OF PROJECTS TO BE FUNDED WITH ROAD REPAIR AND ACCOUNTABILITY ACT TAX PROCEEDS IN FISCAL YEAR 2020-21, AND RESCINDING RESOLUTION NUMBER 2020-180

WHEREAS, Senate Bill 1 (SB 1), the Road Repair and Accountability Act of 2017 (Chapter 5, Statues of 2017) was passed by the Legislation and Signed into law by the Governor in April 2017 to address the significant multi-modal transportation funding shortfalls statewide, and

WHEREAS, SB 1 includes accountability and transparency provisions that will ensure the residents of our City are aware of the projects proposed for funding in our community and which projects have been completed each fiscal year, and

WHEREAS, the City must adopt by resolution a revised list of projects proposed to receive fiscal year funding from the Road Maintenance and Rehabilitation Account (RMRA), created by SB 1, which must include description and the location of each proposed project, a proposed schedule for projects completion, and the estimated useful life of the improvement, and

WHEREAS, the City will receive an amount less than the original estimated $4,064,467 in RMRA funding in Fiscal Year 2020-21 from SB 1, and

WHEREAS, the result of the COVID-19 pandemic, events have been canceled, unemployment has increased, and travel has drastically been minimized, all of which has greatly affected state and local revenues, and

WHEREAS, the estimated funding reduction of 15 - 30% would result in the original projected amount of $4,064,467 being reduced to between $3,454,797 and $2,845,127 for FY 20/21, and

WHEREAS, the City project list reflects a reduced funding amount, and

WHEREAS, due to the anticipated reduction in funding, the following two projects were removed from the original list and will be deferred to a future time when funding is available: High Voltage Street Light Maintenance and Upgrade Video Detection, and

WHEREAS, projects listed result in the following life-cycle benefits: Slurry seal project that includes crack seal and asphalt repairs will result in a five to seven-year life extension to existing pavement. Traffic signal and street light maintenance will result in a ten-year extension. Traffic sign and striping maintenance will result in a five-year life extension.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto, that it hereby approved the list of projects **(Attachment A)** for Fiscal Year 2020-21 and funding by SB1: Road Repair and Accountability Act of 2017.

BE IT FURTHER RESOLVED, that Resolution No. 2020-180 be hereby rescinded.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 2nd day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-250

RESOLUTION APPROVING A FIRST AMENDMENT TO THE LEGAL SERVICES AGREEMENT WITH MEYERS, NAVE, RIBACK, SILVER & WILSON ("MEYERS NAVE"), A PROFESSIONAL LAW FIRM, TO PROVIDE CITY ATTORNEY SERVICES FOR THE CITY, APPOINTING JOSE M. SANCHEZ AS CITY ATTORNEY, EFFECTIVE JUNE 2, 2020, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AMENDMENT

WHEREAS, Meyers Nave has successfully served the City of Modesto as City Attorney and Special Counsel on a wide variety of critical City projects since the Fall of 2013; and

WHEREAS, on May 13, 2014, by Resolution No. 2014-186, Council approved a Legal Services Agreement with Meyers Nave, a professional law firm, to provide City Attorney services for the City, and appointed Adam U. Lindgren as City Attorney; and

WHEREAS, in January 2020, City Attorney Adam Lindgren began a medical leave of absence; and

WHEREAS, in City Attorney Lindgren's absence, Council appointed the Assistant City Attorney Jose M. Sanchez as Acting City Attorney on February 4, 2020; and

WHEREAS, continuing in his recovery, City Attorney Lindgren requested that Acting City Attorney Sanchez be formally appointed as City Attorney, to replace Attorney Lindgren; and

WHEREAS, on June 2, 2020, City Council reported out of Closed Session that City Attorney Adam U. Lindgren, was doing well in his recovery, would not be returning to the City from his medical leave of absence, and that the Council had selected Jose M. Sanchez as the new City Attorney.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a First Amendment to the Legal Services Agreement with Meyers, Nave, Riback, Silver & Wilson ("Meyers Nave"), a professional law firm, to provide City Attorney services for the City, appointing Jose M. Sanchez as City Attorney, effective June 2, 2020.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to execute the amendment.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-251

RESOLUTION AMENDING FISCAL YEAR 2019-2020 ANNUAL OPERATING AND CAPITAL IMPROVEMENT FUND BUDGETS AND AUTHORIZING THE CITY MANAGER, TO TAKE THE NECESSARY STEPS TO IMPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, a financial analysis has been completed and it has been determined that a budget adjustment is required to the Annual and Capital Improvement Budgets of the City of Modesto for Fiscal Year 2019-20.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Fiscal Year 2019-20 Annual Operating and Capital Improvement budget as shown in **Exhibit A**, which is **attached** hereto and incorporated by reference herein.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

EXHIBIT A

FISCAL YEAR 2019-20

COMMUNITY AND ECONOMIC DEVELOPMENT

- A budget adjustment in the amount of $3,551,707 is necessary to establish the transfer from Project 101254 – Transfer of NSP2 Funds to CDBG, and budget the transfers in to the following projects:
    - 101219 – Youth Access Center $478,386
    - 101215 – Kansas House Project $2,527,942
    - 101209 – PFI South MLK S&R $295,379
    - 1130-14010-61130-000000-01330 $250,000

  The US Department of Housing and Urban Development (HUD) has authorized these funds to be used in accordance with the approved City CDBG Annual Action Plan. These funds are currently held in project 101254, and a budget adjustment is necessary to create the transfer of funds to the projects listed above and allocate to the projects discretionary expense budgets.

FIRE DEPARTMENT

- A budget adjustment is necessary to amend the Industrial Fire District budget as approved in Fund 6100, JPA-Industrial Fire Fund, by the Industrial Fire Board in December 2019. The revenues are being increased by $74,910, which is offset by an increase to the expense of the final disbursements to the JPA members by $74,910.

PARKS RECREATION & NEIGHBORHOODS

- A budget adjustment is necessary to appropriate the revenue and expenditure budget for the Modesto Tourism and Marketing District (MTMD) agreement. This agreement was approved by Council on January 28, 2020 and established a Modesto Tourism Marketing District Owner's Association agreement that provides marketing and promotional programs intended to increase hotel room night sales at all hotels paying into the MTMD. The agreement set up the City as a pass-through agency for the Convention and Visitor's Bureau for this program but when the item was brought forward to Council the resolution to establish appropriation authority was not included. This adjustment will correct that action and establish a revenue budget of $286,499 and an expenditure budget of $286,499 in accounts 0100-34301-47056 (Special Assessments - Modesto Tourism Marketing District) and 0100-34301-53505 (Intergovernmental Services - Other), respectively.

- A budget adjustment is necessary to amend the Tuolumne Regional River Park Joint Power Agreement (TRRP JPA) budget in the amount of $54,418. To increase the operating budget by $29,059 for tree trimming and to increase the transfer from the TRRP JPA Fund to the TRRP CIP Fund by $25,039. These adjustments have been approved by the TRRP JPA Commission.

- A budget adjustment is necessary in the amount of $222,874 for the Little Legion Hall Fire Demo project within the TRRP CIP Fund by recognizing insurance claim proceeds

received from the fire at the Little Legion Hall and programming offsetting expenses for improvements to Legion Hall as approved by the TRRP JPA Commission.

PUBLIC WORKS

- *The following adjustments are being made from the various city Fleet Replacement sub-funds to the Fleet Replacement Fund (5409). This action is being done to reimburse the Fleet Replacement Fund (5409) for vehicle purchases that had been made as required by fund accounting rules in FY 19-20 for the October 2019 – March 2020 period. Below is a table showing the net effect in each sub-fund as a result of the various adjustments.*

Fund	*Fund Name*	*Net Impact of Adjustments*
1709	Surface Transportation Fleet Replacement	$227,700
4109	Water Fleet Replacement Fund	$455,917
4219	Wastewater Fleet Replacement Fund	$28,974
4489	Storm Drainage Fleet Replacement Fund	$187,991
5410	GF Equipment Replacement	$178,699
	Total Transfer Outs	**$1,079,281**
5409	Transfer In – Fleet Management Fleet Replacement	$1,079,281
	Total Transfer Ins	**$1,079,281**

A budget adjustment is necessary to establish a transfer in the amount of $227,700 from Surface Transportation Fleet Replacement Fund 1709 to Fleet Replacement Fund 5409 for purchases made in FY 19/20: (2) Tractor Loader w/ Backhoe and (2) concrete grinders.

A budget adjustment is necessary to establish a transfer in the amount of $455,917 from Water Fleet Replacement Fund 4109 to Fleet Replacement Fund 5409 for purchases made in FY 19/20: (1) truck hydro excavator.

A budget adjustment is necessary to establish a transfer in the amount of $28,974 from Wastewater Fleet Replacement Fund 4219 to Fleet Replacement Fund 5409 for purchases made in FY 19/20: (1) Truck ¾ Ton regular cab with long bed.

A budget adjustment is necessary to establish a transfer in the amount of $187,991 from Storm Drainage Fleet Replacement Fund 4489 to Fleet Replacement Fund 5409 for purchases made in FY 19/20: (2) loaders with claw attachments.

A budget adjustment is necessary to establish a transfer in the amount of $178,699 from General Fund Equipment Fleet Replacement Fund 5410 to Fleet Replacement Fund 5409 for purchases made in FY 19/20: (1) Sedan Investigation, (1) Sedan Patrol, (1) Sedan Patrol K-9, (1) Truck ½ ton extended cab, (1) Sedan, and (1) SUV 4x2.

- A budget adjustment is necessary to increase the Fleet Management Fund (5400) revenue (vehicle and equipment maintenance-Interfund account) and expense (professional services account) budget by $518,727 due to the increase in City vehicle and equipment rentals. As part of the new rental policy and to allow for more appropriate tracking of rentals, all expenses related to equipment and vehicle rentals are incurred within the Fleet Management Fund and are offset with revenue collected through the Fleet monthly O&M billing.

RESOLUTION NO. 2020-252

RESOLUTION APPROVING THE AWARD OF PROPOSAL AND AGREEMENT FOR CYBERSECURITY AUDIT SERVICES TO SECURANCE LLC, OF TAMPA, FL, FOR A TOTAL COST NOT TO EXCEED $170,376; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the Information Technology (IT) Department's focus is to provide technology services that are available, reliable and secure, and

WHEREAS, the cybersecurity audit will provide an assessment of security controls so that they can systematically identify programmatic weaknesses and where necessary, establish targets for continuing improvement of the City of Modesto's security operations, and

WHEREAS, at the completion of the project a detailed security audit report will be provided including an assessment of security policies, practices, procedures, a security gap analysis and a prioritized remediation roadmap, and

WHEREAS, the City of Modesto issued its Request for Proposal (No. 1920-13) for an IT Security Audit on October 9, 2019, and

WHEREAS, an RFP Evaluation Committee, comprised of three staff members from the IT Department proposals, and

WHEREAS, based upon the final scores, the RFP Evaluation Committee recommended awarding the agreement to Securance LLC of Tampa, FL for a total cost not to exceed $170,376, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow formal bid procedures and RFP No. 1920-13 conforms with this MMC.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of proposal and agreement to Securance LLC, of Tampa, FL, for a total cost not to exceed $170,376.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-253

RESOLUTION APPROVING THE APPLICATION FOR GRANT FUNDS FOR THE RECREATIONAL TRAILS AND GREENWAYS GRANT PROGRAM IN AN AMOUNT OF $2,968,885 TO FUND DESIGN AND CONSTRUCTION OF THE TUOLUMNE RIVER REGIONAL PARK (TRRP) RIVERWALK – GATEWAY TO NEECE DR PROJECT AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO ACCEPT AND UTILIZE THE GRANT AWARD

WHEREAS, the Recreational Trails and Greenways (RTGG) Grant Program is funded by State of California Parks and Water Bond Act of 2018 (Proposition 68): and

WHEREAS, RTGG funds are made available on a competitive basis to provide assistance to local agencies and community-based organizations with regard to the development non-motorized infrastructure development and enhancements that promote new or alternate access to parks, waterways, outdoor recreational pursuits, and forested or other natural environments to encourage health-related active transportation and opportunities for Californians to reconnect with nature: and

WHEREAS, the Legislature and Governor of the State of California have provided funds for the program shown above; and

WHEREAS, the California Natural Resources Agency has been delegated the responsibility for the administration of this grant program, establishing necessary procedures; and

WHEREAS, said procedures established by the California Natural Resources Agency require a resolution certifying the approval of application(s) by the Applicant's governing board before submission of said application(s) to the State; and

WHEREAS, the Applicant, if selected, will enter into an agreement with the State of California to carry out the project.

NOW, THEREFORE, BE IT RESOLVED that the City of Modesto:

1. Approves the filing of an application for the TRRP Riverwalk - Gateway to Neece Dr Project; and

2. Certifies that Applicant understands the assurances and certification in the application; and

3. Certifies that Applicant or title holder will have sufficient funds to operate and maintain the project(s) consistent with the land tenure requirements; or will secure the resources to do so; and

4. Certifies that it will comply with all provisions of Section 1771.5 of the California Labor Code; and

5. If applicable, certifies that the project will comply with any laws and regulations including, but not limited to, the California Environmental Quality Act (CEQA), legal requirements for building codes, health and safety codes, and disabled access laws, and that prior to commencement of construction all applicable permits will have been obtained; and

6. Certifies that Applicant will work towards the State Planning Priorities intended to promote equity, strengthen the economy, protect the environment, and promote public health and safety as included in Government Code Section 65041.1; and

7. Appoints the City Manager, or designee, as agent to conduct all negotiations, execute and submit all documents including, but not limited to, applications, agreements, payment requests and so on, which may be necessary for the completion of the aforementioned project(s).

BE IT FURTHER RESOLVED that the City Manager or his designee is hereby authorized to accept and utilize the grant award.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-254

RESOLUTION APPROVING AMENDMENT NO. 2 TO THE SITE LEASE AGREEMENT WITH NCWPCS MPL 24 - YEAR SITES TOWER HOLDINGS LLC, TO INCREASE THE EXISTING CELL TOWER LEASE TERMS AT DAVIS PARK TO ALLOW FOR UP TO SIX ADDITIONAL, FIVE-YEAR RENEWAL OPTIONS AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto partners with various cellular service providers by leasing city property for cell towers, and

WHEREAS, these partnerships are a benefit to the residents of the City of Modesto by improving cellular service coverage throughout Modesto, improving coverage for the FCC mandated E911 Services, and also provide annual revenue to the City of Modesto to maintain the City park system, and

WHEREAS, on August 10, 1993, by Resolution No. 93-469, Council approved a 5-year lease agreement with Modesto Cellular Partnership for 1,820 square feet at Davis Park including five (5) extensions of five (5) years each, and

WHEREAS, on January 7, 2003, by Resolution No. 2003-15, Council approved the first amendment to the agreement with the new tenant/operator AT&T Wireless Services of California, including updating the payment terms and approving certain site improvements by the tenant, and

WHEREAS, on October 12, 2013 AT&T, with the consent of the City of Modesto, assigned this lease to the management of Crown Castle Corporation, and notified the City that the site ownership has been assigned to the AT&T subsidiary NCWPCS MPL 24 - Year Sites Tower Holdings, LLC, and

WHEREAS, in February 2018, the City of Modesto was notified by Crown Castle that AT&T would like to amend the existing contract to provide long-term security for subleasing, and

WHEREAS, the amendment includes the following terms:

1) Term extension: Six (6) additional, five (5) year renewal terms which would extend the final contract expiration term until October 31, 2053.

2) Rent escalation: The City has requested a rent escalation of 3% annually on the anniversary of the amendment.

3) Signing Bonus: AT&T will pay the City $12,500 as a signing bonus conditional upon execution of the amendment.

4) Revenue Share: AT&T agrees to pay to the City twenty-five percent (25%) of the rental, license or similar payments actually received from future subtenants.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves Amendment No. 2 to the Site Lease Agreement with NCWPCS MPL 24 - Year Sites Tower Holdings LLC, to increase the existing cell tower lease terms at Davis Park to allow for up to six (6) additional, five-year renewal options.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-255

RESOLUTION ACCEPTING PROPOSITION 68 SUSTAINABLE GROUNDWATER MANAGEMENT GRANT PROGRAM PLANNING – ROUND 3 GRANT AWARD OF $1,000,000, ON BEHALF OF THE STANISLAUS AND TUOLUMNE RIVERS GROUNDWATER BASIN ASSOCIATION GROUNDWATER SUSTAINABILITY AGENCY AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL GRANT-RELATED DOCUMENTS AND ANY AMENDMENT OR CHANGES THERETO

WHEREAS, in September of 2014, Governor Edmund G. Brown signed into law, the Sustainable Groundwater Management Act of 2014, which changed the method for groundwater management, and

WHEREAS, the Sustainable Groundwater Management Act is a comprehensive three-bill package that sets the framework for statewide sustainable groundwater management by local agencies, and

WHEREAS, the Sustainable Groundwater Management Act requires that a Groundwater Sustainability Agency be formed for all groundwater basins designated by the Department of Water Resources (DWR) as high-priority basins, and

WHEREAS, on January 24, 2017 by Resolution No. 2017-030, Council authorized a Groundwater Sustainability Agency Memorandum of Understanding with the Stanislaus and Tuolumne Rivers Groundwater Basin Association (STRGBA), and

WHEREAS, on August 14, 2019 the STRGBA Groundwater Sustainability Agency (STRGBA GSA) appointed the City to be lead applicant, and

WHEREAS, on October 22, 2019 by Resolution 2019-480, Council approved the submittal of an application on behalf of the STRGBA GSA to the DWR to obtain grant funding.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the acceptance of a Proposition 68 Sustainable Groundwater Management Grant Program Planning – Round 3 grant award of $1,000,000 on behalf of the STRGBA GSA.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute all grant-related documents and any amendment or changes thereto.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-258

RESOLUTION AUTHORIZING AN AMOUNT OF $1,171,057 TO A REVISED TOTAL AMOUNT OF 3,797,057 TO FUND CLAIMS SETTLEMENTS; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE SETTLEMENTS

WHEREAS, the City of Modesto provides its employees with employee and dependent health insurance coverage; and

WHEREAS, following notice of the current health plan provider's failure to pay outstanding claims, initiated the need for the City to determine most effective way to negotiate unpaid outstanding claims; and

WHEREAS, by Resolution No. 2019-147, the Council approved an agreement with S&S Healthcare Strategies, Ltd. for negotiation of unpaid medical claims; and

WHEREAS, the Council approved the full reimbursement of employees who paid claims on or before March 1, 2019 that should have been paid by previous plan provider, Riverstone Capital; and

WHEREAS, by Resolution No. 2019-147, the Council approved the use of $2,626,000 of Employee Benefits Fund reserves for initial funding of employee reimbursement, claims negotiation and settlement in the amount of $2,626,000; and

WHEREAS, the City began negotiations with providers; and

WHEREAS, negotiations have been successful but additional funds are needed to continue settling outstanding unpaid claims; and

WHEREAS, the City may fund claims settlement through the Employee Benefit Fund.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves additional funding in the amount of $1,171,057 for a total of 3,757,057 for negotiated settlement of remaining outstanding unpaid medical claims with cooperating providers.

BE IT FURTHER RESOLVED that the Director of Human Resources is hereby authorized to serve as the coordinator for the various plans.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute all necessary agreements relating to employee and dependent health care to fulfill the intent of this Resolution, in a form approved by Legal Counsel, including such provisions as may be necessary to meet requirements of the Independent Fiduciary.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-259

RESOLUTION AMENDING THE FISCAL YEAR 2019-20 OPERATING BUDGET IN THE AMOUNT OF $1,998,200 ($827,143 FOR FY19 REMAINING BUDGET AND $1,171,057 FOR THE NEW REQUEST) AND AUTHORIZING THE CITY MANAGER, ORHIS DESIGNEE, TO IMPLEMENT THE PROVISIONS

WHEREAS, funding for the health care contributions mentioned in this agenda item is currently not budgeted in fiscal year 2019-20, and

WHEREAS, certain budgetary actions are required to fulfill this action.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the fiscal year 2019-20 Operating Budget in the amount of $1,998,200.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 9th day of June, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:
