Appendix C

Biological Resources Technical Information

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly a. ected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

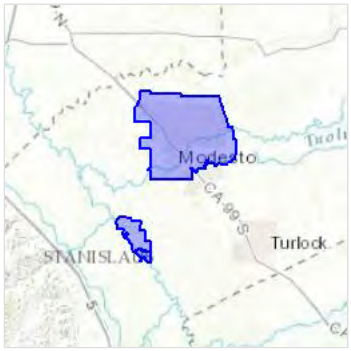
Project information

NAME

City of Modesto Wastewater Master Plan

LOCATION

Stanislaus County, California



Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

Not for consultation

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act requires Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can only be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Log in to IPaC.

2. Go to your My Projects list.
3. Click PROJECT HOME for this project.
4. Click REQUEST SPECIES LIST.

Listed species[1] are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service.

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS
San Joaquin Kit Fox Vulpes macrotis mutica No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/2873	Endangered

Reptiles

NAME	STATUS
Blunt-nosed Leopard Lizard Gambelia silus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/625	Endangered
Giant Garter Snake Thamnophis gigas No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4482	Threatened

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/2891	Threatened
California Tiger Salamander Ambystoma californiense There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/2076	Threatened

Fishes

NAME	STATUS
Delta Smelt Hypomesus transpaci. cus There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/321	Threatened
Steelhead Oncorhynchus (=Salmo) mykiss There is a **fi**nal critical habitat designated for this species. Your location overlaps the designated critical habitat. https://ecos.fws.gov/ecp/species/1007	Threatened

Insects

NAME	STATUS
Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/7850	Threatened

Crustaceans

NAME	STATUS

Vernal Pool Fairy Shrimp Branchinecta lynchi There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/498	Threatened
Vernal Pool Tadpole Shrimp Lepidurus packardi There is a **fi**nal critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/2246	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

This location overlaps the critical habitat for the following species:

NAME	TYPE
Steelhead Oncorhynchus (=Salmo) mykiss Northern California DPS https://ecos.fws.gov/ecp/species/1007#crithab	Final designated
Steelhead Oncorhynchus (=Salmo) mykiss South-Central California Coast DPS https://ecos.fws.gov/ecp/species/1007#crithab	Final designated
Steelhead Oncorhynchus (=Salmo) mykiss Southern California DPS https://ecos.fws.gov/ecp/species/1007#crithab	Final designated
Steelhead Oncorhynchus (=Salmo) mykiss Central California Coast DPS https://ecos.fws.gov/ecp/species/1007#crithab	Final designated
Steelhead Oncorhynchus (=Salmo) mykiss California Central Valley DPS https://ecos.fws.gov/ecp/species/1007#crithab	Final designated

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any activity that results in the take (to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct) of migratory birds or eagles is prohibited unless authorized by the U.S. Fish and Wildlife Service[3]. There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Conservation measures for birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Year-round bird occurrence data http://www.birdscanada.org/birdmon/default/datasummaries.jsp

The migratory birds species listed below are species of particular conservation concern (e.g. Birds of Conservation Concern) that may be potentially affected by activities in this location. It is not a list of every bird species you may find in this location, nor a guarantee that all of the bird species on this list will be found on or near this location. Although it is important to try to avoid and minimize impacts to all birds, special

attention should be made to avoid and minimize impacts to birds of priority concern. To view available data on other bird species that may occur in your project area, please visit the AKN Histogram Tools and Other Bird Data Resources. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

NAME	SEASON(S)
Allen's Hummingbird Selasphorus sasin https://ecos.fws.gov/ecp/species/9637	Migrating
Bald Eagle Haliaeetus leucocephalus https://ecos.fws.gov/ecp/species/1626	Year-round

What does IPaC use to generate the list of migratory bird species potentially occurring in my specified location?

Landbirds:

Migratory birds that are displayed on the IPaC species list are based on ranges in the latest edition of the National Geographic Guide, Birds of North America (6th Edition, 2011 by Jon L. Dunn, and Jonathan Alderfer). Although these ranges are coarse in nature, a number of U.S. Fish and Wildlife Service migratory bird biologists agree that these maps are some of the best range maps to date. These ranges were clipped to a specific Bird Conservation Region (BCR) or USFWS Region/Regions, if it was indicated in the 2008 list of Birds of Conservation Concern (BCC) that a species was a BCC species only in a particular Region/Regions. Additional modifications have been made to some ranges based on more local or refined range information and/or information provided by U.S. Fish and Wildlife Service biologists with species expertise. All migratory birds that show in areas on land in IPaC are those that appear in the 2008 Birds of Conservation Concern report.

Atlantic Seabirds:

Ranges in IPaC for birds off the Atlantic coast are derived from species distribution models developed by the National Oceanic and Atmospheric Association (NOAA) National Centers for Coastal Ocean Science (NCCOS) using the best available seabird survey data for the offshore Atlantic Coastal region to date. NOAANCCOS assisted USFWS in developing seasonal species ranges from their models for specific use in IPaC. Some of these birds are not BCC species but were of interest for inclusion because they may occur in high abundance off the coast at different times throughout the year, which potentially makes them more susceptible to certain types of development and activities taking place in that area. For more refined details about the abundance and richness of bird species within your project area off the Atlantic Coast, see the Northeast Ocean Data Portal. The Portal also offers data and information about other types of taxa that may be helpful in your project review.

About the NOAANCCOS models: the models were developed as part of the NOAANCCOS project: Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf. The models resulting from this project are being used in a number of decision-support/mapping products in order to help guide decision-making on activities off the Atlantic Coast with the goal of reducing impacts to migratory birds. One such product is the Northeast Ocean Data Portal, which can be used to explore details about the relative occurrence and abundance of bird species in a particular area off the Atlantic Coast.

All migratory bird range maps within IPaC are continuously being updated as new and better information becomes available.

Can I get additional information about the levels of occurrence in my project area of specific birds or groups of birds listed in IPaC?

Landbirds:

The Avian Knowledge Network (AKN) provides a tool currently called the "Histogram Tool", which draws from the data within the AKN (latest,survey, point count, citizen science datasets) to create a view of relative abundance of species within a particular location over the course of the year. The results of the tool depict the frequency of detection of a species in survey events, averaged between multiple datasets within AKN in a particular week of the year. You may access the histogram tools through the Migratory Bird Programs AKN Histogram Tools webpage.

The tool is currently available for 4 regions (California, Northeast U.S., Southeast U.S. and Midwest), which encompasses the following 32 states: Alabama, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New York, North, Carolina, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin.

In the near future, there are plans to expand this tool nationwide within the AKN, and allow the graphs produced to appear with the list of trust resources generated by IPaC, providing you with an additional level of detail about the level of occurrence of the species of particular concern potentially occurring in your project area throughout the course of the year.

Atlantic Seabirds:

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAANCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Facilities

Wildlife refuges

Any activity proposed on National Wildlife Refuge lands must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGES AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

WETLAND INFORMATION IS NOT AVAILABLE AT THIS TIME

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Technical Report—Draft

CULTURAL RESOURCES ASSESSMENT REPORT

City of Modesto River Trunk Realignment Project Stanislaus County, California

September 2017

Prepared for:

Jim Alves
City of Modesto
Public Works Department
Modesto, CA 95353

Prepared by:

Horizon Water and Environment, LLC
P.O. Box 2727
Oakland, CA 94612
Dean Martorana, MA, RPA
Senior Archaeologist

Limitations

This report contains confidential cultural resources location information; report distribution should be restricted to those with a need to know. Cultural resources are non-renewable, and their scientific, cultural, and aesthetic values can be significantly impaired by disturbance. To deter vandalism, artifact hunting, and other activities that can damage cultural resources, the locations of cultural resources should be kept confidential. The legal authority to restrict cultural resources information is in California Government Code 6254.1 and the National Historic Preservation Act of 1966, as amended, Section 304.

Executive Summary

The City of Modesto (City) is proposing a revised Wastewater Master Plan (Program) that contains a number of project-level and program-level components. This cultural resources assessment report addressed the project-level aspects of this Program called the *River Trunk Realignment Project* (project) as they pertained to the potential to impact or adversely affect archaeological resources. The City retained Horizon Water and Environment, LLC (Horizon) to complete the cultural resources assessment in support of the project.

This report documents cultural resources inventory methods and results as required for compliance with federal and California regulations. The study consisted of a literature review to identify previously recorded cultural resources that could be affected by the proposed project and a field survey to locate archaeological sites that may exist but have not yet been recorded.

No archaeological resources were identified during the course of the field survey, nor will any previously identified cultural resources be impacted by the proposed project. As a result, the project will not have an impact on significant cultural resources.

This report has been prepared based on certain key assumptions made by Horizon that substantially affect its conclusions and recommendations. These assumptions are that the information gathered during the records search is up to date and accurate, and that the field survey results accurately identified the presence or absence of archaeological resources visible on the ground surface. These assumptions, although thought to be reasonable and appropriate, may not prove to be true in the future. Horizon's conclusions and recommendations are conditioned upon these assumptions.

The archaeological inventory was performed based upon information obtained at the Central California Information Center (CCIC) of the California Historical Resources Information System and direct observation of site conditions and other information that is generally applicable as of August 2017. The conclusions and recommendations herein are therefore based on information available up to that point in time. Further information may come to light in the future that could substantially change the conclusions found herein.

Information obtained from these sources in this timeframe is assumed to be correct and complete. Horizon does not assume any liability for findings or lack of findings based upon misrepresentation of information presented to Horizon or for items that are not visible, made visible, accessible, or present at the time of the project area inventory.

This page intentionally left blank.

1 Introduction

1.1 Location and Setting

The Modesto is located in Stanislaus County, California, in the central San Joaquin Valley. The city is centrally located within California, approximately 70 miles southeast of Sacramento, 85 miles east of San Francisco, 90 miles northwest of Fresno, and 35 miles west of the foothills of the Sierra Nevada range (**Figure 1**). The Tuolumne River flows westerly through the southern portion of the city. Dry Creek, a tributary to the Tuolumne River, runs through the central portion of the city before draining into the Tuolumne River near South 9th Street and River Road. The proposed project is located in the south-central portion of the city, which is depicted on the Salida, Riverbank, Brush Land, and Ceres 7.5' USGS topographic quadrangles, in Sections 5 6, 32, and 33, Township 3-4 South, Range 9 East (**Figure 2**).

1.2 Project Description and Area of Potential Effects

The River Trunk Realignment Project, includes the following component elements:

- **Dry Creek Crossing and Pipeline to River Trunk Pump Station**

  A new 48-inch siphon would be installed to replace the existing Dry Creek crossing. This pipeline would begin at the parking lot located at the Gallo property, cross beneath Dry Creek, traverse vacant land between the creek and 9th Street, and terminate at the proposed River Trunk Pump Station. Trenchless pipeline construction methods would be employed, whereby insertion pits would be established at the Gallo property, to the west of Dry Creek, on either side of 9th Street, and at the River Trunk Pump Station site.

- **River Trunk Pump Station**

  The River Trunk Pump Station would be constructed at the corner of B Street and Beard Street. The facility would have five centrifugal submersible pumps (four on duty and one standby pump).

- **River Trunk Force Main**

  Two force mains would be constructed to convey flows from the River Trunk Pump Station to a discharge structure in Tuolumne Boulevard. One force main would be 30 inches in diameter and the second would be 42 inches in diameter.

- **Gravity Pipelines along Tuolumne Boulevard, Colorado Avenue, Neece Drive, and Pelton Avenue**

  This pipeline would be 42 inches in diameter along Tuolumne Boulevard. Along Colorado Avenue, the pipeline would range in size between 48 inches, 54 inches, and 60 inches diameter down to the Sutter Plant.

- **Shackelford Pump Station and Force Main**

  The pump station would consist of a rectangular wet well (approximately 24 feet deep) and would operate with two duty pumps and one standby pump.

Area of Potential Effects

The area of potential effects (APE) is limited to the area of proposed ground disturbance and any property, or any portion thereof, that would be physically altered or destroyed by the proposed project (undertaking) (see Figure 2). For example, construction activities associated with the linear pipeline alignments—described above—that would include both trenching and jack-and-bore methods. The depth and width of the trenches would vary depending upon the size of the pipe and take into consideration the presence of other existing utility lines. For the new effluent outfall pipeline, the width of the trench would be approximately 8 feet wide and approximately 11 feet deep. Where new or replacement sewer pipelines and outfall pipelines would cross creeks (e.g., Dry Creek and Tuolumne River), or where open trench methods would be problematic due to the presence of underground utilities, railroad crossings, or other right-of-way issues, the City would use trenchless methods. In these instances, only the bore pits would be included in the APE (as shown in **Figure 3**).

In the case of the proposed pump stations, the footprint of the pump station is included in the APE, as well as any surrounding staging areas or grounds associated with the pump station. An access road between Crows Landing Road and Shackelford Pump Station is also in the APE.

1.3 Regulatory Setting and Need for Study

1.3.1 State of California Regulations

CEQA and State CEQA Guidelines

The proposed project must comply with California Environmental Quality Act (CEQA) (Public Resources Code [PRC] 21000 et seq. and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Chapter 3), which determine, in part, whether the project has a significant effect on a unique archaeological resource (per PRC 21083.2) or a historical resource (per PRC 21084.1).

CEQA Guidelines CCR 15064.5 notes that "a project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment." Lead agencies are required to identify potentially feasible measures or alternatives to avoid or mitigate significant adverse changes in the significance of a historical resource before they approve such projects. According to the CEQA guidelines, historical resources are:

- Listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (per PRC 5024.1(e));
- Included in a local register of historical resources (per PRC 5020.1(k)) or identified as significant in a historical resource survey meeting the requirements of PRC 5024.1(g);
- Determined by a lead state agency to be historically significant; or

Unique archaeological resources as defined in PRC 21084.1.

Assembly Bill 52, which went into effect on July 1, 2015, requires, per PRC 21080.3.1, that CEQA lead agencies consult with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project, if so requested by the tribe, and the agency intends to release a negative declaration, mitigated negative declaration, or environmental impact report for a project. The bill also specifies, under PRC 21084.2, that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource (TCR) is a project that may have a significant effect on the environment. This latter language was added to the CEQA checklist in 2016. The City, as the project's CEQA lead agency, will consult with Native American tribes pursuant to PRC 21080.3.1.

Defined in Section 21074(a) of the PRC, TCRs are:

(1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

   a. Included or determined to be eligible for inclusion in the CRHR; or

   b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

In addition to Section 21074(a), above, TCRs are further defined under Section 21074(b) and (c) as follows:

(b) A cultural landscape that meets the criteria of subdivision (a) is a TCR to the extent that the landscape is geographically defined in terms of the size and scope of the landscape; and

(c) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms to the criteria of subdivision (a).

Mitigation measures for TCRs must be developed in consultation with the affected California Native American tribe pursuant to the newly chaptered Section 21080.3.2, or according to Section 21084.3. Section 21084.3 identifies mitigation measures that include avoidance and preservation of TCRs and treating TCRs with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource.

California Register of Historical Resources

PRC Section 5024.1 establishes the CRHR. The register lists all California properties considered to be significant historical resources. The CRHR includes all properties listed as or determined to be eligible for listing in the National Register of Historic Places (NRHP), including properties evaluated under Section 106 of the National Historic Preservation Act (NHPA). The criteria for listing are similar to those of the NRHP. Criteria for listing in the CRHR include resources that:

1) Are associated with the events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

2) Are associated with the lives of persons important in our past;

3) Embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual, or possess high artistic values; or

4) Have yielded, or may be likely to yield, information important in prehistory or history.

The regulations set forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

1.3.2 Federal Regulations

Construction of the proposed project by the City will require a Clean Water Act Section 402 permit from the Central Valley Regional Water Quality Control Board. As a result, the project constitutes a federal undertaking as defined by Title 54 United States Code (USC) Section 300101 of the NHPA and mandates compliance with 54 USC Section 306108, commonly known as Section 106 of the NHPA

and its implementing regulations found under Title 36 of the Code of Federal Regulations (CFR) Section 800, as amended in 2001. To comply with Section 106 of the NHPA, the project proponent must "take into account the effect of the undertaking on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register."

The implementing regulations of the NHPA require that cultural resources be evaluated for NRHP eligibility if they cannot be avoided by an undertaking (proposed project). To determine site significance through application of NRHP criteria, several levels of potential significance that reflect different (although not necessarily mutually exclusive) values must be considered. As provided in Title 36 CFR Section 60.4, "the quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association" must be considered within its historic context. Resources must also be at least 50 years old, except in rare cases, and, to meet eligibility criteria of the NRHP, must:

(A) Be associated with events that have made a significant contribution to the broad patterns of our history; or

(B) Be associated with the lives of persons significant in our past; or

(C) Embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

(D) Have yielded, or may be likely to yield, information important in prehistory or history.

For archaeological sites evaluated under Criterion D, integrity requires that the site remain sufficiently intact to convey the expected information to address specific important research questions.

Cultural resources also may be considered separately under the National Environmental Protection Act per Title 42 USC Sections 4321 through 4327. These sections require federal agencies to consider potential environmental impacts and appropriate mitigation measures for projects with federal involvement.

1.4 Personnel

Field work, analysis, and reporting were carried out by the below-listed professionals who meet the U.S. Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation (Per Title 48 of the CFR, Section 44716, as amended in 1983). Procedures complied with NHPA Section 106 as set forth in Title 36 of the CFR, Section 800.

- Dean Martorana, RPA (Horizon), holds a master's degree in anthropology from California State University, Long Beach. He served as the lead archaeologist on the project. Mr. Martorana has 15 years of experience in both historic and prehistoric archaeology, including 10 years of experience in cultural resources management in northern California.

- Eric Durksen received a B.A. in 2017 from California State University, Sacramento in Anthropology with a specialization in Archaeology. He has 7 years of experience as a field

technician and field crew member on a number of archaeological projects throughout California and Oregon.

2 Project Context

2.1 Environmental Setting

The proposed project is located near the east side of the northern San Joaquin Valley. The area is generally flat and has an elevation of approximately 100 feet above mean sea level. Stanislaus County, as well as the larger San Joaquin Valley, was formerly dominated by riparian woodland, oak savannah, wetlands, saltbush, and perennial grassland communities that harbored an abundance of wildlife and plant species. The project area would have reflected this type of ecological setting prehistorically, especially given the proximity to the Tuolumne River. Presently, the area is dominated by urban and agricultural development; some remnant habitats exist along the Tuolumne River in protected flood plains.

Buried Deposits Forecast

Because archaeological sites may be buried with no surface manifestation, precluding their observation during pedestrian survey, the potential for buried archaeological resources within a given project area requires assessment. The probability that a buried archaeological resource exists in a project area is governed by several factors: (1) the presence of a buried, "stable land surface" called a paleosol; (2) the age of this paleosol; (3) the relative availability of a subsistence base required for human sustenance near the buried paleosol; and (4) the presence or absence of known archaeological resources in the area. Assessments that evaluate the potential for buried resources are commonly referred to as "geoarchaeological studies."

Soils information and geoarchaeological data (Natural Resources Conservation Service 2016; Rosenthal et al. 2004) indicate that the soils within the Program area represent a variety of alluvial soils (e.g., Dinuba loamy sand, Hanford sandy loam, Madera sandy loam, Modesto clay loam, San Joaquin sandy loam, and Tujunga loamy sand) that date from the late Pleistocene through the Holocene Epoch and have depths of up to 80 inches. These soils are largely considered to have low sensitivity ratings for buried archaeological remains, although the Hanford series is considered to be moderately sensitive and the Tujunga is rated as highly sensitive for buried archaeological remains (Rosenthal et al. 2004). Proximity to the Tuolumne River increases the potential for buried resources within the Program area and project study area.

2.2 Prehistoric Context

Very little archaeological work has been conducted in the Modesto area, or in the San Joaquin Valley in general; therefore, the archaeology of the project area is understood within the prehistoric context developed for the Central Valley. Since the early 1930s a number of schemes have been set forth by researchers to organize the archaeological data of California into a chronological framework. The Central Valley sequence established by Lillard, Heizer and Fenenga in 1939 is particularly notable. Based on archaeological investigations in the lower Sacramento Valley, Lillard et al. divided human prehistory into three broad cultural horizons: Early, Middle, and Late. This chronology was first known as the Delta sequence and later became the basis of Richard Beardsley's Central California Taxonomic System (CCTS) (Moratto 2004:181). The system relies on the identification of certain characteristics such as burial patterns, shell bead types, stone tools, and even where the sites tend to occur. These traits and characteristics are used to place an archaeological resource in a specific time period. The CCTS has continued to undergo significant refinement but remains the framework within

which California archaeologists explain cultural change. The general system is still widely used by archaeologists, but it has been expanded and revised to include economic and technological strategies, socio-politics, trade networks, population density, and variations of artifact types to differentiate between cultural periods. The current chronology (Rosenthal et al. 2010:150) for Central California archaeology includes:

- Paleo-Indian: 11,550 to 8550 B.C.
- Lower Archaic: 8550 to 5550 B.C.
- Middle Archaic: 5550 to 550 B.C.
- Upper Archaic: 550 B.C to 1100 A.D.
- Emergent: 1100 A.D. to Historic

The Paleo-Indian Period (11,550 to 8,550 B.C.) is generally characterized by big-game hunters occupying broad geographic areas. However, archaeological deposits from the Paleo-Indian period are rarely found in the Central Valley and those that have been identified have largely been discovered at the south end of the San Joaquin Valley near Tulare Lake. Post-depositional processes, mainly glacial outwash occurring at the end of the Pleistocene either destroyed or deeply buried much of the existing evidence of human activity in the region from this time period. As result, little is known about Paleo-Indian lifeways in the region. (Moratto 2004:214).

Similar to the preceding period, the Lower Archaic Period (8550 to 5550 B.C.) is presumed to reflect a mobile population who continued to hunt big game. There are few localities in the Central Valley associated with this period, and those that have been found are largely isolated artifacts consisting of large wide-stemmed and leaf-shaped projectile points, along with flaked stone crescents. Only two sites with associated deposits of faunal and shell remains have been identified for the Lower Archaic; one at Buena Vista Lake in the southern San Joaquin Valley (Rosenthal, et al. 2010: 151-152) and one in Sacramento (Tremaine 2008). Some sites in the Sierra Nevada foothills from this period, however, indicate the use of milling equipment (hand stones and milling stones) to process seeds and nuts.

The Middle Archaic Period (5550 to 550 B.C.) indicates a shift to a more settled way of life that is reflected by substantial, though often deeply buried, archaeological sites with artifacts that are more elaborate in design, infer a more diverse subsistence regime, and indicate interregional trade. Sites are often situated along the major rivers and streams within the Central Valley, emphasizing a focus on riverine and marsh habitats. The Windmiller Tradition or Pattern, which was first identified in sites around the Sacramento-San Joaquin River Delta, is often considered representative of this period. Characteristic artifacts from this period include a variety of fish hooks and spears; large stemmed and leaf-shaped projectile points of obsidian and chert; shaped charmstones of alabaster, steatite, or marble; and a variety of *Haliotis* and *Olivella* shell ornaments and beads, respectively. Mortars and pestles, associated with acorn preparation, become commonplace by the middle of the period. The presence of ventrally and dorsally extended burials with a western orientation is particularly indicative of the Windmiller Pattern.

Increased sedentism and technological specialization are evidenced during the Upper Archaic Period (550 B.C to 1100 A.D.) as populations exploited more diverse resources and established trade relationships. Mortars and pestles became the primary ground stone implements, suggesting that acorns had become a more important dietary staple. Regional diversity in artifact styles, such as

Haliotis shell ornaments, bone tools, and ground charmstones or plummets become more pronounced; burial postures are also varied.

Archaeological sites from the Emergent Period (A.D. 1100 to the historic-period) indicate increased social complexity and the development of large, central villages with resident political leaders and specialized activity sites. Enhanced regional diversity in terms of artifact styles, housing, and interment methods is evident in the archeological record. Artifacts associated with the period include the bow and arrow, small corner-notched projectile points, and a variety of shell and stone beads and ornaments.

2.3 Ethnohistoric Context

The Modesto area lies within the ancestral territory of the Northern Valley Yokuts. "Yokuts" is a term applied to a large and diverse number of people inhabiting the San Joaquin Valley and Sierra Nevada foothills of central California. The Northern Valley Yokuts inhabited a 40- to 60-mile-wide area straddling the San Joaquin River, south of the Mokelumne River, east of the Diablo Range, and north of the sharp bend that the San Joaquin River takes to the east-northeast near Mendota in Fresno County. The Southern Valley Yokuts occupied the San Joaquin Valley south of the bend in the river. Although they were divided geographically and ecologically, the two Yokuts divisions have a common linguistic heritage (Wallace 1978:462).

The Northern Valley tribes closely resembled the Yokuts groups to the south, although there were some cultural differences. The northerners had greater access to salmon and acorns, two important dietary resources, than the Southern Yokuts, and some of their religious practices reflected the influences of groups to their north, such as the Miwok. While inhumation was the usual practice in the southern valley, the Northern Valley Yokuts either cremated their dead or buried them in a flexed position (Wallace 1978:464, 468). A chief headed the tribal villages, which averaged around 300 people. Family houses were round or oval in shape, sunken, with a conically shaped pole frame, and covered with tule mats. Each village also had a lodge for dances and other community functions, as well as a sweathouse (Wallace 1978:462-464).

The Northern Valley Yokuts built their riverside villages on elevated areas along the water's edge to avoid the spring floods, which were a result of heavy Sierra Nevada snow melts. Living beside rivers and streams provided plentiful river perch, Sacramento pike, salmon, and sturgeon. Hunting provided waterfowl such as geese and ducks as well as terrestrial animals such as antelope, elk, and brown bear, although by all indications, fish constituted a majority of the diet. The surrounding woodland, grasslands, and marshes provided acorns, tule root, and seeds.

The Northern Valley Yokuts used bone harpoon tips for fishing, stone sinkers for nets, chert projectile points for hunting, mortars and pestles, scrapers, knives, and bone awl tools to procure and process food. Marine shells, procured from coastal tribes, were used for necklaces and other adornments, and marine shell beads sometimes accompanied the deceased. They used tule reed rafts to navigate the waterways for fishing and fowling. The Yokuts also manufactured a range of intricate baskets for a variety of purposes, including storing, cooking, eating, winnowing, hopper mortars, the transport of food materials, and ritual. Very little is known of the Northern Valley Yokuts' clothing, but drawings of their tattoos show that they served not only as a decoration but also as a form of identity (Wallace 1978:464).

Initially, the Diablo Range served as a natural barrier against heavy recruitment of Native Californians by the Spanish, who established missions along the coast. However, by the early nineteenth century, Spanish and, later, Mexican missionaries began to explore the inner valleys in search of potential neophytes. The Yokuts resisted recruitment, and California Indians from a variety of tribes sought refuge among the Yokuts after fleeing the missions. Introduced diseases, destruction of traditional resources from cattle grazing, and forced relocation took a heavy toll on the Northern Yokuts. Despite decades of hardship, many individuals who can trace their ancestry to the Northern Valley Yokuts continue to live and thrive in the Central Valley and throughout California and the United States.

2.4 Historic-Era Context

The historic era began in Stanislaus County when the first Spanish expedition entered the San Joaquin Valley in 1806 under the leadership of Gabriel Moraga. Traveling north and northwest through the region in search of possible mission sites, Moraga's party explored up what came to be known as the Stanislaus River. Moraga visited the area again in 1808 and 1810 (Kyle et al 2002:516-517).

After Mexico gained its independence from Spain in 1822, two additional expedition forces entered the area; however, the purposes of their campaigns were no longer exploratory. Soldiers were sent into the Central Valley to recover stolen animals and punish rebellious Indians in order to reduce the attacks upon coastal towns, missions, and ranchos.

Americans also began to enter the region during the Mexican period. In both 1827 and 1828, Jedediah Smith entered the San Joaquin Valley via the Tejon Pass and trapped beavers along the San Joaquin, Kings, and other rivers and streams that flowed from the Sierra. Smith was followed by fellow trappers such as Peter Ogden, Ewing Young, Kit Carson, and Joseph Walker.

The first permanent European settlement in Stanislaus County may have occurred when two land grants were issued by the Mexican government in 1843. The first was the Rancho El Pescadero on the west side of the San Joaquin River near the border of what would eventually become San Joaquin County. The second was the Rancheria del Rio de Estanislao located north of the Stanislaus River bordering Tuolumne County. Two additional land grants were issued the following year. These were the Ranchos del Puerto and Orestimba, both of which were on the west side of the County near Rancho Pescadero (Tinkham 1921).

The City of Modesto came into being in 1870 when the Central Pacific Railroad announced the location would be the end point of the next extension of the rail line as it progressed south through the Central Valley (Kyle et al 2002:521). By the time the tracks were completed in November of that year, a viable town had already been established by entrepreneurs (City of Modesto 2016). Modesto residents were among California's first irrigation advocates, and by 1904 a system of canals had been constructed in order to allow more productive agriculture. During the nineteenth century grain-growing was Stanislaus County's dominant agricultural activity. Stock-raising, dairying, fruit and nut orchards, and vegetable farms all became more important over time. When Prohibition ended in 1933, the Gallo brothers came to Modesto, bringing the wine business to the area on an industrial scale. In the twenty-first century, almonds and walnuts are the most lucrative local crops, although fruit, vegetables, livestock, and other agricultural products remain important. Modesto is still the most important town in the region, and is the Stanislaus County seat.

3 Native American Consultation and Archival Research

In accordance with the U.S. Secretary of the Interior's Standards and the Guidelines for Archaeology and Historic Preservation (Title 48 CFR Section 44716 [amended 1983]), the goals of this archaeological inventory were to identify and completely document the location, qualities, and condition of any potential historic properties in the project's APE. Methods employed to achieve these goals follow.

3.1 Native American Consultation

Native American consultation was conducted pursuant to PRC Section 21080.3.1 by the City of Modesto. A request to the Native American Heritage Commission (NAHC) for a list of tribes with a traditional and cultural association with the proposed Program resulted in the identification of two tribes: the Northern Valley Yokuts and the Southern Sierra Miwok Nation. The City notified these tribes about the Program pursuant to PRC Section 21080.3.1 in a letter dated June 8, 2016. A letter was also sent to the Tule River Indian Tribe, as there had been consultation with that tribe in the past. The City did not receive requests for formal consultation under PRC Section 21080.3.1(b)(2) from any of those contacted. Follow-up phone calls were made to the Tule River Indian Tribe but did not receive a response. All correspondence with tribes related to PRC Section 21080.3.1 is provided in **Attachment 1**.

Table 1. Native American Consultation

Name of Contact	Tribe	Letter Date	Comments
Ms. Katherine Erolinda Perez, Chairperson	North Valley Yokuts Tribe	06/08/2016	N/A
Ms. Lois Martin, Chairperson	Southern Sierra Miwok Nation	06/08/2016	N/A
Mr. Neil Peyron, Chairperson	Tule River Indian Tribe	06/08/2016	City left message in fall 2016 but did not receive a response.

3.2 Archival Research

A records search for the River Trunk Realignment Project study area was conducted by the CCIC of the California Historical Resources Information System at California State University, Stanislaus, before initiating the field study. The purpose of the records search was to determine if the River Trunk Project study area had previously been surveyed for cultural resources, and to identify any previously recorded cultural resources in, or within one-quarter mile of, the study area. The CCIC archival research (Records Search File No. 10317N) included review of the California Inventory of Historic Resources, local historical inventories, historical literature, and historical maps including USGS topographic maps, General Land Office maps, and Rancho Plat Maps. The records search results are presented in **Attachment 2**.

The records search indicated that 11 previous studies had included portions of the River Trunk Project study area; one overview also included the study area. These studies are listed in **Table 2**; another 21 studies had been conducted within the one-quarter mile search area. All of the studies listed were conducted in the study area east of 7th Street.

Table 2: Previously Conducted Cultural Studies within the Proposed Project Study Area

CCIC Report No. (ST-)	Author	Date	Title
7775	Helton, C. and Cardenas, G.	2011	Cultural Resources Monitoring and Mitigation Plan, Almond 2 Power Plant, Turlock Irrigation District.

Data source: CCIC of the California Historical Resources Information System at California State University, Stanislaus.

The records search identified five previously recorded cultural resources within the River Trunk Project study area (**Table 3**). Two of these resources, the Tidewater-Southern Railroad wooden trestle bridge over the Tuolumne River (P-50-1811) and the Tidewater-Southern Railroad line, no longer exist. One of the resources, the Seventh Street Bridge (P-50-514), has been determined eligible for listing in the NRHP. The remaining resources have been determined not eligible for listing in the NRHP.

Table 3. Previously Recorded Cultural Resources within Proposed Project Study Area

Resource No. (P-50-X)	Resource Trinomial (CA-STA-X)	Recorded by	Date Recorded	Resource Information
0001	350H	various	1999–2007	Southern Pacific Railroad line; multiple sections recorded. Determined not eligible for the NRHP.
0083	425H	various	1992	Tidewater-Southern Railroad line; multiple sections recorded. Section in project area removed.
0514	—	J. Snyder W. Hill	1991 1992	Southern Pacific Railroad Tuolumne River Bridge; Bridge #113.75. Originally constructed 1897; significantly rebuilt 1944-45. Determined not eligible for the NRHP.
0617	—	Office of Historic Preservation L. Martin	1986 2000	Seventh Street Bridge; Lion Bridge; Bridge #38C-23; City of Modesto Designated Landmark Preservation Site #14. Constructed 1916. Determined eligible for listing in the NRHP.
1811	—	J. Snyder	1991	Tidewater-Southern Railroad Bridge; constructed 1914. Burnt down 2001.

Data source: CCIC of the California Historical Resources Information System at California State University, Stanislaus.

Another six previously recorded resources within one-quarter mile of the River Trunk Project alignment were identified. All of the resources are from the historic era, and include office and industrial buildings, features (e.g., a pump station and a water tower), and one scatter of historic artifacts.

The list of City of Modesto Designated Landmarks provided by the CCIC includes 59 resources, many of which are residences and buildings, but cemeteries and heritage trees, among other features, are also included. A vast majority are in the Modesto downtown core area. The Seventh Street Bridge is listed as Designated Landmark Preservation Site #14, and the Dryden Golf Course is listed as #52.

The Directory of Historic Places in the Historic Property Data File for Stanislaus County, compiled by the Office of Historic Preservation, lists a large number of resources in the Program area. While most of these are in Modesto, some are also situated in Ceres. These range from residences and buildings to water and transportation infrastructure, along with other features. A vast majority are assigned the California Historical Resources Code of 52D (identified as a contributor to a district that is eligible for local listing or designation) or 6Y (determined ineligible for listing on the NRHP).

Historic USGS topographic maps and historic aerials were examined in addition to the records search materials. USGS maps from 1915/1916 indicate that the area around the railroad yards between 7th and 9th streets were already well developed by that era, and that much of the town west of present-day State Highway 99 and south of Tuolumne Avenue to South Avenue was laid out, but not developed. South of South Avenue to the Tuolumne River, acreage within the River Trunk Project study area contained just a scattering of homes. By the 1940s (USGS 1939, 1941), much of the area within the River Trunk Realignment Project vicinity was well developed. The most significant modification was the construction of Highway 99 as a freeway through town by the early 1970s. In the area of the proposed Shackelford Pump Station, USGS topographic maps indicate that a number of buildings were in the vicinity (but not at the location) as early as 1939. These had disappeared by 1953 and were replaced by two building south of the proposed pump site. By 1969 (USGS 1969) the full contingent of buildings visible in the earliest aerial photograph (1967) were present, along with several railroad spurs to individual buildings. This is corroborated by aerial photographs (NetrOnline 2017) that indicate a variety of businesses (trucking, perhaps a feed lot) once occupied the site from at least 1967 until around 2002. After that time, the businesses are slowly dismantled and the immediate project area for the proposed Shackelford Pump Station is cleared of buildings by 2012.

4 Inventory Methods and Results

4.1 Pedestrian Survey

A field review of the River Trunk Realignment Project footprint was conducted by qualified archaeologists from Horizon on June 15 and August 17, 2017. The field investigation consisted of two approaches. A pedestrian survey was conducted in areas where open trenching or bore pit excavation is proposed and the ground surface is undeveloped or where native ground surface is visible. A cursory inspection was conducted in areas where the ground surface is developed or paved and no native ground surface is visible. Figure 3 shows both the areas subject to pedestrian survey and those areas subject to cursory survey. The pedestrian component consisted of walking the proposed alignment or areas of proposed excavation using 10-meter transects. Any exposures of subsurface were more closely inspected and trowel exposures were also applied to the surface in areas that were heavily vegetated or grassy. The cursory inspection was conducted by car and any areas that were undeveloped were more closely inspected.

Approximately 6,850 linear feet (1.3 miles) and 1.5 acres at the Shakelford Pump Station were subject to intensive pedestrian survey. These areas included the east end of the pipeline from the Gallo property west to the River Trunk Pump Station and to Highway 99; from Neece Drive, two segments across the Dryden Golf Course to the Tuolumne River; and the proposed footprint of the Shackelford Pump Station and access road. The proposed location of the River Trunk Pump Station is currently a fully developed oil and gas storage facility and, therefore, was not subject to pedestrian survey. Other areas subject to cursory survey were paved streets in the City of Modesto, including Tuolumne Boulevard, Colorado Avenue, Neece Drive, and Pelton Avenue. The Sutter Plant is also fully developed and was not surveyed.

4.2 Survey Results

Dry Creek Crossing and Pipeline to River Trunk Pump Station

This section of the pipeline was surveyed using pedestrian techniques. The exception was the proposed bore under Dry Creek, which was not accessible and no ground disturbance is proposed for this section of the pipeline. The bore pit, which is located on the Gallo Winery property, was surveyed; however, the entire area is under landscaped grasses and has been heavily graded. The survey of the pipeline west of Dry Creek was resumed in the open flood plain. Despite the heavy grass cover, the majority of the surface was highly visible in this section. The section from the River Trunk Pump station to B Street was also heavily vegetated and has been previously graded. The proposed pipeline would extend under a Union Pacific Railroad bridge and vehicle bridge for South 7th Street. In addition, the section closest to B Street has had some recent grading and construction of an access road that proceeds west toward the Tuolumne River and Route 99. The area for the proposed River Trunk Pump Station is currently an oil and gas storage facility that was developed and, therefore, not subject to pedestrian survey. No evidence of cultural resources was identified.

Shackelford Pump Station and Force Main

A new gravity pipeline is proposed near the northwestern side of the Dryden Golf Course that would extend from Neece Drive to the Dryden Golf Course parking lot and cross the golf course toward the Tuolumne River. This section was subject to pedestrian survey. The surface was mostly covered by

grasses for the golf course or were otherwise developed. However, the riverbank of the Tuolumne River was open and was surveyed more closely. On the eastern side of the river is an area proposed for the Shackelford Pump Station and an access road from Crows Landing Road to the pump. This area was also subject to pedestrian survey. The surface was previously graded and consisted of loose gravel. The area closest to the river was covered in tall grasses (e.g., Arundo). No evidence of cultural resources was identified, although archival research indicated that industrial buildings were once at that location.

Gravity Pipelines along Tuolumne Boulevard, Colorado Avenue, Neece Drive and Pelton Avenue City

The remaining proposed gravity pipelines are planned in city streets of Modesto listed in the header above. These alignments were subjected to cursory inspection because they are under city streets and no visible ground surface is available to survey. The exception was the location of the alignment from the south end of Colorado Avenue, across Dryden Golf Course to the Sutter Plant, which was subject to pedestrian survey. No evidence of cultural resources was identified.

No archaeological resources were identified within the proposed project study area as the result of the archaeological field survey.

5 Summary and Recommendations

The City of Modesto is proposing a revised Waste Water Master Plan that contains a number of project-level and program-level components. This document addressed the project-level aspects of this Program called the River Trunk Realignment Project as it pertains to the potential to impact or adversely affect archaeological resources. Archival research and a pedestrian survey did not identify any archaeological resources within the APE. One previously recorded historic resource, the Seventh Street Bridge (P-50-514), which has been determined eligible for listing in the NRHP, will not be impacted; the proposed alignment will be bored under this bridge.

Given the rate of landscape change in the San Joaquin Valley and the proximity of the proposed alignments and proposed facilities to areas of urban, railroad, and commercial activities, the existence of substantial and intact surface manifestations of cultural activity is not expected. Although no archaeological sites were identified by the archaeological inventory, archaeological sites may be buried with no surface manifestation. Furthermore, the soils that underlie the Project location have a moderate to very high sensitivity for the presence of buried archaeological remains. If prehistoric or historic-era materials are encountered, all work in the vicinity should halt until a qualified archaeologist can evaluate the discovery and make recommendations pursuant to 36 CFR Section 800.13(b). Prehistoric materials will most likely include obsidian and chert flaked-stone tools (e.g., projectile points, knives, choppers), tool-making debris, or milling equipment, such as mortars and pestles. Historic materials might include remains of agricultural implements, stone or concrete footings and walls, and deposits of metal, glass, and/or ceramic refuse.

The possibility of encountering human remains cannot be discounted. Section 7050.5 of the California Health and Safety Code states that it is a misdemeanor to knowingly disturb a human burial. If human remains are encountered, work must halt in the vicinity of the remains and, as required by law, the Stanislaus County coroner should be notified immediately. An archaeologist should also be contacted to evaluate the find. If human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of that determination. Pursuant to California PRC Section 5097.98, the NAHC, in turn, will immediately contact an individual who is most likely descended from the remains (i.e., the Most Likely Descendant). The Most Likely Descendant has 48 hours to inspect the site and recommend treatment of the remains. The landowner is obligated to work with the Most Likely Descendant in good faith to find a respectful resolution to the situation and entertain all reasonable options regarding the Most Likely Descendant's preferences for treatment.

MODESTO
CALIFORNIA
Utilities Department

June 8, 2016

Lois Martin, Chairperson
Southern Sierra Miwuk Nation
P.O. Box 186
Mariposa, CA 95338

Subject: City of Modesto Utilities Department Wastewater Master Plan Update Environmental Impact Report

Dear Chairperson Martin,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Wastewater Master Plan (WWMP) Update (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its wastewater service system through development of a wastewater master plan, which reviews existing and planned sanitary sewer infrastructure relative to the projected urban growth of the City. The City has made a number of improvements that were identified in the 2007 Wastewater Master Plan but still faces challenges associated with aging infrastructure, providing reliability of critical facilities and, for future growth, providing increased capacity and extending infrastructure when it is needed.

The Program would consist of numerous Capital Improvement Projects (CIPs) collectively intended for system-wide implementation needed to ensure adequate wastewater infrastructure and services are available to meet wastewater demand requirements under both existing and future developed conditions. The Program all incorporated areas of Modesto, a portion of north Ceres, the unincorporated community of Empire, and unincorporated "islands" in Stanislaus County that are served by agreement with the City (Figure 1). The Sutter Avenue Primary Treatment Plant (Primary Plant or Sutter Plant) is in the southwestern portion of Modesto adjacent to the north bank of the Tuolumne River. The Jennings Road Secondary Treatment Plant (Secondary Plant or Jennings Plant) is approximately 6.5 miles southwest of the Modesto urban area and located on City-owned land on the eastern side of the San Joaquin River. These areas are shown in Figure 2.

The Program involves several improvements to the City's collection system, such as replacement or construction of new trunk sewers or pump stations, construction of new parallel sewers, and removal of storm drain cross connections. Proposed improvements at the Sutter Plant include, but are not limited to, upgrading the influent pump station to increase its hydraulic capacity to convey peak wet weather flows, improvements to the headworks facilities, and decommissioning of primary treatment and solids handling facilities. The Program also includes outfall pipeline improvements, such as replacement of

existing pipe crossings under the Tuolumne River and construction of a new third outfall pipeline from the Sutter Plant to the Jennings Plant. At the Jennings Plant, the Program includes upgrades to the secondary and Cannery Segregation treatment facilities, and construction of new primary treatment and solids handling facilities.

Most of the proposed CIPs would be implemented within the City's sewer service area, the Sutter Plant, and the Jennings Plant. The Program also proposes a third outfall pipeline connecting the Sutter and Jennings Plants (Figure 3). The exact locations of some of the proposed new facilities (e.g., collection system improvements and outfall pipeline) have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

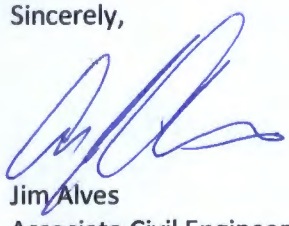
Pursuant to Public Resources Code Section 21080.3.1 *et seq.*, the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. If you wish to request the consultation, or if you have any questions, please contact:

Jim Alves
Associate Civil Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4600
Modesto, CA 95353
Phone: (209) 571-5557
Email: jalves@modestogov.com

If you do not contact us within 30 days following receipt of this letter, the City of Modesto Utilities Department will proceed with processing the above referenced application with the assumption that the project will not have a potential effect on tribal cultural resources. If consultation is requested, please provide the name and contact information of the designated lead contact person as part of your request. The City will contact the designated person to set a meeting date to begin consultation within 30 days of our receipt of your request.

More detailed information about this project is available, at your request. Thank you for giving this matter your prompt attention.

Sincerely,



Jim Alves

Dear Ms. Offermann:

The Central California Information Center received your record search request for the project area referenced above, located on the Brush Lake, Ceres, Riverbank and Salida USGS 7.5' quadrangles in Stanislaus County. The following reflects the results of the records search for the project study area and radius:

As per data currently available at the CCaIC, the locations of resources/reports are provided in the following format: ☒ custom GIS maps ☐ shapefiles ☐ hand-drawn maps

Summary Data:

Resources within project area:	5: unrecorded portions of P-50-000001 (Southern Pacific RR), P-50-000083, 514, 617, and 1811 **Note:** See the attached Directory of Properties in the Historic Property Data File for Ceres & Modesto; these resources are not mapped, there may be additional historic properties within the project area/radius.
Resources within 1/4 mi radius:	6: P-50-000084, 438, 439, 524, 1999, 2018 (see Note as referenced above).
Reports within project area:	12: ST-0000035 (overview); ST-01435, 1836, 2759, 2801, 3995, 4592, 4816, 6345, 6352, 7537, 7775
Reports within 1/4 mi radius:	21: ST-02222, 2848, 2930, 3747, 3878, 3882, 4296, 4760, 4849, 5007, 5358, 5574, 6775, 6777, 6915, 7076, 7388, 7589, 7828, 7946, 8208

Resources known to have value to local cultural groups: None have been formally reported to the CCIC.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS).

Note: Billing will be transmitted separately via email by our Financial Services office *($926.55), payable within 60 days of receipt of the invoice.

Sincerely,

E. A. Greathouse, Coordinator
Central California Information Center
California Historical Resources Information System

SITE NAME: Southern Pacific San Joaquin Valley Mainline
SITE NUMBERS: SPM-1 through SPM-35
QUAD SHEET: Various; see site forms
PIPELINE LOCATION: Various; see site forms

Ceres, Salida 7.5' 5/96

Description of Feature

The proposed Mojave pipeline alignment crosses the Southern Pacific Railroad's San Joaquin Valley lines at 35 places in Kern, Tulare, Fresno, Madera, Merced, Stanislaus, San Joaquin and Sacramento counties. The sites fall into eight categories (the total equals 36 because one site fit into two categories):

Mainline single track, no other features	8
Mainline double track, no other features	4
Mainline with road crossing at grade, with gates, warning equipment	9
Mainline with sidings or side tracks	7
Mainline single or double track with a street or highway over/undercrossing	2
Mainline junctions with branch line	1
Sidings and spurs off mainline	2
Mainline with trestle or bridge	3

At all of the mainline sites (33 of 35) the tracks show evidence of heavy use (shiny rails) and recent maintenance (regular shaping of embankment, consistent ballasting, etc.) Rail dates indicate that of the 106 observed dates on the mainline, only 15 were before 1950; 91 date from 1950-1990. Of the three railroad bridges or trestles, one was a standard plate girder bridge over Highway 99, the second was a wooden trestle on wood pilings crossing a stream bed, and the third a wooden trestle on concrete abutments carrying the railroad over a Highway 99 underpass.

The 35 sites are located in a variety of settings: rural points in the San Joaquin Valley; rural/residential zones at the edges of valley towns; commercial/industrial sites at the edge of towns; or sites within valley towns. In several instances the railroad runs adjacent to new residential subdivisions created in what were rural agricultural areas.

Detailed information regarding the 35 sites, with photographs and site maps showing location is provided in the attached "Railroad Feature Inventory Forms."

History of Feature

Construction of the Southern Pacific line on the east side of the San Joaquin Valley began in December 1869 at Lathrop, the Western Pacific junction nine miles south of Stockton. The specific route was not dictated by the wishes of valley residents, but by engineering considerations, and grant requirements, local aid, and the desire for monopoly control.

P-50-000001
CA-STA-000350H

The line was located about midway between the San Joaquin River and the Sierra Nevada foothills in the northern part of the valley and tapped the region with the highest population density and agricultural potential. In the arid southern portion of the San Joaquin Valley the railroad continued along the eastern side of the plains where streams flowing from the mountains made irrigation possible. Whereas engineering considerations such as favorable sites for bridging rivers were important, the potential for town promotion and townsite acquisition by the railroad to a large degree controlled route selection. The absence of urban centers southward from Lathrop and the small requirements for grading facilitated construction of an efficient, straight route through the valley. Crossing rivers and streams would be the main item of expense, but as Charles Crocker pointed out in most cases they could be crossed in culverts, instead of bridges (Smith 1976:116)

Employing a crew of about 200 Chinese laborers, the company pushed the San Joaquin Valley mainline south eleven miles to the Stanislaus River by May 1870. The first Central Pacific locomotive entered the new railroad town of Modesto, sixteen miles south of Lathrop, on May 5, 1870. The railroad had a profound effect on earlier local supply and service centers. People from the surrounding towns of Tuolumne City, Paradise, Empire, and Westport, for example, moved their businesses and many commercial buildings to the new town site of Modesto. Early settlements on the Kings, Kaweah, and Tule river fans were similarly drained of population by new railroad towns.

The Southern Pacific bridged the Tuolumne River just south of Modesto in June 1871 and continued its construction south founding the towns of Turlock and Merced before year's end. To meet the Southern Pacific's contractual obligations under the congressional land grant, the company settled on the solution of connecting their twenty miles of Southern Pacific lines south of Visalia to the San Joaquin Valley railroad before July 1, 1872. During early 1872 the Southern Pacific drove with extraordinary intensity southeast through Merced County to the new town of Fresno in May 1872 (Tinkham 1923: 94; Carothers 1934: 47-48, 52-54; Preston 1981: 128-129).

The Southern Pacific proceeded south to the proposed Goshen junction with the Southern Pacific's west side line that was planned to link the main valley line with San Francisco by way of Gilroy, Tres Pinos, and Huron. Goshen, located seven miles east of Visalia, dates from the completion of the railroad tracks to that point in June 1872. The town was laid out with more than ordinary care as it was made a division point with a roundhouse, machine shop, hotel, and depot (Carothers 1934: 56-57).

Visalia, one of the few pre-railroad towns in the valley and nearly 1,000 residents in 1870, was bypassed when its citizens voted not to pay the subsidies demanded by the Southern Pacific. The Big Four chose to continue their southern trajectory from Goshen to a point midway between the foothills and Tulare Lake where the railroad founded the town of Tulare City. Tracks were laid out over the semi-barren, dusty plains to Tipton and reached Delano Station, an important shipping point for wool and stock, in July 1873. In April 1874 construction resumed south of Delano to the Kern River. When the town of Bakersfield balked at providing a right of way and land grant to the railroad, the company constructed a bridge over the river on higher land upstream a short distance east of Bakersfield and laid out a new town called Sumner (East Bakersfield). The Southern

P-50-000001
CA-STA-000350H

Pacific railroad was open for travel to Sumner in August 1874. Two years later the line had been completed through the foothills through Tehachapi Pass and the Mojave Desert, to Los Angeles (Preston 1981: 122-123).

The Southern Pacific contracted out much of its construction work in the San Joaquin Valley to the Contract and Finance Company, a construction company controlled by the Southern Pacific, and which had built other lines for the company elsewhere in the state. The Big Four set up the Western Development Company in 1874 to replace the Contract and Finance Company. It built the line from Sumner to San Fernando (Daggett 1966: 75-82, 131-133).

Railroad building on the flat, alluvial plains enabled the crews to make rapid progress, wrote another observer: "A few furrows are made on each side, the dirt thrown to the center and the grade is made. Then the ties are laid, and the rails, a few spikes driven, and the road is complete." (Small 1926: 164). Bridge builders constructed trestles across creeks and rivers ahead of the crews laying track. Track laying proceeded in a highly regimented manner with several miles laid each day.

Loading platforms and water stations were located at five to seven mile intervals along the tracks. Town sites were not platted at these crossroad locations (Preston 1981: 123, 125). When the construction crews reached an area the company selected as a future townsite, the engineers staked off a large tract for a railroad yard for warehouses, switching tracks, a depot, and the townsite. Many of the valley's larger cities were laid out as isolated railroad towns in the 1870s and 1880s by the Southern Pacific, which built, settled, and nurtured the infant cities until settlement was successful. Nearly all San Joaquin (and for that matter Central Valley) railroad towns share a common plan: a central depot with a surrounding uniform plat. Lots were laid out in a regular pattern on a rectangular grid aligned with the tracks rather than with the grid of the government survey. As railroad towns grew, surrounding landowners who subdivided their property did not always conform to the railroad plat. The legacy of this two-phase process of subdivision is a special hybrid street pattern characteristic of all Central Valley railroad towns (Smith 1976: passim).

The Central Pacific, its leased lines, and, later, the Southern Pacific were from the beginning under unified control. In March 1884 the Central Pacific and Southern Pacific combined into the Southern Pacific Company. During the next 15 years the Southern Pacific added a total of 2,630 miles of lines (Hofsommer 1986: 1-8).

In a brief time, the Big Four had created a prodigious railroad empire that transformed California and much of the American West. Nowhere was the transformation more profound than in the San Joaquin Valley. Between 1870 and 1880 the population grew by 45 percent and the acreage of improved land increased by 71.6 percent. By the 1880s the Southern Pacific had established about 50 stations in the six San Joaquin Valley counties. Townsite locations were founded at 24 of these stations; of these eight became major towns. Also, by the end of the 1880s Southern Pacific held patents to more than a million acres of valley land. Much of the land went to large land developers, but the railroad made hundreds of thousands of acres available to small farmers and pioneer agricultural colonies (Smith 1976).

P-50-000001
CA-STA-000350H

Since the time of its construction the San Joaquin mainline has served the San Joaquin Valley. At numerous points sidings, spurs and side tracks were added to tap local industries or commercial centers. For example, two sites, SPM-24 and SPM-25, are connected to the mainline by spurs originally built in 1898s (Kathy Bisphas, Heublein Wines, April 27, 1994)

In 1923 the Southern Pacific began a major program of rehabilitation and development that lasted through 1930 and cost $387,000,000; it was one of the largest such programs in the company's history (Heath 1945: 25-30). During the Great Depression, Southern Pacific's revenue dropped and reduction of services followed; some branch lines were abandoned and torn up, unprofitable services curtailed, and old equipment scrapped.

In contrast, World War II brought record freight orders and greatly increased passenger traffic. Because most of the Southern Pacific's mainline in California is single track, increased traffic presented a serious problem. To speed wartime delivery schedules, the company installed a Centralized Traffic Control system on its California lines. Further major improvements in the tracks included: installation of 1,400 miles of new rail, mostly 113-pound and 132-pound replacement track for lighter, older rails; 268 sidings and siding extensions; strengthening track structures, such as bridges and trestles; construction of new roundhouse and shop facilities; and expansion of stations (Hofsommer 1986: 190-1207; Heath 1945:44-50).

After the war, Southern Pacific used its wartime gains to enhance its operating system. Perhaps the biggest improvement to the Southern Pacific railway route in California during the post-World War II period was its impressive 78.3 mile, $22 million Palmdale cut-off completed in 1967, which included upgrading the main line through the San Joaquin Valley with new welded "ribbon rails" manufactured at the Tracy rail-welding plant. The ties, rails, and ballast were laid with newly developed, mechanized track-laying machines that placed the ties, aligned rails, drove spikes, and spread ballast with precision impossible to obtain in the previous century. These rails are still functioning on hundreds of miles of Southern Pacific track throughout the Central Valley (*Sacramento Bee*, May 14, 1967; Southern Pacific Bulletin, December 1967). This program accounts, to a large degree, for the modern condition of the San Joaquin mainline seen at the recordation points.

Evaluation of Feature

The Southern Pacific San Joaquin Valley mainline crossing sites evaluated as a part of this inventory do not appear to be eligible for listing in the National Register of Historic Places. While the line was built in the 1870s, and played an important role in the history of transportation in California and the western United States, and to the development of towns and agriculture in the San Joaquin Valley, the railroad related resources at the 35 sites recorded have insufficient integrity of materials, setting, design, workmanship, feeling and association to be eligible to the National Register.

P-50-000001
CA-STA-000350H

The resources that would be significant and eligible for the National Register would be those that were related to the original construction of the Southern Pacific main line through the San Joaquin Valley during the period 1869-1876, or which exhibit important characteristics (construction techniques, engineering features, etc.) of that period. None of the crossing points surveyed, however, have resources from the period of significance.

Like most heavily used main railroad routes, this line has aspects that are more similar to a machine than a structure. As with all pieces of heavy equipment, over time parts become worn out or break and are then replaced. The technology of railroad construction has also undergone significant evolution in the past 100 years with respect to rail manufacturing. The iron rails laid in the 1870s were far different from the modern rails rolling out of steel plants today. In the case of the 35 mainline sites (SPM-1 through SPM-35), the major resource related to the period of significance (1869-1876) is the right of way itself; all other resources -- rails, tie plates, ties, ballasting, signals, warning arms, road crossings, etc. -- have been replaced and exhibit either dates or characteristics that place their installation well after the period of significance.

Rail dates at these locations provide an insight into the process of rebuilding the valley railroad in the 20th century. JRP field crews collected 106 rail dates at the 35 sites on the mainline. Of these, only 15 were from the period 1928-1949; none were earlier. Ten rail dates were from 1956, 40 from 1966-67 (consonant with the Southern Pacific's rebuilding program of that time), 28 were from 1969-70, and 14 were from the years 1971-1990. The sites that have the oldest elements, such as SPM-17, SPM-24, and SPM-25 still only dated to the late 1920s; and those have survived primarily because of lighter and less regular use off the mainline. Furthermore these sites, primarily sidings or short spurs, are not of the same historical significance as the mainline. Therefore none of the 35 Southern Pacific San Joaquin Valley Lines sites crossed by the Mojave Pipeline proposed main line or alternatives described above are eligible for listing in the National Register owing to an overall lack of integrity to the period of significance, primarily in setting, design, materials, workmanship, feeling and association.

RAILROAD FEATURE INVENTORY FORM

P-50-000001
CA-STA-000350H

PROJECT: Mojave Natural Gas Pipeline, Northern Extension Project
LOCATION NO: SPM-30
MILEPOST: 197.8
PHOTO DATE: April 19, 1994
QUAD NAME & NO.: Ceres (34)

1. **Name of Line:** Southern Pacific - San Joaquin Mainline

2. **Location of recordation:** This site is located just south of where the welded double tracks pass under the Service Road overcrossing in Ceres **(Photograph 1).**

3. **Structures at or near this location:** There are no railroad related structures at this site. The railroad alignment runs in a southeast-northwest direction at this site. There are two sets of parallel tracks, roughly 13' feet apart; the eastern set contains rails consistently dated 1966, and the western set contains rails dated in the late 1940s. Both sets contain rails welded into continuous track. Service Road passes over the two sets of tracks just north of the APE. West of the APE Lucas Road diverges off Service Road and then extends south, parallel to the west side of the tracks. State Route 99 extends parallel to the north side of the tracks.

4. **Setting at this location:** Southwest of the APE is an orchard, and to the northwest is an auto wrecking and salvage company. State Route 99 lies to the east of the APE.

5. **Integrity considerations for this feature:** Southern Pacific replaced rails along the eastern alignments sometime after 1966. Along the western alignment rails were replaced sometime after 1946.

6. **Attributes at this location (measurements in feet):**

   Width, berm-berm: 34

   Top width (crown): 28

   Height or Depth: 2' 6"

   Ballast Material: Crushed granite

7. **Observed dates:**

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, etc., as appropriate) Elevation: Segment of the UPRR rail line which runs south from Hatch Road to Wood Road, approximately one half mile east of Crow's Landing Road.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The TSRR segment recorded here runs adjacent to the 69 kV line to be reconductored for approximately four miles. The section of rail line visible on the historic maps reviewed and located in the A2PP APE is a segment of the TSRR interurban electric railway. This segment runs between Hatch Road and Wood Road and was a part of the TSRR completed in 1916. Although the segment recorded in the A2PP was initially intended to be an electric line, it was never actually electrified (Hatoff et al. 1995). The newly-recorded section of TSRR located within the transmission line corridor runs along the footprint of the original historic railroad grade; however, modern upgrades to the rail line, including modern rail crossings, upgraded rail lines and ties are extant. Additionally, the rail grade itself has been modified to allow for heavier loads to be run upon the tracks.

This line has been recorded in other parts of Stanislaus County as P-50-00083 (Napton, 1994; Sharpe 2003) and in San Joaquin County (Hatoff 1995) as P-39-00015 (CA-SJO-256H). In the A2PP APE, the TSRR has not yet been recorded. None of the segments of the TSRR investigated by Napton (1994), Sharpe (2003),and Hatoff (1995) were determined to be NRHP or CRHR-eligible. These previously recorded and discontinuous segments are not considered eligible to the NRHP as the segments lack integrity due to modern improvements made to the tracks, the rail ties, and the rail beds (Napton, 1994; Sharpe, 2003; Hatoff, 1995). This segment, likewise, was determined not eligible for listing on the NRHP or the CRHR.

P5. Description of Photo: (View, date, accession #) TSRR, view to the south at Hatch Road.

*P11. Report Citation: (Cite survey report and other sources, or enter "none.") TID Almond Power Plant No. 2, AFC Application.

Historic Context

The Central Valley is defined historically by agriculture and transportation. The area around Modesto and Ceres is no exception. In addition to the railroads, such as the Central Pacific and the Western Pacific, ferries serviced the area via several ferry landings and the Tuolumne and the San Joaquin Rivers. The road that would eventually become State Route 99 was planned and permitted in the late 1800's, although the paved highway was not completed until 1968. Ceres was first settled in 1870 and by 1872, the CPRR stopped at Ceres. Wheat was planted on thousands of acres in the region. The settlement of Crow's Landing was founded by J.B. Crow, one of the first wheat growers in the area. Crow established a landing on the San Joaquin River to ship his wheat to market and Crow and his two partners operated a ferry at that landing from 1870 until 1885 (Napton 1991). Crow's Landing Road represents the original road which connected two ferries, the Davis and Maze's Ferry on the Tuolumne and the Fairbank's Ferry on the San Joaquin. This main road was established in 1870. Several small taverns were constructed along this main road and served as way stations for (Brotherton 1982).

Hot dry summers and over cultivated lands made wheat growing less and less prosperous as the 19th century drew to a close. In 1887, the Wright bill, a bill that proposed the creation of irrigation districts in California, passed the California Senate and Assembly and was signed into law by then Governor Washington Bartlett. Local irrigation districts, including the TID and the Modesto Irrigation District (MID), created water conveyance systems in the early 1900s and started the flow of water into the area. Farmers began to diversify their crops and experimented with fruit and nut trees that did not require as much water as wheat. The combined efforts of the TID and the MID resulted in the construction of the La Grange Dam in 1893. The promise of water and cheap land brought an influx of settlers into the area. Expanding rail lines and ferry service made travel into the region easier.

By 1912, the Tidewater Southern Railroad connected Modesto with Stockton. This line operated as a freight feeder system and connected with the Western Pacific Railroad at Manteca Junction. Modesto was connected with Turlock via rail by 1916 (Paterson 1989) providing easy access to rail lines for local growers. A rise in canneries throughout the region provided convienient buyers for local fruit and vegetable sellers who, prior to the opening of the canneries had to haul their figs, apricots, and peaches to San Jose or Santa Clara for processing.

Period of Significance

From the standpoint of agriculture, which was the primary occupation of the people that settled the TID region, the years from **1900 to 1920** were the ones of growth and development. These were the pioneering times when many families livened in one end of a barn while their cattle resided in the other end until the family could afford a barn and a house. World War I brought a sharp increase in the price of agricultural products and the local gross farm income soared from 14,300,000 dollars in 1910 to 34,204,000 dollars in 1919. Prices crashed in 1920 and did not recover until World War II (Hohenthal 1972: 217).

The recorded segment of the TSRR was completed in 1916, thus making settlement in the region easier as well as providing easy shipping access to local farmers. Using 1900 to 1920 as the period of significance effectively captures the important historical context of the historic built environment in the immediate project area. Buildings, farms, and associated outbuildings were constructed in direct response to the newly expanded freight line.

The TSRR, which runs adjacent to the 69 kV line to be reconductored and less than 200 ft to the west of the proposed plant site, has been recorded in other parts of Stanislaus County as P-50-00083 (Napton, 1994; Sharpe 2003) and in San Joaquin County (Hatoff 1995) as P-39-00015 (CA-SJO-256H). In the A2PP APE, the TSRR has not yet been recorded. None of the segments of the TSRR investigated by Napton (1994), Sharpe (2003),and Hatoff (1995) were determined to be NRHP or CRHR-eligible. These previously recorded and discontinuous segments are not considered eligible to the NRHP as the segments lack integrity due to modern improvements made to the tracks, the rail ties, and the rail beds (Napton, 1994; Sharpe, 2003; Hatoff, 1995).

The section of rail line visible on the historic maps reviewed and located in the A2PP APE is a segment of the TSRR interurban electric railway. This line originally connected passengers between Taylor Street in Stockton and downtown Modesto. The line was eventually converted into a feeder line for the main Southern Pacific and Central Pacific lines, which were the first railroads to run through the San Joaquin Valley. The TSRR is now a part of the Union Pacific Railroad (UPRR). One separate section of this railroad is recorded elsewhere in Stanislaus County as site P-50-00083.

The historic TSRR was incorporated in 1910 and was originally an interurban electric railway that was intended to run from Stockton south through the San Joaquin Valley. In 1912, the TSRR consolidated with the Tidewater and Southern Transit and began operation as the Tidewater Southern Railway (Napton, 1994). By 1916, the line ran south to Turlock. The line was only electrified to Modesto and steam engines ran on the remainder of the track between Modesto and Turlock. The TSRR remained an independent line until 1917 when it was acquired by the the Western Pacific Railroad who bought much of the stock in the TSRR and began changing the line into a conventional feeder line. The purchase of the TSRR was a part of the WPRR's expansion designed to extend its market though the acquisition of feeder lines which ran into the main WPRR line. By the 1930's, passenger service on the TSRR was stopped and most of the electric service was removed (Hatoff et al. 1995). The line was further upgraded after World War II as the newer heavier diesel locomotives required heavier rail (Sharpe, 2003). The line is still actively used between Modesto and Stockton as a freight feeder line.The WPRR merged with the UPRR in 1983, two months before its 80th anniversary. Shortly after, the UPRR began an additional series of improvements to the Old WPRR tracks to enable larger locomotives and heavier freight cars running at higher speeds to run on the WPRR. The upgrades included heavier rails, new ties, and improved rail beds to permit higher tonnage on the tracks (Bridges, 1983).

The newly-recorded section of TSRR located within the transmission line corridor runs along the footprint of the original historic railroad grade; however, modern upgrades to the rail line, including modern rail crossings, upgraded rail lines and ties are extant. Additionally, the rail grade itself has been modified to allow for heavier loads to be run upon the tracks. Consistent with all other recorded segments of this rail line, this particular segment of the TSRR does not appear to be eligible for listing on the NRHP as it no longer retains integrity. This railroad segment was evaluated in accordance with Section 15064.5 (a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. This railroad segment does not appear to meet any of the significance criteria as outlined in these guidelines.

L1. Historic and/or Common Name: Tidewater Southern Railroad; now the Union Pacific Railroad

L2a. Portion Described: ☐ Entire Resource ☒ Segment ☐ Point Observation **Designation:**

b. Location of point or segment: (Provide UTM coordinates, legal description, and any other useful locational data. Show the area that has been field inspected on a Location Map) The recorded section is limited to the section which runs from Hatch Road south to Wood Road. This section is located on the *Ceres* 7.5′ quadrangle approximately ½ mile east of the intersection of Hatch Road and Crow's Landing Road.

L3. Description: (Describe construction details, materials, and artifacts found at this segment/point. Provide plans/sections as appropriate.) This section of railroad is a single track with modern heavy gauge rails and pressure treated ties. Cross streets, including Hatch Road, Whitmore Road, and Service Road are paved with asphalt. The remainder of the recorded line is situated upon a crushed granite ballast berm. All crossing guards, warning lights, and associated signage are modern.

L4. Dimensions: (In feet for historic features and meters for prehistoric features)
- **a. Top Width:** 12 feet
- **b. Bottom Width:** 20 feet
- **c. Height or Depth:**
- **d. Length of Segment:** approximately 4 miles

L5. Associated Resources: Modern crossing guards, warning lights

L4e. Sketch of Cross-Section (include scale) **Facing:**

L6. Setting: (Describe natural features, landscape characteristics, slope, etc., as appropriate.) This segment is located near agricultural fields, farms, residences, and a small dairy.

L7. Integrity Considerations: The integrity of this segment has been compromised due to the improvements made to the track in the 1940's after complete removal of the electric lines north of this segment, as well as in the 1980's following the UPRR acquisition of the WPRR. The original historic features of this line have been removed and thus, the historic integrity is gone.

L8b. Description of Photo, Map, or Drawing (View, scale, etc.) View to the south.

L8a. Photograph, Map or Drawing

L9. Remarks:
While the original location of the TSRR line remains, the track has been upgraded and thus, has lost historic integrity.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This segment of the railroad is located in an agricultural setting and used in part to transport grain to the Tyson elevators a short distance to the east of Washington Road. At Washington Road, the rail consists of a single set of tracks set at grade with concrete pad added for traffic crossing. Railroad signal gates are located on each side of the crossing. A short distance east of Washington Road, is a small silver building used as a relay case for the signal light and a switch stand track. West of Washington at the switch stand, the railroad has five spur lines used by the Tyson grain elevators.

Facing: See photographs

L7. Integrity Considerations:
The Tidewater Southern began operations as an interurban electric railway to serve a route projected to extend from Stockton south along the San Joaquin Valley. On October 4, 1910, the Tidewater and Southern Railroad was incorporated and soon it constructed railroad grade to a point about 4 miles south of Modesto (Guido 1950:3-13). The Tidewater and Southern consolidated in 1912 with another company (Tidewater and Southern Transit) and then operated under the name Tidewater Southern Railway (Napton 1994).

The new railroad accelerated construction during 1912 and opened for service 32.23 miles of electric railway between Taylor Street in Stockton and the downtown Modesto passenger terminal. Operated as a freight feeder system, the railroad connected with the Western Pacific Railroad (WPRR) at Manteca Junction some 3 miles north of Manteca. The TSRR gradually expanded its operations in 1916 by opening a 16-mile extension from Modesto into Turlock. The extension of electrification failed to materialize and the interurbans never operated south of Modesto.

In 1907, W.A. Irwin promoted construction of a townsite south of Turlock, to be called Irwin City. The TSRR proposed to run its line through Irwin City to Fresno, but the residents of Irwin demurred, so the railroad encouraged development of an alternative townsite to the north, called Hilmar. The latter was founded and Irwin soon faded away.

According to Hohenthal et al. (1972) and Shireman (1970), the TSRR line was electrified as far as Modesto, steam locomotives being used on the 28-mile run south to Hilmar. The southward extension of the railroad was attractive to the WPRR, and in 1917 that company bought the majority of stock in the TSRR. A 10-wheel locomotive was operated on the line, and branch lines were constructed during this period for freight service. These included an 8-mile extension to Hilmar (south of Turlock), opened in 1917, and a 6.6-mile branch to Manteca, opened in 1918. It was planned to extend service from Nile Garden near Manteca south down the San Joaquin Valley as far as Bakersfield, but this ambitious scheme never materialized (Napton 1994).

Incrementally, the WPRR transformed the TSRR from its original electric interurban configuration to a conventional feeder railroad. The line's passenger service was discontinued in 1932, and the WPRR began dismantling the electric overheads along the mainline between Stockton and the northern limits of Modesto.

After World War II, the WPRR began to upgrade the mainline long-haul freight traffic and abandoned some of its branches. The WPRR brought in new diesel locomotives for the Tidewater Southern, some of which were used on the Sacramento Northern Western Pacific subsidiary as well. This heavier equipment required a heavier rail, and virtually all of the track was replaced after 1945 (Guido 1950). In time, the TSRR abandoned its Manteca Branch, but the line is still actively used along the Modesto to Stockton mainline as well as the Turlock Branch.

Criteria A: This segment of the Tidewater Southern Railroad branch evaluated for this project does not appear to meet the criteria for listing in the National Register nor does it appear to be a historical resource for the purposes of CEQA, primarily because of its loss of historic integrity with the replacement of the track in 1945 and the updating of the Washington Road crossing. Therefore the section under evaluation in this form does not appear to have the potential to be a contributor to any larger historic property, nor does the segment appear to meet the criteria individually.

Criteria B: This property does not appear to be associated with any individuals who made significant contributions to national, state, or local history as required under Criterion B. This property does not convey any association with W.A. Irwin (Turlock townsite promoter) or any of the well-known historical figures associated with California's major railroads (e.g., Stanford, Crocker, etc).

Criteria C: This property does not appear to be an important example of a type, period, or method of construction. No special engineering or construction techniques were known to be used in the construction of this segment of the railroad. Improvements and upgrades to this segment of the railroad have compromised the integrity.

Criteria D: The railline is documented and does not appear to be a principal source of important information in this regard.

This property has been evaluated in accordance with Section 15064.5(1)(2)-(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code. The property does not appear to meet the criteria for listing in California Register of Historical Places.

Evaluated by Ms. Elizabeth D. Calvit, CH2M HILL. Secretary of the Interior-qualified Architectural Historian.

Riverbank 7.5' Manteca 7.5'

Feature Description

The proposed Mojave pipeline crosses the alignment of the Tidewater Southern Railway at five locations, identified as UP-1 through UP-5. It will be noted that these five crossings carry "UP" prefixes, recognizing that the line is currently owned by the Union Pacific, although it was built by the independent Tidewater Southern Railway and owned for many years by the Western Pacific Railroad.

As discussed under "History of Feature," the Tidewater Southern Railway originally comprised three segments: a mainline from Stockton to Modesto; a branch from the mainline to Manteca, south of Stockton; and a branch from Modesto south to Turlock. Sites UP-1 and UP-2 are on the Turlock Branch, UP-3 is on the mainline, and UP-4 and UP-5 are on the Manteca Branch.

The existing tracks reflect various stages of post-World War II modernization undertaken by the Western Pacific, which owned the line after 1917. The two sites on the Turlock Branch (UP-1 and -2) show signs of the most recent modernization. The rails were laid at these points some time after 1966. The track at the one site on the original mainline (UP-3) appears to have been upgraded in the immediate post-war years, with rails dating to some time after 1947. The Manteca Branch was abandoned in the post-war period and all ties and rails have been removed. Only the earthen embankment remains from the branch line at these points.

History of Feature

The Tidewater Southern Railway began as a small interurban electric passenger and freight operation. Although its founders had visions of extending the line as far south as Fresno and to the Southern California coast, the line was always a limited facility in San Joaquin and Stanislaus counties, extending from Stockton to Modesto and from Modesto to Turlock, a distance of less than 50 miles. The independent line was short-lived; it went into service in 1912 and was acquired by the Western Pacific Railroad in 1917. Little by little, it was transformed from electric to steam (later diesel) service; it was always a dual-motive line, with an electric main between Stockton and Modesto and steam branch service south of Modesto and on a small branch to Manteca. By the mid-1930s, passenger service had been discontinued and virtually all of the electric service removed. The line operates today as a feeder branch for the Union Pacific (formerly Western Pacific) service, providing a connection between Modesto and the Union Pacific mainline at Stockton.

(R-SO-83 Sta. Co.) P-39-000015 CA-SJO-256H

The Tidewater Southern was organized in 1910, with Byron Bearce, a Stockton investor, as president (Strapac, 1973: 3). The original intent of the company was to build an electric railroad from Stockton to Fresno, with possible connections to Bakersfield as well as a branch to connect with the Pacific coast in Ventura County. In its initial (and ultimately its only) phase of construction, the company began laying track north from Turlock toward Modesto and south from Stockton toward Modesto. The key mainline from Stockton to Modesto (UP-3 is on the mainline) was completed as a conventional (steam) railroad in 1912 and electrified in 1913. The southern extension from Modesto to Turlock was completed in 1916 but was never electrified (UP-1 and UP-2 are on the Turlock Branch). A small branch line was built in the initial phase of construction to connect with Manteca, due south of Stockton but not on the main line (UP-4 and UP-5 are on the Manteca Branch). This short branch was never electrified.

On its mainline, the Tidewater Southern used overhead wires to power its locomotives. In its earliest years, the line offered extensive passenger service between Stockton and Modesto; freight service only was offered on the non-electric branches to Manteca and Turlock. Although unprofitable from the outset, passenger service survived until 1932 (Strapac, 1974: 10). Freight service, by contrast was generally quite profitable and the company invested in modern electric and steam locomotives for its freight operations (Western Railroader, 1950: 7).

In 1917, the Western Pacific Railroad purchased a controlling interest in the Tidewater Southern. This purchase was part of a substantial expansion program by the WP, designed to extend its market through acquisition of existing shortlines which could be operated as feeders for the WP mainline. Incrementally, the Western Pacific transformed the Tidewater Southern from its original electric interurban configuration to a conventional feeder railroad. As noted, the line's passenger service was discontinued in 1932. The same year, the WP began dismantling the electric overheads along the mainline between Stockton and the northern limits of Modesto. The electric lines were retained in Modesto, however, between 1932 and 1946, requiring the use of doubleheaded steam and electric locomotives within that city (Strapac, 1974: 10). In 1946, the last of the electric lines were removed.

After World War II, the Western Pacific began to upgrade the mainline long-haul freight traffic and abandoned some of its branches. The WP brought in new diesel locomotives for the Tidewater Southern, some of which were used on the Sacramento Northern WP subsidiary as well. This heavier equipment required a heavier rail and virtually all of the track was replaced after 1945 (*Western Railroader* 1950: 11). In time, the Tidewater Southern abandoned its Manteca Branch; however, the line is still in active use along the Modesto to Stockton mainline as well as the Turlock Branch.

Evaluation of Feature

The five sites associated with the Tidewater Southern Railway do not appear to be eligible for listing in the National Register of Historic Places because they do not retain integrity of setting, design, materials, workmanship, feeling and association. Potential significance

(P-50-83 Sta. Co.) P-39-000015
CA-SJO-000250/H

for this shortline relates chiefly to the fact that it was one of a small number of interurban electric train lines in the San Joaquin Valley. As noted under "History of Feature," all vestiges of the old interurban line were dismantled in the 1930s, when the line was converted to conventional motive power, and in the 1940s, when it was rebuilt for heavier diesel locomotives. The Manteca Branch was affected most dramatically when the branch was abandoned and the track removed. The existing line is almost entirely a product of the post-World War II period, with only the alignment serving as a reminder of its past use as an interurban. Track on the Turlock Branch dates to the late 1960s; track on the main line dates to the late 1940s; there is no track on the Manteca Branch. Because they lack integrity to the potential period of significance for the line, these five sites do not appear to meet the eligibility criteria for listing in the National Register.

Period of Significance 1912 Property Type Railroad Applicable Criteria n/a

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The Tidewater Southern Railway began as an interurban electric passenger and freight line. It stretched from Stockton to Modesto and then from Modesto to Turlock. The line was established in 1912 and was purchased by the Western Pacific railroad in 1917, when the Modesto to Turlock branch was converted to steam power. By the 1930s, the line no longer carried passengers and was primarily steam driven. It later became part of the Union Pacific system and is now abandoned (Brotherton, 1981).

(See continuation sheet.)

B10. Significance (continued)

The Tidewater Southern Railway does not appear to be eligible for the National Register or the CRHR, since it lacks sufficient historic significance and integrity. The Tidewater Southern Railway's inferred period of significance dates to 1912 when it was constructed. It was one of several electric interurban passenger lines serving the San Joaquin Valley from the 1910s to the 1930s, and the abandonment was the main line for the Tidewater railway from Stockton to Modesto. This rail line is an expansion of existing lines, although it did specifically cater to local passenger service, and does not mark a significant event or shift in local settlement. The rail was also not the first interurban or electric rail introduced in the area, and therefore, is not associated with the introduction of interurban electric rail to the valley. Therefore, it is not significant under National Register Criterion A or CRHR Criterion 1. The Tidewater Southern Railway does not have significance under National Register Criterion B or CRHR Criterion 2. Research has not found this railway to have any significant associations with any person of historical significance. The Tidewater Southern Railway does not have significance under National Register Criterion C or CRHR Criterion 3. It is one of many railroads in the San Joaquin Valley, including other interurban lines, and does not exhibit unusual or exemplary construction techniques or workmanship. Additionally, it does not appear that the railway abandonment has the potential to yield information important to the prehistory or history of the local area, state, or the nation. The Tidewater Southern Railway maintains poor physical integrity due to the removal of the original tracks and all other equipment when the line was abandoned. Although the resource may retain some integrity related to its inferred period of significance, the resource lacks historic significance, and therefore, does not appear to be eligible for the National Register or the CRHR.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The Tidewater & Southern Railway Company filed corporation papers in October of 1910. Shares of stock were issued to support the construction of a standard gauge railroad line from Stockton south to Turlock, with long range plans to build all the way south to connect with the Ventura County Railroad. After two years, The Tidewater & Southern Railway Company had only put down four miles of rail line and it merged with the Tidewater & Southern Transit Company in 1912 to form the Tidewater Southern Railway. After the merger almost 33 miles of new track was laid from Stockton to Modesto. The Stockton Hotel (which still stands on El Dorado Street in Stockton) was the joint terminal office of the Tidewater Southern Railway and the Central California Traction Company. With the popularity of the automobile in the 1920s and 1930s, the rail line became more dedicated to hauling freight from the small towns to Stockton for shipping downriver. The Railway changed majority ownership many times until being bought in its entirety by Union Pacific Railroad in 1996.

While the Tidewater Southern Railway line appears eligible for listing in the National Register and California Register under Criteria A/1 for being an important inter-urban railroad transportation line, this small segment is not eligible as it has been continually upgraded with the replacement of rails, ties, ballast bed, crossing guards and other related equipment. The segment has not retained the historical integrity of materials, workmanship, setting and feeling. It is not eligible for listing in the National or California Register.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.):

Resource is a historic artifact deposit and scatter. There are 4 artifact concentrations. The largest concentration shows evidence of extensive pot hunting. Artifacts have eroded along with the soil, and are strewn the entire width of the slope to the Tuolumne River below. The largest of the pot holes was dug to a depth of approximately 27 inches. A burn layer occurs from 21 inches to 27 inches.

18. Related features: Del Rio Mobile Home Park

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site): The Lion's Market building was constructed ca. 1947 to service the adjacent Shady Acres Court, now known as the Del Rio Mobile Home Park (Stanislaus County Assessor's Files). In 1957 the trailer court consisted of Sanders Bros. Grocery (Lion's Market), Tex's Garage, U & I Lunch, Ray's Rod and Gun Club, and several trailer homes (Polk Directory 1957). The motor court was established ca. 1920, and was the home of many migratory workers during the Dust Bowl era in Modesto. The cafe was constructed ca. 1934 and other buildings followed in the late 1940s and early 1950s (Don Gackle, personal communication 1996). Although the building was constructed post-1945, it was included in the inventory as it was built 49 years ago and will reach the 50-year age date by the current Seventh Street Bridge project is completed. The building does not appear to be eligible for inclusion in the NRHP under any of the criteria. Under Criterion A it is associated with the growth and development of Modesto after World War II, but is not associated with any persons significant in history (Criterion B). It does not embody any distinctive architectural characteristics (Criterion C), nor is it likely to yield information important in history (Criterion D).

DESCRIPTION

7a. Architectural Style: Industrial

7b. Briefly describe the present PHYSICAL CONDITION of the site or structure and describe any major alterations from its original condition: This facility consists of an office, storage buildings, and storage tanks. The office building is modern, as are the storage tanks. Two buildings, now attached, are located on the western boundary of the complex. The small structure on the southwest corner of Seventh and B streets, possibly the original office, is a one-story frame building with corrugated metal gable roof with exposed rafters. The building is clad in corrugated metal siding. Original fenestration consists of a six-light window; all others have been replaced with one-light frame sash. The building has a wood pier foundation. Attached to the corner building is a long, rectangular storage facility with a loading dock on the east elevation. The building has an end-gable roof, covered in corrugated metal, with a shed roof protruding over the loading dock. The entire building is clad in corrugated metal.

8. Construction date 1913, 1946

Other:

17. Is the structure: On its original site? √ Moved? ☐ Unknown? ☐

18. Related features: Modern office building and storage tanks.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site): Adjoining and served by the Southern Pacific Railroad, the W. H. Breshears Chevron Products facility was constructed in stages, with the small building on the corner of Seventh and B streets serving as the original office when it was built ca. 1913. The storage facility and loading docks were added ca. 1946 (Stanislaus County assessor's Files). Although it is unknown who constructed the small corner building, it has been utilized by Standard Oil Company as part of the distributorship complex since at least 1940. In 1930 the facility was operated by General Gasoline Company, with the Standard Oil Company facility located at 802 B Street, near Eighth Street. There are no listings for either company in 1920 (Polk Directories, 1920, 1930, 1940, 1957). The Breshears buildings do not appear to be eligible for inclusion in the National Register under any of the criteria. Under Criterion A, they are associated with the growth of the City of Modesto and the San Joaquin Valley when the automobile and truck were replacing the horse and railroad as the primary methods of transportation, and oil and gasoline distribution facilities were developed along railroad lines as transfer stations. The building was evidently constructed by an oil company and operated by a succession of managers and so does not appear to be eligible under Criterion B, nor does it appear to be likely to yield information important in history (Criterion D). Under Criterion C it does not retain any integrity of design or represent the work of a master or embody any distinctive characteristics of construction.

COUNTY: Stanislaus
ROUTE: N/A
VICINITY: Modesto
NAME: Tuolumne River Bridge
BRIDGE NUMBER: 113.75

DESCRIPTION:

TYPE: STANDARD

TYPE OF SUPERSTRUCTURE: Timber stringer trestle with ballast deck approach spans, with timber rails. Main spans consist of: two 100'6" riveted deck girder spans built in 1945 by Bethlehem Steel Co.; one 59'10' riveted deck girder span built in 1944 by Pacific Bridge Co., and relocated to this site from the Feather River; one 60'6" riveted deck girder span built in 1897 by Phoenix Bridge Co. and reinforced in 1944; and one 50' deck girder span built in 1897 by Phoenix Bridge Co. and reinforced in 1944; all with ballast deck.

TYPE OF SUBSTRUCTURE: Timber pile bents beneath timber stringer approach spans; five stone masonry piers and one (south) stone masonry abutment beneath main spans.

HISTORY/DATE OF CONSTRUCTION/DESIGNER: 1897-1945/Southern Pacific Railroad

OTHER HISTORICAL INFORMATION (persons, events--e.g. WPA/CCC):

Built in 1897 to replace earlier 1870s crossing of the Tuolumne River. Timber spans continually renewed over the years. Three new main spans in 1944-45, with original main spans heavily rebuilt at that time. Integrity very compromised.

Comments:
The Seventh Street Bridge is significant under Criteria A and C. It was designed through the collaborative efforts of the engineering firm, Leonard & Day, and architect, Fay Spangler. It is by far the largest extant example of John B. Leonard's "Canticrete" bridge design. This bridge form, Leonard's invention, involves a cantilevered steel truss encased in concrete. Architecturally, it is the only major example in the San Joaquin Valley of the "City Beautiful" bridge, an urban bridge design of the second decade of this century, always placed at a major entrance to the city and adorned in Beaux Arts classical detail. It is almost completely unmodified.

The Seventh Street Bridge (Lion Bridge) over the Tuolumne River in Modesto opened to traffic in 1917. Designed by famed architect John B. Leonard, it is one of only four Canticrete (concrete with internal steel trusses) structures still in California. The first vehicle across the bridge was a Studebaker carrying the Board of Supervisors. County Surveyor E.A. Annear supervised the project. In 1973, his daughter, Ellen Crippen, recalled some farmers in the area wanted cows instead of lions on the bridge approaches. *Photos by Ken Williams*

Located at the southern portal to the City of Modesto, the Seventh Street or Lion Bridge(Bridge # 38C-23) crosses over the Tuolumne River between River Road at the south end and B Street at the North end.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries): Locally known as the Lion Bridge, the Seventh Street Bridge (Bridge No. 38C-023) is the only major example in the San Joaquin Valley of the "City Beautiful" bridge. Adorned in Beaux Arts Classical detail, two concrete lions stand guard at each portal. Designed through the collaborative efforts of the engineering firm of Leonard & Day and architect Fay Spangler, the Seventh Street Bridge is the most impressive extant example of "Canticrete" bridge design. Invented by John B. Leonard, this bridge form involves a cantilevered steel truss encased in concrete. Built in 1916 by C.E. Cotton & Co., the main span is 101 feet long and 35.8 feet wide with 14 additional spans for a total of 1170 feet. As a result of DOE Process 12/24/85 (DOE-50-86-0001-0000), the Seventh Street Bridge has been determined eligible (2S2) for inclusion in the National Register of Historic Places. Significant under Criteria A and C, it is important both from the engineering perspective and from the perspective of the city planner. The Seventh Street Bridge was also designated a Modesto Landmark Preservation Site by the Modesto City Council in 1992.

BRIDGE EVALUATION FORM

8/01

(NOTE: This form is only to be used for structure types listed in the Caltrans/FHWA/SHPO Memorandum of Understanding dated December 1980.)

LOCATION: (attach copy of appropriate map showing structure location)

COUNTY: Stanislaus
ROUTE: N/A
VICINITY: Modesto
NAME: Tuolumne River Bridge
BRIDGE NUMBER: N/A

DESCRIPTION:

TYPE: STANDARD

TYPE OF SUPERSTRUCTURE: Single-track timber stringer trestle with open deck. Timbers stringers are creosoted Douglas fir; 10 stringers in two lines of 5, aligned directly beneath rails.

TYPE OF SUBSTRUCTURE: Timber 6-pile bents with timber caps; backfilled timber abutments.

HISTORY/DATE OF CONSTRUCTION/DESIGNER: ca. 1914*/Tidewater Southern Railway

OTHER HISTORICAL INFORMATION (persons, events--e.g. WPA/CCC):

*While original construction of this structure likely dates to ca.1914, maintenance and renewal of timber bridge structures dictates that there is likely little original material left intact. The Tidewater Southern Railway incorporated in 1912, and was acquired by the Western Pacific Railroad in 1917. While this trestle is interesting for its length, it remains nonetheless a simple engineering solution, using a standard-type design, for crossing a broad river basin.

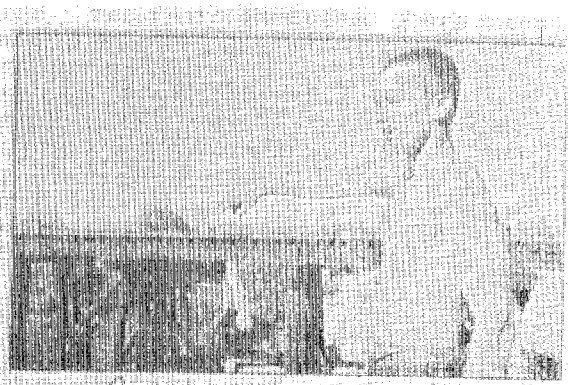
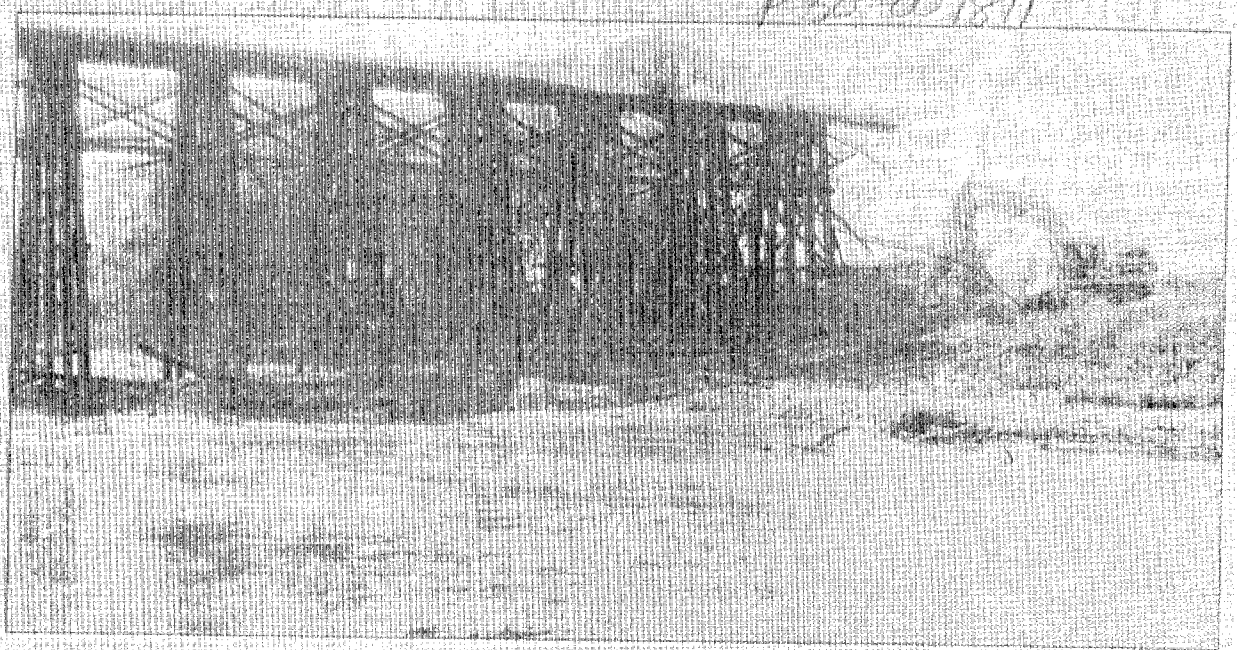
Another piece of Modesto goes down





ADRIAN MENDOZA/THE BEE

A backhoe begins demolition Sunday of the trestle. Top: Johnny Helton points toward spot where homeless stayed.

Historic railroad trestle plowed under after fire destroyed it Saturday

BY JOHN GORENFELD
BEE STAFF WRITER

The trestle over the Tuolumne River creaked, crunched and cracked Sunday afternoon as the metal jaws of a backhoe gnawed off its burnt wooden beams.

On Saturday, fire scorched the 91-year-old railroad bridge next to the Ninth Street Bridge. About a fifth of the bridge's 1,630 feet gave way after the fire was out.

Crews from a contractor planned to collapse the rest of the bridge, now seen as a hazard, by today.

The bridge's death throes provided a spectacle for Modesto residents who parked nearby to watch.

Susan French of Modesto, 41, was upset she had missed Saturday's fire. "I'm loving this," she said as machines tore out trees on the embankment under the bridge.

Saturday, the oil-treated wood that made up the abandoned bridge burned so hot it took two hours to put out and produced smoke visible from the other side of town.

The end of the bridge also means homeless people who lived beneath the former Tidewater Southern Railway trestle would have to move on.

Johnny Helton, 21, who lives farther up the river, said police told people under the bridge that they had to leave the state-owned land.

The fire department is still searching for the cause of the blaze.

The fire came as no surprise to Chris Johnson, 22. He lives in the nearby Beiler's Camp trailer park and said small grass fires have become common in the area. Park residents, he said, suspected groups of children have been starting fires for fun.

He said the bridge was a remnant of a disappearing era. The bridge was built in 1917 and hasn't been used for more than a year.

"It's another piece of Modesto," he said. "It goes down, and a piece of Modesto goes down."

Bee staff writer John Gorenfeld can be reached at 578-2347 or jgorenfeld@modbee.com.

Inside Story

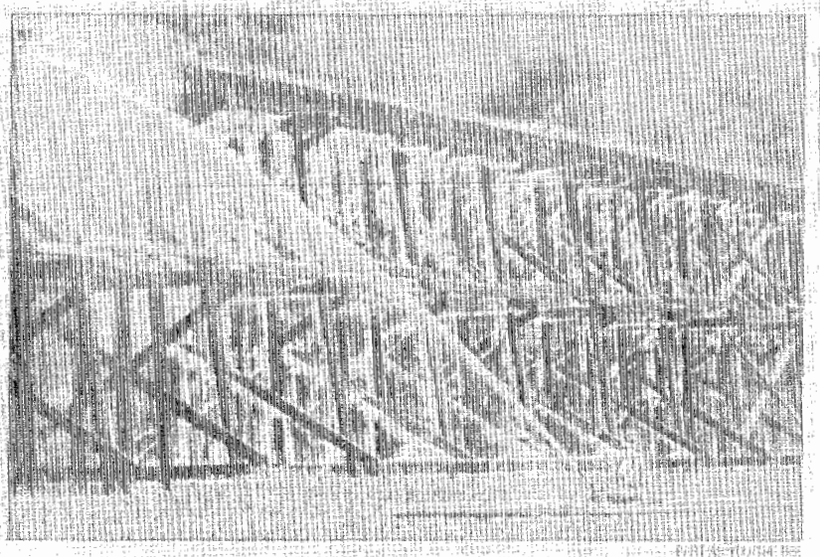
BRIDGE OF FLAMES



The former Tidewater Southern Railway trestle spanned the Tuolumne River for more than 85 years, but fell to a two-hour blaze Saturday. At top, the main deck collapses at 4:07 p.m. Above, a Modesto firefighter douses flames.

Abandoned train trestle blaze gives firefighters a workout

Law enforcement officials busy, too, with spectators

BY BRIAN JOSEPH

A three-alarm fire at a south Modesto train trestle sent a blaze of black smoke hundreds of feet into the late afternoon sky Saturday.

No one was injured in the fire at the trestle, which runs parallel to the Mall. Many Modesto residents gathered to watch as the historic, but unused, structure burned. The trestle has been out of use for many years.

The cause of the fire remains under investigation Saturday night, although officials believe it may have been started by an earlier grass fire in the corner of Needham Drive and Tuolumne Boulevard.

At least more than two hours for about 60 firefighters to get the blaze under control.

The fire was particularly difficult to fight because the trestle was made of dried wood.

"That was a lot of fuel," Modesto Battalion Chief Rich Stanley said. "It took a lot of gallons of water from the Mall Street Pond."

The Modesto Police Department, the Stanislaus County Sheriff's Department and the California Highway Patrol helped firefighters in controlling hundreds of spectators and in blocking off the streets.

Modesto police officers also searched the vicinity of the trestle to arrest homeless people who were living under the trestle. Modesto police Sgt. Mike Ridenour said police believe some people have been known to live in the area.

[illegible] A-4, [illegible]

Above, the old trestle's lumber, of the open decks, burns like an inferno. Below, a pilot took this photo shortly after taking off from Modesto Airport.

***P2. Location:** ☐ **Not for Publication** ■ **Unrestricted** ***a. County:** Stanislaus
b. Address: Near intersection of 10th and D Streets **City:** Modesto **Zip:** 95354
***c. USGS Quad:** Riverbank, CA 7.5' **Date:** 1954
d. UTM:
***e. Other Locational Data:** The water tower is situated southeast of D Street and southwest of 10th Street, APN 106-046-001.

***P3a. Description:** The approximate 130' high elevated water tank and tower is a standard ellipsoidal steel six legged tower with an approximate 100,000 gallon capacity tank. The tower, supported by concrete piers and a concrete pad, is located on a compacted dirt surface adjacent to a circa 1930s industrial building (north side). Character defining features of the water tower and tank include the tower's steel legs, x-bracing, a central pipe between the ground level and the base of the tank, and a narrow catwalk that encircles the tank. The elevated water tank and tower were probably constructed either by the Pittsburgh Tank and Tower Company of Iowa or the Chicago Bridge & Iron Works Company. Both companies were leaders in the industry and built thousands of elevated water towers and tanks all across the United States. The water tower and tank have good integrity of design, workmanship, materials, and association, although the immediate setting beneath the tower has changed with the construction of telecommunications equipment.

BUILDING, STRUCTURE, AND OBJECT RECORD

 ***Resource Name or #:** City of Modesto Elevated Water Tower and Tank ***NRHP Status Code:** 6Y2

B1. Historic Name: Undetermined
B2. Common Name: Undetermined
B3. Original Use: Water storage and delivery **B4. Present Use:** Same
***B5. Architectural Style:** Industrial elevated water tower and tank
***B6. Construction History:** Based upon historic maps, the elevated water tower and tank were built in circa 1950. The elevated water tank was constructed as a source of water storage for the City of Modesto.
***B7. Moved?** ■ No ☐ Yes ☐ Unknown **Date:** N/A **Original Location:**
***B8. Related Features:** Industrial buildings and warehouses that date from the 1930s through the 1970s.
B9a. Architect: Possibly the Pittsburg-Des Moines Tank & Tower Company, Des Moines, Iowa or the Chicago Bridge & Iron Company.
B9b. Builder: Possibly the Pittsburg-Des Moines Tank & Tower Company, Des Moines, Iowa or the Chicago Bridge & Iron Company.
***B10. Significance: Theme:** Engineering/Elevated tower and tank construction/Manufacturing **Area:** Modesto/Stanislaus County
Period of Significance: circa 1950 **Property Type:** Industrial Water Storage Structure **Applicable Criteria:** A and C

With the expansion of the railroad through the great Central Valley of California, Modesto began its existence with populations from smaller towns along the Tuolumne River - Paradise and Tuolumne City. Their populations and buildings moved entirely to the new village laid out by the Central Pacific Railroad. It was intended to name the station for William C. Ralston, one of the railroad's directors, but he modestly declined and the name was changed to the Spanish adjective meaning "modest" (Gudde 1969:205). The dusty village soon became the center of Stanislaus County, dethroning Knight's Ferry by becoming the county's sixth seat of government since 1854.

In 1870, when it became generally known where the new town of Modesto was to be located, there was a tremendous influx of businesses, dwellings, and people rapidly moving to the one-mile square railroad town. Modesto became the end of the railroad line on November 8, 1870, and it took another two years to construct the tracks as far as Merced. When newcomers got off the train here they saw a community of approximately 25 hastily constructed buildings. By 1910, the population of Modesto was estimated at 4,034 and ten years later it had doubled to 9,241. Modesto soon became known as the "Rose City" and the "Garden City" because of its many rose bushes and well-manicured lawns. From 1920 to 1930 Modesto achieved the greatest growth of any city in Northern California or 49% to 13,842. Then in 1940, the population again increased to 16,830 (Historic Modesto Website 2008) Refer to BSO, Page 3 of 3.

***B10. Significance: (Continued):**

The story of the Modesto Irrigation District began with the creation of a California irrigation district law. In 1886, a young Modesto attorney, C.C. Wright, ran for the state legislature in 1886 on one issue - to get a California irrigation district law passed. He was elected, arrived in Sacramento in January 1887 and by March 7th, the law was passed and signed by the governor. Then it was up to the local voters to organize a district under the new law. On July 9, 1887, voters in the Modesto area approved the formation of California's second irrigation district under the new law and elected a five-member board of directors. The Stanislaus County Board of Supervisors declared the Modesto Irrigation District (MID) organized on July 18. Directors held the first meeting on July 23 and went to work to select a source of water for the newly organized district (Hohenthal et al. 1972).

In 1893, directors decided to use water from the Tuolumne River and the Modesto and Turlock irrigation districts built La Grange Dam, a diversion dam, on the Tuolumne River. MID continues to divert water to the north of the river and Turlock Irrigation District (TID) to the south. Don Pedro Reservoir is the District's primary water storage facility, while Modesto Reservoir is a small holding reservoir. Modesto and Turlock irrigation districts constructed the original Don Pedro Reservoir in 1923. It was replaced by the completion of the New Don Pedro Reservoir and Dam in 1971. New Don Pedro is the sixth largest freshwater multi-use reservoir in California. The District's 208 miles of canals operate on a gravity flow system. Canals were completed in 1903 and the first official MID irrigation season opened in 1904 (Hohenthal et al. 1972).

The location of the elevated water tower and tank consists of an approximate ½-acre parcel of land zoned for general industrial use, which contains an elevated water tank owned by the City of Modesto. The surface of the property is covered with a combination of packed dirt and gravel including existing electrical cabinets and other telecommunications equipment. The steel elevated water tower and tank features a design that can still be found throughout the United States, used by private companies and municipalities for water storage. Between the 1920s and the 1970s there had been a number of important technological improvements that had been made to the design of elevated water towers, although the basic principals of engineering and function remain unchanged.

The 1900s-1920s water tower designs were constructed largely of wood, with lattice bracing and a large catwalk around the tank, which featured a conical cap. The second episode of tower construction, circa 1910s-1920s, featured steel four legged, riveted, lattice-braced towers with a distinctive cone shaped steel tank and conical hood. The third class of elevated towers included torospherical or ellipsoidal steel, five or six legged designs with spherical tanks and narrow catwalks. These towers were generally built in the late 1940s or 1950s for municipal or military use, as was the case with the Modesto elevated water tower and tank (Pittsburgh Tank & Tower Company, Inc. Website 2005; Chicago Bridge and Iron Works 1931).

The candidate structure, owned and operated by the City of Modesto, is a circa 1950s ellipsoidal elevated steel water tower and tank, commonly used by municipalities, the military, and private industry. The approximate 130' tower and tank retain good integrity, but the structure itself is very common and can be found in numerous Central Valley communities, including nearby Stockton. Near the tower is a circa 1930s industrial warehouse, but further beyond the elevated water tower are industrial buildings and structures that date from the 1950s through the 1970s. While the property is owned and operated by the City of Modesto, and is part of the city's water storage and distribution network, it is a relatively modern facility as compared to the communities historic water storage system that once included wood-frame elevated water towers and tanks and conical circa 1920s steel water towers.

Therefore, the property does not appear to be individually eligible for the National Register of Historic Places (NRHP) under Criterion A for its association with a significant event in the history of Modesto, or under NRHP Criterion C for its engineering design. The property does not appear to be part of a NRHP historic district, characterized by industrial buildings and structures adjoining D Street.

c. Address: 629 2nd Street City: Modesto Zip: 95351-3351
d. UTM: (Give more than one for large and/or linear resources) Zone: 10 ; mE/ ; mN
e. Other Locational Data: (e.g.parcel #, directions to resource, elevation, etc., as appropriate) The former fire station is located at 629 2nd Street , located north of Sierra Drive, and south of G Street in the southwestern portion of the City of Modesto..

P3a. Description: (Describe resource and it major elements. Include design, materials, condition, alterations, size, setting, and boundaries). The pump station structure is single story, rectangular-shaped with a flat roof and parapet with an undecorated entablature, made of concrete. The walls are enclosed with square columns and beam. Two facades have paired, double sash windows divided horizontally. They are enclosed with a lintel with decorative panel, plain trim and plain lugsill. A third facade has a single window with the same treatment. The south-facing facade has an arched porch supported by columns and double, double doors with a fanlight transom window with panels. The doors are metal. There is a decorative panel below the crest of the arch.

Stylistically, the structure has elements of the Beaux Arts Style, popular between 1885 and 1930. It would fall under the more common flat roof subtype that was modeled after Italian Renaissance homes. The symmetrical facade and entry porch roof supported with classical columns are typical Beaux Arts features (McAlester and McAlester 1996:379-380). Overall, decorative elements are limited to the window lintels and one panel underneath the crest of the arch.

Period of Significance N/A **Property Type** N/A **Applicable Criteria** N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The pump station is not associated with events important in our past or that have made a significant contribution to the broad patterns of California's history and cultural heritage [CRHR Criterion (B) 1]. It is simply a former part of the water supply system of the City of Modesto, and is representative of a period when the growth in population brought about a need for more service.

There is no single person of prominence that can be cited relative to the development and expansion of the water supply system of the City of Modesto. There are no other personalities associated with the building complex, so it can be concluded the building is not eligible under CRHR Criterion (B) 2 for an association with the lives of persons important in our past.

Modesto Pump Station No. 5 had a limited number of design elements added to an otherwise utilitarian design. It is somewhat unique, but does not exemplify or embody any outstanding architectural characteristics of a particular style or method of construction. Similarly, it does not represent the work of an important creative individual, or possesses high artistic values [CRHR Criterion (B) 3].

As a result, it can be concluded that the structure is not eligible for the California Register of Historical Resources.

STANFORD UNIVERSITY PRESS · STANFORD, CALIFORNIA

until the building of the west side railroad in the middle 1880's. Grayson today is a small town two miles northwest of Westley.

Langworth and Burneyville, Oakdale and Riverbank

The present towns of Oakdale and Riverbank, which date from the 1870's, are the successors of Langworth and Burneyville, respectively, which had been established before the coming of the railroad. Langworth, plotted as a town in 1860 by Henry Langworthy, was located on the Mariposa Road on the hill above the ferry owned by James Burney. Burney was a former sheriff of Mariposa County and a member of the Mariposa Battalion under Major James D. Savage in 1851. He moved down the river to begin Burneyville in 1867. When the railroad was run east of this site in 1871, the post office moved to the new town of Oakdale, and Langworth was finished. A plaque commemorating the town was placed by E Clampus Vitus at the junction of Langworth Road and SR 108, about three miles west of Oakdale. Oakdale has been an agricultural processing and shipping center for many years, as well as a stopover for travelers on the way to Yosemite from the San Francisco Bay Area.

At the corner of First and High streets in Riverbank, an E Clampus Vitus plaque notes that Burneyville was founded on the riverbank below the bluff by Major James Burney in 1867. Burney operated a second ferry at this point for a few years. He then served with distinction, in the words of the plaque, as "public servant, school superintendent and justice of the peace; Burney lived a full life [and] died 1901 at the age of 87 years." The small community of Burneyville has been absorbed by the expanding town of Riverbank.

Modesto

Modesto is the offspring of the railroad. The Central Pacific reached the site in 1870, and it was two years before the next thrust down the San Joaquin Valley carried the line farther south and east. Although early accounts seem to agree that the railroad terminus was not an attractive spot, it was clear to many people that the future of Stanislaus County lay along this central route. Within a year the new community was chosen to be the county seat, even though accommodations were so few that the county offices were scattered among boarding houses, the back rooms of commercial buildings, and similar improvised quarters.

The explanation most often given for the distinctive name of the town—Modesto is Spanish for "modesty"—goes as follows. The directors of the Central Pacific named railroad stops for officials of the company or members of their families. The name of William C. Ralston was proposed for the new town, but the San Francisco banker declined the honor. The chosen name reflects his unusual modesty in so doing.

Modesto's early history is full of stories of Wild West hell-raising in saloons and dens of iniquity. Vigilantes frequently purged the undesirable elements, who returned after a short while. At the same time, the undeniable progress in agriculture and the prosperity brought by the railroad ensured that a more serious, permanent quality would eventually take over in the community. In 1912, the energetic Modesto Business Men's Association received permission to erect an ornamental iron arch at the intersection of Ninth and I streets in what was then the commercial heart of town. (Other Central Valley towns, such as Lodi and Orland, made the same kind of construction.) Although the slogan to be written on the arch was originally NOBODY'S GOT MODESTO'S GOAT, sanity mercifully prevailed and the runner-up in the competition for the slogan—MODESTO: WATER WEALTH CONTENTMENT HEALTH—was chosen. It can be seen to this day, smartly embellished with electric lights at night, as the planners intended.

The McHenry Museum at 1402 I Street is housed in what was once the city library building, given to the city in 1912 by the McHenry family. Among its treasures are reconstructed offices, a large collection of guns and cattle brands from Stanislaus County, and a research and archive center for Modesto and Stanislaus County history. The McHenry Mansion, in which this prominent family lived, is nearby at Fifteenth and I

McHenry Mansion, Modesto

streets. It has been restored to its Victorian grandeur, including the distinctive cupola on top, visible, it was said, for miles around when it was constructed in 1883. The mansion is open to the public on a regular basis.

Patterson

An interesting example of a planned community, Patterson was founded in 1909. Thomas W. Patterson, one of the heirs to his uncle's Rancho del Puerto, was impressed by the colonization projects in other parts of the Central Valley, which had brought many settlers into the region. His town was laid out in the shape of a wagon wheel, the streets converging on a plaza where the Hotel del Puerto stands. The hotel, built in 1910, was the first building in town, along with the office of the Patterson Ranch Company, which stands in the center of the plaza and is now the home of the Patterson City Museum. The handsome palm-lined thoroughfare of Las Palmas Avenue, leading into the town from the west, was planted by Patterson, it is thought in emulation of Kearney Avenue in Fresno.

Hotel del Puerto, Patterson

A complex irrigation project, bringing water from the San Joaquin River to the town, insured its success, and within a few months of its establishment, Patterson was on the way to becoming a principal town on the west side of the San Joaquin Valley.

Lois Martin, Chairperson
Southern Sierra Miwuk Nation
P.O. Box 186
Mariposa, CA 95338

Subject: City of Modesto Utilities Department Wastewater Master Plan Update Environmental Impact Report

Dear Chairperson Martin,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Wastewater Master Plan (WWMP) Update (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its wastewater service system through development of a wastewater master plan, which reviews existing and planned sanitary sewer infrastructure relative to the projected urban growth of the City. The City has made a number of improvements that were identified in the 2007 Wastewater Master Plan but still faces challenges associated with aging infrastructure, providing reliability of critical facilities and, for future growth, providing increased capacity and extending infrastructure when it is needed.

The Program would consist of numerous Capital Improvement Projects (CIPs) collectively intended for system-wide implementation needed to ensure adequate wastewater infrastructure and services are available to meet wastewater demand requirements under both existing and future developed conditions. The Program all incorporated areas of Modesto, a portion of north Ceres, the unincorporated community of Empire, and unincorporated "islands" in Stanislaus County that are served by agreement with the City (Figure 1). The Sutter Avenue Primary Treatment Plant (Primary Plant or Sutter Plant) is in the southwestern portion of Modesto adjacent to the north bank of the Tuolumne River. The Jennings Road Secondary Treatment Plant (Secondary Plant or Jennings Plant) is approximately 6.5 miles southwest of the Modesto urban area and located on City-owned land on the eastern side of the San Joaquin River. These areas are shown in Figure 2.

The Program involves several improvements to the City's collection system, such as replacement or construction of new trunk sewers or pump stations, construction of new parallel sewers, and removal of storm drain cross connections. Proposed improvements at the Sutter Plant include, but are not limited to, upgrading the influent pump station to increase its hydraulic capacity to convey peak wet weather flows, improvements to the headworks facilities, and decommissioning of primary treatment and solids handling facilities. The Program also includes outfall pipeline improvements, such as replacement of

existing pipe crossings under the Tuolumne River and construction of a new third outfall pipeline from the Sutter Plant to the Jennings Plant. At the Jennings Plant, the Program includes upgrades to the secondary and Cannery Segregation treatment facilities, and construction of new primary treatment and solids handling facilities.

Most of the proposed CIPs would be implemented within the City's sewer service area, the Sutter Plant, and the Jennings Plant. The Program also proposes a third outfall pipeline connecting the Sutter and Jennings Plants (Figure 3). The exact locations of some of the proposed new facilities (e.g., collection system improvements and outfall pipeline) have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

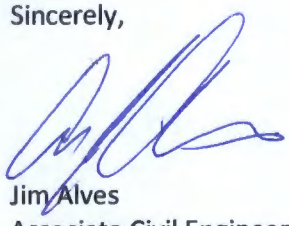
Pursuant to Public Resources Code Section 21080.3.1 *et seq.*, the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. If you wish to request the consultation, or if you have any questions, please contact:

Jim Alves
Associate Civil Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4600
Modesto, CA 95353
Phone: (209) 571-5557
Email: jalves@modestogov.com

If you do not contact us within 30 days following receipt of this letter, the City of Modesto Utilities Department will proceed with processing the above referenced application with the assumption that the project will not have a potential effect on tribal cultural resources. If consultation is requested, please provide the name and contact information of the designated lead contact person as part of your request. The City will contact the designated person to set a meeting date to begin consultation within 30 days of our receipt of your request.

More detailed information about this project is available, at your request. Thank you for giving this matter your prompt attention.

Sincerely,



Jim Alves

Subject: City of Modesto Utilities Department Wastewater Master Plan Update Environmental Impact Report

Dear Ms. Perez,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Wastewater Master Plan (WWMP) Update (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its wastewater service system through development of a wastewater master plan, which reviews existing and planned sanitary sewer infrastructure relative to the projected urban growth of the City. The City has made a number of improvements that were identified in the 2007 Wastewater Master Plan but still faces challenges associated with aging infrastructure, providing reliability of critical facilities and, for future growth, providing increased capacity and extending infrastructure when it is needed.

The Program would consist of numerous Capital Improvement Projects (CIPs) collectively intended for system-wide implementation needed to ensure adequate wastewater infrastructure and services are available to meet wastewater demand requirements under both existing and future developed conditions. The Program all incorporated areas of Modesto, a portion of north Ceres, the unincorporated community of Empire, and unincorporated “islands” in Stanislaus County that are served by agreement with the City (Figure 1). The Sutter Avenue Primary Treatment Plant (Primary Plant or Sutter Plant) is in the southwestern portion of Modesto adjacent to the north bank of the Tuolumne River. The Jennings Road Secondary Treatment Plant (Secondary Plant or Jennings Plant) is approximately 6.5 miles southwest of the Modesto urban area and located on City-owned land on the eastern side of the San Joaquin River. These areas are shown in Figure 2.

The Program involves several improvements to the City’s collection system, such as replacement or construction of new trunk sewers or pump stations, construction of new parallel sewers, and removal of storm drain cross connections. Proposed improvements at the Sutter Plant include, but are not limited to, upgrading the influent pump station to increase its hydraulic capacity to convey peak wet weather flows, improvements to the headworks facilities, and decommissioning of primary treatment and solids handling facilities. The Program also includes outfall pipeline improvements, such as replacement of

existing pipe crossings under the Tuolumne River and construction of a new third outfall pipeline from the Sutter Plant to the Jennings Plant. At the Jennings Plant, the Program includes upgrades to the secondary and Cannery Segregation treatment facilities, and construction of new primary treatment and solids handling facilities.

Most of the proposed CIPs would be implemented within the City's sewer service area, the Sutter Plant, and the Jennings Plant. The Program also proposes a third outfall pipeline connecting the Sutter and Jennings Plants (Figure 3). The exact locations of some of the proposed new facilities (e.g., collection system improvements and outfall pipeline) have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

Pursuant to Public Resources Code Section 21080.3.1 *et seq.*, the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. If you wish to request the consultation, or if you have any questions, please contact:

Subject: City of Modesto Utilities Department Wastewater Master Plan Update Environmental Impact Report

Dear Chairperson Peyron,

The City of Modesto (City) Utilities Department will serve as lead agency under the California Environmental Quality Act (CEQA) in preparing an Environmental Impact Report (EIR) for the Wastewater Master Plan (WWMP) Update (Program or Proposed Project) EIR. A Notice of Preparation will be released, as required by California Code of Regulations title 14, section 15000 et seq. The City periodically reevaluates its wastewater service system through development of a wastewater master plan, which reviews existing and planned sanitary sewer infrastructure relative to the projected urban growth of the City. The City has made a number of improvements that were identified in the 2007 Wastewater Master Plan but still faces challenges associated with aging infrastructure, providing reliability of critical facilities and, for future growth, providing increased capacity and extending infrastructure when it is needed.

The Program would consist of numerous Capital Improvement Projects (CIPs) collectively intended for system-wide implementation needed to ensure adequate wastewater infrastructure and services are available to meet wastewater demand requirements under both existing and future developed conditions. The Program all incorporated areas of Modesto, a portion of north Ceres, the unincorporated community of Empire, and unincorporated "islands" in Stanislaus County that are served by agreement with the City (Figure 1). The Sutter Avenue Primary Treatment Plant (Primary Plant or Sutter Plant) is in the southwestern portion of Modesto adjacent to the north bank of the Tuolumne River. The Jennings Road Secondary Treatment Plant (Secondary Plant or Jennings Plant) is approximately 6.5 miles southwest of the Modesto urban area and located on City-owned land on the eastern side of the San Joaquin River. These areas are shown in Figure 2.

The Program involves several improvements to the City's collection system, such as replacement or construction of new trunk sewers or pump stations, construction of new parallel sewers, and removal of storm drain cross connections. Proposed improvements at the Sutter Plant include, but are not limited to, upgrading the influent pump station to increase its hydraulic capacity to convey peak wet weather flows, improvements to the headworks facilities, and decommissioning of primary treatment and solids handling facilities. The Program also includes outfall pipeline improvements, such as replacement of

existing pipe crossings under the Tuolumne River and construction of a new third outfall pipeline from the Sutter Plant to the Jennings Plant. At the Jennings Plant, the Program includes upgrades to the secondary and Cannery Segregation treatment facilities, and construction of new primary treatment and solids handling facilities.

Most of the proposed CIPs would be implemented within the City's sewer service area, the Sutter Plant, and the Jennings Plant. The Program also proposes a third outfall pipeline connecting the Sutter and Jennings Plants (Figure 3). The exact locations of some of the proposed new facilities (e.g., collection system improvements and outfall pipeline) have yet to be finalized; where tentative sites have been identified, these locations will be identified in the Draft EIR.

Pursuant to Public Resources Code Section 21080.3.1 *et seq.*, the City of Modesto Utilities Department is notifying you of our intent to consider the Proposed Project. To initiate formal consultation with the City regarding any potential impacts of this Proposed Project on tribal cultural resources, Public Resources Code Section 21080.3.1(e) requires that you contact us within 30 days from your receipt of this letter. Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM SUMMARY TABLE

The following mitigation monitoring and reporting program (MMRP) summary table includes the mitigation measures identified in the City of Modesto (City) Wastewater Master Plan Draft Environmental Impact Report (DEIR). For each mitigation measure, this table identifies monitoring and reporting actions that shall be carried out and the monitoring schedule. This table also includes a column where responsible parties can check off monitoring and reporting actions as they are completed. It is the responsibility of the Contractor to ensure that actions required for all mitigation measures listed herein are included in the project plans and specifications. It is the responsibility of the City to review and confirm that all of the mitigation measure actions described herein are in the project plans and specifications.

Mitigation measures that are applicable to specific types of program-level improvements are indicated in the table. Mitigation measures that are applicable to the River Trunk Realignment Project are indicated with a "X" in the table.

Aesthetics							
AES-1	**Locate Staging Areas Away from Public Areas and Install Screening.** For components located in residential areas and near public parks, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences, major roadways, parks and other public areas. With the exception of designated staging areas for the River Trunk Realignment Project, to the extent practicable, staging areas for Program components shall be sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials	CSC OP SP	X	1. Include requirements in project plans and specifications. 2. Identify staging area locations that meet the requirements described in the measure. 3. In instances where on-street or on-site staging areas are necessary, implement screening methods.	1. Confirm that measure is included in plans and specifications. 2. Confirm that selected staging areas comply with requirements of the measure. 3. If necessary, confirm that screening methods are implemented appropriately.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to construction.	
Air Quality							
AQ-1	**Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM_{10}** The following controls are required to be implemented by the City or its contractor at all construction sites. ▪ All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover. ▪ All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/suppressant. ▪ All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid fugitive dust emissions through the application of water during work or by presoaking. ▪ When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained. ▪ All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.) ▪ Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/suppressant. ▪ Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday. ▪ Any site with 150 or more vehicle trips per day will prevent carryout and trackout.	CSC JP LSC OC OP PL SP	X	1. Include emission reduction measures into the project plans and specifications. 2. Implement and document emission reduction measures.	1. Confirm emission reduction measures are incorporated into the project plans and specifications. 2. Confirm emission reduction measures are implemented properly.	1. During development of the plans and specifications. 2. During construction.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
AQ-2	**Implement Enhanced Control Measures for Construction Emissions of PM_{10}** The following measures will be implemented by the City or its contractor at construction sites when required to mitigate significant PM10 impacts as determined by SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements). 1. Limit traffic speeds on unpaved roads to 15 mph. 2. Install sandbags or other erosion-control measures to prevent silt runoff. The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or that warrant additional emissions reductions for any other reason. 1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site. 2. Install wind breaks at windward sides of construction areas. 3. Suspend excavation and grading activity when winds exceed 20 miles per hour (mph). 4. Limit the area subject to excavation, grading, and other construction activity at any one time. 5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.	CSC JP LSC OC OP PL SP	X	1. Include enhanced emission control measures into project plans and specifications. 2. Implement and document enhanced emission control measures. 3. The quantitative air analyses shall be based on the types, locations, numbers, and operations of equipment to be used and shall determine whether the combined emissions exceed the SJVAPCD's permitted and unpermitted air quality thresholds.	1. Confirm enhanced emission control measures are included in project plans and specifications. 2. Confirm that enhanced emission control measures are implemented properly.	1. During preparation of plans and specifications. 2. During construction. 3.Prior to or during construction.	
AQ-3	**Implement Control Measures for Operation Emissions of PM_{10} and for Ozone Precursors (ROG and NO_x)** In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its contractor shall install equipment with Best Available Control Technology, as indicated in a site-specific air quality analysis to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified wastewater system sites when required to mitigate significant PM10 and ozone impacts, due to exceedance of Air Quality Thresholds of Significance.	CSC JP LSC OC OP PL SP	X	1. N/A 2. If necessary, and if directed by the City, install equipment with Best Available Control Technology at new or modified facility sites.	1. For new or modified facilities, conduct site-specific air quality analysis to determine if operational emissions will exceed SJVAPCD thresholds. 2. If thresholds will be exceeded, ensure that equipment with Best Available Control Technology is installed.	1. Prior to or during design phase. 2. If necessary, include equipment specifications during development of plans and specifications. Install equipment during construction.	
Biological Resources							
BIO-1	**Perform Surveys for Special-status Plant Species.** Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site as determined by the botanist. If special-status plants may be directly or indirectly affected, then **Mitigation Measure BIO-2** shall be implemented.	CSC OP	X	1. N/A 2. Provide the City with advance notice of construction schedule and anticipated start date. Support site access for qualified biologist. 3. Do not start construction until	1. Retain a qualified biologist to conduct focused surveys. 2. Ensure qualified biologist conducts focused surveys prior to implementation of construction activities. 3. If special-status plants are identified that may	1. Prior to construction. 2. Prior to construction. 3. Prior to construction.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
				focused surveys have been conducted and, if necessary, **Mitigation Measure BIO-2** has been implemented.	be directly or indirectly affected by activities, ensure that **Mitigation Measure BIO-2** is implemented.		
BIO-2	**Avoid, Minimize and Compensate for Impacts on Special-status Plant Species.** If special-status plants are detected, the City shall implement the following measures to avoid, minimize, and compensate for impacts on special-status plant species: ▪ The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally-sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally-sensitive area fencing will be installed at least 200 feet from the edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally-sensitive area. ▪ If avoidance is not feasible, the Program proponent will consult with either CDFW or USFWS, or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following components: relocation methods that will minimize the potential loss of plants from relocation, management plans and success criteria by which the mitigation can be measured for success, and regular monitoring to ensure that the plants are successfully transplanted. Success criteria shall require that at least 75% of the plants survive. The Rare Plant Plan will include specific, measurable triggers for adaptive management actions that will be necessary to ensure survival. ▪ The Rare Plant Plan will specify annual monitoring of the mitigation site for at least five years after planting, and will assess factors such as population size and density, recruitment, and individual plant health and vigor. Monitoring will also assess whether the mitigation requires adaptive management actions, such as collection and sowing of additional seed, tillage/disturbance within existing populations to induce establishment, installation of container plants, and control of exotic invasive vegetation (such as yellow star thistle) to ensure successful plant establishment and survival. The site will be evaluated at the end of the 5-year monitoring period to determine whether the mitigation has met the success criteria identified in the	CSC OP	X	1. If necessary, redesign or modify Program components to avoid or minimize impacts on special-status species. 2. Incorporate requirements prohibiting activities within fenced environmentally-sensitive areas into plans and specifications. 3. Protect any special-status plant species occurrences near a Program component site with environmentally-sensitive area fencing. 4. N/A 5. If directed by the City, implement the Rare Plant Plan prepared by the qualified botanist.	1. Confirm that modified design would avoid or minimize special-status plant species. 2. Confirm that requirements prohibiting activities within fenced environmentally-sensitive areas are included in plans and specifications. 3. Confirm that environmentally-sensitive area fencing is appropriately implemented, if such fencing is necessary to protect special-status species. 4. If avoidance is not feasible, consult with CDFW and/or USFWS to determine feasibility of special-status plant species transplantation. If feasible, retain qualified botanist to prepare Rare Plant Plan.	1. During design phase. 2. During preparation of plans and specifications. 3. Prior to start of construction. 4. Prior to construction. 5. During and/or after construction. Annual monitoring would occur for 5 years after planting.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
	Rare Plant Plan. If success criteria are not met at that time, then mitigation activities and monitoring will continue until success criteria are met. ▪ As part of the Rare Plant Plan, the program proponent, in conjunction with a qualified restoration ecologist and/or botanist and the consulting agency, if any, will identify a suitable on- or off-site location for mitigation, and appropriate methods for seed collection, propagation, relocation, maintenance, and monitoring. Mitigation sites will be located within the range of the affected plant and contain suitable habitat sites. For annual plant species, the seed crop from the individuals to be lost will be collected and then sown on appropriate habitat located on the mitigation site. The individuals will not be removed until seeds have been collected. For perennial plant species, both the seed and the plants themselves will be salvaged and relocated to the mitigation site. The individuals will not be removed until seeds have been collected. Seed from the populations that will be affected may be collected and propagated at a native plant nursery prior to planting in order to increase the potential for establishment and survival.				5. If necessary (i.e., avoidance is not feasible), confirm Rare Plant Plan is appropriately prepared by a qualified individual, and appropriately implemented (including 5-year monitoring requirements).		
BIO-3	**Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** Prior to implementation of proposed CIPs in areas that could contain habitat for vernal pool branchiopods, the City shall retain a qualified biologist to conduct surveys to determine whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City shall avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.	All Program-level components in grasslands or pastures	N/A	1. N/A 2. If necessary, and if habitat is present on-site, implement buffer zone identified by qualified biologist and/or USFWS to protect habitat.	1. Retain a qualified biologist to conduct surveys for vernal pools and wetlands. 2. If surveys find potential special-status invertebrate species habitat, confirm that an adequate buffer zone is implemented to protect resources.	1. Prior to construction. 2. Prior to initiation of construction activities.	
BIO-4	**Minimize and Compensate for Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided the City shall implement the following measures: ▪ After construction, restore surface topography and drainage to pre-construction conditions; and ▪ Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.	All Program-level components in grasslands or pastures	X	1. If impacts to habitat could not be avoided per **Mitigation Measure BIO-3**, restore surface topography and drainage to pre-construction conditions to minimize impacts. 2. N/A 3. If instructed by the City, implement off-site compensation plan for impacts to vernal pool branchiopods and/or western spadefoot.	1. If impacts could not be avoided per **Mitigation Measure BIO-3**, ensure that surface topography and drainage is restored to pre-construction conditions following construction. 2. Consult with USFWS and CDFW to determine appropriate ratios for off-site compensation for impacts to vernal pool branchiopods and/or western spadefoot.	1. Following construction. 2. As soon as it is determined that impacts to species/habitat cannot be avoided per **Mitigation Measure BIO-3**. 3. Following consultation with USFWS/CDFW and development of compensation approach.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
					3. Either implement compensation plan, instruct the contractor to do so, or hire a third party to perform the needed work.		
BIO-5	**Avoid Impacts on VELB Habitat.** The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to the VELB would not be expected to be substantial and therefore would not require mitigation. For proposed improvements that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017f). This shall include the following avoidance measures: ▪ If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal. ▪ The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities. ▪ No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level. ▪ A qualified biologist shall provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for noncompliance. ▪ A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring shall depend on the project specifics and should be discussed with USFWS. ▪ As much as feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the flight season of the VELB (March - July). ▪ If required, trimming of elderberry shrubs shall occur between November and February and shall avoid the removal of any branches or stems that are ≥ 1 inch in diameter.	CSC JP LSC OC OP PL SP	X	1. Incorporate requirement to avoid riparian habitat and/or elderberry shrubs into plans and specifications. 2. Make any necessary accommodations to allow biologist to conduct survey for elderberry shrubs/VELB habitat. 3. Avoid riparian habitat and/or elderberry shrubs whenever possible. If necessary, and VELB habitat is present on-site, implement avoidance measures described in mitigation measure. 4. N/A	1. Confirm that requirement to avoid riparian habitat and/or elderberry shrubs is included in project plans and specifications. 2. Retain qualified biologist to conduct surveys for the presence of elderberry shrubs that may be required. 3. If elderberry shrubs are present, ensure that avoidance measures are implemented. 4. If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to, and during, construction. 4. As soon as it is evident that elderberry shrubs cannot be avoided during construction.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	▪ Herbicides shall not be used within the drip-line of the shrub. Insecticides shall not be used within 98 feet of an elderberry shrub. All chemicals shall be applied using a backpack sprayer or similar direct application method. ▪ Mechanical weed removal within the drip-line of the shrub shall be limited to the season when VELB adults are not active (August-February) and shall avoid damaging the elderberry. ▪ Erosion control shall be implemented and the affected area shall be re-vegetated with appropriate native plants. If elderberry shrubs cannot be avoided, implement **Mitigation Measure BIO-6**.						
BIO-6	***Implement VELB Compensatory Mitigation, if Necessary.*** The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by the project shall be transplanted to a USFWS-approved location per **Mitigation Measure BIO-7.** Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS. Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre(s) of credits: acre(s) of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used. Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.	CSC JP LSC OC OP PL SP	X	1. Take all measures to preserve any elderberry shrub encountered that must be removed, such that the shrub may be transplanted per **Mitigation Measure BIO-7**. 2. If on-site mitigation is selected as the compensatory mitigation approach, implement any measures of the mitigation plan to which the contractor is delegated responsibility. 3. N/A	1. Ensure that any elderberry shrub removed during construction is preserved and transplanted per **Mitigation Measure BIO-7,** if feasible. 2. In coordination with USFWS, develop a compensatory mitigation approach following requirements set forth in mitigation measure. Either implement approach or delegate certain responsibilities to contractor. 3. Confirm that compensatory mitigation is satisfactorily provided.	1. During or prior to construction, if elderberry shrubs are encountered. 2. Once it is determined that avoidance of elderberry shrubs is infeasible. Compensatory mitigation shall be provided after approach is confirmed by USFWS. 3. After implementation of compensatory mitigation plan/approach.	
BIO-7	**Transplant Elderberry Shrubs if Avoidance Is Not Feasible.** The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to **Mitigation Measure BIO-6**, the shrub shall be transplanted. Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems,	CSC JP LSC OC OP PL SP	X	1. N/A 2. Under direction of the qualified biologist, transplant elderberry shrubs that cannot be avoided following the guidelines and requirements in the mitigation measure.	1. Retain a qualified biologist to oversee transplantation activities, should such activities be necessary. 2. Confirm that any elderberry shrubs that cannot be avoided are transplanted appropriately in accordance with the guidelines contained in	1. Prior to construction. 2. After it is determined that elderberry shrubs cannot be avoided.

	may not be appropriate for transplanting. The transplanting guidelines below shall be followed: ▪ A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures. ▪ Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the CNDDB. ▪ Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. ▪ Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (www.tcia.org).				the mitigation measure, and that exit-hole surveys are reported to CDFW and USFWS.		
BIO-8	**Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.** Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, ponds, and sloughs where suitable habitat exists. If a western pond turtle is located within the construction area, it will be relocated out of this area (with authorization from the CDFW), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented. ▪ The project proponent will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating western pond turtles. ▪ If a western pond turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed downstream from the project site (with authorization from CDFW). ▪ The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat. ▪ If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been conducted. 3. In coordination with the qualified biologist, relocate any discovered turtles outside of the construction area and erect exclusion fence to prevent re-entry. Implement minimization measures described in the mitigation measure, as directed by the biologist.	1. Retain a qualified biologist to conduct preconstruction surveys for western pond turtle in any suitable habitat. 2. Confirm that surveys are conducted in accordance with the mitigation measure prior to initiation of construction activities. 3. For any turtles discovered in the project area, ensure these individuals are relocated out of the area and that exclusion fence is installed to prevent re-entry. Also, confirm that minimization measures are implemented in the event that turtles or their habitat are present.	1. Prior to construction. 2. Prior to initiation of construction activities. 3. Prior to, or during, construction, if necessary.

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
BIO-9	**Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas If Necessary.** Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If no burrowing owls or signs of burrowing owls are detected during the survey, no further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented. If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season (February 1 through August 31). Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (CDFG 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW. If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow. If occupied burrows are relocated, the City shall enhance or create burrows in adjacent habitat at a 1:1 ratio (burrows destroyed to burrows enhanced or created) one week prior to implementation of passive relocation techniques. If burrowing owl habitat enhancement or creation takes place, the City shall develop and implement a monitoring and management plan to assess the effectiveness of the mitigation. The plan shall be subject to the approval of CDFW.	CSC JP LSC OC OP PL SP	N/A	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been completed. Provide any needed support/assistance to the qualified biologist in establishing no-work buffers around occupied burrows, if such burrows are discovered. 3. Provide any needed support/assistance to the qualified biologist and the City in implementing a passive owl relocation plan, if such a plan is deemed necessary.	1. Retain a qualified biologist to conduct the preconstruction surveys for burrowing owls. 2. If burrowing owls are located on or within 250 feet of the construction site, ensure that no-work buffers are established around occupied burrows in accordance with mitigation measure. Confirm appropriate buffer distances with CDFW. 3. If occupied burrows cannot be avoided, ensure that passive owl relocation techniques are appropriately implemented. Enhance or create burrows in adjacent habitat at a 1:1 ratio one week prior to implementation of passive relocation techniques. Obtain approval from CDFW for owl relocation plan.	1. Prior to construction. 2. Prior to construction. 3. Prior to construction / after it is determined that occupied burrows cannot be avoided.	
BIO-10	**Avoid and Minimize Impacts on Raptors, including Special-status Species.** The City shall implement the following measures. If ground and vegetation disturbing activities occur between February 1 and August 31, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests.	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate ground- and vegetation-disturbing activities between February 1 and August 31 until a nesting raptor survey has been conducted. If nesting raptors are detected, provide any needed support to the	1. Retain a qualified biologist to conduct the nesting raptor survey. 2. If nesting raptors are detected, ensure that an appropriate 500-foot no-disturbance buffer is established around the nest.	1. Prior to construction. 2. Prior to construction, if necessary.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.			qualified biologist and/or the City in establishing no-disturbance buffers around the nest(s). Do not conduct activities within the buffer(s) until directed by the biologist.			
BIO-11	**Compensate for Loss of Raptor Foraging Habitat.** The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's hawk foraging habitat mitigation bank that covers the study area, such as the Dutchman Creek Conservation Bank. The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program-level components are assumed to be within 1 mile of an active Swainson's hawk nest tree. Mitigation credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows: ▪ 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's hawk; or ▪ 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands. The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.	CSC JP LSC OC OP PL SP	X	1. N/A	1. Provide off-site compensation for losses of raptor foraging habitat through one of the methods described in the mitigation measure. Confirm that off-site mitigation is sufficient to compensate for impacts following the ratios outlined in the measure.	1. After the acreage of any permanent impacts to raptor foraging habitat is determined.	
BIO-12	**Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas If Necessary.** The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If the survey indicates that no active nests are found, no further mitigation shall be required.	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate construction activities during the bird breeding season until surveys have been conducted. Provide any assistance or accommodation	1. Retain a qualified biologist to conduct the preconstruction surveys for nesting birds. 2. Confirm that surveys are appropriately conducted within 14 days of construction	1. Prior to construction. 2. Prior to construction. 3. Prior to and during construction.

		Program-level Components	River Trunk Realignment Project				
	If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned construction activities, and baseline level of human activity. The buffers will be clearly marked in the field with flagging or fencing. No work shall commence within the buffer until the young have fledged or the nest is deemed inactive.			necessary to the biologist conducting the survey. 3. In the event that active nests are identified, provide any needed assistance to the qualified biologist in establishing the no-disturbance buffers. Do not conduct construction activities within the buffers until directed by the biologist.	activity that would occur during the bird breeding season. 3. In the event that active nests are identified, ensure that no-disturbance buffers are established around nests in accordance with the measure.		
BIO-13	**Avoid and Minimize Impacts on Federally Protected Wetlands.** The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands. If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of **Mitigation Measure BIO-14**. For all activities greater than one acre of disturbance, a SWPPP shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters, and for all activities less than one acre of disturbance, a Local SWPPP shall be implemented. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.	CSC OP	X	1. N/A 2. Avoid wetlands to the extent feasible. 3. If wetlands cannot be avoided, following construction, restore surface topography and drainage to pre-construction conditions. Additionally, where appropriate, revegetate impacted wetland areas with site-adapted native plant species.	1. If complete avoidance of wetlands is not possible, perform or commission a wetland delineation study for the project site, to be used during implementation of **Mitigation Measure BIO-14**. 2. Confirm that wetlands are avoided during construction activities to the extent feasible. 3. In the event that wetlands cannot be avoided, confirm that wetland areas are restored to pre-construction conditions.	1. Prior to construction. 2. During construction. 3. Following construction.	
BIO-14	**Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.** The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA	CSC OP	X	1. Do not initiate work in areas defined as water of the U.S. and State until the City has obtained the appropriate regulatory permits. 2. N/A	1. For work within areas defined as waters of the U.S. and State, obtain appropriate regulatory permits. 2. For areas where wetland impacts occur, provide compensatory	1. Prior to initiation of construction activities within waters. 2. At a time acceptable to the regulatory agencies.

	Nationwide Permit and/or the Final Rule on Compensatory Mitigation for Losses of Aquatic Resources (73 Fed. Reg. S19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.				mitigation by one of the methods described in the mitigation measure.		
BIO-15	**Install Temporary Trench Plates over Open Trenches.** The City shall implement the following measure. During open-cut construction of pipelines, the City shall install temporary trench plates over open trenches at the end of each work day.	CSC JP LSC OC OP PL SP	X	1. Incorporate requirement into project plans and specifications. 2. Cover open trenches with trench plates at the end of each work day.	1. Confirm that requirement is included in plans and specifications. 2. Confirm that contractor is covering trenches appropriately at the end of each work day.	1. During preparation of plans and specifications. 2. During construction.	
Cultural Resources							
CR-1	**Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work** Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive information about the kinds of archaeological materials that could be present at the River Trunk Realignment Project site and other CIP sites, and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.	CSC JP LSC OC OP PL SP	X	1. Coordinate with the City to provide workers information about potential buried cultural resources.	1. Arrange for workers to receive information about potential buried cultural resources	1. Prior to construction	
Greenhouse Gases

Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	Program-level Components	River Trunk Realignment Project				
▪ Require that a qualified archaeologist and biologist survey for and recommend protection measures for sensitive cultural and biological resources at the location of the entry and exit points and along the boring route. ▪ Include worker training measures to ensure that all field personnel understand their responsibility for timely reporting of frac-outs to their supervisors. Supervisors must then report frac-outs to CDFW as described in the last bullet below. ▪ Maintain necessary response equipment on-site or at a readily accessible location and in good working order. ▪ Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003): For a terrestrial frac-out: - Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud. - Based on consultation with CDFW (see below), either: ▪ Use a mobile vacuum truck to pump the drilling mud from the contained area and recycle it to the return pit; or ▪ Leave the drilling mud in place to avoid potential damage from vehicles entering the area. - Once excess drilling mud is removed, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. For an aquatic frac-out: - Monitor frac-out for 4 hours to determine if the drilling mud congeals (bentonite will usually harden, effectively sealing the frac-out location). - Based on consultation with CDFW (see below), either: ▪ If the drilling mud congeals, take no other action that would potentially suspend sediments in the water column. ▪ If drilling mud does not congeal, erect isolation/containment environment (underwater boom and curtain). ▪ If the fracture becomes excessively large, call in a spill response team to contain and clean up excess drilling mud in the water. Keep phone numbers of spill response teams on-site. - If the spill affects an area that is vegetated, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. ▪ Notify and consult with CDFW in the event of a frac-out. Restore vegetation damaged by drilling fluid to pre-construction conditions.			recommendations. Coordinate worker training for field personnel. 3. For any frac-outs that occur, notify the appropriate agencies and implement the appropriate measures, as specified in the measure.	biologist to make recommendations to minimize impacts. Arrange for field personnel to receive training. 3. For any frac-outs that occur, confirm that proper protocols were followed to contain the frac-out and minimize impacts.

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
HYD/WQ-2	**Conduct Flood Flow Study for Benson Lift Station.** Prior to final project design, the City of Modesto and/or its contractor(s) shall conduct a study to ascertain the changes in flows that may be caused by the proposed Benson Lift Station structure in the event of a 100-year flood. The study shall model the change, if any, in inundation area that may be caused by restriction in flood flow passage caused by the structure. If the study determines that the proposed lift station may cause inundation of adjacent or upstream/downstream properties or structures during a 100-year flood event, the City shall develop mitigation measures to address this impact. Feasible mitigation measures may include construction of flood protection structures for potentially affected properties or reconfiguration of the proposed project facilities to reduce impedance or redirection of flows (e.g., elevating critical facilities such as electrical panels and underground pump vault doors to levels above flood stage). Alternatively, the City may identify an alternative site for the proposed lift station that would avoid impacts on flood flows.	LSC #3	N/A	1. N/A 2. Conduct flood flow study of pre- and post-project conditions in accordance with the mitigation measure. If study determines that the lift station may cause inundation of adjacent properties during a 100-year flood event, develop feasible mitigation measures.	1. Incorporate requirements into plans and specifications. 2. Ensure that flood flow study meets requirements described in **Mitigation Measure HYD/WQ-2**.	1. During preparation of plans and specifications. 2. During preparation of plans and specifications.	
Land Use and Planning							
None.							
Noise and Vibration							
NOI-1	**Employ Noise-Reducing Construction and Maintenance Practices.** The following measures will be implemented by the City or its contractor(s) to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected: ▪ Locate stationary equipment as far as practical from noise-sensitive land uses; ▪ Use electrified or otherwise quieter equipment when practical; ▪ Use sound-control devices on equipment that are more effective than devices originally provided on the equipment; ▪ Use noise-reducing enclosures around noise-generating equipment; and ▪ Install temporary barriers between noise sources and noise-sensitive land uses, or take advantage of existing barrier features (e.g., terrain and structures) to block sound transmission. When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.	CSC JP LSC OC OP PL SP	X	1. Include noise reduction measures in project plans and specifications. 2. Implement and document noise reduction measures. In coordination with the City, develop haul routes that avoid sensitive receptors to the extent feasible.	1. Confirm that noise reduction measures are included in project plans and specifications. 2. Confirm that noise reduction measures are implemented properly. Work with Contractor to identify haul routes that avoid sensitive receptors.	1. During preparation of plans and specifications. 2. During construction.	
NOI-2	**Limit Nighttime Construction Noise.** When feasible, the City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays unless a special exemption permit allowed by Modesto Municipal Code Section 4-9.103(b)(6) is obtained.	CSC JP LSC OC OP PL SP	X	1. Include measure in project plans and specifications. 2. Do not conduct construction activities in close proximity to a residence outside of the hours specified in the measure.	1. Confirm that measure is included in project plans and specifications. 2. Confirm that Contractor follows requirements specified in the mitigation measure.	1. During development of plans and specifications. 2. During construction.

				Document compliance with this requirement.			
NOI-3	**Prepare Project-level Noise Analysis for Operation of Proposed Sutter Plant Components** The City or its contractor(s) shall prepare a project-level noise analysis for operation of proposed Sutter Plant components. The detailed noise study should show that appropriate mitigation measures will be implemented to reduce noise levels to less than a 10-dB increase in residential areas. If the analysis demonstrates that significant operational noise impacts are likely to occur, **Mitigation Measure NOI-4** shall be implemented. Alternately, the City can assume that the impacts would be significant and implement **Mitigation Measure NOI-4** without first conducting a noise study under **Mitigation Measure NOI-3**.	SP	N/A	1. N/A 2. Conduct noise study in accordance with **Mitigation Measure NOI-3**.	1. Retain contractor to conduct a noise analysis for the Sutter Plant components. 2. Ensure that noise evaluation meets requirements outlined in **Mitigation Measure NOI-3**.	1. Prior to the design phase of Sutter Plant components. 2. Prior to construction of Sutter Plant components.	
NOI-4	**Employ Noise-Reducing Methods During Operations** The City or its contractor(s) shall implement noise-reducing methods so that noise from lift stations does not exceed City or County noise-level standards at adjacent residences. This measure shall also be implemented to achieve City or County noise-level standards for Sutter Plant components if deemed necessary per **Mitigation Measure NOI-3**. Example measures may include, but are not limited to, the following: ▪ Locate stationary equipment as far as practical from noise-sensitive land uses; ▪ Use electrified or otherwise quieter equipment when practical; ▪ Use sound-control devices on equipment that are more effective than devices originally provided on the equipment; ▪ Install permanent barriers between noise sources and noise-sensitive land uses, or take advantage of existing barrier features (terrain and structures) to block sound transmission; ▪ Limit operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas; and ▪ Use sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available.	LSC SP	N/A	1. N/A 2. If necessary, and if directed by the City, implement noise-reducing measures at new or modified facility sites.	1. For new or modified facilities, conduct site-specific noise analysis to determine if County noise-level standards will be exceeded at adjacent residences during facility operations. 2. If standards will be exceeded, implement noise-reducing measures to reduce noise to below standards.	1. Prior to or during the design phase. 2. Incorporate measures during design phase. Implement measures during construction.	
NOI-5	**Implement Vibration Reduction Measures** The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors: ▪ Ensure proper tuning of vibration-causing equipment. ▪ Use vibration damping devices to the extent feasible. ▪ Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings. ▪ Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically	CSC JP LSC OC OP PL SP	X	1. Include measures in project plans and specifications. 2. Implement and document vibration-reducing measures.	1. Confirm that measures are included in project plans and specifications. 2. Confirm that measures are implemented properly.	1. During development of plans and specifications. 2. During construction.

	powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible. ▪ Use electric stationary equipment (e.g., generators) where feasible. ▪ Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment, particularly if construction activities are conducted after 7:00 pm. For all construction activities occurring within 60 feet of residences at any time of day, install a temporary noise and vibration barrier between the project site and the nearest sensitive receptors. Following the completion of construction activities within that distance, the barrier will be removed.

MITIGATION MONITORING AND REPORTING PROGRAM SUMMARY TABLE

The following mitigation monitoring and reporting program (MMRP) summary table includes the mitigation measures identified in the City of Modesto (City) Wastewater Master Plan Draft Environmental Impact Report (DEIR). For each mitigation measure, this table identifies monitoring and reporting actions that shall be carried out and the monitoring schedule. This table also includes a column where responsible parties can check off monitoring and reporting actions as they are completed. It is the responsibility of the Contractor to ensure that actions required for all mitigation measures listed herein are included in the project plans and specifications. It is the responsibility of the City to review and confirm that all of the mitigation measure actions described herein are in the project plans and specifications.

Mitigation measures that are applicable to specific types of program-level improvements are indicated in the table. Mitigation measures that are applicable to the River Trunk Realignment Project are indicated with a "X" in the table.

Aesthetics							
AES-1	**Locate Staging Areas Away from Public Areas and Install Screening.** For components located in residential areas and near public parks, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences, major roadways, parks and other public areas. With the exception of designated staging areas for the River Trunk Realignment Project, to the extent practicable, staging areas for Program components shall be sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials	CSC OP SP	X	1. Include requirements in project plans and specifications. 2. Identify staging area locations that meet the requirements described in the measure. 3. In instances where on-street or on-site staging areas are necessary, implement screening methods.	1. Confirm that measure is included in plans and specifications. 2. Confirm that selected staging areas comply with requirements of the measure. 3. If necessary, confirm that screening methods are implemented appropriately.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to construction.	
Air Quality							
AQ-1	**Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM_{10}** The following controls are required to be implemented by the City or its contractor at all construction sites. ▪ All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover. ▪ All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/suppressant. ▪ All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid fugitive dust emissions through the application of water during work or by presoaking. ▪ When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained. ▪ All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.) ▪ Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/suppressant. ▪ Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday. ▪ Any site with 150 or more vehicle trips per day will prevent carryout and trackout.	CSC JP LSC OC OP PL SP	X	1. Include emission reduction measures into the project plans and specifications. 2. Implement and document emission reduction measures.	1. Confirm emission reduction measures are incorporated into the project plans and specifications. 2. Confirm emission reduction measures are implemented properly.	1. During development of the plans and specifications. 2. During construction.

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
AQ-2	**Implement Enhanced Control Measures for Construction Emissions of PM_{10}** The following measures will be implemented by the City or its contractor at construction sites when required to mitigate significant PM10 impacts as determined by SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements). 1. Limit traffic speeds on unpaved roads to 15 mph. 2. Install sandbags or other erosion-control measures to prevent silt runoff. The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or that warrant additional emissions reductions for any other reason. 1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site. 2. Install wind breaks at windward sides of construction areas. 3. Suspend excavation and grading activity when winds exceed 20 miles per hour (mph). 4. Limit the area subject to excavation, grading, and other construction activity at any one time. 5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.	CSC JP LSC OC OP PL SP	X	1. Include enhanced emission control measures into project plans and specifications. 2. Implement and document enhanced emission control measures. 3. The quantitative air analyses shall be based on the types, locations, numbers, and operations of equipment to be used and shall determine whether the combined emissions exceed the SJVAPCD's permitted and unpermitted air quality thresholds.	1. Confirm enhanced emission control measures are included in project plans and specifications. 2. Confirm that enhanced emission control measures are implemented properly.	1. During preparation of plans and specifications. 2. During construction. 3.Prior to or during construction.	
AQ-3	**Implement Control Measures for Operation Emissions of PM_{10} and for Ozone Precursors (ROG and NO_x)** In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its contractor shall install equipment with Best Available Control Technology, as indicated in a site-specific air quality analysis to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified wastewater system sites when required to mitigate significant PM10 and ozone impacts, due to exceedance of Air Quality Thresholds of Significance.	CSC JP LSC OC OP PL SP	X	1. N/A 2. If necessary, and if directed by the City, install equipment with Best Available Control Technology at new or modified facility sites.	1. For new or modified facilities, conduct site-specific air quality analysis to determine if operational emissions will exceed SJVAPCD thresholds. 2. If thresholds will be exceeded, ensure that equipment with Best Available Control Technology is installed.	1. Prior to or during design phase. 2. If necessary, include equipment specifications during development of plans and specifications. Install equipment during construction.	
Biological Resources							
BIO-1	**Perform Surveys for Special-status Plant Species.** Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site as determined by the botanist. If special-status plants may be directly or indirectly affected, then **Mitigation Measure BIO-2** shall be implemented.	CSC OP	X	1. N/A 2. Provide the City with advance notice of construction schedule and anticipated start date. Support site access for qualified biologist. 3. Do not start construction until	1. Retain a qualified biologist to conduct focused surveys. 2. Ensure qualified biologist conducts focused surveys prior to implementation of construction activities. 3. If special-status plants are identified that may	1. Prior to construction. 2. Prior to construction. 3. Prior to construction.

				focused surveys have been conducted and, if necessary, **Mitigation Measure BIO-2** has been implemented.	be directly or indirectly affected by activities, ensure that **Mitigation Measure BIO-2** is implemented.		
BIO-2	**Avoid, Minimize and Compensate for Impacts on Special-status Plant Species.** If special-status plants are detected, the City shall implement the following measures to avoid, minimize, and compensate for impacts on special-status plant species: ▪ The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally-sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally-sensitive area fencing will be installed at least 200 feet from the edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally-sensitive area. ▪ If avoidance is not feasible, the Program proponent will consult with either CDFW or USFWS, or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following components: relocation methods that will minimize the potential loss of plants from relocation, management plans and success criteria by which the mitigation can be measured for success, and regular monitoring to ensure that the plants are successfully transplanted. Success criteria shall require that at least 75% of the plants survive. The Rare Plant Plan will include specific, measurable triggers for adaptive management actions that will be necessary to ensure survival. ▪ The Rare Plant Plan will specify annual monitoring of the mitigation site for at least five years after planting, and will assess factors such as population size and density, recruitment, and individual plant health and vigor. Monitoring will also assess whether the mitigation requires adaptive management actions, such as collection and sowing of additional seed, tillage/disturbance within existing populations to induce establishment, installation of container plants, and control of exotic invasive vegetation (such as yellow star thistle) to ensure successful plant establishment and survival. The site will be evaluated at the end of the 5-year monitoring period to determine whether the mitigation has met the success criteria identified in the Rare Plant Plan. If success criteria are not met at that time, then mitigation	CSC OP	X	1. If necessary, redesign or modify Program components to avoid or minimize impacts on special-status species. 2. Incorporate requirements prohibiting activities within fenced environmentally-sensitive areas into plans and specifications. 3. Protect any special-status plant species occurrences near a Program component site with environmentally-sensitive area fencing. 4. N/A 5. If directed by the City, implement the Rare Plant Plan prepared by the qualified botanist.	1. Confirm that modified design would avoid or minimize special-status plant species. 2. Confirm that requirements prohibiting activities within fenced environmentally-sensitive areas are included in plans and specifications. 3. Confirm that environmentally-sensitive area fencing is appropriately implemented, if such fencing is necessary to protect special-status species. 4. If avoidance is not feasible, consult with CDFW and/or USFWS to determine feasibility of special-status plant species transplantation. If feasible, retain qualified botanist to prepare Rare Plant Plan. 5. If necessary (i.e., avoidance is not feasible), confirm Rare Plant Plan is appropriately prepared by a qualified individual, and appropriately implemented	1. During design phase. 2. During preparation of plans and specifications. 3. Prior to start of construction. 4. Prior to construction. 5. During and/or after construction. Annual monitoring would occur for 5 years after planting.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	activities and monitoring will continue until success criteria are met. ▪ As part of the Rare Plant Plan, the program proponent, in conjunction with a qualified restoration ecologist and/or botanist and the consulting agency, if any, will identify a suitable on- or off-site location for mitigation, and appropriate methods for seed collection, propagation, relocation, maintenance, and monitoring. Mitigation sites will be located within the range of the affected plant and contain suitable habitat sites. For annual plant species, the seed crop from the individuals to be lost will be collected and then sown on appropriate habitat located on the mitigation site. The individuals will not be removed until seeds have been collected. For perennial plant species, both the seed and the plants themselves will be salvaged and relocated to the mitigation site. The individuals will not be removed until seeds have been collected. Seed from the populations that will be affected may be collected and propagated at a native plant nursery prior to planting in order to increase the potential for establishment and survival.				(including 5-year monitoring requirements).		
BIO-3	**Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** Prior to implementation of proposed CIPs in areas that could contain habitat for vernal pool branchiopods, the City shall retain a qualified biologist to conduct surveys to determine whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City shall avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.	All Program-level components in grasslands or pastures	N/A	1. N/A 2. If necessary, and if habitat is present on-site, implement buffer zone identified by qualified biologist and/or USFWS to protect habitat.	1. Retain a qualified biologist to conduct surveys for vernal pools and wetlands. 2. If surveys find potential special-status invertebrate species habitat, confirm that an adequate buffer zone is implemented to protect resources.	1. Prior to construction. 2. Prior to initiation of construction activities.	
BIO-4	**Minimize and Compensate for Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.** If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided the City shall implement the following measures: ▪ After construction, restore surface topography and drainage to pre-construction conditions; and ▪ Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.	All Program-level components in grasslands or pastures	X	1. If impacts to habitat could not be avoided per **Mitigation Measure BIO-3**, restore surface topography and drainage to pre-construction conditions to minimize impacts. 2. N/A 3. If instructed by the City, implement off-site compensation plan for impacts to vernal pool branchiopods and/or western spadefoot.	1. If impacts could not be avoided per **Mitigation Measure BIO-3**, ensure that surface topography and drainage is restored to pre-construction conditions following construction. 2. Consult with USFWS and CDFW to determine appropriate ratios for off-site compensation for impacts to vernal pool branchiopods and/or western spadefoot. 3. Either implement compensation plan,	1. Following construction. 2. As soon as it is determined that impacts to species/habitat cannot be avoided per **Mitigation Measure BIO-3**. 3. Following consultation with USFWS/CDFW and development of compensation approach.

					instruct the contractor to do so, or hire a third party to perform the needed work.		
BIO-5	**Avoid Impacts on VELB Habitat.** The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to the VELB would not be expected to be substantial and therefore would not require mitigation. For proposed improvements that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017f). This shall include the following avoidance measures: ▪ If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal. ▪ The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities. ▪ No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level. ▪ A qualified biologist shall provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for noncompliance. ▪ A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring shall depend on the project specifics and should be discussed with USFWS. ▪ As much as feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the flight season of the VELB (March - July). ▪ If required, trimming of elderberry shrubs shall occur between November and February and shall avoid the removal of any branches or stems that are ≥ 1 inch in diameter. ▪ Herbicides shall not be used within the drip-line of the shrub. Insecticides shall not be used within 98 feet of an elderberry shrub. All chemicals shall be applied using a	CSC JP LSC OC OP PL SP	X	1. Incorporate requirement to avoid riparian habitat and/or elderberry shrubs into plans and specifications. 2. Make any necessary accommodations to allow biologist to conduct survey for elderberry shrubs/VELB habitat. 3. Avoid riparian habitat and/or elderberry shrubs whenever possible. If necessary, and VELB habitat is present on-site, implement avoidance measures described in mitigation measure. 4. N/A	1. Confirm that requirement to avoid riparian habitat and/or elderberry shrubs is included in project plans and specifications. 2. Retain qualified biologist to conduct surveys for the presence of elderberry shrubs that may be required. 3. If elderberry shrubs are present, ensure that avoidance measures are implemented. 4. If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.	1. During preparation of plans and specifications. 2. Prior to construction. 3. Prior to, and during, construction. 4. As soon as it is evident that elderberry shrubs cannot be avoided during construction.	

Key to program-level Components: CSC = Collection System Components; JP = Jennings Plant; LSC = Lift Station Components; OC = Other Components; OP = Outfall Pipelines; PL = New/Upgraded Sewer Pipelines and Pipeline Rehabilitation; SP = Sutter Plant

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	backpack sprayer or similar direct application method. ▪ Mechanical weed removal within the drip-line of the shrub shall be limited to the season when VELB adults are not active (August-February) and shall avoid damaging the elderberry. ▪ Erosion control shall be implemented and the affected area shall be re-vegetated with appropriate native plants. If elderberry shrubs cannot be avoided, implement **Mitigation Measure BIO-6**.						
BIO-6	***Implement VELB Compensatory Mitigation, if Necessary.*** The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by the project shall be transplanted to a USFWS-approved location per **Mitigation Measure BIO-7.** Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS. Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre(s) of credits: acre(s) of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used. Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.	CSC JP LSC OC OP PL SP	X	1. Take all measures to preserve any elderberry shrub encountered that must be removed, such that the shrub may be transplanted per **Mitigation Measure BIO-7**. 2. If on-site mitigation is selected as the compensatory mitigation approach, implement any measures of the mitigation plan to which the contractor is delegated responsibility. 3. N/A	1. Ensure that any elderberry shrub removed during construction is preserved and transplanted per **Mitigation Measure BIO-7,** if feasible. 2. In coordination with USFWS, develop a compensatory mitigation approach following requirements set forth in mitigation measure. Either implement approach or delegate certain responsibilities to contractor. 3. Confirm that compensatory mitigation is satisfactorily provided.	1. During or prior to construction, if elderberry shrubs are encountered. 2. Once it is determined that avoidance of elderberry shrubs is infeasible. Compensatory mitigation shall be provided after approach is confirmed by USFWS. 3. After implementation of compensatory mitigation plan/approach.	
BIO-7	**Transplant Elderberry Shrubs if Avoidance Is Not Feasible.** The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to **Mitigation Measure BIO-6**, the shrub shall be transplanted. Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The transplanting guidelines below shall be followed:	CSC JP LSC OC OP PL SP	X	1. N/A 2. Under direction of the qualified biologist, transplant elderberry shrubs that cannot be avoided following the guidelines and requirements in the mitigation measure.	1. Retain a qualified biologist to oversee transplantation activities, should such activities be necessary. 2. Confirm that any elderberry shrubs that cannot be avoided are transplanted appropriately in accordance with the guidelines contained in the mitigation measure, and that	1. Prior to construction. 2. After it is determined that elderberry shrubs cannot be avoided.

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
	▪ A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures. ▪ Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the CNDDB. ▪ Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. ▪ Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (www.tcia.org).				exit-hole surveys are reported to CDFW and USFWS.		
BIO-8	**Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.** Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, ponds, and sloughs where suitable habitat exists. If a western pond turtle is located within the construction area, it will be relocated out of this area (with authorization from the CDFW), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented. ▪ The project proponent will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating western pond turtles. ▪ If a western pond turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed downstream from the project site (with authorization from CDFW). ▪ The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat. ▪ If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been conducted. 3. In coordination with the qualified biologist, relocate any discovered turtles outside of the construction area and erect exclusion fence to prevent re-entry. Implement minimization measures described in the mitigation measure, as directed by the biologist.	1. Retain a qualified biologist to conduct preconstruction surveys for western pond turtle in any suitable habitat. 2. Confirm that surveys are conducted in accordance with the mitigation measure prior to initiation of construction activities. 3. For any turtles discovered in the project area, ensure these individuals are relocated out of the area and that exclusion fence is installed to prevent re-entry. Also, confirm that minimization measures are implemented in the event that turtles or their habitat are present.	1. Prior to construction. 2. Prior to initiation of construction activities. 3. Prior to, or during, construction, if necessary.	
BIO-9	**Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas If Necessary.** Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed.	CSC JP LSC OC OP	N/A	1. N/A 2. Do not initiate construction activities until preconstruction surveys have been completed. Provide	1. Retain a qualified biologist to conduct the preconstruction surveys for burrowing owls. 2. If burrowing owls are	1. Prior to construction. 2. Prior to construction. 3. Prior to construction / after it is determined that occupied burrows

	Mitigation Measure	Applicable WWMP Improvement: Program-level Components	Applicable WWMP Improvement: River Trunk Realignment Project	Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
	If no burrowing owls or signs of burrowing owls are detected during the survey, no further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented. If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season (February 1 through August 31). Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (CDFG 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW. If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow. If occupied burrows are relocated, the City shall enhance or create burrows in adjacent habitat at a 1:1 ratio (burrows destroyed to burrows enhanced or created) one week prior to implementation of passive relocation techniques. If burrowing owl habitat enhancement or creation takes place, the City shall develop and implement a monitoring and management plan to assess the effectiveness of the mitigation. The plan shall be subject to the approval of CDFW.	PL SP		any needed support/assistance to the qualified biologist in establishing no-work buffers around occupied burrows, if such burrows are discovered. 3. Provide any needed support/assistance to the qualified biologist and the City in implementing a passive owl relocation plan, if such a plan is deemed necessary.	located on or within 250 feet of the construction site, ensure that no-work buffers are established around occupied burrows in accordance with mitigation measure. Confirm appropriate buffer distances with CDFW. 3. If occupied burrows cannot be avoided, ensure that passive owl relocation techniques are appropriately implemented. Enhance or create burrows in adjacent habitat at a 1:1 ratio one week prior to implementation of passive relocation techniques. Obtain approval from CDFW for owl relocation plan.	cannot be avoided.	
BIO-10	**Avoid and Minimize Impacts on Raptors, including Special-status Species.** The City shall implement the following measures. If ground and vegetation disturbing activities occur between February 1 and August 31, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests. If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate ground- and vegetation-disturbing activities between February 1 and August 31 until a nesting raptor survey has been conducted. If nesting raptors are detected, provide any needed support to the qualified biologist and/or the City in establishing no-disturbance buffers around the nest(s). Do not conduct activities	1. Retain a qualified biologist to conduct the nesting raptor survey. 2. If nesting raptors are detected, ensure that an appropriate 500-foot no-disturbance buffer is established around the nest.	1. Prior to construction. 2. Prior to construction, if necessary.

				within the buffer(s) until directed by the biologist.			
BIO-11	**Compensate for Loss of Raptor Foraging Habitat.** The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's hawk foraging habitat mitigation bank that covers the study area, such as the Dutchman Creek Conservation Bank. The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program-level components are assumed to be within 1 mile of an active Swainson's hawk nest tree. Mitigation credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows: ▪ 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's hawk; or ▪ 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands. The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.	CSC JP LSC OC OP PL SP	X	1. N/A	1. Provide off-site compensation for losses of raptor foraging habitat through one of the methods described in the mitigation measure. Confirm that off-site mitigation is sufficient to compensate for impacts following the ratios outlined in the measure.	1. After the acreage of any permanent impacts to raptor foraging habitat is determined.	
BIO-12	**Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas If Necessary.** The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If the survey indicates that no active nests are found, no further mitigation shall be required. If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned	CSC JP LSC OC OP PL SP	X	1. N/A 2. Do not initiate construction activities during the bird breeding season until surveys have been conducted. Provide any assistance or accommodation necessary to the biologist conducting the survey. 3. In the event that active nests are identified, provide any needed	1. Retain a qualified biologist to conduct the preconstruction surveys for nesting birds. 2. Do not conduct construction activities within the buffers until directed by the biologist.	disturbance buffers are established around nests in accordance with the measure.		
BIO-13	**Avoid and Minimize Impacts on Federally Protected Wetlands.** The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands. If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of **Mitigation Measure BIO-14**. For all activities greater than one acre of disturbance, a SWPPP shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters, and for all activities less than one acre of disturbance, a Local SWPPP shall be implemented. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.	CSC OP	X	1. N/A 2. Avoid wetlands to the extent feasible. 3. If wetlands cannot be avoided, following construction, restore surface topography and drainage to pre-construction conditions. Additionally, where appropriate, revegetate impacted wetland areas with site-adapted native plant species.	1. If complete avoidance of wetlands is not possible, perform or commission a wetland delineation study for the project site, to be used during implementation of **Mitigation Measure BIO-14**. 2. Confirm that wetlands are avoided during construction activities to the extent feasible. 3. In the event that wetlands cannot be avoided, confirm that wetland areas are restored to pre-construction conditions.	1. Prior to construction. 2. During construction. 3. Following construction.	
BIO-14	**Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.** The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA Nationwide Permit and/or the Final Rule on Compensatory Mitigation for Losses of Aquatic Resources (73 Fed. Reg. S19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.	CSC OP	X	1. Do not initiate work in areas defined as water of the U.S. and State until the City has obtained the appropriate regulatory permits. 2. N/A	1. For work within areas defined as waters of the U.S. and State, obtain appropriate regulatory permits. 2. For areas where wetland impacts occur, provide compensatory mitigation by one of the methods described in the mitigation measure.	1. Prior to initiation of construction activities within waters. 2. At a time acceptable to the regulatory agencies.	
BIO-15	**Install Temporary Trench Plates over Open Trenches.**	CSC	X	1. Incorporate	1. Confirm that	1. During preparation of

Cultural Resources							
CR-1	**Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work** Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive information about the kinds of archaeological materials that could be present at the River Trunk Realignment Project site and other CIP sites, and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.	CSC JP LSC OC OP PL SP	X	1. Coordinate with the City to provide workers information about potential buried cultural resources.	1. Arrange for workers to receive information about potential buried cultural resources	1. 	and in good working order. ▪ Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003): For a terrestrial frac-out: - Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud. - Based on consultation with CDFW (see below), either: ▪ Use a mobile vacuum truck to pump the drilling mud from the contained area and recycle it to the return pit; or ▪ Leave the drilling mud in place to avoid potential damage from vehicles entering the area. - Once excess drilling mud is removed, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. For an aquatic frac-out: - Monitor frac-out for 4 hours to determine if the drilling mud congeals (bentonite will usually harden, effectively sealing the frac-out location). - Based on consultation with CDFW (see below), either: ▪ If the drilling mud congeals, take no other action that would potentially suspend sediments in the water column. ▪ If drilling mud does not congeal, erect isolation/containment environment (underwater boom and curtain). ▪ If the fracture becomes excessively large, call in a spill response team to contain and clean up excess drilling mud in the water. Keep phone numbers of spill response teams on-site. - If the spill affects an area that is vegetated, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation. ▪ Notify and consult with CDFW in the event of a frac-out. Restore vegetation damaged by drilling fluid to pre-construction conditions.			and implement the appropriate measures, as specified in the measure.	occur, confirm that proper protocols were followed to contain the frac-out and minimize impacts.		
HYD/WQ-2	**Conduct Flood Flow Study for Benson Lift Station.** Prior to final project design, the City of Modesto and/or its contractor(s) shall conduct a study to ascertain the changes in flows that may be caused by the proposed Benson Lift Station structure in the event of a 100-year flood. The study shall model the change, if any, in inundation area that may be caused by restriction in flood flow passage caused by the structure. If the study determines that the proposed lift station may cause inundation of adjacent or upstream/downstream properties or structures during a 100-year flood event, the City shall develop mitigation measures to address this impact. Feasible mitigation measures may include construction of flood protection structures for potentially affected	LSC #3	N/A	1. N/A 2. Conduct flood flow study of pre- and post-project conditions in accordance with the mitigation measure. If study determines that the lift station may cause inundation of	1. Incorporate requirements into plans and specifications. 2. Ensure that flood flow study meets requirements described in **Mitigation Measure**	1. During preparation of plans and specifications. 2. During preparation of plans and specifications.

	properties or reconfiguration of the proposed project facilities to reduce impedance or redirection of flows (e.g., elevating critical facilities such as electrical panels and underground pump vault doors to levels above flood stage). Alternatively, the City may identify an alternative site for the proposed lift station that would avoid impacts on flood flows.			adjacent properties during a 100-year flood event, develop feasible mitigation measures.	**HYD/WQ-2**.		
Land Use and Planning							
None.							
Noise and Vibration							
NOI-1	**Employ Noise-Reducing Construction and Maintenance Practices.** The following measures will be implemented by the City or its contractor(s) to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected: ▪ Locate stationary equipment as far as practical from noise-sensitive land uses; ▪ Use electrified or otherwise quieter equipment when practical; ▪ Use sound-control devices on equipment that are more effective than devices originally provided on the equipment; ▪ Use noise-reducing enclosures around noise-generating equipment; and ▪ Install temporary barriers between noise sources and noise-sensitive land uses, or take advantage of existing barrier features (e.g., terrain and structures) to block sound transmission. When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.	CSC JP LSC OC OP PL SP	X	1. Include noise reduction measures in project plans and specifications. 2. Implement and document noise reduction measures. In coordination with the City, develop haul routes that avoid sensitive receptors to the extent feasible.	1. Confirm that noise reduction measures are included in project plans and specifications. 2. Confirm that noise reduction measures are implemented properly. Work with Contractor to identify haul routes that avoid sensitive receptors.	1. During preparation of plans and specifications. 2. During construction.	
NOI-2	**Limit Nighttime Construction Noise.** When feasible, the City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays unless a special exemption permit allowed by Modesto Municipal Code Section 4-9.103(b)(6) is obtained.	CSC JP LSC OC OP PL SP	X	1. Include measure in project plans and specifications. 2. Do not conduct construction activities in close proximity to a residence outside of the hours specified in the measure. Document compliance with this requirement.	1. Confirm that measure is included in project plans and specifications. 2. Confirm that Contractor follows requirements specified in the mitigation measure.	1. During development of plans and specifications. 2. During construction.	
NOI-3	**Prepare Project-level Noise Analysis for Operation of Proposed Sutter Plant Components** The City or its contractor(s) shall prepare a project-level noise analysis for operation of proposed Sutter Plant components. The detailed noise study should show that appropriate mitigation measures will be implemented to reduce noise levels to less than a 10-dB increase in residential areas. If the analysis demonstrates that significant operational noise impacts are likely to occur, **Mitigation Measure NOI-4** shall be implemented. Alternately, the City can assume that the impacts would be significant and implement **Mitigation Measure NOI-4** without first conducting a noise study under **Mitigation Measure NOI-3**.	SP	N/A	1. N/A 2. Conduct noise study in accordance with **Mitigation Measure NOI-3**.	1. Retain contractor to conduct a noise analysis for the Sutter Plant components. 2. Ensure that noise evaluation meets requirements outlined in **Mitigation Measure**	1. Prior to the design phase of Sutter Plant components. 2. Prior to construction of Sutter Plant components.

	Mitigation Measure	Applicable WWMP Improvement		Contractor Responsibility	City Responsibility	Monitoring Schedule	Completion Date and Initials
		Program-level Components	River Trunk Realignment Project				
					NOI-3.		
NOI-4	**Employ Noise-Reducing Methods During Operations** The City or its contractor(s) shall implement noise-reducing methods so that noise from lift stations does not exceed City or County noise-level standards at adjacent residences. This measure shall also be implemented to achieve City or County noise-level standards for Sutter Plant components if deemed necessary per **Mitigation Measure NOI-3**. Example measures may include, but are not limited to, the following: ▪ Locate stationary equipment as far as practical from noise-sensitive land uses; ▪ Use electrified or otherwise quieter equipment when practical; ▪ Use sound-control devices on equipment that are more effective than devices originally provided on the equipment; ▪ Install permanent barriers between noise sources and noise-sensitive land uses, or take advantage of existing barrier features (terrain and structures) to block sound transmission; ▪ Limit operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas; and ▪ Use sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available.	LSC SP	N/A	1. N/A 2. If necessary, and if directed by the City, implement noise-reducing measures at new or modified facility sites.	1. For new or modified facilities, conduct site-specific noise analysis to determine if County noise-level standards will be exceeded at adjacent residences during facility operations. 2. If standards will be exceeded, implement noise-reducing measures to reduce noise to below standards.	1. Prior to or during the design phase. 2. Incorporate measures during design phase. Implement measures during construction.	
NOI-5	**Implement Vibration Reduction Measures** The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors: ▪ Ensure proper tuning of vibration-causing equipment. ▪ Use vibration damping devices to the extent feasible. ▪ Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings. ▪ Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible. ▪ Use electric stationary equipment (e.g., generators) where feasible. ▪ Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment,	CSC JP LSC OC OP PL SP	X	1. Include measures in project plans and specifications. 2. Implement and document vibration-reducing measures.	1. Confirm that measures are included in project plans and specifications. 2. Confirm that measures are implemented properly.	1. During development of plans and specifications. 2. During construction.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-055

RESOLUTION APPROVING THE 2016 WASTEWATER MASTER PLAN AS COMPLETE

WHEREAS, Council had an approved contract with Carollo Engineers to update the City's Wastewater Master Plan (WWMP), and

WHEREAS, the WWMP consists of two major components, the first focusing on the Wastewater Collection System and the second concentrating on the Wastewater Treatment Systems, and

WHEREAS, the WWMP serves as a roadmap in identifying wastewater infrastructure needed to serve both existing and future users via build-out of the City's planned sewer service area, and

WHEREAS, having a current and comprehensive WWMP is a critical step in keeping ahead of the replacement requirements of an aging infrastructure system and the pressures of expanding urban growth, and

WHEREAS, WWMP has identified a Capital Improvement Program for both Wastewater Collection and Treatment Facilities that will be required for the build-out of the City's Sewer Service Area, and

WHEREAS, Carollo Engineers has completed the 2016 Wastewater Master Plan.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the 2016 Wastewater Master Plan as complete.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of January, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Mayor Brandvold
NOES:	Councilmembers:	None
ABSENT:	Councilmembers:	Zoslocki

ATTEST: _____
STEPHANIE LOPEZ, City Clerk

RESOLUTION ACCEPTING THE MODESTO TRAFFIC SIGNAL SYSTEM MASTER PLAN, AND AUTHORIZING CITY STAFF TO APPLY FOR GRANT FUNDING IDENTIFIED IN THE MODESTO TRAFFIC SIGNAL SYSTEM MASTER PLAN

WHEREAS, the City's traffic signal system has effectively served the City for approximately 25 years and is nearing its useful life, and

WHEREAS, the City would like to update the traffic signal system to a state-of-art system to provide continuous operations and advance future goals of implementing connected and autonomous vehicles (CV/AV) technology with a focus on the Vehicle to Infrastructure component, and

WHEREAS, a state-of-the-art traffic signal system uses the latest infrastructure and computer technology that contains excess volume for hardware improvements and flexible computer software that allows for interchangeability from one technology to another, and

WHEREAS, on September 4, 2018, by Resolution No. 2018-380, Council approved Measure L projects which included Traffic Signal Analysis Study System Wide, and

WHEREAS, the Traffic Signal Analysis Study System Wide project consists of a qualified consultant to improve traffic signal equipment, traffic specifications, Advanced Traffic Management System (ATMS), traffic engineering operations, a 5-year plan, and funding options for the City, and

WHEREAS, on January 22, 2019, by Resolution No. 2019-16, Council approved an agreement with Iteris Inc. as the consultant for the Traffic Signal System Engineering Services Project, and

WHEREAS, on November 26, 2019 Iteris submitted the final Modesto Traffic Signal System Master Plan Document for City acceptance, and

WHEREAS, the Master Plan details out specific Intelligent Transportation System (ITS) elements that the City should be used to upgrade/implement within their traffic signal system infrastructure, and

WHEREAS, The plan provides a 12 year implementation schedule assuming the City is able to fund approximately $3,800,000 per year for a total capital cost of all improvements up to $45,850,000 which includes 25% contingency, and

WHEREAS, the plan identifies potential federal, state and local funding opportunities that would assist the City in procuring and implementing a state of the art traffic signal system.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Modesto Traffic Signal System Master Plan, and authorizes City staff to pursue all grant funding opportunities identified in the Modesto Traffic Signal System Master Plan.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of January, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-057

RESOLUTION APPROVING THE AWARD OF PROPOSALS AND AGREEMENT FOR THE HOMELESS EMPLOYMENT LITTER PROGRAM TO READY TO WORK (RTW), FOR A 3 YEAR AGREEMENT, FOR AN ANNUAL COST NOT TO EXCEED $150,000, AND A TOTAL AGREEMENT AMOUNT NOT TO EXCEED $450,000, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, in 2019, the City consistently received approximately 1,345 complaints and requests for service each month for blight and homeless related issues across the community, and

WHEREAS, as a response to these concerns, the City explored innovative strategies to help address these issues, and

WHEREAS, modeled after the Homeless Employment Litter Program (HELP) in the City of Stockton who has partnered with the California Department of Transportation (CalTrans) to employ individuals experiencing homelessness for litter abatement work on State right of ways, and

WHEREAS, the City has entered into a Delegated Maintenance Agreement with CalTrans for litter abatement, as approved by Council by Resolution 2019-512, that authorizes $100,000 from CalTrans to the City of Modesto to support the employment of individuals experiencing homelessness, and

WHEREAS, the City has supplemented this amount by CalTrans with an additional $50,000 to support this program for litter abatement on City right of ways, and

WHEREAS, to fulfill the responsibility of the Delegated Maintenance Agreement, the City intends to enter into a subsequent contract with an organization that

supports no-to-low barrier access to employment for individuals who are experiencing or at-risk of homelessness, and

WHEREAS, the City released a Request for Proposals (RFP) in June and did not receive any submissions, and released an RFP a second time in August, 2019 and proposals were formally opened on October 15, 2019, and

WHEREAS, an interdepartmental committee of City staff recommends the award of Request for Proposals and Agreement for the Homeless Employment Litter Program to Ready to Work (RTW), and

WHEREAS, the scope of work for this contract will include employment support, litter abatement on State right of ways, and litter abatement on City right of ways, and

WHEREAS, the fiscal impact includes an authorized reimbursable amount of up to $100,000 by the California Department of Transportation for State right of ways, and an additional $50,000 from the City's Commercial Litter Abatement Fee for City right of ways, which will be used to supplement the program on City right of ways, for 3-year period not to exceed $450,000.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approving the award of proposals and agreement for the Homeless Employment Litter Program to Ready to Work (RTW), for a 3 year agreement, for an annual cost not to exceed $150,000, and a total agreement amount not to exceed $450,000.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-058

RESOLUTION APPROVING THE AWARD OF PROPOSALS AND AGREEMENT FOR CONSULTANT SUPPORT WITH ENERGY AND WATER USAGE ANALYSIS TO SAGE ENERGY, WITH A COST NOT TO EXCEED $119,323 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT; AND AUTHORIZING THE CITY MANAGER TO NEGOTIATE, ENTER INTO, AND EXECUTE A MEMORANDUM OF UNDERSTANDING WITH THE COUNTY OF STANISLAUS FOR CONSULTANT SUPPORT FROM SAGE ENERGY AT CITY AND COUNTY SHARED FACILITIES.

WHEREAS, the City of Modesto currently spends approximately seven million dollars ($7,000,000) annually on utility costs, and

WHEREAS, the City and the County of Stanislaus have explored innovative strategies to reduce expenditures, and

WHEREAS, based on a joint procurement process with the County, an interdepartmental committee comprised of City and County staff have selected Sage Energy for support with identifying facilities with the highest amount of potential savings through the installation of Energy Service Company (ESCO) retrofits, and

WHEREAS, the scope of work for this consultant will include a facility feasibility and cost analysis, perform an energy and water resources audit of city facilities, calculate the estimated savings for each facility and support with the procurement of the ESCO, and

WHEREAS, the committee recommends the award of Request for Proposals (RFP) and agreement for consultant services for support with energy and water usage analysis to Sage Energy.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with Sage Energy for consultant support with energy and water usage analysis with a cost not-to exceed $119,323.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the agreement in a form approved by the City Attorney.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to negotiate, enter into, and execute a Memorandum of Understanding with the County of Stanislaus for consultant support from Sage Energy at City and County shared facilities.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-060

RESOLUTION APPROVING THE FISCAL YEAR 2018-2019 SINGLE AUDIT REPORT FOR THE CITY OF MODESTO FROM EXTERNAL AUDITORS HUDSON HENDERSON & COMPANY, INC

WHEREAS, the City of Modesto Single Audit reports are federally mandated by the provisions of the Federal Single Audit Act Amendments of 1996 and Title 2 U.S. Code of Federal Regulations (CFR) Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance), which requires an audit to be conducted for any non-Federal entity that expends $750,000 or more a year in Federal awards, and

WHEREAS, this audit was conducted by the City's external auditors, Hudson Henderson & Company, Inc., and the main objectives were to ensure a fair presentation of the basic financial statements and the schedule of expenditures of Federal awards, and to also audit the City's internal controls and compliance with legal requirements, with special emphasis on internal controls and legal requirements involving the administration of federal awards expended during the fiscal year, and

WHEREAS, as part of the City's Fiscal Year 2018-2019 Single Audit report, no audit findings were reported for any of the grant funding received from the various federal agencies and all findings reported in the prior fiscal year have had the correction plan implemented.

NOW, THEREFORE, BE IT RESOLVED, by the Council of the City of Modesto that it hereby accepts the Fiscal Year 2018-2019 Single Audit report for the City of Modesto.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION APPROVING THE AUDITORS' REPORTS AND SCHEDULE OF PASSENGER FACILITY CHARGE REVENUES AND EXPENDITURES FOR FISCAL YEAR ENDED JUNE 30, 2019, PREPARED BY EXTERNAL AUDITORS HUDSON HENDERSON & COMPANY, INC

WHEREAS, pursuant to Section 1306 of the Charter of the City of Modesto, the City Council shall employ an independent certified public accountant who, at least annually, shall audit the books and records of the City of Modesto, and submit a final audit and report to the City Council as soon as practicable after the end of the fiscal year and

WHEREAS, the accounting firm of Hudson Henderson & Company, Inc. has completed its Auditors' Report and Schedule of Passenger Facility Charge Revenues and Expenditures, and

WHEREAS, the independent audit is applicable to the City's Passenger Facility Charge program at the Modesto City-County Airport for the year ending June 30, 2019, and

WHEREAS, as part of the Independent Auditors' Reports and Schedule of Passenger Facility Charge Revenues and Expenditures, the auditors identified no findings for Fiscal Year Ending June 30, 2019.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Independent Auditors' Reports and Schedule of Passenger Facility Charge Revenues and Expenditures for Fiscal Year Ended June 30, 2019 for the City of Modesto.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-062

RESOLUTION APPROVING THE FISCAL YEAR 2018-2019 AUDITOR'S REPORT ON COMPLIANCE OF THE MEASURE L: LOCAL ROADS FIRST TRANSPORTATION FUNDING MEASURE

WHEREAS, in November of 2016 the voters of Stanislaus County approved the county wide, 25-year, half-cent sales tax increase for the Local Roads First Transportation Funding Measure, known as Measure L. As part of the safe guards built into the expenditure plan an annual independent audit and annual reporting must be completed, and

WHEREAS, on December 12, 2017, by resolution 2017-505, Council approved the Measure L master funding agreement with the Stanislaus Council of Governments (StanCOG) which requires an annual independent audit of all of recipients Measure L accounts which audit shall be conducted at recipients' sole cost and expense, and

WHEREAS, for the audit related to FY 2018-2019 the City received information from StanCOG that they would be continuing to conduct the annual audit and that it would be at the expense of StanCOG as part of the 1% allowable administrative expenses within the Measure L ordinance, and

WHEREAS, the accounting firm of Hudson Henderson & Company, Inc., was selected by StanCOG to conduct the Fiscal Year 2018-2019 audit report, and

WHEREAS, as part of the City's Fiscal Year 2018-2019 Measure L Program Audit, the accounting firm verified the revenues and expenditures, fund balances, and that the Maintenance of Effort requirement was met, and

WHEREAS, Hudson Henderson & Company, Inc. issued the final independent auditor's report of the Measure L program for the fiscal year ending in June 30, 2019. In

addition, the firm issued a letter to the Policy Board of Stanislaus Council of Governments with the final report. Neither the final report, nor the letter to StanCOG contained any findings for the year ending June 30, 2019.

NOW, THEREFORE, BE IT RESOLVED, by the Council of the City of Modesto that it hereby accepts the Fiscal Year 2018-2019 Auditor's Report on Compliance of the Measure L: Local Roads First Transportation Funding Measure.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-063

RESOLUTION APPROVING THE SECOND AMENDMENT INCREASING THE AGREEMENT WITH HUDSON AND HENDERSON INC., FRESNO, CA FOR THE FURNISHING OF AUDITING SERVICES FOR THE FINANCE DEPARTMENT, ACCOUNTING DIVISION BY $33,600 FROM $735,550 TO A NEW TOTAL AMOUNT OF $769,150 OVER FIVE (5) YEARS AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, under Section 1306 of the Modesto City Charter requires the Council to employ independent auditors to perform an annual financial audit of the financial records managed by City employees, and

WHEREAS, the City requests an external auditor to express an opinion on the fair presentation of its basic financial statements and schedule of expenditures from federal awards in conformity with generally accepted accounting principles, the provisions of the Federal Single Audit Act Amendments of 1996 and Title 2 U.S. Code of Federal Regulations (CFR) Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance), and

WHEREAS, on February 13, 2018 under Resolution 2018-72, Council approved awarding the audit services contract to Hudson and Henderson for an estimated annual cost of $147,110 and over five years of $735,550, and

WHEREAS, on April 9, 2019, the First Amendment was approved by the City Manager which had no financial impacts to the contract but to acknowledge the additional audit required by Federal Transit Administration (FTA) for the Federal Funding Allocation Data report, and

WHEREAS, with the City handling all financial records for the Community Facility Districts (CFD), the City is required to have an audit and preparation of the financial statements when any new CFD begins to be tax levied, and

WHEREAS, Hudson and Henderson provided an estimated annual cost of $2,200 for the additional CFD, which will be added to the second amendment being proposed for the remaining three (3) fiscal years of this contract; and

WHEREAS, the City anticipates up to three additional CFDs t will be tax levied during the term of this contract at an annual additional cost not to exceed $3,000 per CFD for an annual increase of $11,200 per year, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid. However, exceptions to the formal bidding process are granted in MMC 8-3.204(d) "Where the Purchasing Manager, in his or her discretion, determines that a process other than the formal bid procedure set for in Section 8-3.203 will result in procurement for the City at the lowest possible cost commensurate with the desired quality." and this amendment confirms to this code due to the additional cost being the lowest compared to all other proposals for the original award.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Second Amendment increasing the agreement with Hudson and Henderson Inc., Fresno, CA for the furnishing of auditing services for the Finance Department, Accounting Division by $33,600 from $735,550 to a new total amount of $769,150 over five (5) years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the amendment to the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-065

RESOLUTION APPROVING AN UPDATE ON THE POLICY FOR DISCONTINUATION OF RESIDENTIAL WATER SERVICE FOR NONPAYMENT AND UPDATING THE UTILITY BILLING DELINQUENCY TIMELINE INCREASING THE AMNESTY PERIOD FROM 45 DAYS TO 60 DAYS FOR DELINQUENT RESIDENTIAL CUSTOMERS BEFORE SERVICES ARE DISCONNECTED FOR NONPAYMENT IN COMPLIANCE WITH SENATE BILL NO. 998 EFFECTIVE FEBRUARY 1, 2020

WHEREAS, on September 28, 2018 the Governor of the State of California signed into law Senate Bill No. 998, Discontinuation of Residential Water Service: Urban and Community Water Systems also knowns as the Water Shutoff Protection Act, and

WHEREAS, compliance with the new legislation requires a written policy on the discontinuation of water service to certain types of residences for nonpayment, making that policy available in prescribed languages on the City's website effective February 1, 2020, and

WHEREAS, the policy must include but is not limited to the following key components: a formal mechanism for a customer to contest or appeal a bill, a formal payment plan policy, a residential customer may not be disconnected for nonpayment until a payment has been delinquent for at least sixty (60) days, the policy must be posted on the City's website, the City shall mail notices regarding impending discontinuation for nonpayment seven (7) days prior to discontinuation as well as mail a notice to Occupant at service address when service address differs from mailing address, when unable to make contact by phone or mail the City must make good faith effort to leave notice posted a property and the City must provide information on how to restore service in the event a discontinuation for nonpayment occurs, and

WHEREAS, in conjunction with the City Attorney's office the Utility Billing Division has created a new Discontinuation of Residential Water Service for Nonpayment policy to be posted on the City website as of February 1, 2020 and

WHEREAS, the Utility Billing Division will make all necessary changes to internal practices as described above to ensure the City is adhering to all aspects of Senate Bill No. 998 as of February 1, 2020.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves this update on the policy for Discontinuation of Residential Water Service for Nonpayment and updating the utility billing delinquency timeline increasing the amnesty period from 45 days to 60 days for delinquent residential customers before services are disconnected for nonpayment in compliance with Senate Bill No. 998 effective February 1, 2020.

RESOLUTION APPROVING A PURCHASE ORDER FOR THE PURCHASE OF A CELL PHONE DATA EXTRACTION PRODUCT FROM CELLEBRITE FOR A TOTAL AMOUNT NOT TO EXCEED $75,802, AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO ISSUE THE PURCHASE ORDER

WHEREAS, the Modesto Police Department utilizes various technology strategies to achieve the goals of the department and protect the community; and

WHEREAS, the ability to extract and analyze data from cellular devices is crucial in almost all criminal investigations; and

WHEREAS, in the past three years, mobile operating system developers and cell phone manufacturers have been increasing security on cellular devices; and

WHEREAS, the ability of law enforcement agencies to acquire data from a cell phone has become increasingly difficult; and

WHEREAS, two years ago, Cellebrite developed a way to overcome the security and encryption systems for most cellular devices; and

WHEREAS, the Modesto Police Department seeks to purchase a cell phone data extraction product form Cellebrite; and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, in excess of $50,000 to follow formal bid procedures. However, MMC 8-3.204(b) provides that a purchase may be exempted from the City's formal bidding requirement where the Purchasing Agency's requirements can be met solely by a single article or process; and

WHEREAS, here, Cellebrite, is the only company that provides the service of extracting data from devices at the security level necessary. Therefore, staff recommends

the purchase of a cell phone data extraction product with Cellebrite should be exempt from the formal bidding procedures in accordance with Modesto Municipal Code 8-3.204(b) since Cellebrite is the sole provider of this software.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a purchase order for the purchase of a cell phone data extraction product from Cellebrite, for a total amount not to exceed $75,802.

BE IT FURHTER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to issue the Purchase Order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-068

RESOLUTION ACCEPTING THE STANDIFORD AVENUE PAVEMENT REHABILITATION PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $2,714,108 TO KNIFE RIVER CONSTRUCTION, OF STOCKTON, CA

WHEREAS, in November of 2016 the voters of Stanislaus County approved the county wide, 25-year, half- cent sales tax increase known as Measure L, and

WHEREAS, on July 5, 2017, by Resolution No. 2017-269, Council approved a list of proposed projects to be funded with Measure L tax proceeds in Fiscal Year 2017-18 and necessary budget adjustment, and

WHEREAS, on March 13, 2018, by Resolution No. 2018-124, Council amended the approved list of projects including the Standiford Avenue Pavement Rehabilitation Project to be funded with Measure L tax proceeds in Fiscal Year 2017-2018 and necessary budget adjustments, and

WHEREAS, Standiford Avenue Pavement Rehabilitation project begins at Dale Road and proceeds east to approximately Sherwood Avenue, the length of the project is 2.97 miles, and

WHEREAS, project improvements include roadway resurfacing and reconstruction, new signage and striping, ADA upgrades, storm drainage system improvements, and signal upgrades (including detection cameras), and

WHEREAS, bids were advertised on May 8, 2018, and

WHEREAS, three bids were publicly opened on June 5, 2018, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and Knife River Construction of Stockton, CA was the apparent low bidder, and

WHEREAS, on June 26, 2018, by Resolution No. 2018-265, Council awarded a contract to Knife River Construction, of Stockton, CA for the construction of the Standiford Avenue Pavement Rehabilitation Project in the amount of $2,591,417, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of August 13, 2018 and all contract work was completed by June 1, 2019, and

WHEREAS, the total project costs were $850,605 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $959,346 which included $847,317 for the construction contract and contingency with Knife River Construction, and

WHEREAS, there were four change orders resulting in an overall increase of $122,691 for change order work, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Standiford Avenue Pavement Rehabilitation Project is hereby accepted as complete from contractor Knife River Construction, of Stockton, California, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $2,714,107, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-069

RESOLUTION ACCEPTING THE CLAUS ROAD PAVEMENT REHABILITATION PROJECT, STPL-5059(195) AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $1,677,264 TO DSS COMPANY, DBA KNIFE RIVER CONSTRUCTION, OF STOCKTON, CA

WHEREAS, on June 25, 2013, by Ordinance No. 3587-C.S., Council adopted the 2013-2014 Annual and Multi-Year Operating Budgets and the 2013-2014 Capital Improvement Program for the City of Modesto and the related inter-fund transfers which provided funding for the project, and

WHEREAS, this project rehabilitated deteriorated pavement on Claus Road from Gomes Road to 700' north of Briggsmore Avenue. This road segment was milled grinded and overlayed with new asphalt pavement surface. Other improvements include installation of ADA curb ramps, a Class IV bicycle facility, traffic signal modifications, vehicle detection cameras and new traffic striping, and

WHEREAS, bids were advertised on February 27, 2018, and

WHEREAS, bids were publicly opened on April 3, 2018, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and DSS Company, dba Knife River Construction of Stockton, CA was the apparent low bidder, and

WHEREAS, on May 22, 2018, by Resolution No. 2018-176, Council awarded a contract to DSS Company, dba Knife River Construction of Stockton, CA for the construction of the Claus Road Pavement Rehabilitation Project, STPL-5059(195) in the amount of $1,588,636, and

WHEREAS, the contractor received the Notice to Proceed, with a first working day of June 25, 2018. All contract work was completed by September 9, 2019, and

WHEREAS, the total project costs were $2,061,551 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $2,143,750 which included $1,715,726 for the construction contract and contingency with DSS Company, dba Knife River Construction, and

WHEREAS, there were six change orders resulting in an overall increase of $88,628 for change order work, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Claus Road Pavement Rehabilitation Project is hereby accepted as complete from contractor DSS Company, dba Knife River Construction of Stockton, California, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $1,677,264, as is authorized.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-070

RESOLUTION APPROVING AN INCREASE TO ALL MUNICIPAL PARKING VIOLATION FINES AND UPDATING THE PARKING VIOLATION FINE SCHEDULE.

WHEREAS, in July of 1993Assembly Bill 408 became state law, establishing procedures for the decriminalization of parking violations and transferred the responsibility of setting fines, processing, collection, and the adjudication of parking violations from the courts to the issuing agencies, and

WHEREAS, the state legislature established procedures in Section 40203.05 of the California Vehicle Code which provided for the City Council of the jurisdiction where the notice of violation is issued to establish a schedule of parking fines for parking violations and late payment penalties, and

WHEREAS, the City of Modesto issues two types of parking violations, one for municipal parking violations as established by the Modesto Municipal Code (MMC) and a second type based on California Vehicle Code (CVC) that can be issued on a notice of parking violation, and

WHEREAS, when a notice of parking violation for parking, stopping, or standing is collected all issuing agencies are required to remit to the County Treasurer a total of $12.50 per citation in State in County surcharges which are then allocated for various court and jail funds, and

WHEREAS, in November of 1991 Council approved Resolution No. 91-705 for an increase to municipal parking violations in order to recuperate the State-mandated surcharge, and

WHEREAS, in June of 2005 Council approved Resolution No. 2005-583 increasing fines for parking violations to deter repeat offenders , and

WHEREAS, on June 2, 2009 Council approved Resolution No. 2009-239 authorizing the City Manager to adjust the fine schedule for parking violations when necessary to incorporate changes in the fees mandated by the State or County and collected by the City , and

WHEREAS, it is critical the City recover the costs of the surcharges imposed by the State and County in addition to capturing the costs of enforcement, and

WHEREAS, staff conducted a survey of parking violation fines for surrounding agencies and found many of the City's current parking violation fines to be well below other comparable cities, and

WHEREAS, the survey uncovered miscellaneous MMC violations with no established fine amount, and

WHEREAS, based on this survey staff is recommending adoption of an updated parking violation fine schedule to include fines for previously established MMC violations, to increase all MMC and CVC fines related to parking, stopping, or standing bringing them up to the average fine amount of surrounding agencies with an effective date of May 4, 2020 and to include an annual increase on the base fine amount for inflation based on Consumer Price Index (CPI), and

WHEREAS, staff will utilize the next 90 (ninety) days to notify the public of the fine increases in advance of fine increases going into effect, and

WHEREAS, the annual increase for inflation will be limited to nor more than the annual increase listed in the local Consumer Price Index for the State of California for the

Bay Area for the month of December of the prior year and will be effective January 1st of each year, and

WHEREAS, staff is recommending the City update the methodology to collect all State and County mandated surcharges as part of the City's approved parking violation fine amounts, and

WHEREAS, the City Manager will be authorized to approve the adjustment of the fine schedule for parking violations for the annual CPI increase and when necessary to incorporate changes in the fees mandated by the State and/or County and collected by the City without further Council action, and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves agreements an increase to all municipal parking violation fines and updating the parking violation fine schedule as shown on the **attached** City of Modesto Parking Violation Fine Schedule, which shall take effect 90 (ninety) days after adoption of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-071

RESOLUTION APPROVING THE TRANSITION OF PARKING ENFORCEMENT RESPONSIBILITIES FROM THE POLICE DEPARTMENT TO THE PUBLIC WORKS DEPARTMENT, PARKING SERVICES DIVISION AND APPROVING ONE FULL-TIME PARKING ENFORCEMENT OFFICER FOR AN ESTIMATED ANNUAL COST OF $54,132

WHEREAS, city staff has explored strategies to improve the management, enforcement, and availability of parking in Downtown Modesto since 2006 and within this timeframe there have been several opportunities for the public to offer recommendations for improvements in these areas, and

WHEREAS, the most recent opportunity is the current Downtown Master Plan engagement process which included various opportunities for residents to engage and offer recommendations to improve downtown and one of the prevalent concerns from these activities was the availability of parking in the downtown core, despite the data showing an abundance of parking in the garages across downtown, and

WHEREAS, this analysis is consistent with the findings of the various consultant reports that have been prepared for City Council, which refer to limited on-street parking and virtually empty parking garages, and

WHEREAS, this initial phase of a larger Citywide Parking Strategy is specifically intended to improve parking enforcement that currently involves three city departments: Police, Finance and Public Works. Parking operations, including maintaining and monitoring all seven surface lots and three garages, is managed by Public Works, and

WHEREAS, the Finance Department provides support with adjudication, collections and citation processing , and the Police Department provides support with

three part-time Police Assistants who perform parking enforcement under general supervision of a Police Sergeant, and

WHEREAS, to streamline the City's workflow, increase parking availability, and ensure fiscal sustainability staff recommends the consolidation of the parking enforcement program and parking services division under the umbrella of the Public Works department, in conjunction with the Finance Department's continued management of collections and adjudication , and

WHEREAS, the transition will require an expansion of enforcement staff to include one full-time Parking Enforcement Officer and a rotation of six part-time Parking Assistants that will cost $114,972 on an annual basis beginning on July 1, 2020, and

WHEREAS, under this scenario, the Parking Enforcement Officer and Parking Assistants are projected to work a total of 118 hours per week, which will translate to projected revenues of $901,837 based on a conservative increase of 50% in citation issuance in Fiscal Year 2020-2021, which is an increase of approximately $400,000 compared to Fiscal Year 2018-2019.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the transition of parking enforcement responsibilities from the Police Department to the Public Works Department, Parking Services Division.

BE IT FURTHER RESOLVED by the Council of the City of Modesto that it hereby approves the allocation of one full-time parking enforcement officer for an estimated annual cost of $54,132.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 4th day of February, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-074

RESOLUTION AMENDING FISCAL YEAR 2019-2020 ANNUAL OPERATING AND CAPITAL IMPROVEMENT FUND BUDGETS

WHEREAS, a financial analysis has been completed and it has been determined that a budget adjustment is required to the Annual and Capital Improvement Budgets of the City of Modesto for Fiscal Year 2019-20.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Fiscal Year 2019-20 Annual Operating and Capital Improvement budget as shown in **Exhibit A**, which is **attached** hereto and incorporated by reference herein.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

EXHIBIT A

FISCAL YEAR 2019-20

FINANCE

- A budget adjustment is needed to increase the interfund transfer from fund 4210-Sewer Operations Fund to the debt service fund 4245-State Revolving Loan (Tertiary Treatment Funding) by $81,000, to a total fiscal year 2020 budget of $8,245,729. The Sewer Operations Fund provides funding annually to the Tertiary debt service fund from which payments on the State Revolving Loan are made. This transfer adjustment will allow for the true-up of the balance of the debt service fund on June 30, 2020, based on projected debt service expense requirements during fiscal year 2020.

- A budget adjustment is needed to increase Professional Services expense in fund 4245-State Revolving Loan (Tertiary Treatment Funding), Cost Center 12186-FIN – Wastewater State Revolving Loan Debt (Tertiary Plant), by $654,166. This fund is the debt service fund for the State Revolving Loan-Tertiary debt. This budget increase will allow for the payment of the fiscal year 2020 service charge expense as per the debt service schedule that was not fully incorporated into the original budget.

PUBLIC WORKS

- A budget adjustment in the amount of $213,946 is needed to create and establish the budget for non-capital project 101198 – "PW-MADAR-CAD/AVL". This project is for the purchase, installation, and configuration of new computer-aided dispatch/automated vehicle location system for the City's complementary paratransit system, Modesto Area Express, and will serve individuals with disabilities and seniors age 65 or older. Funding will be provided from Local Transportation Funds (LTF) awards (4510 – Bus Fixed Route Fund)

- A budget adjustment in the amount of $150,000 is needed to fully fund the replacement of the roof at the Amtrak Station in project 101187 – "Amtrak Roof Repair/Replacement". Funding will be provided from Local Transportation Funds (LTF) awards (4510 – Bus Fixed Route Fund)

URGENT ITEMS NOT REVIEWED BY FINANCE COMMITTEE

COMMUNITY AND ECONOMIC DEVELOPMENT

- A budget adjustment in the amount of $3,551,706 is necessary to establish the transfer out from Project 100243 - CDBG NSP2 Program Income to Fund 1130 – CDBG Direct Program – Program Income and to establish the revenue budgets in the operating and

project budgets for this allocated amount. The US Department of Housing and Urban Development (HUD) has authorized a transfer of program income from the Neighborhood Stabilization Program 2 (NSP2) to the Community Development Block Grant (CDBG) Program for the City of Modesto in the amount of $3,551,706. Of this amount, $2,600,000 will need to be budgeted in revenues for Project #101215 - Kansas House Project Acquisition, with an additional $250,000 budgeted for Admin Support associated with this project. The remaining $701,706 will be used to further projects in accordance with the approved City CDBG Annual Action Plan

FIRE DEPARTMENT

- A budget adjustment in the amount of $113,500 is necessary to establish a transfer from the Station 1 Roof Replacement and Repainting project (101065) to the Fire Station 5 Remodel project (101234) and to establish the expense appropriations for the remodel of the kitchen, office and corridor of Fire Station 5.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-075

RESOLUTION APPROVING AN AGREEMENT WITH GEOCON CONSULTANTS INC. (GEOCON) FOR REMEDIAL ACTION PLAN MONITORING DURING CONSTRUCTION FOR THE STATE ROUTE 132 WEST FREEWAY/EXPRESSWAY – PHASE 1 PROJECT IN AN AMOUNT OF $197,684 FOR THE IDENTIFIED SCOPE OF SERVICES, PLUS $19,768 FOR ADDITIONAL SERVICES (IF NEEDED), FOR AN AGREEMENT TOTAL NOT TO EXCEED $217,452, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the purpose of the State Route 132 West Freeway/Expressway - Phase 1 Project (Project) is to improve regional and interregional circulation, relieve traffic congestion along existing State Route 132, and enhance safety and operations for the existing and proposed transportation network, and

WHEREAS, a construction contract was awarded to Bay Cities Paving and Grading (Bay Cities) on September 24, 2019 per Resolution 2019-439 and a Notice to Proceed was issued on December 10, 2019, and

WHEREAS, the California Department of Transportation (Caltrans) and the Department of Toxic Substance Control (DTSC) have an environmental requirement to properly handle and contain Barium Containing Stockpiles (BCS) that exist on the new SR132 roadway alignment, and

WHEREAS, a Remedial Action Plan (RAP) was developed during the environmental phase of the Project. This RAP was further developed into a Remedial Design and Implementation Plan (RDIP) during final project design. The RDIP serves as the roadmap for the prime construction contractor to properly handle and contain the BCS, and

WHEREAS, during this process, Caltrans hired Geocon to design and develop the Project RAP/RDIP so that it could meet its commitment to the DTSC. Further, it was Caltrans' intention to engage Geocon to provide monitoring services during construction to ensure that the toxic materials were handled appropriately, however Caltrans recently notified the City that because of funding issues, they would be unable to hire Geocon, and

WHEREAS, Caltrans has requested that the City assist with its obligation to engage the compliance monitoring via Geocon. Caltrans has notified the City that no BCS activities can occur without compliance monitoring. Due to the tight timeline for procurement, City staff does not have time to engage a consultant via its standard procurement protocol, thus the Project may experience significant cost due to delay should this BCS element be stopped, and

WHEREAS, a Notice To Proceed was given to Bay Cities on December 10, 2019, and Project construction commenced as of that date. The City is now fully engaged with all terms, compliances and requirements that exist under the terms of that contract. Contractor has provided its statutory notice to the City of its intent to commence relocation activities of the BCS. This notification requires the contractor to wait 30 calendar days prior to commencement of this construction element. This pause to commencement of construction will sunset on February 14th, and

WHEREAS, Modesto Municipal Code Section 8-3.204 generally requires all purchase in excess of fifty thousand dollars ($50,000) to follow formal bid procedures. However, MMC 8-3.204(c) provides that a purchase may be exempted from the City's

formal bidding requirement where the Purchasing Manager determines that calling for bids on a competitive basis is undesirable due to exigent circumstances, and

WHEREAS, also, in accordance with Modesto Municipal Code 8-3.204(a), Exceptions to Formal Bidding Requirements, the agreement with Geocon Consultants Inc. is for professional services and, therefore, is exempt from the bidding requirement, and

WHEREAS, Geocon should be exempt from the formal bidding procedure in accordance with Modesto Municipal Code 8-3.204(c) for the following reasons: 1) Geocon was selected by Caltrans several years ago to perform work on this project through a competitive bidding process, and 2) Caltrans has advised the City that Geocon is the best consultant candidate since it has obtained an intimate knowledge of intent as to the compliances during its coordination with DTSC and the development of the RAP/RDIP, and 3) Geocon can commence work immediately with superior knowledge and therefore protect City, Caltrans, and the environment as required to meet the challenge of monitoring the contractor's work which is expected to begin on February 14th, and therefore, this purchase qualifies for exemption from the City's formal bidding procedures.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with Geocon Consultants Inc. (Geocon) for Remedial Action Plan Monitoring during construction for the State Route 132 West Freeway/Expressway – Phase 1 Project in an amount of $197,684 for the identified scope of services, plus $19,768 for additional services (if needed), for an agreement total not to exceed $217,452.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-076

RESOLUTION AMENDING THE POSITION ALLOCATION FOR FISCAL YEAR 2019-20 AS ADOPTED IN THE OPERATING BUDGET.

WHEREAS, a Position Allocation for the City of Modesto was adopted by Modesto City Council on June 25, 2019, as part of the Annual Budget of the City of Modesto for Fiscal Year 2019-2020, and

WHEREAS, classification studies are conducted to ensure that a classification system is equitable and consistent within an organization and that positions are correctly classified, and

WHEREAS, per Personnel Administrative Order 2.2-87-12, a classification study may be conducted in response to a reclassification request, to develop/revise a classification specification, or to assist in a reorganization, and

WHEREAS, classification studies were conducted by Human Resources to determine appropriate classification, and

WHEREAS, position changes will be effective the pay period starting February 4, 2020, and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Position Allocation and the Fiscal Year 2019-20 Operating Budget for various departments as follows:

1. Reallocate one (1) Fire Inspector to one (1) Senior Fire Inspector in the Fire Prevention Division (18510) of the Modesto Fire Department.
2. Allocate one (1) Administrative Office Assistant III in the Administration Division (18110) of the Modesto Fire Department.

3. Move nine (9) Fire Fighters from the SAFER Grant Division (18510) to the Suppression Division (18210) of the Modesto Fire Department.
4. Reallocate one (1) Assistant Engineer to one (1) Associate Engineer in the Traffic Engineering Division (53510) of the Public Works Department.
5. Reallocate one (1) Software Analyst I to one (1) Software Analyst II in the Business Applications/Development Services Division (17510) of the Information Technology Department.
6. Reallocate one (1) Business Manager to one (1) Economic Development Manager in the Economic Development Division (14180) of the Community & Economic Development Department.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-077

RESOLUTION AUTHORIZING A PAYMENT IN THE AMOUNT OF $100,000 TO BELFOR PROPERTY RESTORATION, MODESTO, CA FOR THE DOWNEY PARK RESTROOM FIRE RENOVATION AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO ISSUE THE PAYMENT

WHEREAS, on July 14, 2019 the public restroom, park storage and electrical building at Downey Community Park was heavily damaged by a fire, and

WHEREAS, at approximately 11:00 PM the Modesto Fire Department responded to the park, located at 1230 Brighton Ave, and was able to extinguish the blaze before the building was a complete loss, and

WHEREAS, the property insurance company, Alliant dispatched Belfor Property Restoration of Modesto, CA (Belfor) to secure the property against additional damages, perform environmental testing, and fence the structure off to protect the public from unnecessary hazards, and

WHEREAS, Belfor evaluated the site with City staff and the insurance adjuster and conclude that although approximately 90% of the structure (728 sq/ft) had been damaged, the facility could be restored, and

WHEREAS, on September 20, 2019, Belfor provided a Scope and Preliminary budget to the insurance adjuster for renovation of the burned structure with an initial budget estimate between $190,000 and $217,500, and

WHEREAS, based upon the most recent plans reviewed by staff, it is currently estimated that the total project cost is likely to exceed $300,000, and

WHEREAS, the City of Modesto's property insurance policy establishes a maximum deductible (out-of-pocket cost to the City) of $100,000, and

WHEREAS, the insurance adjuster confirmed that once the City has paid its deductible to Belfor Property Restoration, the insurance company will cover the remainder of the project's cost, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid, but exceptions to the formal bidding process are granted in MMC 8-3.204(d) "Where the Purchasing Manager, in his or her discretion, determines that a process other than the formal bid procedure set for in Section 8-3.203 will result in procurement for the City at the lowest possible cost commensurate with the desired quality," and

WHEREAS, this project meets these requirements, as the contractor has been selected directly by the insurance company and it makes the best business sense to utilize their services, given the active insurance claim.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves a payment in the amount of $100,000 to Belfor Property Restoration, Modesto, CA for the Downey Park Restroom Fire Renovation.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is authorized to issue the payment.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-079

RESOLUTION APPROVING THE FIRST AMENDMENT TO THE AGREEMENT FOR THE OPERATION OF THE KING-KENNEDY MEMORIAL CENTER WITH THE WEST MODESTO COMMUNITY COLLABORATIVE (WMCC), AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, the City owns the community center known as the King-Kennedy Memorial Center which was established to address issues impacting the West Modesto community, and

WHEREAS, the CITY entered into an agreement with the West Modesto Community Collaborative to operate the King-Kennedy Memorial Center through Resolution No. 2018-303 (Agreement), and

WHEREAS, the CITY and WMCC desire to amend the Agreement for the purposes of updating the stipulations in **Exhibit D** of the Agreement, dealing with the submission of rental applications to allow the WMCC to act on behalf of the King-Kennedy Memorial Center Board of Directors, the NAACP Modesto Stanislaus Branch 1048, and The Women's Auxiliary, A Modesto Community Connection when booking the King-Kennedy Memorial Center for community-based services and events, and

WHEREAS, the CITY and WMCC desire to further amend the Agreement with an administrative correction in **Exhibit D,** Section 6 which incorrectly references itself.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the First Amendment to the Agreement with the West Modesto Community Collaborative to operate the King-Kennedy Memorial Center.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the First Amendment to the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-080

RESOLUTION APPROVING A FIVE YEAR LEASE AGREEMENT WITH HERTZ RENT-A-CAR CORPORATION LLC TO PROVIDE SERVICES AT THE MODESTO CITY-COUNTY AIRPORT IN THE AMOUNT OF $6,228 PER YEAR, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, Hertz Rent-A-Car Corporation LLC (Hertz) would like to enter into a new five year lease at the Modesto City–County Airport, and

WHEREAS, the lease agreement would allow them to lease a larger office, Office Space #2 in the terminal building, and

WHEREAS, the lease agreement currently reflects a 7.8% concessions of Hertz's gross revenue at Modesto City-County Airport, and

WHEREAS, the lease agreement would include rent for Office Space #2 as follows: 519 s.f. x $1.00/s.f./month=$519.00/month, and

WHEREAS, the lease agreement would increase annual revenue $6,228 per year, and

WHEREAS, the lease agreement would guarantee Hertz remains at the Modesto City-County Airport, continuing to serve the community.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Airport Lease Agreement between the City of Modesto and Hertz Rent-A-Car Corporation LLC to provide car rental services at the Modesto City-County Airport in the amount of $6,228 per year.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-081

RESOLUTION APPROVING PLANS AND SPECIFICATIONS FOR THE SPENCER AVENUE NEIGHBORHOOD STRENGTHEN & REPLACE WATER MAINS PROJECT, ACCEPTING THE BID, AND APPROVING A CONSTRUCTION CONTRACT TO ROLFE CONSTRUCTION INC., ATWATER, CA, IN THE AMOUNT OF $1,275,618 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the Spencer Avenue Neighborhood is one of many prioritized areas in the City's water service area that require replacement of current, aging water infrastructure, and

WHEREAS, the Spencer Avenue Neighborhood Strengthen & Replace Water Mains project will replace and upgrade deficient water mains, associated water valves, services and fire hydrants to increase service reliability, flows, and pressures, and

WHEREAS, specifications have been prepared for the Spencer Avenue Neighborhood Strengthen & Replace Water Mains project, and

WHEREAS, on January 14, 2020 staff received bids from three companies that were responsible and responsive, including a bid from Rolfe Construction Inc., and

WHEREAS, MMC 8-3.203 states that all purchases, in excess of fifty thousand dollars ($50,000), or when directed by the City Manager for any purchase of fifty thousand dollars ($50,000) or less, shall follow formal bid procedures, and

WHEREAS, and the award of bid for the Spencer Avenue Neighborhood Strengthen & Replace Water Mains project conforms to the Modesto Municipal code based on providing the overall lowest cost, while providing improved service, and

WHEREAS, the Director of Utilities has recommended that the bid of $1,275,618 received from Rolfe Construction Inc., be accepted as the lowest responsible and responsive bid and the contract be awarded to Rolfe Construction Inc.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the plans and specifications for the Spencer Avenue Neighborhood Strengthen & Replace Water Mains project and accepts the bid of $1,275,618 and Awards Rolfe Construction Inc., of Atwater, CA, the contract for the Spencer Avenue Neighborhood Strengthen & Replace Water Mains project.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-082

RESOLUTION AUTHORIZING AN INCREASE IN THE DIRECTOR'S AUTHORITY TO ISSUE CHANGE ORDERS FOR THE SPENCER AVENUE NEIGHBORHOOD STRENGTHEN & REPLACE WATER MAINS PROJECT FROM 8% ($102,049) TO 10% ($127,562) OF THE CONSTRUCTION CONTRACT PRICE OF $1,275,618 WITH ROLFE CONSTRUCTION INC, ATWATER, CA

WHEREAS, the City's "Change Order Approval Policy", enacted by Council Resolution No. 94-443 on July 19, 1994, and updated by Resolution No. 2019-326 on July 9, 2019, established a contract change order budget of 8% for projects over $1 Million, and

WHEREAS, given the nature of a rehabilitation project, additional work may be needed to address unexpected conditions that require changes in project scope, and

WHEREAS, the additional costs may exceed the Director's authority for the project as established by the Council's Change Order Approval Policy adopted by Resolution No. 94-443 and revised on July 9, 2019 by Resolution No. 2019-326, and

WHEREAS, staff is requesting authorization to increase the contract change order budget to 10% ($127,562) to account for unexpected conditions.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the Director of Utilities to issue change orders for the Spencer Avenue Neighborhood Strengthen & Replace Water Mains Project from 8 percent (102,049) to 10 percent ($127,562) of the construction contract price of 1,275,618 with Rolfe Construction Inc., of Atwater, CA.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-083

RESOLUTION APPROVING THE DOWNTOWN MODESTO HOTEL PROJECT ESTIMATED TIMELINE AND BUDGET FOR POTENTIAL DEVELOPMENT OF A HOTEL LOCATED IN DOWNTOWN MODESTO AND AUTHORIZING STAFF TO PROCEED WITH TASKS I AND II, INCLUDING SUPPORTING BOND, REDEVELOPMENT SUCCESSOR AGENCY AND GENERAL LEGAL SERVICES FOR THE DOWNTOWN MODESTO HOTEL PROJECT

WHEREAS, the 2006 Redevelopment Master Plan (Plan) provided updated goals and implementation strategies for the redevelopment project area, and

WHEREAS, the Plan identified that development should support the vision for downtown as the "commercial and cultural heart of the city" and prioritization of land use and economic development goals to attract new development, and

WHEREAS, the Plan identified target areas and catalyst and opportunity sites for development, and

WHEREAS, one catalyst site, identified for potential development of a new hotel with ground floor commercial and retail space, is the surface parking lot adjacent to the Modesto Centre Plaza (MCP), and

WHEREAS, the site is owned by the Redevelopment Successor Agency, which, prior to its dissolution in 2012, supported the downtown hotel concept, and

WHEREAS, in August 2018, the City issued an informal Request for Proposals (RFP) for a lodging and market study to explore the feasibility of an additional hotel adjacent to MCP, and

WHEREAS, on October 24, 2018, by City Manager authority, the City retained HVS Convention, Entertainment, Sports, and Facilities Consulting (HVS) to conduct the lodging and market study, and

WHEREAS, on January 22, 2019, HVS submitted the "Feasibility Study – Proposed Convention Center Hotel" (Study) to the City, and

WHEREAS, the Study, based on the hotel market and a feasibility analysis, concluded that a 200-room select service hotel with minimum function space and limited food service would be the most viable due to the subject property size, development costs, and steadily growing demand for this product in the larger area hotel market, and

WHEREAS, based on the findings, development of the proposed hotel is projected to yield $8.6 million in new direct spending, 106 new full-time jobs, and $1.2 million in annual tax revenue in a stable year, and

WHEREAS, the Study identified the following practical next steps to determine whether the proposed hotel can be developed including 1) Project Management, 2) Site Parameters, Valuation and Parking, and 3) Solicitation of Development Partner, and

WHEREAS, on April 12, 2019, the Economic Development Committee unanimously recommended forwarding the Study to Council and proceeding with preparing a budget and timeline for the next steps, and

WHEREAS, on May 7, 2019, by Resolution No. 2019-228, Council accepted the Study and directed staff to prepare a timeline and budget for each of next steps, and

WHEREAS, the estimated timeline and budget ("Timeline and Budget") for the next steps in the Downtown Modesto Hotel Project (Project) is projected to take approximately 12-18 months to complete at a projected cost of $381,080 **(Exhibit "A"),** and

WHEREAS, the estimated capital improvements for the Modesto Centre Plaza are estimated at $3.2 million which may be considered at a later time, and

WHEREAS, additional costs may be identified during the next phase of the Project, and

WHEREAS, on September 4, 2019, the Economic Development Committee unanimously recommended approving the estimated timeline and budget, authorizing staff to proceed with the next steps in the Downtown Modesto Hotel Project, and forwarding to Council for approval, and

WHEREAS, staff recommends proceeding with Tasks I (Project Management) and II (Determine Initial Interest in Hotel Development) and supporting legal services for the Downtown Modesto Hotel Project, estimated at $84,600, and

WHEREAS, funding for the Tasks I, II, and supporting legal services will be covered by FY 18/19 General Fund carryover, pending availability after the year-end audit ($60,850), and Redevelopment Successor Agency Funds ($11,250).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Downtown Modesto Hotel Project estimated Timeline and Budget for potential development of a hotel located in downtown Modesto and authorizes staff to proceed with the Tasks I, II, and supporting legal services.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

WHEREAS, the Study identified the following practical next steps to determine whether the proposed hotel can be developed including 1) Project Management, 2) Site Parameters, Valuation and Parking, and 3) Solicitation of Development Partner, and

WHEREAS, on April 12, 2019, the Economic Development Committee unanimously recommended forwarding the Study to Council and proceeding with preparing a budget and timeline for the next steps, and

WHEREAS, on May 7, 2019, by Resolution No. 2019-228, Council accepted the Study and directed staff to prepare a timeline and budget for each of next steps, and

WHEREAS, on September 4, 2019, the Economic Development Committee unanimously recommended approving the estimated timeline and budget, retaining

Management Advisory Services and authorizing staff to proceed with the Tasks I and II for the Downtown Modesto Hotel Project, and

WHEREAS, the Management Advisory Services agrees to accept a sum not to exceed $42,100 as full remuneration for performing all services and furnishing all staffing and materials for Tasks I and II, and

WHEREAS, funding for the Agreement will be from 2018-2019 General Fund carryover funds, pending availability after the year end audit, and

WHEREAS, Modesto Municipal Code Section 8-3.204(a) exempts professional services from formal bidding requirements.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the agreement with Management Advisory Services for professional services for Task I and II of the Downtown Modesto Hotel Project, in an amount not to exceed $42,100 over a twelve month period.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is authorized to execute the agreement in form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-085

RESOLUTION AMENDING THE FISCAL YEAR 2019-2020 OPERATING BUDGET IN THE AMOUNT OF $60,850 TO FUND TASKS I, II, AND SUPPORTING LEGAL SERVICES FOR THE DOWNTOWN MODESTO HOTEL PROJECT

WHEREAS, in August 2018, the City issued an informal Request for Proposals (RFP) for a lodging and market study to explore the feasibility of an additional hotel adjacent to MCP, and

WHEREAS, on January 22, 2019, HVS submitted the "Feasibility Study – Proposed Convention Center Hotel" (Study) to the City, and

WHEREAS, the Study identified the following practical next steps to determine whether the proposed hotel can be developed including 1) Project Management, 2) Site Parameters, Valuation and Parking, and 3) Solicitation of Development Partner, and

WHEREAS, on May 7, 2019, by Resolution No. 2019-228, Council accepted the Study and directed staff to prepare a timeline and budget for each of next steps for the Downtown Modesto Hotel Project ("Project"), and

WHEREAS, on September 4, 2019, the Economic Development Committee unanimously recommended approving the estimated timeline and budget, authorizing staff to proceed with the next steps in the Downtown Modesto Hotel Project, and forwarding to Council for approval, and

WHEREAS, staff recommended proceeding with Tasks I and II and supporting legal services estimated at $84,600, and

WHEREAS, the Fiscal Year 2019-2020 Operating Budget must be amended to allocate $60,850 from FY 18/19 General Fund carryover funds pending availability after the year-end audit, to the Community and Economic Development Department (0100-14110-53300) to fund the Tasks I, II, and supporting legal services for the Downtown Modesto Hotel Project.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2019-2020 Operating Budget to allocate $60,850 from FY 18/19 General Fund carryover funds pending availability after the year-end audit, to the Community and Economic Development Department (0100-14110-5330) for the Downtown Modesto Hotel Project.

BE IT FURTHER RESOLVED that the City Manager, or designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 11th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Kenoyer, Madrigal, Ridenour, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-090

RESOLUTION APPROVING THE PLANS AND SPECIFICATIONS FOR THE PELANDALE AVENUE PAVEMENT REHABILITATION PROJECT, STPL-5059(220), ACCEPTING THE BID, AND AWARDING A CONTRACT TO DSS COMPANY DBA KNIFE RIVER CONSTRUCTION, OF STOCKTON, CALIFORNIA, IN THE AMOUNT OF $2,034,488 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, plans and specifications have been prepared for the Pelandale Avenue Pavement Rehabilitation Project,STPL-5059(220), and City staff recommends approval by the City Council, and

WHEREAS, the bids received for the Pelandale Avenue Pavement Rehabilitation Project, STPL-5059(220), were publicly opened at 11:00 a.m. on January 21, 2020, and later tabulated by the Director of Community and Economic Development for the consideration of Council, and

WHEREAS, the Director of Community and Economic Development has recommended that the bid of $2,034,487.45 received from DSS Company dba Knife River Construction, of Stockton, California be accepted as the lowest responsible and responsive bid and the contract be awarded to DSS Company dba Knife River Construction, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow the formal bid procedures, and

WHEREAS, an award of $2,034,487.45 and agreement for construction for Community and Economic Development Department to use DSS Company dba Knife River Construction, of Stockton, California, conforms to the Modesto Municipal Code

because the City complied with the formal bid procedures and DSS Company dba Knife River Construction, of Stockton, California, was the lowest responsive bidder.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the plans and specifications for the Pelandale Avenue Pavement Rehabilitation Project, STPL-5059(220), accepts the bid of DSS Company dba Knife River Construction, of Stockton, California, in the amount of $2,034,487.45 and awards DSS Company dba Knife River Construction the contract for the Pelandale Avenue Pavement Rehabilitation Project, STPL-5059(220).

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-093

RESOLUTION AUTHORIZING THE PAYMENT OF $280,722 TO THE PACIFIC GAS AND ELECTRIC COMPANY (PG&E) FOR THE RELOCATION OF GAS LINES ON ROSEMORE AVENUE AT KANSAS AVENUE, KANSAS AVENUE AT MERCY AVENUE, FRANKLIN STREET (KANSAS AVENUE EXTENSION), AND SHIRLEY COURT AT ELM AVENUE AS REQUIRED FOR THE STATE ROUTE 132 WEST FREEWAY/EXPRESSWAY PHASE 1 PROJECT

WHEREAS, the State Route 132 West Freeway/Expressway – Phase 1 Project (Project) proposes to construct a two-lane highway on a new alignment in Stanislaus County and the City of Modesto from State Route 99 just south of Kansas Avenue to Dakota Avenue; and

WHEREAS, a construction contract was awarded to Bay Cities Paving and Grading on September 24, 2019 per Resolution 2019-439; and

WHEREAS, construction began in December of 2019 and is anticipated to be completed in 2022; and

WHEREAS, relocation of the Pacific Gas and Electric (PG&E) gas line facilities is required so that improvements needed for the Project can be constructed; and

WHEREAS, these existing gas lines are in conflict with the proposed improvements and must be relocated; and

WHEREAS, the conflicts and locations are identified as follows:

- Rosemore Avenue at Kansas Avenue- Cap existing line during bridge construction and then install approximately 190 lineal feet of 3-inch gas line. Line will be encased in a 12-inch steel casing within the bridge structure;

- Kansas Avenue at Mercy Avenue- Relocate approximately 200 lineal feet of existing 4-inch gas line. Relocation is necessary so that the City Utility Department's existing 54-inch sanitary sewer line can be reconstructed;
- Franklin Street (Kansas Avenue Extension)- Abandon approximately 435 lineal feet of existing gas line. Existing 3-inch steel gas line will be capped in place. This abandonment is required to meet Caltrans standards. Standards require that the existing right of way be cleared of utilities prior to construction of the bridge overcrossing of the State Route 99 Freeway;
- Shirley Court at Elm Avenue- Existing 3-inch gas line is in conflict with the proposed construction of the relocated MID Renna line. The Gas line must be lowered so that the new irrigation line can be constructed. Irrigation lines are controlled by gravity; therefore the gas line must be lowered; and

WHEREAS, the cost to design and install all of this work is estimated at $561,444 and this work is codified within the terms as stated in State Utility Agreement 2320.6 (Agreement), and

WHEREAS, this Agreement specifies that the cost for this work be split between the City and PG&E at a 50/50 percentage rate, and

WHEREAS, this work was reviewed by the design engineer Dokken Engineering and approved by Caltrans District 10 Utility Engineer, and

WHEREAS, Capital Facility Fees (CFF) funding is currently available in project account #100614 to pay PG&E the required $280,722.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the payment of $280,722 to Pacific Gas and Electric for the

relocation of gas lines on Rosemore Avenue at Kansas Avenue, Kansas Avenue at Mercy Avenue, Franklin Street (Kansas Avenue Extension), and Shirley Court at Elm Avenue as required for the State Route 132 West Freeway/Expressway Phase 1 Project.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-094

RESOLUTION DIRECTING STAFF TO PREPARE AND FILE THE 2020-2021 ANNUAL ENGINEER'S REPORT FOR CITY OF MODESTO LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 1

WHEREAS, Resolution No. 88-935 adopted by the Council of the City of Modesto on December 13, 1988, initiated proceedings for the formation of Landscape Maintenance Assessment District No. 1 (LMAD No. 1) to provide funding for the landscape maintenance in the public right-of-way, street medians and adjacent to the access control walls in Dry Creek Meadows Subdivisions Nos. 1-6, and

WHEREAS, LMAD No. 1 was formed in accordance with the Landscaping and Lighting Act of 1972 (Streets and Highways Code Sections 22500 through 22679), and comprised of 749 single-family residential lots and three (3) public agency owned parcels, and

WHEREAS, Section 22620 et. seq. of the Streets and Highways Code requires the legislative body (the City Council) adopt a resolution which shall generally describe any proposed new improvements or any substantial changes in existing improvements and orders the preparation and filing of the report, and

WHEREAS, the annual assessment for LMAD No. 1 has remained the same since 1996, and

WHEREAS, staff does not anticipate any new improvements or substantial changes in existing improvements.

NOW, THEREFORE, BE IT RESOLVED that the City Engineer is designated by this Council as the Engineer of Work for LMAD No. 1, and is hereby directed to prepare and file an annual report in accordance with the provisions of the Landscaping and

Lighting Act of 1972, as amended (Streets and Highways Code Sections 22500 through 22679).

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION DIRECTING STAFF TO PREPARE AND FILE THE 2020-2021 ANNUAL ENGINEER'S REPORT FOR THE SHACKELFORD LANDSCAPE AND LIGHTING DISTRICT

WHEREAS, on June 29, 1999, the County of Stanislaus formed the Shackelford Landscape and Lighting District (Shackelford LLD) for the purpose of administering the maintaining seventy-seven (77) 200-watt high-pressure sodium streetlights, and

WHEREAS, the Shackelford LLD was formed in accordance with the Landscaping and Lighting Act of 1972 (Streets and Highways Code Sections 22500 through 22679), and

WHEREAS, the Shackelford LLD is comprised of approximately 153 acres, includes 496 lots with both residential and commercial development, and is bounded by Crows Landing Road on the west, East Hatch Road on the south, Union Pacific Railroad on the east, and State Route 99 on the north, and

WHEREAS, on July 1, 2012, the City of Modesto assumed jurisdiction of the Shackelford Landscape and Lighting District from the County of Stanislaus, and

WHEREAS, Section 22620 of the Streets and Highways Code requires the legislative body (the City Council) to adopt a resolution which shall generally describe any proposed new improvements or any substantial changes in existing improvements and direct staff to prepare and to file a report accordingly, and

WHEREAS, the annual assessment for the Shackelford LLD has gradually increased since June 1999, and

WHEREAS, staff does not anticipate any new improvements or substantial changes in existing improvements.

NOW, THEREFORE, BE IT RESOLVED that the City Engineer is designated by this Council as the "Engineer of Work" for the Shackelford LLD, and is hereby directed to prepare and file an annual report in accordance with the provisions of the Landscaping and Lighting Act of 1972, as amended (Streets and Highways Code Sections 22500 through 22679).

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-097

RESOLUTION APPROVING THE PURCHASE OF A ONE TON CREW CAB FLATBED TRUCK WITH SPECIFIC CONFIGURATIONS TO NATIONAL AUTO FLEET GROUP, WATSONVILLE, CA FOR A TOTAL AMOUNT NOT TO EXCEED $56,782 AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE PURCHASE ORDER

WHEREAS, the Public Works Department, Streets Maintenance Division will replace a current truck that was involved in an accident and cannot be safety fixed; and

WHEREAS, the Finance Department's Purchasing Division suggested utilizing an existing competitively bid contract, Sourcewell contract, previously known as National Joint Powers Alliance (NJPA); and

WHEREAS, Sourcewell's analysts streamline the procurement process by developing RFP's and IFB's for national, competitive solicitations that meet or exceed local requirements; and

WHEREAS, Modesto Municipal Code Section 8-3.203 requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services, to be formally bid; and

WHEREAS, however, there are exceptions to the rule set forth in the Modesto Municipal Code; and

WHEREAS, one exception, MMC 8-3.204(d) is available where the Purchasing Manager, in her discretion, determines that a process other than the usual formal bid procedure set forth in MMC Section 8-3.203 will result in procurement for the City at the lowest possible cost commensurate with the desired quality; and

WHEREAS, in addition, MMC 8-3.202(h) encourages the Purchasing Manager to join with the State of California and other units of government in cooperative purchasing plans where the best cost savings interest of the City would be served; and

WHEREAS, by accessing the terms of the Sourcewell Contract #120716-NAF, the purchase of this equipment will conform to MMC Section 8-3.204(d).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approved the award and purchase of a One Ton Crew Cab Flatbed Truck with specific configurations to National Auto Fleet Group, Watsonville, CA for a total amount not to exceed $56,782.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to execute the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-098

RESOLUTION APPROVING THE AWARD OF BID AND AGREEMENT WITH VAN DE POL PETROLEUM, STOCKTON, CA BY UTILIZING THE COMPETITIVE PROCESS WITH THE TWIN RIVERS UNIFIED SCHOOL DISTRICT, NORTH HIGHLANDS, CA FOR RENEWABLE DIESEL AND BULK FUELS FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS, FOR AN ANNUAL ESTIMATED COST NOT TO EXCEED $1,270,000, AND A TOTAL AMOUNT NOT TO EXCEED $6,350,000 OVER FIVE YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the Public Works and Utilities Departments maintain storage tanks for bulk fuels used to fuel buses, fleet vehicles and non-public roadway powered equipment; and

WHEREAS, there are two 12,000 gallon diesel underground storage tanks located at the Bus Maintenance Facility, a 1,000 gallon diesel tank at the Corp Yard, and three various size diesel tanks located at the Primary and Secondary Treatment Plants; and

WHEREAS, a permanent change to renewable diesel benefits the City and its fleet by lowering emissions to help improve air quality, it is odorless, higher mileage and performance, and lower maintenance costs; and

WHEREAS, on August 17, 2018 the Twin Rivers Unified School District, North Highlands, CA issued RFP No. 81718 for Fuel, Oil, Coolant and Hazardous Waste Disposal Services; and

WHEREAS, on September 6, 2018 proposals were formally opened, and three companies chose to respond; and

WHEREAS, Van De Pol Petroleum, Stockton, CA was the successful proposer based on the evaluation criteria; and

WHEREAS, Modesto Municipal Code Section 8-3.204 generally requires all purchases, in excess of $50,000 to follow formal bid procedures; and

WHEREAS, however, exceptions to the formal bidding process are granted in MMC 8-3.204(d) "Where the Purchasing Manager, in her discretion, determines that a process other than the formal bid procedure set forth in Section 8-3.203 will result in a procurement for the City at the lowest possible commensurate with the desired quality"; and

WHEREAS, in addition, MMC 8-3.202(d) permits the Purchasing Manager to utilize other government agencies competitive bid process such as Twin Rivers Unified School District when the best cost savings interest of the City would be served; and

WHEREAS, here, this exemption is satisfied because the Twin Rivers Unified School District did complete a competitive process for Fuel, Oil, Coolant and Hazardous Waste Services.

NOW, THEREFORE, BE IT RESOLVED by the City council of the City of Modesto that it hereby approved the award of bid and agreement for Fuel, Oil, Coolant and Hazardous Waste Services to Van De Pol Petroleum, Stockton, CA for a two-year agreement with three one-year extension options, for an annual estimated cost not to exceed $1,270,000, and a total amount not to exceed $6,350,000 over five years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-099

RESOLUTION APPROVING THE PURCHASE OF TWO (2) CLASS 7 TRUCKS WITH SPECIFIC CONFIGURATIONS TO NATIONAL AUTO FLEET GROUP, WATSONVILLE, CA, FOR A TOTAL AMOUNT NOT TO EXCEED $472,914 AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE PURCHASE ORDER

WHEREAS, these Class 7 trucks will be used by the Utilities Department, Water Construction Division to maintain current operations within the Water Construction Division; and

WHEREAS, each truck supports a crew with signs, air compressor, hand tools, flood lights, jack hammers, generator, parts and safety equipment to service the citizens of the City of Modesto water districts; and

WHEREAS, the trucks serve as a mobile shop, responding to emergency repair needs and scheduled work to the water systems; and

WHEREAS, the replacement of these two (2) Class 7 trucks for the Utilities Department was approved by the City Manager and City Council with the adopted Fiscal Year 2017-2018 budget; and

WHEREAS, the Finance Department's Purchasing Division recommended utilizing an existing competitively bid contract, Sourcewell Contract, previously known as National Joint Powers Alliance (NJPA) #081716-NAF for Class 6, 7 and 8 Chassis with Related Equipment; and

WHEREAS, Sourcewell's analysts streamline the procurement process by developing RFP's and IFB's for national competitive solicitations that meet or exceed local requirements; and

WHEREAS, Modesto Municipal Code Section 8-3.203 requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services, to be formally bid; and

WHEREAS, however, there are exceptions to the rule set forth in the Modesto Municipal Code; and

WHEREAS, one exception, MMC Section 8-3.204(d), is available where the Purchasing Manager, in her discretion, determines that a process other than the usual formal bid set forth in MMC Section 8-3.203 will result in a procurement for the City at the lowest possible cost commensurate with the desired quality; and

WHEREAS, in addition, MMC 8-3.202(h) encourages the Purchasing Manager to join with the State of California and other units of government in cooperative purchasing plans where the best cost savings interest of the City would be served; and

WHEREAS, by accessing the terms of the Sourcewell Contract #081716-NAF, the purchase of this equipment will conform to MMC Section 8-3204(d).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approved the award and purchase of two (2) Class 7 Trucks with specific configurations to National Auto Fleet Group, Watsonville, CA for a total amount not to exceed $472,914.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to execute the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-100

RESOLUTION APPROVING THE PURCHASE OF A PIPEHUNTER VACHUNTER 800 DUAL AXLE HYDRO-EXCAVATOR TRAILER WITH SPECIFIC CONFIGURATIONS TO TEXAS UNDERGROUND INC., PEARLAND, TX FOR A TOTAL AMOUNT NOT OT EXCEED $108,249 AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE PURCHASE ORDER

WHEREAS, the hydro-excavator trailer will be used by the Utilities Department, Wastewater collection Division to maintain current operations; and

WHEREAS, this equipment will be used daily by the sewer clean-out crew; and

WHEREAS, the clean-out crew installs clean-outs for customers at the property line, and there are often a large number of obstructions and dry utilities at or around the property line; and

WHEREAS, it is safer to use hydro-excavation than digging with mini excavator; and

WHEREAS, the addition of this equipment was approved by the City Manager and City Council with the adopted Fiscal Year 2019-2020 budget; and

WHEREAS, the Finance Department's Purchasing Division recommended utilizing a cooperative agreement on an existing bid contract with Houston-Galveston Area Council (H-GAC); and

WHEREAS, H-GAC's analysts streamline the procurement process by developing RFB's and RFP's for national competitive solicitations that meet or exceed local requirements; and

WHEREAS, Modesto Municipal Code Section 8-3.203 requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services, to be formally bid; and

WHEREAS, however, there are exceptions to the rule set forth in the Modesto Municipal Code; and

WHEREAS, one exception, MMC Section 8-3.204(d), is available where the Purchasing Manager, in her discretion, determines that a process other than the usual formal bid procedure set forth in MMC Section 8-3.203 will result in procurement for the City at the lowest possible cost commensurate with the desired quality; and

WHEREAS, in addition, MMC 8-3.202(h) encourages the Purchasing Manager to join with the State of California and other units of government in cooperative purchasing plans when the best cost savings interest of the City would be served; and

WHEREAS, by accessing the terms of the H-GAC Contract #SC01-18 the purchase of this equipment will conform to MMC Section 8-3.204(d).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award and purchase of a Pipehunter VacHunter 800Dual Axle Hydro-Excavator Trailer with specific configurations to Texas Underground, Inc., Pearland, TX for a total amount not to exceed $108,249.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to execute the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-101

RESOLUTION APPROVING A CITYWIDE ORGANIZATION DEVELOPMENT AND SUCCESSION PLAN AND PROFESSIONAL SERVICES AGREEMENT FOR AN EMPLOYEE LEADERSHIP DEVELOPMENT PROGRAM WITH BRANDMAN UNIVERSITY, MODESTO, CALIFORNIA FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR EXTENSION OPTIONS, FOR AN ANNUAL COST NOT TO EXCEED $50,000 AND A TOTAL AMOUNT NOT TO EXCEED $250,000 OVER FIVE YEARS AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THIS AGREEMENT

WHEREAS, the City has identified the need for a citywide organizational development and succession plan that promotes proven strategies for a positive transformation in its overall culture, and

WHEREAS, from January 2018 to September 2019, the City experienced 15% turnover of its technical and management staff through resignations or retirements, and projections are that the City could be faced with a large wave of retirements over the next 3 to 5 years, and

WHEREAS, to further support the organization development and succession plan, staff is requesting funding for the Leadership Academy offered by the Brandman University, and

WHEREAS, implementing a robust Leadership Academy for the City's management staff and possible successors will increase knowledge in ethical standards, federal and state employment laws, effective employee relations, effective and proactive communication, quality-driven problem solving, positive conflict resolution, and performance management.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a citywide organization development and succession plan and

Professional Services agreement for an employee leadership development program with Brandman University, Modesto, California for a two-year agreement with three one-year extension options, for an annual cost not to exceed $50,000 and a total amount not to exceed $250,000 over five years.

BE IT FURTHER RESOLVED that the City Manager, or designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-102

RESOLUTION REJECTING ALL BIDS RECEIVED FOR REQUEST FOR BID NO. 1920-03 FOR OVERSIZED AND NON-COMPOSTABLE WASTE MATERIAL HANDLING

WHEREAS**,** the City of Modesto Compost Facility receives approximately 65,000 tons of green waste, paper waste, and food material for composting per year, and at the end of processing, some materials are oversized, non-compostable, and separated from the finished product, and

WHEREAS, this oversized and non-compostable waste material is referred to as "overs" and can consist of oversized wood pieces, rock, metal, glass, plastic, clothing and other items, and

WHEREAS, overs comprise of approximately eight percent of the annual material received, or approximately 5,000 tons of waste material per year and needs to be removed from the City's compost facility and disposed of in a landfill, and

WHEREAS, due to budget constraints, the last time overs were removed from the Compost site was in August of 2016, and

WHEREAS, the City Manager authorized the Purchasing Division to issue a Request for Bids (RFB) for Oversized and Non-Compostable Waste Material Handling, and on September 25, 2019 Request for Bid No. 1920-03 for Oversized and Non-Compostable Waste Material Handling was issued on Planet Bids, and

WHEREAS, 234 prospective bidders were notified online and emailed the bid opportunity, and 12 companies chose to download the bid package, and

WHEREAS, on October 29, 2019 bids were formally opened in the City Clerk's office and three companies chose to respond, and

WHEREAS, after reviewing the bids received and conferring with Compost staff it was determined that the bids contained higher than anticipated costs and that the Compost budget could not sustain the, and that staff would have to research different cost effective ways for the removal of the overs, and

WHEREAS, in accordance with Modesto Municipal Code Sec. 8-3.204(a), Formal Bid Procedures, the Council shall have the authority to accept or reject any or all bids and the rejection of all bids for the Oversized and Non-Compostable Waste Material Handling conforms to Modesto Municipal Code 8-3.204, subsection (e).

NOW THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the rejection of all bids received for Request for Bid No. 1920-03 for Oversized and Non-Compostable Waste Material Handling.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-103

RESOLUTION ACCEPTING THE REBID OF GROUNDWATER MONITORING WELLS PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $716,590 TO GREGORY DRILLING, INC., OF NORTH BEND, WA

WHEREAS, the Rebid Groundwater Monitoring Wells project provides groundwater monitoring wells at five different locations within the City limits and throughout the City's contiguous water service area, and

WHEREAS, at each of the five locations, the City constructed a cluster of four monitoring wells targeting discrete water-bearing zones at depths ranging from approximately 55 to 375 feet, and

WHEREAS, the data collected from the new monitoring wells will support characterizing groundwater conditions, evaluate fate and transport of contaminants, and ultimately provide the City information to efficiently operate the production wells and also compliance with SGMA, and

WHEREAS, the project was initially advertised for bids on August 21, 2018 and the City received one bid on September 18, 2018 which was withdrawn due to an error made on the bid by the bidder, and

WHEREAS, the project was advertised for rebid on November 20, 2018, and

WHEREAS, bids were publicly opened on January 8, 2019, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, five bids were received and Gregory Drilling, Inc., of North Bend, WA, was the apparent lowest responsible and responsive bidder, and

WHEREAS, on April 2, 2019, by Resolution No. 2019-144, Council awarded a contract to Gregory Drilling, Inc., of North Bend, WA for the construction of the Rebid Groundwater Monitoring Wells Project in the amount of $634,307, and also by Resolution 2019-145 an agreement with Ground Zero Analysis, Inc., of Modesto, CA, for Hydrogeological Design support during construction, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of April 29, 2019, and all contract work was completed by July 19, 2019, and

WHEREAS, the total project costs were $885,372 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $1,835,000 which included $761,168 for the construction contract and contingency with Gregory Drilling, Inc., and

WHEREAS, there were three change orders resulting in an overall increase of $82,283 for change order work, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the rebid of Groundwater Monitoring Wells Project is hereby accepted as complete from contractor Gregory Drilling, Inc., of North Bend, WA, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $716,590, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-104

RESOLUTION ACCEPTING THE MODESTO FIRE DEPARTMENT ASSISTANCE TO FIREFIGHTERS GRANT EXHAUST SYSTEMS PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $128,080 TO BENZ AIR ENGINEERING, OF BEAVERTON, OR

WHEREAS, the Modesto Fire Department currently has all first out apparatus bays equipped with adequate exhaust systems, and

WHEREAS, there are however, six fire stations that lacked exhaust systems in the secondary equipment apparatus bays (i.e. brush/grass rigs, reserve engines, etc.), and

WHEREAS, the department sought to be able to expand existing exhaust systems to the secondary apparatus bay, and

WHEREAS, source capture exhaust systems reduce the amount of soot, carcinogenic substances and other harmful airborne pollutants that diesel exhaust contains which all of our fire apparatus produce, and

WHEREAS, this is achieved by a system that attaches to the vehicle tailpipe and captures exhaust emissions, and the need for vehicle exhaust extraction is especially important when there are employees living in the quarters where the vehicles run (such as a firehouse), and

WHEREAS, bids were advertised on April 16, 2019, and

WHEREAS, bids were publicly opened on May 14, 2019, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and Benz Air Engineering Inc., Beaverton, OR, was the apparent responsible and responsive bidder, and

WHEREAS, on July 9, 2019, by Resolution No. 2019-342, Council awarded a contract to Benz Air Engineering Inc., Beaverton, OR, for the construction of the Modesto Fire Department Assistance to Firefighters Grant Exhaust Systems Project in the amount of $120,080, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of September 3, 2019, and all contract work was completed by November 12, 2019, and

WHEREAS, the total project costs were $163,757 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $229,102 which included $147,292 for the construction contract and contingency with Benz Air Engineering Inc., and

WHEREAS, there were no change orders on this project, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Modesto Fire Department Assistance to Firefighters Grant Exhaust Systems Project is hereby accepted as complete from contractor Benz Air Engineering Inc., Beaverton, OR, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $128,080, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-105

RESOLUTION APPROVING AN AMENDMENT TO THE AGREEMENT WITH VALI COOPER ASSOCIATES, INC., OF SACRAMENTO, CA, FOR CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES FOR THE AREA 2 STORM WATER TO SANITARY SEWER CROSS CONNECTION REMOVAL – PHASE 2 ROOSEVELT PARK PROJECT IN AN AMOUNT NOT TO EXCEED $95,494, FOR A TOTAL AMOUNT NOT TO EXCEED $195,106, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, the purpose of the Area 2 Storm Water to Sanitary Sewer Cross Connection Removal – Phase 2 Roosevelt Park project is to remove direct connections of storm drain runoff to the sanitary sewer system and provide necessary storm drain improvements resulting from the removal of the cross connections, and

WHEREAS, the project proposes to capture, treat, and infiltrate stormwater runoff to augment groundwater supplies, reduce flood-related damage, and improve the quality of stormwater runoff percolating to the underlying groundwater basin, and

WHEREAS, on August 14, 2018, by Resolution No. 2018-343, Council awarded the construction contract to D.A. Wood Construction, Inc., Modesto, CA., and

WHEREAS, due to the limited availability of the City's Construction Administration staff and recent staffing transitions, staff recommended utilizing a consultant to provide construction management, inspection and materials testing services through completion of the construction phase, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a), "Exceptions to Formal Bidding Requirements," this agreement for professional services is exempt from the bidding requirements of Modesto Municipal Code 8-3.203, and

WHEREAS, for the construction management and inspection services, a Request for Proposals (RFP) was issued to the prequalified list of firms for construction management and inspection services for this project, and

WHEREAS, on January 16, 2018, by Resolution No. 2018-10, Council approved the pre-qualified consultant list for construction management and inspection services for various capital improvement projects with NV5, Inc., Vali Cooper Associates, Inc., 4Leaf, Inc., Drake Haglan and Associates, Inc., Black Water Consulting Engineers, Structure Groups, and CMPROS, Inc., and

WHEREAS, in accordance with City's policy, Administrative Directive 3.1 Selection Procedures for Professional Consultants Who Provide Architectural and Engineering Services for Capital Projects, Vali Cooper Associates, Inc., was selected as the most qualified firm for the project, and

WHEREAS, on November 26, 2019, by Resolution No. 2019-527, Council approved an agreement with Vali Cooper Associates, Inc., of Sacramento, CA, for construction management and inspection services for the Area 2 Storm Water to Sanitary Sewer Cross Connection Removal – Phase 2 Roosevelt Park project in an amount not to exceed $99,612, plus $9,961 for additional services (if needed), for a total amount not to exceed $109,573, and

WHEREAS, the project was scheduled to be complete by December 31, 2019; however, the project has experienced delays due to unanticipated circumstances related to trench compaction issues and on-site park landscaping improvements, and

WHEREAS, the delays have resulted in an extended construction schedule and additional inspections with anticipated completion schedule of April 30, 2020.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an Amendment to the current agreement with Vali-Cooper Associates, Inc., for construction management and inspection services for Area 2 Storm Water to Sanitary Sewer Cross Connection Removal – Phase 2 Roosevelt Park project, in the amount of $95,494 for a total amount not to exceed $195,106.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-106

RESOLUTION APPROVING PLANS AND SPECIFICATIONS FOR THE KANSAS AVENUE 12-INCH WATER MAIN UPGRADE PROJECT, ACCEPTING THE BID, AND APPROVING A CONSTRUCTION CONTRACT TO PLATINUM PIPELINE INC., OF LIVERMORE, CA, IN THE AMOUNT OF $638,916 PLUS $127,783 FOR CONTINGENCY (IF NEEDED) FOR A TOTAL AMOUNT NOT TO EXCEED $766,699 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the Kansas Avenue 12-inch Water Main Upgrade project area is one of many prioritized areas identified in the City's Water Master Plan that requires upgrading current, aging water infrastructure to meet current fire flow requirements, and

WHEREAS, the Kansas Avenue 12-inch Water Main Upgrade project will replace and upgrade the existing undersized 6-inch water main with a new 12-inch City Standard water main, as well as associated water valves, services, and fire hydrants to increase service reliability, flows, pressures, and most importantly, to meet current fire flow requirements for the surrounding businesses, and

WHEREAS, specifications have been prepared for the Kansas Avenue 12-Inch Water Main Upgrade project, and

WHEREAS, the Project was advertised for bids on January 15, 2020, and

WHEREAS, on February 04, 2020, Bids were publicly opened, pursuant to City Charter Section 1307, thee bids were received and Platinum Pipeline, Inc., Livermore, CA, was the responsible bidder with the lowest responsive bid, and

WHEREAS, MMC 8-3.203 states that all purchases, in excess of fifty thousand dollars ($50,000), or when directed by the City Manager for any purchase of fifty thousand dollars ($50,000) or less, shall follow formal bid procedures, and

WHEREAS, and the award of bid for the Kansas Avenue 12-Inch Water Main Upgrade project conforms to the Modesto Municipal code based on providing the overall lowest cost, while providing improved service, and

WHEREAS, the Director of Utilities has recommended that the bid of $638,916 received from Platinum Pipeline Inc., be accepted as the lowest responsible and responsive bid and the contract be awarded Platinum Pipeline Inc.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the plans and specifications for the Kansas Avenue 12-Inch Water Main Upgrade project and accepts the bid of $638,916 plus $127,783 for contingency (if needed) for a total amount not to exceed of $766,699 and Awards Platinum Pipeline Inc., of Livermore, CA, the contract for the Kansas Avenue 12-Inch Water Main Upgrade project.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-107

RESOLUTION AUTHORIZING AN INCREASE IN THE DIRECTOR'S AUTHORITY TO ISSUE CHANGE ORDERS FOR THE KANSAS AVENUE 12-INCH WATER MAIN UPGRADE PROJECT FROM 10% ($63,892) TO 20% ($127,783) OF THE CONSTRUCTION CONTRACT PRICE OF $638,916 WITH PLATINUM PIPELINE INC, OF LIVERMORE, CA

WHEREAS, the City's "Change Order Approval Policy", enacted by Council Resolution No. 94-443 on July 19, 1994, and updated by Resolution No. 2019-326 on July 9, 2019, established a contract change order budget of 10% for projects less than $1 Million, and

WHEREAS, given the nature of a rehabilitation project, additional work may be needed to address unexpected conditions that require changes in project scope, and

WHEREAS, the additional costs may exceed the Director's authority for the project as established by the Council's Change Order Approval Policy adopted by Resolution No. 94-443 and revised on July 9, 2019 by Resolution No. 2019-326, and

WHEREAS, staff is requesting authorization to increase the contract change order budget to 20% ($127,783) to account for unexpected conditions.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the Director of Utilities to issue change orders for the Kansas Avenue 12-Inch Water Main Upgrade Project from 10 percent ($63,892) to 20 percent ($127,783) of the construction contract price of $638,916 with Platinum Pipeline Inc., of Livermore, CA.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-108

RESOLUTION APPROVING AN AGREEMENT WITH NV5, OF MANTECA, CA FOR CONSTRUCTION MANAGEMENT, SPECIAL INSPECTION, AND MATERIALS TESTING SERVICES FOR THE KANSAS AVENUE 12-INCH WATER MAIN UPGRADE PROJECT IN AN AMOUNT NOT TO EXCEED $86,392, PLUS $8,639 FOR ADDITIONAL SERVICES (IF NEEDED), FOR A TOTAL AMOUNT NOT TO EXCEED $95,031; AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENT AND ANY AMENDMENTS UP TO A CUMULATIVE AMOUNT OF TEN PERCENT (10%) OR $8,639

WHEREAS, the Kansas Avenue 12-inch Water Main Upgrade project area is one of many prioritized areas identified in the City's Water Master Plan that requires upgrading current, aging water infrastructure to meet current fire flow requirements; and

WHEREAS, the Kansas Avenue 12-inch Water Main Upgrade project will replace and upgrade the existing undersized 6-inch water main with a new 12-inch City Standard water main, associated water valves, services, and fire hydrants to increase service reliability, flows, pressures, and most importantly, to meet current fire flow requirements to the surrounding businesses; and

WHEREAS, the City has determined that Construction Management, Special Inspection, and Materials Testing Services should be performed for the Kansas Avenue 12-Inch Water Main Upgrade; and

WHEREAS, NV5, of Manteca, CA represents that it is qualified, willing and able to provide the requested Construction Management, Special Inspection, and Materials Testing Services to City.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an Agreement with NV5, of Manteca, CA for Construction Management, Special Inspection, and Materials Testing Services for the Kansas Avenue

12-Inch Water Main Upgrade Project in an amount of $86,392 for the identified scope of services.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the Agreement, in a form approved by the City Attorney.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to execute one or more amendments to this Agreement in a cumulative amount up to ten percent (10%) of the original agreement amount of $86,392.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-109

RESOLUTION AMENDING THE FISCAL YEAR 2019-20 CAPITAL IMPROVEMENT PROGRAM BUDGET IN THE AMOUNT OF $925,065 TO BE TRANSFERRED INTO THE PROJECT FROM WATER RESERVES IN ORDER TO FULLY FUND THE CONSTRUCTION, CONTINGENCY, CONSTRUCTION ADMINISTRATION AND DESIGN SUPPORT DURING CONSTRUCTION FOR THE KANSAS AVENUE 12-INCH WATER MAIN UPGRADE PROJECT

WHEREAS, certain budgetary transactions are necessary in the amount of $925,065, in order to fund to fully fund the construction, contingency, construction administration and design support during construction for the Kansas Avenue 12-Inch Water Main Upgrade Project, and

WHEREAS, the Fiscal Year 2019-2020 Capital Improvement Program Budget must be amended.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2019-2020 Capital Improvement Program Budget in the amount of $925,065 to be transferred into the project from Water Reserves.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-110

RESOLUTION APPROVING AN AMENDMENT TO THE PURCHASE AGREEMENT WITH INDUSTRIAL ELECTRICAL CO., MODESTO, CA, FOR THE FURNISHING OF ELECTRIC MOTOR REWIND/REBUILD SERVICES, INCREASING THE ANNUAL COSTS FROM $88,548 TO $133,548 UNTIL THE END OF THE AGREEMENT AUGUST, 2020, AND A TOTAL AGREEMENT AMOUNT NOT TO EXCEED FROM $442,740 TO $487,740 AND AUTHORIZING THE PURCHASING MANAGER OR HER DESIGNEE TO EXECUTE THE AMENDMENT

WHEREAS, electric motor rewinding/rebuilding services are required for various types and sizes of motors used within City facilities; these motors require immediate repair or rebuild services to ensure that City operations and facilities are maintained, and

WHEREAS, the City Manager authorized the Purchasing Manager to issue formal Request for Bids (RFB) for the furnishing of electric motor rewinding/rebuilding services and the Purchasing Division issued RFB No. 1415-31 on the City's website under the commodity code for electric motor rewind/rebuild services to 88 prospective bidders, twelve of which were local companies. Eight companies chose to download the RFB document, and

WHEREAS, bids were formally opened in the City Clerk's Office with four companies chose to respond, two of which were local companies; all four companies that responded provided responsive and responsible bids, and

WHEREAS, to ensure continuity of services to the City, two purchase agreements were awarded to a primary and secondary contractor, and

WHEREAS, based on providing the lowest responsive and responsible bids for the furnishing of electric motor rewind/rebuild services, agreements were awarded to Andrews Electric and Machine, Modesto, CA, as "primary" contractor and Industrial

Electrical Co., Modesto, CA, as "secondary" contractor, on September 1, 2017 by Resolution No. 2015-320 for one-year terms with four one-year extension options at the sole discretion of the City, for an estimated annual cost of $88,548, and over five years of $442,740, and

WHEREAS, wastewater utilizes this contract to maintain the City's process pumps and motors in the stormwater and sewer lift stations, Jennings and Sutter Treatment Plants and the North Valley Regional Recycled Water Project, and

WHEREAS, this increase will cover the unexpected failures of critical motors and pumps until the new agreement is put into place in 2020, and

WHEREAS, the Wastewater Division has often used Industrial Electric as primary contractor due to testing requirement on the City's many submersible motors, which Andrews Electric has been unable to accomplish, and

WHEREAS, staff recommends an amendment to the purchase agreement for the furnishing of electric motor rewind/rebuild services increasing the annual costs from $88,548 to $133,548 until the end of the agreement in August, 2020, and a total agreement amount not to exceed from $442,740 to $487,740.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment to the purchase agreement with Industrial Electrical Co., Modesto, CA, for the furnishing of Electric Motor Rewind/Rebuild Services, increasing the annual costs from $88,548 to $133,548 until the end of the agreement August, 2020, and a total agreement amount not to exceed from $442,740 to $487,740.

BE IT FURTHER RESOLVED that the Purchasing Manager, or her designee, is hereby authorized to execute the amendment.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-111

RESOLUTION APPROVING ON-CALL ENGINEERING CONSULTANT AGREEMENTS WITH BLACK WATER CONSULTING ENGINEERS INC. OF MODESTO CA, BROWN AND CALDWELL OF RANCHO CORDOVA, CA, CAROLLO ENGINEERS FO WALNUT CREEK, CA, HAZEN AND SAWYER OF SAN FRANCISCO, CA, WEST YOST ASSOCIATES OF DAVIS, CA AND WOODARD & CURRAN OF PORTLAND, ME FOR TWO-YEAR AGREEMENTS WITH THREE ONE-YEAR EXTENSION OPTIONS, FOR A COMBINED ANNUAL COST NOT TO EXCEED $200,000 FOR WASTEWATER FUND, AND $100,000 FOR STORM DRAIN FUND, FOR A TOTAL COMBINED COST NOT TO EXCEED $1,000,000 FOR WASTEWATER FUND, AND $500,000 FOR STORM DRAIN FUND, OVER FIVE YEARS AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENTS

WHEREAS, the Wastewater Division performs a number of tasks associated with Wastewater Collections, Operations and Maintenance, and Environmental Services, and

WHEREAS, staff has selected six qualified consulting firms that have broad experience and allow for more competitive costs in the execution of projects under these On-Call Engineering Services agreements and these services are provided by engineers that have specialized expertise in wastewater collection, treatment and processes, environmental regulations, and other projects as necessary, and

WHEREAS, on September 11, 2019, a formal Request for Qualifications was issued on Planet Bids for On- Call Engineering Services and prospective bidders were notified online and via email of the request for qualifications, and

WHEREAS, eight firms chose to respond, of which three were local consultants, and

WHEREAS, based on the vast expertise among the following six proposers, staff recommends approving agreements with the consulting firms of Black Water Consulting Engineers Inc. (local), Brown & Caldwell, Carollo Engineers, Hazen and Sawyer, West

Yost Associates and Woodard & Curran for On-Call Engineering Services for wastewater and storm drain related work, and

WHEREAS, as tasks are determined, a scope of work will be written and sent to each consultant who will submit a written proposal outlining the specific work, schedule, and estimated cost associated with each scope of work, and

WHEREAS, the most responsive consultant will be selected and will not perform services until the Director of Utilities has approved and a written Notice to Proceed is sent to the consultant, and

WHEREAS, Modesto Municipal Code Section 8-3.204(a), "Exceptions to Formal Bidding Requirements," agreements for professional services are exempt from the bidding requirements of Modesto Municipal Code 8-3.203, and

WHEREAS, the approval for On-Call Engineering Services to Black Water Consulting, Brown & Caldwell, Carollo Engineering, Hazen and Sawyer, West Yost Associates, and Woodard & Curran conforms to Modesto Municipal Code 8-3.204, subsection (a) as they are providing professional services, and

WHEREAS, collectively, up to $200,000 from the Wastewater Fund (4210-44312-53300 Plant Operations) and up to $100,000 from the Storm Drain Fund (4480-44111-53300 Stormwater Compliance) will be spent for On-Call consultant work annually, and

WHEREAS, each consultant will sign an agreement for possible work to be performed in the communitive annual total shall not exceed the amount of $200,000 in the Wastewater Fund and $100,000 in the Storm Drain Fund.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves On-Call Engineering consultant agreement with Black Water

Consulting Engineers Inc. of Modesto CA Brown & Caldwell of Rancho Cordova, CA, Carollo Engineering of Walnut Creek, CA, Hazen and Sawyer of San Francisco, CA, West Yost Associates of Davis, CA, and Woodard & Curran, Inc. of Portland, ME for two-year agreements with three one-year extension options, for a combined annual cost not to exceed $200,000 for Wastewater Fund, and $100,000 for Storm Drain Fund, for a total combined cost not to exceed $1,000,000 for Wastewater Fund, and $500,000 for Storm Drain Fund, over five years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute these agreements, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-112

RESOLUTION APPROVING A NINTH AMENDMENT TO THE AGREEMENT WITH SCS ENGINEERS, INC., MODESTO, CA, TO PROVIDE ENGINEERING SUPPORT AND POTENTIAL ADDITIONAL WELL REMOVAL AND REPLACEMENT FOR THE CARPENTER ROAD LANDFILL CLEAN CLOSURE PROJECT AS MANDATED BY THE CENTRAL VALLEY REGIONAL WATER QUALITY CONTROL BOARD COMPLIANCE ABATEMENT ORDER R5-2015-0700, IN AN AMOUNT NOT TO EXCEED $173,000 THROUGH DECEMBER 31, 2020 OR UNTIL THE PROJECT IS COMPLETE, FOR A TOTAL AMOUNT NOT TO EXCEED $1,679,156, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS**,** the City of Modesto owned and operated the Carpenter Road Landfill from 1956 to 1968, and the landfill includes fill sites on both the east and west sides of Carpenter Road, along the Tuolumne River, and

WHEREAS, the City is required by State law to perform post closure landfill maintenance, monitoring, and reporting for the landfill site, and

WHEREAS, in December 2005, it appeared that methane gas levels at the landfill's Northern boundary exceeded the maximum limits, and the California Integrated Waste Management Board (CIWMB) required the City to determine the cause and develop a Mitigation and Monitoring Plan, and

WHEREAS, the Central Valley Regional Water Quality Control Board (CVRWQCB) subsequently required the City to assess the potential for groundwater impacts, and

WHEREAS, on June 12, 2007 by Resolution No. 2007-341, Council authorized a Professional Services Agreement with SCS Engineers, Inc. in an amount not to exceed $299,500 to assess the landfill and recommend corrective action, and

WHEREAS, after the initial site assessment, Resolution No. 2007-728 authorized a no-cost Letter Amendment to shift the focus of the work to installation of gas probes, design and installation of groundwater monitoring wells, and ongoing monitoring and reporting of methane gas and groundwater, and

WHEREAS, the assessment determined that migration of methane gas past the boundaries of the landfill was not a problem, but that a groundwater monitoring event determined that the landfill had experienced a "release" that could potentially have affected groundwater, and

WHEREAS, an engineering feasibility study had to be completed and the CVRWQCB required the City to submit a Corrective Action Plan (CAP), and

WHEREAS, in May 2009 by Resolution 2009-199, Council approved a Second Amendment to the Agreement with SCS Engineers, Inc. to further evaluate the site, develop the CAP, and provide ongoing monitoring and reporting services in an amount not to exceed $242,000, and

WHEREAS, in November 2010, after conducting 12 hydro punch borings to sample groundwater and analyzing them for Volatile Organic Compounds (VOC's), SCS submitted the CAP to the CVRWQCB proposing to use an injection of a hydrogen releasing compound to remediate any groundwater impacts, and

WHEREAS, subsequently , the VOC concentrations began to consistently decline, and City staff and SCS Engineers, Inc. determined that the proposed CAP needed to be re-evaluated, and

WHEREAS, in August 2013 by Resolution No. 2013-277, Council approved a Third Amendment to the Agreement with SCS Engineers, Inc. for ongoing monitoring,

lab analysis, compliance reports, corrective action monitoring and maintenance, and re-evaluating and implementing the CAP in a cost not to exceed $290,500, and

WHEREAS, in October 2014, a revised CAP and post closure maintenance plan was submitted to the CVRWQCB and in March 2015, the CVRWQCB issued the City a Cleanup and Abatement Order (CAO R5-2015-0700) requiring the City to clean close the Eastern Fill, move all the waste to the Western Fill, install a final cover atop the Western Fill, and construct a storm water retention basin, and

WHEREAS, in April 2015, SCS Engineers, Inc. submitted the plans and drawings to address the CAO and it was conditionally approved by the CVRWQCB in July 2016, with mitigation to be completed by October 2017, and

WHEREAS, the Central Valley experienced a significant wet winter at the end of 2016 and into the beginning of 2017, with the Tuolumne River above flood stage and not expected to completely recede until September or mid-October 2017, and

WHEREAS, the City petitioned the CVRWQCB in June 2017 for an extension to the CAO due to the groundwater elevation being higher than that of the waste to be excavated, and

WHEREAS, in mid-July the CVRWQCB approved the City's request to postpone the execution of the Clean Closure Work Plan with the condition that the approved background soil assessment would be completed and submitted to the water board by October 20, 2017 and the Final Construction and Completion Report for the CAO would be submitted no later than October 31, 2018, and

WHEREAS, in September 2017, by Resolution No. 2017-341, Council approved a Fourth Amendment to the Agreement with SCS Engineers, Inc. to complete these tasks and carry the project through December 31, 2018 in a cost not to exceed $92,349, and

WHEREAS, in July 2018 the City opened the bid process for the Clean Closure work, and in August 2018, awarded the bid to Pacific States Environmental Contractors for a total of $3,776,598 by Council Resolution No. 2018-345, and

WHEREAS, in addition, a Fifth Amendment to the SCS Agreement in an amount not to exceed $520,000 was approved by Council Resolution No. 2018-348 for environmental and design support services to the Clean Closure work, and

WHEREAS, Resolution No. 2018-348 also authorized the City Manager to execute any amendments up to a cumulative amount of 10% of the Fifth Amendment, or $52,000, and

WHEREAS, in September 2018, it was determined that the City needed to have a No-Rise Certification in order to be in compliance with Federal Emergency Management Agency (FEMA) Regulation, and

WHEREAS, the City requested that SCS Engineers perform this analysis but since nothing was identified in their agreements for this type of work, in December 2018 a Sixth Amendment to the SCS Agreement in an amount not to exceed $44,036 was approved under the authority of the City Manager, for SCS to hire HDR Engineering to produce the model runs, analysis, and No-Rise Certification needed to be in compliance with FEMA, and

WHEREAS, HDR Engineering diligently worked with SCS Engineers and the City to help the City achieve a No-Rise Certification and determined that with some

slight design modifications and their site review of the vegetation layout, that the No-Rise Certification could be met, and

WHEREAS, with the number of analytical models that needed to be run and the slight design modifications that needed to be made, the Sixth Amendment fell short by $17,771, and in order to keep the project moving to meet construction deadlines, the City Manager executed a Seventh Amendment to the SCS Agreement, under his authority in the Fifth Amendment by Resolution No. 218-348, for the balance of the cumulative total of 10%, which was $7,964, and

WHEREAS, the previous amount was approved in the Sixth Amendment in the amount of $44,033, and the City Manager total delegated authority was $52,000, and

WHEREAS, an Eighth Amendment for the remaining $9,807 of the $17,771 was needed to complete the No-Rise Certification, and

WHEREAS, it was critical that this amendment be processed for several reasons: 1) the health and safety of the neighborhood in and around the landfill as the longer the project is delayed, the longer the waste sits in a non-line landfill without groundwater protection; 2) the contract was awarded almost a year ago and the contractor has been in a holding pattern; 3) there are time limitations to when construction can occur due to wildlife cycles; and 4) if the project does not get started as mandated by the CVRWQCB, the City will be subjected to fines of up to $10,000 per day, and

WHEREAS, the Eighth Amendment was approved at the City Council meeting of August 7, 2019 by Resolution No. 2019-360 in an amount not to exceed $9,807, and

WHEREAS, a notice to proceed was issued to Pacific States (Contractor) to begin the clean closure project work on September 3, 2019, and

WHEREAS, SCS Engineers removed four ground water monitoring wells as per the work plan, and the Contractor began stripping the site and performing pot-holing to determine the levels of waste, and

WHEREAS, after two weeks of work the Contractor engaged the City in discussions regarding the design modifications that were recommended by HDR in order to meet the No-Rise requirements, and the need for these design changes to be implemented in the design plans by SCS Engineers, and

WHEREAS, in agreement with the City, the Contractor halted the project to address these design issues and requested a change order be completed to ensure proper compensation was in line with the design changes proposed, and

WHEREAS, as part of the proposed designed changes, SCS Engineers has submitted a new Scope of Work to handle the additional services of the design support, as well as the potential removal and replacement of 4 additional wells if the Contractor deems it necessary to proceed with the project, and

WHEREAS, funds are collected in the garbage rate for this mitigation project, estimated to cost $6.2 million and to date the Carpenter Road Landfill Fund (Fund 4893-56016) has approximately $5 million.

NOW THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Ninth Amendment to the Agreement with SCS Engineers, Inc. to provide engineering support and potential additional well removal and replacement for the Carpenter Road Landfill Clean Closure Project as mandated by the Central Valley Regional Water Quality Control Board Compliance Abatement Order R5-2015-0700, in

an amount not to exceed $173,000 through December 31, 2020 or until the project is complete, for a total amount not to exceed $1,679,156.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the Ninth Amendment to the Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-113

RESOLUTION AUTHORIZING AN INCREASE OF THE DIRECTOR OF UTILITIES AUTHORITY TO ISSUE CHANGE ORDERS ON THE CARPENTER ROAD LANDFILL MITIGATION PROJECT FROM 10 PERCENT ($377,659) TO 48 PERCENT ($1,812,767) OF THE ORIGINAL CONSTRUCTION CONTRACT PRICE OF $3,776,598 WITH PACIFIC STATES ENVIRONMENTAL CONTRACTORS, INC. OF DUBLIN, CA

WHEREAS, on August 14, 2018, by Resolution No. 2018-345 Council awarded a construction contract to Pacific States Environmental Contractors, Inc. of Dublin, CA in an amount not to exceed $3,776,598 for the Carpenter Road Landfill Mitigation Project, and

WHEREAS, the original amount authorized to the Director of Utilities to issue change orders was 10 percent ($377,659) of the contract amount of $3,776,598, and

WHEREAS, a change order policy is utilized for each construction contract awarded by the City, and

WHEREAS, if after the contract is executed, a change in the original scope of work is determined necessary by staff, the policy authorized the Director to approve a change order up to a cumulative amount of the original contract, and

WHEREAS, in most cases, the budgeted amount set by the policy and specific requests by resolution are typically sufficient, however, as it relates to the Carpenter Road Landfill Mitigation Project, anticipated change order costs will exceed the authority allowed by policy, and

WHEREAS, upon award of the project and during the course of the submittal phase, City Construction Administration staff determined that the project had not

obtained a Federal Emergency Management Agency (FEMA) "No Rise Certification" which is required for construction located within a floodplain, and

WHEREAS, the consultant engineer was notified and requested to provide the "No Rise Certification", which resulted in additional hydraulic evaluation needed to verify that the proposed design met the "No Rise Certification" requirements, and

WHEREAS, the hydraulic analysis conducted confirmed that the proposed design did not meet the requirement, resulting in the need for the design to be revised, and

WHEREAS, the design revisions resulted in additional scope of work to address the significant changes in the design and unforeseen conditions such as increased excavation quantities and additional work associated with the sloped area, depth of debris material and additional environmental measures to address odors, and

WHEREAS, additional change order work not included in the original bid is needed to be added to the project to allow completion of the project.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an increase in Director's Authority to issue change orders for the Carpenter Road Landfill Mitigation Project from 10 percent ($377,659) to 48 percent ($1,812,767).

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Zoslocki, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-114

RESOLUTION APPROVING AN AMENDED LOAN AMORTIZATION SCHEDULE FOR THE ORIGINAL INTERFUND LOAN FOR CARPENTER ROAL LANDFILL MITIGATION PROJECT, RESCINDING RESOLUTION NO. 2018-349 AND APPROVING A SECOND INTERFUND LOAN IN THE AMOUNT OF $900,000 FROM THE WATER FUND RESERVES TO THE CARPENTER ROAD LANDFILL FUND FOR THE CARPENTER ROAD LANDFILL CLEAN CLOSURE MITIGATION PROJECT, TO BE PAID BACK WITH INTEREST FROM FUTURE REVENUE COLLECTED ON THE GARBAGE RATES

THIS RESOLUTION WAS RESCINDED BY MODESTO CITY COUNCIL RESOLUTION NO. 2020-531 ON DECEMBER 8, 2020

WHEREAS, the City of Modesto owned and operated the Carpenter Road Landfill from 1956 to 1968, and the landfill includes fill sites on both the east and west sides of Carpenter Road, along the Tuolumne River, and

WHEREAS, the City is required by State law to perform post closure landfill maintenance, monitoring, and reporting for the landfill site, and

WHEREAS, On August 14, 2018, Council, by Resolution No. 2018-345, awarded a construction contract to Pacific States Environmental Contractors, Inc. in the amount of $3,776,598 for the Carpenter Road Landfill Mitigation project, and

WHEREAS, On August 14, 2018, Council, by Resolution No. 2018-349, approved an interfund loan in the amount of $2,300,000 from the Water Fund Reserves to the Carpenter Road Landfill Fund to assist with the funding of this project so that the project remains within the parameters of the set schedule approved by the Regional Water Quality Control Board, and

WHEREAS, the project design has experienced revisions due to Federal Emergency Management Agency (FEMA) “No Rise Certification” requirements, which have resulted in additional scope of work to address the significant changes in the design and unforeseen conditions such as increased excavation quantities and additional work

associated with the sloped area, depth of debris material and additional environmental measures to address odors, and

WHEREAS, additional change order work not included in the original bid is needed to be added to the project to allow completion of the project, and

WHEREAS, additional funds are needed to cover the costs of the additional work to allow completion of the project, and

WHEREAS, staff recommends amending the original loan to add a year to its repayment schedule, and

WHEREAS, staff also recommends establishing a second interfund loan in the amount of $900,000, and

WHEREAS, principal payments for each loan will be paid back each fiscal year through fiscal year 2025-26 plus interest, as outlined in **Exhibit A**, and

WHEREAS, City policy allows for interfund loans to be made at the interest rate of the City's investment portfolio, which is currently 2.35%.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an amended interfund loan amortization schedule for the original interfund loan for Carpenter Road Landfill Mitigation project, rescinding Resolution No. 2018-349 and approving a second interfund loan in the amount of $900,000 from the Water Fund Reserves to the Carpenter Road Landfill Fund for the Carpenter Road Landfill Clean Closure Mitigation Project, to be paid back with interest from future revenue collected on the garbage rate, as outlined in **Exhibit A.**

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Zoslocki, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-115

RESOLUTION AMENDING THE FISCAL YEAR 2019-2020 CAPITAL IMPROVEMENT PROJECT BUDGET BY $1,557,155 FOR THE CARPENTER ROAD LANDFILL MITIGATION PROJECT (101046), INCLUDING $900,000 TO BE TRANSFERRED FROM THE WATER FUND TO AMEND THE INTERFUND LOAN (4100) TO THE CARPENTER ROAD LANDFILL FUND (4893)

WHEREAS, on August 14, 2018, by Resolution No. 2018-345 Council awarded a construction contract to Pacific States Environmental Contractors, Inc. of Dublin, CA in an amount not to exceed $3,776,598 for the Carpenter Road Landfill Mitigation Project, and

WHEREAS, a change order policy is utilized for each construction contract awarded by the City, and

WHEREAS, if after the contract is executed, a change in the original scope of work is determined necessary by staff, the policy authorized the Director to approve a change order up to a cumulative amount of the original contract, and

WHEREAS, in most cases, the budgeted amount set by the policy and specific requests by resolution are typically sufficient, however, as it relates to the Carpenter Road Landfill Mitigation Project, anticipated change order costs will exceed the authority allowed by policy, and

WHEREAS, staff has negotiated the change order work, but estimates are above the approved contingency limit set by Council at 10 percent or ($377,659), and

WHEREAS, the anticipated cost for the change order work is estimated to be 40 percent or ($1,812,767), and

WHEREAS, the total anticipated expenditures will be increased by $1,557,155 for change orders and staff costs, and

WHEREAS, staff has reviewed all funding sources for the project and has determined that an additional $1,557,155 in budget is needed to fund construction, contingency, construction administration, and design support.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it approves amending the fiscal year 2019-2020 Capital Improvement Project budget by $1,557,155 for the Carpenter Road Landfill Mitigation project (101046), including $900,000 to be transferred from the Water fund to amend the interfund loan (4100) to the Carpenter Road Landfill fund (4893).

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 25th day of February, 2020, by Councilmember Zoslocki, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-119

RESOLUTION APPROVING THE EXTENSION OF TERMINATION DATES OF SEVEN ANNUAL PURCHASING AGREEMENTS; APPROVING TERMINATION DATES FOR THE SERVICES STATED HEREIN; AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO ISSUE THE IDENTIFIED PURCHASE AGREEMENTS TERMINATION DATES APPROVED BY COUNCIL

WHEREAS, City staff continues to review and monitor over 1,000 purchasing items and identify the best and most efficient way to procure the needs of the City, and

WHEREAS, to ensure that goods and services are available to effectively manage the operations of the City, the Purchasing Division is making every attempt to expedite the bidding process and making sure we have new agreements in place before the current agreements expire, and

WHEREAS, the Finance Department has implemented monthly purchasing training to educate City Staff about the standards which govern the City's purchases, including the City's Charter, Municipal Code, implementation of Administrative Directive 7.5 Purchasing Policy, and updated Purchasing Purchase Manual, and

WHEREAS, the Finance Department continues to work with departments to address the on-going procurement needs of the City and strategizing the best solution to ensure a new agreement can be approved by the time the existing annual purchasing and consultant agreements expire, and

WHEREAS, the Finance Department, via the Purchasing Division, has identified a number of agreements that require further time extensions of their termination dates (as shown in **Attachment A** – Purchasing Agreement Extension Dates), and

WHEREAS, the extension of these term dates for existing agreements will not alter the dollar amount of said agreements nor the terms and conditions of the agreements.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the purchasing agreements with various vendors as **attached**; approving the term dates for the services stated herein; and authorizing the Purchasing Manager, or her designee, to issue the identified Annual Purchasing Agreements terms.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 3rd day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-120

RESOLUTION APPROVING A FIRST AMENDMENT TO THE PURCHASING AGREEMENT WITH HARTLEY AND ASSOCIATES, FOR THE FURNISHING OF AFTER-HOURS ON-CALL ANSWERING SERVICES, TO INCREASE THE AMOUNT BY $50,000 FROM $153,000, FOR A NEW TOTAL ESTIMATED AMOUNT OF $203,000 OVER FIVE YEARS, AND AUTHORIZING ALL CITY DEPARTMENTS TO UTILIZE THE AGREEMENT, AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, in 2015 the City Manager authorized the Purchasing Manger to issue a formal Request for Proposals (RFP) for the issuing of after-hours on-call answering services for Citywide departments including Wastewater, Water, Parks and Recreation, and various Public Works divisions, and

WHEREAS, on March 22, 2016, by Resolution No. 2016-114, Council approved the award of proposal and contract for the furnishing of after-hours on-call answering services to Hartley and Associates, Santa Monica, CA, for an estimated annual cost of $30,600, and a total amount not to exceed $153,000 over five years, to the Wastewater and Water Divisions, and did not generally authorize other City divisions to use the agreement, and

WHEREAS, from 2017 to 2019 the Utilities divisions have spent approximately $76,000 on after-hours on-call answering services, and other Citywide divisions have spent approximately $26,000 on the same services during that time period, and

WHEREAS, the current Agreement with Hartley and Associates ends March 21, 2021, and only authorizes Utilities divisions to use the Agreement, and

WHEREAS, the intent of the RFP was to furnish after-hours on-call answering services to all City divisions, rather than limit usage to Utilities divisions only, because

multiple departments have a significant business need for after-hours on-call answering services, and

WHEREAS, sufficient funds are budgeted and available in the budgets for Utilities, Public Works, Parks and Recreation, and other divisions for these services, staff is requesting an increase to the authorized spending limit and an expansion of the authorized users to include all City departments.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the First Amendment increasing the agreement amount with Hartley and Associates, Santa Monica, CA, for after-hours on-call answering services by $50,000 from $153,000, to a new estimated total amount of $203,000 over five years, and authorizing all City departments to utilize the agreement.

BE IT FURTHER RESOLVED that the Purchasing Manager, or her designee, is hereby authorized to execute the Amendment.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 3rd day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-121

RESOLUTION APPROVING AN AMENDMENT TO THE PURCHASE AGREEMENT WITH UNIVAR CHEMICAL, KENT, WA, AND NORTHSTAR CHEMICAL, MODESTO, CA, FOR THE PURCHASE OF WASTEWATER TREATMENT CHEMICALS, INCREASING THE ANNUAL COSTS FROM $34,134 TO $52,845 FOR THE BALANCE OF THE TWO YEARS REMAINING AND A TOTAL AGREEMENT AMOUNT NOT TO EXCEED FROM $170,070 TO $208,091 AND AUTHORIZING THE PURCHASING MANAGER OR HER DESIGNEE TO EXECUTE THE AMENDMENT

WHEREAS, the City of Modesto, Utilities Department, Wastewater Services Division, uses sodium hypochlorite, sodium hydroxide, sulfuric acid, phosphoric acid and citric acid as part of the treatment process and these chemicals are used for the cleaning of the membrane and ultra violet light disinfection systems at the City's Tertiary Treatment Plant, and

WHEREAS, the Purchasing Division issued RFB No. 1516-21, Chemicals for the Wastewater Treatment, on the city's website under the commodity codes "Chemical and Solvents, Commercial" in 2016 and based on the inability of any one company to provide all chemicals required at the lowest price, staff recommended the split award of bid Univar USA Inc., San Jose CA, was to be for the purchase of sodium hypochlorite, sodium hydroxide, and citric acid, and Northstar Chemical, Modesto, CA would be used for the purchase of sulfuric acid and phosphoric acid to, and

WHEREAS, the original award of bid for the purchase of sodium hypochlorite, sodium hydroxide, and citric acid from Univar USA Inc., San Jose CA and sulfuric acid and phosphoric acid from Northstar Chemical, Modesto CA, was for a two-year agreement with three one-year extension options at the sole discretion of the City, for an estimated annual cost of $34,134, and over five years of $170,070, and

WHEREAS, the need for increased funding is due to the additional chemical usage as a result of adding the Phase 1 Tertiary Treatment (Phase 1) process to the bulk supply tank of chemicals, which is located at the adjacent Phase 2 Tertiary Treatment (Phase 2) facility, and

WHEREAS, previously, it has been difficult to have chemical supply companies that were willing to deliver small bulk quantities (less than 500 gallons) to the Phase 1 chemical tanks; in addition, due to the dusty site conditions at the Jennings Plant, it is necessary to increase the frequency of maintenance cleaning, which requires increased chemical usage. An increase of $52,845 each year for the last two years will provide funding for the remaining 18 months of this agreement.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment to the purchase agreement with Univar Chemical, Kent, WA, and Northstar Chemical, Modesto, CA, for the purchase of wastewater treatment chemicals, increasing the annual costs from $34,134 to $52,845 for the balance of the two years remaining and a total agreement amount not to exceed from $170,070 to $208,091.

BE IT FURTHER RESOLVED that the Purchasing Manager, or her designee, is hereby authorized to execute the amendment.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 3rd day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-128

RESOLUTION APPROVING THE FIRST YEAR EXTENSION OPTION FOR THE PURCHASING AGREEMENTS FOR HOT PATCH WORK WITH UNITED PAVEMENT MAINTENANCE, HUGHSON, CA AND PATCH CREW, MODESTO, CA, WITHOUT EXCEEDING THE ANNUAL ESTIMATED COST OF $4,306,500, AND AUTHORIZING THE DIRECTOR OF FINANCE OR HER DESIGNEE TO EXECUTE THE EXTENSION

WHEREAS, the Utilities Departments' Water and Wastewater Divisions request contractual assistance to perform hot patch work throughout the City of Modesto and the outlying areas included in the City's regional water systems; and

WHEREAS, on May 22, 2018, by Resolution 2018-188, the Council approved the award of bids for the furnishing of hot patch work with Garrett Thomson Construction, Inc., Modesto, CA, for an annual cost not to exceed $4,106,500; and United Pavement Maintenance, Hughson, CA, for an annual cost no to exceed $200,000, for two-year agreements with three one-year extension options; the annual combined total costs of the contract were not to exceed $4,306,500, and approval of any of the one year extensions would require approval by Council; and

WHEREAS, upon review of the insurance certification for the hot patch contractors, it was discovered that the insurance had expired on February 28, 2019 for the primary contractor, Garrett Thompson; and

WHEREAS, the delay in proof of insurance coverage, coupled with coverage gap and the performance of work without proper insurance led to the City's decision to terminate the contract with Garett Thompson and immediately engage the secondary provider; and

WHEREAS, with United Pavement Maintenance becoming the primary vendor, it was important to identify and secure a backup provider to avoid service interruptions, the Purchasing Division reached out to all contractors who participated at the bid conference on January 18, 2018 to solicit bids for Hot Patch work; and

WHEREAS, one contractor, Patch Crew responded with a reasonable bid and was recommended as the new secondary contractor; and

WHEREAS, on July 22, 2019 by Resolution 2019-344, Council approved the Purchasing Agreement for the furnishing of hot patch work with Patch Crew, Modesto, CA, for an annual estimated cost not to exceed $400,000 to add as a secondary contractor; and

WHEREAS; Modesto Municipal Code (MMC) Section 8-3.204 9(c), the Purchasing Manager has the authority to recognize the department's current situation as an exigent circumstance; based on the need for availability of a secondary vendor, the Purchasing Manager, within the scope of this authority, recommends staff be allowed to transfer amounts between both contractors in accordance with MMC Section 8-3.204 (c) ensuring hot patch services continue and needed work is not significantly delayed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the first-year extension option for the purchasing agreements for hot patch work with United Pavement Maintenance, Hughson, CA and Patch Crew, Modesto, CA. without exceeding the annual estimated cost of $4,306,500.

BE IT FURTHER RESOLVED, that the Director of Finance or her designee to execute the first-year extension option.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 10th day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-129

RESOLUTION APPROVING A PURCHASING AGREEMENT FOR THE SECURITY CAMERAS, INSTALLATION, INTEGRATION, AND MAINTENANCE WITH QPCS LLC OF CERES, CA, FOR A TWO-YEAR AGREEMENT WITH THREE ONE YEAR EXTENSION OPTIONS, FOR AN INITIAL COST OF $81,380, AND ESTIMATED ANNUAL COST NOT TO EXCEED $9,416, FOR A TOTAL AMOUNT NOT TO EXCEED $109,628 OVER FIVE YEARS, AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO ISSUE THE AGREEMENT

WHEREAS, the City of Modesto currently utilizes a mix of analog and digital security cameras; and

WHEREAS, Staff identified the need to expand and improve its existing remote security camera network with additional high definition cameras to its wastewater treatment, compost and corporation yard facilities, due to multiple thefts, vandalism and poor quality cameras; and

WHEREAS, this Security Cameras, Installation, Integration and Maintenance agreement will create a safer environment for City employees and visitors from the public and minimize vandalism; and

WHEREAS, this Agreement will create an effective line of communication with one service provider for all new cameras, for the duration of this agreement. There is no current agreement in place for this scope of work; and

WHEREAS, on September 19, 2019, the Purchasing Division issued RFB No. 1819-36 for the purchase of security cameras, installation, integration, and maintenance; and

WHEREAS, on October 22, 2019, bids were formally opened in the City Clerk's office. Five companies chose to respond, none of which were local vendors. All five companies provided responsive and responsible bids; and

WHEREAS, prospective bidders were notified online, via email and phone call of the bid opportunity. Thirty-one companies chose to download the RFB document; and

WHEREAS, on October 22, 2019, bids were formally opened in the City Clerk's office. Five companies chose to respond, none of which were local vendors; and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow formal bid procedures; and

WHEREAS, the award of RFB No. 1819-36 for the purchase of security cameras, installation, integration, and maintenance, conforms to the Modesto Municipal Code based on providing the overall lowest responsive and responsible bid.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid and agreement for Security Cameras, Installation, Integration and Maintenance to QPCS LLC of Ceres, CA, for a two-year agreement with three one-year extension options, for an initial cost of $81,380, and estimated annual cost not to exceed $9,416, for a total amount not to exceed $109,628 over five years.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to execute the agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 10th day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-130

RESOLUTION APPROVING THE AWARD OF BID AND AGREMEENT FOR BACKGROUND INVESTIGATION SERVICES TO CREATIVE SECURITY COMPANY INC., SAN JOSE, CA AS THE PRIMARY VENDOR AND RANK INVESTIGATIONS, MODESTO, CA AS THE SECONDARY VENDOR FOR A TWO (2) YEAR AGREEMENT WITH THREE (3) ONE-YEAR EXTENSION OPTIONS, FOR AN ANNUAL ESTIMATED COST OF $180,500 BETWEEN BOTH AGREEMENTS, AND A TOTAL AMOUNT NOT TO EXCEED $902,500 OVER FIVE YEARS AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, Public Safety requires qualified firms to provide background investigation services on all sworn and non-sworn staff, and

WHEREAS, the estimated quantities of background investigations for the Modesto Police Department is 55 per year, Fire Department and I.T. Department anticipate 15 per year), and

WHEREAS, on November 13, 2019 the Purchasing Division issued Request for Bid (RFB) 1920-11 for the procurement of background investigation services for the Modesto Police Department, Fire Department and Information Technology Department, and

WHEREAS, two vendors responded and Rank Investigations, Modesto, CA and Creative Security Company Inc., San Jose, CA were responsible bidders, and

WHEREAS, Creative Security Company Inc will designate as the primary vendor to provide background investigation services for the Modesto Police Department, Fire Department and Information Technology Department on an as-needed basis since they are the lowest bidder and Rank Investigations will be the secondary vendor if the primary vendor is unable to perform the service, complete the specific job within the time frame required, or as deemed necessary by the City, and

WHEREAS, Modesto Municipal Code (MMC) Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow formal bid procedures and RFB No. 1920-11 conforms with this MMC.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid and agreement for background investigations services to Creative Security Company Inc., San Jose CA as the primary vendor and Rank Investigations, Modesto, CA as the secondary vendor for a two (2) year agreement with three (3) one-year extension options, for an annual estimated cost not to exceed $180,500 between both agreements, and a total amount not to exceed $902,500 over five years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute these agreements, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 10th day of March, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-131

RESOLUTION AUTHORIZING AN INCREASE OF THE DIRECTOR OF UTILITIES' AUTHORITY TO ISSUE CHANGE ORDERS FOR THE KANSAS AVENUE 12-INCH WATER MAIN UPGRADE PROJECT FROM 20% ($127,783) TO 43.24% ($276,283) OF THE ORIGINAL CONSTRUCTION CONTRACT PRICE OF $638,916 WITH PLATINUM PIPELINE, INC. OF LIVERMORE, CA, AND INCREASING STAFF BUDGET FROM $138,022 TO $148,022

WHEREAS, on February 25, 2020, Council, by Resolution No. 2020-106, awarded a construction contract to Platinum Pipeline, Inc. of Livermore, CA, in the amount of $638,916 for the Kansas Avenue 12-inch Water Main Upgrade project, and

WHEREAS, when Council awarded this construction contract, a contract change order budget of 20 percent (or $127,783) was also approved by Council Resolution No. 2020-107, to address unexpected conditions that require changes in project scope, and

WHEREAS, during development of the Kansas House Development, it was determined that a fire hydrant would need to be installed near the southwest corner of the facility to meet fire hydrant spacing requirement, and

WHEREAS, the extension of a new 8-Inch Water Main and installation of a fire hydrant assembly will part of the additional scope of work performed by Platinum Pipeline, Inc., and

WHEREAS, this scope of work will be funded through Community Development Block Grant (CDBG), and

WHEREAS, City staff is requesting an increase in the Director's authority to issue change orders for the Kansas Avenue 12-inch Water Main Upgrade Project from 20% ($127,783) to 43.24% ($276,283) of the original construction contract price of $638,916 with Platinum Pipeline, Inc. of Livermore, CA, and

WHEREAS, these changes in the construction contract also have a direct impact on staff costs for administering the contract, negotiating change orders and coordinating with operations staff and Kansas House representatives, and

WHEREAS, as a result, staff requests Council authorize additional budget of $10,000 for staff's increased costs for administration, inspection and reporting, thereby revising staff budget from $138,022 to $148,022.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes the Director of Utilities to issue change orders for the Kansas Avenue 12-Inch Water Main Upgrade Project from 20%t ($127,783) to 43.24% ($276,283) of the construction contract price of $638,916 with Platinum Pipeline Inc., of Livermore, CA, and increasing staff budget from $138,022 to $148,022.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 10th day of March, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-133

RESOLUTION APPROVING PLANS AND SPECIFICATIONS FOR THE FLEET MAINTENANCE FACILITY HEAVY BAY ADDITION AND BUS MAINTENANCE FACILITY PARTS STORAGE ROOM PROJECT, ACCEPTING THE BID, AND APPROVING A CONTRACT WITH HARRIS BUILDER'S INC., HILMAR, CA, FOR THE FLEET MAINTENANCE FACILITY HEAVY BAY ADDITION IN THE AMOUNT OF $4,063,948, PLUS $325,116 FOR CONTINGENCY (IF NEEDED) FOR A TOTAL AMOUNT OF $4,389,064 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE TO EXECUTE THE CONTRACT

WHEREAS, the Fleet Services Division maintains all City owned vehicles and equipment; and

WHEREAS, there are currently 1,060 pieces of active equipment in the City's fleet used by all City departments in their daily operations as they provide services to the citizens of Modesto; and

WHEREAS, the current fleet facility is extremely outdated, overcrowded and is inadequate in several areas to properly service the City's vehicles and equipment; and

WHEREAS, the current building does not allow lifting of the nearly 200 heavy duty vehicles and pieces of equipment for performing under vehicle maintenance work; and

WHEREAS, the construction of a new maintenance building is crucial to keep Fleet Services operations running smoothly into the future; and

WHEREAS, specifications have been prepared for the Fleet Maintenance Facility Heavy Bay Addition and Bus Maintenance Facility – Parts Storage Room Project and City staff recommends approval by the City Council; and

WHEREAS, the Project was advertised for bids on September 24, 2019; and

WHERAS, on October 29, 2019, Bids were publicly opened, pursuant to City Charter Section 1307, four bids were received and Harris Builder's Inc. of Hilmar, CA, was the responsible bidder with the lowest responsive bid; and

WHEREAS, MMC 8-3.203 states that all purchases, in excess of fifty thousand dollars ($50,000), or when directed by the City Manager for any purchase of fifty thousand dollars ($50,000) or less, shall follow formal bid procedures; and

WHEREAS, the award of the bid for the Fleet Maintenance Facility Heavy Bay Addition and Bus Maintenance Facility – Parts Storage Room Project conforms to the Modesto Municipal code based on providing the overall lowest cost, while providing improved service; and

WHEREAS, the Director of Public Works has recommended that the bid of $4,063,947.50 received from Harris Builder's Inc., for the Fleet Maintenance Facility Heavy Bay Addition be accepted as the lowest responsible and responsive bid and the contract be awarded to Harris Builder's Inc.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the specifications for the Fleet Maintenance Facility Heavy Bay Addition and Bus Maintenance Facility – Parts Storage Room Project, accepts the bid of $4,063,948 and awards Harris Builder's Inc. of Hilmar, CA, the contract for the Fleet Maintenance and Heavy Bay Addition Project plus $325,116 for contingency, if needed, for a total of $4,389,064.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 10th day of March, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-140

RESOLUTION RATIFYING THE CITY MANAGER/DIRECTOR OF EMERGENCY SERVICES PROCLAMATION OF EXISTENCE OF A LOCAL EMERGENCY IN RESPONSE TO THE CORONAVIRUS (COVID-19), DATED MARCH 13, 2020

WHEREAS, California Government Code section 8630 and Modesto Municipal Code section 3-4.06 authorize the Director of Emergency Services for the City of Modesto to proclaim the existence of a local emergency when the City is affected or likely to be affected by conditions of extreme peril to the safety of persons and property within the City, and

WHEREAS, Section 8558 of the Government Code defines a local emergency as including an epidemic, and

WHEREAS, Section 3-4.05 of the Modesto Municipal Code designates the City Manager as the Director of Emergency Services, and

WHEREAS, the novel coronavirus (named "SARS-CoV-2" which causes the COVID-19 disease) was first detected in Wuhan City, Hubei Province, China in December of 2019, is now considered to be a serious global public health threat, and

WHEREAS, symptoms of the virus include fever, cough, and shortness of breath, and infected individuals have experienced a range of outcomes, from mild sickness to severe illness and even death, and

WHEREAS, it is essential to slow virus transmission as much as possible to protect the most vulnerable and to prevent the health care system from being overwhelmed. Based on scientific evidence and best practices, the most effective way to

slow the transmission of communicable diseases generally and COVID-19 specifically, is to limit interactions among people to the greatest extent possible, and

WHEREAS, on January 30, 2020, the World Health Organization declared the outbreak a "public health emergency of international concern", and

WHEREAS, on January 31, 2020, the United States Department of Public Health and Human Services Secretary declared a public emergency for COVID-19, and on March 4, 2020 the Governor of the State of California proclaimed a State of Emergency, and

WHEREAS, on March 11, 2020, the World Health Organization declared COVID-19 a pandemic, and

WHEREAS, on March 11, 2020, the Stanislaus County Public Health Officer declared a local health emergency, and

WHEREAS, on March 12, 2020, March 15, 2020 and March 16, 2020, Governor Gavin Newsom issued new executive orders further enhancing state and local government's ability to respond to COVID-19 Pandemic, and

WHEREAS, on March 13, 2020, the County of Stanislaus Director of Emergency Services proclaimed a Local Emergency due to the threat of COVID-19 in the County, and

WHEREAS, on March 13, 2020, the President of the United States, Donald Trump, declared a state of national emergency in response to the COVID-19 outbreak, and

WHEREAS, as of March 13, 2020, it has been reported that COVID-19 has spread to over 90 countries including many parts of the United States, including the City of Modesto, and

WHEREAS, on March 13, 2020, the City Manager, in his capacity as Director of Emergency Services, proclaimed the existence of local emergency in the City of Modesto in response to COVID-19. The proclamation was pursuant to Modesto Municipal Code section 3-4.06, however, the City Council must ratify that declaration within seven (7) days or the declaration of local emergency will not be effective thereafter, and

WHEREAS, the declaration enables the City to more effectively respond to the outbreak, and potentially obtain reimbursement for the response, and

WHEREAS, the City may require additional assistance in the future, and a formal declaration of emergency allows additional resources to flow to the City in a timely fashion. The declaration of emergency also allows needed flexibility in staffing decisions and steps needed to continue to deliver essential services and to protect the City's residents, and

WHEREAS, there will be costs associated with City's emergency response, however the approval of the proclamation of a Local Emergency by the City Council has no direct cost impact and may enable potential external sources for reimbursement to costs associated with the city's emergency response.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby ratifies the Proclamation of the Existence of a Local Emergency issued by the City Manager in his capacity as Director of Emergency Services, dated March 13, 2020, **attached** to this Resolution as **Exhibit A**.

BE IT FURTHER RESOLVED, that because a substantial threat to public health and safety exists that has a substantial likelihood that serious harm will be experienced unless immediate action is taken, the City has altered or ceased certain services other than essential services in response to this emergency. The City Manager is authorized to take any lawful personnel action that protects the health and safety of the workforce or the community. The City is authorized to postpone and/or delay any associated meet and confer obligations when taking actions in response to the emergency.

BE IF FURTHER RESOLVED, that the Council of the City of Modesto advises residents to stay in their home from March 19, 2020 to April 6, 2020, however, it is not mandatory. This means individuals should stay at home to the maximum extent feasible, and practice social distancing when not at home. Social distancing involves maintaining at least six-foot social distancing from other individuals, washing hands with soap and water for at least twenty seconds as frequently as possible or using hand sanitizer, covering coughs or sneezes, regularly cleaning high-touch surfaces, and not shaking hands.

BE IT FURTHER RESOLVED, that the City Manager or his designee is hereby authorized to carry out executive orders and guidance provided by the State and Federal governments as deemed necessary.

BE IT FURTHER RESOLVED, that the City Manager or his designee is hereby authorized to undertake the following actions:

(i) Return any City fees collected for events at City facilities that have been cancelled due to the COVID-19 outbreak;

(ii) To identify locations that could potentially be used by health care providers or other entities to combat the COVID-19 outbreak;

(iii) Prepare policy and procedures to conduct City Council meetings telephonically or through another electronic means in compliance with the Governor's Executive Orders; and

(iv) Explore potenital resources available to the City to potentially minimize the financial impact to our citizens and businesses during this emergency.

BE IT FURTHER RESOLVED, that said local emergency shall be deemed as continuing to exist until proclaimed otherwise by the City Manager/Director of Emergency Services and the City Council.

The foregoing resolution was introduced at a special meeting of the Council of the City of Modesto held on the 19th day of March, 2020, by Councilmember Zoslocki, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

CITY OF MODESTO

PROCLAMATION OF EXISTENCE OF A LOCAL EMERGENCY BY DIRECTOR OF EMERGENCY SERVICES

WHEREAS, California Government Code section 8630 and Modesto Municipal Code section 3-4.06 authorize the Director of Emergency Services for the City of Modesto to proclaim the existence of a local emergency when the City is affected or likely to be affected by conditions of extreme peril to the safety of persons and property within the City; and

WHEREAS, Government Code section 8558(c) defines a local emergency as "the duly proclaimed existence of conditions of disaster or of extreme peril to the safety of persons and property within the territorial limits of a county, city and county, or city, caused by conditions such as . . . epidemic . . . which are or are likely to be beyond the control of the services, personnel, equipment, and facilities of that political subdivision and require the combined forces of other political subdivisions to combat . . . ,"; and

WHEREAS, Section 3-4.05 of the Modesto Municipal Code designates the City Manager as the Director of Emergency Services; and

WHEREAS, the Novel Coronavirus (COVID-19) is a respiratory disease first identified in China that may result in serious illness or death and is easily transmissible from person to person. As of March 13, 2020, it has been reported that COVID-19 has spread to over 90 countries including the United States, and is spreading to a growing number of California cities and counties; and

WHEREAS, on January 30, 2020 the World Health Organization declared the outbreak a "public health emergency of international concern"; and

WHEREAS, on January 31, 2020, the United States Department of Public Health and Human Services Secretary declared a public emergency for COVID-19, and on March 4, 2020 the Governor of the State of California proclaimed a State of Emergency; and

WHEREAS, the first 2 cases with positive results have been identified in Stanislaus County; and

WHEREAS, on March 11, 2020, the World Health Organization declared COVID-19 a pandemic; and

WHEREAS, on March 11, 2020, the Stanislaus County Public Health Officer declared a local health emergency; and

WHEREAS, on March 12, 2020, Governor Gavin Newsom issued a new executive order further enhancing state and local government's ability to respond to COVID-19 Pandemic; and

WHEREAS, on March 13, 2020, the County of Stanislaus Director of Emergency Services proclaimed a Local Emergency due to the threat of COVID-19 in the County; and

WHEREAS, on March 13, 2020, the President of the United States, Donald Trump, declared a state of national emergency in response to the COVID-19 outbreak; and

WHEREAS, World Health Organization officials report that sustained human-to-human transmission of

the virus is occurring. Transmission from asymptomatic individuals has been documented. Suspected community transmission of the virus is occurring in the United States. Although the majority of individuals infected with COVID-19 recover from the disease without special treatment, there is significant potential for serious infection and death; and

WHEREAS, the health, safety and welfare of Modesto residents, businesses, visitors and staff is of utmost importance to the City and additional future measures may be needed to protect the community; and

WHEREAS, the City may require additional assistance in the future, and a formal declaration of emergency allows additional resources to flow to the City in a timely fashion; and

WHEREAS, existing conditions related to the COVID-19 warrant the proclamation of emergency, as defined by Modesto Municipal Code Chapter 3-4.

NOW THEREFORE, IT IS HEREBY PROCLAIMED by the Director of Emergency Services of the City of Modesto that a local emergency exists.

IT IS FURTHER PROCLAIMED that during the existence of said local emergency, the powers, functions and duties of the Director of Emergency Services shall be those prescribed by state law and the ordinances and resolutions of this City.

IT IS FURTHER PROCLAIMED that this local emergency regarding COVID-19 is declared in order to empower the City to:

- Respond effectively to COVID-19;
- Seek and utilize mutual aid;
- Ensure the City is able to obtain reimbursement for its efforts in dealing with this local emergency, and
- Ensure that City of Modesto Staff has all the necessary tools and powers at their disposal to slow the spread of COVID-19.

IT IS FURTHER PROCLAIMED that this Proclamation shall remain in effect for the next seven (7) days, and hereafter by ratification of the City Council.

Joseph P. Lopez
City Manager and
Director of Emergency Services

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-142

RESOLUTION APPROVING AN AGREEMENT WITH CENTRALSQUARE TECHNOLOGIES (FORMERLY SUPERION), LAKE MARY, FL, FOR THE PURCHASE AND INSTALLATION OF THE TRAKIT SOFTWARE SYSTEM FOR THE CITY OF MODESTO DEVELOPMENT CENTER FOR $474,180, 2ND YEAR MAINTENANCE COST OF $188,000 AND A 3RD YEAR MAINTENANCE COST OF $193,640 FOR A TOTAL AMOUNT NOT TO EXCEED $855,820, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto Building Safety Division, which encompasses all development plan review, permitting, inspection and code enforcement services within the City of Modesto, has an immediate need for new permit software, and

WHEREAS, in January of 2019, the Moss Adams Permitting Efficiency Study recommended "the selection and implementation of a new permitting system" to provide "an opportunity to strengthen internal data and processes", and

WHEREAS, the new software solution will be GIS based so that staff can view inspections and code enforcement cases in the field, which will be in alignment with the recommended approach set forth in the Blight Abatement Strategy, and

WHEREAS, Modesto Municipal Code Section 8-3.203 requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid, and

WHEREAS, the Community and Economic Development Department obtained authorization to issue a formal Request for Proposal (RFP) for a new community development management system in February of 2018, and

WHEREAS, seven (7) companies chose to respond, and

WHEREAS, an evaluation committee comprised of City staff from Information Technology, Building Safety, Planning, and Code Enforcement evaluated the proposals and based upon total evaluation criteria, which included references, qualifications, implementation plan and system ability to meet requirement, the evaluation committee recommends the award of proposal for the purchase, installation, and three-year maintenance of the TrakIt Software to CentralSquare Technologies.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an Agreement with CentralSquare Technologies, Lake Mary, FL., for the purchase and installation of the TrakIt software system for the City of Modesto Development Center for $474,180, 2nd year maintenance cost of $188,000 and a 3rd year maintenance cost of $193,640 for a total amount not to exceed $855,820.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the Agreements, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-143

RESOLUTION APPROVING AN INTERFUND LOAN IN AN AMOUNT NOT TO EXCEED $265,404 FROM THE MULTI-YEAR ABATEMENT FUND TO PURCHASE THE TRAKIT SOFTWARE SYSTEM FROM CENTRALSQUARE TECHNOLOGIES (FORMERLY SUPERION), LAKE MARY, FL, FOR THE CITY OF MODESTO DEVELOPMENT CENTER AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE, IS HEREBY AUTHORIZED TO INPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, the City of Modesto Building Safety Division, which encompasses all development plan review, permitting, inspection and code enforcement services within the City of Modesto, has an immediate need for new permit software, and

WHEREAS, in January of 2019, the Moss Adams Permitting Efficiency Study recommended "the selection and implementation of a new permitting system" to provide "an opportunity to strengthen internal data and processes", and

WHEREAS, the new software solution will be GIS based so that staff can view inspections and code enforcement cases in the field, which will be in alignment with the recommended approach set forth in the Blight Abatement Strategy, and

WHEREAS, the Community and Economic Development Department obtained authorization to issue a formal Request for Proposal (RFP) for a new community development management system in February of 2018, and

WHEREAS, an evaluation committee comprised of City staff from Information Technology, Building Safety, Planning, and Code Enforcement evaluated the proposals and based upon total evaluation criteria, which included references, qualifications, implementation plan and system ability to meet requirement, the evaluation committee recommends the award of proposal for the purchase, installation, and three-year maintenance of TrakIt Software system to CentralSquare Technologies, and

WHEREAS, the purchase and installation of the development management software solution will have an estimated cost of $474,180, and

WHEREAS, Senate Bill 2 grant funds in the amount of $70,000 are to be awarded for the acquisition of the system, and

WHEREAS, the cost for ten Neighborhood Preservation staff licenses and three graffiti abatement staff licenses will be funded by the Multi Year Abatement Fund (4910-14999-53300-100673) at an estimated cost of $51,916.80, and

WHEREAS, the cost for 17 Utilities staff licenses will be funded through the Water and Wastewater Enterprise funds at a cost of $67,891.20, and

WHEREAS, the cost for 5 HUD staff licenses will be funded through CDBG and Infrastructure Financing Program Funds (1130-14010-54500-00000-01330 and 3220-14160-54500) at an estimated cost of $21,568, and

WHEREAS, staff is recommending to borrow the remaining costs of $474,180 from the Multiyear Abatement Fund in the amount of $265,404 as an interfund loan and repay those funds from the Building Safety Technology Fund over the next five fiscal years, and

WHEREAS, the loan from the Multiyear Abatement Fund will be paid back yearly; a principal payment of $52,880.80 plus interest at the rate as required by the City's Financial Policies, the interfund loan will accrue interest based upon the rate of return earned by the City's Investment Pool. The interest will be calculated based on principal outstanding during the prior fiscal year.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves and amends the Fiscal Year 2019-2020 Operating and Multi-Year

budget to loan an amount not to exceed $265,404 from the Multiyear Abatement Fund for the purchase of the TrakIt software system from CentralSquare Technologies, Lake Mary, FL.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-145

RESOLUTION APPROVING THE DESIGNATION OF AUTHORIZED AGENTS DEFINED AS THE CITY MANAGER, DEPUTY CITY MANAGER, AND DIRECTOR OF FINANCE TO FILE RELATED DOCUMENTS WITH THE CALIFORNIA GOVERNOR'S OFFICE OF EMERGENCY SERVICES TO SEEK REIMBURSEMENT FOR THE COVID-19 PANDEMIC

WHEREAS, on January 31, 2020, President Donald J. Trump's Health and Human Services Secretary, Alex Azar, declared a public health emergency in response to the COVID-19 outbreak, and

WHEREAS, President Trump approved California's request for a presidential Major Disaster Declaration on March 22, 2020. This declaration made California, its counties and local municipalities eligible for federal funding and assistance for reimbursement of up to 75% of eligible costs, which has become known as FEMA-4428-DR, and

WHEREAS, beginning in February 2020, City of Modesto officials began meeting in response to the declared public health emergency of COVID-19. Efforts to enact recommended guidelines as outlined by the Center for Disease Control and in accordance with Executive Order N-33-20 issued by California Governor Newsom (originally issued on March 4, 2020 and amended on March 19, 2020 to include Orders of the State Public Health Officer) began taking place city-wide the week of March 16th, 2020, and

WHEREAS, in response to this unprecedented pandemic an Emergency Proclamation for the City was made by the City Manager on March 19, 2020 and was approved by the Mayor and Council the same date.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto

that it hereby approves the Designation of Authorized Agents defined as the City Manager, Deputy City Manager and Director of Finance to file related documents with the California Governor's Office of Emergency Services to seek reimbursement for the COVID-19 Pandemic.

BE IT FURTHER RESOLVED by the Council of the City of Modesto that the Director of Finance and/or Deputy City Manager and/or the City Manager are hereby authorized to execute for and on behalf of the City of Modesto, a public entity established under the laws of the State of California, the application and to file it with the California Governor's Office of Emergency Services for the purpose of obtaining certain federal financial assistance under Public Law 93-288 as amended by the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988, and/or state financial assistance under the California Disaster Assistance Act.

BE IT FURTHER RESOLVED that the City of Modesto, a public entity established under the laws of the State of California, hereby authorizes its agent(s) to provide to the Governor's Office of Emergency Services for all matters pertaining to such state disaster assistance the assurances and agreements required.

BE IT FURTHER RESOLVED that this is a universal resolution and is effective for all open and future disasters up to three (3) years following the date of approval below.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-146

RESOLUTION APPROVING THE SUBMISSION OF A GRANT APPLICATION FOR THE LOW CARBON TRANSIT OPERATIONS PROGRAM FOR THE FREE FARES PROJECT IN THE AMOUNT OF $841,048 FOR SPECIFIC DATES AND EVENTS TO ENCOURGE MORE RIDERSHIP ON MODESTO AREA EXPRESS BUSES, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL AGREEMENT DOCUMENTS

WHEREAS, the City of Modesto is an eligible project sponsor and may receive state funding from the Low Carbon Transit Operations Program (LCTOP) for transit projects, and

WHEREAS, the statutes related to state-funded transit projects require a local or regional implementing agency to abide by various regulations, and

WHEREAS, Senate Bill 862 (2014) named the Department of Transportation (Department) as the administrative agency for the LCTOP, and

WHEREAS, the Department has developed guidelines for the purpose of administering and distributing LCTOP funds to eligible project sponsors, and

WHEREAS, the City was allocated a grant from the California Department of Transportation (Caltrans) in local and regional funding under the LCTOP, and

WHEREAS, these funds will be used to provide free fare days on specific dates to everyone riding the Modesto Area Express (MAX) system, and

WHEREAS, this project will provide people an incentive for using the bus more often, thus increasing ridership, and

WHEREAS, these funds will be used as fare revenue to supplement the total local revenue for the system, and

WHEREAS, these funds will enable the City of Modesto to achieve the fare box revenue requirement, and

WHEREAS, the City wishes to implement the following LCTOP project listed above.

NOW, THEREFORE, BE IT RESOLVED, by the Council of the City of Modesto that the fund recipient agrees to comply with all conditions and requirements set forth in the Certification and Assurances and the Authorized Agent documents and applicable statutes, regulations and guidelines for all LCTOP funded transit projects.

BE IT FURTHER RESOLVED, by the Council of the City of Modesto that it hereby authorizes the submittal of the following project nomination and allocation request to the Department in FY19-2020 LCTOP funds.

BE IT FURTHER RESOLVED, by the Council of the City of Modesto that it hereby approves the submission of a grant application for the LCTOP for free transit fares for specific dates and events.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute all grant agreement documents, and to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-147

RESOLUTION APPROVING AND IMPLEMENTING THE PUBLIC TRANSIT AGENCY SAFETY PLAN AS REQUIRED BY THE FEDERAL TRANSIT ADMINISTRATION; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO IMPLEMENT THE PLAN

WHEREAS, on July 19, 2018, the Federal Transit Administration (FTA) published the Public Transportation Agency Safety Plan Final Rule, which requires certain operators of public transportation systems that receive federal funds under FTA's Urbanized Area Formula Grants to develop safety plans that include the processes and procedures to implement Safety Management Systems (SMS); and

WHEREAS, operators of public transportation systems are required to implement the safety plans by July 20, 2020; and

WHEREAS, this rule outlines requirements for Public Transportation Agency Safety Plans that would carry out explicit statutory mandates in the Moving Ahead for Progress in the 21st Century Act (MAP–21), which was reauthorized by the Fixing America's Surface Transportation Act (FAST Act) and codified at 49 U.S.C. 5329, to strengthen the safety of public transportation systems that receive federal financial assistance under 49 U.S.C. Chapter 53; and

WHEREAS, the Modesto Area Express (MAX) Public Transit Agency Safety Plan was developed in collaboration with city safety staff, with information provided by the city's transit operation contractors, National Express Transit Inc. and Storer Transportation; and

WHEREAS, the MAX Public Transit Agency Safety Plan meets all FTA requirements for the size of the City's transit system.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the Public Transit Agency Safety Plan.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to implement the plan.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-148

RESOLUTION ACCEPTING THE GRANT AWARD FOR FEDERAL TRANSIT ADMINISTRATION SECTION 5307 TRANSIT FUNDS IN THE AMOUNT OF $5,380,567; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE AND FILE THE ANNUAL CERTIFICATIONS AND ASSURANCES, AND ALL OTHER NECESSARY DOCUMENTS WITH THE FEDERAL TRANSIT ADMINISTRATION

WHEREAS, the Federal Transit Administration (FTA) has been delegated authority to award federal financial assistance for transportation related projects, and

WHEREAS, the City of Modesto has provided all annual certifications and assurances required by the FTA to be eligible for funding under 49 U.S.C Section 5307, and

WHEREAS, the projects are included in the 2019 Federal Transportation Improvement Program (FTIP) adopted by the Stanislaus Council of Governments (StanCOG), and

WHEREAS, Modesto is eligible to use federally approved Transportation Development Funds, formerly known as “Toll Credits”, in lieu of a local match, and

WHEREAS, these Section 5307 funds will be used for preventative maintenance, operating assistance and the capital cost of contracting for Stanislaus County.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the award of $5,380,567 in FTA Section 5307 funds.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute and file the annual certifications and assurances and other documents the FTA requires for awarding a federal assistance grant.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-149

RESOLUTION APPROVING GRANT APPLICATIONS TO THE CALIFORNIA DEPARTMENT OF RESOURCES, RECYCLING AND RECOVERY (CALRECYCLE) FOR ALL WASTE TIRE ENFORCEMENT GRANTS, ACCEPTING GRANT AWARDS, AMENDING THE ANNUAL BUDGET, RESCINDING RESOLUTION NO. 2015-113 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE ALL GRANT RELATED DOCUMENTS AND AUTHORIZATIONS

WHEREAS, Public Resources Code section s 400000 et seq. authorized the Department of Resources Recycling and Recovery (CalRecycle), to administer various Grant Programs (grants) in furtherance of the state of California's (State) efforts to reduce, recycle, and reuse solid waste generated in the State thereby preserving landfill capacity and protecting public health and safety and the environment, and

WHEREAS, in furtherance of this authority CalRecycle is required to establish procedures governing the application, awarding, and management of the grants, and

WHEREAS, CalRecycle grant application procedures require, among other things, an applicant's governing body to declare by resolution certain authorizations, related to administration of CalRecycle grants.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorized the submittal of applications(s) to CalRecycle for Local Government Waste Tire Enforcement Grants for which the City of Modesto is eligible.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute all grant documents, including but not limited to, application, agreements, amendments, and requests for payment, necessary to secure grant funds and implement the approved grant project.

BE IT FURTHER RESOLVED the City Manager, or his designee, is authorized

to amend the current budget to reflect increases in revenue from grant awards.

BE IT FURTHER RESOLVED that these authorizations shall remain effective for five years from the date of adoption of this resolution.

BE IT FURTHER RESOLVED that Resolution No. 2015-113 is hereby rescinded.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-150

RESOLUTION ACCEPTING THE WELL 72 (REPLACING WELL 229) PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $497,851 TO NOR-CAL PUMP & WELL DRILLING, INC. OF YUBA CITY, CA

WHEREAS, city Well 229 is strategically important to the City's water supply infrastructure, as it is located near Sutter and Rouse Avenues in southwest Modesto, and

WHEREAS, due to elevated nitrate conditions, Well 229 was taken offline in early 2016, and

WHEREAS, originally drilled in 1950 to a shallow depth of 230 feet, Well 229 is more than 65 years old, and

WHEREAS, the drilling method used was not able to isolate specific water layers and therefore it's easier for certain contaminants to travel into the pumped water source, and

WHERAS, a new, deeper replacement well, built to current well construction standards is proposed to be drilled on the existing site, and

WHEREAS, bids were advertised on October 10, 2018, and

WHEREAS, bids were publicly opened on November 13, 2018, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and Nor-Cal Pump & Well Drilling, Inc. of Yuba City, CA, was the apparent responsible and responsive bidder, and

WHEREAS, on March 12, 2019, by Resolution No. 2019-123, Council awarded a contract to Nor-Cal Pump & Well Drilling, Inc., of Yuba City, CA for the construction of the Well 72 (Replacing Well 229) Project in the amount of $556,906, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of May 13, 2019, and all contract work was completed by September 4, 2019, and

WHEREAS, the total project costs were $774,700 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $1,204,604 which included $696,133 for the construction contract and contingency with Nor-Cal Pump & Well Drilling, Inc., and

WHEREAS, there were four change orders on this project with an overall decrease of $59,055, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Well 72 (Replacing Well 229) Project is hereby accepted as complete from contractor Nor-Cal Pump & Well Drilling, Inc., of Yuba City, CA, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $497,851, as is authorized.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-151

RESOLUTION ACCEPTING THE CLAUS ROAD PAVEMENT REHABILITATION PHASE II PROJECT AS COMPLETE, AUTHORIZING ALL NECESSARY STEPS TO FILE WITH THE COUNTY RECORDER, RELEASING SECURITIES, AND RELEASING PAYMENTS TOTALING $1,064,354 DSS COMPANY, DBA KNIFE RIVER CONSTRUCTION, OF STOCKTON, CALIFORNIA

WHEREAS, in November 2016, the voters of Stanislaus County approved the county wide, 25-year, half- cent sales tax increase known as Measure L, and

WHEREAS, on September 4, 2018, by Resolution No. 2018-380, Council amended the approved list of projects to be funded with Measure L tax proceeds in Fiscal Year 2018-2019, and

WHEREAS, the amendment to the list of projects allocated $1,443,773.00 for construction and design to the Claus Road Pavement Rehabilitation – Phase II Project, and

WHEREAS, the Claus Road Pavement Rehabilitation Phase II Project repaired pavement that was deteriorated with an asphalt rubber chip seal and asphalt overlay within the street limits of Briggsmore Avenue to Terminal Avenue, and

WHEREAS, bids were advertised on March 6, 2019, and

WHEREAS, bids were publicly opened on April 2, 2019, pursuant to Modesto Municipal Code section 8-3.403 and Charter Section 1307, and DSS Company, dba Knife River Construction, of Stockton, California, was the apparent responsible and responsive bidder, and

WHEREAS, on May 7, 2019, by Resolution No. 2019-204, Council awarded a contract to DSS Company, dba Knife River Construction, of Stockton, California for the

construction of the Claus Road Pavement Rehabilitation Phase II Project in the amount of $1,036,423, and

WHEREAS, the contractor received the Notice to Proceed with a first working day of July 29, 2019, and all contract work was completed by October 21, 2019, and

WHEREAS, the total project costs were $1,208,746 which included all construction, design, and construction administration costs. The total project amount originally budgeted was $1,443,7734 which included $1,140,065 for the construction contract and contingency with DSS Company, dba Knife River Construction, and

WHEREAS, per Resolution 2019-205, on May 7, 2019, the Directors Authority for Change Orders was increased to 10% contingency, and

WHEREAS, there were three change orders on this project with an overall increase of $27,931, and

WHEREAS, by accepting this project as complete, the City officially accepts the improvements made and authorizes the Notice of Completion to be filed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that the Claus Road Pavement Rehabilitation – Phase II Project is hereby accepted as complete from contractor DSS Company, dba Knife River Construction, of Stockton, CA, and that the City Clerk is authorized to complete all necessary steps to file the appropriate notices and documents with the County Recorder, release securities and authorize payments totaling $1,064,354, as is authorized.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-152

RESOLUTION APPROVING AGREEMENTS FOR ON-CALL LAND SURVEYING SERVICES WITH DELAMARE-FULTZ (DF) ENGINEERING, INC., OF MODESTO, CA, NORTHSTAR ENGINEERING, INC., OF MODESTO, CA, AND O'DELL ENGINEERING OF MODESTO, CA, FOR A ONE-YEAR AGREEMENT WITH TWO (2) ONE-YEAR EXTENSION OPTIONS, FOR AN ANNUAL AMOUNT NOT TO EXCEED $75,000 PER CONSULTANT, AND A TOTAL AMOUNT NOT TO EXCEED $225,000 PER CONSULTANT OVER THREE YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto has the need for professional Land Surveying services on various projects, and

WHEREAS, the Utilities Department lacks sufficient qualified staff members to satisfy the demand for these services, and

WHEREAS, project workloads and permit workloads require more resources than the City survey staff has available, and

WHEREAS, land surveying support is required on public works projects, and

WHEREAS, land surveying Services are needed for reviewing legal maps, plans and documents for property lines, monuments and subdivisions, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural & Engineering Services for Capital Projects, which follows State of California Government Code, Section 4526-4529, staff issued a Request for Qualifications on September 5, 2019, and

WHEREAS, Staff received Statement of Qualifications from six firms, and

WHEREAS, the three consultants were deemed the most qualified firms and meet or exceeds the standard of work set forth by the City of Modesto for Land Surveying services, and

WHEREAS, in accordance with Modesto Municipal Code 8-3.204(a) Exceptions to Formal Bidding Requirements, these agreements are for professional services and, therefore, exempt from the bid requirement. However, staff proceeded with the RFP process pursuant to Administrative Directive 3.1. Staff recommends approval of agreements with DF Engineering, Inc., NorthStar Engineering, Inc., and O'Dell Engineering for on-call land surveying services.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves agreements for on-call land surveying services with Delamare-Fultz (DF) Engineering, Inc., of Modesto, CA, NorthStar Engineering, Inc., of Modesto, CA, and O'Dell Engineering of Modesto, CA, for a one-year agreement with two (2) one-year extension options, for an annual amount not to exceed $75,000 per consultant, and a total amount not to exceed $225,000 per consultant over three years.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the agreements, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-156

RESOLUTION APPROVING THE GRANT OF TEMPORARY CONSTRUCTION EASEMENT WITHIN A PORTION OF APN 083-004-06 FROM SNOW PROPERTIES, MS. JANET LYNN SNOW, MRS. ELIZABETH BARNES, MRS. JENNIFER L. SHIN, AND STAN-SAN PROPERTIES 1, LLC FOR THE SONOMA TRUNK PROJECT, CONSENTING TO THE RECORDATION THEREOF, AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE REQUIRED DOCUMENTS FOR THE TEMPORARY CONSTRUCTION EASEMENT AREA UPON EXPIRATION OCCURRING APRIL 30, 2022

WHEREAS, the City of Modesto provides wastewater collection and treatment service to all City residents, and

WHEREAS, installation of the Sonoma Trunk will promote development within the Tivoli Specific Plan, and

WHEREAS, installation of the Sonoma Trunk will necessitate the relocation of certain Modesto Irrigation District irrigation apparatus, and

WHEREAS, the proposed configuration and location of the relocated MID irrigation apparatus has been reviewed and approved by MID, and

WHEREAS, the City requested from the owners of the APN 083-004-06 a Temporary Construction Easement to facilitate relocation and construction of MID irrigation apparatus, and

WHEREAS, the owners have agreed to grant the temporary construction easement at no financial cost to the City of Modesto, and

WHEREAS, the temporary construction easement will expire on April 30, 2022 and the City will deliver a quit-claim deed to the owners at that time releasing interest in the easement area.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the temporary construction easement granted to the City of Modesto by Snow Properties, Ms. Janet Lynn Snow, Mrs. Elizabeth Barnes, Mrs. Jennifer L. Shin, and Stan-San Properties 1, LLC for the Sonoma Trunk Sewer Project.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the required documents for the Temporary Construction Easement area upon expiration occurring April 30, 2022.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Madrigal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-157

RESOLUTION APPROVING THE GRANT OF TEMPORARY CONSTRUCTION EASEMENT WITHIN PORTIONS OF APN 078-055-023 AND 078-055-024, A PERMANENT ACCESS AND UTILITY EASEMENT WITHIN A PORTION OF APN 078-055-023 FROM THE STANISLAUS UNION SCHOOL DISTRICT FOR THE WELL 64 FLUSH LINE PROJECT, CONSENTING TO THE RECORDATION THEREOF, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE CERTIFICATES OF ACCEPTANCE AND QUIT-CLAIM DEED UPON EXPIRATION OF THE TEMPORARY CONSTRUCTION EASEMENT ON DECEMBER 31, 2020

WHEREAS, municipal wells within the City of Modesto water system provide safe, clean water to all City of Modesto residents and benefit greatly from the use of dedicated flush lines to clear standing sediment, and

WHEREAS, on June 25, 2019 by Resolution number 2019-304, Council approved Capital Improvement Program (CIP) project # 100357 to perform water system improvements, and

WHEREAS, the location of the Well 64 flush line creates a pedestrian obstacle within the designated sidewalk near the Mary Lou Dietrich Elementary School, and

WHEREAS, the City requested from the Stanislaus Union School District a Temporary Construction Easement (TCE) to facilitate relocation and construction of a new flush line for Well 64 and a Permanent Access and Utility Easement (AUE) to provide access and permanent placement of the new Well 64 flush line, and

WHEREAS, the Stanislaus Union School District has agreed to grant the easements at no financial cost to the City of Modesto, and

WHEREAS the Stanislaus Union School District has requested that the City provide quit-claim deeds upon expiration of the temporary construction easements on December 31, 2020.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts both the temporary construction easement and the permanent access and utility easement granted to the City of Modesto by the Stanislaus Union School District.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the Certificates of Acceptance and the quit-claim deed releasing interest in the easement areas upon expiration of the temporary construction easements on December 31, 2020.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-158

RESOLUTION APPROVING AN AMENDMENT INCREASING THE AGREEMENT WITH STORER TRANSIT SYSTEMS, FOR MODESTO AREA DIAL-A-RIDE OPERATIONS BY $900,000 FROM $19,814,653 TO $20,714,653, FOR A NEW TOTAL AMOUNT NOT TO EXCEED $20,714,653, AND APPROVE EXTENDING THE TERM OF THE AGREEMENT FROM JUNE 28, 2020 THROUGH SEPTEMBER 30, 2020, AND AUTHORIZE THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City is in the final year of a six year contract with Storer Transit Systems (Storer) to operate Modesto Area Dial-A-Ride (MADAR) through June 28, 2020, and

WHEREAS, at the March 10, 2020 Council meeting, the Council directed staff to return with more information regarding the impacts to the risks to the funding related to the award of RFP 1920-07, and

WHEREAS, an extension with Storer to continue operating the Modesto Area Dial-A-Ride system for approximately 90 days would be reasonable due to the COVID-19 situation.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby authorizes an amendment increasing the agreement with Storer Transit Systems, for Modesto Area Dial-A-Ride operations by $900,000 from $19,814,653 to $20,714,653, for a new total amount not to exceed $20,714,653, an approve extending the term of the agreement from June 28, 2020 through September 30, 2020.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 7th day of April, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-160

RESOLUTION AMENDING THE FISCAL YEAR 2019-2020 ANNUAL OPERATING AND CAPITAL IMPROVEMENT PROJECT FUND BUDGETS

WHEREAS, a financial analysis has been completed and it has been determined that a budget adjustment is required to the Annual and Capital Improvement Budgets of the City of Modesto for Fiscal Year 2019-20.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves amending the Fiscal Year 2019-20 Annual Operating and Capital Improvement budget as shown in **Exhibit A**, which is **attached** hereto and incorporated by reference herein.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

EXHIBIT A

FISCAL YEAR 2019-20

HUMAN RESOURCES

- A budget adjustment in the amount of $1.5M is necessary for the Employee Benefit Fund (5510) to increase the Sick Leave Conversion Budget from $1.028M to $2.528M. This is related to the recent retirements of employees with large sick leave balances. Since the Employee Benefit Fund is an Internal Service Fund (ISF), per Governmental Account Standards Board (GASB), it is required to report based on full accrual basis of accounting. .

FIRE DEPARTMENT

- A budget adjustment is necessary to amend the Industrial Fire District budget as approved in Fund 6100, JPA – Industrial Fire Fund, by the Modesto Ceres JPA Industrial Fire board on December 11, 2019. The revenues will need to be increased by $74,910, which will be offset by an increase to the expense of the final disbursement to the JPA members by $74,910

PUBLIC WORKS

- A budget adjustment in the amount of $615,228 to fund 4540-Bus Fixed Route MAX operations, Cost center 53472 – Transit Services is necessary to increase grant revenues from the Low Carbon Transit Operations grant awarded to transit to provide free fares to passengers during Fiscal Year 2019-2020
- A budget adjustment in the amount of $144,769 is necessary to establish the budget and non-capital project 101235 – MAX – Token Validators in fund 4510 – Bus Fixed Route Fund to fund the purchase of Token Validators for the MAX bus fleet. Revenues for this purchase will come from a Prop 1 B grant under the Public Transportation Modernization, Improvement and Service Enhancement Account Program (PTMISEA)
- A budget adjustment in the amount of $181,685 in Fund 4520-Bus Service Fund – DAR is needed to fund the 1 year extension to the agreement with Storer Transit Services to operate Modesto Area Dial A Ride for the approved under resolution 2019-232. Funding for this contract expense will come from a grant from Federal Transit Administration (FTA) $72,674 and Local Transportation Funds (LTF) in the amount of $109,011.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-161

RESOLUTION APPROVING THE PLANS AND SPECIFICATIONS FOR THE COFFEE ROAD PAVEMENT REHABILITATION PROJECT, ACCEPTING THE BID, AND AWARDING A CONTRACT TO UNITED PAVEMENT MAINTENANCE, INC. OF HUGHSON, CALIFORNIA, IN THE AMOUNT OF $2,630,349 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, plans and specifications have been prepared for the Coffee Road Pavement Rehabilitation Project, and City staff recommends approval by the City Council, and

WHEREAS, the bids received for the Coffee Road Pavement Rehabilitation Project were publicly opened at 11:00 a.m. on March 10, 2020, and later tabulated by the Director of Community and Economic Development for the consideration of Council, and

WHEREAS, the Director of Community and Economic Development has recommended that the bid of $2,630,349 received from United Pavement Maintenance, Inc., of Hughson, California be accepted as the lowest responsible and responsive bid and the contract be awarded to United Pavement Maintenance, Inc., and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow the formal bid procedures, and

WHEREAS, an award of $2,630,349 and agreement for construction for Community and Economic Development Department to use United Pavement Maintenance, Inc., of Hughson, California, conforms to the Modesto Municipal Code

because the City complied with the formal bid procedures and United Pavement Maintenance, Inc., of Hughson, California, was the lowest responsive bidder.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the plans and specifications for the Coffee Road Pavement Rehabilitation Project, accepts the bid of United Pavement Maintenance, Inc., of Hughson, California, in the amount of $2,630,349 and awards United Pavement Maintenance, Inc. the contract for the Coffee Road Pavement Rehabilitation Project.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the contract, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-164

RESOLUTION APPROVING AN AGREEMENT WITH MARK THOMAS & COMPANY, INC., FRESNO, CA, FOR ENGINEERING SERVICES FOR THE GRANGER NEIGHBORHOOD PAVEMENT REHABILITATION PROJECT IN AN AMOUNT NOT TO EXCEED $250,225 FOR THE IDENTIFIED SCOPE OF SERVICES, PLUS $25,022 FOR ADDITIONAL SERVICES (IF NEEDED), FOR A MAXIMUM TOTAL AMOUNT OF $275,247, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, in November of 2016 the voters of Stanislaus County approve the county wide, 25-year, half-cent sales tax increase known as Measure L, and

WHEREAS, on December 12, 2017 by Resolution 2017-505, Council approved a Measure L Master Funding Agreement between the Stanislaus Council of Governments and the City of Modesto, and

WHEREAS, the Granger Neighborhood and Roosevelt Park area has been identified as having pavement in need of rehabilitation, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural and Engineering Services for Capital Projects, which is in compliance with California Government Code Sections 4526-4529, and Council resolution Number 2017-439, staff utilized a pre-qualified list of consultants to solicit proposals to perform engineering services for the Granger Neighborhood Pavement Rehabilitation project, and

WHEREAS, also in accordance with Administrative Directive 3.1, a selection committee made up of Community and Economic Development Department (CEDD) staff members evaluated each of the Proposals based on the firms' qualifications and experience, project understanding, approach and proposed scope of work, organization and individual roles and responsibilities, and project schedule, and

WHEREAS, after careful review, the selection committee determined Mark Thomas & Company, Inc., of Fresno, CA to be the most qualified firm to perform the work for this particular project.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with Mark Thomas & Company, Inc. (Fresno, CA) for engineering services for the Granger Neighborhood Pavement Rehabilitation project, in an amount not to exceed $250,225 for the identified scope of services, plus $25,022 for additional services (if needed), for a maximum total amount of $275,247.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-165

RESOLUTION APPROVING AN AGREEMENT WITH ALTA PLANNING + DESIGN INC., PORTLAND, OR, FOR ENGINEERING SERVICES FOR THE SCHOOL SAFETY PROGRAM STUDY IN AN AMOUNT NOT TO EXCEED $247,499, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, in November of 2016 the voters of Stanislaus County approve the county wide, 25-year, half-cent sales tax increase known as Measure L, and

WHEREAS, on December 12, 2017 by Resolution 2017-505, Council approved a Measure L Master Funding Agreement between the Stanislaus Council of Governments and the City of Modesto, and

WHEREAS, starting in FY2019-20, the Measure L funded projects for each category were presented to the Citizen's Commission, and subsequently brought forth to Committee and Council with the annual budget review, and

WHEREAS, the City has 68 public schools in 8 districts, consisting of 50 elementary schools, 11 middle schools, and 7 high schools, and

WHEREAS, in Fiscal Year 2017-2018, the City created a task force to establish school safety needs using Measure L local funding, and

WHEREAS, the City schools have more needs than resources available to address them, so safety and traffic flow around schools needs to be evaluated and prioritized for fair, effective and transparent use of funding to make improvements in the public right-of-way, and

WHEREAS, the School Safety Program Study project will provide funding to hire a consultant to evaluate safety and traffic flow around schools throughout Modesto, and prioritize needs. Anticipated deliverables include identification of needs, prioritization of

schools, recommendations for future projects such as safe pedestrian path of travel, ADA upgrades, signage and beacons near schools, and traffic calming, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural and Engineering Services for Capital Projects, which is in compliance with California Government Code Sections 4526-4529, staff solicited and formally advertised a Request for Qualifications (RFQ) and Request for Proposals (RFP) through PlanetBids for transportation planning consultants to provide consulting services for the development of the City's School Safety Program, and

WHEREAS, also in accordance with Administrative Directive 3.1, a selection committee made up of Community and Economic Development Department (CEDD) staff members evaluated each of the SOQs/Proposals based on the firms' qualifications and experience, project understanding, approach and proposed scope of work, organization and individual roles and responsibilities, and project schedule, and

WHEREAS, after careful review, the selection committee determined Alta Planning + Design, Inc., of Portland, OR, to be the most qualified firm to perform the work for this particular project.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with Alta Planning + Design Inc., Portland, OR for engineering services for the School Safety Program Study, in an amount not to exceed $247,499.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-166

RESOLUTION ACCEPTING A HIGHWAY SAFETY IMPROVEMENT PROGRAM (HSIP) GRANT IN THE AMOUNT OF $75,000 FOR THE DEVELOPMENT OF A LOCAL ROADS AND SAFETY PLAN (LRSP), AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE TO EXECUTE ALL FUNDING AND GRANT RELATED DOCUMENTS

WHEREAS, federal regulations require each State to have a Strategic Highway Safety Plan (SHSP), which is a state-wide traffic safety plan that coordinates the efforts of a wide range of organizations to reduce traffic fatalities and all injuries on public roads, and

WHEREAS, the SHSP addresses the 4E's of Traffic Safety: Engineering, Enforcement, Education, Emergency Services, and

WHEREAS, the SHSP is part of a statewide approach to improve traffic safety, whereas a Local Road and Safety Plan (LRSP) provides local road owners, like the City of Modesto, with an opportunity to address unique roadway safety needs while contributing to the success of the SHSP, and

WHEREAS, the process of preparing an LRSP creates a framework to systemically identify and analyze safety problems and recommend safety improvements for local jurisdictions, and

WHEREAS, on October 8, 2019 Caltrans announced a call for LRSP grant applications, and a total of $10 million from the Highway Safety Improvement Program (HSIP) was set aside to assist local agencies in developing a safety plan, and

WHEREAS, agencies like the City of Modesto who have an active Systemic Safety Analysis Report project underway will be considered for funding after January 1, 2020, and

WHEREAS, the grant will allow for 90 percent funding, with a required 10 percent local match, and

WHEREAS, on January 28, 2020, by Resolution 2020-32, Council authorized submittal of an HSIP grant application to seek funds for the development of an LRSP, and

WHEREAS, the City received notification that the grant application submitted to Caltrans in January, 2020 was selected for funding and implementation of an LRSP for the City of Modesto.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Highway Safety Improvement Program (HSIP) grant in the amount of $75,000 for the development of a Local Roads and Safety Plan (LRSP).

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute all funding and grant related documents

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-167

RESOLUTION APPROVING THE FIRST AMENDMENT INCREASING THE AGREEMENT FOR CONSULTANT SERVICES WITH FEHR AND PEERS, IN THE AMOUNT OF $39,994 WITH A NEW TOTAL NOT TO EXCEED AMOUNT OF $223,234 TO INCLUDE THE DEVELOPMENT OF THE LRSP AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE TO EXECUTE THE FIRST AMENDMENT

WHEREAS, the Systemic Safety Analysis Report Program Grant represents a proactive approach focusing on evaluating roadway networks using a defined set of criteria to identify potential improvements to increase pedestrian and bicyclist safety, and

WHEREAS, on June 5, 2018, by Resolution No. 2018-274, Council approved an agreement with Fehr and Peers of Walnut Creek, CA for consultant services for the Systemic Safety Analysis Report Project in the amount of $183,240 for the identified scope of work for the Systemic Safety Analysis Report (SSAR) Grant, plus $18,324 for additional services (if needed), for a total amount not to exceed $201,564, and

WHEREAS, Federal regulations require each State to have a Strategic Highway Safety Plan (SHSP), which is a state-wide traffic safety plan that coordinates the efforts of a wide range of organizations to reduce traffic accident fatalities and all injuries on public roads, and

WHEREAS, the SHSP is part of a statewide approach to improve traffic safety, whereas a Local Roads and Safety Plan (LRSP) provides local road owners, like the City of Modesto, with an opportunity to address unique roadway safety needs, while contributing to the success of the SHSP, and

WHEREAS, on October 8, 2019 Caltrans announced a call for LRSP grant applications, and that a total of $10 million from Highway Safety Improvement Program (HSIP) funds were set aside to assist local agencies to develop a safety plan, and

WHEREAS, agencies like the City of Modesto who have an active Systemic Safety Analysis Report (SSAR) project underway were considered for funding after January 1, 2020, and

WHEREAS, on January 28, 2020 by Resolution 2020-32, Council authorized submittal of an HSIP application to seek funds for the development of an LRSP, and

WHEREAS, the City was notified that the grant submitted to Caltrans in January 2020 was selected for funding and implementation of an LRSP for the City of Modesto, and

WHEREAS, the City of Modesto currently has an effort underway to develop an SSAR with Fehr and Peers as the Consultant, to receive the most benefit and utilize the majority of the collision pattern information and analysis that has already been performed throughout the City, staff recommends amending the current contract with Fehr and Peers to include additional services that would include the development of the LRSP, and

WHEREAS, on March 19, 2020, Fehr and Peers submitted to the City an amended scope of work to revise the draft SSASR to incorporate the additional elements that make up the LRSP document, and

WHEREAS, the final LRSP document will meet the SSAR reporting requirements while also aligning with the LRSP guidelines, and

WHEREAS, the estimated modified tasks result in increased costs as follows:

1. Progress Meetings: $10,706

2. Collision Analysis: $5,308

3. Preliminary Countermeasures List: $4,574

4. Amended Stakeholder Engagement: $8,594

5. Amended Draft and Final LRSP: $10,812

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the First Amendment increasing the Agreement amount with Fehr and Peers, for consultant services for the City of Modesto Systemic Safety Analysis Report by $39,994 from $183,240 to a total not to exceed amount of $223,234.

BE IT FURTHER RESOLVED, that the City Manager, or his designee is authorized to execute the First Amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-168

RESOLUTION AMENDING THE FISCAL YEAR 2019/20 CAPITAL IMPROVEMENT PROGRAM (CIP) BUDGET, PROJECT #100990 IN THE AMOUNT OF $75,000 TO INCLUDE THE AMENDED SCOPE OF WORK TO INCLUDE THE ELEMENTS OF THE LRSP

WHEREAS, in February, 2016 the State of California released guidelines for the Systemic Safety Analysis Report Program (SSARP), and

WHEREAS, the guidelines were developed in consultation with the California Local Highway Safety Improvement Program (HSIP) Advisory Committee, and

WHEREAS, the SSARP program represents a proactive approach focusing on evaluating roadway networks using a defined set of criteria to identify potential improvements to increase pedestrian and bicycle safety, and

WHEREAS, in March, 2016, staff submitted an application to the State of California, Department of Transportation requesting SSARP funds in the amount of $225,000 with a Local match of $25,000 for Preliminary Engineering (PE), and

WHEREAS, on May 18, 2016, the State of California notified the City of Modesto that the application submitted for the SSARP funds was selected to receive funding, and

WHEREAS, on July 5, 2017, by Resolution No. 2017-269, Council approved the use of $25,000 in Measure L funds to be used as match funds for the City's project, and

WHEREAS, on September 26, 2017, by Resolution No. 2017-359, Council accepted the Systemic Safety Analysis Report Program (SSARP) grant in the amount of $225,000, and

WHEREAS, Federal regulations require each State to have a Strategic Highway Safety Plan (SHSP), which is a state-wide traffic safety plan that coordinates the efforts of a wide range of organizations to reduce traffic fatalities and all injuries on public roads, and

WHEREAS, the SHSP addresses the 4E's of Traffic Safety: Engineering, Enforcement, Education, Emergency Services, and

WHEREAS, the SHSP is part of a statewide approach to improve traffic safety, whereas a Local Road and Safety Plan (LRSP) provides local road owners, like the City of Modesto, with an opportunity to address unique roadway safety needs while contributing to the success of the SHSP, and

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-169

RESOLUTION APPROVING THE FINAL MAP OF VINTAGE UNIT THREE SUBDIVISION, APPROVING THE SUBDIVISION AGREEMENT AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE A SUBDIVISION AGREEMENT WITH THE OWNER / DEVELOPER, MODESTO ROSELLE, LLC, AND AUTHORIZING THE CITY CLERK TO CERTIFY THE FINAL MAP AND RECORD IT WITH THE STANISLAUS COUNTY RECORDER'S OFFICE

WHEREAS, Modesto Roselle, LLC, a California limited liability company ("SUBDIVIDER"), is in possession of a tract of land situated in the City of Modesto, County of Stanislaus, consisting of 10.4 acres, known as the Vintage Unit Three Subdivision ("SUBDIVISION"), and

WHEREAS, a tentative map of said tract was approved by the Planning Commission of the City of Modesto on October 19, 2015 with conditions of approval as noted in Planning Commission resolution Number 2015-26, and

WHEREAS, the Secretary of the Planning Commission and the City Engineer of the City of Modesto have certified that the final map of said tract substantially conforms to the approved tentative map, and

WHEREAS, the project is currently under construction and the public improvements have not been completed, and

WHEREAS, as required by Section 4-4.605 of the Modesto Municipal Code, the SUBDIVIDER has executed a Subdivision Agreement, and

WHEREAS, the City Engineer of the City of Modesto has certified that the final map of said SUBDIVISION meets all of the provisions of the California Subdivision Map Act and the provisions of the Modesto Municipal Code relating to subdivisions, and the City Surveyor has determined that the map is technically correct, and

WHEREAS, the Subdivider has furnished securities, as set forth in Section 4-4.605 of the Modesto Municipal Code, which shall secure the obligations set forth in Section 66499.3 of the Government Code of the State of California. Said securities are in forms acceptable to the City Attorney and in the amounts required by the City Engineer.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that said Final Map be approved; that the dedications for public streets and easements as shown thereon within the boundaries of said tract be accepted on behalf of the public for public use; and approve the subdivision agreement.

BE IT FURTHER RESOLVED, that the City Manager or his designee, is hereby authorized to execute the Subdivision Agreement, in a form approved by the City Attorney.

BE IT FURTHER RESOLVED that the City Clerk be authorized to certify the map of said tract on behalf of the City of Modesto after the fees required by the Modesto Municipal Code in amounts determined by the City Engineer have been paid.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-170

RESOLUTION APPROVING THE FINAL MAP OF VINTAGE UNIT FOUR SUBDIVISION, APPROVING THE SUBDIVISION AGREEMENT AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE A SUBDIVISION AGREEMENT WITH THE OWNER / DEVELOPER, MODESTO ROSELLE, LLC, AND AUTHORIZING THE CITY CLERK TO CERTIFY THE FINAL MAP AND RECORD IT WITH THE STANISLAUS COUNTY RECORDER'S OFFICE

WHEREAS, Modesto Roselle, LLC, a California limited liability company ("SUBDIVIDER"), is in possession of a tract of land situated in the City of Modesto, County of Stanislaus, consisting of 3.6 acres, known as the Vintage Unit Four Subdivision ("SUBDIVISION"), and

WHEREAS, a tentative map of said tract was approved by the Planning Commission of the City of Modesto on October 19, 2015 with conditions of approval as noted in Planning Commission resolution Number 2015-26, and

WHEREAS, the Secretary of the Planning Commission and the City Engineer of the City of Modesto have certified that the final map of said tract substantially conforms to the approved tentative map, and

WHEREAS, the project is currently under construction and the public improvements have not been completed, and

WHEREAS, as required by Section 4-4.605 of the Modesto Municipal Code, the SUBDIVIDER has executed a Subdivision Agreement, and

WHEREAS, the City Engineer of the City of Modesto has certified that the final map of said SUBDIVISION meets all of the provisions of the California Subdivision Map Act and the provisions of the Modesto Municipal Code relating to subdivisions, and the City Surveyor has determined that the map is technically correct, and

WHEREAS, the Subdivider has furnished securities, as set forth in Section 4-4.605 of the Modesto Municipal Code, which shall secure the obligations set forth in Section 66499.3 of the Government Code of the State of California. Said securities are in forms acceptable to the City Attorney and in the amounts required by the City Engineer.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that said Final Map be approved; that the dedications for public streets and easements as shown thereon within the boundaries of said tract be accepted on behalf of the public for public use; and approve the subdivision agreement.

BE IT FURTHER RESOLVED, that the City Manager or his designee, is hereby authorized to execute the Subdivision Agreement, in a form approved by the City Attorney.

BE IT FURTHER RESOLVED that the City Clerk be authorized to certify the map of said tract on behalf of the City of Modesto after the fees required by the Modesto Municipal Code in amounts determined by the City Engineer have been paid.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-171

RESOLUTION ACCEPTING THE PUBLIC IMPROVEMENTS OF OAKDALE ROAD AND SYLVAN AVENUE AS COMPLETE, RELEASE SECURITIES UPON EXPIRATION OF STATUTORY PERIODS, AND INITIATE REIMBURSEMENT FOR IMPROVEMENTS AS OUTLINED IN THE ACQUISITION AND SHORTFALL AGREEMENT

WHEREAS, in January 2008, by Resolution No. 2008-024 the City adopted the Policies and Procedures for the Formation, Annexation, and Administration of Community Facilities Districts Created Pursuant to the Provisions of the Mello-Roos Community Facilities Act of 1982, and

WHEREAS, the policy allows developers to install public improvements which benefit properties within a proposed CFD, and be reimbursed for the work if certain parameters are met, and

WHEREAS, on April 6, 2004, the City formed City of Modesto Community Facilities District No. 2004-1 (CFD No. 2004-1) to pay for various infrastructure improvements as well as the maintenance of parks, parkways and open space, storm drainage basin and related facilities that serve the Village One area, and

WHEREAS, a developer may construct identified improvements for CFD No. 2004-1 and be reimbursed, provided an agreement for such improvements is entered into with the City and CFD No. 2004-1 prior to commencement of the work, and

WHEREAS, Berberian Holdings, L.P. (Applicant) submitted an application to develop an 18-acre neighborhood shopping center, more commonly known as The Marketplace, at the southwest corner of Sylvan Avenue and Oakdale Road, and

WHEREAS, on August 8, 2017, by Resolution 2017-311, the Council approved an Acquisition and Shortfall Agreement with Applicant. Under the terms of the

Acquisition & Shortfall Agreement, the Applicant will be reimbursed for the public capital improvements they make on behalf of the City, and

WHEREAS, the improvements have been completed to the satisfaction of the Director of Utilities, who certifies that the work has been satisfactorily completed, and all fees have been paid, and

WHEREAS, the developer has provided to the City evidence that all of the costs for constructing the improvements have been fully paid, and acceptable to the City Engineer, and

WHEREAS, pursuant to the terms of the Acquisition and Shortfall Agreement, Applicant will be reimbursed for the public improvements it constructs that are eligible for reimbursement. Reimbursement will be based upon actual expenses and have been verified to total $2,635,322, and

WHEREAS, the developer has submitted required documentation and payment of costs including unconditional lien releases, proof of prevailing wage, an executed grant dee dedicating public land to the City, and a warranty securities control account.

NOW, THEREFORE, BE IT RESOLVED the City Clerk is authorized to file the Notice of Completion with County Recorder, release the Faithful Performance Security immediately after filing the Notice of Completion, and release Payment Security sixty days after filing the Notice of Completion, and release the Warranty Security one year and one day after acceptance, and that the Council of the City of Modesto hereby accepts the public improvements of Oakdale Road and Sylvan Avenue as complete, releases the securities upon expiration of statutory periods, and initiates reimbursement for improvements as outlined in the Acquisition and Shortfall Agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-172

RESOLUTION VACATING AND DISPOSING OF TEMPORARY STORM DRAIN EASEMENT LOCATED BETWEEN OAKDALE ROAD AND HASHEM DRIVE

WHEREAS, the City owns a ten foot (10') wide temporary storm drain easement (the "Temporary Easement") located between Oakdale Road and Hashem Drive in the City of Modesto, as further described and depicted in **Exhibit A, attached** hereto in incorporated herein, and

WHEREAS, the Owner of the Property has agreed to grant the City a new public utility easement for storm drain purposes in a new location (the "New Easement"), and the location of the New Easement is more beneficial for the City than the location of the Temporary Easement, and

WHEREAS, upon recordation of the New Easement, the Temporary Easement will no longer be necessary and will be superseded by relocation, and

WHEREAS, the City Council has determined that the Temporary Easement is unnecessary for present or prospective public use, and

WHEREAS, vacation of the Temporary Easement is in the best interests of the City of Modesto, and

WHEREAS, pursuant to the provisions of Section 8330 *et seq*., of the Streets and Highways Code, the City Council desires to summarily vacate the Temporary Easement.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto as follows:

1. Findings and Determinations

The City Council hereby finds and determines that the above recitals are true and correct and have served as the basis, in part, for the findings and actions of the City set forth below.

2. No present or prospective public use

Upon the recordation of the New Easement, the Temporary Easement described and depicted in **Exhibit A, attached** hereto and incorporated herein, will be unnecessary for present or prospective public use and will be superseded by relocation.

3. Vacation of Easement

Pursuant to Chapter 4 of Part 3 of Division 9 of the California Streets and Highways Code, the Temporary Easement is hereby summarily vacated and abandoned. From and after the date this resolution is recorded, the Temporary Easement shall no longer constitute a public service easement.

4. Notification

All entities having any right, title, or interest in the Temporary Easement, if any, have been notified of this action.

5. Certification and Recordation of Resolution

After the New Easement has been recorded, the City Clerk is hereby directed to record a certified copy of this Resolution in the office of the Stanislaus County Recorder pursuant to Streets and Highways Code section 8335.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-173

RESOLUTION ACCEPTING THE FISCAL YEAR 2020-21 ENGINEER'S ANNUAL REPORT FOR THE SHACKELFORD LANDSCAPE AND LIGHTING DISTRICT; NOTICE OF INTENTION TO LEVY AND COLLECT ASSESSMENTS FOR THE SHACKELFORD LANDSCAPE AND LIGHTING DISTRICT; AND SETTING A PUBLIC HEARING ON THE PROPOSED ASSESSMENTS TO BE HELD ON JUNE 23, 2020 TO CONSIDER THE 2020-21 LEVY AND COLLECTION OF ASSESSMENTS WITHIN SHACKELFORD LANDSCAPE AND LIGHTING DISTRICT

WHEREAS, on June 29, 1999, the County of Stanislaus ("County") formed the Shackelford Landscape and Lighting District ("Shackelford LLD") for the purpose of administering the maintenance of seventy-seven (77) 200-watt high-pressure sodium streetlights, and

WHEREAS, the Shackelford LLD was formed in accordance with the Landscaping and Lighting Act of 1972 (Streets and Highways Code Sections 22500 through 22679), and

WHEREAS, the Shackelford LLD is comprised of approximately 153 acres, includes 494 lots with both residential and commercial development, and is bounded by Crows Landing on the west, E. Hatch Road on the south, Union Pacific Railroad on the east, and State Route 99 on the north, and

WHEREAS, on February 22, 2012, the Stanislaus County Local Agency Formation Commission ("LAFCO") approved the annexation of the Shackelford Area to the City of Modesto ("City"), and

WHEREAS, on April 24, 2012, the City Council approved the Shackelford Landscape and Lighting District Transfer Agreement between the County and City, and

WHEREAS, the City assumed full responsibility and administration of the Shackelford LLD on July 1, 2012, and

WHEREAS, Section 22623 of the California Streets and Highways Code requires the City Engineer, the person designated by this Council as Engineer of Work for the Shackelford LLD, to prepare and file an annual report, and

WHEREAS, the Engineer of Work has prepared and filed said annual report with the City Clerk, and

WHEREAS, California Streets and Highways Code Section 22623 requires the legislative body (the City Council) to adopt a resolution of intention which shall include the following:

a. Declaration of intention of the legislative body (the City Council) to levy and collect assessments within the Shackelford LLD for the fiscal year stated in the annual report.

b. General description of the existing improvements and proposed improvements and any substantial changes proposed to be made in the existing improvements.

c. Reference to the assessment district by its distinctive designation and indication of the general location of the Shackelford LLD.

d. Reference to said annual report, on file with the City Clerk, for a full and detailed description of the improvements, the boundaries of the Shackelford LLD and any zones therein, and the proposed assessments upon assessable lots and parcels of land within the Shackelford LLD.

e. Notice of the time, as fixed by the California Streets and Highways Code Section 22625, and the place for hearing by the legislative body (the City Council) on the levy of the proposed assessment.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Fiscal Year 2020-21 Engineer's Annual Report for the Shackelford Landscape and Lighting District.

BE IT FURTHER RESOLVED that the City Council hereby finds the following:

1. The City Council intends to levy and collect assessments within the Shackelford LLD during the fiscal year 2020-21.

2. There are no proposed new improvements or any substantial changes in the existing improvements in the Shackelford LLD and the existing improvements to be made in the Shackelford LLD are generally described as follows:

The City shall provide maintenance, operation and servicing, in perpetuity, of streetlights and all improvements required for such maintenance including, but not limited to:

a. Payment to local utility company for monthly power costs of energizing street lights in the Shackelford LLD.

b. Payment to local utility company for maintenance of street lights in the Shackelford LLD that the utility company owns (usually those lights that are mounted on wooden poles).

c. Maintenance provided by the City of Modesto for street lights in the Shackelford LLD that are owned by the City of Modesto (usually those lights that are mounted on steel poles).

3. The Shackelford LLD is located in the County of Stanislaus, within the City Limits of the City of Modesto and is more specifically located North of Hatch Road, South of State Highway 99, and East of Crows Landing Road.

4. Said annual report filed with the City Clerk and approved by the Council by motion does provide a full and detailed description of the improvements, the boundaries of the Shackelford LLD and any zones therein, and the proposed assessments upon assessable lots and parcels of land within the Shackelford LLD.

5. On Tuesday, the 23rd day of June, 2020, at the hour of 5:30 p.m., the City Council will conduct a public hearing on the questions of the levy of the proposed annual assessment. The hearing will be held at the meeting place of the City Council located in the Tenth Street Place Chambers located at 1010 10th Street, Modesto, California.

6. The City Clerk is authorized and directed to give the notice of hearing required by the Landscape and Lighting Act of 1972.

The levy and collection of assessments as set forth in this resolution are exempt from the procedural and substantive requirements of Proposition 218 pursuant to Article XIII, Section 5(a) of the California Constitution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-174

RESOLUTION ACCEPTING FISCAL YEAR 2020-21 ENGINEER'S ANNUAL REPORT FOR LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 1 FOR DRY CREEK MEADOWS SUBDIVISIONS NOS. 1 THROUGH 6; NOTICE OF INTENTION TO LEVY AND COLLECT ASSESSMENTS FOR LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 1 FOR DRY CREEK MEADOWS SUBDIVISIONS NOS. 1 – 6 AND SETTING A PUBLIC HEARING ON JUNE 23, 2020 TO CONSIDER THE FISCAL YEAR 2020-21 LEVY AND COLLECTION OF ASSESSMENTS WITHIN LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 1

WHEREAS, Resolution No. 88-935, adopted by the Council of the City of Modesto on December 13, 1988, initiated proceedings for the formation of Landscape Maintenance Assessment District No. 1 for the purpose of administering the maintenance of landscaping in the public right-of-way within the street medians and adjacent to the access control walls in Dry Creek Meadows Subdivisions Nos. 1-6, and

WHEREAS, said assessment district was formed in accordance with the Landscape and Lighting Act of 1972, (California Streets and Highways Code Sections 22500 through 22679), and

WHEREAS, Section 22623 of the California Streets and Highways Code requires the City Engineer, the person designated by this Council as Engineer of Work for Assessment District No. 1, to prepare and file an annual report, and

WHEREAS, the Engineer of Work, has prepared and filed said annual report with the City Clerk, and

WHEREAS, California Streets and Highways Code Section 22623 requires the legislative body (the City Council) to adopt a resolution of intention which shall include the following:

a. Declaration of intention of the legislative body (the City Council) to levy and collect assessments within the assessment district for the fiscal year stated in the annual report.

b. General description of the existing improvements and proposed improvements and any substantial changes proposed to be made in the existing improvements.

c. Reference to the assessment district by its distinctive designation and indication of the general location of the district.

d. Reference to said annual report, on file with the City Clerk, for a full and detailed description of the improvements, the boundaries of the assessment district and any zones therein, and the proposed assessments upon assessable lots and parcels of land within the district.

e. Notice of the time, as fixed by the California Streets and Highways Code Section 22625, and the place for hearing by the legislative body (the City Council) on the levy of the proposed assessment.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto hereby accepts the Fiscal Year 2020-2021 Engineer's Annual Report for Landscape Maintenance Assessment District No. 1 for Dry Creek Meadows Subdivisions Nos. 1 through 6, which is **attached** hereto and hereinafter incorporated by reference.

BE IT FURTHER RESOLVED that the City Council hereby finds as follows:

1. The City Council intends to levy and collect assessments within Landscape Maintenance Assessment District No. 1 during the fiscal year 2020-21.

2. There are no proposed new improvements or any substantial changes in existing improvements in Landscape Maintenance Assessment District No. 1 and that the existing improvements to be made in said assessment district are generally described as follows:

The City shall provide maintenance, in perpetuity, of landscaping and any and all improvements required for such maintenance including, but not limited to, landscape irrigation systems in the following locations:

a. Street medians in Creekwood Drive

b. Areas adjacent to the access control walls along Creekwood Drive

c. Areas adjacent to the access control walls along Claus Road

3. Landscape Maintenance Assessment District No. 1 is located in the County of Stanislaus, within the City Limits of the City of Modesto and is more specifically located on the west side of Claus Road, between Modesto Irrigation District Lateral No. 2 and State Route 132 (Yosemite Boulevard).

4. Said annual report filed with the City Clerk and approved by the Council does provide a full and detailed description of the improvements, the boundaries of the assessment district and any zones therein, and the proposed assessments upon assessable lots and parcels of land within Landscape Maintenance Assessment District No. 1.

5. On Tuesday, the 23rd day of June, 2020, at the hour of 5:30 p.m., the City Council will conduct a public hearing on the question of the levy of the proposed annual assessment. The hearing will be held at the meeting place of the City Council located in the Tenth Street Place Chambers located at 1010 10th Street, Modesto, California.

6. The City Clerk is authorized and directed to give the notice of hearing required by the Landscape and Lighting Act of 1972.

7. The levy and collection of assessments as set forth in this resolution are exempt from the procedural and substantive requirements of Proposition 218 pursuant to Article XIII, Section 5(a) of the California Constitution.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-175

RESOLUTION ACCEPTING FISCAL YEAR 2020-21 ENGINEER'S ANNUAL REPORT FOR LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 2 FOR DRY CREEK MEADOWS SUBDIVISIONS NOS. 7-10, CREEKWOOD MEADOWS SUBDIVISION, AND YOSEMITE MEADOWS SUBDIVISION; NOTICE OF INTENTION TO LEVY AND COLLECT ASSESSMENTS FOR LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 2 FOR DRY CREEK MEADOWS SUBDIVISIONS NOS. 7-10, CREEKWOOD MEADOWS SUBDIVISION, AND YOSEMITE MEADOWS SUBDIVISION AND SETTING A PUBLIC HEARING ON JUNE 23, 2020 TO CONSIDER THE FISCAL YEAR 2020-21 LEVY AND COLLECTION OF ASSESSMENTS WITHIN LANDSCAPE MAINTENANCE ASSESSMENT DISTRICT NO. 2

WHEREAS, Resolution No. 89-460, adopted by the Council of the City of Modesto on April 4, 1989, initiated proceedings for the formation of Landscape Maintenance Assessment District No. 2 for the purpose of administering the maintenance of landscaping in the public right of way within the street medians and adjacent to the access control walls in Dry Creek Meadows Subdivisions Nos. 7-10, Creekwood Meadows Subdivision and Yosemite Meadows Subdivision Units Nos. 1 and 2, and

WHEREAS, said assessment district was formed in accordance with the Landscaping and Lighting Act of 1972, (California Streets and Highways Code Sections 22500 through 22679), and

WHEREAS, Section 22623 of the California Streets and Highways Code requires the Community Development Manager, the person designated by the Council as Engineer of Work for Assessment District No. 2, to prepare and file an annual report, and

WHEREAS, the City Engineer, said Engineer of Work, has prepared and filed said annual report with the City Clerk, and

WHEREAS, California Streets and Highways Code Section 22623 requires the Council to adopt a resolution of intention which shall include the following:

a. Declaration of intention of the Council to levy and collect assessments within the assessment district for the fiscal year stated in said annual report.

b. General description of the existing improvements and proposed improvements and any substantial changes proposed to be made in the existing improvements.

c. Reference to the assessment district by its distinctive designation and indication of the general location of the district.

d. Reference to said annual report, on file with the City Clerk, for a full and detailed description of the improvements, the boundaries of the assessment district and any zones therein, and the proposed assessments upon assessable lots and parcels of land within the district.

e. Notice of the time, as fixed by California Streets and Highways Code Section 22625, and the place for hearing by the Council on the levy of the proposed assessment.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the Fiscal Year 2020-2021 Engineer's Annual Report for Landscape Maintenance Assessment District No. 2 for Dry Creek Meadows subdivisions Nos. 7-10, Creekwood Meadows subdivision and Yosemite subdivision.

BE IT FURTHER RESOLVED that the Council hereby finds as follows:

1. The City Council intends to levy and collect assessments within Landscape Maintenance Assessment District No. 2 during the fiscal year 2020-2021.

2. There are no proposed new improvements or any substantial changes in the existing improvements within the existing Landscape Maintenance Assessment District No. 2, and the existing improvements to be made in said assessment district are generally described as follows:

The City shall provide maintenance, in perpetuity, of landscaping and any and all improvements required for such maintenance including, but not limited to, landscape irrigation systems in the following locations:

a. Street medians in Creekwood Drive

b. Areas adjacent to the access control walls along Creekwood Drive

c. Areas adjacent to the access control walls along Claus Road

3. Landscape Maintenance Assessment District No. 2 is located in the County of Stanislaus, within the City limits of the City of Modesto, and is more specifically located on the northeast corner of Yosemite Boulevard and North McClure Road. District 2 is bounded by Yosemite Boulevard on the south, North McClure Road on the west, Yosemite Meadows Drive on the east, and Mechalys Way on the north.

4. Said annual report filed with the City Clerk and approved by the Council does provide a full and detailed description of the improvements, the boundaries of the assessment district and any zones therein, and the proposed assessments upon assessable lots and parcels of land within Landscape Maintenance Assessment District No. 2.

5. On Tuesday, the 23rd day of June, 2020, at the hour of 5:30 p.m., the City Council will conduct a public hearing on the question of the levy of the proposed annual assessment. The hearing will be held at the meeting place of the City Council located in the Tenth Street Place Chambers located at 1010 10th Street, Modesto, California.

6. The City Clerk is authorized and directed to give the notice of hearing required by the Landscaping and Lighting Act of 1972.

7. The levy and collection of assessments as set forth in this resolution shall follow the procedural and substantive requirements of Proposition 218 pursuant to Article 13D, Section 5(a) of the California Constitution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-176

RESOLUTION APPROVING A SECOND AMENDMENT EXTENDING THE TERMINATION DATE WITH OCCU-MED LTD, FRESNO, CA, FOR THE FURNISHING OF OCCUPATIONAL MEDICINE SERVICES THROUGH DECEMBER 31, 2020, AND INCREASING THE AGREEMENT AMOUNT BY $50,000 FOR A TOTAL AMOUNT NOT TO EXCEED $1,017,220 OVER THE TERM OF THE AGREEMENT, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AMENDMENT

WHEREAS, on May 15, 2015, by Resolution No. 2015-145, Council approved the award of proposal and contract for the furnishing of occupational medicine services for the Human Resources Department to Occu-Med Ltd., Fresno, CA, for a two (2) year agreement with three (3) one-year extension options at the sole discretion of the City, for an estimated annual cost of $115,444, and over five (5) years of $577,220 with a scheduled termination date of May 11, 2020 based on the City exercising the remaining options for extension, and

WHEREAS, on March 5, 2019, by Resolution 2019-105, Council approved a First Amendment to the agreement increasing the total agreement amount by $390,000 from $577,220 to $967,220, and

WHEREAS, the current agreement is reaching its approved term expiration and the City recognizes the need to renew a full Request for Proposals (RFP) for occupational medicine services to establish a program that meets the needs of all departments based on state and federal regulations and best practice, and

WHEREAS, this amendment will authorize the necessary time and funds to continue to provide occupational medicine services without interruption until proposal and selection process is closed and completed.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a second amendment to the agreement with Occu-Med Ltd., to continue providing occupational medicine services to the City through December 31, 2020 and to increase the total agreement amount by $50,000 to an amount not to exceed $1,017,220.

BE IT FURTHER RESOLVED that the City Manager, or designee, is hereby authorized to execute the amendment, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-177

RESOLUTION ACCEPTING THE 2017 EDWARD BYRNE MEMORIAL JUSTICE ASSISTANCE GRANT IN THE AMOUNT OF $136,528 FOR THE PURCHASE OF ADDITIONAL LICENSE PLATE READERS AND ASSOCIATED SOFTWARE; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE NECESSARY DOCUMENTS

WHEREAS, the Police Department was awarded a grant in partnership with the Stanislaus County Sheriff' department in the sum of $136,528 from the Department of Justice for the purchase of additional License Plate Readers and the associated software; and

WHEREAS, the Modesto Police Department has sought to reduce the number of crimes and vehicle thefts by implementing an effective License Plate Readers program with modern crime fighting technology; and

WHEREAS, acceptance of said $136,528 grant will assist the department in best utilizing License Plate Readers technology as part of its commitment to intelligence-led policing; and

WHEREAS, the term of this grant will be through September 30, 2020.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby accepts the 2017 Edward Byrne Justice Assistant Grant in the amount of $136,528 from the Department of Justice to purchase additional License Plate Readers and the associated software.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the necessary award documents.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-178

RESOLUTION AMENDING THE FISCAL YEAR 19-20 MULTI-YEAR PROJECT BUDGET TO APPROPRIATE REVENUE AND EXPENSES IN THE AMOUNT OF $136,528 RELATED TO THE 2017 EDWARD BYRNE MEMORIAL JUSTICE ASSISTANCE GRANT FOR THE PURCHASE OF ADDITIONAL LICENSE PLATE READERS AND ASSOCIATED SOFTWARE; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO IMPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, the Police Department acquired a grant award in the amount of $136,528 from the Department of Justice for the purchase of additional License Plate Readers and associated software, and

WHEREAS, there is no local match required for this grant, and

WHEREAS, certain budgetary adjustments are necessary to account for the programing of revenues and offsetting expenses.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment of the Fiscal Year 2019-2020 Multi-Year Project Budget by $136,528 to the revenue and expense budget of the 2017 BJAG Project, 101253.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to take the necessary steps to implement the provisions of this resolution.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-179

RESOLUTION APPROVING THE IMPLEMENTATION OF A NEW MODESTO AREA EXPRESS COMMUTER ROUTE TO STOCKTON, CA, AND RESCINDING RESOLUTION 2019-215 TO OPERATE A ROUTE BETWEEN MODESTO AND SACRAMENTO

WHEREAS, the San Joaquin Joint Powers Authority started an early morning Amtrak service that was scheduled to get people to Stockton and Sacramento by 8:00am which stopped operating, and

WHEREAS, on May 7, 2019, by Resolution 2019-215, Council authorized the implementation of a new commuter route to Sacramento, and

WHEREAS, the route was never started due to delays in getting agreements with the City of Stockton and Manteca, and

WHEREAS, in the planning discussions with the San Joaquin Regional Transit District (SJRTD), it would be better to implement a route between Modesto and Stockton, and connect people to the existing service operated by SJRTD between Stockton and Sacramento, and

WHEREAS, it is proposed to start a new route to Manteca and Stockton using a Modesto Area Express (MAX) commuter bus, and

WHEREAS, MAX has received some inquiries to operate a route that provides service between Modesto, Manteca and Stockton to replace the service being stopped by Amtrak.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the implementation of a new Modesto Area Express commuter route to Stockton, CA.

BE IT FURTHER RESOLVED, that Resolution 2019-215 to operate a route between Modesto and Sacramento is rescinded.

BE IT FURTHER RESOLVED, that the Modesto Area Express fares are updated to reflect new fares for the new commuter route as shown on **Exhibit A.**

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-180

RESOLUTION APPROVING A LIST OF PROJECTS TO BE FUNDED WITH ROAD REPAIR AND ACCOUNTABILITY ACT TAX PROCEEDS IN FISCAL YEAR 2020-21

WHEREAS, Senate Bill 1 (SB 1), the Road Repair and Accountability Act of 2017 (Chapter 5, Statues of 2017) was passed by the Legislation and Signed into law by the Governor in April 2017 to address the significant multi-modal transportation funding shortfalls statewide, and

WHEREAS, SB 1 includes accountability and transparency provisions that will ensure the residents of our City are aware of the projects proposed for funding in our community and which projects have been completed each fiscal year, and

WHEREAS, the City must adopt by resolution a list of projects proposed to receive fiscal year funding from the Road Maintenance and Rehabilitation Account (RMRA), created by SB 1, which must include description and the location of each proposed project, a proposed schedule for projects completion, and the estimated useful life of the improvement, and

WHEREAS, the City will receive an estimated $4,064,467 in RMRA funding in Fiscal Year 2020-21 from SB 1, and

WHEREAS, this is the fourth year in which the City is receiving SB 1 funding and will enable the City to continue essential road maintenance and rehabilitation projects, safety improvements, and increasing access and mobility options for traveling public that would not have otherwise been possible without SB 1 funding, and

WHEREAS, the City has conducted a robust public process to ensure public input, Community outreach meetings and calls received from citizens regarding

THIS RESOLUTION WAS RESCINDED BY MODESTO CITY COUNCIL RESOLUTION NO. 2020-249 ON JUNE 02, 2020

conditions of streets in their neighborhoods were considered in evaluating and developing a list for improvements, and

WHEREAS, the City used a Pavement Management System to develop the SB 1 project list to ensure revenues are being used on the high priority and cost effective projects that also meet the community's priorities for the transportation investment, and

WHEREAS, the funding from SB 1 will help the City maintain and rehabilitate streets that have been targeted for improvements and add active transportation infrastructure throughout the City this year and similar projects into the future. The city's Slurry Seal Program will preserve and increase street life by five to seven years ensuring smoother and safer pavement conditions for vehicle travel, and

WHEREAS, the 2018 California Statewide Local Streets and Roads Needs Assessment found that the City's streets are in fair/good condition and this revenue will help us increase the overall quality of our street and road system and over the next decade will bring our streets into an excellent/good condition, and

WHEREAS, the SB 1 project list and overall investment in our local streets and road infrastructure with a focus on basic maintenance and safety, investing in complete streets infrastructure and using cutting-edge technology, materials and practices, will have significant positive co-benefits statewide.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto, that it hereby adopts the list of projects in **Attachment A** for Fiscal Year 2020-21 and funding by SB1: Road Repair and Accountability Act of 2017.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-181

RESOLUTION APPROVING AN AGREEMENT WITH THE HACH COMPANY BY UTILIZING THE COMPETITIVE BID PROCESS WITH THE CITY OF TURLOCK, CA, FOR A WATER INFORMATION MANAGEMENT SOLUTION, FOR A TOTAL AMOUNT NOT TO EXCEED $53,514 AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE THE AGREEMENT

WHEREAS, the Wastewater Services Division treats an average of 20-million gallons of sewage per day in compliance with permits issued by the State of California Central Valley Regional Water Quality Control Board (CVRWQCB). To maintain compliance with these permits, the City has to 1) maintain accurate records of water quality data collected by the Supervisory Control and Data Acquisition (SCADA) system and 2) generate reports to be submitted to the CVRWQCB for review on a monthly, quarterly and annual basis, and

WHEREAS, currently, the City utilizes a combination of the SCADA system and field operators to collect permit-required field data and the LabWorks Laboratory Management System for aggregation of results of permit-required water quality tests; this data is compiled manually from the various isolated databases or field sheets to then be submitted to the CVRWQCB, and

WHEREAS, the Wastewater Services Division is currently limited in its access to reliable performance reports because of a large data-footprint and data is stored in multiple databases, manually generated spreadsheets, hand-written forms and logs or is not being collected due to the inability to centralize the data to create useable, comprehensible performance reports, and

WHEREAS, staff requires access to multiple databases, sources and methods of data collection to provide a data-oriented decision-making process for plant process control, budgeting and planning, and

WHEREAS, the Wastewater Division worked with the Information Technology Department to determine the program best suited to the Wastewater Division's needs and the Hach Water Information Management Solution (WIMS) product was determined to be the best software to meet the City's needs and is designed to integrate water or wastewater treatment facilities databases, and allow for instant and easy report generation, and

WHEREAS, this data management software will allow the user access to multiple databases and provide a mechanism for cross-referencing data and using Hach WIMS software will allow the City to save labor hours and prevent inevitable human errors that can occur during manual data aggregation, and

WHEREAS, the software will allow for generation of proper performance reports and the combining of the facility's Operation's Log with site-specific dashboards and relevant plant performance metrics, which will assist the Operations and Maintenance staff by optimizing the facility's operation, and

WHEREAS, this software will become an integral part of planning, budgeting and day-to-day operations by providing complex data analytics to the staff in a simple, user-friendly format, and

WHEREAS, on April 17, 2019 the City of Turlock's – Purchasing Office issued Request for Proposal Bid No. 19-019 for a Data Management System; a notice of

solicitation was posted on the City of Turlock's website and advertised in the Turlock Journal, and

WHEREAS, on May 1, 2019 bids were formally opened at the City of Turlock Municipal Services Department Purchasing Office; two companies chose to respond, and

WHEREAS, Hach Company, Loveland, CO was the successful bidder based on being the lowest responsive and responsible bidder and awarded a one-year agreement from July 23, 2019 through June 22, 2020 with two additional one-year extension options, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid; however, exceptions to the formal bidding process are granted in MMC 8-3.204(d) "Where the Purchasing Manager, in his or her discretion, determines that a process other than the formal bid procedure set for in Section 8-3.203 will result in procurement for the City at the lowest possible cost commensurate with the desired quality," and

WHEREAS, in addition, MMC 8-3.202(d) encourages the Purchasing Manager to join with the State of California and other units of government in cooperative purchasing plans when the best cost savings for the City's interest would be served; this exception is satisfied because the City of Turlock did complete a competitive process for a Data Management System.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an agreement with the Hach Company by utilizing the competitive bid process with the City of Turlock, CA, for a Water Information Management Solution, for a total amount not to exceed $53,514.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-182

RESOLUTION APPROVING AMENDMENT #2 TO THE CITY OF MODESTO PROGRAM YEAR 2019-2020 ANNUAL ACTION PLAN AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ANY RELATED DOCUMENTS AND/OR AGREEMENTS

WHEREAS, as a U.S. Department of Housing and Urban Development (HUD) entitlement community, the City of Modesto is required to develop a Substantial Amendment to the Annual Action Plan when it makes changes to its planned or actual activities funded with Community Development Block Grant (CDBG), HOME Investment Partnerships (HOME), and Emergency Solutions Grant (ESG) funds, and

WHEREAS, HUD requires the City of Modesto develop, in consultation with its citizens and community-based service providers, a funding strategy that furthers its housing and community development goals as described in the City's Five-Year Consolidated Plan for FY 2015-2020, and

WHEREAS, citizen participation is a key component of the Substantial Amendment to the Annual Action Plan process, and

WHEREAS, HUD regulations require the City provide ample opportunity and means for the populations served by the grants, as well as the general citizenry, to provide input on the goals and priorities and the specific type of activities to be funded in the City's Substantial Amendment to the Program Year 2019-2020 Annual Action Plan, and

WHEREAS, on March 19, 2020 the State of California issued an Order of the State Public Health Officer that ordered all individuals to stay at their place of residence except as needed to maintain continuity of operations of the federal critical infrastructure

sectors and on March 19, 2020, the City Council adopted the proclamation of existence of a local emergency in response to the Coronavirus creating a hardship on local industries, and

WHEREAS, to assist with the threat to our local economy, the City is amending the Program Year 2019-2020 Annual Action, and

WHEREAS, the purpose of this second amendment is to create an Economic Development program to assist local business in the retention and creation of full-time equivalent jobs for low to moderate income persons. Assistance will be provided in the form of a forgivable loan. This program is being created in direct response to the COVID-19 pandemic that is putting a strain on the local economy, and

WHEREAS, in order to fund the development of this program, the City will be converting $300,000 in NSP program income to CDBG funds and as a result of this emergent need within the community, the following modifications are proposed as part of Amendment #2, and

WHEREAS, in compliance with the HUD approved waiver for the Citizen Participation Plan requirements, a 5-day public period to review and comment on the draft amendment opened April 9, 2020 and will close with a public hearing at the City Council meeting on April 14, 2020 and citizen participation was conducted completely online and Plan is available on the City of Modesto Website.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves Amendment #2 to City of Modesto Program Year 2019-2020 Annual Action Plan, a copy of which in on file with the City Clerk.

BE IT FURTHER RESOLVED that the City Manager or his designee his hereby authorized to execute any documents and/or agreements necessary to carry out the intent of this Resolution in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-183

RESOLUTION APPROVING THE CDBG SMALL BUSINESS ASSISTANCE PROGRAM AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ANY RELATED DOCUMENTS AND/OR AGREEMENTS

WHEREAS, on March 19, 2020 the State of California issued an Order of the State Public Health Officer that ordered all individuals to stay at their place of residence except as needed to maintain continuity of operations of the federal critical infrastructure sectors and on March 19, 2020, the City Council adopted the proclamation of existence of a local emergency in response to the Coronavirus creating a hardship on local industries, and

WHEREAS, to assist with the threat to our local economy, the city developed a CDBG Small Business Assistance Program is designed to stimulate economic growth and help sustain employment within the City of Modesto, and

WHEREAS, the Economic Development program will assist local business in the retention and creation of full-time equivalent jobs for low to moderate income persons. Assistance will be provided in the form of a forgivable loan. This program is being created in direct response to the COVID-19 pandemic that is putting a strain on the local economy, and

WHEREAS, businesses receiving these funds will in turn be required to create new jobs, retain existing jobs, benefit a residential neighborhood, or assist a business where 51 percent of its clients are considered low- to moderate-income, and

WHEREAS, through the underwriting of this program City staff will review proposals and determine the type of assistance based on the applicant's project proposal.

Proposals will be assessed in accordance with 24 CFR § 570.209- Guidelines for evaluating and selecting economic development projects, and

WHEREAS, Businesses receiving this type of assistance will be required to meet a national objective as described in 24 CFR Part 570.208; the national objective will determine the goal outcome the business will be responsible to complete, and

WHEREAS, all assistance will start as a loan and will be converted to a forgivable loan if the terms and goals as listed in the loan agreement is fulfilled, and

WHEREAS, businesses that receive assistance must demonstrate the creation or retention of at least one (1) low- to moderate-income FTE job per $35,000 of CDBG funds used in order to qualify for loan forgiveness.

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Modesto hereby approves the CDBG Small Business Assistance Program and the CDBG Small Business Assistance Program Regulations on file with the City Clerk.

BE IT FURTHER RESOLVED that the City Manager or his designee is authorized to execute any documents and/or agreements necessary to carry out the CDBG Small Business Assistance Program in such form as approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION APPROVING THE COVID-19 SMALL BUSINESS ASSISTANCE PROGRAM TO SUPPORT MODESTO'S SMALL BUSINESS COMMUNITY TO HELP THEM RETAIN EMPLOYEES AND REDUCE BUSINESS CLOSURES IN THE WAKE OF THE COVID-19 PANDEMIC AND REALLOCATING FUND FOR THIS PURPOSE

WHEREAS, on March 4, 2020, Governor Gavin Newsom proclaimed a State of Emergency to exist in California as a result of the threat of the COVID-19 virus; and

WHEREAS, on March 11, 2020, the Stanislaus County Public Health Officer declared a local health emergency, and

WHEREAS, on March 12, 2020, March 15, 2020 and March 16, 2020, Governor Gavin Newsom issued new executive orders further enhancing state and local government's ability to respond to COVID-19 Pandemic, and

WHEREAS, on March 13, 2020, the County of Stanislaus Director of Emergency Services proclaimed a Local Emergency due to the threat of COVID-19 in the County, and

WHEREAS, on March 13, 2020, the President of the United States, Donald Trump, declared a state of national emergency in response to the COVID-19 outbreak, and

WHEREAS, on March 13, 2020, the City Manager, in his capacity as Director of Emergency Services, proclaimed the existence of local emergency in the City of Modesto in response to COVID-19. The proclamation advising the community to remain in their homes and direct staff to explore potential resources to potentially minimize the financial impact to our citizens and businesses was ratified through Resolution 2020-140 by the City Council, and

WHEREAS, on March 19, 2020, the Governor issued Executive Order N-33-20, ordering all residents of the State of California to stay home or at their place of residence in accordance with the current State public health directives; and

WHEREAS, on March 31, Stanislaus County's Health Services Agency released the order directing all individuals living in the county to stay at home or place of residence except that they may leave to provide or receive certain essential services or engage in certain essential activities and work for essential businesses or governmental services; and

WHEREAS, in order to alleviate the economic impacts of the COVID-19 virus, the City seeks to implement the COVID-19 Small Business Assistance Program to encourage economic relief and stimulus, and reduce financial hardship for impacted businesses in the City, including a small business incentive fund, and

WHEREAS, the proposed COVID-19 Small Business Assistance program includes assistance to small business by deferring City fees, taxes and utility bills, reallocate Economic Development Incentive Program for Downtown funds and Community Development Block Grant funds to the Business Assistance Program, and coordinate with community partners to run multiple social media campaigns and other campaigns to encourage residents and others to support Modesto's small businesses during this time.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that if hereby approves the COVID-19 Small Business Assistance Program to support Modesto's small business community to help them retain employees and reduce business closures in the wake of the COVID-19 pandemic and reallocating funds for this purpose.

BE IT FURTHER RESOLVED, that as part of the COVID-19 Small Business Assistance Program City Manager or his designee is hereby authorized to:

1. Allow the deferral of business-related Mill Tax for businesses that have a quarterly gross receipt of up to $500,000 for up to 90 calendar days.
2. Allow the deferral of small business water and sewer bills for up to 90 calendar days.
3. Reallocate Economic Development Incentive Program for Downtown funds and Community Development Block Grant funds to the Business Assistance Program.

BE IT FURTHER RESOLVED, that said local emergency and Business Assistance Program shall be deemed as continuing to exist until proclaimed otherwise by the City Manager/Director of Emergency Services and the City Council.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Grewal, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-186

RESOLUTION APPROVING AN AGREEMENT WITH THE CITY OF CERES TO OPERATE THE PUBLIC TRANSIT SERVICES IN CERES, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Ceres has requested that the City of Modesto operate transit services in Ceres as an extension of the Modesto Area Express system (MAX), and

WHEREAS, Ceres operates Ceres Area Transit (CAT) fixed route service and Ceres Area Dial-A-Ride (CDAR) demand-response service, and

WHEREAS, Modesto operates the MAX fixed-route and Modesto Area Dial-A-Ride (MADAR) paratransit demand response services that serve the Modesto urban area, and

WHEREAS, this agreement with the City of Ceres authorizes the City of Modesto to operate transit services in Ceres, and

WHEREAS, Ceres will provide their existing vehicles, bus stops and other bus stop assets to Modesto to use for the service, and

WHEREAS, all funding for this service would come from the Transportation Development Act (TDA), which include operations, maintenance and administrative functions.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves an agreement with the City of Ceres to operate the public transit services in Ceres.

NOW, THERE BE IT FURTHER RESOLVED, that the City Manager, or his designee, execute the agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Ridenour, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-187

RESOLUTION APPROVING THE AGREEMENT WITH THE CITY OF ESCALON TO OPERATE THE ESCALON TRANSIT SYSTEM; AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Escalon has requested that the City of Modesto operate their transit system, and

WHEREAS, the Escalon transit system is named "eTrans" and provides door-to-door dial-a-ride service within the City of Escalon, and

WHEREAS, it also provides deviated fixed route service between the Downtown Escalon Park and Ride Lot and Northwest Modesto, and

WHEREAS, Escalon understands that their city is better linked regionally to Modesto than Stockton, as the eTrans route operates to Modesto, and

WHEREAS, operating this system would not impact the farebox recovery requirements of Modesto, as the City of Escalon would retain the administrative functions and responsibility for the Transportation Development Act (TDA), and

WHEREAS, all funding for this service would come from Escalon, which include operations, maintenance and administrative functions.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves the agreement with the City of Escalon to operate the Escalon Transit System.

THEREFORE, BE IT FURTHER RESOLVED, that the City Manager, or his designee, is authorized to execute the agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 14th day of April, 2020, by Councilmember Grewal, who moved its adoption, which motion being duly seconded by Councilmember Kenoyer, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-188

RESOLUTION ADOPTING THE 2020 STATE AND FEDERAL LEGISLATIVE PLATFORM, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO CARRY OUT THE NECESSARY STEPS TO HELP THE CITY ACHIEVE THE PRIORITIES IDENTIFIED IN THE PLATFORM

WHEREAS, the State and Federal Governments allocate several million dollars for cities for programs and support with policy adoption on an annual basis, and

WHEREAS, best practices show that cities and organizations alike need to proactively engage with legislature by taking positions, providing testimony, monitoring legislation, and employing strategic advocacy to receive favorable legislation or funding, and

WHEREAS, in light of increasing local obligations with issues such as COVID-19 (Coronavirus), homelessness, public pensions, housing development, and increasing expectations from residents, cities are actively seeking additional support from the State and Federal government to help meet these obligations, and

WHEREAS, the City intends to update the Legislative Platform to educate and inform the State and Federal Government of the legislative priorities for the City to help ensure the City is proactively tackling some of its most pressing issues.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby adopts the 2020 State and Federal Legislative Platform for the City of Modesto.

BE IT FURTHER RESOLVED, the City Manager, or his designee, is hereby authorized, to carry out the necessary steps to help the city achieve the priorities identified in the platform.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-189

RESOLUTION APPROVING THE AWARD OF PROPOSALS AND AGREEMENT FOR CONSULTANT SUPPORT WITH STATE ADVOCACY SERVICES TO TOWNSEND PUBLIC AFFAIRS FOR A TWO-YEAR AGREEMENT WITH ONE 1-YEAR EXTENSION FOR AN ANNUAL COST NOT TO EXCEED $60,000, AND FOR A TOTAL AGREEMENT AMOUNT NOT TO EXCEED $180,000, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the state government allocates several million dollars for cities for programs and support with policy adoption on an annual basis, and

WHEREAS, local government agencies rely on the expertise of state and federal government consultants to represent their respective government agencies in Sacramento and Washington DC, and

WHEREAS, best practices show that cities and organizations alike need to proactively engage with legislature by taking positions, providing testimony, monitoring legislation, and employing strategic advocacy to receive favorable legislation and funding, and

WHEREAS, state advocacy services provide support with identifying legislation and agency policies that may affect cities and reflect how the proposed policy or legislation may supplement or hinder the progress of initiatives or issues, and

WHEREAS, the City most recently had an agreement with Pillsbury, Winthrop, Shaw, Pittman, LLP for federal advocacy services through 2016, as approved by Resolution 2014-245, and

WHEREAS, in light of the increasing local demands on cities related to such challenges as COVID-19 (Coronavirus), homelessness, deferred maintenance of critical

infrastructure, emission standards, orders to reduce water usage, and others, the City is seeking to re-establish an agreement for state advocacy services, and

WHEREAS, the City Manager authorized the Purchasing Manager to issue formal Request for Proposals (RFP) for consultants to perform state advocacy services on behalf of the City, and

WHEREAS, on September 3, 2019, proposals were formally opened by the City Clerk's Office, and the City received 4 responsive and responsible proposals for this RFP, none of which were from local vendors, and

WHEREAS, scope of work will primarily include support for the City to secure additional funding and favorable legislation through the following methods:

- Identifying funding opportunities and providing support to the City in securing these funds;
- Providing support with creating a comprehensive legislative strategy that is designed to help City departments leverage support from the State and Federal governments;
- Providing detailed analysis of government activity on issues that affect the City, and offer recommendations for the City; and
- Arranging meetings and advising staff and Council through meetings with key legislators and government departments to help position the City for funding opportunities, favorable legislation, or support with defeating unfavorable legislation,

WHEREAS, based on the recommendations provided by an interdepartmental evaluation committee, the award of the RFP for state advocacy services is recommended to be awarded to Townsend Public Affairs, for an annual amount not to exceed $60,000, and

WHEREAS, the City intends to enter into a two-year agreement with one 1-year extension for total cost not-to-exceed $180,000.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of proposals and agreement for consultant support with state advocacy services to Townsend Public Affairs for two-year agreement with one 1-year extension for an annual cost not to exceed $60,000, and for a total agreement amount not to exceed $180,000.

BE IT FURTHER RESOLVED, that the City Manager, or his designee, is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-191

RESOLUTION APPROVING A THIRD AMENDMENT TO THE LEGAL SERVICES AGREEMENT WITH KRONICK, MOSKOVITZ, TIEDEMANN & GIRARD (KRONICK) FOR PERSONNEL AND ADMINISTRATIVE INVESTIGATION SUPPORT, FOR A 3-MONTH EXTENSION SET TO EXPIRE ON SEPTEMBER 30, 2020 AND INCREASING THE AGREEMENT AMOUNT BY $25,000, FROM $50,000 TO $75,000, AND AUTHORIZING DEPUTY CITY MANAGER, CALUHA BARNES, TO EXECUTE THE AGREEMENT

WHEREAS, in 2019, Kronick, Moskovitz, Tiedemann & Girard was retained to provide advice to the City Council in a labor and personnel matter that could not be performed in-house, and

WHEREAS, the scope of work has included the review of personnel and administrative investigations and the provision of independent legal advice concerning appropriate courses of action based on the results of such investigations, and

WHEREAS, the firm was originally retained for $25,000, which is within the spending authority of the City Manager and the need for services and support from Kronick continued, which required the following amendments that are also within the spending authority of the City Manager, and

WHEREAS, the First Amendment increased the spending authority by $5,000 to a not-to-exceed amount of $30,000, and

WHEREAS, the Second Amendment increased the spending authority by $20,000 for a not-to-exceed amount of $50,000, and

WHEREAS, the need for Kronick continues and requires an additional amendment for an additional estimated cost of $25,000 for a total not to exceed amount of $75,000 with a term expiring on September 30, 2020, and

WHEREAS, the total cost is not to exceed $75,000 and is budgeted within the City's General Liability Fund.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a Third Amendment to the Legal Services Agreement with Kronick, Moskovitz, Tiedemann & Girard in an amount not to exceed $75,000 with a term expiring on September 30, 2020 to continue providing services to the City Council. BE IT FURTHER RESOLVED, that Deputy City Manager, Caluha Barnes, is hereby authorized to execute the agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION NO. 2020-192

RESOLUTION APPROVING AN UPDATE ON THE CITY'S DEBT MANAGEMENT POLICY

WHEREAS, pursuant to the City of Modesto Debt Management Policy, last adopted on May 28, 2019, the City of Modesto is required to periodically review and update its Debt Management Policy to address changes to the primary objectives related to the City's debt and financing related activities, and

WHEREAS, staff has identified the need to update the City's Debt Management Policy in order to continue to maintain cost-effective access to the capital markets through prudent yet flexible policies; moderate principal and debt service payments through effective planning and project cash management; achieve the lowest cost of borrowing; and achieve the highest practical credit ratings, and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto, that it hereby adopts the revised Debt Management Policy.

BE IT FURTHER RESOLVED that City staff is hereby authorized and directed to proceed with any and all actions deemed necessary or advisable, following the adopted policy guidelines pursuant to this Resolution, in connection with the future issuances of the City Debt, for future consideration by this City Council.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-194

RESOLUTION APPROVING THE AWARD OF BID AND SERVICE AGREEMENT FOR THE PORTABLE TOILET RENTAL SERVICES TO UNITED SITE SERVICES, INC., MODESTO, CA, AND TO SUN VALLEY PORTABLE RESTROOMS, INC., TURLOCK, CA, FOR A TWO-YEAR AGREEMENT WITH THREE ONE-YEAR OPTIONS, FOR AN ESTIMATED ANNUAL COST OF $54,888 IN THE FIRST YEAR AND TOTAL AMOUNT NOT TO EXCEED $274,440 OVER FIVE YEARS TO ALLOW FOR POTENTIAL CPI INCREASES FOR YEARS 3-5 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto requires the use of portable toilet rental services on a regular basis across multiple departments, and

WHEREAS, the uses range from temporary services for construction projects, special events such as Concerts in the Park and Earth Day, to regular monthly service at the Mary E. Grogan Soccer Complex, and

WHEREAS, the needs for these services include but are not limited to compliance with health and safety codes for personnel, providing ADA accessible units on sites where ADA accessibility does not exist, and increasing the count of available units to meet the demand of high use facilities and locations, and

WHEREAS, on January 10, 2020 the Purchasing Division issued Request for Bid (RFB) 1819-22 for the portable toilet rental services, and

WHEREAS, two vendors responded and United Site Services, Inc., Modesto, CA and Sun Valley Portable Restrooms, Inc., were responsible bidders, and

WHEREAS, selecting a primary and an alternate provides a backup against services interruptions if the primary is unable to provide the rental services based on the demand of the City, and

WHEREAS, Modesto Municipal Code (MMC) Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow formal bid procedures and RFB No. 1819-22 conforms with this MMC.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid and agreement for Portable Toilet Rental Services to United Site Services, Inc., Modesto, CA as the primary supplier for daily, weekly and monthly rentals and the secondary supplier for yearly rentals and Sun Valley Portable Restrooms, Inc., Turlock, CA as the primary supplier for yearly rentals and secondary supplier for daily, weekly and monthly rentals for a two (2) year agreement with three (3) one-year extension options, for an annual estimated cost of $54,888 between both agreements, and a total amount not to exceed $274, 440 over five years.

BE IT FURTHER RESOLVED, that the City Manager, or his designee is hereby authorized to execute the agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-195

RESOLUTION APPROVING THE AWARD OF BID AND PURCHASE OF TWO (2) 6" TRAILER MOUNTED PUMPS TO WESTERN OILFIELDS SUPPLY CO. DBA RAIN FOR RENT, BAKERSFIELD CA, FOR A TOTAL AMOUNT NOT TO EXCEED $84,394 AND AUTHORIZING THE PURCHASING MANAGER OR HER DESIGNEE, TO ISSUE THE PURCHASE ORDER

WHEREAS, the City Manager authorized the Purchasing Division to issue formal Request for Bids (RFB) 1920-20 for the purchase of two (2) 6" trailer mounted pumps; and

WHEREAS, on September 19, 2019, the Purchasing Division issued RFB No. 1920-20 for the purchase of two (2) 6" trailer mounted pumps; and

WHEREAS, Prospective bidders were notified online, via email and phone call of the bid opportunity. Fifteen (15) companies chose to download the RFB document; and

WHEREAS, on October 22, 2019, bids were formally opened in the City Clerk's office. Nine (9) companies chose to respond, none of which were local vendors; and

WHEREAS, four (4) companies provided responsive and responsible bids, five (5) companies were deemed non-responsive; and

WHEREAS, based on providing the overall lowest responsive and responsible bid, City staff recommends the award for the purchase of two (2) 6" trailer mounted pumps to Western Oilfields Supply Co. DBA Rain For Rent, of Bakersfield, CA for a total cost not to exceed $84,394. The vendor is awarded the bid based on the lowest responsive and responsible bid per the **attached** cost abstract, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to follow formal bid procedures. The award of RFB No. 1920-20 for the purchase of two

(2) 6" trailer mounted pumps, conforms to the Modesto Municipal Code based on providing the overall lowest responsive and responsible bid.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the award of bid for the purchase of two (2) 6" trailer mounted pumps to Western Oilfields Supply Co. DBA Rain For Rent, of Bakersfield, CA for an amount not to exceed $ 84,394.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee is hereby authorized to issue the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

RESOLUTION REJECTING ALL BIDS RECEIVED FOR RFB 1819-43 FOR RADIO AND COMMUNICATION EQUIPMENT SERVICE, REPAIR AND PREVENTATIVE MAINTENANCE; AND AUTHORIZING STAFF TO REISSUE AN RFB AT FUTURE DATE, WITH AN AMENDED SCOPE OF SERVICE

WHEREAS, various divisions throughout the city of Modesto including departments of Police, Fire and Utilities require that the use of mobile radios, portable radios and fixed radios to communicate during the work day; and

WHEREAS, these radios require service and repair on an as-needed basis to ensure that they are working properly for emergency situations and daily operations; and

WHEREAS, the City Manager authorized the Purchasing Division to issue a Request for Bid (RFB) for Radio and Communication Equipment Services, Repair and Preventative Maintenance; and

WHEREAS, on November 14, 2019 the Purchasing Division issued RFB 1819-43 on the City's website and 28 vendors downloaded the RFB; and

WHEREAS, bids were formally opened in the City Clerk's office on December 10. 2019, three vendors chose to respond, one of which was a local vendor; and

WHEREAS, after careful review, staff felt it was in the City's best interest to reject all bids in order to review and amend the RFB scope of services and pricing schedule to request more specific information from prospective bidders; and

WHEREAS, in accordance with Modesto Municipal Code Section 8-3.203(e), Formal Bid Procedures, the Council has the authority to accept or reject any or all bids, and the rejection of all bids for the Radio and Communication Equipment Service, Repair

and Preventative Maintenance compliance to the Modesto Municipal Code 8-3.203, subsection (e).

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the rejection of all bids received for Request for Bid 1819-43 for Radio and Communication Equipment Service, Repair and Preventative Maintenance.

BE IT FURTHER RESOLVED, that staff is authorized to reissue an amended Request for Bids at a later date.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-197

RESOLUTION APPROVING THE PURCHASE ORDER FOR ELECTRONIC CITATION PRINTERS AND ACCESSORIES TO MSA SYSTEMS, SAN JOSE, CA, BY UTILIZING THE COMPETITIVE BID PROCESS WITH THE STATE OF CALIFORNIA, FOR A TOTAL AMOUNT NOT TO EXCEED $133,622, AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE PURCHASE ORDER

WHEREAS, the City of Modesto utilizes Crossroads Software products for the Modesto Police Department and Public Works, Traffic Operations Division; and

WHEREAS, the Modesto Police Department is implementing the Crossroads e-Citation software that requires hand-held printers; and

WHEREAS, the printers must adhere to the California Judicial council printing specs and fonts, and Racial Identity Profiling Act AB953 (RIPA) requirements, and must be preloaded with the Crossroads Software; and

WHEREAS, MSA Systems has the only State of California Multiple Award Schedule (CMAS) Contract which allows local governments to use CMAS without further bidding; and

WHEREAS, the Finance Department's Purchasing Division recommended utilizing the agreement from the State of California Contract to MSA Systems, Inc, San Jose, CA. Contract No. 3-18-70-2117H for Information Technology Goods and Services; and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases which meet or exceed $50,000 for material, equipment or contractual service to be formally bid; however, there are exceptions to the rule set forth in the Modesto Municipal Code; and

WHEREAS, exceptions to the bidding process are granted in MMC 8-3.204(d) "Where the Purchasing Manager, in her discretion determines that a process other than the formal bid procedure set fourth in section 8-3.203 will result in a procurement for the City at the lowest possible cost commensurate with the desired quality; and

WHEREAS, in addition in MMC 8-3.202(h) encourages the Purchasing Manager to join with the State of California and other units of government in cooperative purchasing plans where the best cost savings interest of the City would be served; and

WHEREAS, MSA Systems is the exclusive vendor that can provide the printers preloaded with the printer configurations and fonts that are compliant with the Judicial Council.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the purchase of the electronic printers and accessories from MSA Systems, San Jose, CA, for a total amount not to exceed $133,622.

BE IT FURTHER RESOLVED, that the Purchasing Manager, or her designee, is hereby authorized to execute the purchase order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-198

RESOLUTION APPROVING THE RENEWAL OF THE CITY'S MICROSOFT "ENTERPRISE AGREEMENT" (EA) FOR MICROSOFT LICENSES BY UTILIZING THE COUNTY OF RIVERSIDE COOPERATIVE AGREEMENT NO. RIVCO- 2020-RFQ-000048 WITH DELL TECHNOLOGIES INC., OF ROUND ROCK, TX, FOR A THREE-YEAR AGREEMENT, FOR AN ANNUAL ESTIMATED COST OF $600,000 AND A TOTAL AMOUNT NOT TO EXCEED $1.8M OVER THREE YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto has standardized on Microsoft products to conduct city business, and

WHEREAS, Microsoft licenses are required for users and devices that access Microsoft systems and resources, and

WHEREAS, the Microsoft Enterprise Agreement is a compressive volume licensing program that offers substantial cost savings over standard license pricing, and

WHEREAS, on May 2nd 2017 by resolution 2017-166 the Council approved a three-year Microsoft Enterprise Agreement with Insight Public Sector through the County of Riverside cooperative agreement, and

WHEREAS, the current Microsoft Enterprise Agreement expires April 30th 2020 and requires renewal, and

WHEREAS, the County of Riverside has completed a recent formal Request for Quotation process for Microsoft Enterprise Agreement licensing, and

WHEREAS, the County of Riverside Cooperative Agreement (RIVCO-2020-RFQ-000048) is intended to be available and leveraged by government agencies throughout the State of California as a cooperative agreement, and

WHEREAS, Modesto Municipal Code Section 8-3.203 generally requires all purchases, which meet or exceed $50,000 for material, equipment or contractual services to be formally bid, and

WHEREAS, MMC 8-3.202(h) states that "With the approval of Council, join with the State of California and other units of government in cooperative purchasing plans when the best interest of the City would be served thereby", and

WHEREAS, this purchase conforms to the Modesto Municipal Codes.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approved the renewal of the City's Microsoft Enterprise Agreement by utilizing the County of Riverside Cooperative Agreement No. RIVCO-2020-RFQ-000048 with Dell Technologies Inc., of Round Rock, TX, for a three-year agreement, for an annual estimated cost of $600,000 and a total amount not to exceed $1.8M over three years.

BE IT FURTHER RESOLVED, that the City Manager or his designee is hereby authorized to execute the agreement in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-199

RESOLUTION APPROVING AN AMENDMENT TO THE PURCHASING AGREEMENT WITH SCOTO FARMING FOR DISCING AND FLAIL MOWING SERVICES AND EXTENDING THE TERM OF THE AGREEMENT FROM MARCH 2, 2020 TO SEPTEMBER 2, 2020, AND AUTHORIZING THE PURCHASING MANAGER, OR HER DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, the City of Modesto requires discing and flail mowing services to be performed on nineteen (19) City-owned locations consisting of 564 acres as part of the weed abatement program to for fire breaks and to control the over-growth of weeds and grasses, and

WHEREAS, in 2015, the Purchasing Division issued Request for Bids (RFB) No. 1415-17 for Discing and Flail Mowing Services, and

WHEREAS, by Resolution No. 2015-063, Council awarded SCOTO Farming, Modesto, CA a two-year agreement (Purchasing Agreement) with three (3) one-year extensions, and

WHEREAS, the -Purchasing Agreement was executed in compliance with Modesto Municipal Code Section 8-3.20, and

WHEREAS, the estimated annual cost for the Purchasing Agreement was $42,000 and $210,000 over five (5) years, and

WHEREAS, Purchasing Agreement expired on March 2, 2020 with a remaining contract balance of $74,040, and

WHEREAS, issuance of a new Request for Bids for discing and flair mowing services is delayed, and

WHEREAS, interim discing and flail mowing services are needed for the Parks, Recreation and Neighborhoods Department, the Fire Department, and the Public Works Department, and

WHEREAS, staff desires and SCOTO Farming has agreed to provide interim service under the same terms and conditions as originally approved by Council until the new Request for Bids is issued later this year, and

WHEREAS, payment for interim services will be funded by the remaining agreement balance and shall not exceed the five-year total set forth in the Purchase Agreement, and

WHEREAS, staff recommends amending the Purchasing Agreement and extending the term of the agreement from March 2, 2020 through September 2, 2020.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the amendment to the Purchasing Agreement with SCOTO Farming for discing and flail mowing services and extending the term of the agreement from March 2, 2020 through September 2, 2020.

BE IT FURTHER RESOLVED that the Purchasing Manager, or her designee, has the authority to execute the agreement.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-200

RESOLUTION APPROVING FREE FARES ON MODESTO AREA EXPRESS BUSES DURING THE COVID-19 OUTBREAK BETWEEN APRIL 6, 2020 AND MAY 10, 2020, AND APPROVING FREE FARES ON MODESTO AREA DIAL-A-RIDE BETWEEN APRIL 23, 2020 AND MAY 10,2020, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXTEND THE SUSPENSION OF THE COLLECTION OF FARES ON MODESTO AREA EXPRESS BUSES AND MODESTO AREA DIAL-A-RIDE THROUGH JUNE 30, 2020 IF RESIDENTS OF MODESTO REMAIN SUBJECT TO A SHELTER AT HOME ORDER

WHEREAS, due to the public health emergency of the COVID-19 pandemic the Modesto Area Express (MAX) system has reduced service to Saturday service on Weekdays, and

WHERAS, the service hours for Modesto Area Dial-A-Ride (MADAR) have not been affected, and

WHEREAS, MAX and MADAR are committed to the collective well-being and health of the riders and employees, and

WHEREAS, MAX and MADAR have provided signage and social media posts to encourage riders to only make essential trips, maintain social distancing and other health recommendations issued by the Centers for Disease Control and Prevention (CDC), and

WHEREAS, MAX and MADAR are deemed to provide an essential service during the coronavirus (COVID-19) pandemic, and

WHEREAS, providing free fares on MAX and MADAR would provide several benefits to riders and drivers, and

WHEREAS, on March 13, 2020, the City Manager, in his capacity as Director of Emergency Services, proclaimed the existence of local emergency in the City of Modesto

in response to COVID-19 pursuant to Government Code section 8630 and Modesto Municipal Code section 3-4.06; and

WHEREAS, on March 19, 2020, the City Council adopted Resolution 2020-140 ratifying the proclamation of a local emergency; and

WHEREAS, Government Code section 8634 and Modesto Municipal Code section 3-4.06 authorize the City Manager to take actions reasonably related to the protection of life and property as affected by the COVID-19 emergency; and

WHEREAS, in order to ensure compliance with the recommendations and orders of State and County health officials regarding social distancing, the City Manager used his emergency powers to suspend the collection of MAX fares effective April 6, 2020 and MADAR fares effective April 23, 2020; and

WHEREAS, the CARES Act will provide operating expenses of transit agencies related to the response to a coronavirus public health emergency as described in section 319 of the Public Health Service Act, beginning on January 20, 2020, and

WHEREAS, reimbursement for operating costs to maintain service and lost revenue due to the coronavirus public health emergency are eligible expenses.

NOW, THEREFORE BE IT RESOLVED, by the Council of the City of Modesto that it hereby approves free fares on Modesto Area Express buses during the COVID-19 outbreak between April 6, 2020 and May 10, 2020, and approves free fares on Modesto Area Dial-A-Ride between April 23, 2020 and May 10, 2020.

BE IF FURTHER RESOLVED that the City Manager, or his designee, is authorized to extend the suspension of the collection of fares on Modesto Area Express

buses and Modesto Area Dial-A-Ride through June 30, 2020 if residents of Modesto remain subject to a shelter at home order.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-201

RESOLUTION APPROVING THE PRE-QUALIFIED CONSULTANT LIST FOR CONSTRUCTION MANAGEMENT AND INSPECTION SERVICES FOR VARIOUS CAPITAL IMPROVEMENT PROGRAM (CIP) PROJECTS FOR A PERIOD OF ONE YEAR, WITH TWO (2) ONE-YEAR EXTENSIONS AT THE WRITTEN APPROVAL OF THE DIRECTOR OF UTILITIES

WHEREAS, the Construction Administration group for the City of Modesto is housed within the Utilities Department, and is responsible for construction management and inspection services for nearly all capital projects over $50,000, emergency projects, and inspection of all encroachment permits issued by the City, and

WHEREAS, from time to time, project workload and permit workload requires more resources than the City has available internally, and

WHEREAS, retaining a pre-qualified list with consultants allows the Utilities Department to have accelerated access to specific construction management and inspection services, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural & Engineering Services for Capital Projects, which is in compliance with State of California Government Code, Sections 4526-4529, staff solicited and formally advertised a Request for Qualifications (RFQ) through PlanetBids website, and

WHEREAS, staff received Statements of Qualifications (SOQs) and Proposals from sixteen firms, one of which were considered local firms, and

WHEREAS, after careful review of the qualifications it was determined that each of the firms exhibited unique strengths in the different fields of construction

management, but only the top five most qualified firms were selected to be placed on the prequalified list, and

WHEREAS, these firms are NV5, Inc., West Yost and Associates, TRC Companies, and HDR Inc., and

WHEREAS, when construction management and inspection are required for a particular project, an RFP with a specific scope of work will be issued to either all or select firms from the List, depending on the strengths of the firm and the needs of the project, and

WHEREAS, following proposal evaluation, interviews may be conducted to select the most qualified firm, and

WHEREAS, an agreement for construction management and inspection services will then be presented to City Council for approval, if the total amount of the agreement exceeds $50,000, and

WHEREAS, the Prequalified Consultant List will be active for one year from the date of Council approval, after which the List may be extended via two additional one-year extensions at the written approval of the Director of Utilities, and

WHEREAS, in the event the firms listed are deemed to lack experience or expertise for specific projects, the City may recruit other consultants for individual projects and not be restricted to only using the approved List, and

WHEREAS, the Director will have the authority to request a separate solicitation process and add more firms to this list of pre-qualified firms through a formal selection procedure per Administrative Directive 3.1, and

WHEREAS, City staff recommends approving the Pre-Qualified List for on-call construction management and inspection services.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves a Pre-qualified Consultant List for Construction Management and Inspection Services for various Capital Improvement Projects for a period of one year, with two additional one-year extensions at the written approval of the Director of Utilities.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-202

RESOLUTION APPROVING A PREQUALIFIED CONSULTANT LIST CONSISTING OF CAROLLO ENGINEERS, WALNUT CREEK, CA, WOODARD AND CURRAN, SACRAMENTO, CA, WEST YOST ASSOCIATES, INC., DAVIS, CA, PROVOST & PRITCHARD CONSULTING GROUP, MODESTO, CA, AND HAZEN AND SAWYER, SAN FRANCISCO, CA FOR WATER ENGINEERING DESIGN SERVICES FOR VARIOUS CAPITAL IMPROVEMENT PROGRAM PROJECTS FOR A PERIOD OF ONE YEAR, WITH THE POSSIBILITY OF TWO ADDITIONAL ONE-YEAR EXTENSIONS AT THE WRITTEN APPROVAL OF THE DIRECTOR OF UTILITIES

WHEREAS, there are a number of Capital Improvement Program (CIP) projects that may require outside consultant services for efficient project delivery, and

WHEREAS, retaining a prequalified, as-needed list of consultants, allows the Utilities Department to have accelerated access to specific water engineering design services, when necessary, and this will eliminate the need to send out repetitive Requests for Qualifications (RFQ) for projects of similar scope and/or type, saving staff time and project costs, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural & Engineering Services for Capital Projects, which is in compliance with State of California Government Code, Sections 4526-4529, staff solicited and formally advertised an RFQ through Planet Bids for water engineering design services, and

WHEREAS, on January 10, 2020, staff received ten (10) Statements of Qualifications (SOQs), two (2) of which were considered local firms, and

WHEREAS, after careful review of the SOQs, the following firms were selected as the five most qualified, none of which were local: 1) Carollo Engineers; 2) Hazen and

Sawyer; 3) Provost & Pritchard Consulting Group; 4) West Yost Associates Inc.; and 5) Woodard and Curran, and

WHEREAS, the prequalified engineering design consultant list would be used for CIP projects with a total budget of $2 million or more, and

WHEREAS, generally, the scope of work to be provided by engineering consultants would include preparation of preliminary design reports (PDR), final design and potentially peer review for projects such as, but not limited to, water wells, wellhead treatment, and water pump stations, and

WHEREAS, when services are needed for water engineering design, a Request for Proposals (RFP) with a specific scope of work may be issued to these firms, and

WHEREAS, following an evaluation process, City staff will then select the most qualified firm, and

WHEREAS, an agreement for services will then be presented to City Council for approval, and

WHEREAS, all of the selected firms have proposed the use of various local firms as subconsultants, with participation depending on scope of project, and

WHEREAS, this prequalified consultant list will be active for one year from the date of Council approval, at which time the City may extend the list, and

WHEREAS, staff requests approval of two additional one-year extensions at the written approval of the Director of Utilities, and

WHEREAS, in the event the firms listed on the prequalified list are deemed to lack experience or expertise for specific projects, the City retains the right to recruit

consultants for individual projects and not be restricted to only using the approved list, and

WHEREAS, a formal process will be conducted should this situation occur.

NOW, THEREFORE BE IT RESOLVED by the Council of the City of Modesto that it hereby approves the prequalified consultant list, consisting of Carollo, Walnut Creek, CA, Woodard and Curran, Sacramento, CA, West Yost Associates, Inc., Davis, CA, Provost & Pritchard Consulting Group, Modesto, CA, and Hazen and Sawyer, San Francisco, CA for water engineering design services for various Capital Improvement Program projects for a period of one year, with the possibility of two additional one-year extensions at the written approval of the Director of Utilities.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-204

RESOLUTION APPROVING AN ON-CALL AGREEMENT FOR ARCHITECTURAL DESIGN SERVICES, WITH REDD INC. ARCHITECTS, MODESTO, CA, FOR A ONE-YEAR AGREEMENT, WITH TWO ONE-YEAR EXTENSION OPTIONS, FOR AN ANNUAL COST NOT TO EXCEED $100,000, AND A TOTAL COST NOT TO EXCEED $300,000 OVER THREE YEARS, AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO EXECUTE THE AGREEMENT

WHEREAS, there are a number of Capital Improvement Program (CIP) projects that may require outside consultant services for efficient project delivery, and

WHEREAS, retaining on-call professional services consultants allows the department to have quick access to specific architectural engineering services, when needed, and

WHEREAS, on-call professional services consultants can provide designs for small projects using experienced staff and offer a quick turnaround, which is essential to efficient implementation of the City's CIP projects, and

WHEREAS, this will eliminate the need to send out repetitive Requests for Qualifications (RFQ) for projects of similar scope and/or type, saving staff time and project costs, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural & Engineering Services for Capital Projects, which is in compliance with State of California Government Code, Sections 4526-4529, staff solicited and formally advertised an RFQ through Planet Bids for architectural engineering services for on-call services, and

WHEREAS, on January 1, 2020, staff received three (3) Statement of Qualifications (SOQ) for architectural design services, and

WHEREAS, after careful review of the SOQ/Proposal by Utilities Department staff, Redd Inc. Architects, Modesto, CA., was selected as the most qualified firm to provide on-call architectural design services, and

WHEREAS, when on-call architectural design services are required on an "as needed" basis, written task orders will be issued to the consultant identifying the scope, cost, and schedule to complete specific task, and

WHEREAS, to fund consultant work for project-specific task orders, funds will be budgeted and encumbered against each specific CIP project account as the project is assigned, and

WHEREAS, consultant invoices will be paid from each specific CIP project on a task order basis received and verified by Capital Improvement Services (CIS) staff, and

WHEREAS, when on-call professional services are required, staff will prepare task order(s), and

WHEREAS, the consultant will not perform any services until CIS management has approved the proposed specific task order and a written Notice to Proceed is prepared and sent to the consultant, prior to commencement of services, and

WHEREAS, costs for on-call architectural design services are not expected to exceed $100,000 per year and the total cost for the proposed three-year contract term (initial one-year term, with two one-year extensions) is not to exceed $300,000.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an On-call Agreement for Architectural Design Services with Redd Inc. Architects, Modesto, CA, for a one-year agreement, with two one-year

extension options, for an annual cost not to exceed $100,000, and a total cost not to exceed $300,000 over three years.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute said Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

WHEREAS, this will eliminate the need to send out repetitive Requests for Qualifications (RFQ) for projects of similar scope and/or type, saving staff time and project costs, and

WHEREAS, in accordance with Administrative Directive 3.1, Selection Procedures for Professional Consultants Who Provide Architectural & Engineering Services for Capital Projects, which is in compliance with State of California Government Code, Sections 4526-4529, staff solicited and formally advertised an RFQ through Planet Bids for structural engineering services for on-call services, and

WHEREAS, on January 1, 2020, staff received three (3) Statement of Qualifications (SOQ) for structural engineering services, and

WHEREAS, after careful review of the SOQ/Proposal by Utilities Department staff, Kennedy Jenks Consultants Inc., was selected as the most qualified firm to provide on-call structural engineering services, and

WHEREAS, when on-call professional services are required on an "as needed" basis, written task orders will be issued to the consultant identifying the scope, cost, and schedule to complete specific task, and

WHEREAS, to fund consultant work for project-specific task orders, funds will be budgeted and encumbered against each specific CIP project account as the project is assigned, and

WHEREAS, consultant invoices will be paid from each specific CIP project on a task order basis received and verified by Capital Improvement Services (CIS) staff, and

WHEREAS, when on-call professional services are required, staff will prepare task order(s), and

WHEREAS, the consultant will not perform any services until CIS management has approved the proposed specific task order and a written Notice to Proceed is prepared and sent to the consultant, prior to commencement of services, and

WHEREAS, costs for on-call structural engineering are not expected to exceed $100,000 per year and the total cost for the proposed three-year contract term (initial one-year term, with two one-year extensions) is not to exceed $300,000.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves an On-Call Agreement for Structural Engineering Services, with Kennedy Jenks Consultants Inc., Fresno, CA, for a one-year agreement,

with two one-year extension options, for an annual cost not to exceed $100,000, and a total cost not to exceed $300,000 over three years.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to execute said Agreement, in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Kenoyer, who moved its adoption, which motion being duly seconded by Councilmember Ah You, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-206

RESOLUTION APPROVING AN AMENDMENT TO THE CITY OF MODESTO FISCAL YEAR 2015-2020 CONSOLIDATED PLAN, AMENDMENT #3 TO THE PROGRAM YEAR 2019-2020 ANNUAL ACTION PLAN, AN AMENDMENT TO THE CITIZEN PARTICIPATION PLAN TO IDENTIFY AND ALLOCATE ADDITIONAL FUNDS MADE AVAILABLE THROUGH THE CORONAVIRUS AID, RELIEF, AND ECONOMIC SECURITY ACT AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ANY RELATED DOCUMENTS AND/OR AGREEMENTS

WHEREAS, as a U.S. Department of Housing and Urban Development (HUD) entitlement community, the City of Modesto is required to develop a Substantial Amendment to the Annual Action Plan when it makes changes to its planned or actual activities funded with Community Development Block Grant (CDBG), HOME Investment Partnerships (HOME), and Emergency Solutions Grant (ESG) funds, and

WHEREAS, HUD requires the City of Modesto develop, in consultation with its citizens and community-based service providers, a funding strategy that furthers its housing and community development goals as described in the City's Five-Year Consolidated Plan for FY 2015-2020, and

WHEREAS, citizen participation is a key component of the Substantial Amendment to the Annual Action Plan process, and

WHEREAS, HUD regulations require the City provide ample opportunity and means for the populations served by the grants, as well as the general citizenry, to provide input on the goals and priorities and the specific type of activities to be funded in the City's Substantial Amendment to the Program Year 2019-2020 Annual Action Plan, and

WHEREAS, on March 19, 2020 the State of California issued an Order of the State Public Health Officer that ordered all individuals to stay at their place of residence except as needed to maintain continuity of operations of the federal critical infrastructure sectors and on March 19, 2020, the City Council adopted the proclamation of existence of a local emergency in response to the Coronavirus creating a hardship on local industries, and

WHEREAS, on March 27, 2020, the United States Congress passed the Coronavirus Aid, Relief, and Economic Security Act (CARES Act – H.R. 748), and

WHEREAS, the bill under CDBG-CV waives the 30-day comment period for a substantial amendment and reduces it to five (5) days, it eliminates the in-person public hearing and allows grantees the option of holding virtual hearings, it suspends the 15 percent cap on public services, including FY19 and FY20 CDBG funds, it allows HUD to waive further requirements (except related to fair housing, nondiscrimination, labor standards, and the environment), and it allows grantees to be reimbursed for COVID-19 response activities regardless of the date the costs were incurred, and

WHEREAS, the bill under ESG-CV allows recipients to deviate from regular procurement standards when procuring goods and services to prevent, prepare for, and respond to COVID-19, it allows recipients to use up to 10 percent of the allocation for administrative purposes. In addition to the 10 percent for admin, these funds can be used to provide hazard pay, including for time worked prior to the date of this bill, for staff working directly to prevent, prepare for, and respond to COVID-19 among the homeless or persons at-risk of homelessness, it allows funds to not be subject to the Citizen Participation requirements, it removes a match requirement, it removes a cap on

emergency shelter activities, it allows funds to be used to provide temporary shelters (through leasing of existing property, temporary structures, or other means) to prevent, prepare for, and respond to COVID-19, and it removes the application of environmental reviews, and

WHEREAS, on April 1, 2020, HUD released the Community Development Block Grant – Coronavirus (CDBG-CV) funding allocation for the City of Modesto in the amount of $1,118,269, and

WHEREAS, on April 1, 2020, HUD released the Emergency Solutions Grants – Coronavirus (ESG-CV) funding allocation for the City of Modesto in the amount of $567,410, and

WHEREAS, on April 14, 2020, in direct response to the COVID-19 pandemic that is putting a strain on the local economy, the City created the Small Business Assistance Program (SBAP) to provide assistance to local business in the retention and creation of full-time equivalent jobs for low to moderate income persons, and

WHEREAS, in order to fund the development of this program, the City converted $300,000 in NSP program income to CDBG funds and the following modification are proposed as part of Amendment #3, and

WHEREAS, CDBG-CV funding will replace CDBG funding initially allocated to the Small Business Assistance Program and increase the amounts from $300,000 to $800,000, and

WHEREAS, $94,615 of CDBG-CV funding will allocated to the Public Services Project, and

WHEREAS, $223,653 of CDBG-CV funding will allocated to Planning and Administration, and

WHEREAS, $250,000 of ESG-CV funding will allocated to Emergency Shelter and Outreach Project support in response to COVID-19, and

WHEREAS, $40,669 of ESG-CV funding will allocated to the Homeless Prevention Project in relation to COVID-19, and

WHEREAS, $20,000 of ESG-CV funding will allocated to the Administration and Activity Delivery costs associated with the Homeless Prevention Project, and

WHEREAS, $200,000 of ESG-CV funding will allocated to the HMIS Project towards the COVID-19 System Update and the Administration and Compliance with FEMA requirements, and

WHEREAS, in compliance with the HUD approved waiver for the Citizen Participation Plan requirements, a 5-day public period to review and comment on the draft amendment opened April 23, 2020 and will close with a public hearing at the City Council meeting on April 28, 2020 and citizen participation was conducted completely online and Plan is available on the City of Modesto Website.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Modesto that it hereby approves Amendment #3 to City of Modesto Program Year 2019-2020 Annual Action Plan, a copy of which in on file with the City Clerk.

BE IT FURTHER RESOLVED; that the City Manager or his designee to execute any documents and/or agreements necessary to carry out the intent of this Resolution in a form approved by the City Attorney.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Ah You, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-207

RESOLUTION AMENDING THE FISCAL YEAR 2019-20 OPERATING AND MULTI-YEAR PROJECT BUDGETS TO RE-ALLOCATE COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG) FUNDS AND EMERGENCY SOLUTIONS GRANT (ESG) FUNDS AS PROPOSED IN THE PROGRAM YEAR 2019-20 ANNUAL ACTION PLAN AMENDMENT NO. 3 AND AUTHORIZING THE CITY MANAGER, OR HIS DESIGNEE, TO TAKE THE NECESSARY STEPS TO IMPLEMENT THE PROVISIONS OF THIS RESOLUTION

WHEREAS, the City of Modesto receives annual entitlements from HUD based on its population size, number of households living below poverty level and number of sub-standard housing units, and

WHEREAS, on May 14, 2019, by Resolution 2019-240, City Council approved the Program Year 2019 Annual Action Plan, and

WHEREAS, on September 10, 2019, by Resolution 2019-404, City Council approved the Program Year 2019 Annual Action Plan Amendment No. 1, and

WHEREAS, on April 14, 2020, by Resolution 2020-182, City Council approved the Program Year 2019 Annual Action Plan Amendment No. 2, and

WHEREAS, on March 27, 2020 the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) was signed by President Trump to respond to the public health crisis, and

WHEREAS, the CARES Act immediately provides a special allocation of CDBG funds and ESG funds to be used to prevent, prepare for, and respond to the coronavirus pandemic (COVID-19), and

WHEREAS, certain budgetary transactions are necessary to reallocate funds during the course of the Consolidated Plan cycle when there is a change in allocation priorities, or method of distribution, carrying out new activities with CPD funds, change

in purpose, scope, location or beneficiaries of an activity, and

WHEREAS, the Fiscal year 2019-20 operating and multi-year budget must be amended as shown in **Exhibit A**, which is incorporated by reference herein to reflect an approved reallocation of funds as set forth in the Integrated Disbursement and Information System (IDIS) reporting system.

NOW, THEREFORE, BE IT RESOLVED, that the Council of the City of Modesto that it hereby approves the amendment of the Fiscal year 2019-20 Budget as shown in **Exhibit A attached** hereto.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized to implement the provision of this resolution.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Ah You, who moved its adoption, which motion being duly seconded by Councilmember Zoslocki, was upon roll call carried and the resolution adopted by the following vote:

SUBSTANTIAL AMENDMENT

City of Modesto

2019 Annual Action Plan

Substantial Amendment #3

City Council April 28, 2019:

On March 27, 2020 the United States Congress passed the Coronavirus Aid, Relief, and Economic Security Act (H.R. 748). The bill provided $5 billion for CDBG and $4 billion for ESG to rapidly respond to COVID-19 and the economic, housing, and homelessness impacts caused by it.

The City of Modesto will receive $1,118,269 in Community Development Block Grant – Coronavirus (CDBG-CV) and $567,410 in Emergency Solutions Grants – Coronavirus (ESG-CV). A substantial Amendment to the FY 2019-2020 Annual Action Plan is required, and usually a 30-day public comment period is required; however, the U.S. Department of Housing and Urban Development (HUD) has waived this requirement provided that no less than five (5) days are provided for public comments on each substantial amendment.

The purpose of the Substantial Amendment is to reallocate, add, and define the following Eligible Uses caused by COVID-19:

1. **Economic Development**

   Funding: $800,000 From the CARES Act - CDBG-CV Allocation

   Description: To assist local business in the retention and creation of full-time equivalent jobs for low to moderate income persons. Assistance will be provided in the form of grant, loan, and/or rebate. $50,000 of the $800,000 will be utilized for activity delivery costs. It is projected for the City to assist in the retention and/or creation of 22 low- to moderate-income full-time equivalent jobs.
   Target Area: City-Wide
   Goals Supported: CD-2 Promote Economic Development Activity
   Needs Addressed: CD-2 Promote Economic Development Activity
   Target Date: 06/30/2020
   Estimated Number of Persons served: 22 low/mod income Full-Time Equivalent Jobs
   Location Description: City-Wide
   National Objective: Low/Mod Jobs
   Citation: 570.208 (a)(4)
   Matrix Code: 17D,18A
   Citation: 24 CFR 570.203 (a), 24 CFR 570.203 (b)
   Funding Source: Community Development Block Grant – Coronavirus (CDBG-CV);

OMB Control No: 2506-0117 (exp. 06/30/2018)

Fiscal Year: 2019-20 funds
HUD ID #:

2. **Public Services**

   Funding: $94,615 From the CARES Act - CDBG-CV Allocation

   Description: To assist public service activities affected by COVID-19; for example, assisting public service providers that offer job training, diagnosis, health services, equipment, and supplies for public services.
   Target Area: City-Wide
   Goals Supported: Services - Anti-Poverty
   Needs Addressed: CD-3 Provide Public Services for Residents
   Target Date: 06/30/2020
   Estimated Number of Persons served: TBD
   Location Description: City-Wide
   National Objective: Low/Mod Clients
   Citation: 570.208 (a)(2)
   Matrix Code: TBD
   Citation: 24 CFR 570.201(e)
   Funding Source: Community Development Block Grant – Coronavirus (CDBG-CV);
   Fiscal Year: 2019-20 funds
   HUD ID #:

3. **CDBG-CV Planning & Administration**

   Funding: $223,653 From the CARES Act - CDBG-CV Allocation

   Description: This project will fund administrative expenses related to the planning and administration of CDBG-CV projects and activities including but not limited to development of HUD plans, contract development, project monitoring, and enforcement of federal regulations.
   Target Area: N/A
   Goals Supported: N/A
   Needs Addressed: N/A
   Target Date: 06/30/2020
   Estimated Number of Persons served: N/A
   Location Description: 1010 10th Street, Modesto, CA 95354
   National Objective: N/A
   Citation: 570.206
   Matrix Code: 21A
   Funding Source: Community Development Block Grant – Coronavirus (CDBG-CV);
   Fiscal Year: 2019-20 funds
   HUD ID #:

4. **Emergency Shelter Support and Outreach**

   Funding: $250,000 From the CARES Act - ESG-CV Allocation

   Description: Individuals experiencing homelessness are at greater risk of exposure to a variety of infectious diseases including COVID-19. Taking effective sanitation measures can reduce the spread of COVID-19 for people who are unsheltered or living in emergency shelters. This Emergency Shelter Outreach Project will be

utilized to provide street outreach - equipping staff with masks, disposable gloves, etc. and hire additional staff to support infectious disease preparedness.
Target Area: City-Wide
Goals Supported: HM-1 Address Chronic Homelessness
Needs Addressed: HM-5 Coordinated Case Management
Target Date: 06/30/2020
Estimated Number of Persons served: 500 low/mod income persons
Location Description: City-Wide
National Objective: Low- and Moderate-Income Individuals
Citation: 570.208 (a)(1)
Matrix Code: TBD
Citation: TBD
Funding Source: Emergency Solutions Grants - Coronavirus (ESG-CV);
Fiscal Year: 2019-20 funds
HUD ID #:

5. **Homeless Prevention Rental Assistance**

   Funding: $220,000 From the CARES Act - ESG-CV Allocation

   Description: The City will provide Homeless Prevention short-term rental assistance to those affected by COVID-19. The objective of the Homeless Prevention Rental Assistance project is to prevent homelessness by paying for rent, utilities, arears, etc. This assistance will be in the form of a grant.
   Target Area: City-Wide
   Goals Supported: Services – Anti-Poverty
   Needs Addressed: HM-4 Prevent Homelessness for those At-risk & Rapid Rehousing
   Target Date: 06/30/2020
   Estimated Number of Persons served: 65 low/mod income persons
   Location Description: City-Wide
   National Objective: Low- and Moderate-Income Individuals
   Citation: 570.208 (a)(1)
   Matrix Code: TBD
   Citation: TBD
   Funding Source: Emergency Solutions Grants - Coronavirus (ESG-CV);
   Fiscal Year: 2019-20 funds
   HUD ID #:

6. **HMIS**

   Funding: $40,669 From the CARES Act - ESG-CV Allocation

   Description: To assist with updating the City's system and staff time associated with COVID-19 FEMA requirements.
   Target Area: N/A
   Goals Supported: N/A
   Needs Addressed: N/A
   Target Date: 06/30/2020
   Estimated Number of Persons served: N/A
   Location Description: 1010 10th Street, Modesto, CA 95354
   National Objective: N/A
   Citation: 570.107
   Matrix Code: TBD

Citation: §58.34(a)(9); §58.34(a)(3); §58.35(b)(3); and §58.35(a)(5);
Funding Source: Emergency Solutions Grants - Coronavirus (ESG-CV);
Fiscal Year: 2019-20 funds
HUD ID #:

In addition, for purposes of an expedited use of the CDBG-CV and ESG-CV the bill:

CDBG-CV

- Suspends the 15% cap on public services, including FY19 and FY20 CDBG funds;
- Eliminates in-person public hearings and allows grantees the option of holding virtual hearings;
- Allows HUD to waive further program requirements (except for requirements related to fair housing, nondiscrimination, labor standards, and the environment); and,
- Allows grantees to be reimbursed for COVID-19 response activities regardless of the date the costs were incurred.

ESG-CV

- Allows recipients to deviate from regular procurement standards when procuring goods and services to prevent, prepare for, and respond to the coronavirus;
- Recipients can use up to 10 percent of the allocation for administrative purposes. In addition to the 10 percent for admin, these funds can be used to provide hazard pay, including for time worked prior to the date of this bill, for staff working directly to prevent, prepare for, and respond to coronavirus among the homeless or persons at-risk of homelessness;
- The funds are not subject to the Citizen Participation requirements;
- No match requirement;
- No cap on emergency shelter activities;
- Funds can be used to provide temporary shelters (through leasing of existing property, temporary structures, or other means) to prevent, prepare for, and respond to the coronavirus; and,
- Environmental review standards will no apply to these funds.

MODESTO CITY COUNCIL
RESOLUTION NO. 2020-208

RESOLUTION CERTIFYING THE FINAL ENVIRONMENTAL IMPACT REPORT FOR THE CITY OF MODESTO WATER MASTER PLAN (SCH # 2016082069) IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; ALONG WITH MAKING CERTAIN FINDINGS REGARDING SIGNIFICANT IMPACTS, FINDINGS SUPPORTING REJECTION OF ALTERNATIVES, ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM; ALL IN CONNECTION WITH APPROVAL OF THE PROJECT CONTEMPLATED BY THE FINAL ENVIRONMENTAL IMPACT REPORT

WHEREAS, the City's Utilities Department ("City") on August 26, 2016, published a Notice of Preparation for the City of Modesto Water Master Plan (Project), which identified potentially significant environmental impacts attributable to the improvements included in the proposed project, on which the City determined that an Environmental Impact Report ("EIR") was required, and

WHEREAS, the City published and distributed a Draft EIR dated October 2019 for the City of Modesto Water Master Plan (SCH # 2016082069) for public comment on October 15, 2019, in accordance with Section 15168 of the California Environmental Quality Act ("CEQA Guidelines"), and

WHEREAS, the Draft EIR was available for public comment for a period of 45 days as required by Section 21091 of CEQA, the close of the public comment period being December 2, 2019, in accordance with Section 21091 of the CEQA Guidelines, and

WHEREAS, during the 45-day public comment period the City received five letters commenting on the Draft EIR, and

WHEREAS, the City prepared written responses to all written comments received on the Draft EIR, said responses being contained in a Final EIR for the City of Modesto

Water Master Plan (SCH # 2016082069) ("Final EIR") prepared pursuant to Section 15089 of the CEQA Guidelines, and

WHEREAS, the Final EIR was published and distributed on April 13, 2020, and consists of the Draft EIR, a list of commenters, copies of written comments received, and responses to those comments that raise environmental issues, revisions to the text of the Draft EIR, as required by Section 15132 of the CEQA Guidelines, and

WHEREAS, CEQA requires that, in connection with the approval of a project for which an EIR has been prepared which identifies one or more significant environmental effects the lead agency make certain findings regarding those effects, and

WHEREAS, the City Council has received and considered the Final EIR that analyzed the potential environmental effects of the proposed Project.

NOW, THEREFORE BE IT RESOLVED by the City Council that it hereby has reviewed and analyzed the Final EIR and other information in the record, and has taken such other actions as are necessary and appropriate to make the following findings in respect to the Final EIR, and makes said findings:

1. That the Final EIR has been completed in compliance with CEQA; that the City Council has reviewed and analyzed the Final EIR and other information in the record and has considered the information contained therein, including the written and oral comments received at the public hearings on the Final EIR and the Project, prior to acting upon or approving the Project; and that the Final EIR represents the independent judgment of the City of Modesto; and

2. That the Findings and recommendations set forth in **Exhibit A**, and incorporated herein by reference, are made by the City Council as the City's findings under the California Environmental Quality Act ("CEQA") (Pub. Resources Code § 21000 *et seq.*) and the CEQA Guidelines (Cal. Code Regs., title 14 § 15000 *et seq.*) relating to the Project. The Findings provide the written analysis and conclusions of the City Council regarding the Project's environmental impacts and mitigation measures to the Project; and

3. That pursuant to Public Resources Code Section 21081 and CEQA Guidelines Section 15093, the City Council of Modesto adopts and makes the following statement of overriding considerations regarding the remaining unavoidable impacts of the Project and the anticipated economic, social and other benefits of the Project.

a. Significant Unavoidable Impacts

With respect to the foregoing findings, as set forth in **Exhibit A**, and in recognition of those facts which are included in the record, the City has determined the following:

i. that the Project will contribute to significant and unavoidable cumulative impacts to Agricultural Resources (including cumulative impacts), Air Quality (including cumulative impacts), Greenhouse Gas Emissions and Energy Resources (including cumulative impacts), and Hydrology and Water Quality (including cumulative impacts), as described in **Exhibit B**.

These impacts cannot be avoided or substantially reduced by feasible changes or alterations to the Project, other than the changes or alterations already adopted.

b. Overriding Considerations

The City Council specifically adopts and makes this Statement of Overriding Considerations that this Project includes all feasible measures that would eliminate or substantially lessen the significant impacts of the Project on the environment, and that the remaining significant, unavoidable impacts of the Project are acceptable in light of the environmental, economic, social, and other considerations set forth herein because the benefits of the Project outweigh the significant and adverse impacts of the Project. The City Council finds that each of the overriding considerations set forth below, and each of the overriding considerations set forth in **Exhibit B**, constitutes a separate and independent ground for finding that the benefits of the Project outweigh its significant adverse environmental impacts and sets forth an overriding consideration warranting approval of the Project. These matters are supported by evidence in the record.

c. Benefits of the Proposed Project

The City Council has considered the Final EIR, the public record of proceedings on the proposed Project and other written materials presented to the City as well as oral and written testimony at all public hearings related to the Project, and does hereby determine that implementation of the Project as specifically provided in the Project documents would result in the substantial public benefits set forth below and in **Exhibit B**. The Proposed Program will:

i. Implement and support the City's economic goals and General Plan by planning for and providing water infrastructure in a timely and cost-effective manner to serve new and existing development;

ii. Clearly define the City's long-term water supply needs (from both groundwater and the Modesto Irrigation District's [MID's] surface water supplies) and identify the associated infrastructure required to deliver these supplies to existing and future customers;

iii. Provide the flexibility, system redundancy, and reliability at a reasonable cost to accommodate possible changing future conditions (regulatory, climate, additional conservation, etc.);

iv. Repair and replace aging water infrastructure;

v. Ensure adequate water infrastructure and services are available to serve new growth within the General Plan area, the City's sphere of influence (SOI), and the outlying service areas;

vi. Plan for state-of-the-art facilities that reliably and economically meet changing regulatory requirements;

vii. Provide safe and reliable water supply by planning for and constructing appropriately sized storage facilities, redundancies, and alternate (back up) power supplies for key facilities;

viii. Provide adequate storage capacity to meet operational, fire flow, and emergency storage needs;

ix. Maintain system pressures that meet regulatory requirements and peak demand conditions;

x. Provide transmission and distribution pipelines to safely and reliably convey water throughout the water system;

xi. Provide safe and reliable water that meets regulatory water quality requirements;

xii. Evaluate a groundwater aquifer storage and recovery program; and

xiii. Sustainably utilize and protect groundwater resources

The City Council has weighed the benefits of the proposed Project against its unavoidable environmental risks and adverse environmental effects identified in the Final EIR and hereby determines that those benefits outweigh the risks and adverse environmental effects and, therefore, further determines that these risks and adverse environmental effects are acceptable.

4. That the City Council finds that the Final EIR describes a range of reasonable alternatives to the project. However, none of the alternatives to the Project that

were determined to be potentially feasible in the EIR will avoid or substantially lessen the significant and unavoidable impacts of the project to a level of insignificance. Further, specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EIR which would reduce these impacts to a level of insignificance. The City Council finds and determines that these significant and unavoidable adverse impacts are acceptable and that the Project may be approved despite these impacts for the reasons specified in the Statement of Overriding Considerations. The City Council further finds that there are no additional feasible alternatives that the City Council could adopt at this time that would reduce the impacts summarized in **Exhibit B** to a less-than-significant level.

5. The City Council does hereby designate the Director of Utilities Department of the City of Modesto, at his office at 1010 Tenth Street, Modesto, California 95354, as the custodian of documents and the record of proceedings on which the decision is based.

6. The City Council does hereby make the foregoing findings with respect to the significant effects on the environment of such Project, as identified in the Final EIR, with the stipulations that all information in these findings is intended as a summary of the full administrative record supporting the Final EIR, which full administrative record should be consulted for the full details supporting these findings, and that any mitigation measures and/or alternatives that were suggested by commenters to the Draft EIR and were not adopted as part of the Final EIR are hereby expressly rejected for the reasons stated in the responses to comments set forth in the Final EIR and elsewhere in the record.

7. In compliance with the California Environmental Quality Act (CEQA Guidelines Section 15097), if the City Council has made findings required under paragraph (1) of subdivision (a) of Section 15091, where mitigation measures are required to avoid, substantially lessen, or reduce to a less-than-significant level the environmental effects of certain elements of the Project, as identified in the EIR, the lead agency must adopt a Mitigation Monitoring and Reporting Program to ensure that the Project mitigation measures identified in the EIR are implemented and the party responsible for their implementation is identified.

BE IT FURTHER RESOLVED, by the City Council that it hereby certifies the Final Environmental Impact Report for the City of Modesto Water Master Plan (SCH # 2016082069), **attached** as **Exhibits C1 & C2;** adopts the associated Mitigation Monitoring and Reporting Program, **attached** as **Exhibit D;** approves the Proposed Project; and directs staff to file a Notice of Determination.

The foregoing resolution was introduced at a regular meeting of the Council of the City of Modesto held on the 28th day of April, 2020, by Councilmember Zoslocki, who moved its adoption, which motion being duly seconded by Councilmember Ridenour, was upon roll call carried and the resolution adopted by the following vote:

AYES:	Councilmembers:	Ah You, Grewal, Kenoyer, Madrigal, Ridenour, Zoslocki, Mayor Brandvold
NOES:	Councilmembers:	None
ABSENT:	Councilmembers:	None

JOSE M. SANCHEZ, Acting City Attorney

EXHIBIT "A"

STATEMENT OF FINDINGS OF SIGNIFICANT IMPACTS

STATEMENT OF FINDINGS OF SIGNIFICANT IMPACTS AND REJECTION OF ALTERNATIVES

Pursuant to Public Resources Code Section 21081 and Section 15091 of the California Environmental Quality Act (CEQA) Guidelines (14 California Code of Regulations 15000, et seq.), the City of Modesto cannot approve a project for which an Environmental Impact Report (EIR) has been certified which identifies significant effects on the environment unless it adopts findings with respect to each significant effect. Prior to approving the project, the City of Modesto (City) must also find that there are specific considerations that make infeasible the project alternatives identified in the EIR.

In Section A below, the City will make one or more of the following findings for each of the significant effects identified in the EIR, pursuant to Section 15091 of the State CEQA Guidelines:

1. Changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

2. Such changes or alterations are within the responsibility of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

3. Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures identified in the EIR.

In Section B below, the City will make the following finding regarding each of the alternatives identified in the EIR:

> Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the alternatives identified in the program EIR.

SECTION A. FINDINGS REGARDING SIGNIFICANT IMPACTS

AESTHETICS

Impact AES-3: Degradation of Visual Character or Quality of Site and Surroundings During Construction

Finding:

Construction of proposed City of Modesto Water Master Plan (WMP) components, including new storage tanks, groundwater wells, pipelines, generators, and other capital improvement projects (CIPs) involving ground disturbing activities would be visible to various receptors near the construction work areas. For the various WMP components, nearby residents, patrons at nearby businesses, motorists, and recreationists using public roads would have temporary views of construction activities including heavy equipment operation, materials stockpiling of pipeline and other water system-related materials, and earth movement associated with trenching and grading. Views of pipeline construction activities would be likely be limited to several days at any given location since pipeline construction would likely progress at a rate of 200 to 400 feet per day. In contrast, construction of new and replacement wells would typically occur over a 1- to 1.5-year timeframe, and construction of new water storage tanks would extend over a longer period (typically several months up to 1.5 years, depending on size, construction method, site specific requirements, etc.). Depending on the size, wellhead treatment improvements typically require 3-12 months of construction and tank maintenance and repairs typically require 3-6 months of construction. Depending on where individual CIPs get built, views of these operations may be perceived as a degradation of the surrounding area's visual character. While such activities would be temporary and effects on the area's visual character would cease after construction is complete for a given CIP, disturbance could be significant for individual projects particularly if construction extends for over a year in a given area. Therefore, this impact would be significant.

Implementation of Mitigation Measure AES-1, which requires that staging areas be sited away from public areas and that work areas are maintained as clean as practical, would reduce this impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

The potentially significant effects listed above can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the EIR:

Mitigation Measure AES-1: Locate Staging Areas Away from Public Areas and Install Screening.

For components located in residential areas and near public parks or trails, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences,

major roadways, parks and other public areas. To the extent practicable, staging areas shall be sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials.

Impact AES-4: Degradation of Visual Character or Quality of Site and Surroundings During Program Operations

Finding:

Once constructed, all proposed pipeline components including fire flow improvements and grid improvements, extended and replaced water mains would be underground and would not be visible. Underground components would therefore have no impacts on the visual character of the surrounding area.

Aboveground components that would be constructed include new storage tanks, buildings to house booster pump stations and groundwater wells, and new or replacement water pumps at wells and/or booster pump stations. Wellhead treatment facilities will depend on the treatment method, and typically will include (but are not limited to) piping, treatment tanks approximately 15 feet high, monitoring equipment and appurtenances, structures and enclosures. Emergency generator sizing is dependent on the application but can be 20 feet long by 9 feet wide by up to 15 feet high with fuel storage. In addition, ongoing system security enhancements would involve aboveground improvements such as new fencing, security signage, lighting and other security measures at well and tank sites. These facilities would be visible from surrounding areas and could alter the visual character of each individual site. Aboveground storage tanks could be as high as 35 feet and have a diameter up to 250 feet, while partially buried tanks could have an aboveground height between 10 and 15 feet and a diameter up to 250 feet. Based on other pump station buildings seen throughout the Modesto region, associated pump station buildings may be approximately 20 feet tall and encompass an area of 2,000 to 2,500 square feet. Other ancillary features that may be visible include new outdoor lighting and fencing and gates around the perimeter of new water infrastructure. Views of these facilities may be available from residential and agricultural areas, public roadways, parks, and other public areas.

While these facilities are unlikely to degrade the visual character or quality of views from agricultural areas along the outskirts of Modesto (northern, eastern and western areas of Modesto), they have potential to degrade the visual character or quality of views from public recreation and residential areas as these viewers tend to have longer duration views and have an expectation of higher quality views. While the new water storage tanks would be constructed on parcels in predominantly agricultural areas, limited views would also be available from nearby residences that typically have a higher visual sensitivity. These tanks would also be visible from adjacent public roads and due to the large size of these facilities, would likely obscure views of orchard row crops and, depending on the vantage point, the Sierra Nevada mountain range in the distance. For this reason, impacts related to degradation of the visual character or quality of the site and surrounding area would be considered significant.

Implementation of design considerations as described in Mitigation Measures AES-2 would reduce this impact. Therefore, this impact would be considered less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

The potentially significant effects listed above can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the EIR:

Mitigation Measure AES-2: Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting.

Where wells, tanks, pump stations and other above-ground facilities are located in proximity to or are readily visible from residential areas, recreational areas, or public roadways, the facility and fencing shall be designed to be consistent with the surrounding setting, to the maximum extent feasible. The following design elements shall be used to enhance the aesthetic appearance of proposed facilities and to integrate them with the existing visual setting:

- New storage tanks and pump station buildings shall be set back from public views and, upon completing Mitigation Measure AES-2, the City and/or contractor shall consider partially burying tanks to minimize view obstructions.
- Proposed facility designs shall integrate elements such as color, materials, and pattern of the surrounding landscape.
- The exterior of aboveground facilities shall be painted or include appropriate concrete admixtures to achieve low-glare, earth-tone colors that blend with the surrounding terrain and visual setting.
- Wherever possible, use of unpainted metallic surfaces and other reflective sources that may cause increased levels of reflectivity shall be eliminated.
- Wherever possible, install native landscaping and/or fencing to help screen views of the water treatment plant, pump station, and water storage tanks from public roads and adjacent residences.
- Any outdoor night lighting shall be motion-activated and include baffles that direct lighting onto the facility and minimize light spillage onto adjoining properties.

Impact AES-5: Permanent Source of Substantial Light or Glare

Finding:

As described above under Impact AES-4, once constructed, all pipelines would be underground and would therefore not result in a new source of substantial light or glare.

New aboveground facilities that require on-site exterior lighting include new or replacement booster pump stations, storage tanks, wells, wellhead treatment facilities, generators, and water system security enhancements. New lighting at these facilities would be consistent with outdoor lighting currently used at similar facilities found throughout the Modesto area. Exterior coating of new pump stations and tanks would appear similar to existing structures seen throughout Modesto, and earth tones with non-reflective finishes would be used to coat aboveground components. However, because the exterior coating of proposed facilities has not been determined for aboveground facilities and there could be light spillage onto adjoining properties, permanent light or glare impacts would be considered significant.

Implementation of Mitigation Measure AES-2 would ensure that outdoor lighting is motion-activated and directed downward, and that the exterior of new facilities use non-reflective finishes, reducing this impact to less than significant with mitigation.

Supporting Evidence:

The potentially significant effects listed above can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the EIR:

Mitigation Measure AES-2: Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting.

See the description under Impact AES-4 above.

AGRICULTURAL RESOURCES

Impact AG-1: Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use

Finding:

For the purpose of this analysis, Program components preliminarily located in or near Farmland areas were evaluated as if they would be located in Farmland, despite the potential for changes in their actual location or land use designation. Therefore, the evaluated impact area and potential impacts discussed below may overstate the Proposed Program's actual impact. Program components located within the Baseline Developed Area or Downtown Area as identified in the *City of Modesto Urban Area General Plan* (City of Modesto 2019a) are considered to have minimal effect on agricultural lands and do not require mitigation for conversion of Farmland (City of Modesto 2019a).

The impacts of development of the urban area of Modesto have been previously considered in the City of Modesto's General Plan Master EIR (City of Modesto 2019b) and were found to be significant and unavoidable. While the majority of

proposed pipelines would be constructed within existing roadways or in urban/developed areas, some proposed build-out pipelines and grid improvements in Del Rio would be installed on land that is designated as Prime Farmland. Some build-out pipelines in the northeastern portion of the study area would be installed on land designated as Unique Farmland. Prior to constructing build-out pipelines on agricultural or undeveloped lands, the City typically requires developers to provide right-of-way dedications for utility improvements. Ground disturbing activities associated with these improvements would temporarily affect lands designated as Farmland. All of these pipeline improvements would be installed to serve areas planned for growth and would involve either open trench methods or trenchless methods at irrigation or utility crossings (e.g., jack and bore methods). Since the pipeline components would be underground, any disturbance to Farmland would be temporary, Farmland could be returned to pre-construction conditions after construction is complete, and land could continue to be used for agricultural purposes.

Aside from build-out pipelines, several water storage tanks and groundwater wells would be constructed on Prime Farmland or Unique Farmland. The proposed wells and tanks would result in the permanent conversion of approximately 10 acres of Farmland. This impact would be significant.

Considering the Stanislaus Local Area Formation Commission's (LAFCO's) Agricultural Preservation Policy (2015) and pursuant to Policy 2.15 in the *Stanislaus County General Plan* (Stanislaus County 2016), the County policy requires that agricultural land converted to residential use be replaced at a 1:1 ratio with agricultural land of equal quality in Stanislaus County. However, since the Proposed Program is not a residential project, these policies do not apply to the Program. While Stanislaus County's Farmland Mitigation Program provides a mechanism for establishing agricultural easements, the City has determined that this program is infeasible for the following reasons: (1) Stanislaus County policy is to mitigate the loss of and preserve Prime Farmland through the County's Farmland Mitigation Program, which is designed to address loss of farmland resulting from impacts of residential development, and the County policy is not to burden and increase the cost of new and improved public infrastructure that is needed by the community; and (2) the purchase of an agricultural conservation easement over other off-site agricultural land would not ultimately avoid or reduce the impact of converting Prime Farmland to non-agricultural uses caused by the Proposed Program because there still would be a net reduction in the total amount of Prime Farmland and therefore the easement over other land would not reduce the impact to a level of insignificance. No other feasible mitigation measures, such as restoration of Prime Farmland that has been previously converted or participation in another agricultural conservation easement program, have been identified to further reduce this impact.

As such, the City finds that no feasible changes or alterations have been identified which would lessen the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

Considering all of the WMP components as a whole, while construction-related impacts of several components would be temporary, some WMP components (e.g., wells and water storage tanks) would result in permanent conversion of Farmland. As described above, Stanislaus County's Farmland Mitigation Program is infeasible because it was intended to provide a mechanism for residential projects (not public infrastructures projects) to mitigate impacts associated with loss of Prime Farmland. No further feasible mitigation has been identified that could further reduce the Proposed Program's impacts related to permanent conversion of Farmland. Restoration and/or recovery of Farmland from existing urban uses to offset the loss of Farmland could mitigate the loss caused by the Proposed Program. However, such a measure would be unreasonably costly and inefficient and would, therefore, be infeasible. Therefore, the Proposed Program's overall impact would be significant and unavoidable.

Impact AG-3: Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use

Finding:

The Proposed Program would not directly or indirectly induce substantial population growth during construction but could result in the conversion of farmland to non-agricultural uses. The impacts of development of the urban area of Modesto have been previously considered in the City of Modesto General Plan Master EIR (City of Modesto 2019b) and were found to be significant and unavoidable.

As such, the City finds that no feasible changes or alterations have been identified which would lessen the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

This impact is discussed in more detail under Impact PH-3 below. Mitigation for specific development proposals that involve conversion of agricultural land, such as Mitigation Measure AG-1, would compensate for this impact; however, it would not avoid the conversion and reduce the impact to a less-than-significant level. In addition, the specifics regarding future development that may result in agricultural conversion are not known at this time, and implementation of this mitigation measure for such development is not considered feasible within the scope of the Proposed Program. Therefore, the Proposed Program's overall impact would be significant and unavoidable.

<u>AIR QUALITY</u>

Impact AQ-1: Conflict with or Obstruct Implementation of an Applicable Air Quality Plan

Finding:

The San Joaquin Valley Air Pollution Control District (SJVAPCD) established mass emission thresholds of significance for criteria pollutant emissions to be consistent with levels required to be consistent with the SJVAPCD air quality plans. Thus,

projects with emissions below the thresholds of significance for criteria pollutants would be determined to not conflict or obstruct implementation of the applicable air quality plans provided there are no individual measures listed in the air quality plans that the project would conflict or obstruct.

The Proposed Program would follow all federal, state, and local regulations and policies related to sources of air pollutants, including applicable general plan policies. In addition, construction of the Proposed Program would follow local air district regulations for fugitive dust, volatile organic compounds (VOCs), and nitrogen oxide (NO_X) emissions. Construction of various program-level CIPs may result in NO_X emissions that exceed the 10 tons per year emission threshold and could result in other criteria pollutant emissions that exceed SJVAPCD's thresholds; therefore, such components could obstruct implementation of applicable air quality plans, which would be a significant impact. It is also unknown at this time if the amount of operational emissions would exceed any significance threshold. This impact would be significant. Mitigation measures that would address construction emissions and operational emissions are discussed under Impact AQ-2. It is assumed that emissions from permitted sources would be addressed under the applicable permit process and any excess emissions would purchase offsets as required to obtain permits; however, this would not address construction or operational emissions which do not require permits.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

Mitigation measures that would address construction emissions and operational emissions are discussed under Impact AQ-2. It is assumed that emissions from permitted sources would be addressed under the applicable permit process and any excess emissions would purchase offsets as required to obtain permits; however, this would not address construction or operational emissions which do not require permits.

For the reasons described above, the overall Proposed Program and the various CIPs could generate emissions greater than those accounted for in the applicable air quality plans. Therefore, the Proposed Program could obstruct or conflict with applicable air quality plans and would have a significant and unavoidable impact.

Impact AQ-2: Violate Any Air Quality Standard or Contribute Substantially to an Existing or Projected Air Quality Violation

Finding:

The SJVAPCD considers emissions of particulate matter of aerodynamic radius of 10 micrometers or less (PM10) to be the greatest pollutant of concern when assessing construction-related air quality impacts. The SJVAPCD has determined that compliance with its Regulation VIII and the implementation of all feasible control measures specified in its *Guidance for Assessing and Mitigating Air Quality Impacts* (GAMAQI; San Joaquin Valley Air Pollution Control District 2015), constitute sufficient mitigation to reduce construction-related PM10 emissions to less-than-

significant levels and to minimize adverse air quality effects. Construction activities for individual program-level components would generate emissions of criteria air pollutants via the use of heavy equipment, worker vehicle trips, and material hauling truck trips.

Operation of the program-level components would include the operation, inspection, and maintenance of new tanks, emergency generators, well stations, pump stations, lift stations and water treatment facilities. These activities would result in the direct emission of criteria air pollutants through employee vehicle trips and infrequent use of backup generators primarily during emergencies or power outages, and emissions of VOCs and combustion products associated with vehicle trips, maintenance equipment, generator use, and water treatment operation. The operation and maintenance of other WMP facilities would not require a substantial change in employees compared to existing conditions. Emissions from the operation of emergency generator sources would not be substantial since any new or modified emergency generators would go through the SJVAPCD permit process to ensure that project emissions are below the appropriate significance threshold for permitted sources and offsets provided if required.

All construction projects must abide by Regulation VIII. Consequently, the air quality analysis assumes that the City and its contractors will comply with Regulation VIII and such compliance will be sufficient to eliminate any potentially significant air quality effects generated by construction activities. Implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3 would reduce this impact to a less-than-significant level. In addition, the SJVAPCD recommends the measures listed below to reduce exhaust pollutant emissions from heavy construction equipment to less-than-significant levels:

- Water exposed surfaces three times daily.
- Cover soil stockpiles with a tarp.
- Water unpaved haul roads three times daily.
- Apply soil stabilizers to inactive areas.
- Replace ground cover in disturbed areas quickly.
- Use aqueous diesel fuel in diesel equipment.
- Use diesel particulate filters on diesel equipment.
- Use cooled exhaust gas recirculation on diesel equipment.

Adherence to these mitigation measure and requirements would reduce pollutant emissions below significance thresholds and would ensure that impacts would be less than significant.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3, the Proposed Program's overall impacts would be less than significant with mitigation.

<u>Mitigation Measure AQ-1: Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM10</u>

The following controls are required to be implemented by the City or its contractor at all construction sites.

- All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover.

- All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/suppressant.

- All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid fugitive dust emissions through the application of water during work or by presoaking.

- When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained.

- All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.)

- Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/suppressant.

- Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday.

- Any site with 150 or more vehicle trips per day will prevent carryout and trackout.

<u>Mitigation Measure AQ-2: Implement Enhanced Control Measures for Construction Emissions of PM10</u>

The following measures will be implemented by the City or its contractor at construction sites when required to mitigate significant PM10 impacts as determined by SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements).

1. Limit traffic speeds on unpaved roads to 15 miles per hour (mph).

2. Install sandbags or other erosion-control measures to prevent silt runoff.

The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or that warrant additional emissions reductions for any other reason.

1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site.
2. Install wind breaks at windward sides of construction areas.
3. Suspend excavation and grading activity when winds exceed 20 mph.
4. Limit the area subject to excavation, grading, and other construction activity at any one time.
5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.

Mitigation Measure AQ-3: Implement Control Measures for Operation Emissions of PM10 and for Ozone Precursors (Reactive Organic Gases [ROG] and NO_X)

In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its contractor shall install equipment with Best Available Control Technology, as indicated in a site-specific air quality analysis to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified water system sites when required to mitigate significant PM10 and ozone impacts, due to exceedance of Air Quality Thresholds of Significance.

Impact AQ-3: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard

Finding:

No single CIP would be sufficient in size, by itself, to cause nonattainment of the regional air quality standards. With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3, none of the program-level components would result in mass emissions above the significance threshold. However, these measures would not completely avoid emissions; therefore, the Proposed Program could make a considerable contribution to cumulative impacts related to criteria pollutant emissions for which the region is in non-attainment, a significant impact. This impact would remain significant and unavoidable.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

Program-level components would be located in an area that is in non-attainment for federal and state standards for ozone and particulate matter of aerodynamic radius of 2.5 micrometers or less (PM2.5) and state standards for PM10. Thus, the

combined emissions of past, present, and probable future projects would have a significant cumulative impact on air quality in the project area. With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3 (described above for Impact AQ-2), none of the program-level components would result in mass emissions above the significance threshold. However, because these measures would not completely avoid emissions, the Proposed Program could make a considerable contribution to cumulative impacts related to criteria pollutant emissions for which the region is in non-attainment, a significant impact. This impact would remain significant and unavoidable.

Impact AQ-4: Expose Sensitive Receptors to Substantial Pollutant Concentrations

Finding:

During construction activities for the proposed components, construction emissions have the potential to affect sensitive receptors located at and near program-level component sites. These sensitive receptors include single-family residential units and schools around proposed improvement sites. Therefore, nuisances associated with fugitive dust and construction activity emissions would affect adjacent residences. During operational activities, stationary emission sources would also emit pollutants. This would be a significant impact. Implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3 (described above for Impact AQ-2) would reduce the impact on sensitive receptors from fugitive dust and other pollutants to a less-than-significant level.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3 (described above for Impact AQ-2), the impact on sensitive receptors from fugitive dust and other pollutants would be less than significant with mitigation.

<u>BIOLOGICAL RESOURCES</u>

Impact BIO-1: Impacts on Special-Status Plants

Finding:

Special-status plants may occur in the vicinity of Program components in habitats such as grassland, wetlands, vernal pools, and valley and foothill riparian. Valley and foothill riparian habitat occurs along Dry Creek and the Tuolumne River. Several buildout pipelines, such as those in North Modesto near Cottonwood Drive or South Modesto near Ironside Drive, and a fire flow improvement pipeline in South Modesto near Crows Landing Road and El Paso Avenue, occur in ruderal grasslands. Wetlands may occur in riparian habitat associated with Dry Creek and the Tuolumne River, as well as potentially in some agricultural lands. Impacts to special-status plants could include removal of individuals, and indirect effects from sedimentation or changes to hydrology. Impacts to special-status plants during construction of certain Program components would be minimized by using trenchless or other non-open cut construction method pipeline construction for crossings of the Tuolumne River and Dry Creek, where wetland and riparian habitat

is located. The only Program components that would cross the Tuolumne River and Dry Creek are components FTGRID-01 and FTGRID-04, which are both new 16-inch diameter pipelines for future grid improvements. A frac-out[1] during trenchless pipeline construction could result in impacts to special-status plants such as removal of individuals or reduction in special-status plant habitat quality. These impacts would be significant.

Several mitigation measures are proposed to avoid, reduce, or compensate for impacts to special-status plants. Mitigation Measure BIO-1 would minimize the area of disturbance to habitat for special-status plants. Where disturbance within special-status plant habitat cannot be avoided, Mitigation Measure BIO-2 would identify the extent to which special-status plants are present and could be adversely affected by the project. For special-status plants found to be present, Mitigation Measure BIO-3 would require monitoring to confirm avoidance of identified special-status plant populations, and compensatory mitigation should special-status plants be adversely affected. Implementation of these measures would reduce this impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measures, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels:

Mitigation Measure BIO-1: Perform Focused Surveys for Special-status Plant Species.

Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site as determined by the botanist. If special-status plants may be directly or indirectly affected, then Mitigation Measure BIO-2 shall be implemented.

Mitigation Measure BIO-2: Avoid, Minimize, and Compensate for Impacts on Special-status Plant Species.

If special-status plants are detected, the City shall implement the following measures to avoid, minimize, and compensate for impacts on special-status plant species:

[1] "Frac-out" is the inadvertent return and release to the environment of drilling lubricant during HDD. This is a potential concern when HDD is used under sensitive habitats, waterways, and areas of concern for cultural resources. The HDD procedure uses bentonite slurry, which is a fine clay material that is used as a drilling lubricant. Bentonite is non-toxic and is commonly used farming practices, but benthic invertebrates, aquatic plants, and fish and their eggs can be smothered by the fine particles if bentonite is discharged to waterways (California Public Utilities Commission [CPUC] 2003).

- The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally sensitive area fencing will be installed at least 200 feet from the edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally sensitive area.

- If avoidance is not feasible, the Program proponent will consult with either California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS), or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following components: relocation methods that will minimize the potential loss of plants from relocation, management plans and success criteria by which the mitigation can be measured for success, and regular monitoring to ensure that the plants are successfully transplanted. Success criteria shall require that at least 75% of the plants survive. The Rare Plant Plan will include specific, measurable triggers for adaptive management actions that will be necessary to ensure survival.

- The Rare Plant Plan will specify annual monitoring of the mitigation site for at least five years after planting, and will assess factors such as population size and density, recruitment, and individual plant health and vigor. Monitoring will also assess whether the mitigation requires adaptive management actions, such as collection and sowing of additional seed, tillage/disturbance within existing populations to induce establishment, installation of container plants, and control of exotic invasive vegetation (such as yellow star thistle) to ensure successful plant establishment and survival. The site will be evaluated at the end of the 5-year monitoring period to determine whether the mitigation has met the success criteria identified in the Rare Plant Plan. If success criteria are not met at that time, then mitigation activities and monitoring will continue until success criteria are met.

- As part of the Rare Plant Plan, the program proponent, in conjunction with a qualified restoration ecologist and/or botanist and the consulting agency, if any, will identify a suitable on- or off-site location for mitigation, and appropriate methods for seed collection, propagation, relocation,

maintenance, and monitoring. Mitigation sites will be located within the range of the affected plant and contain suitable habitat sites. For annual plant species, the seed crop from the individuals to be lost will be collected and then sown on appropriate habitat located on the mitigation site. The individuals will not be removed until seeds have been collected. For perennial plant species, both the seed and the plants themselves will be salvaged and relocated to the mitigation site. The individuals will not be removed until seeds have been collected. Seed from the populations that will be affected may be collected and propagated at a native plant nursery prior to planting in order to increase the potential for establishment and survival.

Impact BIO-2: Impacts on Vernal Pool Branchiopods and Western Spadefoot

Finding:

Vernal pool branchiopods with the potential to occur in the study area include vernal pool fairy shrimp and vernal pool tadpole shrimp (*Lepidurus packardi*). These species could potentially occur within vernal pools located in the study area. Western spadefoot (*Spea hammondii*) also has the potential to occur in the study area and uses vernal pools as breeding habitat. Proposed Program components that are not located in grasslands and pastures are not anticipated to have impacts on vernal pool habitat or inhabitants. If construction of WMP components occurs in the microwatershed of vernal pools, such activity could result in sedimentation and alteration of hydrology and drainage patterns, which could impact habitat for vernal pool branchiopods and breeding habitat for western spadefoot.

Many water quality impacts associated with Proposed Program construction activities would be minimized or avoided through compliance with the National Pollutant Discharge Elimination System (NPDES) General Construction Permit. All components with a footprint greater than one acre of disturbance area would be subject to this permit, which requires preparation and implementation of a stormwater pollution prevention plan (SWPPP). Compliance with this permit and implementation of a SWPPP would reduce the potential for sediments and contaminants to enter pools or depressions where vernal pool branchiopods may occur and western spadefoot may breed, but construction impacts of individual Program components could nevertheless be significant. Implementation of Mitigation Measures BIO-3 and BIO-4 would minimize potential adverse effects to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measures, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels:

<u>Mitigation Measure BIO-3: Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.</u>

Prior to implementation of proposed projects in areas that could contain habitat for vernal pool branchiopods, a qualified biologist will conduct surveys to determine

whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City will avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.

Mitigation Measure BIO-4: Minimize and Compensate for Impacts on Branchiopods, Western Spadefoot, and Their Habitat.

If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided, the City shall implement the following measures:

- After construction, restore surface topography and drainage to pre-construction conditions; and
- Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.

Impact BIO-3: Impacts on Valley Elderberry Longhorn Beetle

Finding:

Valley elderberry longhorn beetle (VELB) is a federally threated species, which is dependent on its host plant, elderberry. Elderberry shrubs may occur in riparian areas and along canals, or occasionally in non-riparian areas. Impacts of Proposed Program components located where elderberry shrubs are growing could include removal of elderberry shrubs, or ground disturbance within the rooting zone of these shrubs. If these shrubs were occupied by VELB, shrub removal or mortality could result in adverse effects on VELB. This would be considered a significant impact. Trimming of elderberry shrubs could result in injury or death of eggs, larva, or adults depending on the timing and extent of the trimming, a significant impact. No adverse impacts to the VELB would occur if trimming does not remove stems/branches that are ≥1 inch in diameter and is conducted between November and February (USFWS 2017).

Based on the above, the Proposed Program could affect elderberry shrubs which provide habitat for VELB. If the shrubs are occupied and affected during construction, adverse effects on this federally listed species could occur Implementation of Mitigation Measure BIO-1 would identify the location of elderberry shrubs on a project-specific basis. Implementation of Mitigation Measures BIO-5 through BIO-7 would reduce impacts on VELB to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measures, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels:

Mitigation Measure BIO-1: Perform Focused Surveys for Special-status Plant Species.

See the description under Impact BIO-1 above.

Mitigation Measure BIO-5: Avoid Impacts on VELB Habitat.

The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to the VELB would not be expected to be substantial and therefore would not require mitigation. For proposed components that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017). This shall include the following avoidance measures:

- If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal.

- The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities.

- No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level.

- A qualified biologist shall provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for noncompliance.

- A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring shall depend on the project specifics and should be discussed with USFWS.

- As much as feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the flight season of the VELB (March – July).

- If required, trimming of elderberry shrubs shall occur between November and February and shall avoid the removal of any branches or stems that are ≥ 1 inch in diameter.

- Herbicides shall not be used within the drip-line of the shrub. Insecticides shall not be used within 98 feet of an elderberry shrub. All chemicals shall be applied using a backpack sprayer or similar direct application method.

- Mechanical weed removal within the drip-line of the shrub shall be limited to the season when VELB adults are not active (August-February) and shall avoid damaging the elderberry.

- Erosion control shall be implemented, and the affected area shall be re-vegetated with appropriate native plants.

If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.

Mitigation Measure BIO-6: Implement VELB Compensatory Mitigation, if Necessary.

The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by the project shall be transplanted to a USFWS-approved location per Mitigation Measure BIO-7.

Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS.

Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre(s) of credits: acre(s) of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used.

Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.

Mitigation Measure BIO-7: Transplant Elderberry Shrubs if Avoidance Is Not Feasible.

The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to Mitigation Measure BIO-6, the shrub shall be transplanted.

Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The transplanting guidelines below shall be followed:

- A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.

- Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, global positioning system (GPS) location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the California Natural Diversity Database (CNDDB).

- Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves.

- Transplanting shall follow the most current version of the American National Standards Institute (ANSI) A300 (Part 6) guidelines for transplanting (www.tcia.org).

Impact BIO-4: Impacts on Special-status Fishes

Finding:

Habitat in the study area for special-status fish species is limited to the Tuolumne River and Dry Creek. Special-status fish that are known to occur in the Tuolumne River include Chinook salmon (Central Valley fall- and late fall-run evolutionarily significant unit [ESU]), Central Valley steelhead, Sacramento splittail, and hardhead. These species may also be present in Dry Creek. Adult steelhead and Chinook salmon migrate through the Tuolumne River to reach spawning habitat upstream. Juvenile salmonids pass through the study area on their way out to the Pacific Ocean. Sacramento splittail may be present in this portion of the Tuolumne River in wet years. Hardhead are also known be present.

Program Components (except Future Grid Pipelines FTGRID-01 and FTGRID-04). Construction of these Proposed Program components would not occur in

suitable habitat for special-status fishes. However, impacts to water quality in the Tuolumne River, Dry Creek, the Stanislaus River, and the San Joaquin River could adversely affect special-status fishes. Construction of proposed components would include grading, excavation, trenching, or other construction-related activities that could loosen soils and increase the risk of erosion or sediment transport. Increases in sedimentation and turbidity have been shown to adversely affect fish physiology, behavior, and habitat. The effects of turbidity on fish include gill trauma, avoidance of habitat, changes in forage ability, increased predation risk, and reduced territoriality. The deposition of excessive fine sediment on the stream bottom could eliminate habitat for aquatic insects (a food source for fish); reduce density, biomass, numbers, and diversity of aquatic insects and aquatic vegetation; and reduce the quality of spawning habitat for fish. Impacts to special-status fish from water quality include reduction in habitat quality, injury, or mortality. These impacts would be considered significant.

Construction activities that take place near these creeks and rivers, such as existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06, could result in discharges of hazardous materials if adequate precautions are not taken. The City would comply with all local, state, and federal regulations concerning hazardous materials handling and containment during construction of Program components. This includes standards for any secondary containment and countermeasures for hazardous materials used in construction and operation, and spill response procedures in case of an accidental release. Implementation of these requirements would prevent substantial hazardous materials-related water quality impacts from occurring during construction activities.

Water quality impacts of Program activities would be avoided or minimized through implementation of best management practices (BMPs) and compliance with the NPDES General Construction Permit and SWPPP requirements. Implementation of Mitigation Measure HYD/WQ-1 would further reduce soil erosion. Implementation of Mitigation Measure HYD/WQ-1 would reduce this impact to a level that is less than significant with mitigation.

Future Grid Pipelines FTGRID-01 and FTGRID-04. Construction-related impacts to special-status fish and their habitat would be minimized by using trenchless or other non-open cut construction techniques for these future grid components crossing the Tuolumne River and Dry Creek. Impacts to special-status fish and their habitat may result from a frac-out of drilling fluids during trenchless construction. Drilling fluids typically consist of bentonite, which is non-toxic to aquatic life. However, a frac-out may result in a temporary increase in turbidity or sedimentation that can adversely affect aquatic organisms by covering spawning and feeding areas and clogging fish gills. These impacts are considered significant. Mitigation Measure HYD/WQ-1 would be implemented to reduce impacts in the event of a frac-out. With implementation of Mitigation Measure HYD/WQ-1, this impact would be less than significant with mitigation.

Trenchless construction under the Tuolumne River and/or Dry Creek would not result in any noise or vibration impacts on fish. Vibration from the drilling machinery is minimal and because the tunneling operation occurs below the river, it would be attenuated to an imperceptible level before it reaches the river bottom. No

perceptible noise or vibration would translate into the water. Other non-open cut construction methods are also not anticipated to result in noise or vibration impacts on fish. There would be no impacts from noise or vibration from drilling machinery on special-status fishes.

Construction activities of Program components FTGRID-01 and FTGRID-04 could result in water quality impacts which could adversely affect special-status fish. For example, temporary increases in sediment discharges and increased turbidity, and in the event of an accidental spill, hazardous materials could adversely affect water quality. Such impacts would be avoided or minimized through implementation of BMPs and compliance with the NPDES General Construction Permit and SWPPP requirements. Implementation of Mitigation Measure HYD/WQ-1 would further reduce soil erosion or loss of topsoil and reduce adverse effects on special-status fish. With implementation of Mitigation Measure HYD/WQ-1, impacts would be less than significant with mitigation.

Overall Conclusion. WMP components near the Tuolumne River, and Dry Creek, Stanislaus River, and the San Joaquin River have the potential to adversely affect special-status fish species due to construction-related effects on water quality (e.g., increased sedimentation, turbidity, and hazardous materials in the event of an accidental spill). Implementation of Mitigation Measure HYD/WQ-1 would minimize adverse effects on water quality and reduce adverse effects on special-status fish. In conclusion, implementation of these mitigation measures would reduce the Proposed Program's overall impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating Mitigation Measure HYD/WQ-1, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels:

Mitigation Measure HYD/WQ-1: Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods. (only FTGRID-01 and FTGRID-04)

See the description under Impact HYD/WQ-1 below.

Impact BIO-5: Impacts on Western Pond Turtle

Finding:

Potentially suitable habitat for western pond turtle occurs in the Tuolumne River and Dry Creek. Irrigation ditches with emergent vegetation provide marginally suitable habitat because they generally lack basking sites, the banks are very steep, and they are not perennially inundated. Canals do not provide suitable habitat.

Impacts to western pond turtle would be minimized by using trenchless pipeline construction or other non-open cut pipeline construction where this species is most likely to occur, in the Tuolumne River and Dry Creek. The only Program components that would cross the Tuolumne River or Dry Creek are future grid improvement components FTGRID-01 and FTGRID-04. The majority of Program components

would occur in urban portions of Modesto or the outlying WMP service areas where habitat for western pond turtle is not present. Western pond turtle may also occur in upland areas. Construction activities that directly impact western pond turtle or their nests could result in significant impacts to this species.

Mitigation Measure BIO-8 would avoid impacts to suitable habitat for this species to the extent feasible. Where disturbance of suitable habitat is unavoidable, the mitigation measure would require that impacts be minimized through pre-construction surveys, establishment of buffers, and monitoring. With implementation of this mitigation measure, impacts would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measure, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

Mitigation Measure BIO-8: Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.

Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, ponds, and sloughs where suitable habitat exists. If a western pond turtle is located within the construction area, it will be relocated out of this area (with authorization from the CDFW), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented.

- The City or its contractors will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating turtles.

- If a turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed downstream from the project site.

- The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat.

- If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).

Impact BIO-6: Impacts on Burrowing Owl

Finding:

Burrowing owls could occur within grasslands, agricultural habitats and canal and railroad right of ways where burrows are present. Several buildout pipelines such as those in North Modesto near Cottonwood Drive or South Modesto near Ironside Drive, and a fire flow improvement pipeline in South Modesto near Crows Landing Road and El Paso Avenue occur in ruderal grasslands. Other Program components such as buildout pipelines in the northern portion of the contiguous study area, such as in the vicinity of the intersection of Oakdale Road and Mable Avenue and the vicinity of the intersection of Bangs Avenue and American Avenue, occur in agricultural habitats. Implementation of Mitigation Measure BIO-1 would identify burrowing owl habitat on a project-specific basis. If this species is present in the vicinity of proposed components, construction activities could disturb burrowing owls through noise, visual distraction, or direct impacts to occupied habitat. These impacts would be considered significant.

Implementation of Mitigation Measure BIO-9 would reduce impacts to this species. Where disturbance is unavoidable, impacts to burrowing owls would be minimized through establishing buffers around active burrows. If active burrows cannot be avoided, passive relocation techniques may be used. If relocation occurs, then compensation would be provided to offset impacts. With implementation of this mitigation measure, impacts would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measure, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

<u>Mitigation Measure BIO-9: Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas If Necessary.</u>

Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If no burrowing owls or signs of burrowing owls are detected during the survey, no further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented.

If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season. Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (California Department of Fish and Game [CDFG] 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW.

If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.

If occupied burrows are relocated, the City shall enhance or create burrows in adjacent habitat at a 1:1 ratio (burrows destroyed to burrows enhanced or created) one week prior to implementation of passive relocation techniques. If burrowing owl habitat enhancement or creation takes place, the City shall develop and implement a monitoring and management plan to assess the effectiveness of the mitigation. The plan shall be subject to the approval of CDFW.

Impact BIO-8: Impacts on Raptors, Including Special-status Species

Finding:

Numerous raptors are known to nest and forage in habitats in the study area. Non-listed raptors commonly observed in the vicinity of the study area include red-tailed hawk, American kestrel, red-shouldered hawk, and merlin (*Falco columbarius*), among others. Special-status raptors (excluding burrowing owls, golden eagle, and bald eagle) known to occur in the vicinity of the study area include Swainson's hawk, white-tailed kite, and northern harrier. These species have been observed in the study area and are known to nest locally. Riparian trees along the Tuolumne River, Stanislaus River, and Dry Creek provide potential nesting habitat for Swainson's hawk and white-tailed kite; isolated mature trees in adjacent fields may also be used for nesting. These raptors commonly forage in agricultural fields. Northern harriers nest on the ground in open areas and may nest in agricultural fields. Program components near riparian habitat include future grid pipeline improvements FTGRID-01 and FTGRID-04, and existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06. Although the majority of Program pipelines are within existing roadways, many of these roadways are located adjacent to agricultural habitat.

Construction in the vicinity of raptor nest sites could disturb nesting raptors through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., tree removal or ground disturbance). Impacts to Swainson's hawk and white-tailed kite would be minimized by using trenchless construction techniques for future grid pipeline improvement FTGRID-01 and FTGRID-04 for crossing of the Tuolumne River and Dry Creek, where nesting is most likely to occur. However, special-status raptors could nest in relatively close proximity to trenchless construction operations, and in other portions of the study area. Thus, there would be the potential for disturbance of nesting raptors. Impacts that result in nest abandonment, nest failure, or reduced health or vigor of nestlings are considered significant.

Construction of Program components such as such as new tanks (e.g., North and South Modesto storage tanks) and wells in agricultural or grassland habitat could

result in the loss of suitable foraging habitat for Swainson's hawk. This impact would be considered significant.

Implementation of Mitigation Measure BIO-10, which would require preconstruction surveys for nesting raptors and establishment of no-disturbance buffers, and Mitigation Measure BIO-11, which would require mitigation for the loss of suitable foraging habitat, would reduce this impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measures, identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

Mitigation Measure BIO-10: Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species.

The City shall implement the following measures.

- If ground and vegetation disturbing activities occur between February 1 and August 31, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests.

- If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.

Mitigation Measure BIO-11: Compensate for Loss of Raptor Foraging Habitat.

The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's hawk foraging habitat mitigation bank that covers the study area, such as the Dutchman Creek Conservation Bank.

The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program-level components are assumed to be within 1 mile of an active Swainson's hawk nest tree. Mitigation

credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows:

- 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's hawk; or

- 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands.

The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.

Impact BIO-9: Impacts on Special-status Passerine Species and Birds Protected under the Migratory Bird Treaty Act (MBTA)

Finding:

Program Components (except Future Grid Improvements FTGRID-01 and FTGRID-04). Special-status passerines that may nest in the vicinity of Program components include tricolored blackbird, loggerhead shrike (*Lanius ludovicianus*), yellow-breasted chat (*Icteria virens*) and yellow warbler (*Dendroica petechia*). These special-status passerines nest in riparian habitat. Program components near riparian habitat include existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06. Various birds protected by the MBTA could also occur in the vicinity of any Program components. Construction could disturb nesting passerines through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., vegetation removal or ground disturbance). Nest failure or removal of a nest are considered significant impacts.

Future Grid Pipelines FTGRID-01 and FTGRID-04. Portions of the future grid pipelines FTGRID-01 and FTGRID-04 cross sensitive habitat in the Tuolumne River and Dry Creek where nesting of special-status passerines are most likely to occur. Impacts would be minimized by using trenchless construction techniques for activities crossing these habitats. However, construction could still disturb nesting passerines through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., vegetation removal or ground disturbance). Nest failure or removal of a nest are considered significant impacts.

Overall Conclusion. Construction activities that cross the Tuolumne River and Dry Creek could affect habitat where special-status passerines are likely to be present. Implementation of Mitigation Measure BIO-12 would minimize impacts to passerines by conducting pre-construction surveys during the nesting season and

establishing buffers around active nests. With implementation of this mitigation measure, impacts would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating the following mitigation measure, identified in the Program EIR, will reduce these potentially significant effects to less-than-significant levels.

Mitigation Measure BIO-12: Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary.

The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If the survey indicates that no active nests are found, no further mitigation shall be required.

If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned construction activities, and baseline level of human activity. The buffers will be clearly marked in the field with flagging or fencing. No work shall commence within the buffer until the young have fledged or the nest is deemed inactive.

Impact BIO-11: Impacts on Riparian Habitat and Other Sensitive Natural Communities

Finding:

Future grid pipelines FTGRID-01 and FTGRID-04 would traverse riparian habitat associated with Dry Creek and the Tuolumne River, respectively. Impacts to riparian habitat would be avoided by the use of trenchless construction techniques in riparian habitat. If a frac-out were to occur beneath riparian habitat, direct impacts on this habitat could occur.

Additionally, although the majority of Program components would take place in urban/developed habitats, vernal pool habitat may be present in areas where Program components would be constructed in grasslands and pastures. Vernal pool habitats would be identified on a project-specific basis. Construction-related impacts on vernal pool habitats could include sedimentation or alteration in drainage patterns. These impacts are considered significant.

Implementation of Mitigation Measure HYD/WQ-1, which would require preparation of a frac-out Contingency Plan; and Mitigation Measures BIO-3 and BIO-4, which would require avoidance and minimization of impacts on vernal pools, would reduce this impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating Mitigation Measure HYD/WQ-1, described below and identified in the Program EIR, and Measures BIO-3, and BIO-4, described above and identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

Impact BIO-12: Impacts on Federally Protected Wetlands

Finding:

Program Components (except Future Grid Pipelines FTGRID-01 and FTGRID-04). The study area contains wetlands and waters that are likely to be regulated by the U.S. Army Corps of Engineers and the U.S. Environmental Protection Agency under Section 404 the Clean Water Act (CWA). In the study area, the Tuolumne River is considered Traditional Navigable Waters of the U.S., as is the San Joaquin River adjacent to the Grayson outlying service area and the Stanislaus River adjacent to the Del Rio outlying service area. Other wetlands and waters with a "significant nexus" to the Tuolumne, San Joaquin, or Stanislaus rivers would also be considered jurisdictional waters of the U.S. Wetlands and waters would be preliminarily identified during implementation of Mitigation Measure BIO-1. Drainages excavated wholly in uplands and draining only uplands are not likely to be jurisdictional features. Program components located in or adjacent to wetlands and waters could cause impacts to wetlands or waters through temporary or permanent fill, and erosion or sedimentation.

Future Grid Pipelines FTGRID-01 and FTGRID-04. FTGRID-01 and FTGRID-04 would avoid impacts on wetlands and waters through the use of trenchless pipeline construction for crossings of Dry Creek and the Tuolumne River. If a frac-out were to occur beneath wetlands, direct impacts could occur. Implementation of Mitigation Measure HYD/WQ-1, which require preparation of a Frac-out Contingency Plan would reduce impacts to wetlands and waters. Other impacts to wetlands and waters could occur through temporary or permanent fill, and erosion or sedimentation.

Overall Conclusion. Construction of Program components could result in impacts to wetlands or waters. Implementation of Mitigation Measure HYD/WQ-1, which would reduce sedimentation; Mitigation Measure BIO-13, which would avoid and minimize impacts to wetlands to the maximum extent practicable; and Mitigation Measure BIO-14, which requires regulatory permits for work in wetlands and waters and compensatory mitigation for unavoidable impacts to wetlands and waters, would reduce this impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating Mitigation Measures HYD/WQ-1 (described below) and the following measures, as identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

Mitigation Measure BIO-13: Avoid and Minimize Impacts on Federally Protected Wetlands.

The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands.

If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of Mitigation Measure BIO-14. For all activities greater than one acre of disturbance, a SWPPP shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters. Mitigation Measure HYD/WQ-1 would also be implemented to minimize construction-related effects on wetlands and waters. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.

Mitigation Measure BIO-14: Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.

The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA Nationwide Permit and/or the Final Rule on Compensatory Mitigation for Losses of Aquatic Resources (73 Fed. Reg. 19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.

Impact BIO-13: Impacts on Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites

Finding:

Program Components (Except Future Grid Pipelines FTGRID-01 and FTGRID-04). The majority of Program components (except FTGRID-01 and FTGRID-04, addressed below) would be constructed in previously developed areas or agricultural lands that do not function as a significant movement corridor for fish and wildlife. Some wildlife breeding does occur in agricultural lands and wetlands. Open-cut pipeline construction would create temporary barriers to wildlife

movement in agricultural lands and ruderal habitat. Some mature trees which provide suitable nesting habitat for raptors may be removed during construction, but outside of the raptor nesting season.

Future Grid Pipelines FTGRID-01 and FTGRID-04. Several fish and wildlife species utilize the Tuolumne River, and to a lesser degree Dry Creek, and adjacent riparian habitat as breeding sites and a migration corridor. Additionally, wildlife breeding does occur in agricultural lands and non-riparian wetlands. Impacts to wildlife migration and breeding in these riverine and riparian areas would be avoided by the use of trenchless construction methods. Open-cut pipeline construction would create temporary barriers to wildlife movement in agricultural lands and ruderal habitat. Some mature trees which provide suitable nesting habitat for raptors may be removed during construction, but outside of the raptor nesting season.

Overall Conclusion. Construction of most WMP components would occur in developed areas or agricultural lands that do not function as wildlife movement corridors for fish and wildlife, but open-cut pipeline construction could temporarily create barriers to wildlife movement. Implementation of Mitigation Measures BIO-8, BIO-9, BIO-10, BIO-11, and BIO-12, described above, and Mitigation Measure BIO-15 would minimize adverse effects. In conclusion, implementation of these mitigation measures would reduce the Proposed Program's overall impact to less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Incorporating Mitigation Measures BIO-8, BIO-9, BIO-10, BIO-11, and BIO 12 (described above) and the following mitigation measure, as identified in the Program EIR, will reduce these potentially significant effects to less-than significant levels.

Mitigation Measure BIO-15: Install Temporary Trench Plates over Open Trenches

The City shall implement the following measure. During open-cut construction of pipelines, the City shall install temporary trench plates over open trenches at the end of each work day.

Impact BIO-14: Conflict with Local Ordinances or Policies Protecting Biological Resources

Finding:

Implementation of Mitigation Measures BIO-1 through BIO-15 would ensure that the Proposed Program would be consistent with all local ordinances and policies protecting biological resources, reducing impacts to a level that is less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Implementation of the mitigation measures described above would reduce adverse effects related to compliance with local ordinances or policies protecting biological resources. The Proposed Program's overall impact would be less than significant with mitigation.

CULTURAL, PALEONTOLOGICAL, AND TRIBAL RESOURCES

Commented [CA1]: In the Summary Table, "Impact CR-4: Impacts on Paleontological Resources" is shown to have a LSM impact but the impact is LS (based on the content in the section). Please correct this error in Summary Table.

Commented [DL2R1]: Corrected in Chapter 3, Revisions to the DEIR.

Impact CR-2: Impacts on Previously Undiscovered Archaeological Resources

Finding:

Projects proposing earthwork within archaeological resource study areas must adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k, which requires preconstruction archaeological investigations on the site and implementation of avoidance measures, if necessary. Improvements proposing earthwork in the Planned Urbanizing Area must also adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k as well as Policies 3-a, 3-b, and 3-c (also presented above), which require the applicant (City in this case) to consult with Native American tribes and that a qualified archaeologist evaluate the site to determine its archaeological and cultural sensitivity, and if so, implement avoidance and minimization measures.

All proposed components must adhere to City of Modesto Urban Area General Plan Section VII-F Policies 2-k, 2-l, 2-m, 2-n, 2-o, and 3-c, which outline mitigation procedures that would prevent impacts on the unearthed resources and require on-site activity to cease until an archaeological site investigation is performed, in the event that resources are uncovered during construction. Construction specifications for individual projects must stipulate the relevant procedures that are to be followed in the event that cultural resources are encountered during the construction process.

Adherence to existing City policies regarding archaeological investigation, construction requirements, and proper mitigation for any resources discovered, as well as Mitigation Measure CR-1, would ensure that specific improvements would result in impacts on archaeological resources that meet CEQA's definition of historic resources or unique archaeological resources that are less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating the following mitigation measure identified in the Program EIR:

Mitigation Measure CR-1: Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work

The City shall implement the following measures. Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to

receive information about the kinds of archaeological materials that could be present and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.

Impact CR-3: Disturb Any Human Remains, Including those Interred Outside of Dedicated Cemeteries

Finding:

Based on the Program information for the proposed infrastructure improvements, the Proposed Program does not appear to propose earthwork in proximity to any known cemeteries or Native American burial grounds. However, projects implemented as part of the Proposed Program have the potential to disturb previously undiscovered human remains. All of the City of Modesto Urban Area General Plan policies identified above for Impact CR-2 also pertain to the discovery of human remains. Specifically, Policy VII-F.2[k](2) (presented above) cites California Health and Safety Code 7050.5, which requires the cessation of further excavation and disturbance in the event of a human remains discovery, and coordination with the County coroner and (if applicable) the Native American Heritage Commission (NAHC) regarding further action.

Adherence to Policy VII-F.2[k] and other relevant general plan policies identified for Impact CR-2 and the California Health and Safety Code, as well as Mitigation Measure CR-1, would ensure that impacts on human remains as a result of constructing CIPs would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating Mitigation Measure CR-1 (described above) identified in the Program EIR.

Impact CR-5: Potential for a Substantial Adverse Impact on Tribal Cultural Resources

Finding:

Tribal cultural resources (TCRs) have not been identified within the Program study area. None of the tribes contacted under Public Resources Code Section 21080.3.1 have responded with concerns about the potential impact of the Program on TCRs; thus, the City, as the lead CEQA agency, has determined that no known TCRs exist within the study area.

Project grading and earthmoving activities could disturb previously undiscovered archaeological deposits or buried historic resources. Proposed pipelines, lift stations, and other water infrastructure to be located within riverbeds and otherwise adjacent to natural channels are particularly susceptible to encountering Native American artifacts. The City has adopted guidelines to aid project compliance with requirements for archaeological resources analysis, and subsequent projects would be required to adhere to these guidelines.

Projects proposing earthwork within archaeological resource study areas must adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k, which requires preconstruction archaeological investigations on the site and implementation of avoidance measures, if necessary. Projects proposing earthwork in the Planned Urbanizing Area must adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k as well as Policies 3-a, 3-b, and 3-c , which require the applicant to consult with Native American tribes and that a qualified archaeologist evaluate the site to determine its archaeological and cultural sensitivity, and if so, implement avoidance and minimization measures.

All subsequent projects must adhere to other City of Modesto Urban Area General Plan Section VII-F Policies listed above, including 2-l, 2-m, 2-n, and 2-o, which outline mitigation procedures that would prevent impacts on the unearthed resources and require on-site activity to cease until an archaeological site investigation is performed, in the event that resources are uncovered during construction. Construction specifications for individual projects must stipulate the relevant procedures that are to be followed in the event that cultural resources are encountered during the construction process.

Adherence to existing City policies regarding archaeological investigations, construction requirements, and proper mitigation for any resources discovered on the site, as well as to Mitigation Measure CR-1, would ensure that specific projects implemented subsequent to the Proposed Program would result in less-than significant with mitigation impacts on archaeological resources that meet CEQA's definition of historic resources or unique archaeological resources.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

This potentially significant effect can be reduced to a less-than-significant level by incorporating Mitigation Measure CR-1 identified in the Program EIR.

GREENHOUSE GAS EMISSIONS AND ENERGY

Impact GHG-1: Generate a Substantial Amount of Greenhouse Gas (GHG) Emissions

Finding:

Construction Impacts. Construction of Program components including tanks, pump stations, wells, and pipelines would involve activities that would result in one-time emissions of GHGs. Changes in carbon sequestration due to land use change and tree planting would also result in one-time emissions of GHGs. GHG emissions

from construction equipment exhaust, including exhaust from haul or equipment trucks and worker commutes. Specific project-level data about the amount, use, and locations of these equipment are not available at this time, nor are specific project-level data about the construction periods for each individual CIP. In general, replacement and maintenance of existing facilities and strengthening and replacement of existing water lines would be categorically exempt from CEQA. New water mains or extension of water mains that have been identified in the WMP would therefore be considered to fall below the significance threshold. For other CIPs, in the absence of specific project-level information, it has been conservatively assumed that construction activities for each WMP component would generate GHG emissions that, in combination with the other Program components, could be substantial because they would exceed the significance threshold of 10,000 million tons of carbon dioxide equivalents per year (MT CO2e/year). This is considered a significant impact.

Operational Impacts. The Proposed Program would indirectly and directly generate GHG emissions through operation of booster pump stations, use of new or larger emergency electrical generators, and employee vehicle trips for operation and maintenance of future facilities. Employee trips would be similar to the City's existing maintenance and operation activities. Emissions for emergency electrical generators would be infrequent and would not be substantial. Operation of new or larger pumps at booster pump stations as well as the increased capacity and improved level of water distribution could generate GHG emissions that are substantial because they would increase GHG emissions over the applicable significance threshold of 10,000 MT CO2e/year of GHG emissions Therefore, this impact would be significant.

Overall Conclusion

Consulting with and permitting through the SJVAPCD for stationary source projects would reduce GHG emissions from construction of WMP components. However, it is still possible that these emissions would not be reduced below the applicable significance threshold of 10,000 MT CO2e/year of GHG emissions and therefore the Proposed Program would result in a significant and unavoidable impact.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

On the whole, since specific details regarding the program-level components are not yet available, construction and operation of these components have been conservatively determined to potentially generate GHG emissions that exceed the significance threshold. These emissions may not be able to be reduced below the applicable significance threshold, and no other feasible mitigation has been identified which can further reduce emissions. Therefore, the Proposed Program's impact related to increased GHG emissions would be significant and unavoidable.

Impact GHG-2: Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs

Finding:

Consistency with strategies outlined in California Air Resources Board's (CARB's) Scoping Plan and future updates are used to ensure that the state goals of Assembly Bill (AB) 32, Senate Bill (SB 32), and Executive Order (EO) S-3-05 will be met. CARB's renewable portfolio standard (RPS) would reduce GHG emissions compared to the existing mix of energy sources and would likely result in the program-level components having more than a 29-percent reduction by at least 2030. This is consistent with the emissions reductions goal of AB 32 and SB 32, as well as the policies/actions described in CARB's 2017 Scoping Plan.

In addition, individual WMP components would comply with the Stanislaus Regional Sustainability Toolbox's regional climate action plan goals, strategies, and policies, as well as the County's general plan policies related to reduced energy use. Specifically, Proposed Program-level components would have an energy-efficient design, and utilize Modesto Irrigation District's, Turlock Irrigation District's, and Pacific Gas and Electric's increased renewable energy sources.

WMP components would achieve GHG emission reductions in their design, as discussed above, and would minimize GHG emissions to the maximum extent feasible. Therefore, these program-level components would generally comply with applicable plans, policies, and regulations, including AB 32 and SB 32, and as well as the policies/actions described in the CARB's Scoping Plan. However, at this time the state is still developing strategies that will be needed to fully reach the goals of SB 32 and EO S-3-05 and new strategies may be developed that are inconsistent with the project. In addition, as described in Impact GHG-1, the GHG emissions for the entire Program would be significant and, as such, may impede the state from reaching the goals of AB 32 and SB 32, and EO S-3-05, to reduce GHG emissions within California.

Consulting with and permitting through the SJVAPCD would reduce this impact, but not necessarily to less-than-significant levels and may not be consistent in the future with new strategies. Therefore, this impact would be significant and unavoidable.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

WMP components would achieve GHG emission reductions in their design, as discussed above, and would minimize GHG emissions to the maximum extent feasible. However, for the reasons described above, the Proposed Program may impede the state from reaching the goals of AB 32, SB 32, and EO S-3-05 to reduce GHG emissions within California. The City would consult with and conduct permitting through the SJVAPCD to help reduce this impact, but no other feasible mitigation has been identified that could further reduce this impact. Therefore, the Proposed Program's overall impact would be significant and unavoidable.

HYDROLOGY AND WATER QUALITY

Impact HYD/WQ-1: Violate Any Water Quality Standards or Waste Discharge Requirements or Otherwise Degrade Water Quality

Finding:

Construction of the proposed components could result in discharges of poor-quality water to nearby water bodies if adequate precautions are not taken. Trenching and other ground-disturbing activities could expose loose soils that could be eroded during precipitation events. Construction equipment also would use hazardous materials (e.g., fuel and diesel) that could spill during routine use, storage, transport, or disposal, and then seep into groundwater or be washed into nearby water bodies. Use of trenchless construction methods (e.g., horizontal directional drilling [HDD]) also could present hazards to water quality, such as from frac-out[2] accidents during boring activities below or near streams. Additionally, construction of Program components may require dewatering of excavations, particularly for those components adjacent to the Tuolumne River. Discharge of this water back to the river or other areas could result in adverse water quality effects if adequate precautions are not taken.

Testing, disinfection, and flushing of pipeline improvements prior to use also would require disposal of de-chlorinated flushing water to the storm drainage system or sanitary sewer system. One of the prescribed disinfection methods in the City's standard specifications, which comply with American Water Works Association (AWWA) standard methods, would be used to disinfect all new water mains and appurtenances. After completion of the disinfection process, the heavily chlorinated water would be de-chlorinated and flushed from the new pipelines/water system facilities until the residual chlorine concentration meets the City's established requirements, which are protective of water quality in receiving waters. Discharges of this water would not substantially affect receiving waters or result in a violation of water quality standards or waste discharge requirements.

Many water quality impacts associated with Program construction activities would be minimized or avoided through compliance with the NPDES General Construction Permit. All components with a footprint greater than one acre of disturbance area would be subject to this permit, which requires preparation and implementation of a SWPPP. Compliance with this permit would minimize any impacts of Proposed Program construction activities on water quality, but construction water quality impacts of individual program components could nevertheless be significant.

To ensure that the Proposed Program would not adversely impact water quality from trenchless pipeline installation methods beneath waterways, the City would

[2] "Frac-out" is the inadvertent return and release to the environment of drilling lubricant during HDD. This is a potential concern when HDD is used under sensitive habitats, waterways, and areas of concern for cultural resources. The HDD procedure uses bentonite slurry, which is a fine clay material that is used as a drilling lubricant. Bentonite is non-toxic and is commonly used farming practices, but benthic invertebrates, aquatic plants, and fish and their eggs can be smothered by the fine particles if bentonite is discharged to waterways (California Public Utilities Commission [CPUC] 2003).

implement Mitigation Measure HYD/WQ-1. This measure would require the City's drilling contractor to prepare and implement a frac-out contingency plan for trenchless construction methods. The plan would be designed to minimize the potential for frac-out, provide for the timely detection of frac-outs, and ensure a timely and effective response in the event a frac-out occurs (CPUC 2003). Implementation of this mitigation measure would reduce adverse water quality impacts from frac-out associated with trenchless activities to a level that less than significant. Additionally, compliance with the General Construction Permit, the Central Valley Regional Water Quality Control Board's (RWQCB's) general permit for low threat discharges to surface water, the Central Valley RWQCB's Low Risk General Order, and/or the Low Risk Waiver for activities involving discharging dewatered groundwater to land would prevent substantial adverse impacts from dewatering activities during construction of Program components. Overall, this impact would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Construction of WMP components could result in water quality impacts due to trenching, pipeline installation and other ground-disturbing activities. Use of trenchless construction methods (e.g., jack and bore, HDD) also could present hazards to water quality, such as from frac-out accidents during boring activities below or near streams. Compliance with NPDES permit requirements and the City's Standard Specifications, and implementation of Mitigation Measure HYD/WQ-1 would minimize adverse effects on water quality. In conclusion, the Proposed Program's overall impact would be less than significant with mitigation.

<u>Mitigation Measure HYD/WQ-1: Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods.</u>

The City of Modesto's drilling contractor for trenchless pipeline installation activities (e.g., horizontal directional drilling, microtunneling, pipe bursting) shall prepare and implement a frac-out contingency plan prior to conducting Proposed Program construction activities involving these methods. At a minimum, the frac-out contingency plan shall include the following components/measures:

- Require a geotechnical engineer or qualified geologist to make recommendations regarding the suitability of the formations to be bored to minimize the potential for frac-out conditions.

- Require that a qualified archaeologist and biologist survey for and recommend protection measures for sensitive cultural and biological resources at the location of the entry and exit points and along the boring route.

- Include worker training measures to ensure that all field personnel understand their responsibility for timely reporting of frac-outs to their supervisors. Supervisors must then report frac-outs to CDFW as described in the last bullet below.

- Maintain necessary response equipment on-site or at a readily accessible location and in good working order.

- Include contingency measures to stop work, and effectively isolate and clean up released drilling fluid in the event of a frac-out. Contingency measures should be described for a potential frac-out in a terrestrial and aquatic environment. Example contingency measures include the following (CPUC 2003):

  For a terrestrial frac-out:

  - Isolate the area with hay bales, sand bags, or silt fencing to surround and contain the drilling mud.

  - Based on consultation with CDFW (see below), either:

    - Use a mobile vacuum truck to pump the drilling mud from the contained area and recycle it to the return pit; or

    - Leave the drilling mud in place to avoid potential damage from vehicles entering the area.

  - Once excess drilling mud is removed, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation.

  For an aquatic frac-out:

  - Monitor frac-out for 4 hours to determine if the drilling mud congeals (bentonite will usually harden, effectively sealing the frac-out location).

  - Based on consultation with CDFW (see below), either:

    - If the drilling mud congeals, take no other action that would potentially suspend sediments in the water column.

    - If drilling mud does not congeal, erect isolation/containment environment (underwater boom and curtain).

    - If the fracture becomes excessively large, call in a spill response team to contain and clean up excess drilling mud in the water. Keep phone numbers of spill response teams on-site.

  - If the spill affects an area that is vegetated, seed and/or replant the area using species similar to those in the adjacent area, or allow the area to re-grow from existing vegetation.

- Notify and consult with CDFW in the event of a frac-out. Restore vegetation damaged by drilling fluid to pre-construction conditions.

Impact HYD/WQ-2: Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would Be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level

Finding:

The City of Modesto's Proposed Program includes new and replacement groundwater wells within the contiguous and outlying Modesto water service areas. Typically, the wells would have a pumping capacity between 750 and 2,000 gallons per minute (gpm). Although it cannot be determined how much groundwater pumping may increase under the Proposed Program, as it is not known how frequently and at what capacity the new wells would operate, it can be assumed that groundwater pumping would increase over time in accordance with the City's growth and development.

The Proposed Program was developed in consideration of the operating yield of the Modesto and Turlock groundwater sub-basins. This operating yield was calculated to better manage the groundwater basin in consideration of estimates of annual recharge and pumping activities, and to prevent lowering of the groundwater table. Therefore, by design, operation of existing and proposed wells in the study area should not substantially lower the overall basin-wide level of water or the capacity of the groundwater basins. Individual wells would also be designed and operated to avoid localized reductions in groundwater levels that could substantially affect nearby wells and groundwater beneficial uses.

The City is a participant in the Groundwater Sustainability Agencies (GSAs) that have been formed for the Modesto and Turlock subbasins. Both GSAs are currently developing Groundwater Sustainability Plans (GSPs) per the requirements of the Sustainable Groundwater Management Act (SGMA). The City, along with other agencies or private entities, will implement the recommendations of the GSP, when available, in accordance with SGMA.

That said, groundwater development in the Modesto, Turlock, and/or Delta-Mendota subbasins by other agencies or private entities could, in combination with the City's use of groundwater, result in overall groundwater pumping which exceeds the sustainable yield of the aquifer(s). Pumping by other entities is outside of the City's control. SGMA requires users of groundwater in a basin to develop a GSP which will define the sustainable yield of the aquifer and allocate pumping amounts to individual users (or identify other measures) which will ensure that overall pumping is sustainable. The City will be a participant in development of the GSPs. However, because the GSP has not been developed, and the measures or allocations it will contain are currently unknown and would not be entirely within the City's control, the GSP cannot be relied upon as the basis for concluding that the City's use of groundwater (in combination with other users) would not exceed the sustainable yield of the basin(s); this would be improperly deferred mitigation under CEQA.

As such, the City finds that no feasible changes or alterations have been identified which would lessen the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

While the City fully expects that the SGMA process and the planning surrounding the WMP will prevent overdraft, due to the stage of the SGMA planning process, the City has conservatively concluded that impacts are potentially significant. The City has not identified feasible mitigation beyond that which would be identified in the future pursuant to SGMA, and such measures would be outside of the City's control, to the extent they would need to be implemented by other entities (e.g., other users of groundwater in the basin(s). For these reasons, this impact is considered significant and unavoidable.

NOISE

Impact NOI-1: Expose Persons to Noise Levels in Excess of Standards Established in a Local General Plan or Noise Ordinance or in the Applicable Standards of Other Agencies

Finding:

Construction activities would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m. excluding City-observed holidays. Nonetheless, since the construction timeframes and schedules for each individual CIP have not yet been determined, future construction activities have potential to expose people (particularly residential receptors) to noise levels exceeding the above-listed timeframe and other standards in the local general plan and noise ordinances. This impact is considered significant. Construction of all WMP components would be required to follow applicable local laws and the City's contractor(s) would be required to adjust the times of construction accordingly. Stanislaus County and the City of Modesto, City of Turlock, and City of Ceres municipal codes contain some exemptions for noise from construction and maintenance activities performed by, or for, public utilities and facilities (e.g., a special exemption permit allowed by Modesto Municipal Code Section 4-9.103[b][6]). With implementation of Mitigation Measure NOI-1 (Employ Noise-Reducing Construction Practices) and Mitigation Measure NOI-2 (Limit Nighttime Construction Noise), the City's contractor(s) would be required to ensure that construction activities occur in a manner consistent with local noise standards when operating during allowable daytime hours outlined above. Therefore, this impact would be less than significant with mitigation.

Once construction is complete, WMP components involving new, upgraded, or replacement pipelines would not generate excess noise levels. However, operation of proposed tanks, wells, water pump stations, and emergency generators would generate ongoing noise levels in areas that could expose people to noise levels in excess of established noise levels without mitigation. The Proposed Program includes wells, emergency generators, and booster pump station components in residential areas of Modesto and the outlying service areas, and the operation of these facilities would generate noise. Data indicate that the motor would produce a sound level of 56 A-weighted decibels (dBA) at 50 feet. To approximate the sound level produced under a load, 3 dB were added to the no-load condition for a

resulting source level of 59 dBA at 50 feet. The distance needed for a source of this level to attenuate to the lowest County noise-level standards is 250 feet for 45 dBA (nighttime standard). Noise at sensitive receptors located closer than 250 feet to proposed well locations or pumps could exceed the threshold of significance.

In the event that propane- or natural gas–powered engines are used at some of the proposed CIP locations, the sound level of a similarly-sized pump operated by a propane-fueled reciprocating engine was calculated using the equations for reciprocating engines from Noise Control for Buildings, Manufacturing Plants, Equipment and Products (Hoover and Keith 1996). Based on these calculations, a 100-horsepower, propane-fueled engine would produce a sound level of 75 dBA at 50 feet. This sound level would represent the highest potential noise level from well pumping activities, or the worst-case scenario at the proposed well locations. The distances needed for a source of this level to attenuate to the lowest County noise-level standards is 1,250 feet for 45 dBA (nighttime standard).

Currently, the level of design detail for all proposed CIPs is not sufficient to conduct a quantitative noise analysis; thus, operational noise impacts for these components are conservatively considered to be significant. The preliminary analysis indicates that there is the potential for noise from engines at proposed facilities with the maximum horsepower rating to exceed County nighttime noise standards at residences located within 250 feet of electric engines, or within 1,250 feet of a propane powered engine. For sensitive receptors within Modesto, the noise standard allows a higher exposure level, and the residences could be located closer than 250 feet. This impact is considered potentially significant. With implementation of Mitigation Measure NOI-3 (Employ Noise-Reducing Methods during Operations) this impact would be reduced to a less-than-significant level.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Considering the WMP components as a whole, while construction-related noise impacts would be reduced to a less-than-significant level with implementation of Mitigation Measures NOI-1 and NOI-2. Design details and specific locations for some components (e.g., wells, emergency generators, booster pump stations) have not yet been developed such that a quantitative operational noise analysis can be conducted at this time. Implementation of Mitigation Measure NOI-3 would ensure that noise-reducing design measures are incorporated into the design of these components. In conclusion, implementation of Mitigation Measures NOI-1, NOI-2, and NOI-3 would reduce noise levels associated with the Proposed Program's construction and operation, and noise levels would not be in excess of standards established in the relevant noise ordinances and policies. Therefore, this impact would be less than significant with mitigation.

<u>Mitigation Measure NOI-1: Employ Noise-Reducing Construction and Maintenance Practices</u>

The following measures will be implemented by the City or its contractor to reduce adverse effects from construction and maintenance noise in locations where noise-sensitive receptors could be adversely affected:

- locating stationary equipment as far as practical from noise-sensitive land uses,
- using electrified or otherwise quieter equipment when practical,
- using sound-control devices on equipment that are more effective than devices originally provided on the equipment,
- using noise-reducing enclosures around noise-generating equipment, and
- installing temporary barriers between noise sources and noise sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission.

When determining haul truck routes, consideration will be given to altering haul routes to avoid sensitive receptors when feasible.

Mitigation Measure NOI-2: Limit Nighttime Construction Noise

When feasible, the City and its contractor shall ensure that no construction activities are conducted in close proximity to a residence outside the hours of 7:00 a.m.–9:00 p.m. on weekdays and 9:00 a.m.–9:00 p.m. on Saturdays, Sundays, and state or federal holidays unless a special exemption permit allowed by Modesto Municipal Code Section 4-9.103(b)(6) is obtained.

Mitigation Measure NOI-3: Employ Noise-Reducing Methods During Operations

The City will implement noise-reducing methods so that noise from well operations and emergency generators does not exceed County noise-level standards at adjacent residences. Example measures may include but are not limited to:

- using sound attenuation enclosures designed to achieve noise reductions sufficient to comply with City and County standards for noise-generating elements of the operation, when no other feasible control method is available.
- locating stationary equipment as far as practical from noise-sensitive land uses,
- using electrified or otherwise quieter equipment when practical,
- using sound-control devices on equipment that are more effective than devices originally provided on the equipment,

- installing permanent barriers between noise sources and noise-sensitive land uses, or taking advantage of existing barrier features (terrain and structures) to block sound transmission, and

- limiting operations and maintenance-related trucking to specific routes, times, and speeds that minimize adverse effects to sensitive land uses such as schools and residential areas.

Impact NOI-2: Expose Persons to Excessive Groundborne Vibration or Groundborne Noise Levels

Finding:

Construction activities associated with the operation of heavy equipment may generate localized groundborne vibration. Vibration from non-impact construction activity is typically below the threshold of perception when the activity is more than about 50 feet from the receptor. Impact construction activity, including the use of compactors, jackhammers, and similar equipment, may be perceived hundreds of feet away and can cause damage to susceptible buildings located over 100 feet away. Loaded trucks, a substantial source of construction-related vibration, would likely be used during construction of Proposed Program-level components, which would involve travel along residential roads in Modesto and the outlying service areas. These trucks can generate vibration above the annoyance and human perception thresholds at distances up to 73 and 125 feet, respectively. As a result, vibration effects on sensitive receptors would be significant. Implementation of Mitigation Measure NOI-4 (Implement Vibration Reduction Measures) would reduce construction-related impacts from vibration to a less-than-significant level.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Given the temporary nature of vibration resulting from construction activities and the implementation of Mitigation Measure NOI-4, this impact would be less than significant with mitigation.

<u>Mitigation Measure NOI-4: Implement Vibration Reduction Measures.</u>

The City of Modesto and/or its contractors shall implement the following vibration-reducing measures during construction activities which could generate substantial vibration to minimize impacts on nearby sensitive receptors:

- Ensure proper tuning of vibration-causing equipment.

- Use vibration damping devices to the extent feasible.

- Limit use of vibratory equipment to the extent feasible and do not overlap use of vibratory equipment. Where possible, maintain a distance of 15+ feet from buildings.

- Require contractor(s) to ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible.

- Use electric stationary equipment (e.g., generators) where feasible.

- Implement noise and/or vibration shields, such as sound aprons or temporary enclosures with sound-absorbing material, on or around construction equipment, particularly if construction activities are conducted after 7:00 p.m. For all construction activities occurring within 60 feet of residences at any time of day, install a temporary noise and vibration barrier between the project site and the nearest sensitive receptors. Following the completion of construction activities within that distance, the barrier will be removed.

Impact NOI-3: Substantial Temporary, Periodic, or Permanent Increase in Ambient Noise Levels in the Project Vicinity Above Levels Existing Without the Proposed Program

Finding:

Temporary and periodic increases in noise levels associated with the Proposed Program's construction activities, periodic maintenance activities, and associated periodic truck traffic, would increase ambient noise levels above the ambient noise levels existing without the Proposed Program. However, implementation of Mitigation Measure NOI-1, which includes several construction noise-reducing measures, would reduce short-term noise impacts to a less-than-significant level.

Operation of proposed tanks, wells, pipelines, water pump stations, and emergency generators would generate ongoing noise levels in areas that could expose people to substantial permanent increases in noise levels. The Proposed Program's components would be located near or in residential areas of Modesto, Ceres, Del Rio, and Turlock. As indicated in Impact NOI-1, implementation of Mitigation Measure NOI-3 would reduce potential operation-related noise levels such that the proposed components would not result in noise levels exceeding the relevant thresholds (Community Noise Equivalent Level [CNEL] exterior noise levels or 3-dB increase if existing levels are above the ambient noise level), and thereby ensure that operation of new and upgraded facilities would not result in substantial permanent increases in noise levels. In conclusion, the Proposed Program's effects on ambient noise levels would be less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

Some program-level components involving construction activities, periodic maintenance activities, and associated periodic truck traffic would result in a temporary increase in ambient noise levels. Implementation of Mitigation Measure NOI-1 would ensure that short-term ambient noise levels would be reduced to a less-than-significant level.

Operation of proposed tanks, wells, pipelines, water pump stations, and emergency generators would generate ongoing noise levels in areas that could expose people to substantial permanent increases in noise levels. Implementation of Mitigation Measure NOI-3 would ensure that operation of new and upgraded facilities would not result in substantial permanent increases in ambient noise levels. In conclusion, the Proposed Program's effects on ambient noise levels would be less than significant with mitigation.

POPULATION AND HOUSING

Impact PH-3: Long-term Inducement of Unplanned Substantial Population Growth, Both Directly and Indirectly

Finding:

The Proposed Program includes upgrading the City's groundwater treatment, and water storage and distribution systems to provide improved water service to the City's contiguous and outlying service areas. The Program would not directly induce growth as it does not entail construction of new housing. However, by upgrading the treated water distribution system to deliver more water, it would remove an obstacle to planned development that would support population growth. Although this growth would be consistent with projected growth evaluated in adopted general plans, such growth could not occur without the proposed water system improvements addressed in the EIR.

New growth facilitated by the Proposed Program would result in associated physical environmental impacts; this could include aesthetic effects, conversion of farmland, air pollutant and greenhouse gas emissions, conversion of habitat, impacts on cultural or tribal cultural resources, increased point source or nonpoint source water pollution, use and possible releases of hazardous materials, noise, traffic, additional demands for public services and utilities such as police protection, fire protection, schools, parks, wastewater treatment, solid waste disposal, and energy.

Growth-inducing and secondary impacts are addressed by the policies of general plans and community plans of Stanislaus County, Modesto, Del Rio, Salida, Empire, Turlock and Ceres. These policies ensure that development within the planned growth areas occur as demand arises and services are available, and that utilities are sized appropriately to serve such development. The general and community plans mitigate for impacts through advanced planning and the implementation of growth management strategies, the provision of adequate public services and utilities such as treated water distribution, wastewater collection, and the protection of open space and habitat areas.

In conclusion, proposed improvements to the City's water distribution and storage system would remove an obstacle to urban development and population growth within the Program area. This development would occur in accordance with general plans and thus would not result in unplanned or disorderly growth. Nevertheless, the Program would remain growth-inducing and the impacts of growth inducement, and the secondary environmental effects of induced growth, are considered significant.

The policies contained in general and community plans, in particular Policy No. V.C.4[b], as well as the mitigation measures contained in the EIR, would reduce the secondary effects of growth to a level of insignificance. Individual development improvements would be required to comply with CEQA, which may result in additional mitigation for growth and its effects. For these reasons, this impact is considered less than significant with mitigation.

As such, the City finds that changes or alterations have been incorporated into the project which avoid or substantially lessen the significant effect on the environment.

Supporting Evidence:

The policies contained in general plans, as well as the mitigation measures described throughout the WMP EIR, would reduce the secondary effects of growth to a level of insignificance. Individual development improvements would also be required to comply with CEQA, which may result in additional mitigation for growth and its effects. For these reasons, this impact is considered less than significant with mitigation.

CUMULATIVE IMPACTS

Commented [CA3]: This section is missing the LSM findings for Impacts CUM 1, 4 and 5. Please add.

Commented [DL4R3]: Done

Impact CUM-1: Cumulative Impacts on Aesthetics

Finding:

Several cumulative projects identified in the EIR involve new development throughout Modesto and the County. For example, in northeastern Modesto, the Marketplace Shopping Center Project is planned within one mile of a new storage tank to be constructed under the Proposed Program. Residences and recreationists located in close proximity to these facilities may have views of both the new water storage tank and shopping center. Additionally, the Proposed Program would support planned growth in the City's service area which would involve conversion of agricultural lands. Given the large scale of the new water storage tanks, the facilities in combination with cumulative projects and other planned growth would substantially alter the Program area's rural and open space landscape. Cumulative impacts on aesthetics and visual resources would be considered significant and the Program's contribution, if left unmitigated, may be considerable.

As such, the City finds that changes or alterations have been incorporated into the project which would reduce the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

Construction of Program components could adversely affect the visual quality and visual character of a particular site during construction, but **Mitigation Measure AES-1** would reduce this impact by requiring that construction staging areas be located away from public areas. Other projects in the Modesto area, particularly new development projects and future water infrastructure projects, could alter the visual landscape in the study area. However, with implementation of **Mitigation Measure AES-2** to incorporate aesthetic considerations into the design of these components, the Proposed Program would not make a considerable contribution to any significant cumulative impacts pertaining to aesthetics and visual resources. Therefore, the Program's contribution to this cumulative impact would be less than considerable.

Impact CUM-2: Cumulative Impacts on Agriculture

Finding:

Several cumulative projects identified in the EIR could result in conversion of agricultural land, including Important Farmland, to non-agricultural uses. Additionally, build out of the City of Modesto, Stanislaus County, City of Ceres, and City of Turlock General Plans would convert agricultural land to non-agricultural use. The Proposed Program would result in the conversion of Prime Farmland or Unique Farmland to non-agricultural use associated with development of four storage tanks and six groundwater wells in the Program area.

Given the importance of agriculture to Stanislaus County and that loss of Prime Farmland has been occurring in recent years and is an ongoing concern with increasing urban development in the region, the loss of Prime Farmland is a significant cumulative impact, and the Proposed Program's contribution would be considerable.

As such, the City finds that no feasible changes or alterations have been identified which would lessen the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

LAFCO's Agricultural Preservation Policy (2015) and Policy 2.15 in the *Stanislaus County General Plan*, which require that agricultural land converted to residential use be replaced at a 1:1 ratio, do not apply to the Proposed Program. While the Stanislaus County's Farmland Mitigation Program provides a mechanism for establishing conservation easements, that mitigation program is designed to address loss of Farmland resulting from residential development and not public infrastructure projects such as the Proposed Program. Furthermore, the City has determined that the cost of establishing a conservation easement would substantially increase the cost of the Proposed Program and burden on ratepayers which would not be acceptable and purchasing an agricultural easement over off-site agricultural land would not ultimately avoid or reduce the impact of converting Farmland. Additional mitigation (e.g., restoration of Farmland) is not considered feasible. Based on this, no feasible mitigation measures have been identified. This impact of the Proposed Program would be significant and unavoidable at the project level, and a considerable contribution to significant cumulative impacts related to

loss of Farmland. Therefore, the Program's contribution to this cumulative impact would be significant and unavoidable.

Impact CUM-3: Cumulative Impacts on Air Quality and GHG Emissions

Finding:

Cumulative impacts of air quality and GHG emissions are evaluated in Impact AQ-3 and Impacts GHG-1 and GHG-2, respectively.

No single CIP would be sufficient in size, by itself, to cause nonattainment of the regional air quality standards. With implementation of **Mitigation Measures AQ-1, AQ-2, and AQ-3**, none of the program-level components would result in mass emissions above the significance threshold. However, these measures would not completely avoid emissions; therefore, the Proposed Program could make a considerable contribution to cumulative impacts related to criteria pollutant emissions for which the region is in non-attainment, a significant impact. This impact would remain significant and unavoidable.

Consulting with and permitting through the SJVAPCD for stationary source projects would reduce GHG emissions from construction of WMP components. However, it is still possible that these emissions would not be reduced below the applicable significance threshold of 10,000 MT CO2e/year of GHG emissions and therefore the Proposed Program would result in a significant and unavoidable impact.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

Program-level components would be located in an area that is in non-attainment for federal and state ozone and PM2.5 standards and state standards for PM10. Thus, the combined emissions of past, present, and probable future projects would have a significant cumulative impact on air quality in the project area. With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3 (described above for Impact AQ-2), none of the program-level components would result in mass emissions above the significance threshold. However, because these measures would not completely avoid emissions, the Proposed Program could make a considerable contribution to cumulative impacts related to criteria pollutant emissions for which the region is in non-attainment, a significant impact. This impact would remain significant and unavoidable.

On the whole, since specific details regarding the program-level components are not yet available, construction and operation of these components have been conservatively determined to potentially generate GHG emissions that exceed the significance threshold. These emissions may not be able to be reduced below the applicable significance threshold, and no other feasible mitigation has been identified which can further reduce emissions. Therefore, the Proposed Program's impact related to increased GHG emissions would be significant and unavoidable.

Impact CUM-4: Cumulative Impacts on Biological Resources

Finding:

Construction activities for cumulative projects in the Program area as well as elsewhere in Stanislaus County would have the potential to impact biological resources. Ground-disturbing construction activities could directly injure or kill wildlife, while development of new areas may result in permanent loss of habitat. Given that many of the special-status species known to occur in Stanislaus County are found in riparian areas, this may be particularly true for projects that are located along the Tuolumne River, Dry Creek, or the San Joaquin River. This is considered a cumulatively significant impact.

The Proposed Program would involve various construction activities that could impact wildlife, plants, and fish, which, if left unmitigated, would be considered a considerable contribution to this cumulative impact.

However, implementation of **Mitigation Measures BIO-1** through **BIO-15** would avoid and/or minimize impacts. In addition, compliance with the NPDES General Construction Permit, the City of Modesto's Standard Specifications related to erosion control, and implementing **Mitigation Measure HYD/WQ-1** regarding a frac-out contingency plan for trenchless pipeline installation methods would serve to avoid and minimize impacts on water quality that could affect fish and aquatic life.

As such, the City finds that changes or alterations have been incorporated into the project which would reduce the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

Considering that the Program would not convert large areas of sensitive habitat and would avoid or minimize temporary effects to the maximum extent practicable, with implementation of the above-mentioned mitigation measures, its contribution to cumulative impacts on biological resources would not be considerable. Therefore, this impact would be less than significant with mitigation.

Impact CUM-5: Cumulative Impacts on Cultural, Tribal, and Paleontological Resources

Finding:

While unlikely, it is possible that construction of WMP components in the Program study area could impact buried cultural or archaeological resources. Any project that would disturb the ground surface would have the potential to disturb buried cultural, archaeological, or paleontological resources. Therefore, many of the cumulative projects, as well as currently unknown projects that may be constructed in accordance with the City of Modesto, City of Ceres, City of Turlock, and Stanislaus County General Plans, could impact buried archaeological or paleontological resources. Such projects also could affect above-ground historical structures depending on the nature of the project and location. For these reasons, cumulative impacts on cultural and paleontological resources are considered significant.

If the Proposed Program were to impact resources or groups of resources, which are also being impacted by other projects, the Proposed Program's contribution to cumulative impacts, if left unmitigated, would be potentially considerable. However, along with implementing the City's standards and policies, the Proposed Program would implement **Mitigation Measure CR-1** to avoid and/or minimize impacts to cultural and tribal cultural resources. Therefore, this impact would be **less than significant with mitigation.**

As such, the City finds that changes or alterations have been incorporated into the project which would reduce the significant effect on the environment to a less-than-significant level.

Supporting Evidence:

Mitigation Measure CR-1 would include requirements to conduct cultural resources awareness training before beginning construction on CIP projects. With implementation of this measure, along with implementing the City's standards and policies, the Proposed Program would not substantially affect cultural, tribal cultural, and paleontological resources and would not contribute considerably to any cumulative impacts on such resources in the Program area or greater Stanislaus County.

Impact CUM-6: Cumulative Impacts on Hydrology and Water Quality

Finding:

Cumulative projects could adversely affect hydrology and water quality (e.g., via stormwater discharges from construction sites). In particular, projects located near the Tuolumne River, Dry Creek, or San Joaquin River would have potential to affect water quality in these water courses, which is already substantially compromised. The existing impairments to water quality in the region are considered to be a cumulatively significant impact. The Proposed Program, if left unmitigated, would result in discharges to impaired water bodies and therefore would make a considerable contribution to this impact.

Cumulative projects identified in the EIR, and those that may be constructed in the future in accordance with the City of Modesto, City of Ceres, City of Turlock, and Stanislaus County General Plans, could adversely affect hydrology and water quality (e.g., via stormwater discharges from construction sites). In particular, projects located near the Tuolumne River, Dry Creek, Stanislaus River, or San Joaquin River would have potential to affect water quality in these water courses, which is already substantially compromised. The existing impairments to water quality in the region are considered to be a cumulatively significant impact. The Proposed Program, if left unmitigated, would result in discharges to impaired water bodies and therefore would make a considerable contribution to this impact.

The Proposed Program's impacts on hydrology and water quality, apart from groundwater supply impacts, would be avoided and/or minimized through compliance with the NPDES General Construction Permit, the City's Standard Specifications related to erosion control, and implementation of **Mitigation Measure HYD/WQ-1**, which would require preparation and implementation of a frac-out contingency plan for trenchless pipeline installation methods.

While discharges of pollutants to the Tuolumne, Stanislaus, and San Joaquin Rivers may be considered a contribution to a significant cumulative impact given the existing contamination in these water bodies, the mitigation measures prescribed in the EIR would avoid or reduce any such discharges to minimal levels. Additionally, although not specifically identified, the sources of the existing contaminants in the Tuolumne, Stanislaus, and San Joaquin Rivers are more likely attributed to agricultural and urban runoff, rather than construction-related stormwater discharges, as many of the contaminants are pesticides.

Several of the CIP projects could add impervious surface area to the region or require additional use of groundwater supplies. The new impervious surface area, concentrated largely within or near urban areas, would not substantially affect groundwater recharge because the majority of groundwater recharge within the Modesto and Turlock Subbasins occurs via percolation of irrigation water in the vast agricultural lands in the area. However, any additional groundwater use by the cumulative projects and the Proposed Program's groundwater needs could contribute to declining groundwater levels and potential overdraft of the aquifer. As discussed in **Impact HYD/WQ-2**, although the SGMA process and the future development of a GSP would include measures or allocations to prevent groundwater overdraft, these GSP measures or allocations have not yet been developed and the aquifers' sustainable yields may be exceeded by the Proposed Program (in combination with other users) before these measures and allocations are in place. Thus, while it is the intent of the City to avoid use of groundwater in a manner which would contribute to overdraft, because overall use of groundwater in the relevant aquifers is partially outside of the City's control, and the GSP has not yet been developed to address this issue, the Proposed Program's groundwater use has been conservatively concluded to make a considerable contribution to the cumulative groundwater use and cumulatively exceedance of the local aquifers' sustainable yields. Therefore, following mitigation, the Proposed Program's contribution to cumulative impacts on hydrology and water quality could be considerable. This impact would be significant and unavoidable.

As such, the City finds that changes or alterations have been incorporated into the project which lessen the significant effect on the environment, but not to a less-than-significant level.

Supporting Evidence:

While it is the intent of the City to avoid use of groundwater in a manner which would contribute to overdraft, because overall use of groundwater in the relevant aquifers is partially outside of the City's control, and the GSP has not yet been developed to address this issue, the Proposed Program's groundwater use has been conservatively concluded to make a considerable contribution to the cumulative groundwater use and cumulatively exceedance of the local aquifers' sustainable yields. Therefore, following mitigation, the Proposed Program's contribution to cumulative impacts on hydrology and water quality could be considerable. This impact would be significant and unavoidable.

B. FINDINGS SUPPORTING REJECTION OF ALTERNATIVES

The final Program EIR discussed and evaluated a range of alternatives as required by CEQA Guidelines section 15126.6. In order to reject an alternative, the City must find:

> Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the alternatives identified in the [Program] EIR.

Following are the findings supporting rejection of each of the alternatives.

Alternative 1 – No Program Alternative

Under this alternative, no new water supply infrastructure would be constructed or upgraded. Operation of the City's water treatment, pumping, storage, and conveyance infrastructure would continue similar to existing conditions. The existing storage tanks and booster pump stations, groundwater wells, and transmission/distribution pipeline network would continue to operate. Facilities that are currently operating in the contiguous service area and the outlying service areas would continue functioning, but capacity issues would not be addressed and would likely increase over time as the population of the contiguous service areas is projected to increase by approximately 52 percent (from 255,906 to 388,579) by 2050. The Del Rio and Grayson areas would experience some growth until buildout. The City's outlying water service area in Turlock is already at buildout.

Finding for Rejection:

> Specific legal and social considerations make infeasible the alternative identified in the Program EIR. This alternative would result in increased impacts related to land use and planning as growth planned by the City would not be able to proceed because necessary infrastructure to support development would not be constructed. This alternative also would not meet any of the City's objectives to plan for and provide water infrastructure in a timely and cost-effective manner to serve new and existing development; repair and replace aging water infrastructure; ensure adequate water infrastructure and services are available to serve new growth within the General Plan and City's sphere of influence (SOI); or provide adequate storage capacity to meet operational, fire flow and emergency storage needs.

Supporting Evidence:

> Under this alternative, it is assumed that the City would not approve development which would result in demand for water supply that cannot be met under the No Program Alternative. As such, this alternative would impede attainment of the City's land use plans and policies which rely upon the water supply that would be made available by the Proposed Program. The potential exists for fire risk to increase as a result of the City's failure to address shortfalls or needed expansion of water supply to meet fire flow requirements. More wells could go out of production due to water quality concerns, without the installation of new wells or wellhead treatment to address the issue. Therefore, this could adversely affect the City's water supply as groundwater resources may be less available. The potential exists for increased impacts related to the need for new or expanded water supply or entitlements as a result of the No Program Alternative, if growth in population and housing proceeds in the absence of additional water supply infrastructure and/or if the existing infrastructure becomes deteriorated or otherwise incapable due to pressure or

groundwater quality issues of providing adequate water supplies to the City's water service area.

This alternative would also not meet any of the City's objectives related to providing sewer infrastructure for new and existing development, replacing aging water infrastructure, ensuring adequate water infrastructure and services are available to serve new growth within the General Plan and City's SOI, or provide adequate storage capacity to meet operational, fire flow and emergency storage needs. While this alternative would reduce or avoid most of the significant impacts of the Proposed Program, for the reasons described above, this alternative is considered to be infeasible.

Alternative 2 – Deferred Implementation Alternative

Under the Deferred Implementation Alternative, the schedule for construction of some program-level WMP components would be deferred by 5 years, compared to the schedule for implementation of the Proposed Program. New water supply infrastructure would be constructed or upgraded as indicated for the Proposed Program, but at a later date. Similarly, operation of the City's water treatment, pumping, storage, and conveyance infrastructure would be improved and expanded, but at a slower pace. Maintenance and addition of storage tanks and booster pump stations, groundwater wells, and the transmission/distribution pipeline network would continue, but some shortfalls in capacity or pressure flows may result from the delay in implementation of identified CIPs. Facilities in the contiguous service area and the outlying service areas would continue to operate, but capacity and pressure issues may not be addressed in a timely manner. Development in the City's water service area may be delayed to the extent that construction of necessary infrastructure to support such development would be delayed under this alternative.

Finding for rejection:

Specific legal and social considerations make infeasible the alternative identified in the Program EIR. This alternative would delay the City's ability to meet Program objectives and thus would not fully meet objectives aimed to provide water infrastructure in a timely and cost-effective manner to serve new and existing development and provide adequate water infrastructures and services to serve new growth within the General Plan and City's SOI.

Supporting Evidence:

By delaying construction of facilities, this alternative may not fully meet the City's land use plans, which could result in greater impacts than under the Proposed Program. Impacts of long-term inducement of substantial population growth, and related secondary impacts, would remain, but would be delayed as growth would be impeded by the lack of adequate water supply infrastructure. The potential exists for fire risk to increase if the extended timeline results in delays in addressing shortfalls or needed expansion of water supply to meet fire flow requirements.

This alternative would also fail to meet most of the City's objectives related to providing water infrastructure for new and existing development, replacing aging water infrastructure in a timely and cost-effective manner, ensuring adequate water infrastructure and services are available to serve new growth within the General Plan and City's SOI, or providing adequate storage capacity to meet operational, fire flow and emergency storage needs. As such, the Deferred Implementation

Alternative would not as effectively meet program objectives, as necessary infrastructure to address system deficiencies and support planned development would be delayed. For the reasons described above, this alternative is considered to be infeasible.

Alternative 3: Alternative Sources of Water Supply

Under this alternative, alternative sources of water supply would be used to address existing system deficiencies and meet increases in demand. This would alter the mosaic of capital improvements needed to deliver water to City customers. This alternative would not ultimately alter the amount of water to be used; however, it would rely on a greater range of sources for that water, aside from groundwater and surface water. Different capital facilities would be required to utilize this water throughout the City's service area compared to those proposed under the Program. The actual facilities would depend upon the sources selected and their relative contributions to the overall supply. The additional sources identified for this alternative are assumed to be in addition to alternative water supply sources already being developed by the City, such as water conservation through the City's water shortage contingency plan, in-lieu groundwater recharge, and Aquifer Storage and Recovery (ASR). Alternative sources of water supply under this alternative could include the following:

- **Additional Sources of Potable Water:** A MRWTP Phase Three Expansion project may be possible if there is a sizable future conversion of agricultural land to urban uses that would allow for a corresponding redistribution of Modesto Irrigation District's (MID's) existing surface water rights.

- **Development of Recycled Water Options:** Recycled water could be used in future Comprehensive Planning Districts. This additional supply, however, may affect potable water supply needs by supporting additional and future irrigation of golf courses and parks with non-potable water supply sources. The existing non-potable water supply sources, however, may be subject to cut-backs during dry years; the City would need to use groundwater to make up the difference. Recycled water supplies are not subject to cut-backs and, therefore, could reduce groundwater extractions during dry years.

This alternative would not ultimately alter the amount of water to be used; however, it would rely on a greater range of sources for that water, aside from groundwater and surface water. Project objectives related to repair and replacement of water infrastructure and serving new growth within the General Plan area and the City's SOI would not be met by this alternative.

Finding for rejection:

Specific legal and social considerations make infeasible the alternative identified in the Program EIR. While it would reduce some impacts through use of alternative water supplies, it would be anticipated to have impacts that are, on the whole, similar to those of the Proposed Program. This alternative would meet some, but not all, of the project objectives.

Supporting Evidence:

Many categories of impact for this alternative could be greater or less than those of the Proposed Program, depending upon the extent and location of new facilities. one of the potential sources of water supply under this alternative would be water

previously used for agriculture; as such, it would be dependent upon the conversion of agricultural lands to non-agricultural uses. By using alternative means of addressing system deficiencies and meeting future water demand, this alternative would reduce the need for the sources of potable water identified for the Proposed Program (i.e., groundwater and surface water supplies from MID). As such, the impacts related to use of those water sources would be avoided. However, these new sources of water could have their own set of environmental impacts. While the water supply options evaluated under this alternative are very general in nature, examples of impacts include: reductions or changes of instream flows and related effects on water quality and/or instream habitat, injury to other legal holders of water rights, and third-party effects, such as changes in land uses associated with changed water usage patterns. Appropriate mitigation would need to be developed to address any such impacts. No water supplies would be tapped without a prior agreement with their water rights holders. For these reasons, this alternative is considered to be infeasible.

STATEMENT OF OVERRIDING CONSIDERATIONS

STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to Public Resources Code Section 21081 and Section 15093 of the State CEQA Guidelines (14 California Code of Regulations 15000 et seq.), the City of Modesto cannot approve a project for which an Environmental Impact Report (EIR) has been certified which identifies significant effects on the environment unless it adopts a statement of overriding considerations that finds that specific overriding economic, legal, social, technological, or other benefits of the project outweigh its significant effects on the environment.

A. SIGNIFICANT AND UNAVOIDABLE IMPACTS

The following significant impacts have been identified for which no mitigation is available that would reduce the impact to a less-than-significant level:

- Impact AG-1: Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use
- Impact AG-3: Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use
- Impact AQ-1: Conflict with or Obstruct Implementation of an Applicable Air Quality Plan
- Impact AQ-3: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-attainment Under an Applicable Federal or State Ambient Air Quality Standard
- Impact GHG-1: Generate a Substantial Amount of GHG Emissions
- Impact GHG-2: Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs
- Impact HYD/WQ-2: Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would Be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level
- Impact CUM-2: Cumulative Impacts on Agriculture
- Impact CUM-3: Cumulative Impacts on Air Quality and GHG Emissions
- Impact CUM-6: Cumulative Impacts on Hydrology and Water Quality

B. STATEMENT OF OVERRIDING CONSIDERATIONS

The City Council has determined that the Water Master Plan Program EIR should be approved and that any remaining unmitigated environmental impacts attributable to the Proposed Program are outweighed by the following specific benefits. The Proposed Program will:

i. Meet existing and future water treatment demands for the City and its customers in unincorporated areas of Stanislaus County through 2035;

ii. Implement the City's economic goals and Urban Area General Plan policies, including Policies VI.A.3, VI.B.2, VI.B.3, and VI.B.5 in Chapter VI, Community Services and Facilities, by planning for, and providing, water infrastructure in a timely and cost-effective manner to serve new and existing development;

iii. Repair and replace aging water infrastructure;

iv. Ensure adequate water infrastructure and services are available to serve new growth within the General Plan and City's Sphere of Influence, and planned water demands; and

v. Plan for state-of-the-art facilities that reliably and economically meet the changing regulatory requirements.

Commented [CA1]: Add specific reference to relevant General Plan goals or policies.

Commented [DL2R1]: Added.

Chapter 1
INTRODUCTION

The City of Modesto (City) as the lead agency has prepared this Final Environmental Impact Report (FEIR) to provide other responsible agencies and the public with information about the potential environmental effects of the proposed Water Master Plan (WMP or Proposed Program). The document has been prepared in compliance with the California Environmental Quality Act (CEQA) of 1970 (as amended) and the State CEQA Guidelines (14 California Code of Regulations [CCR] 15000 et seq.). Together with the Draft Environmental Impact Report (DEIR), this document constitutes the FEIR for the Proposed Program.

1.1 FEIR Context

The Proposed Project would involve implementation of a WMP prepared by the City of Modesto. The City developed the WMP to define the City's long-term water supply and infrastructure needs and guide management of its water service system, which includes the City of Modesto and communities in its sphere of influence (Salida, Del Rio, Ceres [Walnut Manor], Empire), and the cities of Grayson and Turlock. The WMP identifies recommended and prioritized capital improvement projects (CIPs) for system-wide implementation needed to deliver safe and reliable water and meet water demand requirements for existing and future City customers through buildout of the City's adopted General Plan. The CIPs proposed in the WMP include new water storage tanks, improvements to existing tanks, new and replacement groundwater wells, groundwater monitoring wells, pump stations, transmission mains, distribution pipelines, supervisory control and data acquisition (SCADA) system upgrade, water quality related studies, wellhead treatment, emergency generators, water system security enhancements, groundwater management, water master plan updates, maintaining and calibrating a hydraulic model of the water system, evaluations of the water system, and water meters for the contiguous water service area and/or outlying water service areas. The Proposed Program was evaluated in a DEIR in accordance with CEQA and the State CEQA Guidelines and was circulated for a 45-day public review period.

CEQA requires the lead agency to prepare an FEIR, addressing all substantive comments received on the DEIR, before approving a project. The FEIR must include a list of all individuals, organizations, and agencies that provided comments on the DEIR, and must contain copies of all comments received during the public review period along with the lead agency's responses.

1.2 Summary of Public Participation

1.2.1 Notice of Preparation and Public Scoping

Scoping refers to the public outreach process used under CEQA to determine the coverage and content of an environmental impact report (EIR). The scoping comment period offers an

important early opportunity for public review and comment on the focus of the CEQA analysis. The scoping process for an EIR is initiated by publication of the Notice of Preparation (NOP), as required by CEQA, which provides formal notice to the public and to interested agencies and organizations that a DEIR is in preparation. Additionally, the NOP informs responsible agencies and the public whether the proposed project could have significant effects on the environment and to solicit their comments so that any concerns raised could be considered during the preparation of the DEIR. During the scoping period, agencies and the public are invited to comment on the project, the approach to environmental analysis, and any issues of concern to be discussed in the DEIR. Scoping also can assist the lead agency with identification of project alternatives and mitigation measures. CEQA does not require public meetings during the scoping phase.

In accordance with State CEQA Guidelines Sections 15082(a), 15103, and 15375, the City circulated an NOP for the Proposed Program beginning on August 26, 2016, and ending on September 26, 2016. The NOP was circulated to the public; local, state, and federal agencies; and other interested parties. A copy of the NOP was included in Appendix A, *Scoping Summary,* of the DEIR. Comment letters received in response to the NOP were also compiled in the scoping summary and were considered during preparation of the DEIR. In addition, the City held a public scoping meeting on September 6, 2016 to receive agency and public comments on the scope of the EIR for the Proposed Program. No comments were provided at the meeting.

1.2.2 Notice of Availability of the DEIR and Public Review

Upon completion of the DEIR, the City issued a Notice of Availability (NOA), providing agencies and the public with formal notification that the document was available for review. The notice was sent to the Governor's Office of Planning and Research (OPR) State Clearinghouse, responsible and trustee agencies, persons and organizations that requested a copy, and the Stanislaus County Clerk's office for posting. A notice was also published in the *Modesto Bee*.

These actions triggered a 45-day public review period, which began on October 15, 2019, and concluded on December 2, 2019. A notice advertising the availability of the DEIR and the location and time of the DEIR public meeting was published in the *Modesto Bee* on October 15, 2019.

During the review period for the DEIR, all documents related to the Proposed Program were available for review on City business days, between the hours of 8 a.m. and 5 p.m., at the following location:

City of Modesto Utilities Department
1010 10th Street, Suite 4600
Modesto, CA 95353

In addition, an electronic copy of the DEIR was available for review and download from the City's website (www.modestogov.com/847/Water-Plans-Reports), and CD copies of the DEIR were also available by contacting Jim Alves, Associate Civil Engineer at City of Modesto. Copies were also available for review at the Stanislaus County Library.

1.2.3 Comments on the DEIR

Written comments or questions concerning the DEIR were accepted during the public review period at the following address:

Jim Alves, Associate Civil Engineer
City of Modesto Utilities Department
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353
Email: jalves@modestogov.com

A total of 5 comment letters were received during the public review period. Chapter 2 provides additional information about comments received on the DEIR.

1.3 FEIR Review and Certification

The FEIR will be distributed to public agencies that provided comments at least 10 days prior to certifying the FEIR. At the close of the 10-day public agency review period, City staff will recommend to the City Council whether or not to certify the FEIR. This governing body then will review the FEIR, consider staff recommendations and public testimony, and decide whether to certify the FEIR.

For significant impacts identified in the EIR that cannot be mitigated, a statement of overriding considerations must be included in the administrative record of the Proposed Program and, if the City chooses to certify the EIR and approve the Proposed Program, mentioned in the Notice of Determination (NOD) to be filed with OPR and at the office of the County Clerk (14 CCR Section 15093[c]).

1.4 Organization and Content of the FEIR

This FEIR contains the following chapters:

- **Chapter 1, *Introduction*.** This chapter describes the context of the FEIR; summarizes the public participation process to date, including the NOP and public scoping, the DEIR and public review, and comments on the DEIR; explains the FEIR review and certification process; and describes the organization of the document.
- **Chapter 2, *Comments on the DEIR and Responses*.** This chapter contains the substantive comments received on the DEIR and provides City's responses to those comments.
- **Chapter 3, *Revisions to the DEIR*.** This chapter presents revisions to the text of the DEIR made in response to comments received during the public review period or initiated by the City.
- **Chapter 4, *Report Preparation*.** This chapter lists the firms and individuals who assisted in the preparation of this FEIR.
- **Chapter 5, *References*.** This chapter provides a list of sources that are cited to support responses to comments on the DEIR.

This page intentionally left blank

Chapter 2
COMMENTS ON THE DEIR AND RESPONSES

2.1 Introduction

CEQA requires the lead agency to prepare an FEIR, addressing all substantive comments received on the DEIR. The FEIR must include a list of all individuals, organizations, and agencies that provided comments on the DEIR, and must contain copies of all comments received during the public review period, along with the lead agency's responses.

This chapter provides a list of comments received, copies of the comments, and responses to those comments that address environmental issues.

Individual comments within each submittal are marked and numbered in the margin of the comment letter. The marked individual comments correspond to the responses to those comments (e.g., Comment A-1 from Letter A corresponds to the response to Comment A-1).

2.2 List of Comments Received

The City received five comment submittals, including letters and emails, during or immediately following the public review period. **Table 2-1** lists the identifier for each submittal; the name and affiliation of the individual who submitted each comment; and the date the comment was sent.

Table 2-1. List of DEIR Comment Submittals Received During the Public Review Period

Comment Letter	Commenter Name and Affiliation	Date Sent
A	Gavin McCreary, Site Mitigation and Restoration Program, Department of Toxic Substances Control	November 4, 2019
B	Jordan Hensley, Environmental Scientist, Central Valley Regional Water Quality Control Board	December 2, 2019
C	William D. Ross, on behalf of Salida Fire Protection District	December 2, 2019
D	John Davids, Modesto Irrigation District	December 12, 2019
E	Scott Morgan, Director, State Clearinghouse	December 3, 2019

2.3 Comments and Responses

This section contains a copy of each comment letter received during the DEIR review period. Following each submittal are the City's responses to each comment that addresses an environmental issue. Revisions to the DEIR that are indicated in these responses are provided in Chapter 3 of this FEIR.

DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CITY OF MODESTO WATER MASTER PLAN – DATED OCTOBER 15, 2019 (STATE CLEARINGHOUSE NUMBER: 2016082069)

Dear Mr. Alves:

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report for the City of Modesto Water Master Plan (EIR).

The City of Modesto (City) developed the Water Master Plan (WMP) to define the City's long-term water supply and infrastructure needs and guide management of its water service system. The WMP identifies recommended and prioritized capital improvement projects for system-wide implementation needed to deliver safe and reliable water and meet water demand requirements for existing and future City customers through buildout of the City's adopted General Plan. The key components of the City's water system are storage tanks and booster pump stations, groundwater wells, wellhead treatment, and a transmission/distribution pipeline network.

DTSC recommends that the following issues be evaluated in the EIR, Hazards and Hazardous Materials section:

1. The EIR should acknowledge the potential for historic project site activities to have resulted in the release of hazardous wastes/substances. In instances in which releases have occurred, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.

A-1

Printed on Recycled Paper

In addition to anticipating contaminants discovered while performing work for system infrastructure at specific sites, the City should have plans in place for any incidental hazardous wastes/substances encountered while installing piping for water distribution systems. The Health and Safety Plan developed for site workers should include protocol for cases in which suspected contamination is encountered. Additionally, a Soil Management Plan should be in place to ensure proper disposal for any contaminated soil.

A-1, cont'd

2. If buildings or other structures are to be demolished on any project sites included in the WMP, surveys should be conducted to investigate for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling should be conducted in accordance with DTSC's 2006 *Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers* (https://dtsc.ca.gov/wpcontent/uploads/sites/31/2018/09/Guidance_Lead_Contamination_050118.pdf).

A-2

3. If any projects initiated as part of the WMP require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to *DTSC's 2001 Information Advisory Clean Imported Fill Material* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/SMP_FS_Cleanfill-Schools.pdf).

A-3

4. If any sites included as part of the WMP have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/Ag-Guidance-Rev-3-August-7-2008-2.pdf). In addition, sampling should be conducted in accordance with DTSC's 2006 *Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers* (https://dtsc.ca.gov/wpcontent/uploads/sites/31/2018/09/Guidance_Lead_Contamination_050118.pdf).

A-4

DTSC appreciates the opportunity to review the Draft EIR. Should you need any assistance with an environmental investigation, please submit a request for Lead Agency Oversight Application, which can be found at: https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/VCP_App-1460.doc. Additional information regarding voluntary agreements with DTSC can be found at: https://dtsc.ca.gov/brownfields/.

Response to Comment A-1

The commenter from the California Department of Toxic Substances Control (DTSC) indicates that the EIR should acknowledge the potential for past activities that may have resulted in the release of hazardous wastes/substances, and requests that the EIR describe the process for conducting further studies, investigations, and remediation that may be necessary.

The regulatory setting portion of EIR Chapter 11, *Hazards and Hazardous Materials*, describes Stanislaus County Safety Element Goal 2, Policy Thirteen: "The Department of Environmental Resources shall continue to coordinate efforts to identify locations of hazardous materials and prepare and implement plans for management of spilled hazardous materials as required." This portion of Chapter 11 also describes City of Modesto Urban Area General Plan Policy VII-J[a]: "Support the Local Hazard Mitigation Plan (LHMP) and ensure the LHMP will be monitored, evaluated, and updated every three years or more frequently as the need arises." Also, there is an extensive state and local regulatory framework that includes requirements for addressing hazardous waste/substances.

Section 11.3.2, "Existing Hazards and Hazardous Materials," states: "In general, hazardous materials contamination is most often connected with past land uses such as gas stations, industrial facilities with underground storage tanks, military bases, and other sites that commonly use or store hazardous materials." Figure 11-4 depicts existing hazardous materials sites within the Proposed Program vicinity. Table 11-1 identifies existing hazardous material sites within 0.25 mile of Proposed Program components. This information provides adequate discussion regarding the potential for historic releases of hazardous wastes and substances.

Impact HAZ-6 (page 11-25) describes the process adopted with Modesto City Council Resolution 2003-66, which would require that any property acquisition by the City must be preceded by appropriate soil investigation and testing. This impact discussion also discloses that "Proposed pipeline improvements would generally be located within the public right-of-way and not within documented clean-up sites." The discussion provides the requested information; no additional response is necessary.

Response to Comment A-2

The comment indicates procedures to be followed prior to demolition of structures that may involve the presence of lead-based paints, mercury, asbestos-containing materials, and polychlorinated biphenyl caulk.

Chapter 11, "Hazards and Hazardous Materials," provides information in several places about federal and state requirements for demolition and construction activities that involve hazardous materials. The discussion primarily focuses on removal of asbestos-containing materials, however. In response to this comment, the discussion under "Occupational Safety and Health Act" (page 11-3) is hereby revised as follows to include information about other hazardous materials.

Occupational Safety and Health Act

OSHA is responsible at the federal level for ensuring worker safety. OSHA sets federal standards for implementation of workplace training, exposure limits, and safety procedures for the handling of hazardous substances, as well as other workplace hazards. OSHA also establishes criteria by which each state can implement its own health and safety program. 29 CFR Chapter XVII, Subpart Z, Section 1926.1101 includes regulations to prevent worker exposure to unsafe levels of asbestos during construction and demolition activities. These regulations require contractors to set up regulated areas in dealing with asbestos materials and ensure that persons entering these areas are wearing respirators. Similarly, OSHA regulations establish general safety requirements for demolition involving hazardous materials (29 CFR Chapter XVII, Subpart Z, Section 1926 Subpart T) and requirements for construction and demolition activities involving lead (29 CFR Chapter XVII, Subpart Z, Section 1926.62).

In addition, Impact HAZ-1 (page 11-23) is hereby revised as follows to clarify inclusion of OSHA and DTSC regulations and requirements.

Impact HAZ-1: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Construction (*Less than Significant*)

Construction of the Proposed Program improvements would involve use of heavy construction equipment, which would use hazardous materials in their operation. These materials would include fuel, grease, oil, and other materials that may be contained within the equipment and/or stored on-site by the construction contractor. Contractors may routinely transport these materials to and from the site, and dispose of the materials once they have been used. In addition, the disinfection and flushing of newly constructed pipelines would require the use of hazardous materials (i.e., chlorination or de-chlorination chemicals). Potential demolition of structures could expose construction workers to hazardous materials such as asbestos-containing materials or lead-based paint.

Transport, use, and disposal of hazardous materials during construction could expose workers, the public, or the environment to hazards if adequate precautions are not taken. Construction workers could inhale toxic vapors or make bodily contact with materials, which could subject them to harm. The public or the environment could be exposed to toxic substances if materials were not stored, transported, or disposed of properly. The potential for harm may depend on the site-specific characteristics at any given Program improvement site, as well as proximity to sensitive receptors or environmental resources.

In accordance with applicable regulations, the City of Modesto and its contractors would be required to identify and track hazardous waste from “cradle to grave” (see RCRA under Section 11.2.1) and provide training and personal protective equipment to workers, if necessary, to prevent exposure to hazardous substances in excess of exposure limits (see “OSHA” under Section 11.2.1). Additionally, the City and/or its contractors would be required to follow protocols established under the NESHAP regulations (described in the

regulatory setting above and in Chapter 6, *Air Quality*), which are designed to limit health impacts associated with hazardous substances.

Compliance with these laws and regulations described in the regulatory setting would prevent significant impacts from occurring during construction activities, and the WMP does not create unique hazards from use, storage, transport, and disposal of materials. Therefore, this impact would be **less than significant.**

The commenter also provides a web link to DTSC's guidance for evaluating school sites with potential contamination. The Proposed Program does not involve the siting or construction of any schools, nor would it involve any activities that would result in the relocation of existing schools. Thus, although there are schools located in the Proposed Program's vicinity (Figure 11-3), the Proposed Program's pipelines would be located outside of these areas and instead within City or County right-of-way boundaries, City utility easements, and/or construction easements (Page 2-39). Because the Proposed Program does not involve school sites, no change to the EIR is necessary.

Response to Comment A-3

The commenter provides a web link to DTSC's guidance regarding imported fill material. The discussion of DTSC's responsibilities (page 11-3 in Chapter 11, *Hazards and Hazardous* Materials) is hereby revised to incorporate the recommended information, as follows:

The Unified Program

The Unified Program (20 Health and Safety Code [HSC] Sections 25404-25404.9) consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. Statewide, DTSC has primary regulatory responsibility for management of hazardous materials, including the following:

- removal, demolition, and disposal of demolished structures that contain lead-based paint, mercury, and asbestos (DTSC 2006);
- importation of fill material (DTSC 2001); and
- presence of organochlorinated pesticides (DTSC 2008).

~~and it~~ DTSC works with other state agencies and delegates its authority to local jurisdictions that enter into agreements with the state. [[*no further revisions*]]

(Note that the links provided in the comment letter have been superseded by more current information due to reorganization of the DTSC website.)

Response to Comment A-4

The commenter provides a web link to DTSC's guidance for evaluating potential contamination of agricultural soils and for evaluating school sites for potential contamination. As described in the Response to Comment A-1, Modesto City Council Resolution 2003-66 requires that any property acquisition by the City must be preceded by appropriate soil investigation and testing. In addition,

as described in Response to Comment A-2, the Proposed Program would not affect existing school sites or require the relocation of schools. The comment is noted.

COMMENTS TO REQUEST FOR REVIEW FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, CITY OF MODESTO WATER MASTER PLAN PROJECT, SCH#2016082069, STANISLAUS COUNTY

Pursuant to the State Clearinghouse's 15 October 2019 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Draft Environmental Impact Report (DEIR)* for the City of Modesto Water Master Plan Project, located in Stanislaus County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

Recycled water use can help to reduce local water scarcity. It is not the only option for bringing supply and demand into a better balance, but it is a viable cost-effective solution that is appropriate in many cases. The feasibility of recycled water use depends on local circumstances which affect the balance of costs and benefits. In drought conditions, recycled water can be particularly valuable, given the scarcity of alternative supplies. In normal precipitation years recycled water use may reduce groundwater extraction. The proposed Water Mater Plan Project's goal is to deliver safe and reliable water and meet the demands of existing and future City of Modesto water customers. However, the DEIR has identified a substantial adverse effect on groundwater through depletion of groundwater supply and potential interference with groundwater recharge. This is presented as an unavoidable impact with no feasible mitigation. We recommend the consideration of recycled water use wherever possible within the Project's area as a means to help minimize the groundwater depletion. Information on permitting for recycled water is in the section "Waste Discharge Requirements – Discharges to Land", below. B-1

I. Regulatory Setting

Basin Plan B-2

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-

Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases, the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues. For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

B-2, cont'd

Antidegradation Considerations

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at:
https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

> *Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.*
>
> *This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.*

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

1

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction Activities (Construction General Permit), Construction General Permit Order No. 2009-009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). For more information on the Construction General Permit, visit the State Water Resources Control Board website at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits[1]

The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

B-2, cont'd

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Industrial Storm Water General Permit

Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-

[1] Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

1

0057-DWQ. For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements. If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications. For more information on the Water Quality Certification, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

B-2, cont'd

Waste Discharge Requirements – Discharges to Waters of the State

If USACE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation. For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at:https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Projects involving excavation or fill activities impacting less than 0.2 acre or 400 linear feet of non-jurisdictional waters of the state and projects involving dredging activities impacting less than 50 cubic yards of non-jurisdictional waters of the state may be eligible for coverage under the State Water Resources Control Board Water Quality Order No. 2004-0004-DWQ (General Order 2004-0004). For more

1

information on the General Order 2004-0004, visit the State Water Resources Control Board website at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2004/wqo/wqo2004-0004.pdf

Waste Discharge Requirements – Discharges to Land

Before beginning discharge of any wastewater to land, the property owner and operator (together) are required to have WDRs or other documents from the Regional Water Quality Control Board allowing discharge to land.

The use of recycled water for non-potable uses, e.g. landscape irrigation, crop irrigation, dust control, industrial/commercial cooling, decorative fountains, can help to reduce local water scarcity and minimize groundwater withdrawals. The State Water Resources Control Board's Water Quality Order 2016-0068-DDW, *Water Reclamation Requirements for Recycled Water Use* (Recycled Water General Order), regulates discharges of recycled or reclaimed water to land. The Recycled Water General Order establishes standard conditions for recycled water use and conditionally delegates authority to an Administrator to manage a Water Recycling Program and issue Water Recycling Permits to recycled water users. Under this order only treated municipal wastewater for non-potable uses can be permitted.

In accordance with California Water Code Section 13260, the project proponent is required to submit a Report of Waste Discharge (RWD) to apply for enrollment under the general order. We recommend that the RWD be submitted 6 to 12 months before the expected startup date.

Pursuant to the State Board's Onsite Wastewater Treatment Systems Policy, the regulation of the septic system may be regulated under the local agency's management program. Please note that only domestic wastewater coming from bathrooms and kitchens should be discharged to septic systems, to avoid negative impacts to groundwater.

For more information on waste discharges to land, visit the Central Valley Water Board Waste Discharges to Land website at https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_land/.

Dewatering and Well-Development Discharge to Land

If the proposed project includes construction dewatering to be discharged to land, the proponent may apply for coverage under Water Quality Order 2003-0003-DWQ, *General Waste Discharge Requirements for Discharges to Land with a Low Threat to Water Quality* (Low Threat General Order). Small temporary construction dewatering projects are projects that discharge groundwater to land from, for example, excavation activities, water or monitoring well development and test pumping/purging, or non-contact cooling water. For certain other discharges which represent the absolute lowest threat to water quality, the Central Valley Water Board has adopted Resolution R5-2018-0085, *Waiver of Reports of Waste Discharge and WDRs for Specific Types of Discharge Within the Central Valley Region* (Specific Low-Threat Waiver). Dischargers seeking coverage under the

B-2, cont'd

1

Low Threat General Order or the Specific Low-Threat Waiver must file at minimum a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Threat General Order, visit the Central Valley Water Board Adopted Orders website, WQO 2003-0003 at https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf.

For more information regarding the Specific Low-Threat Waiver, visit the Central Valley Water Board website, R5-2018-0085 at https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2018-0085.pdf.

Limited Threat NPDES Permit - Discharge to Surface Waters
If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order. For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

NPDES Permit
If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit. For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/help/permit/

B-2, cont'd

Response to Comment B-1

The City acknowledges and appreciates the Central Valley Regional Water Quality Control Board's (RWQCB's) review and comments on the DEIR, and its input regarding recycled water use as a means of minimizing groundwater depletion. The permitting requirements stated in the Central Valley RWQCB's letter regarding recycled water use are described in Section 12.2.2 of Chapter 12, *Hydrology and Water Quality,* on page 12-4. The use of recycled water for agricultural purposes is described by the City in its Wastewater Master Plan (2017); however, the City's *Urban Water Management Plan* (City of Modesto 2016) states that the City does not use recycled water to offset potable water use, nor does it anticipate doing so in the future.

Response to Comment B-2

The City acknowledges and appreciates the Central Valley RWQCB's review and comments on the DEIR, and its input regarding the various regulatory permitting requirements which may apply to the Proposed Program. The permitting requirements stated in the Central Valley RWQCB's letter are described in Section 12.2.2 of Chapter 12, *Hydrology and Water Quality,* of the DEIR. Additions to the setting section of Chapter 12 and Impact HYD/WQ-1 have been provided to further clarify the City's compliance with the potentially applicable NPDES permitting requirements. These clarifying edits do not alter the conclusions of the impact's significance or require any new or additional mitigation measures. Therefore, no additional response is necessary.

Jim Alves, Associate Civil Engineer[1]
City of Modesto Utilities Department
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353

Re: Comments of Salida Fire Protection District on City of Modesto Water Master Plan Draft Environmental Impact Report

Dear Mr. Alves:

This communication comments initially on behalf of the Salida Fire Protection District ("District") on the City of Modesto ("City") Draft Environmental Impact Report ("DEIR") for the City Water Master Plan (the "Project"). The comments focus on the substantive and procedural compliance of the Project DEIR with the provisions of the California Environmental Quality Act (Public Resources Code Section 21000 *et. seq.*, "CEQA"), its Guidelines (Title 14, California Code of Regulations, Section 15000 *et. seq.*, "CEQA Guidelines") and applicable case law interpreting CEQA and the CEQA Guidelines as they relate to the District.

The methodology used in analyzing the DEIR is to: (1) examine the requirements for the contents of an environmental impact report ("EIR") as contained in CEQA, the CEQA Guidelines and applicable case law; and, (2) apply those standards to the DEIR to determine whether compliance is present with respect to the specific concerns of the District focused on adequacy of assessment of the Project impact on fire services.

I. FACTUAL BACKGROUND

A. Documents Reviewed.

The following documents have been reviewed in conjunction with the analysis of the DEIR in this communication:

1. Mr. Alves' job title is also listed as "Acting Senior Civil Engineer," *see*, DEIR, Executive Summary, p. ES-8.

1. Notice of Preparation ("NOP") of Draft Environmental Impact Report for the City of Modesto Water Master Plan, dated August 26, 2016;[2]

2. Notice of Availability of Draft Environmental Impact Report for City of Modesto Water Master Plan, dated October 15, 2019;

3. The City of Modesto 2019 Urban Area General Plan; and,

4. The City of Modesto 2019 Urban Area General Plan, Master Final Environmental Impact Report.

B. The Organization of The Project DEIR.

The DEIR is organized as follows:

An Executive Summary ("ES") (pp. ES-1 – ES-11);

Chapter 1 Introduction (pp. 1-1 – 1-23);

Chapter 2 Program Description (pp. 2-1 – 2-41);

Chapter 3 Introduction to the Environmental Analysis (pp. 3-1 - 3-5);

Chapter 4 Aesthetics and Visual Resources (pp. 4-1 – 4-7);

Chapter 5 Agricultural Resources (pp. 5-1 – 5-9);

Chapter 6 Air Quality (pp. 6-1 – 6-18);

Chapter 7 Biological Resources (pp. 7-1 – 7-34);

Chapter 8 Cultural, Tribal, and Paleontological Resources (pp. 8-1 – 8-18);

Chapter 9 Geology, Soils, and Seismicity (pp. 9-1 - 9-13);

Chapter 10 Greenhouse Gas Emissions and Energy Resources (pp. 10-1 - 10-11);

Chapter 11 Hazards and Hazardous Materials (pp. 11-1 – 11-23);

Chapter 12 Hydrology and Water Quality (pp. 12-1 – 12-25);

2. The District has reviewed its records, e-mails and written correspondence before and after August 26, 2016 and has determined that it did *not* receive the NOP. A summary review of this DEIR does not reveal a record of furnishing the NOP. *See*, CEQA Guideline Section 15082(a)(3).

1

Chapter 13 Land Use and Planning (pp. 13-1 – 13-14);

Chapter 14 Noise and Vibration (pp. 14-1 – 14-19);

Chapter 15 Population and Housing (pp. 15-1 – 15-11);

Chapter 16 Transportation (pp. 16-1 – 16-11);

Chapter 17 Utilities and Service Systems (pp. 17-1 – 17-15);

Chapter 18 Other Statutory Considerations (pp. 18-1 – 18-23);

Chapter 19 Alternatives (pp. 19-1 – 19-14);

Chapter 20 Report Preparation (pp. 20-1); and,

Chapter 21 References (pp. 21-1).

C. Organization of the 2019 City Master FEIR For the Urban Area General Plan.

The City of Modesto 2019 Master Final Environmental Impact Report for the Urban Area General Plan consists of the following Chapters:

(1) Executive Summary (pp. I-1 – I-14);

(2) Implementation and Use of the Master Environmental Impact Report (pp. II-1 – II-9);

(3) Project Description (pp. III-1 – III-5);

(4) Environmental Setting (pp. IV-1 – IV-4);

(5) Environmental Analyses (pp. V-1-1 – V-1-46);

(6) Air Quality and Greenhouse Gas Emissions (pp. V-2-1 – V-2-43);

(7) Generation of Noise (pp. V-3-1 – V-3-46);

(8) Effects on Agricultural Lands (pp. V-4-1 – V-4-12);

(9) Increased Demand for Long-Term Water Supplies (pp. V-5-1 – V-5-23);

(10) Increased Demand for Sanitary Sewer Services (pp. V-6-1 – V-6-13);

1

(11) Loss of Sensitive Wildlife and Plant Habitat (pp. V-7-1 – V-7-31);

(12) Disturbance of Archaeological / Historical Sites (pp. V-8-1 – V-8-29);

(13) Increased Demand for Storm Drainage (pp. V-9-1 – V-9-13);

(14) Flooding and Water Quality (pp. V-10-1 – V-9-13);

(15) Increased Demand for Parks and Open Space (pp. V-11-1 – V-11-10);

(16) Increased Demand for Schools (pp. V-12-1 – V-12-8);

(17) Increased Demand for Police Services (V-13-1 – V-13-8);

(18) Increased Demand for Fire Services (V-14-1 – V-14-8);

(19) Generation of Solid Waste (pp. V-15-1 – V-15-8);

(20) Generation of Hazardous Materials (pp. V-16-1 – V-16-15);

(21) Geology, Soils, and Minerals Resources (pp. V-17-1 – V-17-14);

(22) Energy (pp. V-18-1 – V-18-9);

(23) Effects on Visual Resources (pp. V-19-1 – V-19-7);

(24) Land Use and Planning (V-20-1 – V-20-14);

(25) Growth-Inducing Impacts (pp. VI-1 – VI-3);

(26) Irreversible Impacts (pp. VII-1 – VII-1);

(27) Alternatives Analysis (pp. VIII-1 – VIII-14); and,

(28) Draft Master EIR Comments and Responses (pp. IX-1).

II. ANALYSIS

A. Standard of Review for Sufficiency of Environmental Analysis of the DEIR.

1. CEQA Procedure.

1

To achieve the objective of protecting the environment, the Legislative enacted CEQA and authorized the Office of Planning and Research within the Governor's Office to formulate the CEQA Guidelines. CEQA requires a public agency to consider the environmental impact of an activity or project before approving it. Public Resources Code Sections 21063, 21100. *Meridian Oceansystems, Inc. v. State Lands Com.*, 222 Cal. App. 3d 153, 159 (1990).[3] A project is defined as "the whole of an action, which has potential for resulting in a physical change in the environment." CEQA Guidelines Section 15378.

CEQA sets forth three levels of environmental review. First, if a project falls within a category exempted by administrative regulation, or it can be seen with certainty that there is no activity in question that may have a significant effect on the environment, no public evaluation is required. CEQA Guidelines Section 15060. An exemption is formalized by the adoption of a categorical exemption. The significance of a categorical exemption is that no further environmental review is required prior to project approval. However, if a project is one which may have a significant effect on the environment, an EIR is required. Public Resources Code Sections 21100, 21150; CEQA Guidelines Section 15062; *Perley v. Board of Supervisors,* 137 Cal. App. 3d 424, 430 (1982).

Here, the lead agency, the City, determined in the NOP that a DEIR would be prepared.

2. Standard of Review of Project DEIR.

The Project DEIR to be adequate must be "prepared with sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences." CEQA Guidelines Section 15151. The DEIR must include sufficient detail so that those who did not participate in the preparation of the DEIR can understand and consider meaningfully the issues raised by the proposed Project. *Kings County Farm Bureau v. City of Hanford,* 221 Cal. App. 3d 692, 712 (1990) *("Kings County").* In reviewing whether agency procedures comply with CEQA, the test to be applied is "whether and objective, good faith effort to so comply is demonstrated." *Mt. Sutro Defense Com. v. Regents of the University of California,* 77 Cal. App. 3d 20, 37 (1978); *Kings County, supra.,* 221 Cal. App. 3d at 712.

In summary, the DEIR must present a meaningful, accurate analysis of the significant environmental effects of the Project in order to comply with the law.[4]

---

3. It has been continuously emphasized by the Courts that the Legislative intended CEQA to be interpreted in such a manner so as to afford the fullest possible protection to the environment. *Napa Valley Wine Train, Inc. v. Public Utilities Com., 50* Cal.3d 370, 376 (1990), which can only be achieved if CEQA is compiled with by presenting a *complete and accurate portrayal of the environmental effects of a project.*

4. In commenting upon the DEIR, we are cognizant of the definition of the terms "environment" and "significant effect on the environment."

CEQA Guidelines Section 15360 provides:
15360. "Environment" means the physical condition which exists within the area which will be affected by a proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or

1

B. The DEIR Analysis of Project Impact with Respect to Fire Services Is Inaccurate and Incomplete.

The impact of the project on public services, including fire, is set forth is DEIR Section 3.6.3 (p. 3-4) and providing:

> Public services include police, fire, schools, and parks serving the study area and outline areas outside the city limits in Stanislaus County. The Proposed Program involves upgrades to the City's water distribution system and supply system that would accommodate growth projected within the City's water service areas and under the respective General Plans of Modesto, Ceres, Turlock and Stanislaus County (City of Modesto 2019a) … This growth would not result in any significant affects on …. fire services beyond those evaluated in the *Master Environmental Impact Report for the Urban Area General Plan* (City of Modesto 2019)…

References for this section of the DEIR indicate that the Urban Area Plan FEIR is available at: www.modestogov.com/2243/Documents-Resources. However, when that link is accessed, it is indicated on the City of Modesto website that "We're Sorry, there is Not a Webpage Matching Your Entry" (*see*, Exhibit "A").[5] C-1

When the Master Plan FEIR for the Urban Area General Plan (Section 14) is independently accessed for the DEIR reference above, the following is provided with respect to fire services in the unincorporated area subject to the Area Plan with the caveat without further elaboration that it is for areas that are only *partially* within the City's Sphere of Influence (p.V-14-2). C-2

Critical portions of this analysis provide as follows: C-3

> These Fire Districts (including Salida) their current staffing, and general type of service are listed in Table V-14-1. Because most of these districts are partially within the City's Sphere of Influence, these staffing levels do not correspond to the number of firefighters serving the sphere areas.

***

---

aesthetic significance. The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project. The "environment" includes both natural and man-made conditions.

CEQA Guidelines Section 15382 provides:
15382. "Significant Effect on the Environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area effected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant.
5. This failed link means that the referenced information is *not* in the DEIR. Because it is not in the DEIR in writing it frustrates a fundamental principle of CEQA – to achieve meaningful public review. *See*, *Santiago County Water District v. County of Orange, 118 Cal.App.3d 818, 831 (1981).*

1

> The rural level of service standard is characterized as a fire company equipped to handle basic structural fires and related emergencies that will arrive within 15 minutes of travel time, accompanied by other vehicles and capable of sustaining a five hundred-gallon-per minute fire flow for one hour. The suburban level of service is characterized as a fire company equipped to handle "all risk emergencies" that will arrive within 5-6 minutes of travel time and capable of sustaining a flow for a two thousand square foot occupancy for one hour. An urban level of service is characterized as a fire company equipped to handle all risk emergencies that will arrive within 5 minutes of travel time ninety percent of the time capable of sustaining adequate fire flow for the designated risk level in the area. These are broad characterizations of levels of service and *do not* necessarily reflect the District's effectiveness or efficiency in dealing with a given emergency. (Stanislaus Local Agency Formation Commission Countywide Fire Services Municipal Service Review 2007).

C-3, cont'd

In other words, the incorporated (linked) terms of the City Urban Area General Plan *do not analyze* the impact of the Project Program on the increased density of development contemplated in the District area. There is no analysis or conclusion of the Project with respect to fire services.

Moreover, the Master Plan FEIR, keeping in mind *it was prepared and filed in January 2019*, relies on a Municipal Service Review for analyzing Fire Protection Districts that *is out of date – April 25, 2007*. This incorporated analysis is insufficient as it should have analyzed the capability of fire services on the basis of the Municipal Service Review and Sphere of Influence Update for the Fire Protection Districts in Stanislaus County *adopted* by the Stanislaus Local Agency Formation Commission *on July 27, 2016. See*, http://www.modestogov.com/2243/Documents-Resources.

C-4

Stated plainly, the document relied on for the so-called DEIR "baseline analysis" relies on a study that is twelve years old and has been superseded by more recent information in the 2016 County LAFCO MSR for Fire Protection Districts.

The 2016 MSR, in assessing the effectiveness of fire services in the Salida Fire Protection District notes the following under the heading of "Growth and Population Projection for the Affected Area":

> Portions of the District south of Kiernan have a new, including the north county corridor are within the City of Modesto's sphere of influence. The rest of the District, including the urban area of Salida and Del Rio are not (though the urban area is defined in the City's General Plan). Annexations and land detachment by the City of Modesto possess a threat to the continued financial health of the District. Salida Fire has stated it is taking an active role in trying to protect its interest, and is interested in examining alternatives that protect both the City and the District. These efforts will require the active support of the County and LAFCO. *To date, the City of Modesto and Salida Fire have in place a*

C-5

1

revenue-sharing agreement, which supports annexation without detachment. The last sentence of this "of this portion of the 2016 MSR is critical."

In the most recent example of an annexation by the City- the Wells Avenue Annexation- which supposedly will implement the goals and policies of not only the Urban Area General Plan but also this Project for the extension and improvement of water service departed from the "annexation without detachment process" whereby *all revenues* are reserved for fire services. No explanation was given from the City from this departure.

Indeed, the City assumes the lead agency role for CEQA compliance on the Wells Avenue Reorganization and prepared an initial study and adopted a finding of conformance with the Modesto Urban Area General Plan Master Environmental Impact Report – the same environmental impact report that inaccurately assesses Fire Services. *See*, Exhibit "B" attached.

Correspondingly, this DEIR *does not* indicate there would be a specific amount of revenue always set aside for fire protection in the affected area for the City of Modesto Fire Department to accomplish fire and lifesaving services (http://www.stanislauslafco.org/info/Agenda_PDFs/19/10232019a.pdf).

C-5, cont'd

Stated differently, the City Fire Department must compete for funds with other City Departments such as Parks and Recreation whereas the District is a single service district and its sole sources of revenue shares of the property tax and assessments which must be expended for fire and lifesaving services. This *was* the practice as noted previously.

C-6

Accordingly, this portion of the DEIR is insufficient because it references inaccurate information, relies on old information (the 2007 LAFCO MSR for Fire Protection Services) rather than current information and comes to no conclusion as to how this lack of analysis of fire services would be associated with the projected growth for the affected area- all areas examined by this DEIR. The method of accurate and current analysis required is extensive and *cannot* be accomplished by an addendum (*see*, CEQA Guidelines Section 15164) as it is not a "minor or technical" in nature.

C-7

C. The Environmental Setting Description of The Project Is Incomplete.

Because of the inaccurate and incomplete information with respect to fire services, the "environmental setting" portion of the DEIR is incomplete and inadequate.

CEQA Guidelines Section 15125 requires the Project EIR contain the following with respect to environmental setting:

An EIR must include a description of the environment in the vicinity of the project, as it exists before the commencement of the project, from both a local and regional perspective. The description shall be no longer than is necessary to an understanding of the significant effects of the proposed project and its alternatives.

1

(a) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project.

(b) The EIR shall discuss any inconsistencies between the proposed project and the applicable general plans and regional plans. Such regional plans include, but are not limited to, the applicable Air Quality Management Plan (or State Implementation Plan once adopted), area-wide waste treatment and water quality control plans, regional transportation plans…

(c) Where a proposed project is compared with an adopted plan, *the analysis shall examine the existing physical conditions as well as the potential future conditions discussed in the plan.* (Emphasis added).

C-8

Again, the required accurate analysis is not present.

D. Because the DEIR Is Incomplete and Does Not Contain Accurate and Current Information, It Should Be Supplemented and Recirculated.

Because the DEIR lacks critical information with respect to the Project environmental setting description and analysis of significant impacts on the environment, mitigation measures, Project alternatives and cumulative impacts, the DEIR must be revised according to the comments above and *recirculated* as a revised draft EIR for proper public comment.

In *Sutter Sensible Planning, Inc. v. Board of Supervisors,* 122 Cal. App. 3d 813, 822-823 (1981), a similar issue was analyzed with the court noting, among other things:

> *"The failure to include [the information] in the draft impact statement denied the District the 'opportunity to test, assess and evaluate the data* and make an informed judgement as to the validity of the conclusions to be drawn therefrom."

C-9

The Project DEIR suffers from the same deficiencies. Until the incomplete and inaccurate information commented upon above is obtained, and timely comment from other governmental agencies is included, there is a fundamental omission of adequate information in the DEIR to allow decisionmakers and the public to properly assess the Project.

1

III. CONCLUSION

Since the DEIR lacks the necessary current, accurate information to render a complete analysis as presented in these comments, it is recommended that the City, *as lead agency,* require a further supplemental draft EIR to be prepared in light of the foregoing comments and that the supplemental EIR then be recirculated to the public to allow for further comment and review. C-10

Very truly yours,

William D. Ross

DRAFT

Stanislaus LAFCO

STANISLAUS LOCAL AGENCY FORMATION COMMISSION

MINUTES

September 25, 2019

1. CALL TO ORDER

Chair Van Winkle called the meeting to order at 6:00 p.m.

A. Pledge of Allegiance to Flag. Chair Van Winkle led in the pledge of allegiance to the flag.

B. Introduction of Commissioners and Staff. Chair Van Winkle led in the introduction of the Commissioners and Staff.

Commissioners Present:	Michael Van Winkle, Chair, City Member Jim DeMartini, Vice Chair County Member Terry Withrow, County Member Bill Berryhill, Public Member Amy Bublak, City Member Richard O'Brien, Alternate City Member
Staff Present:	Sara Lytle-Pinhey, Executive Officer Javier Camarena, Assistant Executive Officer Jennifer Vieira, Commission Clerk Alice Mimms, LAFCO Counsel
Commissioners Absent:	Brad Hawn, Alternate Public Member Vito Chiesa, Alternate County Member

2. PUBLIC COMMENT

None.

3. APPROVAL OF MINUTES

A. Minutes of the August 28, 2019 Meeting.

Motion by Commissioner DeMartini, seconded by Commissioner Withrow and carried with a 5-0 vote to approve the Minutes of the August 28, 2019 meeting by the following vote:

Ayes:	Commissioners: Berryhill, Bublak, DeMartini, Van Winkle and Withrow
Noes:	Commissioners: None
Ineligible:	Commissioners: O'Brien
Absent:	Commissioners: Chiesa and Hawn
Abstention:	Commissioners: None

1

Stanislaus
LAFCO

STANISLAUS LAFCO
LOCAL AGENCY FORMATION COMMISSION

Sara Lytle-Pinhey, Executive Officer
1010 10th Street, Third Floor
Modesto, California 95354
Phone: 209-525-7660
Fax: 209-525-7643
www.stanislauslafco.org

Chair Michael Van Winkle, City Member
Vice Chair, Jim DeMartini, County Member
Terry Withrow, County Member
Bill Berryhill, Public Member
Amy Bublak, City Member
Richard O'Brien, Alternate City Member
Brad Hawn, Alternate Public Member
Vito Chiesa, Alternate County Member

AGENDA
Wednesday, October 23, 2019
6:00 P.M.
Joint Chambers—Basement Level
1010 10th Street, Modesto, California 95354

The Stanislaus Local Agency Formation Commission welcomes you to its meetings. As a courtesy, please silence your cell phones during the meeting. If you want to submit documents at this meeting, please bring 15 copies for distribution. Agendas and staff reports are available on our website at least 72 hours before each meeting. Materials related to an item on this Agenda, submitted to the Commission or prepared after distribution of the agenda packet, will be available for public inspection in the LAFCO Office at 1010 10th Street, 3rd Floor, Modesto, during normal business hours.

1. CALL TO ORDER

A. Pledge of Allegiance to the Flag.

B. Introduction of Commissioners and Staff.

2. PUBLIC COMMENT PERIOD

This is the period in which persons may speak on items that are not listed on the regular agenda. All persons wishing to speak during this public comment portion of the meeting are asked to fill out a "Speaker's Card" and provide it to the Commission Clerk. Each speaker will be limited to a three-minute presentation. No action will be taken by the Commission as a result of any item presented during the public comment period.

3. APPROVAL OF MINUTES

A. Minutes of the September 25, 2019 Meeting.

4. CORRESPONDENCE

No correspondence addressed to the Commission, individual Commissioners or staff will be accepted and/or considered unless it has been signed by the author, or sufficiently identifies the person or persons responsible for its creation and submittal.

A. Specific Correspondence.

B. Informational Correspondence.

1. 2019 Legislative Update.

C. "In the News."

1

5. DECLARATION OF CONFLICTS AND DISQUALIFICATIONS

6. CONSENT ITEM

The following consent items are expected to be routine and non-controversial and will be acted upon by the Commission at one time without discussion, unless a request has been received prior to the discussion of the matter.

A. **YEAR-END FINANCIAL REPORT FOR FISCAL YEAR 2018-2019** (Staff Recommendation: Accept and file the report.)

7. PUBLIC HEARINGS

Any member of the public may address the Commission with respect to a scheduled public hearing item. Comments should be limited to no more than three (3) minutes, unless additional time is permitted by the Chair. All persons wishing to speak during this public hearing portion of the meeting are asked to fill out a "Speaker's Card" and provide it to the Commission Clerk prior to speaking.

A. **LAFCO APPLICATION NO. 2018-02 – NORTHWEST NEWMAN PHASE I REORGANIZATION TO THE CITY OF NEWMAN.** Request to annex approximately 121.31 acres to the City of Newman and simultaneously detach the area from the West Stanislaus Fire Protection District and Central California Irrigation District. The project area is located northwest of the Newman City Limits, west of Highway 33 and south of Stuhr Road. The City, through its planning process, assumed the role of Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the project and prepared an Environmental Impact Report for the Northwest Newman Master Plan. LAFCO, as a Responsible Agency, will consider this environmental documentation and adoption of the same findings. (Staff Recommendation: Adopt Resolution No. 2019-19 approving the proposal.)

8. OTHER BUSINESS

9. COMMISSIONER COMMENTS

Commission Members may provide comments regarding LAFCO matters.

10. ADDITIONAL MATTERS AT THE DISCRETION OF THE CHAIRPERSON

The Commission Chair may announce additional matters regarding LAFCO matters.

11. EXECUTIVE OFFICER'S REPORT

The Commission will receive a verbal report from the Executive Officer regarding current staff activities.

A. On the Horizon.

12. ADJOURNMENT

A. Set the next meeting date of the Commission for December 4, 2019.

B. Adjournment.

1

4. CORRESPONDENCE

A. Specific Correspondence.

None.

B. Informational Correspondence.

1. CALAFCO Proposed dues structure for 2020.

C. "In the News"

5. DECLARATION OF CONFLICTS AND DISQUALIFICATIONS

None.

6. CONSENT ITEM

A. **PROPOSED LAFCO MEETING CALENDAR FOR 2020.**
(Staff Recommendation: Accept the 2020 Meeting Calendar.)

Motion by Commissioner Bublak, seconded by Commissioner Berryhill and carried with a 5-0 vote to accept the 2020 meeting calendar, by the following vote:

Ayes:	Commissioners: Berryhill, Bublak, DeMartini, Van Winkle and Withrow
Noes:	Commissioners: None
Ineligible:	Commissioners: O'Brien
Absent:	Commissioners: Chiesa and Hawn
Abstention:	Commissioners: None

7. PUBLIC HEARING

A. **LAFCO APPLICATION NO. 2019-08 – WELLS AVENUE REORGANIZATION TO THE CITY OF MODESTO.** Request to annex approximately 35 acres located south of Pelandale Avenue and west of McHenry Avenue to the City of Modesto and simultaneously detach the area from the Salida Fire Protection District. The annexation is within the City's Sphere of Influence and is meant to accommodate new residential development. The City of Modesto assumed the role of Lead Agency, pursuant to the California Environmental Quality Act (CEQA), for the project. The City prepared an initial study and adopted a finding of conformance with its Modesto Urban General Plan Master Environmental Impact Report (SCH No. 2014042081), pursuant to Section 21157.1 of the CEQA Guidelines. LAFCO, as a Responsible Agency, will consider the environmental documentation prepared by the City as part of its action. (Staff Recommendation: Adopt Resolution No. 2019-18 Option 2, denying the proposal without prejudice.)

C-12

Javier Camarena, Assistant Executive Officer, presented the item with a recommendation of denial without prejudice.

Chair Van Winkle opened the Public Hearing at 6:19 p.m.

1

Pat Burns of Salida Fire Protection District spoke in regards to an agreement between the City and Salida Fire Protection District; George Petrulakis, a landowner representative, gave a short presentation and was available to answer questions of the Commission.

Chair Van Winkle closed the Public Hearing at 6:38 p.m.

Motion by Commissioner Bublak, seconded by Commissioner Berryhill, and carried with a 5-0 vote to adopt Resolution No. 2019-18 approving the proposal with the added condition, by the following vote:

Ayes:	Commissioners: Berryhill, Bublak, DeMartini, Van Winkle and Withrow
Noes:	Commissioners: None
Ineligible:	Commissioners: O'Brien
Absent:	Commissioners: Chiesa and Hawn
Abstention:	Commissioners: None

8. OTHER BUSINESS

None.

9. COMMISSIONER COMMENTS

None.

10. ADDITIONAL MATTERS AT THE DISCRETION OF THE CHAIRPERSON

None.

11. EXECUTIVE OFFICER'S REPORT

A. On the Horizon. The Executive Officer informed the Commission of the following:

- Upcoming items for October will include the Northwest Newman Master Plan Annexation.
- Upcoming for the December meeting: Staff is working on the Eastside Water District Annexation and anticipates a Fire Contract application from the City of Modesto.

12. ADJOURNMENT

A. Chair Van Winkle adjourned the meeting at 6:42 p.m.

NOT YET APPROVED

_____
Sara Lytle-Pinhey, Executive Officer

1

Response to Comment C-1

The commenter, representing the Salida Fire Protection District (SFPD), indicates that the web link provided in the Draft EIR to the Master EIR for the City's Urban Area General Plan (City of Modesto 2019) was out of date. From time to time, agencies revise or update their websites for a variety of reasons; for instance, the web link provided by the commenter no longer provides access to the Master EIR. That document is currently available online at www.modestogov.com/2070/Master-Environmental-Impact-Report-EIR. Nevertheless, the Master EIR remained available online (although online access to references is not required under CEQA). In addition, the information in the letter that precedes Comment C-1 is background factual information or statements of law, and no response to these statements is necessary under CEQA.

Response to Comment C-2

The commenter misquotes the text, which states: "Each of these districts is at least partially within the City's Sphere of Influence." This comment pertains to the Master EIR for the Urban Area General Plan, not the WMP DEIR. No response is required.

Response to Comment C-3

The meaning of the phrase "the incorporated (linked) terms" is unclear. However, this comment pertains to the Master EIR for the Urban Area General Plan, not the WMP DEIR. No response is required.

Response to Comment C-4

This statement by the commenter addresses background information to the Master EIR for the Urban Area General Plan. The Master EIR contains a thorough analysis of the environmental impacts of Urban Area General Plan policies, including those related to fire services. Because this comment pertains to the Master EIR for the Urban Area General Plan, not the WMP DEIR, no response is required.

Response to Comment C-5

The commenter cites information from the 2016 Stanislaus Local Agency Formation Commission (LAFCO) Municipal Service Review (MSR), which describes a revenue sharing agreement that was in place at one time but is no longer in effect. The commenter also addresses the Wells Avenue Annexation as a departure from the "annexation without detachment process" and provides the October 23, 2019 Stanislaus LAFCO agenda for that project as Exhibit B.

To provide context: The Modesto Regional Fire Authority (MRFA) was established in 2011 as a joint powers authority between the City of Modesto and the Salida Fire Protection District. During the period when the MRFA was active, the Stanislaus LAFCO approved several development projects with a condition of "annexation without detachment," meaning that the area was annexed into the city's sphere of influence but continued to be served by the SFPD for fire protection service. Although the commenter implies that this was a longstanding relationship, the JPA was terminated in June 2014.

Thus, the commenter is raising issues regarding the Stanislaus LAFCO 2016 MSR, the Wells Avenue Annexation approval by the Stanislaus LAFCO, and the Master EIR for the Urban Area General

Plan. The WMP DEIR relies on, and references (on page 3-4), the previously certified Master EIR for the adopted Urban Area General Plan with regard to impacts associated with projected growth within the City's SOI, and the DEIR is consistent with the analysis of growth-related impacts provided in the Master EIR. None of these comments, however, address environmental impacts of the City of Modesto Water Master Plan as evaluated in the DEIR.

Response to Comment C-6

The comment addresses funding sources for the City Fire Department and SFPD, which is an economic issue and therefore not a resource topic subject to environmental review under CEQA. No comment related to the environmental impacts of the WMP analyzed in the DEIR is provided; therefore, no response is necessary.

Response to Comment C-7

The commenter states that the fire services analysis in the DEIR is inadequate as a result of the items identified in Comments C-1 through C-6. As noted in the Responses to Comments C-1 through C-6 above, the commenter's concerns are not relevant to the DEIR analysis of environmental impacts of the WMP. Although financial issues and funding are important considerations related to implementation of any project, they are not environmental issues under CEQA. Furthermore, the commenter's concerns about projected growth for the affected area are misdirected. The City's potential adoption of the WMP does not, by itself, result in increased growth or redirect growth from one area to another. Any growth that might result following adoption of the WMP is consistent with the adopted Urban Area General Plan, the environmental impacts of which were evaluated in the Master EIR for the Urban Area General Plan. These comments are more appropriately directed to the City Council with regard to the Urban Area Master Plan, which was adopted in January 2019; the comment period for approval of that project ended in February 2019. No comments were received from SFPD regarding the sufficiency of the Master EIR for the Urban Area General Plan.

Response to Comment C-8

The commenter cites CEQA Guidelines Section 15125(c) with regard to the adequacy of an EIR's environmental setting discussion. As noted in the quotation, "existing physical conditions" must be described. Although not stated in the comment, the commenter is presumably implying that a discussion of funding sources for fire protection service is required as part of the environmental setting. CEQA Guidelines Section 15064(d) states, in part:

> In evaluating the significance of the environmental effect of a project, the Lead Agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project.
>
> (1) A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project. …
>
> (2) An indirect physical change in the environment is a physical change in the environment which is not immediately related to the project, but which is caused indirectly by the project. …

The presence or absence of funding availability over the course of a master plan does not meet the definition of a physical change in the environment. The "required analysis" requested by the commenter is neither required nor appropriate in an environmental review document under CEQA.

Response to Comment C-9

The commenter states that, because the requested information has not been provided, the DEIR is deficient. As described in the Responses to Comments C-1 through C-8, the requested information is not, in fact, required or appropriate. The DEIR is adequate as written; no additional response is necessary.

Response to Comment C-10

See the Response to Comment C-9. The DEIR contains sufficient information about the WMP's physical effects on the environment to allow the City to make an informed decision about the Proposed Program. No supplemental EIR or recirculation is necessary.

Response to Comment C-11

In Exhibit A, the commenter provides a printout of the web page indicating that the City's website has been reorganized and the Urban Area Master Plan is no longer at the link provided in the references section of the DEIR. The comment is noted; see the Response to Comment C-1.

Response to Comment C-12

In Exhibit B, the commenter provides the October 23, 2019 agenda for the Stanislaus LAFCO, which includes LAFCO Application No. 2019-08 – Wells Avenue Reorganization to the City of Modesto. No indication is provided by the commenter about the relevance of this information to the analysis of environmental impacts in the DEIR for the WMP. No response is possible.

Letter D – John Davids, Modesto Irrigation District

Subject: FW: City of Modesto Water Master Plan Draft EIR

Letter D

From: John Davids [mailto:John.Davids@mid.org]
Sent: Thursday, December 12, 2019 1:18 PM
To: William Wong
Cc: Gordon Enas
Subject: City of Modesto Water Master Plan Draft EIR

Hi Will –

I know we missed the formal comment deadline on your Water Master Plan, but I would prefer to work any issues out at a staff level anyway. Consistent with that approach, below are a few comments that we had following our review:

1. Section 2.6 Proposed Aquifer Storage and Recovery Program: The first sentence reads, "The proposed ASR program would identify areas within the Modesto Groundwater Subbasin where groundwater augmentation may occur both to aid in maintaining basin groundwater levels and to provide storage of seasonally-available surplus treated water (obtained via existing infrastructure from the MRWTP as supplied under agreements with MID) in the subsurface for future use."

   MID Comment: There doesn't appear to be an explicit provision for providing "seasonally-available surplus treated water" and storing as groundwater in the ARTDA. Further, we believe that the EIR should address how the ASR program will be integrated with the upcoming Groundwater Sustainability Plan for the Modesto Subbasin. ("Seasonally-available" is defined as water available in winter and spring months, in normal and wet years.) D-1

2. Section 10.3.1 Energy Resources and Consumption: The first sentence of the 2nd paragraph should be changed to read, "The TID in conjunction with MID owns and operates the ~~San~~ Don Pedro Dam…" D-2

3. Table 17-1 Projected Water Supplies:

Table 17-1. Projected Water Supplies **Source**	**Projected Water Supply (af/yr)**				
2020	**2025**	**2030**	**2035**	**2040**	
Surface water (from MID)	44,800	48,533	52,267	56,000	59,733
Groundwater	24,664	26,369	28,073	29,778	31,483
Total	**69,464**	**74,902**	**80,340**	**85,778**	**91,216**

MID Comment: As we discussed this week, we need to circle back to available water supplies now that Phase II is complete. If we could add a general statement along the lines of "future water supply from MID will be supplied in accordance with the ARTDA and the associated environmental documentation" I think that would preserve both parties position, meet your needs from a planning perspective and allow us the space for continued discussions. D-3

Appreciate your cooperation on this as I think many of the same approaches could be used in the 2020 Urban Water Management Plan update. Please let me know if you have any questions or concerns.

Regards,
John

1

Response to Comment D-1

The commenter with Modesto Irrigation District (MID) notes that some requested types of specific information are not provided about operation of the aquifer supply and recovery (ASR) program, including how seasonally available surplus treated water would be set aside. The commenter requests that the EIR describe how the ASR program would be integrated into the Groundwater Sustainability Plan (GSP) for the Modesto Sub-basin.

Section 2.6, "Proposed Aquifer Storage and Recovery Program," of the WMP DEIR describes the ASR program at a conceptual level. The Water Master Plan (WMP) conducted a reconnaissance-level feasibility evaluation (Appendix I) of ASR only as it pertains to certain existing City wells. These existing wells were evaluated as candidates for injection of surface water based on physical criteria in regard to capacity and soil strata of the wells. The WMP did not discuss other aspects that would be involved with a project-level analysis (e.g., water quality issues, conveyance of water to the well site, actual availability of surface water), nor did it discuss aspects regarding the Amended and Restated Treatment and Delivery (ARTDA) language or lack thereof. The statement regarding "seasonally available" surface water is referenced as conceptual in context. The conclusions of the WMP evaluation also recommended that, under a future focused evaluation, the City would address source water availability, water quality, and regulatory and other issues associated with an ASR program. This statement clearly implies working with MID, the source water provider, on such an effort. The WMP did not present ASR as an actual project, nor did the WMP account for ASR as a form of quantified groundwater supply to meet future demands that then could be evaluated under this CEQA process.

In the context of the Sustainable Groundwater Management Act, the WMP DEIR describes the City's participation in the Modesto and Turlock Sub-basins (page 2-31 under "Category 14 of WSER: Groundwater Management"). ASR is a well-known form of managed aquifer recharge that could be one of several tools available to address and/or manage groundwater sustainability goals. The conclusions of the GSP have not been formulated yet as to the sustainability of the sub-basin and, as such, GSP language regarding solutions or mitigation to achieve sustainability have not been developed. The GSP was initiated after the WMP effort; thus, the WMP could not consider the integration aspect. The WMP merely suggests that ASR could be a viable management tool for future consideration and that certain City wells may be good candidates.

Response to Comment D-2

The first paragraph on page 10-10, in Section 10.3.1, "Energy Resources and Consumption," is hereby revised as follows:

> The TID in conjunction with MID owns and operates the ~~San~~ Don Pedro Dam, providing up to 203 megawatts of hydroelectric power to customers throughout the City of Modesto.

Response to Comment D-3

The commenter indicates that, notwithstanding the projected water supply data provided in Table 17-1 (which originated in Table 6-20 of the City's 2015 Urban Water Management Plan), MID and the City have discussed the need for follow-up discussions on future water supply. The requested language is hereby added following Table 17-1 on page 17-9, before the subheading "Sources of Surface Water," as follows:

With completion of Phase II of MID's Modesto Regional Water Treatment Plant (MRWTP) in 2016, future water supply from MID will be supplied in accordance with the ARTDA and the associated environmental documentation.

STATE OF CALIFORNIA
Governor's Office of Planning and Research
State Clearinghouse and Planning Unit

Gavin Newsom
Governor

Kate Gordon
Director

December 3, 2019

Letter E

Jim Alves
Modesto, City of
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353

Subject: Water Master Plan
SCH#: 2016082069

Dear Jim Alves:

The State Clearinghouse submitted the above named EIR to selected state agencies for review. The review period closed on 12/2/2019, and the comments from the responding agency (ies) is (are) available on the CEQA database for your retrieval and use. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

> "A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

Check the CEQA database for submitted comments for use in preparing your final environmental document: https://ceqanet.opr.ca.gov/2016082069/2 . Should you need more information or clarification of the comments, **we recommend that you contact the commenting agency directly**.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

E-1

Sincerely,

Scott Morgan
Director, State Clearinghouse

2

Response to Comment E-1

The comment states that the State Clearinghouse submitted the WMP EIR to selected state agencies for review and indicates that the CEQA database holds submitted comments. The comment also acknowledges that the City has complied with State Clearinghouse review requirements for draft environmental documents pursuant to CEQA.

The City checked the CEQA database, and all substantive comments submitted have been addressed in this Chapter 2.0, *Comments on the DEIR and Responses*.

Chapter 3
REVISIONS TO THE DEIR

This chapter presents revisions to the DEIR in response to the public review and comment process. This chapter also corrects minor errors from the DEIR that are corrected herein. Changes made in response to comments are discussed in FEIR Chapter 2 and indicated below. Text added to the DEIR is underlined, and deleted text is shown in ~~strikeout~~. DEIR text changes are presented in the order they would appear in the DEIR; page numbers from the DEIR are provided to assist in identifying the location of the revisions.

Executive Summary

In Table ES-2, "Summary of Potential Impacts and Mitigation Measures," the section summarizing impacts and mitigation for cultural, tribal, and paleontological resources (page ES-17) incorrectly indicated that Impact CR-4 requires implementation of Mitigation Measure CR-1. This portion of Table ES-2 is hereby revised as follows to correct that error:

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Cultural, Tribal, and Paleontological Resources			
Impact CR-1: Impacts on Known Historic, Archaeological or Tribal Resources	LS	LS	None required
Impact CR-2: Impacts on Previously Undiscovered Archaeological Resources	S	LSM	**Mitigation Measure CR-1:** Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work
Impact CR-3: Disturb Any Human Remains, Including Those Interred Outside of Dedicated Cemeteries	S	LSM	Mitigation Measure CR-1
Impact CR-4: Impacts on Paleontological Resources	S	LS~~M~~	~~Mitigation Measure CR-1~~ None required
Impact CR-5: Potential for a Substantial Adverse Impact on Tribal Cultural Resources	S	LSM	Mitigation Measure CR-1

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Chapter 10, Greenhouse Gas Emissions and Energy Resources

The first paragraph on page 10-10, in Section 10.3.1, "Energy Resources and Consumption," is hereby revised as follows:

> The TID in conjunction with MID owns and operates the ~~San~~ Don Pedro Dam, providing up to 203 megawatts of hydroelectric power to customers throughout the City of Modesto.

Chapter 11, Hazards and Hazardous Materials

The discussion under "Occupational Safety and Health Act" (page 11-3) is hereby revised as follows:

> ***Occupational Safety and Health Act***
>
> OSHA is responsible at the federal level for ensuring worker safety. OSHA sets federal standards for implementation of workplace training, exposure limits, and safety procedures for the handling of hazardous substances, as well as other workplace hazards. OSHA also establishes criteria by which each state can implement its own health and safety program. 29 CFR Chapter XVII, Subpart Z, Section 1926.1101 includes regulations to prevent worker exposure to unsafe levels of asbestos during construction and demolition activities. These regulations require contractors to set up regulated areas in dealing with asbestos materials and ensure that persons entering these areas are wearing respirators. Similarly, OSHA regulations establish general safety requirements for demolition involving hazardous materials (29 CFR Chapter XVII, Subpart Z, Section 1926 Subpart T) and requirements for construction and demolition activities involving lead (29 CFR Chapter XVII, Subpart Z, Section 1926.62).

The discussion of DTSC's responsibilities (page 11-3) is revised as follows:

> ***The Unified Program***
>
> The Unified Program (20 Health and Safety Code [HSC] Sections 25404-25404.9) consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. Statewide, DTSC has primary regulatory responsibility for management of hazardous materials, including the following:
>
> - removal, demolition, and disposal of demolished structures that contain lead-based paint, mercury, and asbestos (DTSC 2006);
> - importation of fill material (DTSC 2001); and
> - presence of organochlorinated pesticides (DTSC 2008).
>
> ~~and it~~ DTSC works with other state agencies and delegates its authority to local jurisdictions that enter into agreements with the state. [[*no further revisions*]]

Impact HAZ-1 (page 11-23) is hereby revised as follows to clarify inclusion of OSHA and DTSC regulations and requirements.

Impact HAZ-1: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Construction (*Less than Significant*)

Construction of the Proposed Program improvements would involve use of heavy construction equipment, which would use hazardous materials in their operation. These materials would include fuel, grease, oil, and other materials that may be contained within the equipment and/or stored on-site by the construction contractor. Contractors may routinely transport these materials to and from the site, and dispose of the materials once they have been used. In addition, the disinfection and flushing of newly constructed pipelines would require the use of hazardous materials (i.e., chlorination or de-chlorination chemicals). Potential demolition of structures could expose construction workers to hazardous materials such as asbestos-containing materials or lead-based paint.

Transport, use, and disposal of hazardous materials during construction could expose workers, the public, or the environment to hazards if adequate precautions are not taken. Construction workers could inhale toxic vapors or make bodily contact with materials, which could subject them to harm. The public or the environment could be exposed to toxic substances if materials were not stored, transported, or disposed of properly. The potential for harm may depend on the site-specific characteristics at any given Program improvement site, as well as proximity to sensitive receptors or environmental resources.

In accordance with applicable regulations, the City of Modesto and its contractors would be required to identify and track hazardous waste from "cradle to grave" (see RCRA under Section 11.2.1) and provide training and personal protective equipment to workers, if necessary, to prevent exposure to hazardous substances in excess of exposure limits (see "OSHA" under Section 11.2.1). Additionally, the City and/or its contractors would be required to follow protocols established under the NESHAP regulations (described in the regulatory setting above and in Chapter 6, *Air Quality*), which are designed to limit health impacts associated with hazardous substances.

Compliance with these laws and regulations described in the regulatory setting would prevent significant impacts from occurring during construction activities, and the WMP does not create unique hazards from use, storage, transport, and disposal of materials. Therefore, this impact would be **less than significant.**

Chapter 12, Hydrology and Water Quality

The discussion under Section 12.2.2, "State Laws, Regulations, and Policies" (page 12-2), is hereby revised as follows to include this additional information:

Antidegradation Policy. The State Water Board adopted California's antidegradation policy by Resolution 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California," in 1968. The Antidegradation Policy seeks to protect

high-quality surface water and groundwater from the disposal of waste and subsequent resulting decrease in water quality. This policy requires that the "quality of existing high-quality water be maintained unless the State finds that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water, and will not result in water quality less than that prescribed in policies as of the date on which such policies became effective" (State Water Resources Control Board [SWRCB] 2020). In addition, the Antidegradation Policy requires best practicable treatment or control (BPTC) of discharges to high-quality waters to assure that pollution or nuisance will not occur, and that the highest water quality consistent with maximum benefit to the people of the state will be maintained (SWRCB 2020).

The discussion under "National Pollutant Discharge Elimination System Permits" (page 12-3) is hereby revised as follows to include this additional information:

Dewatering Activities

Although some construction-related dewatering is covered under the General Construction Permit, the Central Valley RWQCB has also adopted a general permit for limited threat discharges to surface water, including construction dewatering discharges (Order No. R5-2016-0076 [NDPES No. CAG995002]) (Central Valley RWQCB 2016). This permit (Limited Threat General Order) would most likely apply to the Proposed Program if construction would require dewatering in greater quantities than allowed by the General Construction Permit and would discharge the effluent to surface waters. The general permit for limited threat discharges to surface water contains waste discharge limitations and prohibitions similar to those in the General Construction Permit. To obtain coverage, the applicant must submit a Notice of Intent and a pollution prevention and monitoring program.

Similarly, if construction-related dewatering requires discharge to land and exceeds the amount permissible under the General Construction Permit, the applicant may seek coverage under *Water Quality Order 2003-0003-DWQ, General Waste Discharge Requirements for Discharges to Land with a Low Threat to Water Quality (Low Threat General Order*), or under the Central Valley RWQCB's Resolution R5-2018-0085, *Waiver of Reports of Waste Discharge and WDRs for Specific Types of Discharge within the Central Valley Region (Specific Low-Threat Waiver*). The Low Threat General Order may be applicable for temporary, small construction dewatering projects that discharge groundwater to land from excavation activities, water or monitoring well development, and test pumping/purging. Other discharges that represent the absolute lowest threat to water quality may be covered under the Specific Low-Threat Waiver. To obtain coverage under the Low Threat General Order or the Specific Low-Threat Waiver, the applicant must submit a Notice of Intent at a minimum with the Central Valley RWQCB.

Impact HYD/WQ-1 (page 12-25) is hereby revised as follows to clarify inclusion of the SWRCB's Anti-Degradation Policy, the Low Threat General Order, and the Specific Low-Threat Waiver regulations and requirements. These clarifying edits do not alter the conclusions of the impact's significance or require any new or additional mitigation measures.

Impact HYD/WQ-1: Violate Any Water Quality Standards or Waste Discharge Requirements or Otherwise Degrade Water Quality (*Less than Significant with Mitigation*)

Construction of the proposed components could result in discharges of poor-quality water to nearby water bodies, if adequate precautions are not taken. Trenching and other ground-disturbing activities could expose loose soils that could be eroded during precipitation events. Construction equipment also would use hazardous materials (e.g., fuel and diesel) that could spill during routine use, storage, transport, or disposal, and then potentially seep into groundwater or be washed into nearby water bodies. Use of trenchless construction methods (e.g., jack and bore, horizontal directional drilling [HDD] also could present hazards to water quality, such as from frac-out accidents during boring activities below or near streams. Additionally, construction of Program components may require dewatering of excavations, particularly for those components adjacent to the Tuolumne River. Discharge of this water back to the river or other areas could result in adverse water quality effects if adequate precautions are not taken.

Testing, disinfection, and flushing of pipeline improvements prior to use also would require disposal of de-chlorinated flushing water to the storm drainage system or sanitary sewer system. As described in Chapter 2, Program Description, one of the prescribed disinfection methods in the City's standard specifications, which comply with American Water Works Association (AWWA) standard methods, would be used to disinfect all new water mains and appurtenances. After completion of the disinfection process, the heavily chlorinated water would be de-chlorinated and flushed from the new pipelines/water system facilities until the residual chlorine concentration meets the City's established requirements, which are protective of water quality in receiving waters. Discharges of this water would not substantially affect receiving waters or result in a violation of water quality standards or waste discharge requirements; refer to Chapter 17, Utilities and Service Systems for additional discussion of impacts on the stormwater and sewer system from discharge of testing, disinfection and flushing water.

As described in Chapter 11, Hazards and Hazardous Materials, many water quality impacts associated with Program construction activities would be minimized or avoided through compliance with the NPDES General Construction Permit. All components with a footprint greater than one acre of disturbance area would be subject to this permit, which requires preparation and implementation of a SWPPP. As described in Section 12.2, the SWPPP must, among other things, present a list of BMPs that would be implemented to prevent soil erosion and protect against discharge of sediment and other construction-related pollutants to surface waters. The SWPPP also would include spill prevention and response procedures for any hazardous materials used during construction. Compliance with this permit would minimize any impacts of Proposed Program construction activities on water quality, but construction water quality impacts of individual program components could nevertheless be significant.

For Program components whose construction would disturb less than one acre, the City of Modesto's Standard Specifications require that all projects less than one acre develop a Local SWPPP or Erosion Control Plan and implement stormwater BMPs during construction. The Local SWPPP must be submitted to the City of Modesto Land

Development Engineering Division for review prior to obtaining a Grading or Encroachment Permit for the project. Erosion control BMPs are described in Chapter 15 of the Standard Specifications. Implementation of these requirements included in the City's Standard Specifications would ensure that impacts on water quality related to erosion for Program components that disturb less than one acre would be less than significant.

In addition, for Program components that require construction-related dewatering of excavated areas, particularly areas near the Tuolumne River, any discharges of dewatered water to surface waters or land would be required to meet all applicable NPDES permitting requirements and corresponding water quality protections. Depending on if the dewatered groundwater is discharged to land or surface waters, the following NPDES permits would be potentially applicable: the Low Threat General Order, the Specific Low-Threat Waiver, and the Limited Threat General Order. Compliance with the pollution prevention and water quality protection measures included in these permits would minimize the potential for any impacts on the quality of surface waters or groundwater from discharge of dewatered groundwater during construction activities. Furthermore, all Program components requiring these activities and coverage under the NPDES permits, would be required to comply with the State's Antidegradation Policy. Thus, through the regulatory and permitting compliance processes associated with the NPDES program, any dewatering activities for the Proposed Program would not result in substantial groundwater or surface water quality impacts.

As described in Chapter 11, *Hazards and Hazardous Materials*, the City would maintain compliance with all local, state, and federal regulations concerning hazardous materials which would prevent substantial water quality impacts (e.g., due to accidental spills of hazardous materials) during construction activities and ensure water quality impacts would be less than significant.

To ensure that the Proposed Program would not adversely impact water quality from proposed trenchless pipeline installation methods (e.g., new water distribution pipelines underneath the Tuolumne River or Dry Creek), the City would implement Mitigation Measure HYD/WQ-1 (Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods). This measure would require the City's drilling contractor to prepare and implement a frac-out contingency plan for trenchless construction methods. The plan would be designed to minimize the potential for frac-out, provide for the timely detection of frac-outs, and ensure a timely and effective response in the event a frac-out occurs (CPUC 2003). Implementation of this mitigation measure would reduce adverse water quality impacts from frac-out associated with trenchless activities to a level that is less than significant.

Overall, compliance with NPDES permit requirements and the City's Standard Specifications, and implementation of Mitigation Measure HYD/WQ-1 would minimize adverse effects on water quality. In conclusion, the Proposed Program's overall impact would be less than significant with mitigation.

Chapter 17, Utilities

The following text is hereby added on page 17-9, following Table 17-1 and before the subheading "Sources of Surface Water":

> With completion of Phase II of MID's Modesto Regional Water Treatment Plant (MRWTP) in 2016, future water supply from MID will be supplied in accordance with the ARTDA and the associated environmental documentation.

EXECUTIVE SUMMARY

ES.1 Introduction

The City of Modesto (City) has prepared this Draft Program Environmental Impact Report (DEIR) as lead agency to provide the public, responsible agencies, and trustee agencies with information about the environmental effects of implementation of the proposed 2017 Water Master Plan (WMP or Proposed Program). This DEIR was prepared in compliance with the California Environmental Quality Act of 1970 (CEQA), as amended, and the State CEQA Guidelines (California Code of Regulations Title 14, Section 15000 et seq.).

ES.2 Background and Overview

The WMP is intended to accommodate the existing and future water supply needs through 2050 of the population and land uses of the City, along with the City's other water customers in the outlying service areas of Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock. The City developed the WMP to define the City's long-term water supply and infrastructure needs and guide management of its water service system. The WMP identifies recommended and prioritized capital improvement projects (CIPs) for system-wide implementation needed to deliver safe and reliable water and meet water demand requirements for existing and future City customers through buildout of the City's adopted General Plan. The WMP is described in the *City of Modesto Water Master Plan*, prepared by West Yost Associates (Final Draft September 2017).

ES.2.1 Program Location

The Proposed Program is location in the city of Modesto and other communities in Stanislaus County, California, in the central San Joaquin Valley. Modesto is centrally located within California, approximately 70 miles southeast of Sacramento, 85 miles east of San Francisco, 90 miles northwest of Fresno, and 35 miles west of the foothills of the Sierra Nevada range. The City's contiguous service area is limited to the current sphere of influence (SOI), Salida, North Ceres, and some unincorporated areas within and adjacent to the SOI including Empire. The outlying service areas include Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock. Collectively, the contiguous service area and outlying service areas constitute the Proposed Program's study area. These areas are shown in **Figure ES-1**.

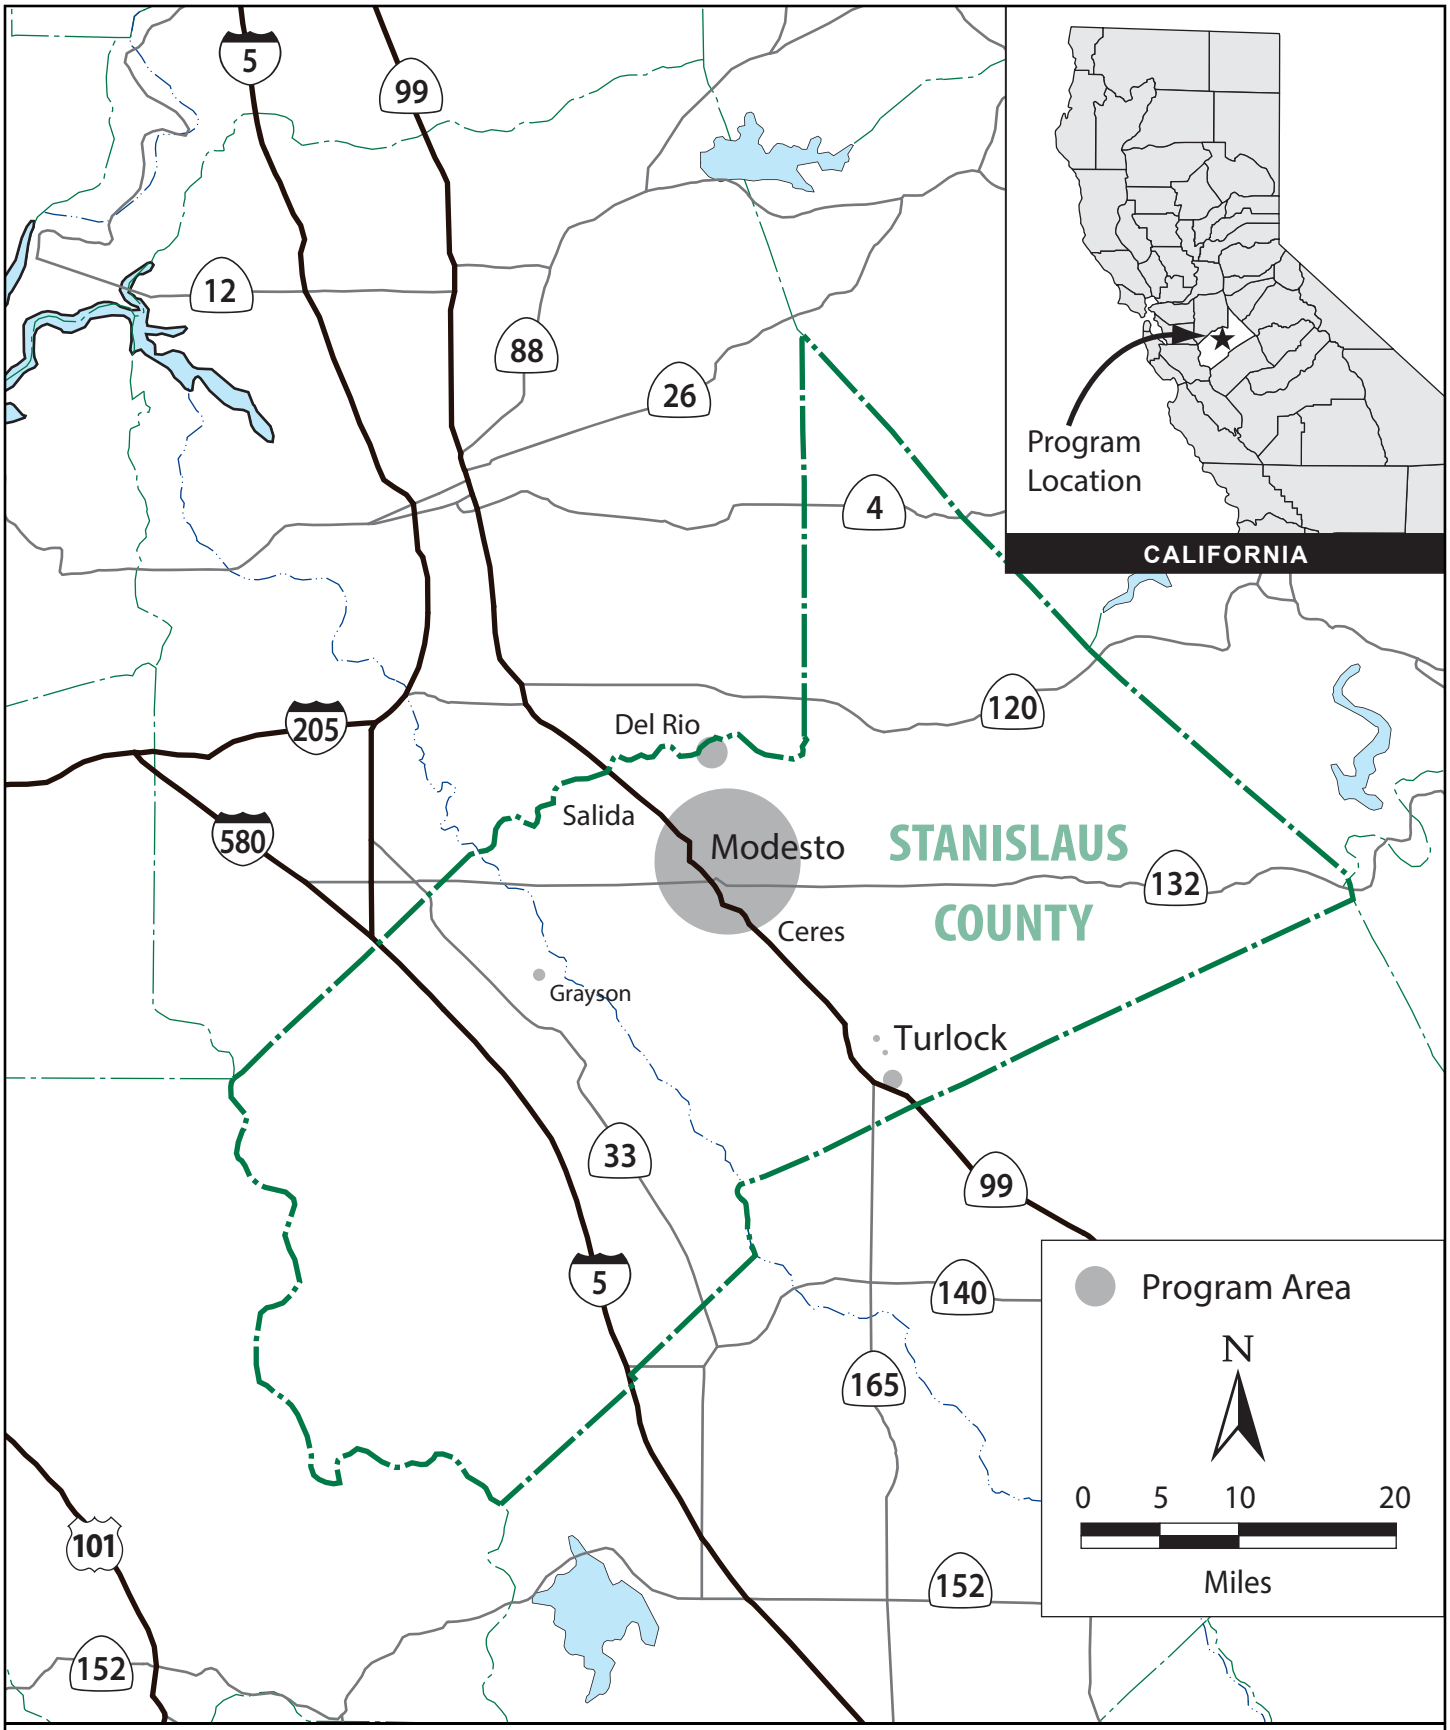

Figure ES-1. Project Location

Prepared by:
Horizon
WATER and ENVIRONMENT

City of Modesto
Water Master Plan EIR

ES.2.2 Program Background

The City has been providing potable water service to its urban area since 1895 through the purchase and acquisition of several private water companies, serving not only the City of Modesto, but also Salida, Ceres (Walnut Manor), Grayson, Del Rio (Hillcrest), and North, South, and Central Turlock. The City of Modesto's water system currently serves a population of approximately 260,000 people in California's Central Valley. The City is currently the largest retail water supplier in Stanislaus County.

In general, water distribution in the City's service area is divided by the Tuolumne River. The area north of the Tuolumne River is referred to as North Modesto, and is within the service area of Modesto Irrigation District (MID). The area south of the Tuolumne River is referred to as South Modesto, and is within the Turlock Irrigation District (TID) service area.

Potable water resources delivered by the City's system to customers originate from two sources: treated surface water purchased from the MID, and groundwater pumped from the many wells located throughout the contiguous service area and the outlying service areas. Water treatment, pumping, storage, and conveyance infrastructure is operated and maintained by the City's Utilities Department, Water Operations Division.

The key components of the City's water system are storage tanks and booster pump stations, groundwater wells, and a transmission/distribution pipeline network. Information about components of the City's existing water supply, storage, and distribution system is provided in Chapter 1, Introduction, of this DEIR.

ES.3 Program Objectives

The objectives of the Proposed Program are as follows:

- To implement and support the City's economic goals and General Plan by planning for and providing water infrastructure in a timely and cost-effective manner to serve new and existing development.
- To clearly define the City's long-term water supply needs (from both groundwater and the Modesto Irrigation District's [MID's] surface water supplies) and identify the associated infrastructure required to deliver these supplies to existing and future customers.
- To provide the flexibility, system redundancy, and reliability at a reasonable cost to accommodate possible changing future conditions (regulatory, climate, additional conservation, etc.).
- To repair and replace aging water infrastructure.
- To ensure adequate water infrastructure and services are available to serve new growth within the General Plan area, the City's sphere of influence (SOI), and the outlying service areas.

- To plan for state-of-the-art facilities that reliably and economically meet changing regulatory requirements.
- To provide safe and reliable water supply by planning for and constructing appropriately sized storage facilities, redundancies, and alternate (back up) power supplies for key facilities.
- To provide adequate storage capacity to meet operational, fire flow, and emergency storage needs.
- To maintain system pressures that meet regulatory requirements and peak demand conditions.
- To provide transmission and distribution pipelines to safely and reliably convey water throughout the water system.
- To provide safe and reliable water that meets regulatory water quality requirements.
- To evaluate a groundwater aquifer storage and recovery program.
- To sustainably utilize and protect groundwater resources.

ES.4 Program Description

The Proposed Program, as analyzed in this EIR, is the collection of CIPs proposed in the *City of Modesto Water Master Plan* (WMP) and the *City of Modesto Water System Engineer's Report* (2016 WSER) (West Yost Associates 2017 and 2016, respectively). Proposed CIPs were determined by evaluating the City's ability to serve current, future, and buildout[1] demands for its contiguous and outlying service areas, and assessing the following system components: groundwater pumping capacity; storage capacity; demands (peak and fire flows), and distribution system needs. In addition, water supply requirements under existing and buildout situations were evaluated.

The City's water system CIPs are divided into 22 categories, which are described in detail in the 2016 WSER (West Yost 2016). These categories are used to group and develop budgets for each of these water system improvements/programs, based on the type of improvement, and to allocate costs between existing and future customers. **Table ES-1** lists the City's water system CIP categories.

[1] **Future** improvements are water facilities that are *required* to be installed by the City (e.g. wells, pumps, replacing deficient water mains). **Buildout** components are facilities to be paid for and constructed by developers for specific development projects (such as extension pipelines) guided by the Land Use Plan (City of Modesto 2019).

Table ES-1. Summary of City of Modesto Water System Capital Improvement Program Categories

Category No.	Project Category	Updated as Part of Water Master Plan or Engineer's Report	Description
1	Modesto Regional Water Treatment Plant Phase II Expansion	Project Complete	This project is complete and provided funding to expand Modesto Irrigation District's capacity from 30 million gallons per day (mgd) to 60 mgd.
2	City-Side Downstream Improvements	Engineer's Report	This project is near completion and provides funding for the Industrial Tank and Booster Pump Station, Codoni Transmission Mains, and the Yosemite Transmission Mains.
3	Improvements for South Modesto	Water Master Plan	Provides funding to increase the delivery reliability to customers in South Modesto, by providing additional transmission mains, distribution mains, tanks, and booster pumping capacity.
4	Water Quality Related Studies	Engineer's Report	Provides funding for system-wide water quality related studies to manage the City's groundwater/ surface water resources.
5	SCADA System Upgrades	Engineer's Report	Provides funding for SCADA system upgrades to improve the City's operation and management of the water system.
6	New Corporation Yard	Engineer's Report	Provides funding for a new Water Division Corporation Yard.
7	Existing Tank Improvements	Engineer's Report	Provides funding for interior and exterior enhancements to water storage tanks to improve efficiency and prolong their useful life.
8	Extend Water Mains	Engineer's Report	Provides funding to extend water mains into developing areas and to complete distribution pipeline "looping".
9	Strengthen and Replace Water System	Water Master Plan	Provides funding to replace and upgrade deficient water mains, which may also include "looping" improvements
10	Install New Wells	Water Master Plan	Provides funding to replace older wells (taken out of service for water quality or production capacity) or construct new wells.

Category No.	Project Category	Updated as Part of Water Master Plan or Engineer's Report	Description
11	Wellhead Treatment	Water Master Plan	Provides funding for wellhead treatment or blending facilities for wells that are offline due to water quality.
12	Purchase & Install New Generators	Water Master Plan	Provides funding to purchase and install new generators to ensure reliable water service throughout the water system.
13	Water System Security Enhancements	Engineer's Report	Provides funding to make security enhancements (e.g. fencing. signage) to facilities identified in the 2003 Water System Vulnerability Assessment.
14	Groundwater Management Program	Engineer's Report	Provides funding to support projects and studies related to managing groundwater resources.
15	Urban Water Management Plan	Engineer's Report	Provides funding to support completion of an Urban Water Management Plan every 5 years to help ensure reliability of water supply.
16	Water Master Plan	Engineer's Report	Provides funding to support completion of future Water Management Plans to evaluate the adequacy of water system to serve existing and future customers.
17	Water System Evaluation	Engineer's Report	Provides funding to support as-needed engineering studies and water system evaluations.
18	New Water Tanks	Water Master Plan	Provides funding to construct new tanks and booster pumping stations and other associated facilities.
19	Water Meters	Engineer's Report	Provides funding to purchase and install new automated meter readers throughout the service area.
21	New or Replacement Pumps	Engineer's Report	Provides funding to replace deficient water pumps at wells and booster pump station that are too costly to repair.
22	Utility Cuts	Engineer's Report	Provides funding to cover costs associated with utility construction (e.g., paving, valve replacement, leak repairs).

Notes:

mgd = million gallons per day; MRWTP = Modesto Regional Water Treatment Plant; SCADA = supervisory control and data acquisition; UWMP = urban water management plan; WMP = water master plan

Categories 1 and 20 are not used for the purposes of this analysis. The WSER category numbers have remained unchanged to be consistent with past WSERs.

Category 1, the Modesto Regional Water Treatment Plant Phase II Expansion, a portion of Category 2, City-side Downstream Improvements Related to MRWTP Expansion, and Category 6, the New Corporation Yard, are not included in the Proposed Program, as these projects are completed or are currently under construction. The Proposed Program encompasses the category components (storage tanks and booster pump stations, groundwater wells, etc.) proposed to be installed or upgraded to alleviate existing deficiencies and accommodate water service demands associated with future development within the contiguous and outlying service areas. The locations of existing facilities needing improvements are known. The exact locations of some new facilities have yet to be finalized; however, in some cases tentative sites have been identified.

Individual facilities/improvements would be designed and constructed on an as-needed basis and as funding becomes available. As final design and locations of Proposed Program components are identified, project-level CEQA review would be completed. All CIPs are evaluated at a program level of detail in this DEIR, since they are improvements that the City would likely construct in the future, but designs of these improvements have not been advanced to a level at which detailed evaluations can be completed. As such, a more general, programmatic analysis of these improvements is included in this DEIR.

ES.5 Public Involvement Process

ES.5.1 Scoping Comment Period

A Notice of Preparation (NOP) for the DEIR was prepared pursuant to the State CEQA Guidelines (Section 15082) and circulated to the Office of Planning and Research's State CEQA Clearinghouse on August 26, 2016. The scoping period continued for 30 days and concluded on September 26, 2016.

The NOP presented general background information on the Proposed Program, the scoping process, and the environmental issues to be addressed in the EIR. Approximately 38 copies of the NOP were mailed to a broad range of stakeholders, including state, federal, and local regulatory agencies and jurisdictions and nonprofit organizations.

The City accepted written comments during the 30-day scoping period, August 26 to September 26, 2016. A scoping meeting was held on September 6, 2016, which one person attended. During the scoping period, one comment letter was received. This comment was considered in the environmental impact evaluation.

ES.5.2 Draft EIR Public Comment Period

The City has prepared this DEIR, as informed by public and agency input received during the scoping period, to disclose significant environmental impacts associated with the Proposed Program. Where any such impacts are significant, feasible mitigation measures and potentially feasible alternatives that substantially lessen or avoid such effects are identified and discussed.

A public review period provides the public an opportunity to provide input to the lead agency on the DEIR. The DEIR will undergo public review for the period specified in the Notice of Availability (NOA). During this period, the City will hold a public meeting. The date, time, and exact location of the public meeting is included in the NOA of this DEIR.

ES.5.3 Submittal of Written Comments

The City is circulating this DEIR for public review and comment for the period specified in the NOA. The City will host a public meeting during this period. The purpose of public circulation is to provide agencies and interested individuals with opportunities to comment on or express concerns regarding the contents of this DEIR. Specific dates, times and locations for the meeting will be provided in the NOA, which will be posted on the City's website (www.modestogov.com), and in a newspaper notice.

Written comments concerning this DEIR can be submitted at the public meeting described above or at any time during the DEIR public review period. All comments must be received by 5:00 p.m. on the final date of public review as identified in the NOA, and directed to the name and address listed below:

Jim Alves, Acting Senior Civil Engineer
City of Modesto Utilities Department
P.O. Box 642 (1010 Tenth Street)
Modesto, CA 95353
jalves@modestogov.com

Submittal of written comments via e-mail (Microsoft Word or Adobe PDF format) is preferred. Written comments received in response to this DEIR during the public review period will be addressed in a Response to Comments section of the Final EIR.

ES.6 Areas of Known Controversy and Issues to Be Resolved

State CEQA Guidelines Section 15123(b) requires that an executive summary identify "areas of controversy known to a lead agency including issues raised by agencies and the public." To date, while not considered controversial, the following concerns regarding the Proposed Program have been raised during the scoping period:

- SOI boundary. Concerns regarding inclusion of certain areas in the Program's SOI that differ from the City's adopted SOI.
- Study area boundary. Concerns regarding the Beckwith Triangle, Wood Colony, and entire Salida community.

ES.7 Significant Impacts

Significant impacts identified in the DEIR are summarized in **Table ES-2**, Summary of Impacts and Mitigation Measures, at the end of this chapter. Environmental resource topics with the potential for significant environmental impacts and evaluated in detail in this DEIR are as follows:

- Aesthetics and Visual Resources
- Agricultural Resources

- Air Quality
- Biological Resources
- Cultural, Tribal, and Paleontological Resources
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions and Energy Use
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise and Vibration
- Population and Housing
- Transportation
- Utilities and Service Systems
- Cumulative Impacts

Chapters 4 through 18 of this DEIR address each of these environmental resource topics and the impacts of the Proposed Program in more detail.

ES.8 Alternatives Considered

The purpose of the alternatives analysis in an Environmental Impact Report (EIR) is to describe a range of reasonable alternatives to the Proposed Program that could feasibly attain most of the objectives of the Proposed Program while reducing or eliminating one or more of the Proposed Program's significant effects. The range of alternatives considered must include those that offer substantial environmental advantages over the Proposed Program and may be feasibly accomplished in a successful manner considering economic, environmental, social, technological, and legal factors.

The following alternatives have been evaluated for their potential feasibility and their ability to achieve most of the Proposed Program objectives while avoiding, reducing, or minimizing significant impacts identified for the proposed Program:

- No Program Alternative
- Deferred Implementation Alternative
- Alternative Sources of Water Supply

In addition, a number of alternatives were considered, but ultimately dismissed from further analysis for one or more of the following reasons: (1) they would not sufficiently meet the Proposed Program objectives; (2) they were determined to be infeasible; or (3) they would not avoid or substantially reduce one or more significant impacts of the Proposed Program. Refer to Section 19.4, "Alternatives Considered and Eliminated," in Chapter 19, *Alternatives,* for a description of these alternatives.

ES.8.1 No Program Alternative

Under this alternative, no new water supply infrastructure would be constructed or upgraded. Operation of the City's water treatment, pumping, storage, and conveyance infrastructure would continue similar to existing conditions. The existing storage tanks and booster pump stations,

groundwater wells, and transmission/distribution pipeline network would continue to operate. Facilities that are currently operating in the contiguous service area and the outlying service areas would continue functioning, but capacity issues would not be addressed and would likely increase over time.

While this alternative would not meet any of the Program objectives, it would avoid all of the impacts associated with construction and operation of the Proposed Program. No new facility construction or ground-disturbing activities would occur. Essentially, all categories of impacts are anticipated to be reduced with this alternative aside from land use and planning, which would be greater because the failure to provide adequate infrastructure for approved development would result in potential to conflict with land use plans, policies, and regulations.

ES.8.2 Deferred Implementation Alternative

Under the Deferred Implementation Alternative, the schedule for construction of all Program-level WMP components would be delayed by 5 years compared to the schedule for implementation of the Proposed Program.

Under this alternative, new water supply infrastructure would be constructed or upgraded as indicated for the Proposed Program, but at a later date. Similarly, operation of the City's water treatment, pumping, storage, and conveyance infrastructure would be improved and expanded, but at a slower pace. Facilities in the contiguous service area and the outlying service areas would continue to operate, but capacity and pressure issues may not be addressed in a timely manner.

Development in the City's water service area may be delayed to the extent that construction of necessary infrastructure to support such development would be delayed under this alternative. This could also hinder population growth. While this alternative would not necessarily avoid significant impacts of the Proposed Program, extending the overall schedule would reduce the severity of construction impacts for the 5-year period. Construction-related impacts such as traffic congestion and delays, air pollutant emissions, and noise and vibration would be reduced during this period compared to the Proposed Program. Extending the timeframe for implementation of CIPs could allow additional flexibility in timing for site-specific improvements that would allow avoidance of special-status species. However, the potential exists for fire risk to increase if the extended timeline results in delays in addressing shortfalls or needed expansion of water supply to meet fire flow requirements.

ES.8.3 Alternative Sources of Water Supply

Under this alternative, alternative sources of water supply would be used to address existing system deficiencies and meet increases in demand. This would alter the mosaic of capital improvements needed to deliver water to City customers. This alternative would not ultimately alter the amount of water to be used; however, it would rely on a greater range of sources for that water. It would require different capital facilities to utilize this water throughout the City's service area than those proposed under the program. The actual facilities would depend upon the sources selected, and their relative contributions to the overall supply. Alternative sources of water supply under this alternative could include additional water conservation and revised water shortage contingency plan; additional sources of potable water; development of recycled water options; and additional in-lieu groundwater recharge and aquifer storage and recovery. While this

alternative would accomplish the goals of the project, it would be anticipated to have impacts that are, on the whole, similar to those of the proposed program.

ES.8.4 Environmentally Superior Alternative

The No Program Alternative is considered environmentally superior as, with one exception, it would reduce or avoid the impacts of the Proposed Program. This alternative, however, would result in increased impacts related to land use and planning as growth planned by the City would not be able to proceed because necessary infrastructure to support development would not be constructed.

Under CEQA, if the "no project" alternative is identified as environmentally superior, the EIR shall also identify an environmentally superior alternative among the other alternatives. Therefore, the Deferred Implementation Alternative, has been selected as environmentally superior; this alternative would avoid impacts during the interim period during which the program would be delayed (although the impacts would eventually occur). The Deferred Implementation Alternative would result in increased impacts related to land use and planning as growth planned by the City would not be able to proceed in the interim period while necessary infrastructure to support development is not completed. As such, the Deferred Implementation Alternative would not as effectively meet program objectives, as necessary infrastructure to address system deficiencies and support planned development would be delayed.

The Alternative Sources of Water Supply Alternative is not considered to be environmentally superior because, while it would reduce some impacts through use of alternative water supplies, it would be anticipated to have impacts that are, on the whole, similar to those of the Proposed Program.

For this reason, the Proposed Program has been selected for implementation, as it would have the same impacts over the long term and would more fully meet Program objectives.

ES.9 Summary of Impacts and Levels of Significance

The impacts of the Proposed Program, proposed mitigation, and significance conclusions before and after mitigation are discussed in detail in Chapters 4 through 18 of this DEIR. Table ES-2 summarizes the impacts, mitigation measures, and levels of significance identified in this document.

Table ES-2. Summary of Potential Impacts and Mitigation Measures

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Aesthetics and Visual Resources			
Impact AES-1: Adverse Effects on Scenic Vistas	NI	NI	None required
Impact AES-2: Damage to Scenic Resources	LS	LS	None required
Impact AES-3: Degradation of Visual Character or Quality of Site and Surroundings During Construction	S	LSM	**Mitigation Measure AES-1:** Locate Staging Areas Away from Public Areas and Install Screening
Impact AES-4: Degradation of Visual Character of Quality of Site and Surroundings During Program Operations	S	LSM	**Mitigation Measure AES-2:** Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting
Impact AES-5: Permanent Source of Substantial Light or Glare	S	LSM	Mitigation Measure AES-2
Agricultural Resources			
Impact AG-1: Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use	S	SU	No feasible mitigation is available
Impact AG-2: Conflict with Existing Zoning for Agricultural Use or a Williamson Act Contract	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact AG-3: Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use	S	SU	No feasible mitigation is available
Air Quality			
Impact AQ-1: Conflict with or Obstruct Implementation of an Applicable Air Quality Plan	S	SU	No feasible mitigation is available
Impact AQ-2: Violate Any Air Quality Standard or Contribute Substantially to an Existing or Projected Air Quality Violation	S	LSM	**Mitigation Measure AQ-1.** Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM10 **Mitigation Measure AQ-2.** Implement Enhanced Control Measures for Construction Emissions of PM10 **Mitigation Measure AQ-3**. Implement Control Measures for Operational Emissions of PM10 and for Ozone Precursors (ROG and NOx)
Impact AQ-3: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard	S	SU	Mitigation Measures AQ-1, AQ-2, and AQ-3
Impact AQ-4: Expose Sensitive Receptors to Substantial Pollutant Concentrations	S	LSM	Mitigation Measures AQ-1, AQ-2, and AQ-3

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact AQ-5: Create Objectionable Odors Affecting a Substantial Number of People	LS	LS	None required
Biological Resources			
Specific biological resources-related impacts and applicable mitigation measures of the Proposed Program may differ by CIPs, specifically for future grid pipelines (FTGRID-01 and FTGRID-04) that cross water bodies. Where measures are applicable for these future grid CIPs and not for other Program components, these distinctions have been indicated. Regardless of these limited mitigation measure differences, the impact significance conclusions prior to and after mitigation measure implementation were identical for the Proposed Program overall, future grid pipelines (FTGRID-01 and FTGRID-04), and other Proposed Program components.			
Impact BIO-1: Impacts on Special-status Plants	S	LSM	**Mitigation Measure BIO-1:** Perform Focused Surveys for Special-status Plant Species **Mitigation Measure BIO-2:** Avoid, Minimize, and Compensate for Impacts on Special-status Plant Species
Impact BIO-2: Impacts on Vernal Pool Branchiopods and Western Spadefoot	S	LSM	**Mitigation Measure BIO-3:** Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat **Mitigation Measure BIO-4:** Minimize and Compensate for Impacts on Branchiopods, Western Spadefoot, and Their Habitat

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact BIO-3: Impacts on Valley Elderberry Longhorn Beetle	S	LSM	**Mitigation Measure BIO-5:** Avoid Impacts on VELB Habitat **Mitigation Measure BIO-6:** Implement VELB Compensatory Mitigation, if Necessary **Mitigation Measure BIO-7:** Transplant Elderberry Shrubs if Avoidance Is Not Feasible
Impact BIO-4: Impacts on Special-status Fishes	S	LSM	**Mitigation Measure HYD/WQ-1:** Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods (only FTGRID-01 and FTGRID-04)
Impact BIO-5: Impacts on Western Pond Turtle	S	LSM	**Mitigation Measure BIO-8:** Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle
Impact BIO-6: Impacts on Burrowing Owl	S	LSM	**Mitigation Measure BIO-9:** Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas if Necessary
Impact BIO-7: Impacts on Golden Eagle and Bald Eagle	LS	LS	None required
Impact BIO-8: Impacts on Raptors, Including Special-status Species	S	LSM	**Mitigation Measure BIO-10:** Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species **Mitigation Measure BIO-11:** Compensate for Loss of Raptor Foraging Habitat

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact BIO-9: Impacts on Special-status Passerine Species and Birds Protected under the MBTA	S	LSM	**Mitigation Measure BIO-12:** Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary
Impact BIO-10: Impacts on Special-status Mammals	LS	LS	None required
Impact BIO-11: Impacts on Riparian Habitat and Other Sensitive Natural Communities.	S	LSM	Mitigation Measures HYD/WQ-1, BIO-3, and BIO-4
Impact BIO-12: Impacts on Federally Protected Wetlands	S	LSM	**Mitigation Measure BIO-13:** Avoid and Minimize Impacts on Federally Protected Wetlands **Mitigation Measure BIO-14:** Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State Mitigation Measure HYD/WQ-1
Impact BIO-13: Impacts on Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites	S	LSM	Mitigation Measures BIO-8, BIO-9, BIO-10, BIO-11, and BIO-12 **Mitigation Measure BIO-15:** Install Temporary Trench Plates over Open Trenches
Impact BIO-14: Conflict with Local Ordinances or Policies Protecting Biological Resources	S	LSM	Mitigation Measures BIO-1 through BIO-15

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Cultural, Tribal, and Paleontological Resources			
Impact CR-1: Impacts on Known Historic, Archaeological or Tribal Resources	LS	LS	None required
Impact CR-2: Impacts on Previously Undiscovered Archaeological Resources	S	LSM	**Mitigation Measure CR-1:** Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work
Impact CR-3: Disturb Any Human Remains, Including Those Interred Outside of Dedicated Cemeteries	S	LSM	Mitigation Measure CR-1
Impact CR-4: Impacts on Paleontological Resources	S	LSM	Mitigation Measure CR-1
Impact CR-5: Potential for a Substantial Adverse Impact on Tribal Cultural Resources	S	LSM	Mitigation Measure CR-1
Geology, Soils, and Seismicity			
Impact GEO-1: Cause Damage to Facilities and Exposure of People to Hazards from Strong Seismic Events, Including Ground Shaking or Landslides	LS	LS	None required
Impact GEO-2: Result in Risk to Property and Life from Expansive Soils	LS	LS	None required
Impact GEO-3: Result in Substantial Soil Erosion or Loss of Topsoil	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact GEO-4: Result in Subsidence, Liquefaction, or Collapse Due to Seismic Activity or an Unstable Geologic Unit or Soil	LS	LS	None required
Greenhouse Gas Emissions and Energy Resources			
Impact GHG-1: Generate a Substantial Amount of GHG Emissions	S	SU	No feasible mitigation is available
Impact GHG-2: Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing Emissions of GHGs	S	SU	No feasible mitigation is available
Impact GHG-3: Cause Wasteful, Inefficient, and Unnecessary Consumption of Energy During Construction, Operation, and/or Maintenance	LS	LS	None required
Impact GHG-4: Cause a Substantial Increase in Energy Demand and the Need for Additional Energy Resources	LS	LS	None required
Hazards and Hazardous Materials			
Impact HAZ-1: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Construction	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact HAZ-2: Create a Substantial Hazard to the Public or the Environment through the Routine Transport, Use, or Disposal of Hazardous Materials during Operation	LS	LS	None required
Impact HAZ-3: Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment during Construction	LS	LS	None
Impact HAZ-4: Create a Significant Hazard to the Public or the Environment through Reasonably Foreseeable Upset and Accident Conditions Involving the Release of Hazardous Materials into the Environment during Operation	LS	LS	None required
Impact HAZ-5: Emit Hazardous Emissions or Handle Hazardous or Acutely Hazardous Materials, Substances, or Waste within One-Quarter Mile of an Existing or Proposed School	LS	LS	None required
Impact HAZ-6: Location on a Site Which Is Included on a List of Hazardous Materials Sites Compiled Pursuant to Government Code Section 65962.5 and, as a Result, Create a Significant Hazard to the Public or the Environment	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact HAZ-7: Location in an Airport Land Use Plan or within 2 miles of a Public Airport, Resulting in a Safety Hazard for People Residing or Working in the Program Area	LS	LS	None required
Impact HAZ-8: Impair Implementation of or Physically Interfere with an Adopted Emergency Response Plan or Emergency Evacuation Plan	LS	LS	None required
Impact HAZ-9: Expose People or Structures, Either Directly or Indirectly, to a Significant Risk of Loss, Injury, or Death Involving Wildland Fires	NI	NI	None required
Hydrology and Water Quality			
Impact HYD/WQ-1: Violate Any Water Quality Standards or Waste Discharge Requirements or Otherwise Degrade Water Quality	S	LSM	**Mitigation Measure HYD/WQ-1:** Prepare and Implement a Frac-Out Contingency Plan for Trenchless Pipeline Installation Methods
Impact HYD/WQ-2: Substantially Deplete Groundwater Supplies or Interfere Substantially with Groundwater Recharge Such That There Would Be a Net Deficit in Aquifer Volume or a Lowering of the Local Groundwater Table Level	S	SU	No feasible mitigation is available
Impact HYD/WQ-3: Substantially Alter the Existing Drainage Pattern of the Site or Area Such as to Result in Substantial Erosion, Siltation, or Flooding On- or Off-Site	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact HYD/WQ-4: Create or Contribute Runoff Water Which Would Exceed the Capacity of Existing or Planned Stormwater Drainage Systems or Provide Substantial Additional Sources of Polluted Runoff	LS	LS	None required
Impact HYD/WQ-5: Place Within a 100-year Flood Hazard Area Structures Which Would Impede or Redirect Flood Flows	LS	LS	None required
Impact HYD/WQ-6: Expose People or Structures to a Significant Risk of Loss, Injury or Death Involving Flooding, Including Flooding as a Result of the Failure of a Levee or Dam	LS	LS	None required
Land Use and Planning			
Impact LU-1: Divide an Established Community	LS	LS	None required
Impact LU-2: Conflict with Land Use Plans, Policies, or Regulations Adopted for the Purpose of Avoiding or Mitigating an Environmental Effect	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Noise and Vibration			
Impact NOI-1: Expose Persons to Noise Levels in Excess of Standards Established in a Local General Plan or Noise Ordinance or in the Applicable Standards of Other Agencies	S	LSM	**Mitigation Measure NOI-1:** Employ Noise-Reducing Construction and Maintenance Practices **Mitigation Measure NOI-2:** Limit Nighttime Construction Noise **Mitigation Measure NOI-3:** Employ Noise-Reducing Methods During Operations
Impact NOI-2: Expose Persons to Excessive Groundborne Vibration or Groundborne Noise Levels	S	LSM	**Mitigation Measure NOI-4:** Implement Vibration Reduction Measures
Impact NOI-3: Substantial Temporary, Periodic, or Permanent Increase in Ambient Noise Levels in the Project Vicinity Above Levels Existing Without the Proposed Program	S	LSM	Mitigation Measures NOI-1 and NOI-3
Impact NOI-4: Expose People Residing or Working in the Study Area to Excessive Noise Levels Associated with a Public Airport	LS	LS	None required
Population and Housing			
Impact PH-1: Induce Substantial Population Growth, Both Directly and Indirectly, During Construction	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact PH-2: Displace Substantial Numbers of People or Existing Housing, Necessitating the Construction of Replacement Housing Elsewhere	LS	LS	None required
Impact PH-3: Long-term Inducement of Substantial Population Growth, Both Directly and Indirectly	S	LSM	The policies contained in general and community plans, in particular Policy No. V.C.4[b], as well as the mitigation measures contained in this DEIR, would reduce the secondary effects of growth to a level of insignificance.
Transportation			
Impact TR-1: Conflict with an Applicable Plan, Ordinance, or Policy Establishing Measures of Effectiveness for the Performance of the Circulation System	LS	LS	None required
Impact TR-2: Conflict with an Applicable Congestion Management Program	LS	LS	None required
Impact TR-3: Substantially Increase Hazards Due to a Design Feature or Incompatible Uses	LS	LS	None required
Impact TR-4: Result in Inadequate Emergency Access	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Impact	Level of Significance of Impact		Mitigation Measure
	Before Mitigation	After Mitigation	
Impact TR-5: Conflict with Adopted Policies, Plans, or Programs Regarding Public Transit, Bicycle, or Pedestrian Facilities, or Otherwise Decrease the Performance or Safety of Such Features	LS	LS	None required
Utilities and Service Systems			
Impact UTL-1: Exceed Wastewater Treatment Requirements of the Applicable Regional Water Quality Control Board	LS	LS	None required
Impact UTL-2: Require or Result in the Construction of New Stormwater Drainage Facilities or Expansion of Existing Facilities, the Construction of Which Could Cause Significant Environmental Effects	LS	LS	None required
Impact UTL-3: Require New or Expanded Water Supply or Entitlements	NI	NI	None required
Impact UTL-4: Require Additional Permitted Landfill Capacity to Accommodate the Project's Solid Waste Disposal Needs	LS	LS	None required
Impact UTL-5: Comply with Federal, State, and Local Statutes and Regulations Related to Solid Waste	LS	LS	None required

Key to Significance Levels: LS = less than significant, LSM = less than significant with mitigation, NI= no impact; S = significant, SU = significant and unavoidable

Chapter 1
Introduction

The City of Modesto (City) has prepared this Draft Program Environmental Impact Report (DEIR) as lead agency to provide the public, responsible agencies, and trustee agencies with information about the environmental effects of implementation of the proposed 2017 Water Master Plan (Proposed Program). The Water Master Plan is intended to accommodate the existing and future water supply needs through 2050 of the population and land uses of the City, along with the City's other water customers in the outlying service areas of Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock.

The following sections provide an overview of the California Environmental Quality Act (CEQA) requirements, organization of the DEIR, impact terminology used, and process in which comments may be submitted on this DEIR. The last section describes the City's existing water system.

1.1 Overview of CEQA Requirements

The basic purposes of CEQA (State CEQA Guidelines Section 15002[a]) are to:

1. Inform governmental decision-makers and the public about the potential, significant environmental effects of the Program's proposed activities.
2. Identify the ways that environmental damage can be avoided or significantly reduced.
3. Prevent significant, avoidable damage to the environment by requiring implementation of feasible mitigation measures or Program/project alternatives that would substantially lessen any significant effects that the Program (or a particular project) would have on the environment.
4. Disclose to the public the reasons why a governmental agency approved the Program in the manner the agency chose if significant environmental effects are involved.

With certain strictly limited exceptions, CEQA requires all state and local government agencies to consider the environmental consequences of projects over which they have discretionary authority before approving or carrying out projects. CEQA establishes both procedural and substantive requirements that agencies must satisfy to meet CEQA's objectives. For example, the agency with principal responsibility for approving or carrying out a project (the lead agency) must first assess whether a proposed project would result in significant environmental impacts. If there is substantial evidence that the project would result in significant environmental impacts, CEQA requires that the agency prepare an Environmental Impact Report (EIR), analyzing both the proposed project and a reasonable range of potentially feasible alternatives.

As described in the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Section 15121[a]), an EIR is an informational document that assesses potential environmental effects of a proposed project, and identifies mitigation measures and alternatives to the project that could reduce or avoid significant environmental impacts. Other key CEQA requirements include

developing a plan for monitoring the implementation of identified mitigation measures and carrying out specific public notice and distribution steps to facilitate public involvement in the environmental review process. As an informational document used in the planning and decision-making process, an EIR's purpose is not to recommend either approval or denial of a project. Note that an EIR does not expand or otherwise provide independent authority of the lead agency to impose mitigation measures or avoid project-related significant environmental impacts beyond the authority already within the lead agency's jurisdiction.

1.1.1 Intent and Scope of this Document

In proposing to conduct the various activities identified in Chapter 2 of this DEIR, the City is proposing to carry out and approve a discretionary project subject to CEQA (State CEQA Guidelines, Section 15378). This DEIR was prepared to disclose further details and of the Proposed Program, as well as the significant effects of the Proposed Program's capital improvement projects (CIPs) on the environment. The City will use the analyses presented in this DEIR, the public response to the DEIR, and the whole of the administrative record, to evaluate the Proposed Program's environmental impacts and to further modify, approve, or deny approval of the Proposed Program.

This DEIR evaluates the environmental impacts of the Proposed Program at a programmatic level of detail, as defined in State CEQA Guidelines Section 15168(a):

> A program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:
>
> (1) Geographically,
>
> (2) As logical parts in the chain of contemplated actions,
>
> (3) In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or
>
> (4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

As described in State CEQA Guidelines Section 15168(c), subsequent activities implemented under the Proposed Program may require additional environmental review if those activities would have effects that were not examined in this program EIR.

1.2 CEQA Process

1.2.1 Notice of Preparation

A Notice of Preparation (NOP) for the Proposed Program was prepared pursuant to the State CEQA Guidelines (Section 15082) and circulated to the Office of Planning and Research's State CEQA Clearinghouse on August 26, 2016. The scoping period continued for 30 days and concluded on September 26, 2016. The NOP presented general background information on the Proposed Program, the scoping process, and the environmental issues to be addressed in the EIR.

Approximately 38 copies of the NOP were mailed to a range of stakeholders including state, federal, and local regulatory agencies and jurisdictions, non-profit organizations. A notice was placed in the local newspaper on August 26, 2016. The NOP is included in this DEIR in Appendix A, *Scoping Materials*.

1.2.2 Scoping Comments and Meetings

The City accepted written comments during the 30-day scoping period, August 26 to September 26, 2016. A scoping meeting was held on September 6, 2016 at which one person attended the meeting. During the scoping period, one comment letter was received. This comment was considered in the environmental impact evaluation.

1.2.3 Draft Program EIR

The City has prepared this DEIR, as informed by public and agency input received during the scoping period, to disclose significant environmental impacts associated with the Proposed Program. Where any such impacts are significant, feasible mitigation measures and potentially feasible alternatives that substantially lessen or avoid such effects are identified and discussed. The public review period provides the public an opportunity to provide input to the lead agency on the DEIR.

1.2.4 Public Review and Meetings

The DEIR will undergo public review for the period specified in the Notice of Availability of the DEIR. During this period, the City will hold a public meeting. The date, time, and exact location of the public meeting is included in the Notice of Availability (NOA) of this DEIR.

1.2.5 Final EIR

Written comments received in response to the DEIR will be addressed in a Response to Comments document which, together with the DEIR and any related changes to the substantive discussion in the DEIR, will constitute the Final EIR. The Final EIR, in turn, will inform the City's exercise of its discretion as a lead agency under CEQA in deciding whether or how to approve the Proposed Program.

1.3 Organization of this DEIR

This DEIR contains the following components:

Executive Summary. A summary of the Proposed Program, a description of the issues of concern, Program alternatives, and a summary of environmental impacts and mitigation measures are provided in this chapter.

Chapter 1, *Introduction*. This chapter describes the purpose and organization of the DEIR and its preparation, review, and certification process. This chapter also provides some background on the Proposed Program and describes the City's existing water supply system.

Chapter 2, *Program Description*. This chapter summarizes the Proposed Program of CIPs, including a description of the Program purpose and objectives, a brief description of the study area, and proposed actions that would be taken under the Program.

Chapter 3, *Introduction to the Environmental Analysis*. This chapter is an introduction to the impact analysis conducted in this DEIR. This chapter also identifies resource topic areas determined not to be affected by the Program, and therefore have been dismissed from further analysis in this DEIR.

Chapters 4–17 describe the environmental resources and environmental impacts of the Proposed Program. Each of these chapters describes the existing local and regional setting and background information for the resource topic area under consideration to aid the reader in understanding the conditions that could be affected by the Proposed Program. In addition, each of these chapters includes a discussion of the criteria used in determining the significance levels of the Proposed Program's environmental impacts. Each of these chapters also provides mitigation measures to reduce, where feasible, the adverse effects of significant impacts.

Chapter 18, *Other Statutory Considerations*, addresses the Proposed Program's contribution to cumulative impacts, outlines the Proposed Program's growth-inducing impacts, and identifies significant and irreversible environmental changes resulting from the Proposed Program.

Chapter 19, *Alternatives Analysis*. This chapter describes the process by which alternatives to the Proposed Program were developed and screened, evaluates their likely environmental impacts, and identifies the environmentally superior alternative.

Chapter 20, *Report Preparation*, lists the individuals involved in preparing this DEIR.

Chapter 21, *References*, provides a bibliography of printed references, websites, and personal communications used in preparing this DEIR.

Appendix A, *Scoping Materials*. This appendix contains the NOP issued by the City, materials from the scoping process, and copies of all comments submitted.

Appendix B contains the supporting documentation for the biological resource impacts evaluation.

Appendix C contains the supporting documentation for the evaluation of cultural resources.

Appendix D contains the draft Mitigation Monitoring and Reporting Program.

1.4 Submittal of Comments

The City is circulating this DEIR for public review and comment for the period specified in the NOA. As discussed above, the City will host a public meeting during this period. The purpose of public circulation is to provide agencies and interested individuals with opportunities to comment on or express concerns regarding the contents of this DEIR. Specific dates, times, and locations for these

meetings will be provided in the NOA, which will be posted on the City's website (www.modestogov.com), and in a newspaper notice.

This CEQA document is available for review at the City's website: www.modestogov.com. In addition, hard copies can be reviewed at the City's Utilities Department offices in Modesto, California. To arrange to view documents during regular business hours (8:00 a.m. to 4:30 p.m., Monday through Friday), call (209) 577-5395. This DEIR also can be reviewed electronically at the Stanislaus County library (1500 I Street, Modesto, California) which is serving as a document repository.

Written comments concerning this DEIR can be submitted at the public meeting described above or at any time during the DEIR public review period. All comments must be received by 5:00 p.m. on the final date of public review as identified in the NOA, and directed to the name and address listed below:

Jim Alves, Associate Civil Engineer
City of Modesto Utilities Department
1010 Tenth Street, Suite 4600
Modesto, CA 95354
P.O. Box 642, Modesto, CA 95353
jalves@modestogov.com

Submittal of written comments via e-mail (Microsoft Word or Adobe PDF format) is preferred. Written comments received in response to this DEIR during the public review period will be addressed in a Response to Comments section of the Final EIR.

1.5 Proposed Program Location and Setting

The Proposed Program is located in the City and several locations within Stanislaus County, California (Figure 1-1). The study area encompasses two distinct customer location categories: (1) the contiguous service area, and (2) outlying service areas. Together, the contiguous service area and outlying service areas constitute this DEIR's "study area." The City's contiguous service area is primarily defined by the current Sphere of Influence (SOI), Salida, North Ceres, and some unincorporated Stanislaus County "islands" within and adjacent to the SOI (Empire is within the SOI). The outlying service areas include Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock. (Figure 1-2).

More specifically, outlying service areas include the unincorporated community of Del Rio, located approximately 2 miles north of the City's SOI boundary; Ceres (Walnut Manor) located roughly 0.5 mile south of the City's SOI boundary; the unincorporated community of Grayson, located approximately 14 miles west of the City's SOI boundary; and a portion of the City of Turlock, located approximately 7 miles southeast of the City's SOI boundary.

In general, water distribution in the portion of the service area in and contiguous to the City is divided by the Tuolumne River. The area north of the Tuolumne River is referred to as North Modesto, and is within the service area of Modesto Irrigation District (MID). The area south of the Tuolumne River is referred to as South Modesto, and is within the Turlock Irrigation District (TID) service area.

1.6 Background and Existing Water System

The City has been providing potable water service to its urban area since 1895 through the purchase and acquisition of several private water companies and, as a result, has become the primary domestic water purveyor in Stanislaus County, serving not only the City of Modesto, but also Salida, Ceres (Walnut Manor), Grayson, Del Rio (Hillcrest), and North, South, and Central Turlock. The City implements a Water Conservation Program, which combines a strong education program with watering restrictions and prohibition of water waste. In the early 1990s, the City, MID, and the Del Este Water Company formed a partnership to use a portion of MID's surface water rights for municipal uses. Today, the water is stored in Don Pedro Reservoir, which is jointly owned by MID and TID. From Don Pedro Reservoir, MID releases water through its power generation facilities directly into the river. From MID's Upper Main Canal at La Grange, water is delivered to Modesto Reservoir. From Modesto Reservoir, MID may release water to its Lower Main Canal for irrigation purposes or to the Modesto Regional Water Treatment Plant (MRWTP) for municipal and industrial purposes, largely through City facilities (MID 2017).

The MID-owned and operated MRWTP was developed as the result of the partnership that was formed between MID, the City and the Del Este Water Company, and became operational in 1995. Construction of the MRWTP allowed the City to purchase treated surface water from MID, which greatly reduced the City's reliance on groundwater pumping and addressed an increasing local groundwater overdraft condition that was emerging at the time (City of Modesto 2016). The MRWTP delivers treated surface water to the City's service area to combine with groundwater sources to meet the City's water supply needs for those municipal customers within the City's SOI north of the Tuolumne River (southern boundary of MID's service area), including the communities of Salida and Empire. Areas served by the City of Modesto that lie outside the MID water service boundary (i.e., south of the Tuolumne River), including the community of Grayson, parts of Ceres and Turlock, and the portion of the Modesto system south of the Tuolumne River, are served exclusively by groundwater.

The MRWTP, in addition to storage and delivery facilities, initially provided 30 million gallons per day to the City. For a number of years, the City and MID have been working together on the MRWTP Phase Two Expansion, which became operational in 2017, and expanded the capacity of the plant to provide the City with up to an additional annual average of 30 million gallons per day (mgd), for a total annual average of up to 60 mgd.

Water treatment, pumping, storage, and conveyance infrastructure is operated and maintained by the City's Utilities Department, Water Operations Division. Potable water resources delivered by the City's system to customers originate from two sources: treated surface water purchased from the MID, and groundwater pumped from the many wells located throughout the contiguous service area and the outlying areas.

The key components of the City's water system are storage tanks and booster pump stations, groundwater wells, and a transmission/distribution pipeline network. These facilities in the contiguous service area are described below and shown in Figure 1-3; while facilities in the outlying service areas are shown in **Figure 1-4, 1-5, 1-6, and 1-7**.

1.6.1 Existing Storage Tanks and Booster Pump Stations

The contiguous service area contains 10 at-grade storage tanks; eight of which are owned and operated by the City, and two owned and operated by MID. The total existing storage capacity in the contiguous service area is approximately 22.1 million gallons (MG).

Each tank operated by the City is equipped with its own booster pump station. MID's two storage tanks are served by one booster pump station and are collectively known as the MID Terminal Reservoirs facility. Thus, there are a total of nine existing booster pump stations in the contiguous service area. Each booster pump station has multiple pumps, with the largest unit reserved as a standby unit at each pump station. Additionally, each booster pump station is equipped with a generator for backup power. The total existing and near-term booster pumping capacity is approximately 212 mgd.

No water storage tanks or booster pump stations currently exist in the outlying service areas of Del Rio or Turlock. However, one water storage tank was recently installed to service the Del Rio area. The Del Rio water storage tank was included in the City's 2010 Water System Engineer's Report (WSER) and was the subject of a separate EIR (City of Modesto 2017).

In Grayson, the City system includes one at-grade storage tank, which receives and stores groundwater from the area's two wells and whose booster pump station is equipped with two pumps and a backup generator. The location of this storage tank is shown in **Figure 1-3**. This tank was constructed in the early 1990s and has been well maintained.

Table 1-1 provides a summary of the existing storage tanks and booster pumps in the City's water service area.

Table 1-1. Existing Storage Tanks and Booster Pumps

Location	No. of Storage Tanks	Storage Capacity (MG)	No. of Booster Pump Stations	Booster Pump Capacity (gpm)
Contiguous Area	10	22.1	9	119,375
Del Rio	0	—	0	—
Ceres (Walnut Grove)	—	—	—	—
Grayson	1	0.22	1	900
Turlock	0	—	0	—

Notes: gpm = gallons per minute; MG = million gallons

1.6.2 Existing Groundwater Wells

The contiguous service area contains 77 active groundwater wells (out of a total of 92 existing groundwater wells), as shown in Figure 1-3, with a total well capacity of 99 mgd. A new

well (Well 67 Grogan Park) is anticipated to be completed in 2017. Some wells have been decommissioned as a result of arsenic, uranium, perchloroethylene (PCE), trichloroethylene (TCE), dibromo-chloropropane (DBCP) or nitrate concentrations in excess of drinking water regulatory maximum contaminant levels (MCLs). The active wells have production capacities ranging from 275 to 2,400 gallons per minute (gpm). The base source of water supply within the contiguous service area is treated water from the MRWTP. The groundwater wells supply water from the groundwater basin as needed to help meet operational, emergency, and/or fire-flow demand. They also provide water supply to the area south of the Tuolumne River, which is outside of MID's service area and hence not served by the MRWTP. Groundwater wells are equipped with pumps that discharge water into the distribution system as needed. Thirty-one of the 77 active wells in the contiguous service area are equipped with generators for backup power (West Yost 2017a). The City is in the process of replacing Wells 226 and 229.

In addition to the contiguous service area wells, the City has a total of 18 groundwater wells (17 are active wells) in the outlying service areas. Groundwater well locations in the outlying service areas are shown on Figures 1-4 through 1-7. In most of the outlying areas, groundwater wells are directly connected to the distribution system because there are no storage tanks, with the exception of Grayson as discussed below. The City system currently includes three groundwater wells in Del Rio and four in Turlock. The Del Rio Tank and Wells Project includes a new well (Well 68), and a replacement well (Well 271). As previously noted, these two wells were included in the City's 2010 WSER and are the subject of a separate EIR that was recently completed. In Grayson, the City system includes two groundwater wells that pump directly to the storage tank (Tank 9). One of these wells is equipped with a generator for backup power. The City is in the process of replacing Well 274.

Table 1-2 summarizes the quantities of active and inactive groundwater wells and the production capacity range for wells in the City's service areas.

Table 1-2. Existing Groundwater Wells

	No. of Active Groundwater Production Wells	No. of Inactive Groundwater Production Wells	Range of Production Capacity (gpm)
Contiguous Area	77	15	275 to 2,400
Del Rio	3	0	395 to 800
Ceres (Walnut Grove)	1	0	242
Grayson	2	0	200 and 350
Turlock	4	1	209 to 350

Notes: gpm = gallons per minute.

1.6.3 Existing Transmission and Distribution Pipelines

The contiguous service area contains approximately 914 miles of underground pipeline, with pipes ranging in size from 2 to 60 inches in diameter. Pipelines within the City are generally

classified as transmission mains (12 to 24 inches in diameter) or the smaller distribution pipelines (2 to 12 inches in diameter), which transport water supplies from the transmission mains to water users. The material type of the pipelines varies depending on the age of the pipeline but include polyvinyl chloride (PVC) and asbestos cement (for most distribution pipelines), or cast iron, welded steel, ductile iron, and reinforced concrete pipe for older pipelines. In addition to the City's pipelines, there are MID-owned transmission mains (24 to 60 inches in diameter) that transfer treated surface water supplies from the MRWTP into the City's water distribution system. The City can control these surface water supplies into its water distribution system via 25 active turnouts within the contiguous service area that each have a hydraulically operated control valve. The existing pipeline grid in the contiguous service area is shown in **Figure 1-3**.

Pipelines located in the outlying service areas are shown in **Figure 1-4** through **Figure 1-7**. The Del Rio service area includes approximately 39,900 linear feet of City-owned distribution pipeline, ranging from 4 to 10 inches in diameter. The Grayson service area includes approximately 16,700 linear feet of City-owned pipeline, including pipes running between the two wells and the storage tank. Pipes located in the Grayson service area range from 4 to 10 inches in diameter. The Turlock service area includes approximately 23,600 linear feet of City-owned distribution pipeline, ranging in size from 4 to 8 inches in diameter.

Table 1-3 summarizes the transmission and distribution pipeline lengths and diameters for the City's contiguous and outlying service area review.

Table 1-3. Existing Transmission and Distribution Pipeline

	Total Length (miles)	Range of Size (inched in diameter)
Contiguous Area	914	2 to 60
Del Rio	7.6	4 to 10
Ceres (Walnut Grove)	0.7	6 to 8
Grayson	3.1	4 to 10
Turlock	4.5	4 to 8

1.6.4 Relationship to 2010 Water System Engineer's Report

The 2017 Water Master Plan and the City's 2016 WSER, which is described further in Chapter 2, *Program Description*, are separate and distinctly different documents from the City's 2010 WSER. The CIPs in the 2010 WSER were evaluated in the EIR certified in 2010 (State Clearinghouse #2008092095) (City of Modesto 2009).

Since the 2010 WSER was prepared, the City has constructed some of the water infrastructure facilities identified in it. As previously mentioned, two planned groundwater wells and a water storage tank for the Del Rio area were included in the 2010 WSER and were also evaluated in a separate tiered EIR. The 2017 Water Master Plan and the City's 2016 WSER includes CIPs previously identified in the WSER and newly identified CIPs.

This page intentionally left blank.

Chapter 2
PROGRAM DESCRIPTION

2.1 Overview

This chapter describes the 2017 Water Master Plan (WMP; Proposed Program) and discusses its purpose and objectives, location, proposed capital improvement projects (CIPs), construction methods and schedule, and necessary permits and approvals. Background reports used to prepare this chapter include the following:

- *City of Modesto Water Master Plan,* prepared by West Yost Associates. Final Draft (September 2017a);
- *City of Modesto Water System Engineer's Report* (WSER), prepared by West Yost Associates. Final Draft (May 2016); and
- 2010 Water System Engineer's Report Draft Program Environmental Impact Report (City of Modesto, December 2009).

2.2 Purpose and Objectives

The City has developed a proposed WMP whose underlying purpose is to define the City's long-term water supply and infrastructure needs, and guide management of its water service system. The WMP identifies recommended and prioritized CIPs for system-wide implementation that are needed to deliver safe and reliable water and that would effectively meet water demand requirements for existing and future City customers through buildout of the City's adopted General Plan.

The objectives of the proposed WMP are as follows:

- To implement and support the City's economic goals and General Plan by planning for and providing water infrastructure in a timely and cost-effective manner to serve new and existing development.
- To clearly define the City's long-term water supply needs (from both groundwater and the Modesto Irrigation District's [MID's] surface water supplies) and identify the associated infrastructure required to deliver these supplies to existing and future customers.
- To provide the flexibility, system redundancy, and reliability at a reasonable cost to accommodate possible changing future conditions (regulatory, climate, additional conservation, etc.).
- To repair and replace aging water infrastructure.

- To ensure adequate water infrastructure and services are available to serve new growth within the General Plan area, the City's sphere of influence (SOI), and the outlying service areas.
- To plan for state-of-the-art facilities that reliably and economically meet changing regulatory requirements.
- To provide safe and reliable water supply by planning for and constructing appropriately sized storage facilities, redundancies, and alternate (back up) power supplies for key facilities.
- To provide adequate storage capacity to meet operational, fire flow, and emergency storage needs.
- To maintain system pressures that meet regulatory requirements and peak demand conditions.
- To provide transmission and distribution pipelines to safely and reliably convey water throughout the water system.
- To provide safe and reliable water that meets regulatory water quality requirements.
- To evaluate a groundwater aquifer storage and recovery program.
- To sustainably utilize and protect groundwater resources.

2.3 Program Location

The Proposed Program is located in the city of Modesto and other communities in Stanislaus County, California, in the central San Joaquin Valley. The city is centrally located within California, approximately 70 miles southeast of Sacramento, 85 miles east of San Francisco, 90 miles northwest of Fresno, and 35 miles west of the foothills of the Sierra Nevada range. The City's contiguous service area is limited to the current SOI, Salida, North Ceres, and some unincorporated areas within and adjacent to the SOI including Empire. The outlying service areas include Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock. Collectively, the contiguous service area and outlying service areas constitute the Proposed Program's study area. These areas are shown in **Figure 2-1**.

2.4 Service Areas

2.4.1 Contiguous Service Area

The City has been providing potable water service to its urban area since 1895 through the purchase and acquisition of several private water companies. The City of Modesto water system currently serves a population of approximately 260,000 people in California's Central Valley. The City is currently the largest retail water supplier in Stanislaus County. **Table 2-1** provides a 35-year population forecast for the contiguous and outlying service areas. This forecast is also included in Chapter 15, *Population and Housing*, of this EIR. Water demands for the City's contiguous water

service area at buildout (year 2050) would be approximately 100,000 acre-feet/year (af/yr), based on the projected estimates from the City's WMP (West Yost 2017a). Available City water supplies at the year 2050 would be approximately 115,000 af/yr (West Yost 2017a).

2.4.2 Del Rio

Del Rio is located approximately 4 miles north of the City of Modesto. The Del Rio service area is approximately 540 acres, primarily residential, and is considered 57 percent developed. Currently, there are no interconnections with any other water systems; the City's contiguous water system is within 4 miles. The future areas of development in the Del Rio service area are located primarily in the east and southwest with a small amount of infill development. The Del Rio service area was originally provided with water service by the Del Este Water Company, but in the mid-1990s the City acquired the Del Este Water Company and began providing water service.

The Del Rio water system currently requires a new storage tank (and associated pump station), new well, replacement well, backup generators, and pipelines to correct existing supply deficiencies. The City's Utilities Department has conducted environmental review on these improvements, collectively known as the Del Rio Tank and Wells Project (City of Modesto 2017), which was certified by the City Council on September 5, 2017, and is expected to be completed in 2019.

The future Del Rio service area would include additional acreage that would expand the service area to the north, east, and southwest. According to the *Del Rio Community Plan* (Stanislaus County 1992), "future planned development land use" (primarily residential) is proposed for the northwest and eastern portions of the service area, while development in the southwestern area would be residential. Full buildout of the service area would require additional pipelines and pumping capacity, as recommended, to provide adequate water service to meet the anticipated demand of 1,480 af/yr at buildout (2050 or before) (West Yost 2017b). The current Del Rio Tank and Wells project includes improvements needed to address existing water system deficiencies, and does not include the improvements needed for future buildout.

2.4.3 Grayson

The town of Grayson is located approximately 14 miles west of Modesto along County Road J16 (Grayson Road). Due to water quality issues at the existing groundwater wells, pumped groundwater has historically been treated through an ion exchange system at Well 295, then stored in Tank 9 prior to being pumped into the distribution system. The Grayson water system requires a new production well, a replacement well, backup generators, replacement tank, additional booster pumps, and pipelines to correct existing supply deficiencies (West Yost 2017c). It has not been determined if the replacement well (Well 274) would require treatment. The Grayson system has no interconnections with other water systems, and there are no nearby water utilities with potential for interconnection.

The Grayson service area is approximately 120 acres, primarily residential, and is considered to be mostly developed, with approximately 30 acres remaining to be developed. The capital improvements recommended to address the current deficiencies would also adequately serve the buildout demand of 258 af/yr (West Yost 2017c).

Table 2-1. Population Projections for the City of Modesto's Contiguous and Outlying Water Service Areas

Year	Contiguous Service Areas				Outlying Service Areas				Total Contiguous Service Area [1]	Total Contiguous and Outlying Service Area [2]
	City of Modesto	Salida	Empire	North Ceres (Bystrom)	Del Rio	Ceres (Walnut Manor)	Grayson	Turlock (Portions)		
2015	218,375	13,750	4,189	4,008	1,021	154	960	1,146	255,906	259,187
2020	232,943	14,667	4,189	4,008	1,233	154	996	1,146	271,392	274,920
2025	248,483	15,646	4,189	4,008	1,444	154	1,032	1,146	287,910	291,686
2030	265,060	16,690	4,189	4,008	1,656	154	1,068	1,146	305,531	309,555
2035	282,743	17,803	4,189	4,008	1,868	154	1,104	1,146	324,327	328,599
2040	301,605	18,991	4,189	4,008	2,079	154	1,140	1,146	344,377	348,896
2045	321,726	20,258	4,189	4,008	2,291	154	1,176	1,146	365,765	370,352
2050	343,189	21,609	4,189	4,008	2,502	154	1,212	1,146	388,579	393,594

Notes:

[1] The Total Contiguous Service Area population includes the population of the contiguous communities shown above as well as the populations of Bret Harte, Shackelford, and West Modesto, which are county areas served by the City. The Bret Harte, Shackelford, and West Modesto communities are built out and have populations, respectively, of 5,152, 4,750, and 5,682.

[2] The Total Contiguous and Outlying Service Area populations includes the contiguous and outlying service area populations of the communities shown above as well as the additional communities Bret Harte, Shackelford, and West Modesto in the contiguous service area.

Source: West Yost 2017a.

2.4.4 Turlock

The City's outlying water service area in Turlock is made up of three small, separate service area islands (North, Central, and South) located within the City of Turlock. The Turlock service area is located approximately 14 miles south of Modesto. The entire Turlock service area contains approximately 130 acres, primarily residential, and is considered fully developed (built out). The Turlock service area has two existing emergency water supply connections to the City of Turlock water system in the North and Central service area islands. The South service area island currently has no emergency interconnections with the City of Turlock water system. The Turlock water system currently requires rehabilitation or replacement of a well, backup generators, and pipelines to correct existing supply deficiencies, upsizing of existing system emergency connections, and one new emergency intertie (West Yost 2017d). The Turlock service area is already fully built out and has a projected buildout demand of 293 af/yr (West Yost 2017d).

2.5 Proposed CIP Improvements

The Proposed Program, as analyzed in this EIR, is the collection of CIPs proposed in the WMP and the 2016 WSER. Proposed CIPs were determined by evaluating the City's ability to serve current, future, and buildout[1] demands for its contiguous and outlying service areas, and assessing the following system components in a hydraulic evaluation within the WMP (West Yost 2017a): groundwater pumping capacity; storage capacity; demands (peak and fire flows); and distribution system needs. In addition, water supply requirements under existing and buildout situations were evaluated.

The City's water system CIPs are divided into 22 categories, which are described in detail in the 2016 WSER (West Yost 2016). These categories are used to group and develop budgets for each of these water system improvements/programs, based on the type of improvement, and to allocate costs between existing and future customers. **Table 2-2** lists the City's water system CIP categories.

[1] **Future** improvements are water facilities that are *required* to be installed by the City (e.g. wells, pumps, replacing deficient water mains). **Buildout** components are facilities to be paid for and constructed by developers for specific development projects (such as extension pipelines) guided by the Land Use Plan (City of Modesto 2019).

Table 2-2. Summary of CIP Categories

Category No.	Project Category	Updated as Part of Water Master Plan or Engineer's Report	Description
1	MRWTP Phase II Expansion	Project Complete	This project is complete and provided funding to expand MID's MRWTP capacity from 30 million gallons per day (mgd) to 60 mgd.
2	City-Side Downstream Improvements	Engineer's Report	This project is near completion and provides funding for the Industrial Tank and Booster Pump Station, Codoni Transmission Mains, and the Yosemite Transmission Mains.
3	Improvements for South Modesto	Water Master Plan	Provides funding to increase the delivery reliability to customers in South Modesto by providing additional transmission mains, distribution mains, tanks, and booster pumping capacity.
4	Water Quality Related Studies	Engineer's Report	Provides funding for system-wide water-quality-related studies to manage the City's groundwater/ surface water resources.
5	SCADA System Upgrades	Engineer's Report	Provides funding for SCADA system upgrades to improve the City's operation and management of the water system.
6	New Corporation Yard	Engineer's Report	Provides funding for a new Water Division Corporation Yard.
7	Existing Tank Improvements	Engineer's Report	Provides funding for interior and exterior enhancements to water storage tanks to improve efficiency and prolong their useful life.
8	Extend Water Mains	Engineer's Report	Provides funding to extend water mains into developing areas and to complete distribution pipeline "looping."

Category No.	Project Category	Updated as Part of Water Master Plan or Engineer's Report	Description
9	Strengthen and Replace Water System	Water Master Plan	Provides funding to replace and upgrade deficient water mains, which may also include "looping" improvements.
10	Install New Wells	Water Master Plan	Provides funding to replace older wells (taken out of service for water quality or production capacity) or construct new wells.
11	Wellhead Treatment	Water Master Plan	Provides funding for wellhead treatment or blending facilities for wells that are offline due to water quality.
12	Purchase & Install New Generators	Water Master Plan	Provides funding to purchase and install new generators to ensure reliable water service throughout the water system.
13	Water System Security Enhancements	Engineer's Report	Provides funding to make security enhancements (e.g. fencing. signage) to facilities identified in the 2003 Water System Vulnerability Assessment.
14	Groundwater Management Program	Engineer's Report	Provides funding to support projects and studies related to managing groundwater resources.
15	Urban Water Management Plan	Engineer's Report	Provides funding to support completion of a UWMP every 5 years to help ensure reliability of water supply.
16	Water Master Plan	Engineer's Report	Provides funding to support completion of future WMPs to evaluate the adequacy of water system to serve existing and future customers.
17	Water System Evaluation	Engineer's Report	Provides funding to support as-needed engineering studies and water system evaluations.

Category No.	Project Category	Updated as Part of Water Master Plan or Engineer's Report	Description
18	New Water Tanks	Water Master Plan	Provides funding to construct new tanks and booster pumping stations and other associated facilities.
19	Water Meters	Engineer's Report	Provides funding to purchase and install new automated meter readers throughout the service area.
21	New or Replacement Pumps	Engineer's Report	Provides funding to replace deficient water pumps at wells and booster pump station that are too costly to repair.
22	Utility Cuts	Engineer's Report	Provides funding to cover costs associated with utility construction (e.g., paving, valve replacement, leak repairs).

Notes:

mgd = million gallons per day; MID = Modesto Irrigation District; MRWTP = Modesto Regional Water Treatment Plant; SCADA = supervisory control and data acquisition; UWMP = urban water management plan; WMP = water master plan

Category 20 was a project that had been completed and is no longer an active category for the purposes of this analysis. The WSER category numbers have remained unchanged to be consistent with past WSERs.

Improvements can be grouped into three primary types to meet the Proposed Program's objectives:

- ***Existing Water System Improvements*:** The WMP identifies CIP improvements that are recommended to improve the City's capability of meeting existing water demands. These CIPs are referred to as "Existing System CIPs." These projects would meet existing demands and would be implemented to address any issues with the City's existing water system infrastructure, storage deficiencies, or distribution needs. Thus, they would generally involve improvements, upgrades, or replacements of existing City water system facilities.

- ***Future and Buildout Water System Project Improvements*:** These projects would be implemented in phases, at the appropriate time to address future development needs within the City's water service area based on growth planned by the City and local governments in the outlying service areas. Future improvements identified in this document are new water facilities that the City would be required to install to address future planned development (within its service area), as described in the City's General Plan (City of Modesto 2019). The Proposed Program supports a buildout of the City's SOI.

Proposed system improvement projects to meet water demands in 2050 as described in the WMP are referred to as "Buildout System CIPs." Buildout CIPs are similar to future CIPs in that they support planned future development as opposed to existing development. However, buildout facilities are those that are needed at buildout of the land use plan, and that would be funded by the developer of a particular area (not the City) to support water service to those specific new development areas since the facilities are exclusively required to support those new development areas.

- ***Program Improvements*:** These improvements would occur more periodically and over time (e.g., updating the WMP, updating the Urban Water Management Plan). Additionally, efforts that are regional in nature are included in this category (e.g., the Aquifer Storage and Recovery [ASR] Program).

The CIPs proposed in the WMP and 2016 WSER include new water storage tanks, improvements to existing tanks, new and replacement groundwater wells, groundwater monitoring wells, pump stations, transmission mains, distribution pipelines, supervisory control and data acquisition (SCADA) system upgrade, water quality related studies, wellhead treatment, emergency generators, water system security enhancements, groundwater management, water master plan updates, maintaining and calibrating a hydraulic model of the water system, evaluations of the water system, and water meters for the contiguous water service area and/or outlying water service areas. Each of these types of improvements is summarized below and discussed further in Section 2.5, "Proposed CIP Improvements." The ASR Program is described in Section 2.6. The CIPs would be implemented within the City's contiguous and outlying service areas, as described in Section 2.5, below.

CIPs planned in each of the service areas are shown in Figure 2-1 and **Figure 2-2** and discussed further below.

2.5.1 CIP Improvements Outside of this Program

Some of the 22 categories of CIPs described in the 2016 WSER have already been completed or were in the process of being constructed. CIPs that have been completed or are currently being constructed are briefly mentioned here but are not part of the Proposed Program and, as such, are *not* analyzed as proposed CIP improvements in this DEIR.

- **MRWTP (Category 1 of WSER).** As described in Chapter 1, this project is complete and involved the expansion of MID's MRWTP capacity from an average annual flow of 30 million gallons per day (mgd) to 60 mgd.

- **City-side Downstream Improvements Related to MRWTP Expansion (Category 2 of WSER).** Two proposed improvements in the City-operated water supply infrastructure that distributes treated surface water from the MID-operated MRWTP facilities have been or are in the process of being constructed to correct low peak hour pressures and distribute additional treated surface water. These improvements include a completed Codoni Transmission Mains Pipeline project and an Industrial Tank/Booster Pump Station project (comprised of a 4-MG industrial tank and a 12-mgd booster pump station). One additional improvement in this WSER category has not yet been constructed and therefore is analyzed as part of the Proposed Program and discussed further in Section 2.5.2, "Proposed CIP Facilities."

- **New Corporation Yard (Category 6 of WSER).** The City has purchased property (47.4 acres on Litt Road) to consolidate and relocate the Water Division's existing and future maintenance and operations activities. The 2010 Water Master Plan EIR evaluated this project and a Finding of Conformance to General Plan Master EIR was prepared in 2015 (EA UTL No. 2015-09). As of October 2019, construction of this project is nearing completion. The project includes the construction of a new building (approximately 30,000 square feet), and site development (parking, landscaping, lighting, security measures, vehicle wash station, refueling station, etc.). The site would also be used to store soil, concrete, and asphalt removed during construction of water projects for later reuse as part of the City's recycling program.

- The Water Division's existing maintenance and operations facilities are currently spread over multiple locations, including the City's Jefferson Street Corporation Yard, Tank 6 on Carpenter Road, and Codoni Avenue. Once the maintenance and operations facilities are amalgamated at the single location, the Water Division would vacate the City's Jefferson Street Corporation Yard for use by other City departments.

- Equipment and materials would be removed from Tank 6, which would continue to be in active service, and from Codoni Avenue, which is the future site of the Industrial Tank and Pump Station.

- **Del Rio Tank and Wells Project.** The City has purchased property (3.96 acres on Ladd Road) for a proposed 0.23-MG water storage tank, 1.0 mgd booster pump station, and new 1,000-gallon-per-minute (gpm) water supply well to address existing system deficiencies. These improvements are collectively known as the Del Rio Tank and Wells Project, and have been addressed by a separate CEQA document. An EIR for the Del Rio

Tank and Wells Project (SCH#2015072055), was certified by Modesto's City Council along with associated findings, documents and project approval on September 5, 2017 by Resolution 2017-347.

2.5.2 Proposed CIP Facilities

The following is a brief description of the Proposed Program water infrastructure categories identified in the WMP and WSER. As previously noted, Category 1, the MRWTP Phase II Expansion, and Category 6, the New Corporation Yard, are not listed, as these projects are completed or are currently under construction. Included here are descriptions of the category components (storage tanks and booster pump stations, groundwater wells, etc.) proposed to be installed or upgraded to alleviate existing deficiencies and accommodate water service demands associated with future development within the contiguous and outlying service areas. The locations of existing facilities needing improvements are known. The exact locations of some of these new facilities have yet to be finalized; however, in some cases tentative sites have been identified.

Individual facilities/improvements identified below would be designed and constructed on an as-needed basis and as funding becomes available. As final design and locations of Program components are identified, project-level CEQA review would be completed. All CIPs are evaluated at a program level of detail in this DEIR, since they are improvements that the City would likely construct in the future, but designs of these improvements have not been advanced to a level at which a detailed evaluation can be completed. As such, a more general, programmatic analysis of these improvements is included in this DEIR.

Category 2 of WSER: City-Side Downstream Improvements Related to MRWTP Expansion

The City's water supplies include groundwater and treated surface water from MID's MRWTP, which is transported to the City's distribution system through MID transmission mains. The Proposed Program provides for the design, construction, and rights-of-way acquisition for a City-side downstream improvement[2] necessary to accommodate the increased MRWTP expanded capacity (60 mgd) and further integrate the MID transmission mains with the City's distribution system. This improvement project would assist in correcting low pressures currently observed during peak hour conditions, distribute the additional treated surface water, and benefit existing and future customers. Two other improvement projects in this WSER category were completed or are currently under construction, and are not analyzed in this Program EIR. This improvement project is described in **Table 2-3**.

[2] City-side downstream improvements refer to City-operated water system facilities that are downstream of MID's surface water supply infrastructure that transports treated surface water from the MRWTP to the City.

Table 2-3. Summary of Proposed City-Side Downstream Improvements (Category 2)

Project Name	General Location	Description	Key Objective
Yosemite Transmission Mains	Lapham Drive to 7th and B Street	Construct 14,000 linear feet (lf) of 16-inch-diameter pipeline from the intersection of 7th/B Streets; in S. Morton, Yosemite Blvd, S. Santa Rosa, Mono Drive, Empire Avenue and Lapham Drive to the intersection of Lapham and Spenker.	Correct low peak hour pressures and distribute additional treated surface water

Category 3 of WSER: Improvements for South Modesto and North Ceres and Category 9 of WSER: Strengthen and Replace Water System

Under Category 3 of the WSER, the City would implement improvements to increase delivery reliability to customers in South Modesto and North Ceres. Types of improvements proposed in this area include new transmission pipelines that would strengthen the interconnectivity with North Modesto and more effectively distribute the water. These improvements would benefit both existing and future water consumers because the South Modesto service area is not completely built out.

Category 9 of the WSER replaces and upgrades deficient water mains throughout the water system service area that have reached the end of their useful life, are undersized, aged, and/or steel pipe. Typically, strengthen-and-replacement projects upgrade/replace pipes, valves, fire hydrants, blow-offs, meters, and other appurtenances as needed. Where possible, pipes are abandoned in place to minimize disruption to existing services, although removal and replacement in the same trench is sometimes necessary.

Similar to the water main extensions described for Category 8 of the WSER, replacement pipelines would be sized per the City's adopted standards, but the sizing would need to be verified by project-specific engineering as a part of final design, and possibly adjusted from that identified in the WMP. Pipelines would generally be constructed within the public right-of-way, following the alignment of existing or future planned streets and easements, wherever feasible.

Other pipeline improvements would include grid improvements to improve the hydraulic transmission of the water system, and fire-flow-related improvements. The fire-flow-related improvements are prioritized by the water system's existing flows compared to the required minimum fire flows of 1,500 gpm. Lower-Priority Fire Flow Improvements are in areas with available fire flow of less than two-thirds of the required fire flow. High-Priority Fire Flow Improvements are located in areas that have even less available flows to meet the fire flow requirements and, thus, are more urgently needed than the Lower-Priority Fire Flow Improvements.

Table 2-4 and **Table 2-5** provide a summary of proposed pipeline improvements under WSER Categories 3 and 9 for the City's existing system and the future and buildout system, respectively.

Table 2-4. Proposed Pipeline Improvements for City's Existing Contiguous and Outlying Service Water Systems (Categories 3 and 9 of WSER)

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
Contiguous Service Area			
Fire flow improvements for existing contiguous systems			
High-Priority Fire Flow	New 8-inch-diameter pipes	153,230 lf	Pipeline Improvement (Category 9 WSER) + Improve existing distribution system's water flow rates and pressures to ensure sufficient for emergency firefighting (Category 3 WSER)
High-Priority Fire Flow	New 12-inch-diameter pipes	8,360 lf	Pipeline Improvement
Lower-Priority Fire Flow	New 8-inch-diameter pipes	860 lf	Pipeline Improvement
Lower-Priority Fire Flow	New 12-inch-diameter pipes	72,100 lf	Pipeline Improvement
Grid Improvements for existing contiguous systems			
EXGRID-01	Construct new 12-inch-diameter pipelines along Briggsmore Avenue between Held Drive and Claus Road; Along Claus Road between Briggsmore Avenue and Scenic Drive	5,630 lf	Distribution/Transmission Improvement
EXGRID-02	Construct new 12-inch-diameter pipelines along Scenic Drive between Claus Rd and Lakewood Avenue	5,430 lf	Distribution/Transmission Improvement

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
EXGRID-03	Construct new 12-inch-diameter pipelines along Lincoln Oak Drive, between Kodiak Drive and Floyd Avenue; Along Roselle Avenue between Floyd Avenue and Briggsmore Avenue	5,540 lf	Distribution/Transmission Improvement
EXGRID-04	Construct new 12-inch-diameter pipelines along Lakewood Avenue between Orangeburg Avenue and Scenic Drive	4,330 lf	Distribution/Transmission Improvement
EXGRID-05	Construct new 12-inch-diameter pipelines along Scenic Drive between Lakewood Avenue and Oakdale Road	5,680 lf	Distribution/Transmission Improvement
EXGRID-06	Construct new 12-inch-diameter pipelines along Scenic Drive between Orangeburg Avenue and Burney Street	10,430 lf	Distribution/Transmission Improvement
EXGRID-07	Construct new 12-inch-diameter pipelines along Coffee Road between Rumble Road and Briggsmore Avenue	5,180 lf	Distribution/Transmission Improvement
EXGRID-08	Construct new 12-inch-diameter pipelines along Coffee Road between Briggsmore Avenue and Scenic Drive	6,870 lf	Distribution/Transmission Improvement
EXGRID-09	Construct new 12-inch-diameter pipelines along Oakdale Road between Claratina Avenue and Mable Avenue; Along Sylvan Avenue between Oakdale Road and Palmwood Drive; Along Sylvan Avenue between Coffee Road and McHenry Avenue	8,160 lf	Distribution/Transmission Improvement

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
EXGRID-10	Construct new 12-inch-diameter pipelines along Standiford Avenue between McHenry Avenue and Carver Road	8,200 lf	Distribution/Transmission Improvement
EXGRID-11	Construct new 12-inch-diameter pipelines along Carver Road between Standiford Avenue and Orangeburg Avenue	9,250 lf	Distribution/Transmission Improvement
EXGRID-12	Construct new 12-inch-diameter pipelines along Standiford Avenue between Prescott Road and Dale Road; Along Veneman Avenue between Bridle Path Lane and Conant Avenue; Along Tully Road and American Avenue South of Bangs Avenue	7,210 lf	Distribution/Transmission Improvement
EXGRID-13	Construct new 12-inch-diameter pipelines along Sisk Road between Rumble Road and Briggsmore Avenue; Along Orangeburg Avenue between Briggsmore Avenue and Martin Avenue	10,160 lf	Distribution/Transmission Improvement
EXGRID-14	Construct new 12-inch-diameter pipelines along Orangeburg Avenue between Carlton Avenue and Tully Road; Along Orangeburg between Carver Road and Martin Avenue, Along Martin Avenue between Orangeburg Avenue between Orangeburg Avenue and Clayton Avenue; Along Clayton Avenue (across Highway 99 assuming Jack and Bore) to Blue Gum Avenue	5,760 lf	Distribution/Transmission Improvement

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
EXGRID-15	Construct new 12-inch-diameter pipelines along Coldwell Avenue between Virginia Avenue and 9th Street; Along College Avenue between Yale Avenue and Stoddard Avenue; Along Tully Road between Yale Avenue and Stoddard Avenue; Along Kearney Avenue between Cecil Way and Coldwell Avenue; Along Woodland Avenue between 9th Street and Emerald Avenue	12,500 lf	Distribution/Transmission Improvement
EXGRID-16	Construct new 12- and 16-inch-diameter (respectively) pipelines along Emerald Avenue/Woodland Avenue between Highway 99 and Carpenter Road; Along Carpenter Road	5,620 lf (12-inch)	Distribution/Transmission Improvement
		2,310 lf (16-inch)	Distribution/Transmission Improvement
EXGRID-17	Construct new 12-inch-diameter pipelines along Lapham Drive between Spenker Avenue and Empire Avenue; Along Empire Avenue between Lapham Drive and Mono Drive; Along Mono Drive between Empire Avenue and South Santa Rosa Avenue; Along South Santa Rosa between Yosemite Boulevard and Mono Drive, and along Yosemite Boulevard (assuming Jack and Bore) below existing bridge to Connect to Pipelines along Morton Boulevard.	8,170 lf	Distribution/Transmission Improvement (Category 3 and Category 9)

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
EXGRID-18	Construct new 12-inch-diameter pipelines along 5th Street between G Street and H Street; Along H Street between 5th Street and South Washington Street; Along Paradise Avenue between South Washington Street and Sutter Avenue; Along Chicago Avenue between Allen Avenue and Florette Avenue	4,900 lf	Distribution/Transmission Improvement
EXGRID-19	Construct new 12-inch-diameter pipelines along Sutter Avenue between Pelton Avenue and Robertson Road; Along Robertson Road between Sutter Avenue and Vernon Avenue	5,850 lf	Distribution/Transmission Improvement
EXGRID-20	Construct New 16-inch-diameter pipeline along the Virgina Corridor between Bangs Avenue to Ladd Road to Connect the City's Contiguous Service Area and the Del Rio Outlying Area for supply reliability	10,650 lf	Supply Reliability
		Total	**97,920 lf / 18.5 miles**
Del Rio Service Area			
Pipeline improvements for existing Del Rio systems			
—	Install 8-inch pipeline along Carver Road between Riveroaks Drive and Thunderbird Drive	230 lf	Fire Flow
Grayson Service Area			
Pipeline improvements for existing Grayson systems			
—	Replace 6-inch-diameter pipelines along Minnie Street from Tank 9 to Laird Road to 8-inch	810 lf	Fire Flow
—	Replace 4-inch-diameter pipelines along Laird Road from Minnie Street to Amelia Street to 8-inch	700 lf	Fire Flow

Pipeline Type/Name	Description	Total Pipeline Length (linear feet)	Objective
—	Replace 4-inch-diameter pipelines along Stakes and Charles Street from Minnie to Mary Street to 8-inch	1,640 lf	Fire Flow
—	Replace 6-inch-diameter pipelines along River Road from Mary Street to Amelia Street to 8-inch	750 lf	Fire Flow
—	Replace 6-inch-diameter pipeline along Mary Street from Laird to River Road to 8-inch	710 lf	Fire Flow
Turlock Service Area			
Pipeline improvements for existing Turlock systems			
—	Replace North Service Area Island 4-inch diameter pipelines to 8-inch	2,300 lf	Fire Flow
—	Replace Central Service Area Island 4-inch diameter pipelines to 8-inch	2,400 lf	Fire Flow
—	Replace South Service Area Island 4-inch diameter pipelines to 8-inch	5,700 lf	Fire Flow

Table 2-5. Proposed Improvements for City's Future and Buildout Contiguous and Outlying Service Water Systems (Categories 3 and 9 of WSER)

Pipeline Type/Name	Description	Total Pipeline Length (linear feet/miles)	Objective
Contiguous Service Area			
Fire flow improvements for future contiguous systems			
—	New 8-inch-diameter pipes	2,360 lf	Ensure future distribution system's water flow rates and pressures are sufficient for emergency firefighting
—	New 12-inch-diameter pipes	34,700 lf	Ensure future distribution system's water flow rates and pressures are sufficient for emergency firefighting (Category 3 and 9 of WSER)
Strengthen and replace improvements for future contiguous systems			
—	Upsize existing small-diameter pipelines to 8-inches in diameter	1,379,580 lf	Strengthen and replace to accommodate future development (Category 3 and 9 of WSER)
Grid Improvements for future contiguous systems			
FTGRID-01	Construct new 16-inch-diameter pipelines along Oakdale Road between Merle Avenue (downstream of Turnout 6) and Lapham Drive	12,080 lf	Distribution/Transmission Improvement
FTGRID-02	Construct new 16-inch-diameter pipelines along Yosemite Boulevard between North Morton Boulevard and D Street; Along D Street between Yosemite Boulevard and 10th Street	3,100 lf	Distribution/Transmission Improvement

Pipeline Type/Name	Description	Total Pipeline Length (linear feet/miles)	Objective
FTGRID-03	Construct new 16-inch-diameter crossing across Highway 99 (assuming Jack and Bore) at the intersection to Conant Avenue and Sisk Road to Brink Avenue	2,460 lf	Distribution/Transmission Improvement
FTGRID-04	Construct new 16-inch-diameter pipelines along South Santa Cruz Avenue between Mono Drive and Monterey Avenue; along South Santa Cruz Avenue from Monterey Avenue; across the Tuolumne River (assuming Deep Horizontal Directional Drilling [HDD]) to River Road; along Herndon Road between River Road and Joyce Avenue; Across Highway 99 (Assuming Deep HDD) to East Hatch Road and Morgan Road; along Morgan Road between East Hatch Road and East Whitmore Avenue	16,090 lf	Distribution/Transmission Improvement (Category 3 of WSER)
Del Rio Service Area			
Pipeline improvements for future Del Rio Systems			
—	Install 10-inch future development pipelines	12,000 lf	Grid
Grayson Service Area			
Pipeline improvements for future Grayson Systems			
N/A	N/A		
Turlock Service Area			
Pipeline improvements for future Turlock Systems			
N/A	N/A		

Category 3 of WSER: Improvements for South Modesto and North Ceres and Category 18 of WSER: New Water Storage Tank Improvements

New or replacement storage tanks are proposed within the contiguous outlying service areas to meet the existing and/or future service areas fire-flow requirements, peak demands, and generally improve service reliability. Any proposed storage tanks would have an associated booster pump station with a backup power supply and pipelines connecting to the existing water system. The tanks would be either aboveground steel or concrete tanks, or partially buried concrete tanks. Exterior coating of new pump stations and tanks would appear similar to existing structures seen throughout Modesto, and earth tones with non-reflective finishes would be used to coat aboveground components.

Aboveground tanks could be as high as 35 feet and have a diameter up to 250 feet. Partially buried tanks would typically have an exposed height of between 10 and 15 feet and a diameter up to 250 feet. Based on similar water tanks in the study area, it is assumed that each 4- to 6-million-gallon tank would require approximately 3 acres. Based on other pump station buildings seen throughout the Modesto region, associated pump station buildings may be approximately 20 feet tall and encompass an area of 2,000 to 2,500 square feet.

Based on the water system analysis, the tanks would have a storage capacity ranging from 0.2 to 5 million gallons. Each tank would be matched with an appropriately sized booster pump station of 7- to 9-mgd capacity and a diesel generator as a backup power supply.

Proposed new storage tank improvements to address existing and future water system needs are summarized in **Table 2-6**.

Table 2-6. Summary of Proposed Storage Tanks for Existing and Future Water System (Categories 3 and 18 of WSER)

Project Name	Description	Key Objective
Existing System Improvements		
Grayson	Repair or replace Tank 9 (0.2 MG capacity) and add two new pumps (50-horsepower [HP] each)	Address existing storage deficiency
Future and Buildout System Improvements		
South Modesto Storage Tanks for Future Service Area	Construct new 2.6 MG storage tank in South Modesto and construct new booster pump station of 7.8 mgd capacity.	Address future storage deficiency
North Modesto Storage Tanks for Future Service Area	Construct three new storage tanks in North Modesto, including at the Terminal Reservoir (total 10.9 MG storage capacity) Construct two new booster pump stations of 8.7 mgd capacity each at two tanks, excluding Terminal Reservoir tank	Address future storage deficiency and maximize the existing pumping capacity of Terminal Reservoir Booster Pump Station

Project Name	Description	Key Objective
Buildout System Improvements for Del Rio	Expansion of booster pump station constructed with new 0.23 MG storage tank to provide an additional 1.0 mgd for a total Del Rio booster pump station capacity of 2.0 mgd	Address future supply deficiencies

Category 4 of WSER: Water Quality Related Studies

This category includes a variety of system-wide water-quality-related studies and activities needed to identify cost-effective methods to manage groundwater resources for meeting the City's water supply needs. Studies may include research, analysis of existing data, modeling, and field investigations (including but not limited to dynamic flow profiling, geophysical investigations, borings, construction of monitoring wells, groundwater monitoring).

Category 5 of WSER: SCADA System Upgrades

This category includes SCADA system upgrades to improve the City's operation and management of the water system. The City would prepare a SCADA Master Plan that would guide the system upgrades in the near and long term. Upgrades may include hardware at remote sites, hardware at centralized location(s), programming, and reporting.

Category 7 of WSER: Existing Tank Improvements

Improvements to existing tanks (and their sites) may include but are not limited to repainting the outside, recoating the inside, structural repairs, general repairs (such as replacement of interior ladders or vent screens), inlet/outlet modifications, emergency overflow modifications, electrical and/or monitoring equipment (i.e., SCADA) upgrades, replacement of hardware and gaskets.

Category 8 of WSER: Extend Water Mains

This program extends water mains, on an as-needed basis, into developing areas throughout the contiguous and outlying service areas to meet the demands of growth. Typically, this includes the installation of 12-inch-diameter and larger pipes, fire hydrants, and valves on a half-mile grid. Projects to complete distribution pipeline looping are included to improve service reliability to new water service areas. Large-diameter transmission mains may require cathodic protection systems to prevent or control corrosion within the system.

New pipelines would be sized to allow the system to meet the City's adopted standards (City of Modesto 2014) for Maximum Day plus fire flow demand and Peak Hour demand. The sizing of the pipelines would need to be verified by project-specific engineering as a part of final design, and possibly adjusted from that identified in the Engineer's Report. The City would extend water mains to future development areas as summarized in **Table 2-7**.

Pipelines would generally be constructed within the public right-of-way, following the alignment of existing or future planned streets and easements, wherever feasible. Prior to constructing

buildout pipelines on agricultural or undeveloped lands, the City typically requires developers to provide right-of-way dedications for utility improvements.

Table 2-7. Proposed Water Main Extensions (Category 8 of WSER)

Project Name	Description	Total Pipeline Length (linear feet)	Key Objective
Contiguous Service Area	Construct new 12-inch-diameter pipelines	344,450	Extend Water Mains
Contiguous Service Area	Construct new 16-inch-diameter pipelines	18,520	Extend Water Mains

Category 10 of WSER: Install New Wells and Category 11 of WSER: Wellhead Treatment

New wells are proposed within the contiguous and outlying service areas in order to meet existing and future demands along with improving service reliability. In addition to the new wells that are proposed, the Program would entail improvements to several existing wells, including installation of generators for backup power.

Typically, the wells would have a pumping capacity between 750 and 2,000 gpm. All new wells would have a diesel generator as a backup power supply, chlorination equipment, monitoring equipment, SCADA, security features. Depending on the site location, new wells may be constructed within a block wall enclosure or within a pump house. Well sites would be designed to allow for future treatment and future monitoring equipment. Based on similar wells in the study area, it is assumed that new wells would typically occupy a 10,000-square-foot area.

Replacement wells are proposed within the contiguous and outlying service areas. Wells that have been offline for some time may be destroyed then replaced on the existing well site, on an adjacent site, or in the service area. Existing improvements are typically upgraded with the construction of the replacement well. Improvement upgrades may include, but are not limited to, monitoring equipment, SCADA equipment, security features, electrical system, flush lines, and emergency generators.

Wellhead treatment may be required for wells throughout the water service area that are offline due to levels of contaminants that exceed California Drinking Water MCLs. The program includes evaluating various wellhead treatment technologies and well treatment alternatives. Wellhead treatment would be selected based on the contaminants of concern present. Improvements to the well site may include, but are not limited to, concrete slabs, enclosures, or block buildings to house treatment systems, monitoring equipment, SCADA equipment upgrades, electrical system upgrades, security features, flush lines, and emergency generators. Treatment and non-treatment alternatives would be considered for each well and may include, but are not limited to, one or a combination of the following technologies: coagulation/filtration, oxidation, coagulation assisted microfiltration, lime softening, sorption processes, ion exchange, microfiltration, ultrafiltration, reverse osmosis, electrodialysis reversal, and blending. Waste streams generated by various

technologies may include but are not limited to backwash water, dewatered sludge, backwash water, spent media, liquid brine, and concentrated streams. Waste disposal would depend on the constituents present in the waste and may include discharge to publicly owned treatment works, off-haul for disposal, landfill, or approved California hazardous landfill. Treatment systems may generate materials containing toxins, hazardous materials, heavy metals, and/or radio nucleotides. Testing and pre-treatment may be required prior to hauling and/or disposal.

Within the contiguous service area, the City would construct up to 13 new wells to support the future system development. These wells would be equipped with backup generators to ensure that a "firm" or reliable water supply could be delivered in the event of a power outage and, thus, result in an additional 11,700 gpm (16.8 mgd) firm groundwater supply capacity. Conceptual proposed well locations for eight wells that would have firm groundwater supply capacity are shown in Figure 2-2. The locations of the additional five wells would be determined through analysis of available land that overlies good groundwater production capability and good quality water. Outlying service areas would also require replacement or new wells to meet existing and future service system needs, as shown in **Table 2-8**. For the Turlock service area, as a method to minimize potential wellhead treatment needs, the Proposed Program may include a total of three full-size (8-inch-diameter) emergency interties. These proposed interties are summarized in Table 2-8**.**

Table 2-8 provides a summary of proposed well improvements in the contiguous and outlying service areas to meet existing and future service system area demands.

Table 2-8. Summary of Proposed Groundwater Well Improvements for Existing and Future Water System (Categories 10 and 11 of WSER)

Project Name	Description	Key Objective
Existing System Improvements		
All Service Areas	Replacement wells as needed to address water quality, well construction related issues, or regulatory requirements. Replacement wells may be constructed at existing wells sites, adjacent to existing wells sites, or at other locations throughout the various service areas.	Supply
All Service Areas	Well head treatment as needed to address water quality or regulatory requirements. Well head treatment may be constructed at existing well sites, adjacent to existing well sites, or at other locations throughout the various service areas.	Supply

Project Name	Description	Key Objective
Grayson	New well with 400 gpm capacity, backup generator, and SCADA. It is unknown if treatment will be needed for the new well. This could include potential upgrades to existing ion exchange system at Well 295 site, or new treatment system at the well 274 site, based on treatment requirements.	Supply
Turlock	Rehabilitate or replace Well 255	Supply
Turlock	Three total emergency interconnections to City of Turlock water system for the North, Central, and South Service Area Islands	Supply
Future and Buildout System Improvements		
Contiguous Service Area	Thirteen (13) new wells, resulting in an additional 11,700 gpm (16.8 mgd) firm groundwater supply capacity	Supply

Category 12 of WSER: New Generators

Emergency generators provide backup power to various booster pump stations for tank and well sites throughout the water system. There is an existing storage capacity deficiency in the City's water supply system that could be offset by installing emergency backup power generators at 18 wells within the City's contiguous water system. By installing these backup power generators and because the City's water supply includes groundwater wells, the groundwater basin can account for a portion of the City's water storage capacity requirement (Emergency Groundwater Storage Credit). Emergency generator sizing is dependent on the application, but can be 20 feet long by 9 feet wide by up to 15 feet high with fuel storage. Emergency generators would be operated monthly for brief testing and maintenance purposes and used as necessary during power outages or similar emergency situations. **Table 2-9** provides the specific proposed emergency generator improvements for the contiguous and outlying service areas.

Table 2-9. Proposed Backup Generator Improvements for the Contiguous and Outlying Service Areas (Category 12 of WSER)

Project Name	Description	Objective
Contiguous Service Area		
Existing System Improvement	Backup generators on Wells 1, 4, 7, 16, 45, 47, 48, 50, 51, 58, 217, 237, 241, 267, 278, 284, 287, and 312	Backup Power

Grayson		
Existing System Improvement	Replacement generator for Well 274 and a backup generator at the existing booster pump station	Supply
Turlock		
Existing System Improvement	Backup generators for Wells 255, 256, and 275	Supply

Category 13 of WSER: Water System Security Enhancements

This ongoing program provides fencing, security signage, lighting, and other security measures to be implemented at well and tank sites throughout the water system. New lighting at these facilities would be consistent with outdoor lighting currently used at similar facilities found throughout the Modesto area.

Category 14 of WSER: Groundwater Management

This program develops projects identified through the Integrated Regional Groundwater Management Plan (IRGMP) in the Modesto Groundwater Sub-basin and the Groundwater Management Plan (GWMP) in the Turlock Groundwater Sub-basin. The City of Modesto has partnered with other agencies to develop Groundwater Sustainability Agencies in each Sub-basin in accordance with Sustainable Groundwater Management Act (Water Code section 10720 et seq.*)*. Projects include but are not limited to groundwater quality monitoring, groundwater replenishment studies, and continued participation in regional groundwater-related activities.

Category 15 of WSER: Urban Water Management Plan

An Urban Water Management Plan (UWMP) (City of Modesto 2016) was developed and would be updated every 5 years in compliance with the Urban Water Management Planning Act of 1983. The Act was amended by passage of the Water Conservation Act of 2009, which requires local agencies to establish water use targets that would result in a 20 percent savings by 2020. Using information generated by the WMP, the UWMP outlines measures to ensure the reliability of the water supply, and includes conservation programs such as residential plumbing retrofits, recycled water implementations, and water system audits.

Category 16 of WSER: Water Master Plan

The ongoing program would provide recurring updates to the WMP and the completion of the associated CEQA compliance. The WMP evaluates the hydraulic and operational performance of the City's water system and addresses, among other items, future sources of supply, water quality issues, water demands, conjunctive use strategies, water system modeling updates, and capital improvements for both existing and future customers. Data collection and analysis is required as part of the preparation effort, and may include field data collection, fire flow testing, system monitoring, and other information needed for calibration of the hydraulic model.

Category 17 of WSER: Water System Evaluation

This ongoing program provides "as-needed" engineering studies and water system evaluations throughout the water service area. Studies and evaluations are typically related to demand expectations, supply capabilities, potential loss of key groundwater production wells, hydraulic modelling support, and other water-system-related activities. Data collection and analysis may include field data collection, fire flow testing, system monitoring, and other information needed for hydraulic model update(s).

Category 19 of WSER: Water Meters

The City is in the process of installing water meters on services throughout the water service areas, as well as upgrading existing obsolete meters. This multi-year endeavor is mandated by state law and must be completed by 2025.

Category 21 of WSER: New or Replacement Pumps

On an as-needed basis, deficient water pumps at wells and booster pump stations are replaced, typically due to age, being beyond their useful life, and/or too costly to repair.

Category 22 of WSER: Utility Cuts Program

Pavement repairs related to utility construction activities, such as the installation of water lines, valve replacement, water connections, and leak repairs, are required on an as-needed basis.

2.6 Proposed Aquifer Storage and Recovery Program

The proposed ASR Program would identify areas within the Modesto Groundwater Subbasin where groundwater augmentation may occur both to aid in maintaining basin groundwater levels and to provide for storage of seasonally-available surplus treated surface water[3] (obtained via existing infrastructure from the MRWTP as supplied under agreements with MID) in the subsurface for future use. The ASR Program has been conceptually evaluated and appears to be a viable water supply management tool for the City but additional studies, tests, and planning are required to develop and implement this program (West Yost 2017a). As part of the Proposed Program, additional groundwater modeling, pilot tests, and/or plans would be developed to identify and implement potential studies, projects, and/or programs to further develop the ASR Program. The proposed ASR Program is a key step in understanding basin hydrodynamics for development of a long-term groundwater banking, conjunctive use, and basin management program.

The City's proposed ASR Program would pump MRWTP-treated surface water that meets drinking water standards to one or more injection wells via the City's existing drinking water distribution system. During periods of injection, both water users and the injection well system would receive water from the MRWTP. Water would later be extracted from the aquifer as needed and conveyed to water users in the same distribution system. This type of ASR Program poses a low threat to the beneficial uses of the aquifer, because the water that would be stored in the aquifer

[3] Seasonally-available surplus treated surface water would typically be available during the winter and spring months in normal and wet years (West Yost 2017a).

would be treated to meet all drinking water standards. Other advantages of the ASR program and using direct injection wells to transport surface water into the aquifer, as compared to a spreading basin, includes preventing the loss of water through evaporation and the smaller land area needs for the program.

To support implementation of this program, the City would evaluate existing wells for suitability as ASR injection wells, identify regulatory requirements, review source water quality and seasonal variability, develop hydrogeological characteristics such as transmissivity, and evaluate movement and perimeter interactions of injected water in the subsurface. As part of this evaluation, a pilot demonstration test program may be performed to empirically verify the conclusions of past ASR evaluations and develop site-specific data regarding the effectiveness, impacts, and economics of an ASR program. Additional objectives of further ASR Program evaluations, including a potential pilot demonstration test, would be to verify that recovered water meets all drinking water standards and other water quality perceptions (i.e. taste, odor, visual clarity), verify that injected water remains geochemically stable during storage and recovery, and verify the beneficial impacts to basin water levels from the ASR operations (West Yost 2017a).

2.7 Construction

2.7.1 Phasing of Construction

Because of the magnitude of the capital improvement costs associated with implementation of the WMP, improvements would be implemented in phases as funding sources become available. It is estimated that buildout of the water system improvements would occur through 2050.

The precise order of project phasing would depend on the sequencing of specific parcel development and the general patterns of the City's future growth. Other than the development applications currently being processed by the City, the majority of the CIPs identified in the WMP cannot be prioritized with certainty at this time. Even projects identified as existing system projects that would be anticipated to be more near-term than future system projects do not have a defined timeline and would be analyzed in the future at a project level following further design of these improvements.

In general, construction activities for the Proposed Program would generally occur Monday through Friday between 7:00 a.m. and 5:00 p.m., excluding City-observed holidays. Because there may be weather constraints, some construction activities may need occur on weekends or holidays, or in the event of emergency, outside normal working hours.

2.7.2 Construction Methods

Construction of proposed improvements to the City's water service system would involve several types of activities: site preparation; demolition and removal of some existing facilities; earthwork (grading and excavation); pipeline and well installation; and facility construction. These activities are described below. As indicated in Section 2.7.1, "Phasing of Construction," construction would occur throughout the Program planning period and within the construction period for each improvement; there would be periods of more intensive activity and associated peaks in

construction traffic, typically during ground-disturbing activities, followed by longer periods of reduced activity.

All water system facilities proposed under the WMP and corresponding post-construction site improvements would be designed and constructed in compliance with the City's Standard Specifications (City of Modesto 2014), which details requirements related to a variety of topics, including but not limited to permits for construction, storm drainage, water system, utilities and trenching, grading, driveways, demolition plans, and traffic striping and signs.

Site Preparation

Site preparation would include clearing and grubbing at each CIP site. Clearing and grubbing would be conducted using standard excavators, bulldozers, and hand labor. Depending on the CIP, other site preparation work may involve demolition of existing facilities/structures, excavation, import, and placement of fill, and compaction. Demolition work would be required to remove improvements and structures from property acquired by the City for various well and/or tank improvements.

To the extent feasible, excavated soil would be reused on site. If required, fill would be delivered to project sites by conventional haul trucks with a capacity of up to 20 cubic yards [cy] per load. Fill material would be placed with an excavator and compacted with a compactor/roller.

Water Storage Tanks

Water storage using at-grade and/or tanks and their associated booster pump stations would involve (but would not be limited to) construction of the following:

- Concrete pads and foundations for the tank, booster pump station, and generator for backup power would consist of concrete or asphalt paving.
- Masonry block building to house booster pumps, process piping, and electrical equipment.
- Above- and below-ground process piping.
- Electrical and control systems housed in secure enclosures.
- Standby generator for a backup power supply during any power outage.
- The entire pump station and tank site would be fenced, gated, and locked.
- The pump station building would be designed to architecturally blend in with other existing buildings in the area. The pump station's building design would include selecting materials and paint colors that are compatible with the existing colors of the surrounding area. The transition of base and accent colors used will relate to changes in the building material or texture, or the change of building surface planes.

- Storm drainage facilities would be installed to allow all-weather maintenance and vehicle access to the site. Proposed storm drainage systems include an on-site retention basin to capture any overflow from the storage tank or booster pumps.
- All lighting would be internally directed to reduce light or glare.
- Based on other pump station buildings seen throughout the Modesto region, associated pump station buildings may be approximately 20 feet tall and encompass an area of 2,000 to 2,500 square feet.
- Standby diesel generators would be installed in inside the booster pump station or in an acoustically designed and insulated structure outside the booster pump station.
- Chain-link fencing would be installed around the perimeter of the site for security purposes.

Figure 2-3 depicts a typical storage tank with booster pump stations. The depth of excavation for construction of tanks, booster pumps, and appurtenances can reach 20 feet. Construction of new water storage tanks typically extend from several months to 1.5 years. Booster pump stations are typically incorporated into the design and construction of tanks and/or wells.

Groundwater Wells

Construction of new wells would involve (but is not limited to) construction of the following.

- Drilling of the well.
- Pumping of the well during initial capacity and production testing.
- Concrete pads and foundations for the well's motor and pump and standby generator.
- Masonry block building to house the well (if required), related equipment, process piping, and electrical equipment.
- Subsurface or inline sand removal equipment.
- Above- and below-ground process piping and valving.
- Electrical and control systems housed in secure enclosures.
- SCADA equipment may include antenna.
- Standby emergency generator for a backup power supply during any power outage.
- The entire pump station and tank site would be fenced (or perimeter masonry block enclosure), gated, and locked. The well house building (if required) would be designed to architecturally blend in with other existing buildings in the area.
- Flush line installed for well discharges to wastewater collection system.

- Storm drainage facilities would be installed to allow all-weather maintenance and vehicle access to the site.
- All lighting would be internally directed to reduce light or glare.
- Standby diesel generators would be installed in acoustically designed and insulated structures.
- Chain-link fencing would be installed around the perimeter of the site for security purposes.

Figure 2-3 shows the typical components that would be constructed at a new groundwater well site. Typical construction durations for installation of new and replacement wells would range from approximately 1 to 1.5 years. Security upgrades and emergency generator installations would typically have a duration of 3 to 6 months.

a) Water storage tank and booster pump stations.

b) Water storage tank in the distance.

c) Groundwater well station within a public park. Building houses monitoring equipment.

d) Groundwater well station near a public school as seen from a road.

Horizon WATER and ENVIRONMENT

Figure 2-3
Typical City Water Storage Tanks and Groundwater Wells

Pipelines

For new pipelines that would be installed beneath existing streets, the general process for pipeline installation involves digging a trench, installing the pipe, and backfilling the trench (referred to as "cut and cover"). In existing streets, the cut-and-cover method involves removing the asphalt, roadway base, and underlying soil; materials would generally be replaced at the completion of the program, but some excess materials may be disposed off-site. The depth and width of the trenches would vary depending upon the size of the pipe, City and County standards, and consideration of other existing utility lines. In general, the depth of excavation for open trench construction for pipelines typically ranges from 5 feet to 11 feet deep or more. Construction crews may close one lane of traffic temporarily during pipe installation. In general, the maximum length of an open trench would be the distance necessary to accommodate the amount of pipe that can be laid in one day, typically 200 to 400 feet. For new water transmission mains or distribution pipelines, typically 200 to 400 feet can be laid with one crew working. A typical crew size includes five workers. In the event multiple crews are working on a particular pipeline project, more than 400 feet of new pipeline can be installed. If a pipeline is required to be installed over an existing line, typically the cut-and-cover method would be used and the existing pipe would be cut, capped or hot tapped (using a valve), and removed; the replacement pipe would then be installed as described above and the surface improvements restored.

To the extent feasible, pipeline construction activities would occur within the limits of the City or County right-of-way boundaries, City utility easement, and/or construction easement. The width of the construction area varies both on the extent of applicable easements and pipeline diameter. For the purposes of this analysis, the approximate width of the construction areas would be 20 feet. Depending on the project location, construction crews may close one lane of traffic temporarily during pipe installation.

Pipelines may also be installed by the jack-and-bore method, typically when the open trench method is not practical and/or possible. For example, when transmission mains or water distribution pipelines are required to cross a railroad, Caltrans right-of-way, an irrigation canal, local water bodies (i.e., Dry Creek or the Tuolumne River) or needs to be buried very deep beneath the ground surface. This method of construction would also be used to avoid sensitive habitats (wetland and riparian habitats) and special-status plants, particularly for construction of Program components that cross the Tuolumne River and Dry Creek, such as FTGRID-01 and FTGRID-04.

The jack-and-bore method requires the construction of insertion pits, pipe jacking (pipes pushed behind the small tunneling machine), and application of a lubricant to maintain pressure and prevent the shafts and the tunnel from collapsing. Launch and receiving pits for trenchless construction typically would be up to 15 feet deep. The tunneling machine is controlled by a computer and is typically accurate. The construction crews first establish the launch pit and a receiving pit on either side of the waterway or utility crossing. Temporary dewatering may be needed at the pits. Horizontal directional drilling (HDD) may also be used when the open trench method is not practical and/or possible. HDD is a steerable trenchless method of installing underground pipe in a shallow arc along a prescribed bore path by using a surface-launched drill rig, with minimal impact to the surrounding area.

Pipelines constructed across major waterways such as the Tuolumne River could be attached to an existing vehicle or pedestrian bridge. The water piping would typically be installed inside a steel

casing and may be contained within the bridge deck, with no visible changes to the outward appearance of the bridge.

Staging Areas

Staging areas would be needed to store pipe, construction equipment, and other construction-related material. The precise locations of staging areas are not known at this time and would be determined just prior to construction. Staging areas would likely be established along the pipeline routes where space is available, such as vacant lots, parcels, or parking lots. In some cases, staging areas may be used for longer duration for CIPs that require construction in one location (e.g., new tank or groundwater well). In other cases, such as when pipeline construction moves along the route, the staging area would also shift to minimize hauling distances and avoid disrupting any one area for extended periods. Staging areas would not be located in environmentally sensitive areas and would be subject to investigation during the project planning phase. The City would reserve the authority to approve the locations of the staging areas as part of the contracts for construction of their respective facilities.

Testing, Disinfection, and Flushing

Prior to use of newly constructed water system improvements, water system facilities, such as pipelines, must be tested, disinfected, and flushed in accordance with the requirements detailed in Section 6, Water System Design, of the City's most current Standard Specifications. Tanks and wells would also be flushed following construction and prior to use in the water system. Specific activities associated with hydrostatic pressure testing would include but not be limited to slowly filling new pipeline sections with water from the existing system, expelling air from the pipeline, equalizing the pipeline pressure to existing system pressure for at least 24 hours, ensuring the hydrostatic pressure meets all defined requirements, determining leakage, and carefully examining new exposed system components during testing. Disinfection would occur after hydrostatic pressure tests were completed. One of the prescribed disinfection methods in the City's standard specifications, which comply with American Water Works Association (AWWA) standard methods, would be used to disinfect all new water mains and appurtenances. After completion of the disinfection process, the heavily chlorinated water would be dechlorinated to neutralize the chlorine and flushed from the new pipelines/water system facilities until the residual chlorine concentration meets the City's established requirements. The de-chlorinated water would be disposed of in the storm drainage system or sanitary sewer system.

2.7.3 Construction Equipment

In general, the main pieces of equipment that may be used during construction activities are:

- well drilling equipment
- rollers
- pavers
- bulldozer
- backhoe
- welders
- track-mounted excavator
- front-end loader
- ten-wheel dump truck
- compressors/jack hammers
- paving equipment
- water truck
- flat-bed delivery truck
- boom truck
- concrete truck
- cement and mortar mixers

- crane
- compactor
- end dump truck
- forklift
- grader
- mowing equipment (e.g., weed eaters, commercial lawnmowers)
- generator sets

The consumption of energy for equipment and vehicles would be minimized by reusing excavated soils on site and reducing vehicle and construction equipment idling for each project.

2.8 Operations and Maintenance

Operation of the Proposed Program would primarily involve the operation, inspection, and maintenance of the water system. The pump stations, storage tanks, and wells are manually and remotely controlled through an automated SCADA system.

The City would inspect the entire water system on an annual basis to determine whether maintenance is needed, though individual water system components may be inspected more frequently. Maintenance activities for storage tanks include the periodic cleaning of a tank's inside (with the use of a vacuum system) to maintain capacity and functioning and occasional recoating of the tank, as needed. Tank maintenance and repair activities would typically have an approximate duration of 3 to 6 months, depending on the extent of repairs or modifications required. Tank sites are inspected on a minimum weekly basis, and tank interiors are inspected a minimum of every 3 years. Maintenance activities associated with wells include various mechanical tests and meter calibration (with equipment specific to those activities) and general maintenance of treatment systems (e.g., treatment system flushing or regeneration). Wells are inspected on a minimum weekly basis. Water meters for commercial or larger water use customers are inspected annually. Residential water meters and system fire hydrants are inspected on an as-needed basis.

The City inspects the wells and pump stations and pipelines on a regular basis (numerous times during the wet months and less frequently the remainder of the year) to ensure optimal performance. In general, pump stations are inspected a minimum of once per week. Pressure points are inspected a minimum of two times a week, and water valves are inspected every 3 years. Maintenance of the pump stations and pipelines is performed on an as-needed basis.

2.9 Permits and Approvals

Table 2-10 provides a summary of potential permits that may be required for the Proposed Program's CIPs. Specific permits would vary for each CIP depending on a variety of factors, including but not limited to the specific site conditions at individual CIP locations and the proposed construction methods for an individual CIP. The state and local agencies identified below would be considered responsible agencies under CEQA.

In addition to the City, the EIR for the Proposed Program would be used by various regulatory agencies issuing permits, as well as other approvals and consultations for the Proposed Program. Specifically, information about the Proposed Program and the environmental analysis would be used by several agencies as part of their decision-making process regarding applicable regulations.

Agencies that may have regulatory authority over various aspects of the Proposed Program are also identified in Table 2-10.

Table 2-10. Potential Permit and Regulatory Requirements for CIPs under the Proposed Program

Regulatory Agency	Law/Regulation	Purpose	Permit/Authorization Type
U.S. Army Corps of Engineers (USACE)	Clean Water Act Section 404	Authorizes dredge or fill materials in waters of the United States	Section 404 permit
U.S. Fish and Wildlife Service (USFWS)	Endangered Species Act	Protects special-status wildlife species from "take" by Program activities	Section 7 or Section 10 consultation
National Marine Fisheries Service	Endangered Species Act	Protects special-status fish species from "take" by Program activities	Section 7 or Section 10 consultation
State Water Resources Control Board (SWRCB)	Clean Water Act, Porter-Cologne Water Quality Control Act	Regulate pollutant discharges into surface waters	Section 401 water quality certification, General Construction Permit under National Pollutant Discharge Elimination System
California Department of Fish and Wildlife	Fish and Game Code Section 1602	Applies to activities that will substantially modify a river, steam, or lake; includes reasonable conditions necessary to protect those resources	Streambed Alteration Agreement
California Department of Transportation (Caltrans)	Section 660 of the California Streets and Highways Code	Applies to pipeline construction activities that occur beneath Caltrans right-of-way	Encroachment permit

Regulatory Agency	Law/Regulation	Purpose	Permit/Authorization Type
California State Lands Commission	General Lease-Public Agency Use	Applies to pipeline construction activities across Tuolumne River	Approval of improvements under General Lease
Central Valley Regional Water Quality Control Board (RWQCB)	Clean Water Act, Porter-Cologne Water Quality Control Act	Regulate pollutant discharges into surface waters	Section 401 water quality certification, Basin Plan oversight, National Pollutant Discharge Elimination System permit
Central Valley Flood Protection Board	Water Code 8710, California Code of Regulations Title 23	Applies to pipelines crossing Dry Creek and the Tuolumne River	Encroachment permit
San Joaquin Valley Air Pollution Control District (SJVAPCD)	Rule 8021	Limit fugitive dust emissions from construction	Construction notification form
Modesto Irrigation District (MID)	N/A	Permission to conduct work involving or affecting MID facilities	Encroachment permits
Turlock Irrigation District (TID)	N/A	Permission to conduct work involving or affecting TID facilities	Encroachment permits
Stanislaus County	N/A	Compliance with County ordinances and policies	Temporary construction easement
City of Modesto	N/A	Required for construction on City-owned parcels	Temporary construction easement
City of Turlock	N/A	Compliance with City ordinances and policies	Temporary construction easement

Regulatory Agency	Law/Regulation	Purpose	Permit/Authorization Type
City of Ceres	N/A	Compliance with City ordinances and policies	Temporary construction easement

Chapter 3
INTRODUCTION TO THE ENVIRONMENTAL ANALYSIS

3.1 Overview

Chapters 4 through 17 of this DEIR describe the potentially affected environmental resources and potential environmental impacts (and proposed mitigation measures) of the Proposed Program. The regulatory setting discussion in each chapter identifies applicable federal, state, and local plans, policies, and regulations.[1] Each chapter also describes the existing environmental setting and background information on the resource topics to help the reader understand the environmental conditions that could be affected by the Proposed Program. In addition, each chapter includes a discussion of the criteria used in determining the significance levels of the Proposed Program's environmental impacts. Finally, for any identified significant impacts, where feasible, mitigation measures are proposed to reduce the adverse effects of significant impacts.

This chapter summarizes the EIR study area, describes the DEIR's consideration of baseline conditions, describes terminology used throughout this DEIR, defines who is responsible for implementing proposed mitigation measures, and describes resource sections that have been eliminated from further consideration in the DEIR.

3.2 EIR Study Area

The study area for this DEIR encompasses the service area for the WMP that would be addressed by the various CIPs, including both the contiguous service area and outlying areas. The City's contiguous service area includes the current SOI, Salida, North Ceres, and some unincorporated areas within and adjacent to the SOI including Empire. The outlying service areas consist of Del Rio, Ceres (Walnut Manor), Grayson, and portions of Turlock.

3.3 Characterization of Baseline Conditions

Under CEQA, the environmental setting, or "baseline," serves as a gauge to assess changes to existing physical conditions that would occur as a result of a Proposed Program. In accordance with State CEQA Guidelines (14 CCR Section 15125), for purposes of this DEIR, the environmental setting is generally the existing physical conditions in and around the Proposed Program area as those conditions exist at the time the NOP was published (2016).

3.3.1 Planning Context

At the time this DEIR was prepared, the City was in the process of developing a General Plan Amendment and updating the General Plan Master EIR. Because those documents were not published at the time this DEIR was prepared, this document continues to rely on relevant policies

[1] CEQA Guidelines Section 15125 requires an EIR to discuss any inconsistencies between the proposed project and applicable general plans, specific plans, and regional plans. This discussion is included in Chapter 13, Land Use.

from the *City of Modesto Urban Area General Plan* (2008a), as well as the *Stanislaus County General Plan* (2016), the *City of Ceres General Plan* (1997), and the *City of Turlock General Plan* (2012a) for the outlying areas.

3.4 Significance of Environmental Impacts

According to CEQA, an EIR should define the threshold of significance and explain the criteria used to determine whether an impact is above or below that threshold. Significance criteria are identified for each environmental resource topic to determine whether implementation of the Program would result in a significant environmental impact when evaluated against the baseline conditions as described in the environmental setting. The significance criteria vary depending on the environmental resource topic. In general, effects can be either significant (above threshold) or less than significant (below threshold). In some cases, a significant impact will be identified as significant and unavoidable if no feasible mitigation measure(s) is/are available to reduce the impact to a less-than-significant level. If a program is subsequently adopted despite identified significant impacts that would result from the program, CEQA requires the lead agency to prepare and adopt a statement of overriding considerations describing the social, economic, and other reasons for moving forward with the program despite its significant impact(s). (See generally CEQA Guidelines sections 15092, 15093, 15126.2)

3.4.1 Terminology Used in Impact Analyses

This DEIR uses the following terminology to describe environmental effects of the Proposed Program:

- A finding of *no impact* is made when the analysis concludes that the Program would not affect the particular environmental resource or issue.
- An impact is considered *less than significant* if the analysis concludes that there would be no substantial adverse change in the environment and that no mitigation is needed.
- An impact is considered *significant* if the analysis concludes that there could be a substantial adverse effect on the environment.
- An impact is considered *less than significant with mitigation* if the analysis concludes that there would be no substantial adverse change in the environment with the inclusion of the mitigation measures described.
- An impact is considered *significant and unavoidable* if the analysis concludes that there could be a substantial adverse effect on the environment and no feasible mitigation measures are available to reduce the impact to a less than significant level.
- *Mitigation* refers to specific measures or activities adopted to avoid, minimize, rectify, reduce, eliminate, or compensate for an impact.
- A *cumulative impact* can result when a change in the environment results from the incremental impact of a project when added to other related past, present, or reasonably foreseeable future projects. Significant cumulative impacts may result from individually minor but collectively significant projects. The cumulative impacts analysis in this DEIR

focuses on whether the Proposed Program's incremental contribution to other significant cumulative impacts caused by past, present, or probable future projects is cumulatively considerable (i.e., significant).

- Because the term "significant" has a specific usage in evaluating impacts under CEQA, it is used only to describe the significance of impacts and is not used in other contexts within this document. Synonyms such as "substantial" have been used when not discussing the significance of an environmental impact.

3.4.2 Program-Level Analysis

As described in Chapter 2, *Program Description,* the DEIR impact analysis considers the Proposed Program components at a programmatic level of detail. All CIPs are evaluated at a program level of detail because, although the City would likely construct these projects in the future, the design of these improvements has not been advanced to a level at which a detailed evaluation can be completed, and specific locations for some improvements are yet to be determined. As such, a more general, programmatic analysis of these improvements is included in this DEIR. Tables 2-1 through 2-8 provide an overview of all projects considered throughout the DEIR.

This Program EIR can be used to streamline the task of preparing environmental documents on later parts of the program. This Program EIR may provide the basis, through preparation of an environmental checklist, for determining whether the later activity may have any significant effects that have not been evaluated as part of the Proposed Program. It can be incorporated by reference to address regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the Program as a whole. Also, it can focus the CEQA review of a subsequent project to permit discussion solely of new effects that have not been considered previously.

Impacts of the Proposed Program are considered based on the potential for various types of proposed improvements to have a significant impact on the physical environment, in the context of appropriate mitigation measures. For example, subsurface improvements, including but not limited to new and/or replacement water mains, would not result in a visible change to the surroundings and therefore are unlikely to have aesthetic impacts. Similarly, proposed improvements to the existing water system, such as strengthening and replacement projects, would not have growth-inducing impacts. Proposed Program improvements located outside of riparian zones would not have biological impacts related to riparian habitat. Agricultural resources would not be affected by Proposed Program improvements in developed areas.

Each resource chapter includes an impact summary table that clearly identifies the impact significance, both before and after mitigation. For some resource chapters, the impact analyses are discussed collectively and no subheading is shown.

3.5 Mitigation Measures

As lead agency, the City will be responsible for ensuring that mitigation measures identified in this DEIR and adopted by the City are fully implemented as part of the Proposed Program. Mitigation measures would be incorporated into contract specifications to be implemented by either contractors or City staff, and monitored by the City. The draft MMRP presented in Appendix E identifies the responsible parties for carrying out requirements specified in the mitigation

measures throughout the design, construction, and operation phases of the Program. A final MMRP will be adopted by City Council with certification of the Program EIR.

3.6 Resource Areas Eliminated from Further Analysis

The following CEQA checklist resource topics have been eliminated from further analysis based on the nature and scope of the Proposed Program activities. A brief summary and description of these resource topics are provided below.

3.6.1 Forestry Resources

The Proposed Program would not result in the loss of forest lands or the conversion of forestland to non-forest use. Stanislaus County has tracts of hardwood forest, as indicated in its General Plan (Stanislaus County 2016), but these are not located in any area affected by the Program activities. For this reason, the Proposed Program would not adversely affect forest lands and would not conflict with lands zoned for forest land or timberland uses.

3.6.2 Mineral Resources

Based on review of the *Stanislaus County General Plan* (2016) and California Department of Conservation (CDOC) Surface Mining and Reclamation Act Mineral Lands Classification mapping (CDOC 2016), there are no known mineral resource zones, historic or active mines or quarries within the study area. In addition, construction and operation of the proposed components would not directly affect mineral production sites or prevent future availability of mineral resources. As a result, the Proposed Program would have no impact on mineral resources.

3.6.3 Public Services

Public services include police, fire, schools and parks serving the study area and outlying areas outside the city limits in Stanislaus County. The Proposed Program involves upgrades to the City's water distribution and supply system that would accommodate growth projected within the City's water service areas and under the respective general plans of Modesto, Ceres, Turlock, and Stanislaus County (City of Modesto 2019a, City of Ceres 1997, City of Turlock 2012a, Stanislaus County 2016). This growth would not result in any significant effects on police or fire services beyond those evaluated in the *Master Environmental Impact Report for the Urban Area General Plan* (City of Modesto 2019b) and the City of Turlock's *General Plan Environmental Impact Report* (City of Turlock 2012b).

During construction of Program facilities, incidents could require law enforcement, fire protection, or emergency services; however, many proposed components are located within the urban areas of Modesto, Ceres, and Turlock, which are currently served by existing public services like police and fire protection, schools, and parks. The remaining outlying areas in unincorporated Stanislaus County receive police and fire protection services from Stanislaus County Sheriff's Department, California Highway Patrol, and the Stanislaus Consolidated Fire Protection Districts. The temporary increase in such incidents would not be substantial and would not result in the need to construct new or physically altered governmental facilities to maintain acceptable service ratios or response times or meet performance objectives.

Operation and maintenance activities described in Chapter 2, *Program Description,* would be substantially the same in nature as existing maintenance and operation activities, although additional facilities would be constructed that would require staff maintenance; therefore, operation of the Proposed Program would not substantially change the demand for public services and would not create a need for new or physically altered governmental facilities to maintain acceptable service ratios or response times or meet performance objectives of public service providers. Construction and operation of the Proposed Program would not substantially affect public services to a level that would require new or modified government facilities, and this impact would be less than significant.

3.6.4 Recreation

The Proposed Program would not directly generate increased demand for recreational facilities. Increased demand for parks or recreation facilities due to population growth is addressed in Chapter 15, *Population and Housing*, as described above. Program components would be constructed in Fairview Neighborhood Park, Creekside Golf Course, and Thousand Oaks Park, and in roadways near several other parks. If required, the temporary closure of these facilities could result in a short-term increase in use of other nearby parks and recreational facilities. However, the Proposed Program would not substantially increase the use of any existing parks or recreational facilities such that physical deterioration of those facilities would occur or be accelerated. In addition, the Proposed Program does not include recreational facilities and would not directly require the construction or alteration of any such facilities. Therefore, based on the above discussion, there would be a less-than-significant impact on recreational uses or facilities.

This page intentionally left blank.

Chapter 4
AESTHETICS AND VISUAL RESOURCES

4.1 Overview

This chapter describes the existing aesthetic resources within the study area and pertinent federal, state, and local plans and policies regarding the protection of visual and scenic resources. The impacts on scenic resources, public views of scenic vistas, visual character of the study area, and nighttime views from construction and operation of the Proposed Program are evaluated, and mitigation is proposed to address the impacts found to be significant.

The term "aesthetics" refers to visual resources and the quality of what can be seen or overall visual perception of the environment, and may include such characteristics as building scale and mass, design character, and landscaping. Visual impacts are analyzed through an examination of views and/or viewsheds. Views refer to visual access and obstruction of prominent visual features, including both specific visual landmarks and panoramic vistas. Viewsheds refer to the visual qualities of a geographic area. The geographic area is defined by the horizon, topography, and other natural features that give an area visual boundary and context. Viewshed impacts are typically characterized by the loss and/or obstruction of existing scenic vistas or other major views in the area of the Program site that are available to the general public. Sensitive viewers are individuals or groups who are particularly affected by changes to the aesthetics of the surrounding area. View analysis is based upon relative visibility with regard to viewing location and proposed on-site development.

4.2 Regulatory Setting

4.2.1 Federal Laws, Regulations, and Policies

Other than the National Historic Preservation Act, which is discussed in Chapter 8, *Cultural and Paleontological Resources*, there are no federal regulations pertaining to visual resources that would affect this Program.

4.2.2 State Laws, Regulations, and Policies

California Scenic Highway Program

The California Scenic Highway Program was established in 1963 under Sections 260–263 of the Streets and Highways Code. The Scenic Highway Program includes a list of highways that are either designated or eligible for designation as scenic highways (California Department of Transportation [Caltrans] 2017a). In Stanislaus County, the only designated scenic highway is Interstate 5 (Caltrans 2017b). There are no highways near the study area that are eligible for designation as scenic highways or have been officially designated.

4.2.3 Local Laws, Regulations, and Policies

Stanislaus County General Plan

The *Stanislaus County General Plan's* Conservation/Open Space Element encourages the protection and preservation of natural and scenic areas throughout the County (Stanislaus County 2016). Although the Conservation/Open Space Element does not identify specific policies concerning the preservation of scenic views of aesthetic resources, the following goal and policy apply to the Proposed Program:

Goal One. Encourage the protection and preservation of natural and scenic areas throughout the County.

Policy One. Maintain the natural environment in areas dedicated as parks and open space.

Policy Two: Assure compatibility between natural areas and development.

City of Modesto Urban Area General Plan

Chapter VII of the *City of Modesto Urban Area General Plan* (City of Modesto 2019a), "Environmental Resources and Open Space," establishes policies which are intended to guide development within the City's Planning Districts. The pertinent aesthetic and visual resource policies from the general plan are listed below.

Policy VII-B.7[a]. Visual corridors of the river will be protected and enhanced.

Policy VII-B.7[b]. Visual corridors and access points on the riverfront will be recreated through development.

Policy VII-B.7[q]. The scenic resources of Public Trust lands and resources shall be considered as protected as a resource of public importance. Permitted development shall be cited and designed to protect scenic views associated with Public Trust lands and resources.

Additionally, the City's inventory of Landmark Preservation Sites (listed in Section V-8 of the General Plan Master EIR [City of Modesto 2019b] and further discussed in Chapter 8, *Cultural, Paleontological, and Tribal Cultural Resources,* of this DEIR) includes not only historic structures, but also several landmark trees.

Del Rio Community and Salida Community Plans

The *Del Rio Community Plan* (Stanislaus County 1992), which was incorporated in the *Stanislaus County General Plan*, does not identify specific policies or regulations related to preservation of scenic views or aesthetic resources. Similarly, the *Salida Community Plan* (Stanislaus County 2007), which was incorporated in the *Stanislaus County Plan,* does not identify policies or regulations related to aesthetics.

Ceres General Plan

The Ceres General Plan 2035 (2018) contains the following goal and policies related to aesthetics:

Goal 2.B. Foster a distinctive city identity to support civic pride and Ceres' appeal.

> **2.B.1 Place-Based Development.** Encourage development consistent with Ceres' history, location in the Central Valley, and evolving demographics to promote community identity and pride.
>
> **2.B.2 Visual Distinction.** Provide visual distinction for key entry points to the City.
>
> **2.B.3 Greenbelt.** In cooperation with Stanislaus County and the City of Hughson, seek to establish a permanent greenbelt between Ceres and Hughson.
>
> **2.B.4 Gateways.** Create gateways to provide distinctive entrances to Ceres, particularly at key access points along the SR 99 corridor, along the major entrances on Mitchell Road, and at transitions from Modesto and Ceres on Crows Landing Road.

City of Turlock General Plan

The Turlock General Plan (2012) notes the scenic value of the city's historic characteristics, but does not identify specific policies or regulations concerning the preservation of scenic views of aesthetic resources pertaining to the Proposed Program. However, the City of Turlock has adopted the Beautification Master Plan to foster the city's identity and improve aesthetics through targeted planting and street designs.

Tuolumne River Regional Master Plan

A joint powers authority comprised of the City of Modesto, the City of Ceres, and Stanislaus County (the County) adopted the Tuolumne River Regional Park (TRRP) Master Plan in December 2001 (EDAW 2001a). This plan is intended to shape development of active- and passive-use parkland along the river corridor, including its span through Modesto. The TRRP Master Plan EIR (EDAW 2001b) refers to the Tuolumne River as "a significant natural landscape feature" that has unique trees and rock outcroppings. The plan further states:

> The visual experience of the river corridor includes areas that are of high visual quality, and other areas where the visual environment has been degraded by urban development. Along the river corridor, the area with the highest existing visual quality is the eastern-most portion of the park, which supports a majestic, mature oak woodland on the north bank.

Public visual access to the river, parks, and enhanced/restored riparian areas is and will be provided throughout the regional park. The TRRP Master Plan specifically designates several land-based "vista points" within proposed park development and enhancement areas, but the plan does not specify policies in relationship to these features. The TRRP Master Plan also identifies several "river overlooks" within the park-enhancement areas. Based on information available for the Proposed Program, WMP components would not be located in proximity to these river overlooks and would not be visible from future vista points or river overlooks.

4.3 Environmental Setting

Modesto and the City's contiguous areas including Salida, North Ceres, and Empire; and outlying service areas (e.g., Del Rio, Grayson, Ceres [Walnut Manor], and portions of Turlock) are located in the Central Valley, a broad and generally flat area bordered by the Sierra Nevada mountain range to the east and the Coast Ranges to the west. Due to the region's flat topography and openness, extensive views are accessible across the valley. Figure 2-1 shows existing water system improvements within the service area.

4.3.1 Modesto

Modesto is rural in nature, characterized by its predominantly agricultural lands and associated infrastructure. Features that contribute to the rural and agricultural character of the area include orchards, row crops, vineyards, cleared fields, hay bales, farm structures, farming and ranching equipment (such as tractors), and farmhouses. Pockets of urban development bordering the agricultural areas provide contrast to this rural character. Agricultural and residential/urban areas in the Modesto region have abrupt boundaries, lacking transition and beginning where the other ends. The City's visual quality is low-to-moderate because of the general lack of visual continuity and coherence. Modesto's historic downtown is one square mile and has a historic-style main street at the city center, surrounded by old, established neighborhoods and mature trees and landscaping.

Agricultural and industrial buildings, such as silos, warehouses, and factory buildings, remain visually prominent and contribute to the overall visual quality of the region. Recent development, including big-box and chain commercial shopping areas, is commonly seen on the outskirts of Modesto. The new water storage tank and groundwater well sites to the north of Modesto are in predominantly agricultural areas with some single-family residential uses nearby (see Figure 2-2). The 5 MG water storage tank site to the south of Gomes Road would be located adjacent to two existing tanks. The 2.6 MG tank site in southern Modesto consists of a vacant parcel with commercial and residential uses to the south.

The Tuolumne River runs along the southern edge of Modesto, and the Stanislaus River runs roughly parallel to the northern boundary of the Modesto urban area. Dry Creek drains into the Tuolumne River from the northeast in the southeastern portion of Modesto.

4.3.2 Ceres

Ceres is located immediately south of Modesto but only the northern portion of Ceres and the Walnut Manor area of Ceres are within the City's service area. Land uses in North Ceres predominantly consist of industrial and residential uses. As North Ceres is bordered by the Tuolumne River to the north and Highway 99 to the west, riparian vegetation along the river and the highway itself are the most prominent visual features in the area. Walnut Manor is a residential neighborhood in Ceres bordering North Central Avenue and East Hatch Road that is surrounded by predominantly residential uses.

4.3.3 Salida

The community of Salida, located northwest of Modesto, is characterized by a combination of agricultural uses, open space, industrial, and residential development. Salida is known for cultivating almonds and is home of the major Blue Diamond processing facility.

4.3.4 Empire

Empire is located immediately east of Modesto and south of the Tuolumne River. Similar to other contiguous areas, Empire is also an agriculturally active region with residential development.

4.3.5 Del Rio

The community of Del Rio is located roughly 2.5 miles north of Modesto. Del Rio is situated along the south bank of the Stanislaus River and is characterized by agricultural uses, open space, residential development, the Del Rio Golf and Country Club, and the Stanislaus River itself.

4.3.6 Grayson

The community of Grayson is located approximately 11 miles southwest of Modesto and 6.5 miles northwest of the city of Patterson. This small rural residential and agricultural community is situated on the west bank of an old channel of the San Joaquin River. Grayson was once an active port known for transporting grains along the river. Prominent visual features include the surrounding agricultural operations and riparian vegetation along the San Joaquin River.

4.3.7 Turlock

Turlock is a growing community that is characterized by residential, commercial, and industrial development, the SR 99 corridor, and California State University, Stanislaus.

The City of Turlock's *Beautification Master Plan* is a tool that aids the City of Turlock in enhancing Turlock's visual image. The Master Plan identifies landscaping improvements and wayfinding signage improvements for the following corridors and roadways: the SR 99 corridor, Golden State Boulevard, Christoffersen Parkway, Monte Vista Avenue, Fulkerth Road, West Main Street, East Avenue, Geer Road, and Lander Avenue, and Secondary Corridors along Taylor Road, West Tuolumne Road, Hawkeye Avenue, and East Canal Drive (City of Turlock 2010).

The City of Modesto's Turlock water service area is an independent water system made up of three small, separate service area islands ("Northern," "Central," and "Southern," as shown in Figure 1-2) located within the City of Turlock's water system. The Northern service area is bounded by East Monte Vista Avenue to the north, James Lane to the east, Hedstrom Road to the south, and Geer Road to the west. The Central service area is bounded by Debone Avenue to the north, Runyan Drive to the south, Colorado Avenue to the east, and North Olive Avenue to the west. The Southern service area is basically a two-service block area, connected via a pipeline along Brier Road. The entire Turlock service area contains approximately 99 acres, primarily residential, and is considered fully developed.

4.4 Impact Analysis

4.4.1 Methodology

The Proposed Program includes, but is not limited to, four primary types of improvements, as identified in the WMP and WSER: storage tanks, groundwater wells, pumps and pump stations, and pipelines. The visual impact analysis evaluates the visual changes that would occur from construction and operation of the Proposed Program, using the standards of quality, consistency, and symmetry typically used for a visual assessment. The evaluation is based on a review of the local plans and policies discussed in Section 4.2.3, as well as maps and aerial photographs.

Visual effects were assessed based on the Program's potential to substantially alter scenic resources or to degrade the visual character of the site. Subsurface improvements, such as pipelines and subsurface portions of wells, would not be visible and therefore are not expected to affect visual resources.

The evaluation of temporary or short-term visual impacts considers whether construction activities could substantially degrade the existing visual character or quality of the site or surrounding area, as well as the duration over which any such changes would occur. Because of their short-term nature, construction activities occurring in an area for less than one year are typically considered to have a less-than-significant effect on visual quality. However, construction activities occurring in an area for over one year have been evaluated for potentially significant visual impacts.

Proposed activities with long-term visual effects, such as constructing new or altered structures, grading roads, removing trees, and introducing new sources of light and glare can permanently alter the landscape in a manner that could affect the existing visual character or quality of the area, depending on the perspective of the viewer. In determining impact potential, the assessment considers the visual sensitivity of the project area. Since damage to scenic resources such as trees, rock outcroppings, and other features of the built or natural environment would typically constitute a long-term effect, the potential for project implementation to damage scenic resources is evaluated solely as a long-term effect and is not included in the analysis of construction-related impacts.

4.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on aesthetics if it would:

- Have a substantial adverse effect on a scenic vista;
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
- Substantially degrade the existing visual character or quality of the site and its surroundings; or
- Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

4.4.3 Environmental Impacts

Impact AES-1: Adverse Effects on Scenic Vistas (*No Impact*)

No designated scenic vistas or viewpoints exist in the study area. As described in Section 4.2.3, above, proposed WMP components would not be visible from vista points and scenic overlooks identified in the TRRP Master Plan due to distance. **No impact** on existing scenic vistas are likely as a result of the Proposed Program.

Impact AES-2: Damage to Scenic Resources (*Less than Significant*)

As noted in Section 4.2.2, the only state-designated scenic highway in Stanislaus County is Interstate 5 which is over 4 miles away from the Proposed Program components. As such, the various Proposed Program components would not be located in proximity to or visible from a scenic highway and there would be no impact on scenic resources located along a scenic highway. This impact would be **less than significant**.

Impact AES-3: Degradation of Visual Character or Quality of Site and Surroundings During Construction (*Less than Significant with Mitigation*)

Construction of proposed WMP components, including new storage tanks, groundwater wells, pipelines, generators, and other CIPs involving ground disturbing activities would be visible to various receptors near the construction work areas. For the various WMP components, nearby residents, patrons at nearby businesses, motorists, and recreationists using public roads would have temporary views of construction activities including heavy equipment operation, materials stockpiling of pipeline and other water system-related materials, and earth movement associated with trenching and grading. Views of pipeline construction activities would be likely be limited to several days at any given location since pipeline construction would likely progress at a rate of 200 to 400 feet per day. In contrast, construction of new and replacement wells would typically occur over a 1- to 1.5-year timeframe, and construction of new water storage tanks would extend over a longer period (typically several months up to 1.5 years, depending on size, construction method, site specific requirements, etc.). Depending on the size, wellhead treatment improvements typically require 3-12 months of construction and tank maintenance and repairs typically require 3-6 months of construction. Depending on where individual CIPs get built, views of these operations may be perceived as a degradation of the surrounding area's visual character. While such activities would be temporary and effects on the area's visual character would cease after construction is complete for a given CIP, disturbance could be significant for individual projects particularly if construction extends for over a year in a given area. Therefore, this impact would be significant. Implementation of **Mitigation Measure AES-1 (Locate Staging Areas Away from Public Areas and Install Screening)**, which requires that staging areas be sited away from public areas and that work areas are maintained as clean as practical, would reduce this impact to **less than significant with mitigation**.

> **Mitigation Measure AES-1: Locate Staging Areas Away from Public Areas and Install Screening.**
>
> For components located in residential areas and near public parks or trails, the City shall implement the following measures. Construction staging areas for equipment, vehicle parking, and material storage will be sited as far as possible from residences, major roadways, parks and other public areas. To the extent practicable, staging areas shall be

sited in areas where existing topography and vegetation can help screen views of the staging area. Where on-street or on-site staging areas are necessary, chain-link fencing with slats (either earth tone or another neutral color) or other screening methods shall be installed around designated staging areas to screen views of equipment and materials.

Impact AES-4: Degradation of Visual Character or Quality of Site and Surroundings During Program Operations (*Less than Significant with Mitigation*)

Once constructed, all proposed pipeline components including fire flow improvements and grid improvements, extended and replaced water mains would be underground and would not be visible. Underground components would therefore have no impacts on the visual character of the surrounding area.

Aboveground components that would be constructed include new storage tanks, buildings to house booster pump stations and groundwater wells, and new or replacement water pumps at wells and/or booster pump stations. Wellhead treatment facilities will depend on the treatment method, and typically will include (but are not limited to) piping, treatment tanks approximately 15 feet high, monitoring equipment and appurtenances, structures and enclosures. Emergency generator sizing is dependent on the application, but can be 20 feet long by 9 feet wide by up to 15 feet high with fuel storage. In addition, ongoing system security enhancements would involve aboveground improvements such as new fencing, security signage, lighting and other security measures at well and tank sites. These facilities would be visible from surrounding areas and could alter the visual character of each individual site. Aboveground storage tanks could be as high as 35 feet and have a diameter up to 250 feet, while partially buried tanks could have an aboveground height between 10 and 15 feet and a diameter up to 250 feet. Based on other pump station buildings seen throughout the Modesto region, associated pump station buildings may be approximately 20 feet tall and encompass an area of 2,000 to 2,500 square feet. Other ancillary features that may be visible include new outdoor lighting and fencing and gates around the perimeter of new water infrastructure. Views of these facilities may be available from residential and agricultural areas, public roadways, parks, and other public areas.

While these facilities are unlikely to degrade the visual character or quality of views from agricultural areas along the outskirts of Modesto (northern, eastern and western areas of Modesto), they have potential to degrade the visual character or quality of views from public recreation and residential areas as these viewers tend to have longer duration views and have an expectation of higher quality views. As noted in Section 4.3.1, while the new water storage tanks would be constructed on parcels in predominantly agricultural areas, limited views would also be available from nearby residences that typically have a higher visual sensitivity. These tanks would also be visible from adjacent public roads and due to the large size of these facilities, would likely obscure views of orchard row crops and, depending on the vantage point, the Sierra Nevada mountain range in the distance. For this reason, impacts related to degradation of the visual character or quality of the site and surrounding area would be considered significant. Implementation of design considerations as described in **Mitigation Measures AES-2 (Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Settings)** would reduce this impact. Therefore, this impact would be considered **less than significant with mitigation**.

Mitigation Measure AES-2: Incorporate Aesthetic Considerations into Design for Storage Tanks, Pump Stations, Groundwater Well Buildings, and Other Above-ground Facilities to Be Consistent with Surrounding Setting.

Where wells, tanks, pump stations and other above-ground facilities are located in proximity to or are readily visible from residential areas, recreational areas, or public roadways, the facility and fencing shall be designed to be consistent with the surrounding setting, to the maximum extent feasible. The following design elements shall be used to enhance the aesthetic appearance of proposed facilities and to integrate them with the existing visual setting:

- New storage tanks and pump station buildings shall be set back from public views and, upon completing Mitigation Measure AES-2, the City and/or contractor shall consider partially burying tanks to minimize view obstructions.
- Proposed facility designs shall integrate elements such as color, materials, and pattern of the surrounding landscape.
- The exterior of aboveground facilities shall be painted or include appropriate concrete admixtures to achieve low-glare, earth-tone colors that blend with the surrounding terrain and visual setting.
- Wherever possible, use of unpainted metallic surfaces and other reflective sources that may cause increased levels of reflectivity shall be eliminated.
- Wherever possible, install native landscaping and/or fencing to help screen views of the water treatment plant, pump station, and water storage tanks from public roads and adjacent residences.
- Any outdoor night lighting shall be motion-activated and include baffles that direct lighting onto the facility and minimize light spillage onto adjoining properties.

Impact AES-5: Permanent Source of Substantial Light or Glare (*Less than Significant with Mitigation*)

As described above under Impact AES-4, once constructed, all pipelines would be underground and would therefore not result in a new source of substantial light or glare.

New aboveground facilities that require on-site exterior lighting include new or replacement booster pump stations, storage tanks, wells, wellhead treatment facilities, generators, and water system security enhancements. New lighting at these facilities would be consistent with outdoor lighting currently used at similar facilities found throughout the Modesto area. Exterior coating of new pump stations and tanks would appear similar to existing structures seen throughout Modesto, and earth tones with non-reflective finishes would be used to coat aboveground components. However, because the exterior coating of proposed facilities has not been determined for aboveground facilities and there could be light spillage onto adjoining properties, permanent light or glare impacts would be considered significant. Implementation of Mitigation Measure AES-2 would ensure that outdoor lighting is motion-activated and directed downward

and that the exterior of new facilities use non-reflective finishes, reducing this impact to **less than significant with mitigation**.

Chapter 5
AGRICULTURAL RESOURCES

5.1 Overview

This chapter describes the regulatory setting and environmental setting, and impacts of the Proposed Program related to agricultural resources.

The regulatory and environmental settings and impact analysis for agricultural resources were developed through a review of:

- The California Department of Conservation's (CDOC's) *Stanislaus County Important Farmland Map* (2017a) and Williamson Act Lands geographic information systems (GIS) data for Stanislaus County (2016a);
- The *Stanislaus County General Plan* (2016a);
- The Stanislaus County Public Parcel Viewer – Zoning Map (2016b)
- The Stanislaus Local Agency Formation Commission Policies and Procedures (Stanislaus LAFCO 2015);
- The *Del Rio Community Plan* (Stanislaus County 1992);
- The *Salida Community Plan* (Stanislaus County 2007);
- The *City of Modesto Urban Area General Plan* (2019);
- The *City of Turlock General Plan* (2012); and
- The *Ceres General Plan 2035* (2018).

5.2 Regulatory Setting

There are no federal laws, regulations, and policies regarding agricultural resources pertinent to the Proposed Program.

5.2.1 State Laws, Regulations, and Policies

California Department of Conservation – Farmland Mapping and Monitoring Program

Developed by the California Department of Conservation, the Farmland Mapping and Monitoring Program (FMMP) provides consistent, timely and accurate data for use in assessing agricultural land resource status in California. The program utilizes a combination of GIS, aerial imagery, local

agency comments, and other relevant information to combine soil quality data and current land use information to produce Important Farmland Maps.

The FMMP maps out five different farmland categories as well as urban, nonagricultural and natural vegetation, semi-agricultural and rural commercial land, rural residential land. These five categories are listed below (CDOC 2004):

- Prime Farmland – lands with the best combination of physical and chemical features able to sustain long-term production of crops. The land must be cropped and supported by a developed irrigation water supply that is dependable and of adequate quality during the grow season. It must also have been used for production during the previous four years.

- Farmland of Statewide Importance – lands similar to Prime Farmland but with minor shortcomings such as greater slope or less ability to store moisture.

- Unique Farmland – soils of lower quality that are used for producing California's leading agricultural crops. These lands are usually irrigated but may include non-irrigated orchards or vineyards.

- Farmland of Local Importance – lands such as dryland grains and irrigated pastures that are not considered Prime Farmland, Farmland of Statewide Importance, or Unique Farmland.

- Grazing Land – land on which the existing vegetation is suited to the grazing of livestock

California Land Conservation Act (Williamson Act)

The California Land Conservation Act, more commonly referred to as the Williamson Act, was passed in 1965 as a means to preserve agricultural and open space lands by discouraging "premature and unnecessary conversion to urban uses" (Government Code Section 51220[c]). Through this act, local governments and landowners may choose to forgo the possibility of developing their lands, or convert their property into nonagricultural or non-open space use for a set amount of time determined in a contract. In return, they would receive lower property taxes. Contracts have an initial term of ten years with renewal occurring automatically each year after that. Local governments are permitted to negotiate longer initial contract terms that exceed ten years (CDOC 2014).

According to the 2015 Stanislaus County Agricultural Report, 575,549 acres of the County are registered under Williamson Act contracts. This accounts for approximately 60 percent of the total amount of acres within the county (Stanislaus County 2016a). The following land classifications are found either within or around the planned locations of the Proposed Program components:

- Williamson Act – Prime Agricultural Land

- Williamson Act – Non-Renewal

- Non-Williamson Act – Urban and Built-Up Land

Williamson Act lands designated as "non-renewal" are lands in which either the local government or landowner have initiated the nonrenewal process.

5.2.2 Local Laws, Regulations, and Policies

Stanislaus County Local Agency Formation Commission (LAFCO)

The Stanislaus County Local Agency Formation Commission's (LAFCO's) mission is to "discourage urban sprawl, preserve open space and prime agricultural lands, promote the efficient provision of government services and encourage the orderly formation of local agencies" (LAFCO 2012). In order to achieve their mission as well as to meet Government Code Section 56668(e) requirements, which requires LAFCO to consider the effect of a proposal on the maintenance of the physical and economic integrity of agricultural lands, they adopted the Agricultural Preservation Policy on September 26, 2012. The goals of this policy are as follows:

- Guide development away from agricultural lands where possible and encourage efficient development of existing vacant lands and infill properties within an agency's boundaries prior to conversion of additional lands;
- Fully consider the impacts a proposal will have on existing agricultural lands;
- Minimize the conversion of agricultural land to other uses; and
- Promote preservation of agricultural lands for continued agricultural uses while balancing the need for planned, orderly development and the efficient provision of services (LAFCO 2012).

On March 25, 2015, LAFCO amended the policy to include specific regulations regarding the use of in-lieu fees for acquiring and managing agricultural conservation easements (LAFCO 2015). LAFCO shall consider this policy, in addition to its existing goals and policies, as an evaluation standard for review of any proposals that could reasonably be expected to induce, facilitate, or lead to the conversion of agricultural land (LAFCO 2015). As required by the policy, a plan for agricultural preservation must be provided with any application for a sphere of influence expansion or annexation to a city or special district ("agency") providing one or more urban services (i.e., potable water, sewer services) that includes agricultural lands. Once the plan is provided, LAFCO will then evaluate it based on specific criteria that must be met (LAFCO 2015).

Stanislaus County General Plan

The *Stanislaus County General Plan*'s Land Use and Agricultural Elements includes goals and policies that are intended to promote and protect local agricultural resources. The main goals of the Agricultural Element are to strengthen the agricultural sector of the local economy, conserve the county's agricultural lands for agricultural uses, and protect the natural resources that sustain agriculture in Stanislaus County. The following goal and policies related to agricultural land include:

Land Use Element

Policy 16. Agriculture, as the primary industry of the County, shall be promoted and protected.

Agricultural Element

Goal 1. Strengthen the agricultural sector of our economy.

Policy 1.10. The County shall protect agricultural operations from conflicts with non-agricultural uses by requiring buffers between proposed non-agricultural uses and adjacent agricultural operations.

Implementation Measure 1: The County shall require buffers and setbacks for all discretionary projects introducing or expanding non-agricultural uses in or adjacent to an agricultural area consistent with the guidelines presented in Appendix "A" of the Agricultural Element.

Buffer and Setback Guidelines

Appendix A of the *Stanislaus County General Plan* includes buffer and setback guidelines that are intended to physically avoid conflicts between agricultural and non-agricultural uses (Stanislaus County 2016a). The guidelines include the following:

- All projects shall incorporate a minimum 150-foot wide buffer. All buffers shall incorporate a solid wall and vegetative screen consistent with the following standards:
- Fencing: A 6-foot high wall of uniform construction shall be installed along any portion of a buffer where the project site and the adjoining agricultural operation share a common parcel line.
- Permitted uses within a buffer area shall include: public roadways, utilities, drainage facilities, landscaping, parking lots and similar low human intensity uses. Walking and bike trails shall be allowed within buffers provided they are designed without rest areas.
- Landscaping within a buffer setback shall be designed to exclude turf areas which could induce activities and add to overall maintenance costs and water usage.
- A landowner's association or other appropriate entity shall be required to maintain buffers to control litter, fire hazards, pests, and other maintenance problems when a project consists of multiple parcels which may be held, or have the potential to be held, under separate ownership.
- The Board of Supervisors may authorize the abandonment and reuse of buffer areas if agricultural uses on all adjacent parcels within a 150-foot radius of the project site have permanently ceased.

Del Rio Community Plan

The *Del Rio Community Plan* (Stanislaus County 1992), which was incorporated in the *Stanislaus County General Plan*, is a focused planning policy and land use planning document for the Del Rio area. The Community Plan acknowledges that agricultural use would be gradually confined to the southern portion of the community, with efforts made to decrease incompatibilities with adjacent agricultural and residential uses. The following goals and policies regarding agricultural resources are relevant to the Proposed Program:

Goal 2. Prime agricultural land in the Del Rio vicinity should be preserved in areas where incompatibility impacts between agricultural and residential uses can be minimized.

Goal 3. Further development in the Del Rio should be planned to ensure that adverse impacts on services and utilities, schools, transportation and circulation, agriculture, water, and air quality are appropriately mitigated.

Goal 7. The Del Rio Community shall not be allowed to become an example of inadequately planned leap-frog urban development on primer agricultural land which outpaces demand and overrides community sentiment.

The Plan includes the following standard for future residential development in southern Del Rio:

2. Planned developments adjacent to agricultural land shall be required to incorporate buffers, such as roads, green belts, or natural open spaces, between residential and ag use so as to minimize potential use incompatibilities.

Salida Community Plan

The *Salida Community Plan* (Stanislaus County 2007), which has also been incorporated in the *Stanislaus County General Plan,* serves as a land use planning and policy document for Salida, which is located northwest of Modesto. The County has designated lands that are suitable for open space or recreational use as Agriculture. Within the Plan's Amendment Area, this applies to the Stanislaus River Park, which comprises 244 acres. Note that this designation is not intended to accommodate agricultural activities within Community Plan boundary.

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (2019) contains the following agricultural resources policies that are relevant to the Proposed Program:

Policy VII-D.3[a]. If a subsequent project is within the Baseline Developed Area or Downtown Area as identified on the General Plan Growth Strategy Diagram (Figure II-1), consider the project to have minimal effect on the conversion of agricultural lands, and no mitigation for that impact is required.

Policy VII-D.4[a]. Do not annex agricultural land unless urban development consistent with the General Plan has been approved by the City.

Policy VII-D.4[b]. Support the continuation of agricultural uses on lands designated for urban uses until urban development is imminent.

Policy VII-D.4[d]. Where necessary to promote planned City growth, encourage development of those agricultural lands that are already compromised by adjacent urban development or contain property required for the extension of infrastructure or other public facilities, before considering urban development on agricultural lands that are not subject to such urban pressures.

Policy VII-D.4[e]. For any subsequent project that is adjacent to an existing agricultural use, the project proponent may incorporate measures to reduce the

potential for conflicts with the agricultural use. Potential measures to be implemented may include the following:

(1) Include a buffer zone of sufficient width between proposed residences and the agricultural use.

(2) Inform residents about the possible exposure to agricultural chemicals. (City of Modesto 2019)

Ceres General Plan 2035

The *Ceres General Plan 2035* (2018) seeks to balance the need for growth while encouraging the conservation and enhancement of the area's agricultural and natural resources. Most of Ceres was developed on prime agricultural farmland and the goals and policies of the plan strive to maintain agricultural uses as long as possible.

Goal 4. A. To promote the productivity of agricultural lands surrounding Ceres and the continued viability of agriculture in Stanislaus County, and, recognizing the community's agricultural heritage and its contribution to the local economy, support the preservation of agricultural character where it has cultural or scenic significance.

4.A.2 Urban Expansion in Agricultural Areas. Ensure that development and the expansion of infrastructure in urban areas do not encourage the expansion of urban uses into areas designated for Agriculture on the Land Use Diagram, or otherwise reduce the viability of agricultural operations on lands designated for Agriculture.

4.A.5 Land Use Compatibility. Ensure that new development adjacent to agricultural uses is compatible with the continuation of the agricultural uses by minimizing conflicts through appropriate design criteria, such as site layout, landscaping, and buffers to provide adequate separation between habitable structures and active farmland.

The Stanislaus County General Plan also contains an agricultural buffer policy that would apply to unincorporated areas of the Planning Area.

4.A.6 Right to Farm. Continue to support the County's Right-to-Farm ordinance.

4.A.7 Farmland Mitigation. Minimize the loss of agricultural lands by developing a Plan for Agricultural Preservation upon application for a SOI expansion or annexation that includes agricultural land, consistent with the Stanislaus LAFCO Agricultural Preservation Policy.

Goal 4.B Conserve and, where possible, enhance open space lands for the preservation of natural resources, the managed production of resources, outdoor recreation, and public health and safety.

City of Turlock General Plan

The *City of Turlock General Plan* (City of Turlock 2012) includes several goals and policies that are intended to promote and protect local agricultural resources and to minimize conflict with urban uses. Goals and policies relevant to agriculture are listed below.

Land Use

Policy 2.9-a Agriculture belongs in unincorporated areas. Support Stanislaus and Merced County policies that promote continued agricultural activity on lands surrounding the urban areas designated on the General Plan Diagram.

Policy 2.9-c Encourage infill and more compact development to protect farmland. Relieve pressures to convert valuable agricultural lands to urban uses by encouraging infill development.

Parks and Open Space

Policy 6.1-d Minimize conflict. Minimize conflict between urban and agricultural uses.

Agriculture and Hydrology

Policy 7.2-a Preserve Farmland. Promote the preservation and economic viability of agricultural land adjacent to the City of Turlock.

Policy 7.2-b Limit Urban Expansion. Retain Turlock's agricultural setting by limiting urban expansion to designated areas and minimizing conflicts between agriculture and urban activities.

5.3 Environmental Setting

Stanislaus County consists of a flat topography, good-to-excellent soil quality, favorable climate, and availability of natural water (City of Modesto 2019). Agriculture is the County's leading industry, generating over $3.8 billion in agricultural commodities in 2015 alone (Stanislaus County 2016a). Approximately 768,000 acres of land throughout the County is categorized as farmland, with approximately 4,150 farms in operation (Stanislaus County 2016a). The County's leading commodities are currently almond crops and milk (Stanislaus County 2016a). Modesto is at the center of Stanislaus County's rich agricultural landscape. As the largest city in the County, Modesto is comprised of mostly urban and built-up land with its contiguous areas comprised of agricultural lands (CDOC 2017a).

Based on the most recent CDOC FMMP report, Stanislaus County has 249,967 acres of Prime Farmland, 33,172 acres of Farmland of Statewide Importance, 116,210 acres of Unique Farmland, and 26,029 acres of Farmland of Local Importance (CDOC 2016b). **Figure 5-1** shows important farmland in the Program vicinity. While the majority of proposed components would be located in urban and built-up areas of Modesto, the following Program components would be sited on lands classified as Prime Farmland: one water storage tank in Modesto, two water storage tanks in the outskirts of Modesto in unincorporated Stanislaus County, two wells in the northern portion of the WMP's contiguous study area in unincorporated Stanislaus County, two wells in the

western portion of the contiguous study area, and buildout pipelines along the outskirts of Modesto. Proposed components that would be sited on lands classified as Unique Farmland include two wells, one water storage tank, and build-out pipelines, all located in the northeastern area of the WMP's contiguous study area.

Aside from buildout pipelines planned along the outskirts of Modesto, the majority of proposed pipeline components in the WMP's contiguous study area including fire flow improvements, grid improvements, and strengthening and replacement pipelines would be sited within urban/developed areas. Similarly, in the City's outlying service areas, proposed components primarily include fire flow improvements in existing road rights-of-way.

5.4 Impact Analysis

5.4.1 Methodology

Impacts to agricultural resources from the Proposed Program components were assessed by reviewing the *2015 Stanislaus County Agricultural Report* (Stanislaus County 2015a), the General Plan policies of Stanislaus County, the City of Modesto, City of Ceres, and City of Turlock; Williamson Act maps; FMMP maps; and relevant federal and state regulations. Improvements in the Proposed Program include replacement or upgrade of existing facilities. Existing facilities are considered developed, and are not expected to have agricultural resources impacts. New facilities in the Proposed Program may be in developed areas, or within the public right-of-way, which again are not expected to have agricultural resource impacts; however, new facilities proposed in undeveloped areas would be subject to the analysis outlined in the following sections. The effects of construction, operation, and maintenance of the proposed facilities on existing agricultural resources was evaluated according to the significance criteria below.

5.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on agricultural resources if it would:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use;
- Conflict with existing zoning for agricultural use, or a Williamson Act contract; or
- Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use.

Impacts on forestry resources are not evaluated in this DEIR because no zoning for forest land was identified in the Program area (City of Modesto 2019; Stanislaus County 2015b) and Stanislaus County had no land classified as Timberland Protection Zone as of 2001 (Shih 2002).

5.4.3 Environmental Impacts

Impact AG-1: Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to Non-agricultural Use (*Significant and Unavoidable*)

Figure 5-1 shows Farmland and the general location of pipeline alignments and locations of future facilities associated with the Proposed Program. Program components were planned to serve future developed areas. However, these locations are preliminary and the exact alignments and locations of Program facilities are dependent upon County- and City-approved development plans and land ownership and/or easement agreements. Future roads and land uses would be refined as part of the development planning process and would identify future rights-of-way to be used for utility alignments and facilities, including Program components. In addition, some areas may be converted from Farmland to developed areas prior to construction of Program components. For the purpose of this analysis, Program components preliminarily located in or near Farmland areas were evaluated as if they would be located in Farmland, despite the potential for changes in their actual location or land use designation. Therefore, the evaluated impact area and potential impacts discussed below may overstate the Proposed Program's actual impact.

In addition, Program components located within the Baseline Developed Area or Downtown Area as identified in the City of Modesto Urban Area General Plan (2019), are considered to have minimal effect on agricultural lands and do not require mitigation for conversion of Farmland (City of Modesto 2019).

The impacts of development of the urban area of Modesto have been previously considered in the City of Modesto's General Plan Master EIR, and were found to be significant and unavoidable. While the majority of proposed pipelines would be constructed within existing roadways or in urban/developed areas, some proposed build-out pipelines and grid improvements in Del Rio would be installed on land that is designated as Prime Farmland. Some build-out pipelines in the northeastern portion of the study area would be installed on land designated as Unique Farmland. Prior to constructing build-out pipelines on agricultural or undeveloped lands, the City typically requires developers to provide right-of-way dedications for utility improvements. Ground disturbing activities associated with these improvements would temporarily affect lands designated as Farmland. All of these pipeline improvements would be installed to serve areas planned for growth and would involve either open trench methods or trenchless methods at irrigation or utility crossings (e.g., jack and bore methods). Since the pipeline components would be underground, any disturbance to Farmland would be temporary, Farmland could be returned to pre-construction conditions after construction is complete, and land could continue to be used for agricultural purposes.

Aside from build-out pipelines, the following WMP components would be constructed on Prime Farmland:

- three water storage tanks (one in northern Modesto east of Dale Road, one in eastern Modesto south of Gomes Road, and one in southern Modesto west of Morgan Road and north of East Whitmore Road),
- two wells in the northern portion of the WMP's contiguous study area (north of Kiernan Avenue), and

- two wells in the western portion of the contiguous study area (west of Highway 99).

In addition, two new groundwater wells in northeastern Modesto would be constructed on Unique Farmland. The proposed tank east of Mable Avenue would also be constructed on land designated as Unique Farmland.

Based on similar wells and water tanks in the study area, it is assumed that new wells would occupy a 10,000 square-foot-area and each 4-6 million gallon tank would require approximately 3 acres. The proposed wells and tanks would result in the permanent conversion of approximately 10 acres of Farmland. This impact would be **significant**.

Considering LAFCO's Agricultural Preservation Policy (2015) and pursuant to Policy 2.15 in the *Stanislaus County General Plan,* the County policy requires that agricultural land converted to residential use be replaced at a 1:1 ratio with agricultural land of equal quality in Stanislaus County. However, since the Proposed Program is not a residential project, these policies do not apply to the Program. While the Stanislaus County's Farmland Mitigation Program provides a mechanism for establishing agricultural easements, the City has determined that this program is infeasible for the following reasons: (1) Stanislaus County policy is to mitigate the loss of and preserve Prime Farmland through the County's Farmland Mitigation Program, which is designed to address loss of farmland resulting from impacts of residential development, and the County policy is not to burden and increase the cost of new and improved public infrastructure that is needed by the community; and (2) the purchase of an agricultural conservation easement over other off-site agricultural land would not ultimately avoid or reduce the impact of converting Prime Farmland to non-agricultural uses caused by the Proposed Program because there still would be a net reduction in the total amount of Prime Farmland and therefore the easement over other land would not reduce the impact to a level of insignificance. No other feasible mitigation measures, such as restoration of Prime Farmland that has been previously converted or participation in another agricultural conservation easement program, have been identified to further reduce this impact. Therefore, this impact would be **significant and unavoidable**.

City of Modesto
Water Master Plan EIR

This page intentionally left blank

Impact AG-2: Conflict with Existing Zoning for Agricultural Use or a Williamson Act Contract (*Less than Significant*)

Most pipeline components would take place within developed areas of the WMP study area. However, several storage tanks, wells, and buildout pipelines would be installed on land zoned for agricultural uses. **Table 5-1** summarizes Program components that are zoned for agricultural use in Stanislaus County.

Table 5-1. WMP Components Zoned for Agricultural Use

WMP Components	Location
2.9 MG water storage tank in unincorporated Stanislaus County (north of Modesto)	Northeast of Dale Road and Pirrone Road intersection
5.0 MG water storage tank	South of Gomes Road and north of La Coste Lane
Groundwater well and connecting buildout pipelines	North of Kiernan Avenue and about 0.5 mile east of American Avenue
Groundwater well and connecting buildout pipelines	About 1 mile east of Bangs Avenue and 0.5 mile south of Claribel Road
Groundwater well and connecting buildout pipelines	Immediately southwest of Oakdale Road and Claribel Road intersection
Groundwater well and connecting buildout pipelines	About 0.5 mile west of the Plainview Road and Roselle Avenue intersection
Groundwater well and connecting buildout pipelines	Immediately southwest of the Plainview Road and Litt Road intersection
Groundwater well	Kansas Avenue and Dakota Avenue
Groundwater well and connecting buildout pipelines	About 0.25 mile north of Shoemake Avenue and 1 mile east of Dakota Avenue

In addition, based on review of California Department of Conservation's Williamson Act Lands map (CDOC 2012) and as shown in **Figure 5-2**, one new groundwater well (located near the Plainview Road and Litt Road intersection) would be sited on Williamson Act-Prime Agricultural land. Some build-out pipelines would be constructed adjacent to designated Williamson Act lands but those pipelines would be constructed within existing roadways. No other new WMP facilities would be sited on Williamson Act lands.

While the Program could conflict with lands zoned for agricultural uses or Williamson Act lands, according to Stanislaus County Ordinance Section 21.20.030 a Tier Three conditional use permit can be obtained for new facility construction planned on lands zoned for agricultural uses, including those subject to a Williamson Act contract. Specifically, the ordinance states that uses not directly related to agriculture can occur on lands that are not located on the County's most productive agricultural areas, which includes lands within LAFCO-approved spheres of influence of cities and/or community service districts serving unincorporated communities. Since the WMP

study area includes the City of Modesto's sphere of influence and outlying areas are within the City's service area, lands designated for agricultural uses would not qualify as "productive agricultural areas" as defined in Stanislaus County Ordinance Section 21.20.030. Allowable uses include construction of public facilities. As such, the proposed WMP components listed in Table 5-1 would meet conditional uses stated under Tier Three of this ordinance. Note that the requirements associated with County zoning do not apply to actions undertaken by the City; regardless, the City's actions would be consistent with the County's existing zoning (considering that public facilities are a conditionally approved use).

For these reasons, conflicts with Williamson Act lands and land zoned for agricultural uses would be **less than significant**.

Impact AG-3: Involve Other Changes in the Existing Environment Which, Due to Their Location or Nature, Could Result in Conversion of Farmland to Non-agricultural Use (*Significant and Unavoidable*)

The Proposed Program would not directly or indirectly induce substantial population growth during construction, but could result in the conversion of farmland to non-agricultural uses. The impacts of development of the urban area of Modesto have been previously considered in the City of Modesto's General Plan Master EIR, and were found to be significant and unavoidable.

This impact is discussed in more detail in Chapter 15, *Population and Housing* under Impact PH-3. Mitigation for specific development proposals that involve conversion of agricultural land, such as Mitigation Measure AG-1, would compensate for this impact; however, it would not avoid the conversion and reduce the impact to a less-than-significant level. In addition, the specifics regarding future development that may result in agricultural conversion are not known at this time, and implementation of this mitigation measure for such development is not considered feasible within the scope of the Proposed Program. Impacts are considered **significant and unavoidable**.

Chapter 6
AIR QUALITY

6.1 Overview

This chapter evaluates the Proposed Program's air quality impacts. The chapter first describes the air quality regulatory and environmental settings and then evaluates the Proposed Program's air quality impacts. The impact evaluation begins by describing the air quality significance criteria and the methodology used to evaluate significance, and then presents the impact evaluation. Mitigation measures are identified for impacts that are determined to be significant.

Air quality is described for a specific location as the concentration of various pollutants in the atmosphere. Air quality conditions at a particular location are a function of the type and amount of air pollutants emitted into the atmosphere, the size and topography of the regional air basin, and the prevailing meteorological conditions.

Key sources used in preparing this chapter are as follows:

- *Stanislaus County General Plan* Conservation/Open Space Element (Stanislaus County 2016a);
- City of Modesto Urban Area General Plan (City of Modesto 2019);
- SJVAPCD *Mitigation Measures* guidance document (SJVAPCD 2017d); and
- SJVAPCD Guidance for Assessing and Mitigating Air Quality Impacts (SJVAPCD 2015a).

6.2 Regulatory Setting

6.2.1 Federal Laws, Regulations, and Policies

The Clean Air Act is implemented by U.S. Environmental Protection Agency (USEPA) and sets ambient air limits, the National Ambient Air Quality Standards (NAAQS), for six criteria pollutants: carbon monoxide (CO), lead, nitrogen dioxide (NO_2), ground-level ozone, sulfur dioxide (SO_2), and particulate pollution which is subdivided into particulate matter of aerodynamic radius of 10 micrometers or less (PM10) and particulate matter of aerodynamic radius of 2.5 micrometers or less (PM2.5). Of these criteria pollutants, particulate matter and ground-level ozone pose the greatest threats to human health. **Table 6-1** shows the current attainment status for NAAQS.

Table 6-1. Attainment Status of the Federal and State Ambient Air Quality Standards

Contaminant	Averaging Time	Concentration	State Standards Attainment Status1	Federal Standards Attainment Status2
Ozone (O_3)	1-hour	0.09 ppm	N (Severe)	See footnote 3
	8-hour	0.070 ppm	N	
		0.075 ppm		N (Extreme)
Carbon Monoxide (CO)	1-hour	20 ppm	U/A	
		35 ppm		U/A
	8-hour	9.0 ppm	U/A	U/A
Nitrogen Dioxide (NO_2)	1-hour	0.18 ppm	A	
		0.100 ppm5		U/A
	Annual arithmetic mean	0.030 ppm	A	
		0.053 ppm		U/A
Sulfur Dioxide (SO_2)	1-hour	0.25 ppm	A	
		0.075 ppm		U/A
	24-hour	0.04 ppm	A	
		0.14 ppm		U/A
	Annual arithmetic mean	0.030 ppm		U/A
Particulate Matter (PM10)	24-hour	50 µg/m3	N	
		150 µg/m3		A
	Annual arithmetic mean	20 µg/m3	N	
Fine Particulate Matter (PM2.5)	24-hour	35 µg/m3		N (Moderate)
	Annual arithmetic mean	12 µg/m3	N	N (Moderate)
Sulfates	24-hour	25 µg/m3	A	
Lead (Pb)[6]	30-day average	1.5 µg/m3	A	
Hydrogen Sulfide (H_2S)	1-hour	0.03 ppm	U	
Vinyl Chloride[6] (chloroethene)	24-hour	0.010 ppm	A	
Visibility-Reducing Particles	8-hour (10:00 to 18:00 PST)	See footnote 4	U	

A – attainment
N – nonattainment
U – unclassified

ppm – parts per million
µg/m^3 – micrograms per cubic meter
PST – Pacific Standard Time

km – kilometer
PM10- particulate matter of aerodynamic radius of 10 microns or less
PM2.5- particulate matter of aerodynamic radius of 2.5 microns or less

Notes:

1. California standards for O_3, CO (except Lake Tahoe), SO_2 (1-hour and 24-hour averages), NO_2, PM10, and visibility-reducing particles are values that are not to be exceeded. The standards for sulfates, Lake Tahoe CO, Pb, H_2S, and vinyl chloride are not to be equaled or exceeded. If the standard is for a 1-hour, 8-hour, or 24-hour average (i.e., all standards except for Pb and the PM2.5 and PM10 annual standards), some measurements may be excluded. In particular, measurements are excluded that the California Air Resources Board (CARB) determines would occur an average of less than once per year.
2. National standards shown are the "primary standards" designed to protect public health. National air quality standards are set by the U.S. Environmental Protection Agency (USEPA) at levels determined to be protective of public health with an adequate margin of safety. National standards other than for O_3, particulates, and those based on annual averages are not to be exceeded more than once per year. The 1-hour O_3 standard is attained if, during the most recent 3-year period, the average number of days per year with maximum hourly concentrations above the standard is less than or equal to one. The 8-hour O_3 standard is attained when the 3-year average of the fourth highest daily concentrations is 0.075 ppm (75 parts per billion) or less. The 24-hour PM10 standard is attained when the 3-year average of the ninety-ninth percentile of monitored concentrations is less than 150 $\mu g/m^3$. The 24-hour PM2.5 standard is attained when the 3-year average of ninety-eighth percentiles is less than 35 $\mu g/m^3$. Except for the national particulate standards, annual standards are met if the annual average falls below the standard at every site. The national annual particulate standard for PM10 is met if the 3-year average falls below the standard at every site. The annual PM2.5 standard is met by spatially averaging annual averages across officially designated clusters of sites and then determining whether the 3-year average of these annual averages falls below the standard.
3. The national 1-hour O_3 standard was revoked by USEPA on June 15, 2005. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm. However, the attainment status has not yet been updated based on this revised 8-hour standard. It is likely that the region will remain in nonattainment.
4. Statewide Visibility-Reducing Particle Standard (except Lake Tahoe Air Basin): Particles in sufficient amount to produce an extinction coefficient of 0.23 per km when the relative humidity is less than 70 percent. This standard is intended to limit the frequency and severity of visibility impairment resulting from regional haze and is equivalent to a 10-mile nominal visual range.
5. To attain this standard, the 3-year average of the ninety-eighth percentile of the daily maximum 1-hour average at each monitoring station within an area must not exceed 0.100 ppm (effective January 22, 2010).
6. CARB has identified Pb and vinyl chloride as toxic air contaminants with no threshold level of exposure below which there are no adverse health effects determined. Although the vinyl chloride CAAQS remains in force, current regulatory efforts are under ARB's Air Toxics Program.

Sources: SJVAPCD 2017a, CARB 2017a, USEPA 2017

USEPA and, in California, the California Air Resources Board (CARB) regulate various stationary sources, area sources, and mobile sources. USEPA has regulations involving performance standards for specific sources that might release criteria pollutants and/or toxic air contaminants (TACs), known at the federal level as hazardous air pollutants (HAPs). These regulations are 40 CFR Part 60, Standards of Performance for New Stationary Sources (NSPS), and 40 CFR Part 63, National Emission Standards for Hazardous Air Pollutants (NESHAP). Large sources of emissions may be classified as major sources and are subject to the Clean Air Act Title V program. In addition, USEPA has regulations involving emission criteria for off-road sources, such as emergency generators, construction equipment, and vehicles as well as other releases of toxic chemicals.

6.2.2 State Laws, Regulations, and Policies

California Clean Air Act

CARB sets standards for criteria pollutants in California that are more stringent than NAAQS and includes the following additional contaminants: visibility-reducing particles, hydrogen sulfide (H_2S), sulfates, and vinyl chloride. The Proposed Program is located in the San Joaquin Valley Air Basin (SJVAB) and managed by SJVAPCD, which manages air quality in Stanislaus County for attainment and permitting purposes.

CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB also establishes passenger vehicle fuel specifications.

Statewide Truck and Bus Regulations

On December 12, 2008, CARB approved a regulation to substantially reduce emissions of diesel particulate matter (DPM), oxides of nitrogen (NO_X), and other pollutants from existing on-road diesel vehicles operating in California. The regulation requires affected trucks and buses to meet performance standards and requirements between 2011 and 2023. Affected vehicles included on-road, heavy-duty, diesel-fueled vehicles with a gross vehicle weight rating greater than 14,000 pounds. The regulation was updated in 2011 and 2014 with revisions that provide more compliance flexibility and reflect the impact of the economic recession on vehicle activity and emissions. Heavy-duty trucks used during construction of Proposed Program components would be required to comply with this regulation.

In-use, Off-road Diesel Vehicle Regulation

In 2007, CARB adopted a regulation to reduce DPM and NO_X emissions from in-use, off-road, heavy-duty diesel vehicles in California. The regulation imposes limits on vehicle idling and requires fleets to reduce emissions by retiring, replacing, repowering, or installing exhaust retrofits to older engines. In December 2011, major amendments were made to the regulation, including modifications to the compliance dates for performance standards and establishing requirements for compliance with verified diesel emission control strategy technologies that reduce PM and/or NO_X emissions.

Heavy-duty Vehicle Inspection Program

The heavy-duty vehicle inspection program requires heavy-duty trucks and buses to be inspected for excessive smoke and tampering and for compliance with engine certification labels. Any heavy-duty vehicle (i.e., a vehicle with a gross vehicle weight rating greater than 6,000 pounds) traveling in California, including vehicles registered in other states and foreign countries, may be tested. Tests are performed by CARB inspection teams at border crossings, California Highway Patrol weigh stations, fleet facilities, and randomly selected roadside locations. Owners of trucks and buses found to be in violation are subject to penalties starting at $300 per violation. Heavy-duty trucks used during construction of Proposed Program components would be subject to the inspection program.

Heavy-duty On-board Diagnostic System Regulations

In 2004, CARB adopted regulations requiring on-board diagnostic (OBD) systems on all 2007 and later model year heavy-duty engines and vehicles (i.e., vehicles with a gross vehicle weight rating greater than 14,000 pounds) in California. CARB subsequently adopted a comprehensive OBD regulation for heavy-duty vehicles model years 2010 and beyond. The heavy-duty OBD regulations were updated in 2010, 2013, and 2016 with revisions to enforcement requirements, testing requirements, and implementation schedules. Heavy-duty trucks used during construction of proposed components would be required to comply with the heavy-duty OBD regulatory requirements.

California Standards for Diesel Fuel Regulations

State regulations require diesel fuel with sulfur content of 15 parts per million (ppm) or less (by weight) to be used for all diesel-fueled vehicles that are operated in California. The standard also applies to non-vehicular diesel fuels. The regulations also contain standards for the aromatic hydrocarbon content and lubricity of diesel fuels.

Airborne Toxic Control Measures

CARB regulates TACs by requiring implementation of various airborne toxic control measures (ATCMs), which are intended to reduce emissions associated with toxic substances. Relevant ATCMs to the Proposed Program are as follows:

- ATCM for Diesel Particulate Matter from Portable Engines Rated at 50 Horsepower and Greater
- ATCM to Limit Diesel-Fueled Commercial Motor Vehicle Idling
- ATCM to Reduce Particulate Emissions from Diesel-Fueled Engines Standards for Nonvehicular Diesel Fuel
- ATCM for Stationary Compression Ignition Engines
- Asbestos ATCM for Construction, Grading, Quarrying and Surface Mining Operations

In addition to ATCMs, TACs are controlled under several regulations in California, including the Tanner Air Toxics Act, Air Toxics Hot Spots Information Act, and Assembly Bill (AB) 2588: Air Toxics "Hot Spots" Information and Assessment Act. In addition, Proposition 65 (the Safe Water and Toxic Enforcement Act of 1996) requires that the state publish a list of chemicals known to cause cancer or birth defects or other reproductive harm. Proposition 65 requires businesses to notify Californians about substantial amounts of chemicals in the products they purchase or that are released into the environment.

6.2.3 Local Laws, Regulations, and Policies

At the local level, responsibilities of air quality districts include overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality monitoring stations, overseeing agricultural burning permits, and reviewing air quality–related sections of environmental documents under CEQA. The air quality districts are also responsible

for establishing and enforcing local air quality rules and regulations that address the requirements of federal and state air quality laws, as well as for ensuring that the NAAQS and California Ambient Air Quality Standards (CAAQS) are met.

Local governments are essential partners in the effort to reduce air pollutant emissions. The local governments have influence through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations.

San Joaquin Valley Air Pollution Control District

SJVAPCD has local air quality jurisdiction over the Proposed Program and in other counties under its jurisdiction. SJVAPCD's recommended CEQA thresholds are outlined in its *Guidance for Assessing and Mitigating Air Quality Impacts* (SJVAPCD 2015a). SJVAPCD has adopted attainment plans to address ozone and PM.

1-Hour Ozone

Although USEPA revoked its 1979 1-hour ozone standard in June 2005, many planning requirements remain in place, and the SJVAB must still attain this standard before CAA Section 185 fees (which are required when attainment is not reached) can be rescinded. SJVAPCD's most recent 1-hour ozone plan, the 2013 Plan for the Revoked 1-hour Ozone Standard (SJVAPCD 2013), demonstrated attainment of the 1-hour ozone standard by 2017. In July 2016, USEPA made a final determination that the SJVAB has attained the 1-hour ozone NAAQS based on the most recent 3-year data period (2012–2014) of sufficient, quality-assured, and certified data (SJVAPCD 2017b). For the SJVAB to be officially designated as an attainment area, SJVAPCD must verify that attainment is due to permanent and enforceable emission reductions and prepare a maintenance plan.

8-Hour Ozone

SJVAPCD's far-reaching 2007 Ozone Plan demonstrates attainment of USEPA's 1997 8-hour ozone standard by 2023. USEPA approved the 2007 Ozone Plan effective April 30, 2012. The district has prepared a 2016 Ozone Plan to address USEPA's 2008 8-hour ozone standard, which the SJVAB must attain by 2032 (SJVAPCD 2016). This extremely stringent standard is nearing the SJVAB's naturally occurring background concentrations of ozone. The 2016 plan identifies that, without mobile sources transitioning to near-zero emission levels through the implementation of transformative measures such as ultra-low tailpipe emissions standards (which SJVAPCD does not have the authority to implement), attainment of the federal standards is not possible (SJVAPCD 2016).

PM10

PM is a complex mixture of extremely small particles and liquid droplets, made up of multiple components, including acids, organic chemicals, metals, and soil or dust particles. PM10 is typically found near roadways and around dusty industrial sites. Based on PM10 measurements from 2003-2006, USEPA found that the SJVAB has reached attainment of federal PM10 standards. On September 21, 2007, the SJVAPCD Governing Board adopted the 2007 PM10 *Maintenance Plan and Request for Redesignation*, which demonstrates that the SJVAB will continue to meet the PM10 standard. USEPA approved the document and, on September 25, 2008, the SJVAB was redesignated to attainment/maintenance (SJVAPCD 2017c). The District is in the process of

developing the 2017 PM10 Maintenance Plan to demonstrate the maintenance of the standard for an additional ten-year period of 2020 through 2029 (SJVAPCD 2017c, 2017e).

PM2.5

PM2.5 are found in smoke and haze. Changes in the federal PM2.5 air quality standard (in 1997, 2006, and 2012) and recent drought conditions in California have resulted in the development of multiple PM2.5 air quality plans by SJVAPCD. The 2008 and 2015 PM2.5 Plans have been prepared to achieve attainment of USEPA's first PM2.5 standard, set in 1997. The attainment deadline for the 1997 standard has been delayed to 2020 (SJVAPCD 2015b).

USEPA lowered the PM2.5 standard in 2006. Although SJVAPCD's 2012 PM2.5 Plan showed attainment of this standard by 2019, USEPA reclassified SJVAPCD to serious nonattainment for the 2006 PM2.5 standard in January 2015, and SJVAPCD must prepare a revised plan to address this nonattainment.

On September 15, 2016, SJVAPCD adopted the "2016 Moderate Area Plan for the 2012 PM2.5 standard" to address another PM2.5 standard issued by USEPA in 2012 and USEPA's determination that the SJVAB is a moderate nonattainment area for the 2012 federal PM2.5 standard. SJVAPCD continues to work with USEPA on issues surrounding these plans, including USEPA implementation updates and is in the process of developing an attainment strategy to address the multiple PM2.5 standards (1997, 2006, and 2012) (SJVAPCD 2017c, 2017e).

SJVAPCD Rules

The Proposed Program may be subject to the following district rules. These rules have been adopted by SJVAPCD to reduce emissions throughout the SJVAB:

- **Rule 2010 – Permits Required**. This rule requires an applicant to obtain an Authority to Construct and Permit to Operate for certain types of stationary air pollution sources.

- **Rule 2201 – New and Modified Stationary-Source Review Rule** applies to all new stationary sources and all modifications to existing stationary sources subject to SJVAPCD permit requirements that, after construction, emit or may emit one or more pollutants regulated by the rule.

- **Rule 2280 – Portable Equipment Registration** applies to portable emissions units that may operate in participating districts throughout California. The rule requires applicable portable equipment to be registered.

- **Rule 3135 – Dust Control Plan Fees** requires the applicant to submit a fee in addition to a dust control plan. The purpose of this rule is to recover SJVAPCD's cost for reviewing these plans and conducting compliance inspections.

- **Rule 4001 – New Source Performance Standards** applies to new or modified sources of air pollution that must comply with standards, criteria and requirements for the applicable sources. This incorporates by reference the federal NSPS.

- **Rule 4002 – National Emission Standards for Hazardous Air Pollutants** applies to sources of air pollution that must comply with standards, criteria and requirements for the applicable sources of TACs. This incorporates by reference the federal NESHAPs.

- **Rule 4101 – Visible Emissions** prohibits emissions of visible air contaminants into the atmosphere and applies to any source operation that emits or may emit air contaminants.

- **Rule 4102 – Nuisance** applies to any source operation that emits or may emit air contaminants or other materials. In the event that the project or construction of the project creates a public nuisance, it could be in violation of this rule and subject to SJVAPCD enforcement action.

- **Rule 4201 – Particulate Matter Concentration** applies to any source operation which emits or may emit dust, fumes, or total suspended particulate matter.

- **Rule 4202 – Particulate Matter - Emissions Rate** limits particulate matter emissions by establishing allowable emission rates.

- **Rule 4301 – Fuel Burning Equipment** limits the concentration of combustion contaminants and specifies maximum emission rates for sulfur dioxide, nitrogen oxide and combustion contaminant emissions.

- **Rule 4601 – Architectural Coatings.** The purpose of this rule is to limit volatile organic compound (VOC) emissions from architectural coatings.

- **Rule 4701 – Internal Combustion Engines—Phase 1** limits the emissions of NO_X, CO, and VOCs from internal combustion engines. These limits are not applicable to standby engines as long as they are used fewer than 200 hours per year (e.g., for testing during non-emergencies).

- **Rule 4702 – Internal Combustion Engines—Phase 2** limits the emissions of NO_X, CO, and VOCs from spark-ignited internal combustion engines.

- **Regulation VIII – Fugitive PM10 Prohibitions** is a series of rules (Rules 8011–8081) designed to reduce PM10 emissions (predominantly dust/dirt) generated by human activity, including construction, road construction, bulk materials storage, landfill operations, and other activities. This regulation is discussed in more detail below.

- **Rule 9410 – Employer-Based Trip Reduction** requires large employers to establish an Employer Trip Reduction Implementation Plan, which is a set of measures that encourages employees to use alternative transportation and ridesharing for their commutes.

- **Rule 9510 – Indirect Source Review** is intended to reduce a project's impact from indirect sources such as on-road and off-road vehicles on air quality through project design elements or mitigation by payments of applicable off-site mitigation fees. Compliance with Rule 9510 is designed to reduce construction exhaust NO_X and PM10 emissions by 20 percent and 45 percent, respectively. Compliance with Rule 9510 is designed to reduce operational emissions of NO_X and PM10 emissions by 33.3 percent and 50 percent,

respectively. This rule is only applicable to certain development projects that exceed size requirements at buildout (e.g., 25,000 square feet of light industrial space).

Fugitive Dust Measures (Regulation VIII)

The Proposed Program would also be required to implement the mandatory control measures listed in Table 2 of the SJVAPCD's Mitigation Measures guidance document (SJVAPCD 2017d) to reduce fugitive dust emissions. These measures are not considered mitigation measures under CEQA because they are required by law.

The Regulation VIII requirements (some of which are not applicable to the Proposed Program) are listed below:

- All disturbed areas, including storage piles, which are not being actively used for construction purposes, will be effectively stabilized for dust emissions using water or a chemical stabilizer/suppressant, or covered with a tarp or other suitable cover or vegetative ground cover.

- All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized for dust emissions using water or a chemical stabilizer/suppressant.

- All land clearing, grubbing, scraping, excavation, land leveling, grading, cut and fill, and demolition activities will be effectively controlled of fugitive dust emissions by utilizing an application of water or by presoaking.

- With the demolition of buildings up to six stories in height, all exterior surfaces of the building will be wetted during demolition.

- All materials transported off site will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained.

- All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. Use of blower devices is expressly forbidden.

- Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, piles will be effectively stabilized to prevent fugitive dust emissions utilizing sufficient water or a chemical stabilizer/suppressant.

- Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday.

- Any site with 150 or more vehicle trips per day will prevent carryout and trackout.

Stanislaus County General Plan 2015

The *Stanislaus County General Plan 2015* Conservation/Open Space Element (Stanislaus County 2016a) identifies air quality–related goals and policies. These are aimed at reducing criteria

pollutant emissions and improving regional air quality by requiring all development projects to include reasonable air quality mitigation measures, reducing motor vehicle emissions, and increasing public awareness of air quality problems and solutions.

City of Modesto Urban Area General Plan

Chapter VII of the *City of Modesto Urban Area General Plan* (City of Modesto 2019) includes policies pertaining to air quality. The following are relevant to the Proposed Program:

> **Policy VII-H.2[h].** Consult with the SJVAPCD during CEQA review for discretionary projects with the potential for causing adverse air quality impacts.
>
> **Policy VII-H.2[m].** Implement measures to reduce the temporary, yet potentially significant, local air quality impacts from construction activities. Potential measures to be implemented may include those measures shown in Section V-2 in the Final Master Environmental Impact Report.

Del Rio Community and Salida Community Plans

The *Del Rio Community Plan* (Stanislaus County 1992), which was incorporated in the *Stanislaus County General Plan*, identifies in Goal 3 that future development in the Del Rio Area should be planned to ensure that adverse impacts on air quality are appropriately mitigated. The *Salida Community Plan* (Stanislaus County 2007), which was incorporated in the *Stanislaus County Plan,* does not identify policies or regulations related to air quality.

Ceres General Plan 2035

The *Ceres General Plan 2035* (2018) contains the following goal and policies related to air quality:

Goal 4.G. Protect and improve air quality in the Ceres area, and protect residents from harmful effects of air pollution.

> **4.G.1. Air Quality Goals.** Cooperate with the San Joaquin Valley Air Pollution District and other agencies in the San Joaquin Valley Air Basin to meet regional air quality goals and achieve a consistent and effective approach to regional air quality planning and management. Coordinate with other jurisdictions and other regional agencies in the San Joaquin Valley to establish parallel air quality programs and implementation measures.
>
> **4.G.3. Air Quality Analysis.** Require major new development projects (those exceeding the San Joaquin Valley Air Pollution District's small project analysis level) to submit an air quality analysis for review and approval, with mitigation measures to be required as determined by the City.
>
> **4.G.5. Reduce VMT.** Emphasize transit-oriented, walkable, compact development patterns to reduce total vehicle miles traveled.

City of Turlock

The *Turlock General Plan* (2012) has the following policies related to air quality:

Policy 8.1-a. Prioritize Air Quality in Local Planning. Continue efforts to improve air quality in Turlock by integrating air quality analysis and mitigation in land use and transportation planning, environmental review, public facilities and operations, and special programs.

Policy 8.1-n. Construction-related Air Emissions Impacts. Continue to require mitigation measures as a condition of obtaining permits to minimize dust and air emissions impacts from construction. Require contractors to implement dust suppression measures during excavation, grading, and site preparation activities. Techniques may include, but are not limited to:

- Site watering or application of dust suppressants;
- Phasing or extension of grading operations;
- Covering of stockpiles;
- Suspension of grading activities during high wind periods (typically winds greater than 25 miles per hour); and
- Revegetation of graded areas.

6.3 Environmental Setting

This section presents information on the existing physical environmental conditions in the Program vicinity related to air quality. This information will be used to determine impacts that could result from construction and operation of the Proposed Program, as presented in Section 6.4. Modesto is home to roughly 300,000 people and contains multiple busy roads and highways, railroads, and an airport. Food processing plants operate in the study area and agricultural land uses are located around the edge of the City proper. The outlying service areas of Grayson, Turlock, and Del Rio are primarily residential. Grayson and Turlock are considered mostly or fully developed, respectively, while Del Rio is approximately 57 percent developed.

6.3.1 Regional Setting

San Joaquin Valley Air Basin

Modesto is located in the SJVAB, which forms the southern half of California's Central Valley and is approximately 250 miles long and averages 35 miles wide. The SJVAB is bounded by the Sierra Nevada to the east, the Coast Ranges to the west, and the Tehachapi Mountains to the south. The SJVAB contains all of San Joaquin, Stanislaus, Merced, Madera, Fresno, Kings, and Tulare Counties, as well as a portion of Kern County.

Climate and Topography

The Modesto area has an inland Mediterranean climate that is characterized by hot, dry summers and cool winters. Summer high temperatures average in the 90s and often exceed 100 degrees Fahrenheit (°F).

Although marine air generally flows into the basin from the Bay-Delta region, the surrounding mountain ranges restrict air movement through and out of the valley. Wind speed and direction

influence the dispersion and transportation of pollutants; the greater the wind flow, the lower the accumulation. The vertical dispersion of air pollutants in the SJVAB is limited by the presence of persistent temperature inversion, leading to higher concentrations of emitted pollutants (SJVAPCD 2015a).

Precipitation and fog tend to reduce pollutant concentrations. Ozone is formed when chemical compounds such as VOCs and NO_X (collectively known as ozone precursors) react with sunlight. Clouds and fog block the solar radiation for the ozone-forming reaction. Annual precipitation in the San Joaquin Valley decreases from north to south, averaging approximately 20 inches in the north, 10 inches in the central portion, and less than 6 inches in the south (SJVAPCD 2002). In the Modesto area of the SJVAB, the average annual precipitation is approximately 12 inches (Western Regional Climate Center 2017).

6.3.2 Existing Air Quality Conditions

Air Monitoring Data

USEPA, CARB, and local air districts operate an extensive air monitoring network to measure maintenance of or progress toward attainment of NAAQS and CAAQS. **Table 6-2** shows the most recent three years of available data.

Table 6-2. Air Monitoring Data for 2013–2015

Monitoring Station	Pollutant Standard		2015		2014		2013	
			No. Exceed[1]	Maximum Concentration[1]	No. Exceed[1]	Maximum Concentration[1]	No. Exceed[1]	Maximum Concentration[1]
Stanislaus County Modesto-14th Street	PM10	24-hour	31.1/0	85.6 µg/m^3	37.6/0	122.5 µg/m^3	57.7/0	73 µg/m^3
	PM2.5	24-hour	*	44.0 µg/m^3	17.0	58.2 µg/m^3	37.6	83.2 µg/m^3
	Ozone	8-hour	24/16	0.093 ppm	24/12	0.090 ppm	13/2	0.082 ppm
	Ozone	1-hour	5/0	0.111 ppm	1/0	0.103 ppm	0/0	0.088 ppm

Notes:

CO = carbon monoxide; NO_2 = nitrogen dioxide; PM2.5 = particulate matter of 2.5 micrometers or less; PM10 = particulate matter of 10 micrometers or less; SO_2 = sulfur dioxide; ppm = parts per million; µg/m^3 = micrograms per cubic meter; * = There was insufficient (or no) data available to determine the value.

1. Indicates the number of exceedance days recorded annually at this monitoring station for a particular constituent compared to that constituent's NAAQS and CAAQS. The first number is the state value and the second number is the federal value if they are different. Used National Maximum

Source: CARB 2017b

Existing Sources of Air Pollution and Odors

Existing sources of air pollution and odor in the Modesto area include: heavy duty trucks, passenger vehicles, farm equipment, off-road equipment, food processing plants, industrial facilities, waste management facilities, the county airport, and agricultural operations. Air pollution transported from the San Francisco Bay and Sacramento areas may account for roughly a quarter of the pollution in the Modesto area (SJVAPCD 2017e).

Existing Emissions from City's Water Treatment Facilities and Distribution System

Monitoring data or comprehensive estimates of existing emissions of criteria pollutants or TACs from the City's water distribution system facilities is not available. The types of emissions associated with the water distribution facilities include criteria pollutant and TAC emissions from burning diesel fuel to run emergency generators at wells and booster pump stations.

The water distribution facilities are typically not a potential source of odors. SJVAPCD was contacted to obtain a list of all odor complaints received in the past 3 years associated with the drinking water system and no complaints were found.

6.3.3 Air Pollutants

Carbon Monoxide

CO is an odorless, colorless gas that is highly toxic. CO is formed by the incomplete combustion of fuels and is emitted directly into the air. Ambient CO concentrations normally are considered a localized effect and typically correspond closely to the spatial and temporal distributions of vehicular traffic, forming pollutant hot spots. CO concentrations are also influenced by wind speed and atmospheric mixing. Under inversion conditions, CO concentrations can be distributed more uniformly over an area to some distance from vehicular sources. CO binds with hemoglobin, the oxygen-carrying protein in blood, and reduces the blood's capacity for carrying oxygen (O_2) to the heart, brain, and other parts of the body. At high concentrations, CO can cause heart difficulties in people with chronic diseases, impair mental abilities, and cause death.

Nitrogen Oxides

NO_X is a family of gaseous nitrogen (N) compounds and are precursors to the formation of ozone (O_3) and PM. Nitrogen dioxide (NO_2), the major component of NO_X, is a reddish-brown gas that is toxic at high concentrations. NO_X result primarily from the combustion of fossil fuels under high temperature and pressure. Fuel combustion, primarily from on-road and off-road motor vehicles, and industrial sources are the major sources of this air pollutant. (SJVAPCD's *Guidance for Assessing and Mitigating Air Quality Impacts* (GAMAQI) (SJVAPCD 2015a).

Volatile Organic Compounds

VOCs are hydrocarbon compounds that exist in the ambient air. VOCs contribute to the formation of smog and/or might themselves be toxic. VOC emissions are a major precursor to the formation of O_3. VOCs are also commonly referred to as reactive organic gases (ROG). (SJVAPCD 2015a).

Ozone

O_3 is a reactive gas consisting of three oxygen atoms. In the stratosphere, O_3 exists naturally and shields the earth from harmful incoming ultraviolet radiation. In the troposphere (the lowest region of the atmosphere); however, it is a secondary pollutant that is formed when NO_X and VOCs react in the presence of sunlight. O_3 at the earth's surface causes numerous adverse health effects and is a pollutant regulated by state and federal air quality agencies. It is a major component of smog. High concentrations of ground-level O_3 can adversely affect the human respiratory system and aggravate cardiovascular disease and many respiratory ailments. O_3 also

damages natural ecosystems, such as forests, foothill communities, and agricultural crops, as well as some human-made materials, such as rubber and plastics. (SJVAPCD 2015a).

Particulate Matter

PM is a complex mixture of extremely small particles and liquid droplets. PM is made up of multiple components, including acids, organic chemicals, metals, and soil or dust particles. Particle size is directly linked to the potential for causing health problems. PM10 is of concern because these particles pass through the throat and nose and are deposited in the thoracic region of the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. PM10 is typically found near roadways and around dusty industrial sites. PM2.5, which are found in smoke and haze, penetrate even more deeply into the thoracic and alveolar regions of the lungs. (SJVAPCD 2015a).

Sulfur Dioxide

Sulfur dioxide (SO_2) is a colorless, irritating gas with a "rotten egg" smell formed primarily by the combustion of sulfur-containing fossil fuels. Suspended SO_2 particles contribute to poor visibility and are a component of PM10. (SJVAPCD 2015a).

Lead

Lead (Pb) is a metal found naturally in the environment as well as in manufactured products. Historically, the major sources of Pb emissions have been mobile and industrial activities. The health effects of Pb poisoning include loss of appetite, weakness, apathy, and miscarriage. Pb poisoning can also cause lesions of the neuromuscular system, circulatory system, brain, and gastrointestinal tract. (SJVAPCD 2015a).

In the past, gasoline-powered automobile engines were a major source of airborne Pb through the use of leaded fuels. Because the use of leaded fuel has been mostly phased out, ambient concentrations of Pb have dramatically decreased.

Hydrogen Sulfide

H_2S is associated with refining, geothermal activity, sewage treatment plants, oil and gas production, and confined animal feeding operations. H_2S is extremely hazardous in high concentrations and can cause death. (SJVAPCD 2015a).

Sulfates

Sulfates are the fully oxidized ionic form of sulfur. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds result primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. This sulfur is oxidized to SO_2 during the combustion process and subsequently converted to sulfate compounds in the atmosphere. The conversion of SO_2 to sulfates is comparatively rapid and complete in urban areas of California because of their regional meteorological features. (SJVAPCD 2015a).

CARB's sulfate standard is designed to prevent aggravation of respiratory symptoms. Effects of sulfate exposure at levels that exceed the standard include decreased ventilatory function, aggravation of asthmatic symptoms, and increased risk of cardiopulmonary disease. Sulfates are

particularly effective in degrading visibility and, because they are usually acidic, can harm ecosystems and damage materials and property. (SJVAPCD 2015a).

Vinyl Chloride

Vinyl chloride is a colorless gas that does not occur naturally; it is formed when substances such as trichloroethane, trichloroethylene, and tetrachloroethylene are broken down. Vinyl chloride is used to make PVC, which is used in plastic products, such as pipes, wire and cable coatings, and packaging materials. (SJVAPCD 2015a).

Toxic Air Contaminants

TACs are air pollutants that can lead to serious illness or increased mortality, even when present in relatively low concentrations. Hundreds of different types of TACs exist, with varying degrees of toxicity. Many TACs are confirmed or suspected carcinogens or are known or suspected to cause birth defects or neurological damage. For some chemicals, such as carcinogens, no threshold exists below which exposure can be considered risk free. Examples of TAC sources associated with the Proposed Program are fossil fuel combustion and chemicals used in the water storage and well treatment areas.

Sources of TACs include stationary sources, area-wide sources, and mobile sources. USEPA maintains a list of 187 TACs, identified federally as HAPs. These HAPs are included on CARB's list of TACs along with additional chemicals identified as TACs in California (CARB 2017c). According to the *California Almanac of Emissions and Air Quality* (CARB 2013), many researchers consider DPM to be a primary contributor to health risk from TACs because particles in the exhaust carry many harmful organics and metals, rather than being a single substance like other TACs. Unlike many TACs, outdoor DPM is not monitored by CARB because no routine measurement method exists; however, using the CARB emission inventory's PM10 database, ambient PM10 monitoring data, and results from several studies, CARB has made preliminary estimates of DPM concentrations throughout the state (California Office of Environmental Health Hazard Assessment [OEHHA] 2001).

Existing buildings might contain asbestos, which can become airborne during demolition activities. People exposed to low levels of airborne asbestos could be at an elevated risk (e.g., above background rates) for lung cancer and mesothelioma. The risk is proportional to the cumulative inhaled dose (quantity of fibers); the risk increases with the time since first exposure. Although various factors influence the disease-causing potency of the different forms of asbestos (such as fiber length and width, fiber type, and fiber chemistry), all forms are carcinogens. Existing regulations regarding demolition of asbestos-containing materials (described in Chapter 11, *Hazards and Hazardous Materials*) require prescriptive measures to ensure that public health is protected and exposure to asbestos is minimized.

6.3.4 Sensitive Receptors

Sensitive receptors are those segments of the population most susceptible to the effects of poor air quality—children, the elderly, and individuals with preexisting serious health problems affected by air quality (e.g., asthma) (CARB 2005). Examples of locations that contain sensitive receptors are residences, schools and school yards, parks and playgrounds, daycare centers, nursing homes, and medical facilities. Residences include houses, apartments, and senior living

complexes. Medical facilities can include hospitals, convalescent homes, and health clinics. Playgrounds include play areas associated with parks or community centers.

Many, if not all, of these sensitive land uses can be found in the immediate vicinity of elements of the Proposed Program. Specific sensitive receptors may change or move over the life of the Program, and a comprehensive map of sensitive receptors is not available. Figure 11-3 in Chapter 11, *Hazards and Hazardous Materials,* show the locations of existing schools, which are one category of sensitive receptors in the study area.

6.4 Impact Analysis

6.4.1 Methodology

Construction and operation-related air quality impacts of WMP components were evaluated qualitatively by considering the Proposed Program's sources and duration of criteria pollutant, TACs, or odor emissions; proximity to sensitive receptors; and frequency and duration of emissions. In addition, the existing SJVAB's air quality attainment status and applicable air quality plans were reviewed and considered in the impact analysis. Construction and operational impact significance were determined qualitatively by considering the project emission sources and duration since specific details of construction or operation for those program components have not yet been defined. Where specific construction or operation-related details were lacking, impacts were conservatively judged to be significant, and prescriptive mitigation measures were developed to ensure significant impacts would be minimized.

The SJVAPCD has established thresholds of significance for criteria pollutant emissions, which are based on SJVAPCD New Source Review offset requirements for stationary sources. As such, the impact analysis qualitatively considered these thresholds of significance, which are identified in the section below.

For TACs and odors associated with all of the Proposed Program components, impacts were evaluated qualitatively using SJVAPCD's *Guidance for Assessing and Mitigating Air Quality Impacts* (GAMAQI) (SJVAPCD 2015a). The odor impact evaluation for WMP construction and operation was conducted qualitatively based primarily on whether the existing operations had elicited any odor or nuisance complaints from SJVAPCD in the past 3 years. In addition, other pertinent information regarding TAC and odor sources (i.e., frequency of emissions, type of sources) and the proximity to sensitive receptors was considered.

6.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on air quality if it would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Violate any air quality standard or contribute substantially to an existing or projected air quality violation;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality

standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);

- Expose sensitive receptors to substantial pollutant concentrations; or
- Create objectionable odors affecting a substantial number of people.

GAMAQI Thresholds

The SJVAPCD's recommended CEQA thresholds are outlined in its GAMAQI (SJVAPCD 2015a) and summarized in **Table 6-3** below. SJVAPCD's thresholds for ROG and NO_X, which are ozone precursors, are 10 tons/year for each pollutant. Ozone precursor emissions are generated from both heavy- and light-duty vehicle use. The SJVAPCD has determined that projects with emissions below the thresholds of significance for criteria pollutants would be determined to be in compliance with the applicable SJVAPCD air quality plans (SJVAPCD 2015a).

According to SJVAPCD's guidance, impacts of operational and construction emissions are considered to be less than significant if fugitive dust (PM10 and PM2.5) emissions are below the significance levels listed in **Table 6-3**. In addition, SJVAPCD Regulation VIII requires all projects that involve earthmoving or travel on unpaved roads to implement fugitive dust control measures. Implementation of these control measures would be sufficient to reduce PM10 and PM2.5 impacts to a level considered less than significant.

These threshold limits apply to the annual emissions, and apply separately to construction, operational permitted sources and activities, and operational non-permitted activities. In other words, a project can emit up to 10 tons of NO_X during construction, 10 tons of NO_X from permitted activities, and an additional 10 tons of NO_X from non-permitted activities for a total of 30 tons of NO_X emissions and still be under the CEQA significance threshold and would be considered less than significant.

Table 6-3. Applicable SJVAPCD Construction and Operational Project-Level Significance Thresholds under CEQA

Pollutant	Construction Emissions Threshold (tons/year)	Operational Permitted Activities (tons/year)	Operational Non-permitted activities (tons/year)
Carbon monoxide (CO)	100	100	100
Oxides of nitrogen (NO_X; ozone precursor)	10	10	10
Reactive organic gases (ROG; ozone precursor)	10	10	10

Source: SJVAPCD 2015a

The following quantitative TAC thresholds of significance are identified in the *Guidance for Assessing and Mitigating Air Quality Impacts* (SJVAPCD 2015a), with implementation of the latest revisions to SJVAPCD's risk management policy (SJVAPCD 2015c, 2015d) also serving as revisions to the CEQA thresholds:

- Probability of contracting cancer for the Maximally Exposed Individual (MEI) exceeds 20 in 1 million, or
- Ground-level concentrations of non-carcinogenic TACs result in a Hazard Index greater than 1 for the MEI.

Due to the variable nature of construction activity, the generation of TAC emissions in most cases would be temporary, especially considering the short amount of time such equipment is typically operating within an influential distance that would result in the exposure of sensitive receptors to substantial concentrations. Chronic and cancer-related health effects estimated over short periods are uncertain. Cancer potency factors are based on animal lifetime studies or studies of workers with long-term exposure to the carcinogenic agent. There is considerable uncertainty in trying to evaluate the cancer risk from exposure that would last only a small fraction of a lifetime. Some studies indicate that the dose rate may change the potency of a given dose of a carcinogenic chemical. In other words, a dose delivered over a short period may have a different potency than the same dose delivered over a lifetime (OEHHA 2017). Given that the construction period for each component under the Proposed Program would vary and has not yet been defined, a qualitative analysis was determined to be the appropriate level of detail required to determine the impact of TAC emissions.

For operational TAC emissions, the Proposed Program's facilities are required to be below the health effects quantitative thresholds in order to obtain the required operating permits consistent with SJVAPCD regulations regarding permitted sources. For construction and operation, health risks from TACs were evaluated by identifying the Proposed Program's potential to generate TAC emissions and determining whether sensitive receptors could be affected by those emissions.

6.4.3 Environmental Impacts

Impact AQ-1: Conflict with or Obstruct Implementation of an Applicable Air Quality Plan (*Significant and Unavoidable*)

Stanislaus County and the cities of Modesto, Turlock, and Ceres have planned for growth and adopted general plans for future development (City of Modesto 2019, Stanislaus County 2016b, City of Ceres 2018, City of Turlock 2012). The SJVAPCD develops its air quality plans to attain NAAQS and CAAQS which are in part based on the population and growth estimates provided by the local planning agencies, including the cities and County. The SJVAPCD established mass emission thresholds of significance for criteria pollutant emissions to be consistent with levels required to be consistent with the SJVAPCD air quality plans. Thus, projects with emissions below the thresholds of significance for criteria pollutants would be determined to not conflict or obstruct implementation of the applicable air quality plans provided there are no individual measures listed in the air quality plans that the project would conflict or obstruct.

The Proposed Program's purpose is to repair, replace, and install new water distribution and conveyance infrastructure to support and accommodate new and existing development in the

City's service areas, General Plan, and SOI. The Proposed Program components would not directly add new housing or substantial sources of employment to the region.

The Proposed Program would follow all federal, state, and local regulations and policies related to sources of air pollutants, including applicable general plan policies. In addition, construction of the Proposed Program would follow local air district regulations for fugitive dust, VOCs, and NO_X emissions. Construction of various program-level CIPs may result in NO_X emissions that exceed the 10 tons per year emission threshold and could result in other criteria pollutant emissions that exceed SJVAPCD's thresholds; therefore, such components could obstruct implementation of applicable air quality plans, which would be a significant impact. It is also unknown at this time if the amount of operational emissions would exceed any significance threshold. Mitigation measures that would address construction emissions and unpermitted operational emissions are discussed under Impact AQ-2. It is assumed that emissions from permitted sources would be addressed under the applicable permit process and any excess emissions would purchase offsets as required to obtain permits; however, this would not address construction or unpermitted operational emissions.

For these reasons, the Proposed Program could generate emissions greater than that accounted for in the applicable air quality plans. Therefore, the Proposed Program could obstruct or conflict with applicable air quality plans and would have a **significant and unavoidable** impact.

Impact AQ-2: Violate Any Air Quality Standard or Contribute Substantially to an Existing or Projected Air Quality Violation (*Less than Significant with Mitigation*)

As described above, the Proposed Program would be located in an area that is in non-attainment for federal and state ozone and PM2.5 standards and state PM10 standards. In order to determine if the Proposed Program would violate or contribute substantially to an existing or projected air quality violation, an evaluation of the projected mass emissions for construction and operation compared to the applicable mass criteria emission thresholds is required.

The SJVAPCD considers PM10 emissions to be the greatest pollutant of concern when assessing construction-related air quality impacts. The SJVAPCD has determined that compliance with its Regulation VIII and the implementation of all feasible control measures specified in the GAMAQI (SJVAPCD 2015a), constitute sufficient mitigation to reduce construction-related PM10 emissions to less-than-significant levels and to minimize adverse air quality effects. These mitigation measures are listed below under Mitigation Measures AQ-1 and AQ-2. All construction projects must abide by Regulation VIII. Consequently, this air quality analysis assumes that the City and its contractors will comply with Regulation VIII and that such compliance will be sufficient to eliminate any potentially significant air quality effects generated by construction activities. The implementation of Mitigation Measures AQ-1 and AQ-2 would reduce this impact to a less-than-significant level. In addition, the SJVAPCD recommends the measures listed below to reduce exhaust pollutant emissions from heavy construction equipment to less-than-significant levels:

- Water exposed surfaces three times daily.
- Cover soil stockpiles with a tarp.
- Water unpaved haul roads three times daily.

- Apply soil stabilizers to inactive areas.
- Replace ground cover in disturbed areas quickly.
- Use aqueous diesel fuel in diesel equipment.
- Use diesel particulate filters on diesel equipment.
- Use cooled exhaust gas recirculation on diesel equipment.

Adherence to the mitigation measures and requirements identified above would reduce pollutant emissions below significance thresholds and would ensure that impacts would be less than significant.

The City does not consider cancer risk from diesel-fueled construction equipment to be an issue. The assessment of cancer risk is typically based on a 70-year exposure period. Construction activities are sporadic and short-term, and once construction activities have ceased, the emissions have ceased as well. Because the exposure period to construction diesel exhaust would be well below the 70-year exposure period, construction of the Proposed Program is not anticipated to result in an elevated cancer risk. This impact is considered less than significant after implementation of Mitigation Measures AQ-1 and AQ-2.

Construction Impacts

The Proposed Program components would all be located within the SJVAB. Construction activities for individual components would generate emissions of criteria air pollutants via the use of heavy equipment, worker vehicle trips, and material hauling truck trips. The City would comply with all SJVAPCD rules and regulations, including Regulation VIII, Fugitive Dust Measures. With implementation of Mitigation Measures AQ-1 and AQ-2, construction-related impacts would be less than significant with mitigation.

Operational Impacts

Operation of WMP components would include the operation, inspection, and maintenance of new tanks, emergency generators, well stations, pump stations, lift stations and water treatment facilities. These activities would result in the direct emission of criteria air pollutants through employee vehicle trips and infrequent use of backup generators primarily during emergencies or power outages, and emissions of VOCs and combustion products associated with vehicle trips, maintenance equipment, generator use, and water treatment operation. The operation and maintenance of other WMP facilities would not require a substantial change in employees compared to existing conditions.

Emissions from the operation of emergency generator sources would not be substantial since any new or modified emergency generators would go through the SJVAPCD permit process to ensure that project emissions are below the appropriate significance threshold for permitted sources and offsets provided if required. If the air quality thresholds of significance are expected to be exceeded, Mitigation Measure AQ-3 would be implemented to ensure equipment with best available control technology would be installed to minimize potential emissions. Thus, these operational impacts would be less than significant with mitigation.

Overall Conclusion

In conclusion, with implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3, the Proposed Program's overall impacts would be **less than significant with mitigation.**

Mitigation Measure AQ-1: Implement SJVAPCD Regulation VIII Control Measures for Construction Emissions of PM10

The following controls are required to be implemented by the City or its contractor at all construction sites.

- All disturbed areas, including storage piles, that are not being actively used for construction purposes will be effectively stabilized to avoid dust emissions through application of water, a chemical stabilizer/suppressant, or by covering these areas with a tarp or other suitable cover or vegetative ground cover.
- All on-site unpaved roads and off-site unpaved access roads will be effectively stabilized to avoid dust emissions using water or a chemical stabilizer/ suppressant.
- All land-clearing, grubbing, scraping, excavation, land-leveling, grading, cut-and-fill, and demolition activities will be effectively controlled to avoid fugitive dust emissions through the application of water during work or by presoaking.
- When materials are transported off-site, all material will be covered or effectively wetted to limit visible dust emissions, and at least 6 inches of freeboard space from the top of the container will be maintained.
- All operations will limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions. The use of blower devices is expressly forbidden.)
- Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles will be effectively stabilized of fugitive dust emissions using sufficient water or chemical stabilizer/ suppressant.
- Within urban areas, trackout will be immediately removed when it extends 50 or more feet from the site and at the end of each workday.
- Any site with 150 or more vehicle trips per day will prevent carryout and trackout.

Mitigation Measure AQ-2: Implement Enhanced Control Measures for Construction Emissions of PM10

The following measures will be implemented by the City or its contractor at construction sites when required to mitigate significant PM_{10} impacts as determined by SJVAPCD Air Quality Thresholds of Significance discussed above (note, these measures are to be implemented in addition to Regulation VIII requirements):

1. Limit traffic speeds on unpaved roads to 15 miles per hour (mph).

2. Install sandbags or other erosion-control measures to prevent silt runoff.

The following measures are strongly encouraged at construction sites that are large in area, are located near sensitive receptors, or warrant additional emissions reductions for any other reason.

1. Install wheel washers for all exiting trucks, or wash off all trucks and equipment leaving the site.

2. Install wind breaks at windward sides of construction areas.

3. Suspend excavation and grading activity when winds exceed 20 mph.

4. Limit the area subject to excavation, grading, and other construction activity at any one time.

5. Regardless of the wind speed, an owner/operator must comply with Regulation VIII's 20% opacity limitation.

Mitigation Measure AQ-3: Implement Control Measures for Operational Emissions of PM10 and for Ozone Precursors (ROG and NO_X)

In compliance with SJVAPCD rules, when the Air Quality Thresholds of Significance will be exceeded, the City or its contractor shall install equipment with Best Available Control Technology, as indicated in a site-specific air quality analysis, to reduce emissions below the SJVAPCD significance threshold. Installed equipment with Best Available Control Technology may include but not be limited to pumping, dewatering, aerating, or heating equipment. This measure will be implemented at all new or modified water system sites when required to mitigate significant PM10 and ozone impacts due to exceedance of Air Quality Thresholds of Significance.

Impact AQ-3: Result in a Cumulatively Considerable Net Increase of Any Criteria Pollutant for Which the Project Region Is Non-Attainment Under an Applicable Federal or State Ambient Air Quality Standard (*Significant and Unavoidable*)

As discussed earlier, WMP components would be located in an area that is in non-attainment for federal and state ozone and PM2.5 standards and state standards for PM10. Thus, the combined emissions of past, present, and probable future projects would have a significant cumulative impact on air quality in the project area. No single CIP, however, would be sufficient in size, by itself, to cause nonattainment of the regional air quality standards. With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3, none of the program-level components would result in mass emissions above the significance threshold. However, because these measures would not completely avoid emissions, the Proposed Program could make a considerable contribution to cumulative impacts related to criteria pollutant emissions for which the region is in non-attainment, a significant impact. This impact would remain **significant and unavoidable**.

Impact AQ-4: Expose Sensitive Receptors to Substantial Pollutant Concentrations (*Less than Significant with Mitigation*)

During construction activities for the proposed improvements, construction emissions have the potential to affect sensitive receptors located at and near the program-level component sites. These sensitive receptors include single-family residential units and schools around proposed improvement sites. Therefore, nuisances associated with fugitive dust and construction activity emissions would affect adjacent residences. During operational activities, stationary emission sources would also emit pollutants. With implementation of Mitigation Measures AQ-1, AQ-2, and AQ-3, the impact on sensitive receptors from fugitive dust and other pollutants would be **less than significant with mitigation**.

Impact AQ-5: Create Objectionable Odors Affecting a Substantial Number of People (*Less than Significant*)

Construction Impacts

Construction activities of program-level components would not generate permanent or long-term objectionable odors. The odors associated with the operation of diesel-powered equipment for construction activities may be detected by nearby sensitive receptors. These odors would be of relatively short duration in any given location and would be unlikely to affect a substantial number of people at a given time, given that construction of the various Proposed Program components would be spread out over time, as well as factors such as the migration of construction equipment along pipeline routes during construction. This impact would be less than significant.

Operational Impacts

The SJVAPCD's GAMAQI identifies common types of facilities that have been known to produce odors in the San Joaquin Valley and water distribution and treatment facilities are not included in the list. As described in Section 6.3.2, SJVAPCD has not received or confirmed odor complaints associated with the City's water facilities in the last three years. Therefore, this impact would be less than significant.

Overall Conclusion

Considering the WMP components as a whole, the construction and operation would not have any substantial long-term sources of odors. There will be some odors associated with diesel fueled equipment during construction and operation which may be detected by nearby sensitive receptors. These odors would be of relatively short duration in any given location and would be unlikely to affect a substantial number of people at a given time. The Program components are not facility types that are known to produce odors and no odor complaints have been received in the past three years. Therefore, the Proposed Program's overall impact would be **less than significant**.

Chapter 7
BIOLOGICAL RESOURCES

7.1 Overview

This chapter presents the environmental setting and impacts of the Proposed Program related to biological resources. The biological resources include special-status plant and wildlife species; sensitive natural communities, including jurisdictional wetlands and other waters; and wildlife movement corridors.

7.2 Regulatory Setting

7.2.1 Federal Laws, Regulations, and Policies

Endangered Species Act

The Endangered Species Act (ESA) (16 U.S. Government Code [USC] Section 1531 *et seq*.; 50 CFR Parts 17 and 222) provides for the conservation of species that are endangered or threatened throughout all or a substantial portion of their range, as well as protection of the habitats on which they depend. The U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration's (NOAA's) National Marine Fisheries Service (NMFS) share responsibility for implementing the ESA. In general, USFWS manages terrestrial and freshwater species; NMFS manages marine and anadromous species.

Section 9 of the ESA and its implementing regulations prohibit the "take" of any fish or wildlife species listed under the ESA as endangered or threatened, unless otherwise authorized by federal regulations. The ESA defines the term "take" to mean "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (16 USC Section 1532). Section 7 of the ESA (16 USC Section 1531 *et seq*.) outlines the procedures for federal interagency cooperation to conserve federally listed species and designated critical habitats. Section 10(a)(1)(B) of the ESA provides a process by which nonfederal entities may obtain an incidental take permit from USFWS or NMFS for otherwise lawful activities that incidentally may result in take of endangered or threatened species, subject to specific conditions.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) (16 USC Chapter 7, Subchapter II) protects migratory birds. Most actions that result in take or the permanent or temporary possession, of a migratory bird constitute violations of the MBTA. The MBTA also prohibits the destruction of occupied nests. USFWS is responsible for overseeing compliance with MBTA.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act (16 USC Section 668; 50 CFR Part 22) prohibits take of bald and golden eagles and their occupied and unoccupied nests. USFWS administers the Bald and Golden Eagle Protection Act.

Clean Water Act

The Clean Water Act (CWA) (33 USC Section 1251) establishes the basic structure for regulating discharges of pollutants (including dredged or fill material) into waters of the United States (U.S.), including wetlands, and for regulating quality standards for surface waters. The CWA provides policies for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters.

CWA Section 404 prohibits the discharge of dredged or fill material into waters of the U.S., including wetlands, without a permit from the U.S. Army Corps of Engineers (USACE). CWA Section 401 requires that an applicant for a federal license or permit that allows activities with the potential to result in a discharge to waters of the U.S., including wetlands, obtain a state 401 water quality certification.

Wetlands and Other Waters Potentially Exempt from USACE Jurisdiction

A number of exemptions from CWA regulations exist for areas that would otherwise qualify as waters of the U.S. Certain areas, which meet the technical definition of wetlands, generally are not considered waters of the U.S. (33 CFR 328.3(a)). Such potentially non-jurisdictional areas include:

- Non-tidal drainage and irrigation ditches excavated on dry land;
- Artificially irrigated areas, which would revert to upland, if the irrigation ceased;
- Artificial lakes or ponds created by excavating and/or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing;
- Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking dry land to retain water for primarily aesthetic reasons; and
- Water filled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States.

USACE and USEPA reserve the right to determine that a particular water body within the categories is a water of the U.S. on a case-by-case basis. In general, potentially non-jurisdictional waters such as ditches are delineated during a wetland delineation, and submitted for verification by USACE.

7.2.2 State Laws, Regulations, and Policies

California Fish and Game Code

The California Fish and Game Code (F&G Code) includes various statutes that protect biological resources, including the Native Plant Protection Act of 1977, the California Endangered Species Act (CESA), and requirements for lake or streambed alteration agreements.

The Native Plant Protection Act (F&G Code Sections 1900–1913) authorizes the Fish and Game Commission to designate plants as endangered or rare and prohibits take of any such plants, except as authorized under limited circumstances.

CESA (F&G Code Sections 2050–2098) prohibits state agencies from approving a project that would jeopardize the continued existence of a species listed under CESA as endangered or threatened. Section 2080 of F&G Code prohibits the take of any species that is state listed as endangered or threatened, or designated as a candidate for such listing. The California Department of Fish and Wildlife (CDFW) may issue an incidental take permit authorizing take of listed and candidate species if that take is incidental to an otherwise lawful activity, subject to specified conditions.

F&G Code Sections 3503, 3513, and 3800 protect native and migratory birds, including their active or inactive nests and eggs, from all forms of take. In addition, Sections 3511, 4700, 5050, and 5515 identify species that are fully protected from all forms of take. Section 3511 lists fully protected birds, Section 5515 lists fully protected fish, Section 4700 lists fully protected mammals, and Section 5050 lists fully protected amphibians.

CDFW regulates activities that will interfere with the natural flow of, or substantially alter, the channel, bed, or bank of a lake, river, or stream. Section 1602 of the F&G Code requires that CDFW be notified of lake or streambed alteration activities. If CDFW subsequently determines that such an activity might adversely affect an existing fish and wildlife resource, it has the authority to issue a streambed alteration agreement, including requirements to protect biological resources and water quality.

7.2.3 Local Laws, Regulations, and Policies

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* was adopted in January 2019 (City of Modesto 2019a). The General Plan's natural resource policies in the Open Space and Conservation element are based on the realization that the remaining riparian and riverine corridors are perhaps the most significant providers of wildlife habitat in the County. The General Plan seeks to protect riparian and wetland habitats while allowing compatible uses where appropriate.

The General Plan identifies two areas within the study area to be preserved as natural resources: the Tuolumne River and Dry Creek. It also provides the following guidance regarding wildlife and other natural resources:

> **Policy VII-E.2[a].** For proposed development consistent with the adopted Urban Area General Plan on lands within the Baseline Developed Area and Downtown Area, exclusive of lands within the Dry Creek and Tuolumne River Comprehensive Planning

Districts, no further biological study is warranted unless habitat is present or if specific information concerning the known or potential presence of significant biological resources is identified in future updates of the California Natural Diversity Database (CNDDB), or through formal or informal input received from resource agencies or other qualified sources.

Ceres General Plan 2035

The Ceres General Plan 2035 (City of Ceres 2018) guides land use and development in the City of Ceres. Goals and policies in the General Plan related to biological resources that are potentially relevant to the Proposed Program include the following:

Chapter 6, Agricultural and Natural Resources

Goal 4.C Protect, restore, and enhance habitats and wildlife corridors that support fish and wildlife species to maintain populations at viable levels.

Policies

4.C.2. Pesticide Control. Work with the Stanislaus County Agricultural Commissioner to identify and enforce mechanisms to control residual pesticides and pesticide runoff to prevent potential damage to water quality, vegetation, and wildlife.

4.C.3. Fisheries. Support the management efforts of the California Department of Fish and Wildlife to maintain and enhance the productivity of fisheries in the Tuolumne River.

4.C.4. Riparian Setback. Protect the integrity of habitats, hydrology, and soils along the river by prohibiting development within a distance of at least 50 feet as measured from the limit of riparian vegetation or as measured from the top of the channel bank, whichever is greater. Smaller buffers may be allowed only where it can be demonstrated that a 50-foot buffer is not possible due to site-specific constraints or if the development is for public, passive park or recreational uses, and the proposed narrower buffer would adequately protect the biological, hydrologic, and geologic integrity of the riparian corridor.

Goal 4.D Protect environmentally sensitive lands and rare, threatened, or endangered plant and animal communities.

Policies

4.D.1. Special-Status Species. Support the preservation of habitats of rare, threatened, endangered, and other special-status species. Require development in areas known to have value for wildlife to be carefully planned and, where possible, sited to maintain reasonable wildlife value of the habitat.

4.D.2 Biotic Resource Evaluation. Require, as part of the environmental review process prior to approval of discretionary development permits involving parcels within a significant ecological resource area, a biotic resources evaluation of the site by a qualified biologist. Significant ecological resource areas include, at a minimum, the following:

- Any habitat that supports rare, threatened, or endangered animals or plants; and
- Riparian and wetland habitats associated with the Tuolumne River.
- Such evaluation should consider the potential for significant impact on biological resources, and identify measures to feasibly mitigate any impacts or otherwise indicate why mitigation would not be feasible. In approving any such permit, the City shall determine the feasibility of the identified mitigation measures.

4.D.3. Significant Biological Resources. Support and cooperate with the efforts of other local, State, and federal agencies and private entities engaged in the preservation and protection of significant biological resources from incompatible land uses and development, including efforts involving a Habitat Conservation Plan or other plan for habitat management or restoration. Significant biological resources include endangered, threatened, or rare species and their habitats, wetland habitats, wildlife migration corridors, and locally-important species/communities.

City of Turlock General Plan

The City of Turlock General Plan (City of Turlock 2012) guides land use and development in the City of Turlock. Policies in the General Plan related to biological resources that are potentially relevant to the Proposed Program include the following:

Guiding Policies

7.4-a Increase Biological Diversity. Make efforts to enhance the diversity of Turlock's flora and fauna, including street trees.

Implementing Policies

7.4-b Sensitive Site Planning. Protect mature trees and natural vegetation and features wherever feasible in new development areas.

7.4-c Urban Trees. Protect and expand Turlock's urban forest through public education, sensitive maintenance practices, and a long-term financial commitment adequate to protect these resources. Continue to require the planting of appropriately-spaced street trees in new development areas.

7.4-d Special Review if New Information Becomes Available. Establish environmental review procedures, such as site reconnaissance and

certification by a biologist, as part of the project development application process if new information to support existence of a Special Status species becomes available.

7.4-e Identify and protect nesting habitat. Projects on greenfield sites proposing to commence construction or other ground-disturbing activities during the typical nesting season (February through mid-September) shall be required to conduct a survey by a qualified biologist no more than 10 days prior to the start of disturbance activities. If nests are found, no-disturbance buffers around active nests shall be established as follows until the breeding season has ended or until a qualified biologist determines that the birds have fledged and are no longer dependent on the nest for survival:

- 250 feet for non-listed bird species;
- 500 feet for migratory bird species; and
- One-half mile for listed species and fully protected species.

7.4-f Swainson's Hawk protection. If Swainson's Hawks are found foraging in an agricultural area prior to or during construction, project proponents shall consult a qualified biologist for recommended proper action, and incorporate appropriate mitigation measures. If specific project activities on sites where suitable nesting habitat may exist are to take place during the normal breeding season (February through mid-September), project proponents shall be required to conduct a survey by a qualified biologist for nesting raptors in all potentially suitable trees no more than 10 days prior to the start of disturbance activities. If an active Swainson's Hawk nest is found, appropriate mitigation measures may include, but are not limited to:

- Establishing a one-half mile buffer around the nest until the breeding season has ended or until a qualified biologist determines that the birds have fledged and are no longer dependent on the nest for survival;
- Mitigating habitat loss within a 10-mile radius of known nest sites as follows:
  - Providing a minimum of one acre of habitat management land for each acre of development for projects within one mile of an active nest tree;
  - Providing a minimum of 0.75 acres of habitat management land for each acre of development for projects within between one and five miles of an active nest tree; or
  - Providing a minimum of 0.5 acres of habitat management land for each acre of development for projects within between five and 10 miles of an active nest tree.

Stanislaus County General Plan 2015

The following goals and policies in the Conservation/Open Space Element of the Stanislaus County General Plan 2015 (2016) are relevant to the Proposed Program:

Conservation and Open Space Element

Goal One: Encourage the protection and preservation of natural and scenic areas throughout the County.

Policy Three: Areas of sensitive wildlife and plant life (e.g., vernal pools, riparian habitats, flyways and other waterfowl habitats, etc.) including habitats and plant species listed in the General Plan Support Document or by state or federal agencies shall be protected from development and/or disturbance.

Policy Four: Protect and enhance oak woodlands and other native hardwood habitat.

Goal Ten: Protect fish and wildlife species of the County.

Policy Twenty-nine: Habitats of rare and endangered fish and wildlife species, including special status wildlife and plants, shall be protected.

Stanislaus County does not have a tree protection ordinance.

Del Rio Community Plan

The Del Rio Community Plan guides development in the community of Del Rio (Stanislaus County 1992). One goal within the Community Plan is relevant to the Proposed Program.

Goal 6: Significant natural resources in the community shall be preserved.

7.3 Environmental Setting

The Proposed Program is situated in the central San Joaquin Valley. The study area generally has gently sloping terrain. The Tuolumne River flows westerly through the southern portion of Modesto. Dry Creek, a tributary to the Tuolumne River, runs through the central portion of Modesto before joining the Tuolumne River near South 9th Street and River Road. The San Joaquin River travels westerly north of Modesto. Elevations range from approximately 55 feet above mean sea level (msl) in Grayson to approximately 120 feet above msl in the eastern portion of the study area.

The landscape in the study area is dominated by the urban development and agriculture. Other land uses in the study area include, transportation, and open space. Natural habitats are mostly found along the Tuolumne River and Dry Creek.

7.3.1 Methods

Reconnaissance surveys were not conducted as the Proposed Program is analyzed in this EIR at a program level, locations of some project components are conceptual, project designs have not been finalized for the proposed CIPs, and some components would not be constructed for a

decade or more. For these reasons, reconnaissance surveys would potentially be out of date and no longer accurate by the time components would be constructed. Instead, several documents covering biological resources in the vicinity of the Program were reviewed for relevant habitat and setting information. This existing information is sufficient to identify sensitive resources and evaluate impacts at a program level. These resources include:

- City of Modesto Urban Area General Plan (City of Modesto 2019a);
- 2010 WSER Draft Program EIR (ICF Jones & Stokes and Horizon 2009);
- Ceres General Plan 2035 (City of Ceres 2018);
- City of Turlock General Plan (City of Turlock 2012);
- Stanislaus County General Plan 2015 (2016);
- Del Rio Community Plan (Stanislaus County 1992);
- City's Modesto Wastewater Master Plan Update Draft Master Environmental Impact Report (Turnstone 2006); and
- North Valley Regional Recycled Water Program Final Environmental Impact Report/Statement (Bureau of Reclamation and City of Modesto 2015a).

Special-status plant and animal species with the potential to occur within the Program were identified through a review of the following resources:

- USFWS IPaC Resource List for the Modesto Water Master Plan study area (USFWS 2017a);
- CDFW's CNDDB queries for the following U.S. Geological Survey (USGS) 7.5-minute quadrangles: Manteca, Avena, Escalon, Ripon, Salida, Riverbank, Westley, Brush Lake, Ceres, Oakdale, Waterford, Denair, and Turlock (CDFW 2017);
- California Native Plant Society's (CNPS's) Inventory of Rare and Endangered Plants of California queries for the following USGS 7.5-minute quadrangles: Manteca, Avena, Escalon, Ripon, Salida, Riverbank, Westley, Brush Lake, Ceres, Oakdale, Waterford, Denair, and Turlock (CNPS 2017);
- eBird records for the study area (eBird 2017a).

Results from these database queries are provided in Appendix B, *Biological Resources Analysis Supporting Information*.

7.3.2 Vegetation and Land Cover

Descriptions of vegetation and land cover occurring in the study area are adapted from previous documents related to the study area, including the 2010 WSER Draft Program EIR (ICF Jones & Stokes and Horizon 2009), 2019 Master EIR for the City's general plan (City of Modesto 2019b), the City of Modesto Wastewater Master Plan Update EIR (Turnstone Consulting 2006), and the North Valley Regional Recycled Water Program DEIR/Statement (Bureau of Reclamation and City

of Modesto 2015b). Wildlife typically associated with these biological communities is also described below.

Urban

The majority of the study area consists of urban land cover. This includes roads, parking lots, housing, landscaping, golf courses and commercial and industrial facilities. This habitat consists of a wide range of ornamental/landscaped vegetation and some native plants. This habitat supports a variety of urban-adapted wildlife.

Birds typical of urban habitats include American crow (*Corvus brachyrhynchos*), scrub jay (*Aphelocoma californica*), mockingbird (*Mimus polyglottos*), house finch (*Haemorhous mexicanus*), wrentit (*Chamaea fasciata*), bushtit (*Psaltriparus minimus*), and oak titmouse (*Baeolophus inornatus*). Common mammals include raccoon (*Procyon lotor*), opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*).

Agricultural Lands

Agricultural lands within the study area include pastures, orchards, and row crops. Pastures are typically cultivated in grasses and/or legumes such as alfalfa (*Medicago sativa*), rescue grass (*Bromus catharticus*), Johnson's grass (*Sorghum halepense*), tall fescue (*Festuca arundinaceae*), and Italian ryegrass (*Festuca perennis*). The primary orchard crops in the vicinity of the Program components are almond (*Prunus dulcis*) and English walnut (*Juglans regia*) cultivars.

Pastures provide food, cover, and nesting habitat for wildlife species; the value of the habitat varies with crop type and agricultural practices. Bird diversity can be high in irrigated pastures (Hartman and Kyle 2010). Species commonly utilizing pasture lands include red-winged blackbird, Brewer's blackbird (*Euphagus cyanocephalus*), European starling (*Sturnus vulgaris*), house finch (*Carpodacus mexicanus*), killdeer (*Charadrius vociferous*), American crow, and American kestrel. Some pasture lands and crop fields provide suitable breeding habitat for northern harrier (*Circus cyaneus*). Redwing blackbird and potentially tricolored blackbird (*Agelaius tricolor*) may use grain crops for breeding habitat. Burrowing owl (*Athene cunicularia*) may use plowed fields for breeding habitat. Small mammals such as gophers (*Thomomys* spp.) and voles (*Microtus* spp.) present in pastures and row crops provide important prey resources for raptors such as red-tailed hawk and Swainson's hawk.

In orchards, understory vegetation is generally removed, which limits the abundance and diversity of wildlife species in this habitat, but some wildlife adapted to agriculture may use these habitats. Species such as the side-blotched lizard (*Uta stansburiana*) can occur in this habitat type. American crow and yellow-billed magpies (*Pica nuttalli*), which forage on nut crops, are often present (City of Patterson 2010). Other bird species may potentially nest in orchards.

Riverine

The Tuolumne River and Dry Creek support multiple species of freshwater and anadromous fish. Introduced freshwater species greatly outnumber native species in the Tuolumne River and associated waterways. Largemouth and smallmouth bass (*Micropterus salmoides* and *M. dolomieu*), and sunfishes (*Lepomis* spp.) are abundant and occur in many aquatic habitats. Anadromous fish rear and spawn in freshwater habitats and spend the remainder of their life in marine habitats. The amount of time individuals spent as adults in the ocean or as juveniles in

freshwater various from species to species. Special-status fish in the Tuolumne River include Chinook salmon (Central Valley fall- late fall-run Evolutionarily Significant Unit [ESU]) (*Oncorhynchus tshawytscha*), Central Valley steelhead (*Oncorhynchus mykiss*), Sacramento splittail (*Pogonichthys macrolepidotus*), and hardhead (*Mylopharodon conocephalus*).

Some irrigation ditches also provide riverine-type habitat, but these areas provide only marginal habitat for aquatic species.

Valley Foothill Riparian

Riparian habitat in the study area is limited to the Tuolumne River, San Joaquin River, and Dry Creek. Common species in this habitat include willows (*Salix* spp.), valley oak (*Quercus lobata*), Fremont cottonwood (*Populus fremontii*), Oregon ash (*Fraxinus latifolia*), wild grape (*Vitis californicus*), and California blackberry (*Rubus ursinus*). Invasive species in riparian areas include Himalayan blackberry (*Rubus armeniacus*) and arundo (*Arundo donax*). Blue elderberry (*Sambucus nigra* ssp. *caerulea*) shrubs are common in this habitat, and are the host plant for the federally-threatened valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*).

Riparian areas provide food, water, shelter, and migration corridors for a wide variety of wildlife. Mammals such as raccoon, desert cottontail (*Sylvilagus audubonii*), deer mouse (*Peromyscus maniculatus*), striped skunk, American beaver (*Castor canadensis),* and coyote (*Canis latrans*) are common in riparian woodlands. Raptor species such as great horned owl (*Bubo virginianus*), red-tailed hawk (*Buteo jamaicensis*), red-shouldered hawk (*Buteo lineatus*), Swainson's hawk (*Buteo swainsoni*), white-tailed kite (*Elanus leucurus*), and American kestrel (*Falco sparverius*) may nest and forage in riparian habitats. A wide variety of passerine species use this habitat for breeding and foraging, including belted kingfisher (*Megaceryle alcyon*), downy woodpecker (*Picoides pubescens*), northern flicker (*Colaptes auratus*), black phoebe (*Sayornis nigricans*), bushtit, and Bewick's wren (*Thryomanes bewickii*).

Wetlands and Vernal Pools

Wetlands within the study area are located in transitions between aquatic and terrestrial habitats, such as along the fringes of riverine habitat or in seasonally flooded grasslands.

Vernal pools are shallow, ephemeral waterbodies that form in depressions in grasslands, pastures, and woodlands. Vernal pools support specialized species adapted to their conditions. Conversion of natural habitats to agricultural and developed uses has eliminated much of the vernal pool habitat in the Central Valley. While vernal pools are unlikely in areas where Program activities would take place, they could not be ruled out as a possibility. This habitat type was also included in the Modesto General Plan Update Final Master EIR (City of Modesto 2019b) and other documents related to the study area.

In the study area, wetlands could occur adjacent to or within the Tuolumne River, Dry Creek, or the San Joaquin River. Vernal pools could potentially occur in pastures and grasslands. Wetlands in the study area are dominated by bulrushes (*Schoenoplectus* spp. and *Scirpus* spp.,), cattails (*Typha* spp.), sedges (*Carex* spp.), and rushes (*Juncus* spp.). Vernal pools support a number of special-status species, such as vernal pool fairy shrimp (*Branchinecta lynchi*) and San Joaquin Valley Orcutt grass (*Orcuttia inaequalis*).

Wetlands provide important habitat for birds and amphibians. Common wildlife species in wetlands include bullfrog (*Lithobates catesbeianus*), egrets (*Ardea* and *Egretta* spp.), sora (*Porzana carolina*), American coot (*Fulica americana*), and red-winged blackbird (*Agelaius phoeniceus*).

Grassland

Grassland habitat consists of a mixture of annual and perennial grasses, and forbs. In the Central Valley, grasslands are dominated by a variety of non-native annual grasses such as wild oats (*Avena* spp.), ripgut brome (*Bromus diandrus*) or foxtail barley (*Hordeum murinum*), with native grass species only infrequently present. Grasslands are relatively uncommon in the study area and are generally somewhat disturbed. Grasslands provide food and cover for birds, reptiles, and small mammals. Many raptors may forage in this habitat.

7.3.3 Special-Status Species

For the purposes of this EIR, special-status plant and wildlife species refers to those species that meet one or more of the following criteria:

- Species that are listed as threatened or endangered under the ESA (50 CFR 17.12 for listed plants, 50 CFR 17.11 for listed animals);
- Species that are candidates for possible future listing as threatened or endangered under ESA (76 Federal Register [FR] 66370);
- Species that are listed or proposed for listing by the State of California as threatened or endangered under CESA (14 CCR 670.5);
- Plants listed as rare under the California Native Plant Protection Act of 1977 (F&G Code Section 1900 et seq.);
- Plants listed as California Rare Plant Rank (CRPR) 1, 2, 3, or 4;
- Species that meet the definitions of rare or endangered under CEQA (State CEQA Guidelines, Section 15380);
- Animals fully protected in California (F&G Code Section 3511 [birds], 4700 [mammals], and 5050 [reptiles and amphibians]); and
- Nesting raptors protected in California (F&G Code Section 3503.5).

Special-status species known to occur within the general Program vicinity were identified from the queries described in Section 7.3.1. A list of these species is provided in **Table 7-1; Figure 7-1**, **Figure 7-2,** and **Figure 7-3** show the CNDDB occurrences of special-status plants, special-status animals, and critical habitat,[1] respectively, within a five-mile radius of the Proposed Program. The

[1] Critical habitats are specific geographic areas identified by USFWS or NMFS that contain features essential to the conservation of a federally-listed species and that may require special management and protection.

potential for special-status species to occur in areas affected by the Proposed Program was evaluated according to the following criteria:

- **None:** the area contains a complete lack of suitable habitat, the local range for the species is restricted, and/or the species is extirpated in this region.
- **Not Expected:** suitable habitat or key habitat elements might be present but might be of poor quality or isolated from the nearest extant occurrences. Habitat suitability refers to factors such as elevation, soil chemistry and type, vegetation communities, microhabitats, and degraded/substantially altered habitats.
- **Possible:** the presence of suitable habitat or key habitat elements that potentially support the species.
- **Present:** either the target species was observed directly or its presence was confirmed in previous studies in the area.

7.3.4 Sensitive Natural Communities

Sensitive natural communities include those that are of special concern to resource agencies, such as those that are protected under CEQA, Section 1600 of the F&G Code, or Sections 401 and 404 of the CWA. These include sensitive communities documented in the *List of Vegetation Alliances and Associations* (California Department of Fish and Game [CDFG] 2010) or that are tracked in the CNDDB (CDFW 2017), riparian communities, and waters of the U.S. and state, including wetlands. Sensitive natural communities within the study area include wetland and riparian communities. Riparian communities are located along the Tuolumne River, Dry Creek, Stanislaus River, and San Joaquin River. Wetlands are also associated with these watercourses, and may also be found in non-riparian areas in the study area, such as depressions or other low places in the landscape. These communities could be affected by Program components that are constructed within or adjacent to riparian or wetland areas. Vernal pools are a subset of wetlands that are unlikely in areas where Program activities would take place, but could potentially occur in pastures and grassland in the study area.

7.3.5 Wildlife Movement Corridors

Wildlife movement corridors are established migration routes between multiple locations used by resident and migratory species. CEQA requires the analysis of a project's potential to substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors (see Section 7.4.2, below). Hence, resource agencies consider wildlife corridors to be a sensitive resource in the evaluation of projects.

The Tuolumne River, Dry Creek, Stanislaus River, and San Joaquin River are wildlife movement corridors. The rivers themselves are a movement corridor for anadromous fish such as steelhead, and the adjacent riparian areas allow for terrestrial wildlife movement.

Table 7-1. Special-Status Plant and Animal Species Known to Occur Within the Vicinity of the Project Sites

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
PLANTS						
Atriplex cordulata var. *cordulata*	Heartscale	-	-	1B.2	Chenopod scrub, valley and foothill grassland, meadows and seeps. Alkaline flats and scalds in the Central Valley, sandy soils. 3-275 meters. Blooms April through October.	**Possible.** Potentially suitable habitat exists in alkaline grassland in the study area.
Atriplex coronata var. *coronata*	crownscale	-	-	4.2	Chenopod scrub, valley and foothill grassland, vernal pools. Valley and foothill grasslands, vernal pools. 1-590 meters. Blooms March through October.	**Possible.** Potentially suitable habitat exists in grassland and vernal pools in the study area.
Atriplex minuscula	lesser saltscale	-	-	1B.1	Chenopod scrub, playas, valley and foothill grassland. In alkali sink and grassland in sandy, alkaline soils. 0-225 meters. Blooms May through October.	**Possible.** Potentially suitable habitat exists in alkaline grassland in the study area.
Atriplex subtilis	subtle orache	-	-	1B.2	Valley and foothill grassland. Alkaline soils. 20-100 meters. Blooms June through September.	**Possible.** Potentially suitable habitat exists in alkaline grassland in the study area.
Blepharizonia plumosa	big tarplant	-	-	1B.1	Valley and foothill grassland. Dry hills and plains in annual grassland. Clay to clay-loam soils; usually on slopes and often in burned areas. 30-505 meters. Blooms July through October.	**Possible.** Potentially suitable habitat exists grassland in the study area.
California macrophylla	round-leaved filaree	-	-	1B.2	Cismontane woodland, valley and foothill grassland. Clay soils. 15-1200 meters. Blooms March through May.	**Possible.** Potentially suitable habitat exists in grassland in the study area.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Caulanthus lemmonii	Lemmon's jewelflower	-	-	1B.2	Pinyon and juniper woodland, valley and foothill grassland. 75-1585 meters. Blooms February through May.	**None.** The study area is not within the elevation range of this species.
Centromadia parryi ssp. *rudis*	Parry's rough tarplant	-	-	4.2	Valley and foothill grasslands, vernal pools. Chaparral, cismontane woodland, coastal scrub. 0-100 meters. Blooms May through October.	**Possible.** Potentially suitable habitat exists in grassland and vernal pools in the study area.
Clarkia rostrata	beaked clarkia	-	-	1B.3	Cismontane woodland, valley and foothill grassland. North-facing slopes; sometimes on sandstone. 60-915 meters. Blooms April through May.	**None.** The study area is not within the elevation range of this species.
Eryngium racemosum	Delta button-celery	-	SE	1B.1	Riparian scrub. Seasonally inundated floodplain on clay. 1-335 meters. Blooms June through October.	**Possible.** Potentially suitable habitat exists along Dry Creek and the Tuolumne River.
Eschscholzia rhombipetala	diamond-petaled California poppy	-	-	1B.1	Valley and foothill grassland. Alkaline, clay slopes and flats. 30-625 meters. Blooms March through April.	**Possible.** Potentially suitable habitat exists in grassland in the study area.
Legenere limosa	legenere	-	-	1B.1	Vernal pools. In beds of vernal pools. 1-880 meters. Blooms April through June.	**Possible.** Potentially suitable habitat exists in vernal pools in the study area.
Monardella leucocephala	Merced monardella	-	-	1A	Valley and foothill grassland. Known from riverbeds, moist sandy depressions; requires moist subalkaline sands associated with low elevation grassland. 35-100 meters. Blooms May through August.	**Not expected.** This species is presumed extirpated and was last seen in 1941.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Neostapfia colusana	Colusa grass	FT	SE	1B.1	Vernal pools. Usually in the bottoms of large, or deep vernal pools; adobe soils. 5-125 meters. Blooms May through August.	**None.** Not within the current range for this species (USFWS 2017b).
Orcuttia inaequalis	San Joaquin Valley Orcutt grass	FT	SE	1B.1	Vernal pools. 10-755 meters. Blooms April through September.	**Not expected.** Only the Turlock outlying service areas are within the current range for this species (USFWS 2017c).
Puccinellia simplex	California alkali grass	-	-	1B.2	Meadows and seeps, chenopod scrub, valley and foothill grasslands, vernal pools. Alkaline, vernally mesic. Sinks, flats, and lake margins. 1-915 meters. Blooms March through May.	**Possible.** Potentially suitable habitat exists in alkaline grassland and vernal pools in the study area.
Sphenopholis obtusata	prairie wedge grass	-	-	2B.2	Cismontane woodland, meadows and seeps. Open moist sites, along rivers and springs, alkaline desert seeps. 300-2000 meters. Blooms April through July.	**None.** The study area is not within the elevation range of this species.
Tuctoria greenei	Greene's tuctoria	FE	SR	1B.1	Vernal pools. Vernal pools in open grasslands. 25-1325 meters. Blooms May through July.	**Not expected.** This species is considered extirpated from Stanislaus County (USFWS 2007b).
FISH						
Hypomesus transpacificus	Delta smelt	FT	SE	-	Sacramento-San Joaquin Delta. Seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt. Most often at salinities < 2ppt.	**None.** The study area is outside the range of this species.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Mylopharodon conocephalus	hardhead	-	SSC	-	Low to mid-elevation streams in the Sacramento-San Joaquin drainage. Also present in the Russian River. Clear, deep pools with sand-gravel-boulder bottoms and slow water velocity. Not found where exotic centrarchids predominate.	**Present.** A recent CNDDB occurrence is located within the study area within the Tuolumne River.
Oncorhynchus mykiss irideus	steelhead Central Valley DPS	FT	-	-	Populations in the Sacramento and San Joaquin rivers and their tributaries.	**Present.** A recent CNDDB occurrence is located within the study area within the Tuolumne River. This species may also stray into Dry Creek.
Oncorhynchus tshawytscha	Chinook salmon (Central Valley fall- late fall-run ESU)	-	SSC	-	Populations spawn in the Sacramento and San Joaquin rivers and tributaries. Require beds of loose, silt-free, coarse gravel for spawning. Also need cover, cool water and high dissolved oxygen.	**Present.** This species occurs in the Tuolumne River and my stray into Dry Creek.
Oncorhynchus tshawytscha	Chinook salmon (Central Valley spring-run ESU)	Non-essential experi-mental pop-ulation	See FGC 2080.2 to 2080.4.		All spring-run Chinook salmon, including those that have been released or propagated, naturally or artificially, within the experimental population area, which is defined as the San Joaquin River from Friant Dam downstream to its confluence with the Merced River (exclusive)]. Require beds of loose, silt-free, coarse gravel for spawning. Also need cover, cool water and sufficient dissolved oxygen.	**Possible.** A nonessential experimental population has recently been reintroduced to the San Joaquin River (NMFS 2013). Individuals may potentially stray into the Tuolumne River or Dry Creek.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Pogonichthys macrolepidotus	Sacramento splittail	-	SSC	-	Endemic to the lakes and rivers of the Central Valley, but now confined to the Delta, Suisun Bay and associated marshes. Slow moving river sections, dead end sloughs. Requires flooded vegetation for spawning and foraging for young.	**Possible.** Within the extant range for this species (UC Davis 2017).
INVERTEBRATES						
Branchinecta conservation	Conservancy fairy shrimp	FE	-	-	Endemic to the grasslands of the northern two-thirds of the Central Valley; found in large, turbid pools. Inhabit astatic pools located in swales formed by old, braided alluvium; filled by winter/spring rains, last until June.	**Not expected.** No known populations of this species are located within the study area (USFWS 2012a). Marginally suitable habitat exists in the study area.
Branchinecta lynchi	vernal pool fairy shrimp	FT	-	-	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	**Possible.** Potentially suitable habitat exists in the study area.
Desmocerus californicus dimorphus	valley elderberry longhorn beetle	FT	-	-	Occurs only in the Central Valley of California, in association with blue elderberry (*Sambucus mexicana*). Prefers to lay eggs in elderberries 2-8 inches in diameter; some preference shown for “stressed” elderberries.	**Possible.** Potentially suitable habitat exists in the study area where elderberry bushes are present.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Lepidurus packardi	vernal pool tadpole shrimp	FE	-	-	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass-bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	**Possible.** Potentially suitable habitat exists in the study area.
AMPHIBIANS AND REPTILES						
Ambystoma californiense	California tiger salamander	FT	ST	-	Central Valley Distinct Population Segment federally listed as threatened. Santa Barbara and Sonoma counties Distinct Population Segment federally listed as endangered. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	**Not expected.** No known extant populations of this species in the study area (USFWS 2017d).
Anniella pulchra	northern California legless lizard	-	SSC	-	Sandy or loose loamy soils under sparse vegetation. Soil moisture is essential. They prefer soils with a high moisture content.	**Not expected.** Marginally suitable habitat exists in riparian areas in the study area.
Emys marmorata	western pond turtle	-	SSC	-	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	**Possible.** Potentially suitable habitat exists in the study area.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Gambelia sila	blunt-nosed leopard lizard	FE	SE	-	Resident of sparsely vegetated alkali and desert scrub habitats, in areas of low topographic relief. Seeks cover in mammal burrows, under shrubs or structures such as fence posts; they do not excavate their own burrows.	**None.** The study area is outside the current range for this species.
Rana draytonii	California red-legged frog	FT	SSC	-	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	**None.** This species is considered extirpated from the Central Valley (USFWS 2002).
Spea hammondii	western spadefoot	-	SSC	-	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Vernal pools are essential for breeding and egg-laying.	**Possible.** Potentially suitable habitat exists in the study area.
Thamnophis gigas	giant gartersnake	FT	ST	-	Prefers freshwater marsh and low gradient streams. Has adapted to drainage canals and irrigation ditches. This is the most aquatic of the gartersnakes in California.	**Not expected.** Potentially suitable habitat exists in the study area, but there have been no CNDDB occurrences within Stanislaus County.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
BIRDS						
Aquila chrysaetos	golden eagle	-	FP	-	Rolling foothills, mountain areas, sage-juniper flats, and desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	**Possible.** Flyover and foraging possible; no suitable nesting habitat.
Agelaius tricolor	tricolored blackbird	-	SC, SSC	-	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	**Possible.** Potentially suitable habitat exists in the study area.
Athene cunicularia	burrowing owl	-	SSC	-	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	**Possible.** Potentially suitable habitat exists in the study area.
Buteo swainsoni	Swainson's hawk	-	ST	-	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	**Present.** CNDDB occurrences within the study area.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Circus cyaneus	northern harrier	-	SSC	-	Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	**Possible.** Species has been observed in the study area (ebird.org 2017a). Flood irrigated pastures provide potential nesting habitat.
Coccyzus americanus occidentalis	western yellow-billed cuckoo	FT	SE	-	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	**None.** The study area is not within the current range of this species (USFWS 2017e).
Dendroica petechia	yellow warbler	-	SSC	-	Riparian plant associations. Prefers willows, cottonwoods, aspens, sycamores, and alders for nesting and foraging. Also nests in montane shrubbery in open conifer forests.	**Present.** Species has been observed along the Tuolumne River in the study area (eBird 2017b).
Elanus leucurus	white-tailed kite	-	FP	-	Rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	**Possible.** Riparian areas and isolated mature trees in agricultural areas provide potential nesting habitat.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Haliaeetus leucocephalus	bald eagle	FD	SE, FP	-	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within 1 mile of water. Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	**Possible.** Flyover and foraging possible; no suitable nesting habitat.
Icteria virens	yellow-breasted chat	-	SSC	-	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses. Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 feet of ground.	**Possible.** Potentially suitable habitat exists in the study area.
Lanius ludovicianus	loggerhead shrike	-	SSC	-	Broken woodlands, savannah, pinyon-juniper, Joshua tree, and riparian woodlands, desert oases, scrub and washes. Prefers open country for hunting, with perches for scanning, and fairly dense shrubs and brush for nesting.	**Present.** Species may nest in riparian areas.
Melospiza melodia	song sparrow ("Modesto" population)	-	SSC	-	Emergent freshwater marshes, riparian willow thickets. Riparian forests, vegetated irrigation canals and levees. Inhabits cattails, tules and other sedges; also known to frequent tangles bordering sloughs.	**Possible.** Potentially suitable habitat exists in the study area.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Vireo bellii pusillus	least Bell's vireo	FE	SE	-	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 feet. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, *Baccharis*, mesquite.	**Not expected.** Species has recently been observed in restored riparian habitat at the San Joaquin River National Wildlife Refuge approximately 2.6 miles north of the Grayson portion of the study area (Howell et al. 2010). Some riparian areas in the study Area provide marginal breeding habitat. Due to the species rarity in the Central Valley and habitat quality, it is not expected to breed in the study area**.**
MAMMALS						
Corynorhinus townsendii	Townsend's big-eared bat	-	SSC	-	Throughout California in a wide variety of habitats. Most common in mesic sites. Roosts in the open, hanging from walls and ceilings. Roosting sites limiting. Extremely sensitive to human disturbance.	**Not expected.** Marginally suitable roosting habitat in existing buildings due to human presence.
Dipodomys nitratoides exilis	Fresno Kangaroo Rat	FE	SE	-	Alkali sink-open grassland habitats in western Fresno County. Bare alkaline clay-based soils subject to seasonal inundation, with more friable soil mounds around shrubs and grasses.	**None.** The study area is not within the range of this species.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Eumops perotis californicus	western mastiff bat	-	SSC	-	Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc. Roosts in crevices in cliff faces, high buildings, trees and tunnels.	**Not expected.** Marginally suitable roosting habitat exists in the study area.
Lasiurus blossevillii	western red bat	-	SSC	-	Roosts primarily in trees, 2-40 feet above ground, from sea level up through mixed conifer forests. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging.	**Possible.** Roosting habitat is present in riparian habitats. In the Central Valley, this species is strongly associated with riparian areas, especially with mature cottonwoods (*Populus* spp.) and sycamores (*Platanus racemosa*) (Pierson et al. 2006).

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Neotoma fuscipes riparia	riparian (=San Joaquin Valley) woodrat	FE	SSC	-	Riparian areas along the San Joaquin, Stanislaus, and Tuolumne rivers. Need areas with mix of brush and trees. Need suitable nesting sites in trees, snags or logs.	**Not expected.** Known populations are limited to San Joaquin River National Wildlife Refuge and Caswell Memorial State Park (USFWS 2012), which are approximately 0.7 and 4.1 miles north and west of the study area, respectively. Grayson is the closest portion of the study are to these populations, and no Program activities in Grayson would occur in riparian habitat.
Sylvilagus bachmani riparius	riparian brush rabbit	FE	SE	-	Riparian areas on the San Joaquin River in northern Stanislaus County. Dense thickets of wild rose, willows, and blackberries.	**Not expected.** The study area is not within the known range of this species (USFWS 2017f). Existing populations are limited to Caswell Memorial State Park and a region in the south Delta near Lathrop (Kelly et al. 2011).
Taxidea taxus	American badger	-	SSC	-	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	**Possible.** Potentially suitable habitat exists in riparian areas in the study area, and marginally suitable habitat exists in grasslands.

Scientific Name	Common Name	Federal Listing Status	State Listing Status	Rare Plant Rank	Habitat	Potential to Occur in the Study Area
Vulpes macrotis mutica	San Joaquin kit fox	FE	ST	-	Annual grasslands or grassy open stages with scattered shrubby vegetation. Need loose-textured sandy soils for burrowing, and suitable prey base.	**Not expected.** The study area provides marginally suitable habitat.

*** List of Abbreviations for Federal and State Species-Status:**

FE = Federally endangered
FT = Federally threatened
FD = Federally delisted

SE = State endangered
ST = State threatened
SC (Endangered) = State candidate for listing as endangered
SSC = State species of special concern

1A = plants presumed extirpated in California and either rare or extinct elsewhere.
1B = plants are considered rare, threatened, or endangered in California and elsewhere.
2B = plants are rare, threatened, or endangered in California, but more common elsewhere.
4 = plants of limited distribution a watch list

Threat Ranks:

0.1-Seriously threatened in California (more than 80 percent of occurrences threatened/high degree and immediacy of threat)
0.2-Moderately threatened in California (20–80 percent of occurrences threatened/moderate degree and immediacy of threat)
0.3-Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known)

CDFW (2017) used as the source for habitat descriptions and species status. Based on this information, qualified Horizon biologists determined the potential to occur.

7.3.6 Habitat Conservation Plan

The Pacific Gas and Electric Company (PG&E) San Joaquin Valley Operation & Maintenance Habitat Conservation Plan (PG&E O&M HCP) (PG&E 2006) covers specific PG&E activities throughout nine counties in the San Joaquin Valley, including Stanislaus County. The PG&E O&M HCP complies with the federal and state ESA and addresses multiple species and critical habitats. The PG&E O&M HCP outlines steps on minimizing, avoiding, and compensating for possible direct, indirect, and cumulative adverse effects on threatened and endangered species that could result from PG&E operation and maintenance activities in the San Joaquin Valley. The Proposed Program lies within the PG&E O&M HCP boundaries. The Proposed Program is not a covered activity under the PG&E O&M HCP and the Proposed Program would not conflict with the HCP's conservation strategy for covered species.

7.4 Impact Analysis

7.4.1 Methodology

The Proposed Program includes four primary types of improvements, as identified in the WMP and WSER: storage tanks, groundwater wells, pumps and pump stations, and pipelines. The Proposed Program may affect biological resources through direct or indirect disturbance, modification, or destruction of habitat that results in death, injury, or harassment of individuals or populations of plant or animal species, or that impedes or prevents the dispersal of individuals or populations of special-status species. Impacts on existing biological resources were evaluated by comparing the quantity and quality of habitats present in the study area under baseline conditions to anticipated conditions after construction of proposed components. Direct and indirect impacts on special-status species were assessed based on the potential for the species or their habitat to be disturbed or enhanced by construction of the Proposed Program.

Improvements included in the Proposed Program include replacement or upgrade of existing facilities. Existing facilities are considered developed, and are not expected to have biological impacts, impact habitat or riparian areas. New facilities in the Proposed Program may be in developed areas, or within the public right-of-way, which again are not expected to have biological resource impacts, however new facilities proposed adjacent to the Tuolumne River and Dry Creek or in non-developed areas will require the analysis outlined in the following sections,

In general, once construction is complete, operation and maintenance of the Proposed Program, as described in Chapter 2, would continue similar to existing conditions. The level of ongoing operation and maintenance activities would be anticipated to increase from adding capacity to serve growth, but this increased operation and maintenance is not anticipated to cause disturbance to biological resources. Unless otherwise stated below, impacts associated with operation and maintenance are considered unlikely or less than significant, and are not discussed further.

7.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on biological resources if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS;

- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS;

- Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;

- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;

- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or

- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

7.4.3 Environmental Impacts

Impact BIO-1: Impacts on Special-status Plants (*Less than Significant with Mitigation*)

Special-status plants may occur in the vicinity of Program components in habitats such as grassland, wetlands, vernal pools, and valley and foothill riparian (Table 7-1). Valley and foothill riparian habitat occurs along Dry Creek and the Tuolumne River. Several buildout pipelines, such as those in North Modesto near Cottonwood Drive or South Modesto near Ironside Drive, and a fire flow improvement pipeline in South Modesto near Crows Landing Road and El Paso Avenue, occur in ruderal grasslands. Wetlands may occur in riparian habitat associated with Dry Creek and the Tuolumne River, as well as potentially in some agricultural lands. Impacts to special-status plants could include removal of individuals, and indirect effects from sedimentation or changes to hydrology. Impacts to special-status plants during construction of certain Program components would be minimized by using trenchless or other non-open cut construction method pipeline construction for crossings of the Tuolumne River and Dry Creek, where wetland and riparian habitat is located. The only Program components that would cross the Tuolumne River and Dry Creek are components FTGRID-01 and FTGRID-04, which are both new 16-inch diameter pipelines for future grid improvements. A frac-out (described in Chapter 12, *Hydrology and Water Quality*) during trenchless pipeline construction could result in impacts to special-status plants such as removal of individuals or reduction in special-status plant habitat quality. These impacts would be significant.

Several mitigation measures are proposed to avoid, reduce, or compensate for impacts to special-status plants. Mitigation Measure BIO-1 would minimize the area of disturbance to habitat for special-status plants. Where disturbance within special-status plant habitat cannot be avoided, implementation of Mitigation Measure BIO-2 would identify the extent to which special-status

plants are present and could be adversely affected by the project. Where special-status plants are found to be present, Mitigation Measure BIO-3 would require monitoring to confirm avoidance of identified special-status plant populations, and compensatory mitigation should special-status plants be adversely affected. Implementation of these measures would reduce this impact to **less than significant with mitigation.**

Mitigation Measure BIO-1: Perform Focused Surveys for Special-status Plant Species.

Prior to implementation of construction activities at a site with grasslands, valley and foothill riparian, wetlands, or vernal pools, a qualified botanist will perform floristic surveys for special-status plant species. Floristic surveys shall occur during the appropriate blooming period(s) for all special-status plant species with the potential to occur at the component site, as determined by the botanist. If special-status plants may be directly or indirectly affected, then Mitigation Measure BIO-2 shall be implemented.

Mitigation Measure BIO-2: Avoid, Minimize, and Compensate for Impacts on Special-status Plant Species.

If special-status plants are detected, the City shall implement the following measures to avoid or minimize impacts on special-status plant species:

- The component shall be redesigned or modified to avoid direct and indirect impacts on special-status plant species, if feasible. Any special-status plant species occurrences near a Program site will be protected by environmentally sensitive area fencing (orange construction barrier fencing) installed around special-status plant species populations. The environmentally sensitive area fencing will be installed at least 200 feet from the edge of the population where feasible, and where not feasible, the buffer will be large enough to adequately protect populations from program activities. Where special-status plant populations are located in wetlands, silt fencing also will be installed. The location of the fencing will be marked in the field with stakes and flagging, and shown on the construction drawings. The construction specifications will contain clear language that prohibits construction-related activities, vehicle operation, material and equipment storage, and other surface disturbing activities within the fenced environmentally sensitive area.

- If avoidance is not feasible, the City will consult with either CDFW or USFWS, or both, depending upon which has jurisdiction, to determine whether transplantation of special-status plant species is feasible. If the agencies concur that it is a feasible mitigation measure, the botanist will develop and implement a Rare Plant Relocation, Management, and Protection Plan (Rare Plant Plan) in coordination with the appropriate agencies. The Rare Plant Plan will include the following components: relocation methods that will minimize the potential loss of plants from relocation, management plans and success criteria by which the mitigation can be measured for success, and regular monitoring to ensure that the plants are successfully transplanted. Success criteria shall require that at least 75% of the plants survive. The Rare Plant Plan will include specific, measurable triggers for adaptive management actions that will be necessary to ensure survival.

- The Rare Plant Plan will specify annual monitoring of the mitigation site for at least five years after planting, and will assess factors such as population size and density, recruitment, and individual plant health and vigor. Monitoring will also assess whether the mitigation requires adaptive management actions, such as collection and sowing of additional seed, tillage/disturbance within existing populations to induce establishment, installation of container plants, and control of exotic invasive vegetation (such as yellow star thistle) to ensure successful plant establishment and survival. The site will be evaluated at the end of the 5-year monitoring period to determine whether the mitigation has met the success criteria identified in the Rare Plant Plan. If success criteria are not met at that time, then mitigation activities and monitoring will continue until success criteria are met.

- As part of the Rare Plant Plan, the City, in conjunction with a qualified restoration ecologist and/or botanist and the consulting agency, if any, will identify a suitable on- or off-site location for mitigation, and appropriate methods for seed collection, propagation, relocation, maintenance, and monitoring. Mitigation sites will be located within the range of the affected plant and contain suitable habitat sites. For annual plant species, the seed crop from the individuals to be lost will be collected and then sown on appropriate habitat located on the mitigation site. The individuals will not be removed until seeds have been collected. For perennial plant species, both the seed and the plants themselves will be salvaged and relocated to the mitigation site. The individuals will not be removed until seeds have been collected. Seed from the populations that will be affected may be collected and propagated at a native plant nursery prior to planting in order to increase the potential for establishment and survival.

Impact BIO-2: Impacts on Vernal Pool Branchiopods and Western Spadefoot (*Less than Significant with Mitigation*)

Vernal pool branchiopods with the potential to occur in the study area include vernal pool fairy shrimp and vernal pool tadpole shrimp (*Lepidurus packardi*). These species could potentially occur within vernal pools located in the study area. Western spadefoot (*Spea hammondii*) also has the potential to occur in the study area and uses vernal pools as breeding habitat.

Grasslands and pastures within the study area have the potential to support vernal pool habitats. Proposed Program improvements that are not located in grasslands and pastures are not anticipated to have impacts on vernal pool habitat or inhabitants. If construction of WMP components occurs in the microwatershed of vernal pools, such activity could result in sedimentation and alteration of hydrology and drainage patterns, which could impact habitat for vernal pool branchiopods and breeding habitat for western spadefoot. As described in Chapter 11, *Hazards and Hazardous Materials*, many water quality impacts associated with Program construction activities would be minimized or avoided through compliance with the National Pollution Discharge Elimination System (NPDES) General Construction Permit. All components with a footprint greater than one acre of disturbance area would be subject to this permit, which requires preparation and implementation of a stormwater pollution prevention plan (SWPPP). As described in Section 12.2 in Chapter 12, *Hydrology and Water Quality*, the SWPPP must, among other things, present a list of best management practices (BMPs) that would be implemented to prevent soil erosion and protect against discharge of sediment and other construction-related

pollutants to surface waters. Compliance with this permit and implementation of a SWPPP would reduce the potential for sediments and contaminants to enter pools or depressions where vernal pool branchiopods may occur and western spadefoot may breed, but construction impacts of individual program components could nevertheless be significant. Implementation of Mitigation Measures BIO-3 and BIO-4 would reduce these impacts to **less than significant with mitigation**.

Mitigation Measure BIO-3: Avoid Impacts on Vernal Pool Branchiopods, Western Spadefoot, and Their Habitat.

Prior to implementation of proposed projects in areas that could contain habitat for vernal pool branchiopods, a qualified biologist will conduct surveys to determine whether vernal pools or seasonal wetlands will be directly or indirectly affected by construction activities. If potential habitat for special-status invertebrate species is found, the City will avoid any habitats that may support special-status species by establishing a buffer zone for each resource. The sizes of buffer zones shall be determined in consultation with the USFWS.

Mitigation Measure BIO-4: Minimize and Compensate for Impacts on Branchiopods, Western Spadefoot, and Their Habitat.

If direct or indirect impacts to habitat with the potential to support vernal pool branchiopods or potential western spadefoot breeding habitat cannot be avoided the City shall implement the following measures:

- After construction, restore surface topography and drainage to pre-construction conditions; and
- Provide off-site compensation for permanent, temporary, and indirect impacts at ratios determined through consultation with USFWS and CDFW. The performance standard shall be no net loss in acreage or habitat quality for vernal pool branchiopods and no net loss in breeding habitat quality or acreage for western spadefoot, as determined through consultation with USFWS and CDFW.

Impact BIO-3: Impacts on Valley Elderberry Longhorn Beetle (*Less than Significant with Mitigation*)

Valley elderberry longhorn beetle (VELB) is a federally-threatened species, which is dependent on its host plant, elderberry. Elderberry shrubs may occur in riparian areas and along canals, or occasionally in non-riparian areas. Impacts of Proposed Program components located where elderberry shrubs are growing could include removal of elderberry shrubs, or ground disturbance within the rooting zone of these shrubs. If these shrubs were occupied by VELB, shrub removal or mortality could result in adverse effects on VELB. This would be considered a significant impact. Trimming of elderberry shrubs could result in injury or death of eggs, larva, or adults depending on the timing and extent of the trimming. No adverse impacts to the VELB would occur if trimming does not remove stems/branches that are ≥1 inch in diameter and is conducted between November and February (USFWS 2017g). Implementation of Mitigation Measure Bio-1 would identify the location of elderberry shrubs on a project-specific basis. Implementation of Mitigation Measures BIO-5 through BIO-7 would reduce impacts on VELB to **less than significant with mitigation**.

Mitigation Measure BIO-5: Avoid Impacts on VELB Habitat.

The City and/or its contractor(s) shall avoid riparian habitat and/or elderberry shrubs whenever possible. If an individual CIP is not within a riparian area, is located on an existing site or other developed area, or within the public right of way, any impacts to VELB would not be expected to be substantial and therefore would not require mitigation. For proposed improvements that may potentially impact VELB habitat, following USFWS guidance, the Program sites and a 165-foot-wide buffer surrounding such sites will be surveyed and mapped by a qualified biologist for the presence of elderberry shrubs. If elderberry shrubs are present, to the extent feasible, the Program shall adhere to avoidance measures outlined in USFWS' Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*) (USFWS 2017g). This shall include the following avoidance measures:

- If elderberry shrubs are located in non-riparian area, a qualified biologist shall evaluate the shrubs for exit holes. If exit holes are present, the shrubs are considered suitable habitat and likely occupied. If exit holes are not present, the biologist shall evaluate whether known VELB occurrences are located within 2,625 feet of the CIP, whether the project site is near suitable riparian habitat, and any surrounding barriers to VELB dispersal.

- The City shall fence and flag all areas to be avoided during construction activities including all established elderberry shrubs within 165 feet of ground disturbing construction that shall not be impacted by construction activities.

- No open-cut construction or other ground disturbance shall occur within 20 feet of the dripline of elderberry plants containing stems measuring 1.0 inch or greater in diameter at ground level.

- A qualified biologist shall provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for noncompliance.

- A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring shall depend on the project specifics and should be discussed with USFWS.

- As much as feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the flight season of the VELB (March-July).

- If required, trimming of elderberry shrubs shall occur between November and February and shall avoid the removal of any branches or stems that are ≥ 1 inch in diameter.

- Herbicides shall not be used within the drip-line of the shrub. Insecticides shall not be used within 98 feet of an elderberry shrub. All chemicals shall be applied using a backpack sprayer or similar direct application method.

- Mechanical weed removal within the drip-line of the shrub shall be limited to the season when VELB adults are not active (August-February) and shall avoid damaging the elderberry.

- Erosion control shall be implemented and the affected area shall be re-vegetated with appropriate native plants.

If elderberry shrubs cannot be avoided, implement Mitigation Measure BIO-6.

Mitigation Measure BIO-6: Implement VELB Compensatory Mitigation, if Necessary.

The City shall implement the following measures. If feasible, any shrub that would be adversely impacted by the project shall be transplanted to a USFWS-approved location per Mitigation Measure BIO-7**.**

Impacts to VELB habitat shall be mitigated through purchase of compensatory mitigation credits from a USFWS-approved mitigation bank, or through on- or off-site mitigation. If on- or off-site mitigation is planned, a Compensatory Mitigation Proposal shall be developed and shall be subject to approval by USFWS.

Mitigation ratios shall be based on impacts to VELB habitat, as well as impacts to individual shrubs. One credit (unit) = 1,800 square feet. For habitat, the total amount of permanent disturbance in square feet should be calculated, the appropriate ratio applied, and the total number divided by 1,800. Impacts to riparian habitat shall be mitigated at a 3:1 (acre[s] of credits: acre[s] of disturbance) ratio. For disturbance to elderberry shrubs in non-riparian habitat, a 1:1 ratio shall be used.

Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at a USFWS-approved bank for each shrub impacted regardless of the presence of exit holes. Impacts to individual shrubs in non-riparian areas shall be replaced through a purchase of 1 credit at a USFWS-approved bank for each shrub that shall be impacted if exit holes have been found in any shrub on or within 165 feet of the project area.

Mitigation Measure BIO-7: Transplant Elderberry Shrubs if Avoidance Is Not Feasible.

The City shall implement the following measures. If an elderberry shrub cannot be avoided or if indirect effects shall result in the death of stems or the entire shrub, then in addition to Mitigation Measure BIO-6, the shrub shall be transplanted.

Elderberry shrubs shall be transplanted as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The transplanting guidelines below shall be followed:

- A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.

- Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the CNDDB.

- Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves.

- Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (www.tcia.org/).

Impact BIO-4: Impacts on Special-status Fishes (*Less than Significant with Mitigation*)

Habitat in the study area for special-status fish species is limited to the Tuolumne and Stanislaus rivers and Dry Creek. Special-status fish that are known to occur in the Tuolumne River include Chinook salmon (Central Valley fall- and late fall-run ESU), Central Valley steelhead, Sacramento splittail, and hardhead. These species may also be present in Dry Creek.

Adult steelhead and Chinook salmon migrate through the Tuolumne River to reach spawning habitat upstream. Juvenile salmonids pass through the study area on their way out to the Pacific Ocean. Sacramento splittail may be present in this portion of the Tuolumne River in wet years. Hardhead are also known be present.

Program Components (except Future Grid Pipelines FTGRID-01 and FTGRID-04)

Construction of these Proposed Program components would not occur in suitable habitat for special-status fishes. However, impacts to water quality in the Tuolumne River, Dry Creek, the Stanislaus River, and the San Joaquin River could adversely affect special-status fishes. As discussed in Chapter 9, *Geology, Soils, and Seismicity,* construction of proposed components would include grading, excavation, trenching, or other construction-related activities that could loosen soils and increase the risk of erosion or sediment transport. Increases in sedimentation and turbidity have been shown to adversely affect fish physiology, behavior, and habitat. The effects of turbidity on fish include gill trauma, avoidance of habitat, changes in forage ability, increased predation risk, and reduced territoriality. The deposition of excessive fine sediment on the stream bottom could eliminate habitat for aquatic insects (a food source for fish); reduce density, biomass, numbers, and diversity of aquatic insects and aquatic vegetation; and reduce the quality of spawning habitat for fish. Impacts to special-status fish from water quality include reduction in habitat quality, injury, or mortality. These impacts would be considered significant.

Construction activities that take place near these creeks and rivers, such as existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06, could result in discharges of hazardous materials if adequate precautions are not taken. As described in Chapter 11, *Hazards and Hazardous Materials*, the City would comply with all local, state, and federal regulations concerning hazardous materials handling and containment during construction of Program components. This includes standards for any secondary containment and countermeasures for

hazardous materials used in construction and operation, and spill response procedures in case of an accidental release. Implementation of these requirements would prevent substantial hazardous materials-related water quality impacts from occurring during construction activities.

As discussed in Chapter 12, *Hydrology and Water Quality*, water quality impacts of Program activities would be avoided or minimized through implementation of BMPs and compliance with the NPDES General Construction Permit and SWPPP requirements. Implementation of Mitigation Measure HYD/WQ-1 would further reduce soil erosion. Implementation of Mitigation Measure HYD/WQ-1 would reduce this impact to a level that is **less than significant with mitigation**.

Future Grid Pipelines FTGRID-01 and FTGRID-04

Construction-related impacts to special-status fish and their habitat would be minimized by using trenchless or other non-open cut construction techniques for these future grid components crossing the Tuolumne River and Dry Creek. Impacts to special-status fish and their habitat may result from a frac-out of drilling fluids during trenchless construction. Drilling fluids typically consist of bentonite, which is non-toxic to aquatic life. However, a frac-out may result in a temporary increase in turbidity or sedimentation that can adversely affect aquatic organisms by covering spawning and feeding areas, and clogging fish gills. These impacts are considered significant. Mitigation Measure HYD/WQ-1 would be implemented to reduce impacts in the event of a frac-out. With implementation of Mitigation Measure HYD/WQ-1, this impact would be **less than significant with mitigation**.

Trenchless construction under the Tuolumne River and/or Dry Creek would not result in any noise or vibration impacts on fish. Vibration from the drilling machinery is minimal and because the tunneling operation occurs below the river, it would be attenuated to an imperceptible level before it reaches the river bottom. No perceptible noise or vibration would translate into the water. Other non-open cut construction methods are also not anticipated to result in noise or vibration impacts on fish. There would be no impacts from noise or vibration from drilling machinery on special-status fishes.

Construction activities of Program components FTGRID-01 and FTGRID-04 could result in water quality impacts which could adversely affect special-status fish. For example, temporary increases in sediment discharges and increased turbidity, and in the event of an accidental spill, hazardous materials could adversely affect water quality. Such impacts would be avoided or minimized through implementation of BMPs and compliance with the NPDES General Construction Permit and SWPPP requirements. Implementation of Mitigation Measure HYD/WQ-1 would further reduce soil erosion or loss of topsoil and reduce adverse effects on special-status fish. With implementation of Mitigation Measure HYD/WQ-1, impacts would be **less than significant with mitigation**.

Overall Conclusion

WMP components near the Tuolumne River, and Dry Creek, Stanislaus River, and the San Joaquin River have the potential to adversely affect special-status fish species due to construction-related effects on water quality (e.g., increased sedimentation, turbidity, and hazardous materials in the event of an accidental spill). Implementation of Mitigation Measure HYD/WQ-1 would minimize adverse effects on water quality and reduce adverse effects on special-status fish. In conclusion,

implementation of these mitigation measures would reduce the Proposed Program's overall impact to **less than significant with mitigation**.

Impact BIO-5: Impacts on Western Pond Turtle (*Less than Significant with Mitigation*)

Potentially suitable habitat for western pond turtle in the study area occurs in the Tuolumne River and Dry Creek. Irrigation ditches with emergent vegetation provide marginally suitable habitat because they generally lack basking sites, the banks are very steep, and they are not perennially inundated. Canals do not provide suitable habitat.

Impacts to western pond turtle would be minimized by using trenchless pipeline construction or other non-open cut pipeline construction where this species is most likely to occur, in the Tuolumne River and Dry Creek. The only Program components that would cross the Tuolumne River or Dry Creek are future grid improvement components FTGRID-01 and FTGRID-04. The majority of Program components would occur in urban portions of Modesto or the outlying WMP service areas where habitat for western pond turtle is not present. Western pond turtle may also occur in upland areas. Construction activities that directly impact western pond turtle or their nests could result in significant impacts to this species.

Mitigation Measure BIO-8 would avoid impacts to suitable habitat for this species to the extent feasible. Where disturbance of suitable habitat is unavoidable, the mitigation measure would require that impacts be minimized through pre-construction surveys, establishment of buffers, and monitoring. With implementation of this mitigation measure, impacts would be **less than significant with mitigation**.

Mitigation Measure BIO-8: Conduct Preconstruction Surveys for and Minimize Impacts on Western Pond Turtle.

Preconstruction surveys for western pond turtles in suitable aquatic and upland habitat will be conducted by a qualified biologist 2 weeks before and 24 hours before the start of construction activities in streams, irrigation canals, and sloughs where suitable habitat exists. If a turtle is located within the construction area, the turtle will be relocated out of this area (with authorization from the DFG), and exclusion fence will be installed to prevent the movement of turtles back into the construction area. Additionally, the following minimization measures will be implemented.

- The City or its contractors will minimize grading and construction activities along the banks of streams, irrigation canals, and sloughs and within 1,000 feet of these areas between October 15 and April 15 in order to reduce potential mortality to hibernating turtles.
- If a turtle becomes trapped during construction activities within the waterway, the turtle will be removed from the work area and placed downstream from the project site.
- The construction area will be clearly defined, using orange barrier fencing, in order to minimize disturbance to riparian vegetation and western pond turtle habitat.

- If nesting areas for western pond turtles are identified in the study area during preconstruction surveys, a buffer of 300 feet will be established between the nesting site and the construction area. Buffers will be indicated by temporary fencing if construction begins before the nesting period ends (egg laying to emergence of hatchlings normally extends from April to November).

Impact BIO-6: Impacts on Burrowing Owl (*Less than Significant with Mitigation*)

Burrowing owls could occur within grasslands, agricultural habitats and canal and railroad right of ways where burrows are present. Several buildout pipelines such as those in North Modesto near Cottonwood Drive or South Modesto near Ironside Drive, and a fire flow improvement pipeline in South Modesto near Crows Landing Road and El Paso Avenue occur in ruderal grasslands. Other Program components such as buildout pipelines in the northern portion of the contiguous study area, such as in the vicinity of the intersection of Oakdale Road and Mable Avenue and the vicinity of the intersection of Bangs Avenue and American Avenue, occur in agricultural habitats. Implementation of Mitigation Measure BIO-1 would identify burrowing owl habitat on a project-specific basis. If this species is present in the vicinity of proposed components, construction activities could disturb burrowing owls through noise, visual distraction, or direct impacts to occupied habitat. These impacts would be considered significant. Implementation of Mitigation Measure BIO-11 would reduce impacts to this species. Where disturbance is unavoidable, impacts to burrowing owls would be minimized through establishing buffers around active burrows. If active burrows cannot be avoided, passive relocation techniques may be used. If relocation occurs, then compensation would be provided to offset impacts. With implementation of this mitigation measure, impacts would be **less than significant with mitigation**.

Mitigation Measure BIO-9: Conduct Pre-construction Surveys for Burrowing Owls and Implement No-Work Buffer Areas if Necessary.

Pre-construction surveys shall be conducted by a qualified biologist in all areas of suitable burrowing owl habitat within 250 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season (February 1 through August 31), surveys must be performed before work is resumed. If no burrowing owls or signs of burrowing owls are detected during the survey, no further mitigation shall be required. If breeding or resident burrowing owls are located on or within 250 feet of the proposed construction site, the following measures shall be implemented.

If burrowing owls are detected, disturbance to burrows shall be avoided during the nesting season. Buffers shall be established around occupied burrows in accordance with guidance provided in the Staff Report on Burrowing Owl Mitigation (CDFG 2012), and at the discretion of a qualified wildlife biologist. Buffers around occupied burrows shall be a minimum of 656 feet (200 meters) during the breeding season, and 160 feet (100 meters) during the non-breeding season. Buffer distances shall be subject to the approval of CDFW.

If occupied burrows cannot be avoided, passive owl relocation techniques may be implemented outside of the nesting season (February 1 through August 31). Owls would be excluded from burrows within 160 feet of construction by installing one-way doors in burrow entrances. The work area shall be monitored daily for 1 week to confirm owl

departure from burrows prior to any ground-disturbing activities. Where possible burrows shall be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible plastic pipe shall be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.

If occupied burrows are relocated, the City shall enhance or create burrows in adjacent habitat at a 1:1 ratio (burrows destroyed to burrows enhanced or created) one week prior to implementation of passive relocation techniques. If burrowing owl habitat enhancement or creation takes place, the City shall develop and implement a monitoring and management plan to assess the effectiveness of the mitigation. The plan shall be subject to the approval of CDFW.

Impact BIO-7: Impacts on Golden Eagle and Bald Eagle (*Less than Significant*)

Golden eagle and bald eagle are State Fully Protected species. CDFW cannot authorize take of these species. Golden eagles have been observed in the vicinity of the study area (eBird 2017c), and are commonly observed in the canyons/foothills to the west of the study area. In central California, golden eagles nest primarily in large trees and cliffs within open grasslands and oak savanna, and occasionally in oak woodland and open shrublands (Hunt et al. 1999). The study area provides marginal foraging habitat and nesting is unlikely.

Bald eagles have been observed in canyons/foothills to the west of the study area and in the vicinity of the study area (ebird.org 2017c). In California, the majority of bald eagles nest in conifer trees near reservoirs (Jackman and Jenkins 2004). Typically, bald eagles forage near open water (rivers, lakes, reservoirs) where fish or waterfowl are abundant (USFWS 2007a). The Tuolumne, San Joaquin, and Stanislaus rivers provide potential foraging habitat. Large trees along the San Joaquin, Tuolumne, and Stanislaus rivers are potential roost sites. Bald eagles are generally winter visitors in the Central Valley; nesting within the vicinity of the study area is unlikely. There are no published reports of nest sites on the San Joaquin Valley floor.

Impacts to non-breeding golden and bald eagles may include visual distractions, noise, and possibly temporary displacement from suitable foraging areas. Project activities are not likely to reduce fitness, affect breeding, result in "take" of these species, or result in any substantial adverse impacts to eagles. Therefore, impacts to golden and bald eagles would be **less than significant**.

Impact BIO-8: Impacts on Raptors, Including Special-status Species (*Less than Significant with Mitigation*)

Numerous raptors are known to nest and forage in habitats in the study area. Non-listed raptors commonly observed in the vicinity of the study area include red-tailed hawk, American kestrel, red-shouldered hawk, and merlin (*Falco columbarius*), among others. Special-status raptors (excluding burrowing owls, golden eagle, and bald eagle) known to occur in the vicinity of the study area include Swainson's hawk, white-tailed kite, and northern harrier (Table 7-1). These species have been observed in the vicinity of the study area and are known to nest locally. Riparian trees along the Tuolumne River, Stanislaus River, and Dry Creek provide potential nesting habitat for Swainson's hawk and white-tailed kite; isolated mature trees in adjacent fields may also be used for nesting. These raptors commonly forage in agricultural fields. Northern harriers nest on the ground in open areas, and may nest in agricultural fields. Program components near riparian

habitat include future grid pipeline improvements FTGRID-01 and FTGRID-04, and existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06. Although the majority of Program pipelines are within existing roadways, many of these roadways are located adjacent to agricultural habitat.

Construction in the vicinity of raptor nest sites could disturb nesting raptors through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., tree removal or ground disturbance). Impacts to Swainson's hawk and white-tailed kite would be minimized by using trenchless construction techniques for future grid pipeline improvement FTGRID-01 and FTGRID-04 for crossing of the Tuolumne River and Dry Creek, where nesting is most likely to occur. However, special-status raptors could nest in relatively close proximity to trenchless construction operations, and in other portions of the study area. Thus, there would be the potential for disturbance of nesting raptors. Impacts that result in nest abandonment, nest failure, or reduced health or vigor of nestlings are considered significant.

Construction of Program components such as such as new tanks (e.g., North and South Modesto storage tanks) and wells in agricultural or grassland habitat could result in the loss of suitable foraging habitat for Swainson's hawk. This impact would be considered significant.

Implementation of **Mitigation Measure BIO-10 (Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species)**, which would require preconstruction surveys for nesting raptors and establishment of no-disturbance buffers, and **Mitigation Measure BIO-11 (Compensate for Loss of Raptor Foraging Habitat)**, which would require mitigation for the loss of suitable foraging habitat, would reduce this impact to **less than significant with mitigation.**

Mitigation Measure BIO-10: Avoid, Minimize, or Compensate for Impacts on Raptors, including Special-status Species.

The City shall implement the following measures.

- If ground and vegetation disturbing activities occur between February 1 and September 15, the City shall conduct a nesting raptor survey, with a focus on Swainson's hawk and white-tailed kite, in accordance with Recommended Timing and Methodology for Swainson's Hawk Nesting Survey's in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000, or current CDFW guidance). Surveys shall cover a minimum of a 0.5-mile radius around potentially suitable nesting habitat for Swainson's hawk and white-tailed kite. Agricultural lands within 500 feet of ground disturbing construction activities shall be surveyed for northern harrier nests.

- If nesting raptors are detected, the City shall establish a 500-foot no-disturbance buffer around the nest. No construction activities shall be initiated within the buffer until fledglings are fully mobile and no longer reliant upon the nest or parental care for survival.

Mitigation Measure BIO-11: Compensate for Loss of Raptor Foraging Habitat.

The City shall implement the following measures. To mitigate for the loss of potential Swainson's Hawk foraging habitat, the City shall provide off-site habitat management lands, as described in the CDFW protocol for the mitigation of impacts on Swainson's

hawks in the Central Valley (CDFG 1994), or by purchasing credits at a CDFW-approved Swainson's Hawk foraging habitat mitigation bank that covers the Proposed study area, such as the Dutchman Creek Conservation Bank.

The City shall determine the final acreage of off-site management lands or mitigation bank credits to be provided based on the CDFW protocol (CDFG 1994). For the purposes of this mitigation measure, all program components are assumed to be within 1 mile of an active Swainson's Hawk nest tree. Mitigation credits would follow the same ratio guidelines as off-site management lands. The City shall compensate for losses as follows:

- 1 acre of habitat management land for each acre of development authorized (1:1 ratio), at least 10% of which shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% protected by a conservation easement acceptable to CDFW on agricultural lands or other suitable habitats that provide foraging habitat for Swainson's Hawk; or

- 0.5 acre of habitat management land for each acre of development authorized (0.5:1 ratio), all of which shall be met by fee title acquisition or a conservation easement acceptable to CDFW that allows for the active management of the habitat for prey production on the habitat management lands.

The City shall provide for the long-term management of the habitat management lands by funding a management endowment (the interest on which shall be used for managing the habitat management lands). If mitigation credits are purchased, long term management would be the responsibility of the mitigation bank.

Impact BIO-9: Impacts on Special-status Passerine Species and Birds Protected under the MBTA (*Less than Significant with Mitigation*)

Program Components (except Future Grid Improvements FTGRID-01 and FTGRID-04)

Special-status passerines that may nest in the vicinity of Program components include tricolored blackbird, loggerhead shrike (*Lanius ludovicianus*), yellow-breasted chat (*Icteria virens*) and yellow warbler (*Dendroica petechia*). These special-status passerines nest in riparian habitat. Program components near riparian habitat include existing grid improvement pipelines EXGRID-02, EXGRID-05, and EXGRID-06. Various birds protected by the MBTA could also occur in the vicinity of any Program components.

Construction could disturb nesting passerines through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., vegetation removal or ground disturbance). Nest failure or removal of a nest are considered significant impacts.

Implementation of **Mitigation Measure BIO-12 (Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary)** would minimize impacts to passerines by conducting pre-construction surveys during the nesting season and establishing buffers around active nests. With implementation of this mitigation measure, impacts would be **less than significant with mitigation**.

Future Grid Pipelines FTGRID-01 and FTGRID-04

Portions of the future grid pipelines FTGRID-01 and FTGRID-04 cross sensitive habitat in the Tuolumne River and Dry Creek where nesting of special-status passerines are most likely to occur. Impacts would be minimized by using trenchless construction techniques for activities crossing these habitats. However, construction could still disturb nesting passerines through generation of noise, visual distraction, or direct impacts to occupied nests (e.g., vegetation removal or ground disturbance). Nest failure or removal of a nest are considered significant impacts. Implementation of Mitigation Measure BIO-14 would minimize impacts to passerines by conducting pre-construction surveys during the nesting season and establishing buffers around active nests. With implementation of this mitigation measure, impacts would be **less than significant with mitigation**.

Overall Conclusion

Construction activities that cross the Tuolumne River and Dry Creek could affect habitat where special-status passerines are likely to be present. Implementation of Mitigation Measure BIO-12 would minimize adverse effects by conducting pre-construction surveys during nesting season and establishing buffers around active nests. In conclusion, implementation of this mitigation measure would reduce the Proposed Program's overall impact to **less than significant with mitigation**.

> **Mitigation Measure BIO-12: Conduct Pre-construction Surveys for Nesting Birds and Implement No-Work Buffer Areas if Necessary.**
>
> The City shall implement the following measures. If construction activities occur during the breeding season (February 15–August 31), a pre-construction survey shall be conducted by a qualified biologist in all areas of suitable nesting habitat within 500 feet of construction activity. Surveys shall be conducted within 14 days before the start of construction activity. If no work occurs for a period of 2 or more weeks during the nesting season, surveys must be performed before work is resumed. If the survey indicates that no active nests are found, no further mitigation shall be required.
>
> If active nests are identified, appropriate no-disturbance buffers around nests shall be established. No-disturbance buffers around special-status passerine nests shall be 500 feet. No disturbance buffers for non-listed birds protected under the MBTA and Fish and Game Code sections 3503 and 3513 will be established by a qualified biologist familiar with the life history and reproductive strategies of the nesting species. The buffer widths will be based on species' sensitivity to disturbance (as documented in peer-reviewed literature), planned construction activities, and baseline level of human activity. The buffers will be clearly marked in the field with flagging or fencing. No work shall commence within the buffer until the young have fledged or the nest is deemed inactive.

Impact BIO-10: Impacts on Special-status Mammals (*Less than Significant*)

Special-status mammals with the potential to occur in the vicinity of the Proposed Program include western red bat (*Lasiurus blossevillii*), American badger (*Taxidea taxus*), riparian brush rabbit (*Sylvilagus bachmani riparius*), and riparian woodrat (*Neotoma fuscipes riparia*). Breeding of western red bats are strongly associated with Central Valley riparian habitat, especially mature stands of cottonwoods (*Populus* spp.) and sycamores (*Platanus racemosa*) (Pierson et al. 2006),

and this species may roost in trees along the Tuolumne River and Dry Creek. The only Program components that would cross these habitats are future grid pipelines FTGRID-01 and FTGRID-04. Riparian trees would not be removed for construction of the proposed components. Non-riparian trees in the vicinity of Program components are generally located in areas with a relatively high level of human activity. The proximity to human activity makes it unlikely that these trees would be used as special-status bat habitat. The Tuolumne River and Dry Creek floodplain provide potential foraging and dispersal habitat for badgers. Impacts to western red bat and American badger would be minimized by using trenchless construction techniques in the riparian areas where these species may occur. A captively-bred population of riparian brush rabbit has been released into San Joaquin River National Wildlife Refuge, near the Grayson outlying service area. A population of riparian woodrat has also been discovered in this Wildlife Refuge (USFWS 2012b). These species could potentially occur in riparian habitat adjacent to Grayson. However, no Program activities would occur in riparian habitat adjacent to Grayson. For these reasons, impacts to special-status mammals would be **less than significant**.

Impact BIO-11: Impacts on Riparian Habitat and Other Sensitive Natural Communities (*Less than Significant with Mitigation*)

Future grid pipelines FTGRID-01 and FTGRID-04 would traverse riparian habitat associated with Dry Creek and the Tuolumne River, respectively. Impacts to riparian habitat would be avoided by the use of trenchless construction techniques in riparian habitat. If a frac-out were to occur beneath riparian habitat, direct impacts on this habitat could occur.

Additionally, although the majority of Program components would take place in urban/developed habitats, vernal pool habitat may be present in areas where Program components would be constructed in grasslands and pastures. Vernal pool habitats would be identified on a project-specific basis. Construction-related impacts on vernal pool habitats could include sedimentation or alteration in drainage patterns. These impacts are considered significant. Implementation of Mitigation Measure HYD/WQ-1, which would require preparation of a frac-out Contingency Plan; and Mitigation Measures BIO-3 and BIO-4, which would require avoidance and minimization of impacts on vernal pools, would reduce this impact to **less than significant with mitigation**.

Impact BIO-12: Impacts on Federally Protected Wetlands (*Less than Significant with Mitigation*)

Program Components (except Future Grid Pipelines FTGRID-01 and FTGRID-04)

The study area contains wetlands and waters that are likely to be regulated by the USACE and the USEPA under Section 404 the CWA. In the study area, the Tuolumne River is considered Traditional Navigable Waters of the U.S., as is the San Joaquin River adjacent to the Grayson outlying service area and the Stanislaus River adjacent to the Del Rio outlying service area. Other wetlands and waters with a "significant nexus" to the Tuolumne, San Joaquin, or Stanislaus rivers would also be considered jurisdictional waters of the U.S. Wetlands and waters would be preliminarily identified during implementation of Mitigation Measure BIO-1. Drainages excavated wholly in uplands and draining only uplands are not likely to be jurisdictional features.

Program components located in or adjacent to wetlands and waters could cause impacts to wetlands or waters through temporary or permanent fill, and erosion or sedimentation. Implementation of Mitigation Measure HYD/WQ-1 which would reduce sedimentation; **BIO-13**

(Avoid and Minimize Impacts on Federally Protected Wetlands), which would avoid and minimize impacts to wetlands to the maximum extent practicable; and **BIO-14 (Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State)**, which requires regulatory permits for work in wetlands and waters and compensatory mitigation for unavoidable impacts to wetlands and waters, would reduce this impact to **less than significant with mitigation**.

Future Grid Pipelines FTGRID-01 and FTGRID-04

FTGRID-01 and FTGRID-04 would avoid impacts on wetlands and waters through the use of trenchless pipeline construction for crossings of Dry Creek and the Tuolumne River. If a frac-out were to occur beneath wetlands, direct impacts could occur. Implementation of Mitigation Measure HYD/WQ-1, which require preparation of a Frac-out Contingency Plan would reduce impacts to wetlands and waters. Other impacts to wetlands and waters could occur through temporary or permanent fill, and erosion or sedimentation. Implementation of Mitigation Measures HYD/WQ-1, BIO-13, and BIO-14 would reduce this impact to **less than significant with mitigation**.

Overall Conclusion

Construction of Program components could result in impacts to wetlands or waters. Implementation of Mitigation Measures HYD/WQ-1, BIO-13, and BIO-14 would minimize adverse effects. In conclusion, implementation of these mitigation measures would reduce the Proposed Program's overall impact to **less than significant with mitigation.**

Mitigation Measure BIO-13: Avoid and Minimize Impacts on Federally Protected Wetlands.

The City shall implement the following measures. To the extent feasible, proposed construction activities shall avoid federally protected wetlands.

If complete avoidance of wetlands is not possible, a jurisdictional wetland delineation shall be conducted for the project site, which will be used during implementation of Mitigation Measure BIO-14. For all activities greater than one acre of disturbance, a SWPPP shall be implemented to reduce the potential for sediment and contaminants to enter wetlands and waters. Mitigation Measure HYD/WQ-1 would also be implemented to minimize construction-related effects on wetlands and waters. After construction, surface topography and drainage shall be restored to pre-construction conditions. Where appropriate, revegetation shall be implemented with site-adapted native plant species.

Mitigation Measure BIO-14: Obtain Regulatory Permits for Work Activities Taking Place in Wetlands and Waters of the United States and the State.

The City shall implement the following measures. Work within areas defined as waters of the U.S. and State that includes placement of fill will require a CWA Section 404 permit and Section 401 Water Quality Certification. All work proposed in jurisdictional waters of the U.S. shall be authorized under these permits, and the work shall comply with the general and regional conditions of the permits. In areas where disturbance to jurisdictional waters or wetlands occurs, the City shall implement mitigation consistent with the terms of a CWA Nationwide Permit and/or the Final Rule on Compensatory

Mitigation for Losses of Aquatic Resources (73 Fed. Reg. 19594). Compensatory mitigation may include creation, reestablishment, or enhancement of wetlands in the study area or at an off-site location. Compensatory mitigation may also include purchase of credits at an approved mitigation bank or contribution to an approved in-lieu fee program.

Impact BIO-13: Impacts on Wildlife Movement, Established Wildlife Corridors, or the Use of Native Wildlife Nursery Sites (*Less than Significant with Mitigation*)

Program Components (Except Future Grid Pipelines FTGRID-01 and FTGRID-04)

The majority of Program components (except FTGRID-01 and FTGRID-04, addressed below) would be constructed in previously developed areas or agricultural lands that do not function as a significant movement corridor for fish and wildlife. Some wildlife breeding does occur in agricultural lands and wetlands.

Impacts on breeding wildlife would be minimized by conducting pre-construction surveys during the breeding season (through implementation of Mitigation Measures BIO-8, BIO-9, BIO-10, BIO-11, and BIO-12). Open-cut pipeline construction would create temporary barriers to wildlife movement in agricultural lands and ruderal habitat, a significant impact. Impacts of open-cuts on wildlife movement would be minimized by implementation of **Mitigation Measure BIO-15 (Install Temporary Trench Plates over Open Trenches)**, which requires that trenches be covered at the end of each work day. Some mature trees which provide suitable nesting habitat for raptors may be removed during construction, but outside of the raptor nesting season. In addition, impacts to breeding wildlife would be minimized by conducting pre-construction surveys during the breeding season and implementing appropriate measures, such as no-work buffer areas if necessary, to minimize impacts on breeding wildlife (see Mitigation Measures BIO-8, BIO-9, BIO-11, and BIO-12). These Program components would not create any permanent barriers to wildlife movement or permanently disrupt breeding sites. With implementation of the above mitigation measures, impacts would be **less than significant with mitigation**.

Future Grid Pipelines FTGRID-01 and FTGRID-04

As described in Section 7.3.3, several fish and wildlife species utilize the Tuolumne River, and to a lesser degree Dry Creek, and adjacent riparian habitat as breeding sites and a migration corridor. Additionally, wildlife breeding does occur in agricultural lands and non-riparian wetlands. Impacts to wildlife migration and breeding in these riverine and riparian areas would be avoided by the use of trenchless construction methods.

In addition, impacts to breeding wildlife from future grid pipelines FTGRID-01 and FTGRID-04 would be minimized by conducting pre-construction surveys during the breeding season (see Mitigation Measures BIO-8, BIO-10, BIO-11, and BIO-12). Open-cut pipeline construction would create temporary barriers to wildlife movement, a significant impact. Impacts of open-cuts on wildlife movement would be minimized by implementation of Mitigation Measure BIO-15, which requires that trenches be covered at the end of each work day. Some mature trees which provide suitable nesting habitat for raptors may be removed during construction, but outside of the raptor nesting season. These Program components would not create any permanent barriers to wildlife movement or permanently disrupt breeding sites. With implementation of the above mitigation measures, impacts would be **less than significant with mitigation**.

Overall Conclusion

Construction of most WMP components would occur in developed areas or agricultural lands that do not function as wildlife movement corridors for fish and wildlife but open-cut pipeline construction could temporarily create barriers to wildlife movement. Implementation of Mitigation Measures BIO-8, BIO-9, BIO-10, BIO-11, BIO-12, and BIO-15 would minimize adverse effects. In conclusion, implementation of these mitigation measures would reduce the Proposed Program's overall impact to **less than significant with mitigation.**

Mitigation Measure BIO-15: Install Temporary Trench Plates over Open Trenches.

The City shall implement the following measure. During open-cut construction of pipelines, the City shall install temporary trench plates over open trenches at the end of each work day.

Impact BIO-14: Conflict with Local Ordinances or Policies Protecting Biological Resources (*Less than Significant with Mitigation*)

Implementation of Mitigation Measures BIO-1 through BIO-15 would ensure that the Proposed Program would be consisted with all local ordinances and policies protecting biological resource; reducing impacts to a level that is **less than significant with mitigation**.

Chapter 8
CULTURAL, TRIBAL, AND PALEONTOLOGICAL RESOURCES

8.1 Overview

This chapter describes the regulatory setting, the study area's cultural resources setting, and impacts of the Proposed Program related to cultural and paleontological resources. Cultural resources include prehistoric and historic-era archaeological sites; tribal cultural resources (TCRs) or traditional cultural properties (TCPs); and historic-era buildings, structures, landscapes, districts, and linear features. Prehistoric archaeological sites are places where Native Americans lived or carried out activities during the prehistoric period, which is generally defined as before the early 1800s in the study area. Historic-era archaeological sites reflect the activities of people after initial exploration and settlement in the region during the early 1800s. Native American sites can also reflect the historic era. Prehistoric and historic-era sites may contain artifacts, cultural features, subsistence remains, and/or human burials. TCRs are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe. TCPs can include TCRs, but they also encompass resources that are culturally important to any community.

Paleontological resources are the fossil remains of prehistoric flora and fauna, or traces of evidence of the existence of prehistoric flora and fauna. This chapter addresses the occurrence of paleontological resources within the project area and the impact that construction activities and operation of the Proposed Program will have on scientifically important fossil remains, as identified in the State CEQA Guidelines. The analysis presented in this chapter conforms to the Society of Vertebrate Paleontology criteria.

The purpose of this chapter is to describe the regulatory setting associated with cultural and paleontological resources, the affected environment for these resources, project impacts on cultural and paleontological resources, and mitigation measures that would reduce these impacts.

The following key data sources support this chapter:

- Records search from the Central California Information Center of the California Historical Resources System at California State University, Stanislaus;
- Files search from the California Native American Heritage Commission (NAHC); and
- The City of Modesto Urban Area General Plan (City of Modesto 2019a) and Urban Area General Plan Master EIR (City of Modesto 2019b); and
- the City of Turlock, City of Ceres, and Stanislaus County general plans (City of Turlock 2012; City of Ceres 2018; Stanislaus County 2016).

8.2 Regulatory Setting

8.2.1 Federal Laws, Regulations, and Policies

No federal laws, regulations, or policies apply to cultural resources and the Proposed Program.

8.2.2 State Laws, Regulations, and Policies

CEQA and State CEQA Guidelines

Section 21083.2 of CEQA requires that the lead agency determine whether a project may have a significant effect on unique archaeological resources. A unique archaeological resource is defined in CEQA as an archaeological artifact, object, or site about which it can be clearly demonstrated that there is a high probability that it:

- Contains information needed to answer important scientific research questions, and there is demonstrable public interest in that information;
- Has a special or particular quality, such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Special limitations on measures to avoid, conserve, preserve, or mitigate significant effects on unique archaeological resources are also provided under Pub. Res. Code Section 21083.2. These limitations do not apply if an archaeological site is also a CEQA-defined "historical resource," as defined below. (CEQA Guidelines Section15064.5(c).)

Section 15064.5 of the State CEQA Guidelines notes that, "a project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment." Substantial adverse changes include physical changes to the historical resource or to its immediate surroundings, such that the significance of the historical resource would be materially impaired. Lead agencies must identify potentially feasible measures to mitigate significant adverse changes in the significance of a historical resource before they approve such projects. "Historical resources" are those that are:

- listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (Pub. Res. Code Section 5024.1[k]);
- included in a local register of historic resources (Pub. Res. Code Sectoin5020.1) or identified as significant in an historic resource survey meeting the requirements of Pub. Res. Code Section 5024.1(g); or
- determined by a lead agency to be historically significant.

State CEQA Guidelines Section 15064.5 also prescribes the processes and procedures found under California Health and Safety Code Section 7050.5 and Pub. Res. Code Section 5097.95 for addressing the existence of, or probable likelihood of, Native American human remains, as well

as the unexpected discovery of any human remains within the project site. This includes consultation with the appropriate Native American tribes.

State CEQA Guidelines Section 15126.4 provides further guidance about minimizing effects to historical resources through the application of mitigation measures. Mitigation measures must be legally binding and fully enforceable.

The lead agency having jurisdiction over a project is also responsible to ensure that paleontological resources are protected in compliance with State CEQA Guidelines and other applicable statutes.

Assembly Bill (AB) 52, which was approved in September 2014 and which went into effect on January 1, 2015, requires that lead agencies consult with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project, if so requested by the tribe. The bill, chaptered in State CEQA Guidelines Section 21084.2, also specifies that a project with an effect that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment.

Defined in Pub. Res. Code Section 21074 (a, b, and c), TCRs are:

(A.1) Sites, features, places, cultural landscapes, sacred places and objects with cultural value to a California Native American tribe that are either of the following:

a. Included or determined to be eligible for inclusion in the CRHR; or

b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(A.2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

(B) A cultural landscape that meets the criteria of subdivision (a) is a TCR to the extent that the landscape is geographically defined in terms of the size and scope of the landscape; and

(C) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms to the criteria of subdivision (a).

AB 52 establishes a consultation process between California Native American tribes and lead agencies. A lead agency must notify a tribe of proposed CEQA projects if the tribe has submitted a request to a lead agency to be so notified. The lead agency then provides the tribe with formal notice of CEQA projects, and the tribe must request formal consultation within 30 days of receiving notice. As part of formal AB 52 consultation, measures for TCRs must be developed in consultation with the affected California Native American tribe pursuant to Pub. Res. Code

Section 21080.3.2. Pub. Res. Code Section 21084.3 identifies mitigation measures that include avoidance and preservation of TCRs; treating TCRs with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource; conservation easements; and protecting the resource.

California Register of Historical Resources

Pub. Res. Code Section 5024.1 establishes the CRHR. The register lists all California properties considered to be significant historical resources. The CRHR includes all properties listed as or determined to be eligible for listing in the National Register of Historic Places (NRHP), including properties evaluated under Section 106 of the National Historic Preservation Act. The criteria for listing are similar to those of the NRHP. Criteria for listing in the CRHR include resources that:

1. Are associated with the events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

2. Are associated with the lives of persons important in our past;

3. Embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual, or possess high artistic values; or

4. Have yielded, or may be likely to yield, information important in prehistory or history.

The regulations set forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

8.2.3 Local Laws, Regulations, and Policies

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (City of Modesto 2019a) contains a progressive and extensive list of policies related to archaeological and cultural resources under Chapter VII, Environmental Resources, Open Spaces and Conservation. As is often the case with general plans that involve historic urban centers, many of the City of Modesto's policies focus on the preservation of buildings that reflect the history and historic character of the city. Because the Proposed Program will not directly impact the buildings in Modesto's historic district, those policies will not be presented here in detail. It is sufficient to note that projects involving the demolition or alteration of buildings aged 50 years or older will require evaluation for NRHP and CRHR eligibility, if the buildings haven't previously been evaluated, by a professional historian or architectural historian prior to project approval. This requirement is also applicable when construction is proposed within 100 feet of a building that is older than 50 years. Other policies identify measures to mitigate damage to historically significant buildings, which generally defer to the U.S. Secretary of the Interior's *Standards for the Treatment of Historic Properties*, and guidelines provided by the State Historic Preservation Officer.

A number of policies address potential impacts to archaeological resources for projects that involve ground disturbance. Those policies that are the most pertinent to the Proposed Program are listed below.

Policy VII-F.2[h]. When proposed development lies within an archaeological resource study area (shown on Figure V-7-1 in the Master EIR), analyze the area to determine whether it has a high potential to have been used by Native Americans or contain prehistoric deposits. Resources to be utilized include archival research through the Central California Information Center at CSU Stanislaus, preliminary surface field reconnaissance, consultations with the Native American Heritage Commission (NAHC) and individuals and organizations identified by the NAHC. Any archaeological resources discovered shall be recorded and mapped. Require an evaluation of the significance of any such resources only when proposed development might affect the resources.

Policy VII-F.2[i]. If land designated or proposed to be designated for development is discovered through archival research, consultation or by chance, to contain a sacred or traditional place, consult with the NAHC and the appropriate Native American groups and individuals for the purpose of determining the level of confidentiality required to protect the cultural place and for the purpose of developing treatment with appropriate dignity of the cultural place in any corresponding management plan. Avoid and preserve sacred sites whenever feasible.

Policy VII-F.2[j]. Consistent with AB 52 of 2016, conduct consultations with the Native American Heritage Commission and the appropriate Native American Tribes for the purpose of determining the level of confidentiality required to protect identified cultural place(s), if any, and for the purpose of developing treatment with appropriate dignity of said cultural place(s) in any corresponding management plan. Avoid and preserve sacred sites whenever feasible.

Policy VII-F.2[k]. For any project that involves earth-disturbing activities within the archaeological resource study area, or on a site determined to be archaeologically or culturally sensitive by City staff through consultation with Native American tribes or bands and a qualified archaeologist, require the project applicant to implement the following mitigation measures, at a minimum:

(1) Where excavation or construction would occur outside of areas where development has occurred, or where excavation / construction would occur at depths greater than existing foundations, roads, and/or trenches in the immediate vicinity, evaluate the site via a qualified archaeologist retained by the project applicant. Said evaluation would include at minimum a records search, a Phase I pedestrian survey, and preparation of an archaeological report containing the results of this cultural resources inventory identification effort for submittal to the Central California Information Center. If a Phase II archaeological evaluation is recommended, complete a report of the survey and any excavations with recommendations prior to project approval;

(2) In the event of the discovery of a burial, human bone, or suspected human bone, immediately halt all excavation or grading in the vicinity of the find and protect the area of the find. The project applicant shall immediately notify the Modesto Police Department and County Coroner of the find and comply with the provisions of California Health and Safety Code Section 7050.5, including California Public

Resources Code Section 5097.98, if applicable. If human remains are identified, also retain a Native American monitor at the applicant's expense;

(3) A qualified archaeological monitor will be present and will have the authority to stop and redirect grading activities, in consultation with the Native Americans and their designated monitors, to evaluate the significance of any Native American archaeological resources discovered on the property; and,

(4) Relinquish ownership of all Native American human remains and/or artifacts that are found within the project area, to the appropriate Native American Most Likely Descendent (MLD), as assigned by the Native American Heritage Commission, for proper treatment and disposition. The MLD will decide whether or not standard archaeological analysis will be allowed on human remains and associated artifacts from burials.

(5) If paleontological resources are discovered during earth-moving activities, the construction crew shall immediately cease work in the vicinity of the find, and the City's Planning Manager shall be notified. A qualified paleontologist shall evaluate the resource and prepare a proposed mitigation plan in accordance with Society of Vertebrate Paleontology guidelines. The proposed mitigation plan may include a field survey of additional construction areas, sampling and data recovery procedures, museum storage coordination for any specimen recovered, and a report of findings. Recommendations determined by the lead agency to be necessary and feasible shall be implemented before construction activities can resume at the site where the paleontological resources were discovered.

Policy VII-F.2[l]. Whenever possible, avoid disturbing or damaging archaeological resources. Preservation in place to maintain the relationship between the artifacts and the archaeological context is the preferred manner of mitigating impacts to archaeological sites. Preservation may be accomplished by:

(1) Planning construction to avoid archaeological sites;

(2) Incorporating sites within parks, green space, or other open space;

(3) Covering the sites with a layer of chemically stable soil; and/or,

(4) Deeding the site into a permanent conservation easement.

When in-place mitigation is not feasible, data recovery through excavation may be necessary. A data recovery plan, which makes provisions for adequately recovering the scientifically consequential information about the site, shall be prepared and adopted prior to any excavation being undertaken. Such studies must be deposited with the Central California Information Center in Turlock, California. Special rules apply to any archaeological sites known to contain human remains (Health and Safety Code Section 7050.5; Guidelines Section 15126.4(b)).

Data recovery shall not be required if the lead agency determines that testing or studies already completed have adequately recovered the necessary data, provided

that the data have already been documented in another EIR and are available for review at the California Historical Resource Regional Information Center (Guidelines Section 15126.4(b)).

Policy VII-F.2[m]. Allow reasonable time for the qualified archaeologist to notify the proper authorities for a more detailed inspection and examination of the exposed cultural resources. During this time, excavation and construction would not be allowed in the immediate vicinity of the find; however, those activities could continue in other areas of the project site.

Policy VII-F.2[n]. If any find is determined to be significant by the qualified archaeologist, representatives of the construction contractor and the City, the qualified archaeologist, and a representative of the Native American community (if the discovery is an aboriginal burial) will meet to determine the appropriate course of action.

Policy VII-F.2[o]. All cultural materials recovered as part of a monitoring program are subject to scientific analysis, professional museum curation, and a report prepared according to current professional standards.

Policy VII-F.3[a]. Any project subject to CEQA that involves substantial earth-disturbing activities should require consultation by the applicant for the purposes of determining archaeological and cultural resources impacts and creating appropriate mitigation to address such impacts.

Policy VII-F.3[b]. Any project that involves earth-disturbing activities within previously undisturbed soils in an area determined to be archaeologically or culturally sensitive by the City of Modesto through consultation with Native American tribes or bands and a qualified archaeologist should be subject to archaeological and Native American monitoring during all ground-disturbing activities.

Policy VII-F.3[c]. Any project that involves earth-disturbing activities within previously undisturbed soils in an area determined to be archaeologically or culturally sensitive by the City of Modesto through consultation with Native American tribes or bands and a qualified archaeologist should be required to carry out the following mitigation measures, at a minimum:

(1) If prehistoric archaeological remains are discovered during project construction (inadvertent discoveries), all work in the area of the find shall cease, and a qualified archaeologist should be retained by the project sponsor to investigate the find, and make recommendations as to treatment and mitigation. In the event of the discovery of a burial, human bone, or suspected human bone all excavation or grading in the vicinity of the find should halt immediately and the area of the find should be protected and the project applicant immediately should notify the County Coroner of the find and comply with the provisions of California Health and Safety Code Section 7050.5, including California Public Resources Code Section 5097.98, if applicable. If human remains are identified, the project sponsor should also retain a Native American monitor;

(2) A qualified archaeological monitor should be present and should have the authority to stop and redirect grading activities, in consultation with the Native Americans and their designated monitors, to evaluate the significance of any Native American archaeological resources discovered on the property;

(3) Native American monitors from the appropriate Native American Tribes, as determined by the NAHC should be allowed to monitor all groundbreaking activities, including all archaeological testing and data recovery excavations that are likely to affect Native American resources, as determined by a qualified archaeologist. The project proponent should be responsible for compensating Native American monitors. If human remains are discovered, the NAHC should assign a Most Likely Descendent (MLD); and,

(4) The landowner agrees to relinquish ownership of all Native American human remains and associated burial artifacts that are found within the project area, to the appropriate Native American MLD, as assigned by the NAHC, for proper treatment and disposition. The MLD will decide whether or not standard archaeological analysis will be allowed on human remains and associated artifacts from burials.

(5) If paleontological resources are discovered during earth-moving activities, the construction crew shall immediately cease work in the vicinity of the find, and the City's Planning Manager shall be notified. A qualified paleontologist shall evaluate the resource and prepare a proposed mitigation plan in accordance with Society of Vertebrate Paleontology guidelines. The proposed mitigation plan may include a field survey of additional construction areas, sampling and data recovery procedures, museum storage coordination for any specimen recovered, and a report of findings. Recommendations determined by the lead agency to be necessary and feasible shall be implemented before construction activities can resume at the site where the paleontological resources were discovered.

These and other policies require proactive consultation by project proponents with Native American tribes for any projects that may impact culturally sensitive sites.

Furthermore, through the Modesto General Plan Update Final Master EIR (20019b), the City of Modesto has adopted Policies VII.F-2[h] through VII.F-3[c] to reduce a project's impacts to archaeological and/or historic resources to a less-than-significant level except where a significant historic building would be demolished. These policies largely reflect those found in the State CEQA Guidelines (Pub. Res. Code 15126.4[b]), including the treatment of human remains (Health and Safety Code Section 7050.5). The policies also outline procedures for address the unanticipated discovery of archaeological materials and human remains during construction.

Landmark Preservation Ordinance

The City of Modesto passed a Landmark Preservation ordinance in 1988 after many of the historic downtown buildings were demolished (City of Modesto 2017). The ordinance recognizes the cultural and economic benefits of preserving the City's historic landmarks. In addition to establishing a Modesto Landmark Preservation Committee, in response to the ordinance the City commissioned a survey of historic resources and developed a list of Designated Landmark Preservation Sites. The ordinance also provides guidance for review of permit applications for

proposed alterations, relocations, demolition or new construction on properties that are listed on the Designated Landmark list.

City of Turlock General Plan

The City of Turlock General Plan (2012) advocates for protection of cultural resources within the city and states that "[t]he Study Area has a rich history of human habitation, including primarily the Yocut tribe of Native Americans. Related to more recent history, a substantial inventory of historically significant buildings in Turlock has been developed, which contribute to the City's visual interest and unique sense of place." Table 7-4 in the Conservation Element of the general plan identifies five buildings designated as historic resources. The following policies address cultural resources:

> **7.5-a Protect Archaeological Resources.** Protect significant archaeological resources in the Study Area that may be identified during construction.
>
> **7.5-b Preserve Historic Places.** Integrate historic preservation into planning for Downtown and other areas with historic significance.

Ceres General Plan 2035

Policies in the *Ceres General Plan 2035* (2018) seek to develop a systematic and comprehensive historic preservation program to ensure that Ceres' historically and architecturally significant resources are preserved, as well as to identify and preserve any archaeological resources that may be disturbed by development activities. The following goals and policies are relevant to the Proposed Program:

Goal 4.H. Preserve and maintain sites, structures and landscapes that serve as significant, visible reminders of the city's social, architectural and agricultural history.

> **Policy 4.H.2. Reuse of Historic Buildings.** Encourage the preservation, maintenance, and adaptive reuse of existing historic buildings in the Planning Area in order to prevent demolition and disrepair.
>
> **Policy 4.H.3. Preservation of Historic Buildings.** Identify and preserve buildings of local historic importance Downtown and in surrounding areas through inclusion on the local historic resources register and the Historic Building Code.

Goal 4.I. Protect and preserve archaeological and paleontological resources in the Planning Area.

> **Policy 4.I.1. Archaeological Sites.** Refer development proposals that may adversely affect archaeological sites to the California Archaeological Inventory at California State University, Stanislaus. Do not knowingly approve any public or private project that may adversely affect an archaeological site without first consulting the California Archaeological Inventory, conducting a site evaluation as may be indicated, and attempting to mitigate any adverse impacts according to the recommendations of a qualified archaeologist. City implementation of this policy shall be guided by Appendix K of the CEQA Guidelines.

Policy 4.I.2. Archaeological Resource Management. Establish a procedure for the management of archaeological materials found on-site during a development, including the following provisions:

- If significant resources are known or suspected to be present on a site, require that a qualified archaeologist conduct monitoring of building demolition and/or construction grading activities.
- If materials are found on-site during construction activities, require that work be halted until a qualified archaeologist evaluates the find and makes a recommendation for the preservation in place or recovery of the resource.

Policy 4.I.3. Preservation in Place. Seek to preserve discovered archaeological resources in place in order to maintain the relationship between the artifacts and their archaeological context, where feasible. Preservation can be achieved through measures such as planning construction to avoid archaeological sites, incorporating sites within open space areas, capping the site prior to construction, and permanently protecting the site using a conservation easement.

Policy 4.I.4. Paleontological Resources. Establish a procedure for the management of paleontological materials found on-site during a development, including the following provisions:

- If materials are found on-site during grading, require that work be halted until a qualified professional evaluates the find to determine if it represents a significant paleontological resource.
- If the resource is determined to be significant, the paleontologist shall supervise removal of the material and determine the most appropriate archival storage of the material.
- Appropriate materials shall be prepared, catalogued, and archived at the applicant's expense and shall be retained within Stanislaus County if feasible.

Goal 4.J. Protect Ceres' Native American heritage.

Policy 4.J.1. Native American Outreach. Conduct outreach to local Native American tribal contacts to identify potential opportunities to highlight the area's Native American history

Policy 4.J.2. Coordination with Native American Tribes. Proactively coordinate with the local Native American tribes in the review and protection of any tribal cultural resources discovered at development sites.

Policy 4.J.3. Tribal Cultural Resources. Avoid the disturbance of tribal cultural resources and, where possible, seek to preserve resources in place, exploring opportunities for permanent protection of the resources where feasible. Treat tribal cultural resources with respect.

Policy 4.J.4. Native American Consultation. Conduct project specific Native American consultation early in the development review process to ensure adequate data recovery and mitigation for adverse impacts to significant Native American sites. Ensure that City staff and local developers are aware of their responsibilities to facilitate Native American consultation under SB 18 and AB 52.

Stanislaus County General Plan

The Stanislaus County General Plan (Stanislaus County 2016) has the following goal and policy pertaining to cultural resources listed in its Conservation and Open Space chapter.

Goal Eight. Preserve areas of national, state, regional, a local historical importance.

Policy Twenty-four. The County will support the preservation of Stanislaus County's cultural legacy of archeological, historical, and paleontological resources for future generations.

8.3 Environmental Setting

8.3.1 Prehistory

Very little archaeological work has been conducted in the Modesto area or in the San Joaquin Valley in general; therefore, the archaeology of the study area is understood within the prehistoric context developed for the Central Valley as a whole. Since the early 1930s, various schemes have been set forth by researchers to organize the archaeological data of California into a chronological framework. As reported by Moratto (1984), the Central Valley sequence established by Lillard, Heizer, and Fenenga in 1939 is particularly notable. Based on archaeological investigations in the lower Sacramento Valley, Lillard and colleagues divided human prehistory into three broad cultural horizons: Early, Middle, and Late. This chronology was first known as the Delta sequence and later became the basis of Richard Beardsley's Central California Taxonomic System (CCTS). The system relies on the identification of characteristics such as burial patterns, shell bead types, stone tools, and the types of locations where the sites tend to occur. These traits and characteristics are used to identify an archaeological resource as belonging to a specific time period.

The CCTS has continued to undergo significant refinement but remains the framework within which California archaeologists explain cultural change. The general system is still widely used by archaeologists, but it has been expanded and revised to include economic and technological strategies, socio-politics, trade networks, population density, and variations of artifact types to differentiate between cultural periods. The current chronology (Rosenthal et al. 2010:150) for central California archaeology includes:

- Paleo-Indian: 11,550–8550 B.C.
- Lower Archaic: 8550–5550 B.C.
- Middle Archaic: 5550–550 B.C.
- Upper Archaic: 550 B.C. to 1100 A.D.
- Emergent: 1100 A.D. to Historic

The Paleo-Indian Period (11,550–8,550 B.C.) is generally characterized by big-game hunters occupying broad geographic areas. Archaeological deposits from the Paleo-Indian period are rarely found in the Central Valley, however, and those that have been identified have largely been discovered at the south end of the San Joaquin Valley near Tulare Lake. Post-depositional processes, mainly glacial outwash occurring at the end of the Pleistocene Epoch, either destroyed or deeply buried much of the existing evidence of human activity in the region from this period. As result, little is known about Paleo-Indian lifeways in the region (Moratto 1984).

Similar to the preceding period, the Lower Archaic Period (8550–5550 B.C.) is presumed to reflect a mobile population that continued to hunt big game. Few localities in the Central Valley are associated with this period, and those that have been found are largely isolated artifacts consisting of large wide-stemmed and leaf-shaped projectile points, along with flaked stone crescents. Only two sites with associated deposits of faunal and shell remains have been identified for the Lower Archaic Period, one at Buena Vista Lake in the southern San Joaquin Valley (Rosenthal et al. 2010:151-152) and one in Sacramento (Tremaine 2008). Some sites in the Sierra Nevada foothills from this period, however, indicate the use of milling equipment (hand stones and milling stones) to process seeds and nuts.

The Middle Archaic Period (5550–550 B.C.) indicates a shift to a more settled way of life that is reflected by substantial, though often deeply buried, archaeological sites with artifacts that are more elaborate in design, imply a more diverse subsistence regime, and indicate interregional trade. Sites are often situated along the major rivers and streams within the Central Valley, emphasizing a focus on riverine and marsh habitats. The Windmiller Tradition or Pattern, which was first identified in sites around the Sacramento–San Joaquin River Delta, is often considered representative of this period. Characteristic artifacts from this period include a variety of fish hooks and spears; large stemmed and leaf-shaped projectile points of obsidian and chert; shaped charmstones of alabaster, steatite, or marble; and a variety of Haliotis and Olivella shell ornaments and beads, respectively. Mortars and pestles, associated with acorn preparation, became commonplace by the middle of the period. The presence of ventrally and dorsally extended burials with a western orientation is particularly indicative of the Windmiller Pattern.

Increased sedentism and technological specialization are evidenced during the Upper Archaic Period (550 B.C. to 1100 A.D.), as populations exploited more diverse resources and established trade relationships. Mortars and pestles became the primary ground stone implements, suggesting that acorns had become a more important dietary staple. Regional diversity in artifact styles, such as Haliotis shell ornaments, bone tools, and ground charmstones or plummets, became more pronounced; burial postures also varied.

Archaeological sites from the Emergent Period (A.D. 1100 to the historic period) indicate increased social complexity and the development of large, central villages with resident political leaders and specialized activity sites. Enhanced regional diversity in terms of artifact styles, housing, and interment methods is evident in the archeological record. Artifacts associated with the period include the bow and arrow, small corner-notched projectile points, and a variety of shell and stone beads and ornaments.

8.3.2 Ethnography

The Modesto area lies within the ancestral territory of the Northern Valley Yokuts. "Yokuts" is a term applied to a large and diverse group of people inhabiting the San Joaquin Valley and Sierra Nevada foothills of central California. The Northern Valley Yokuts inhabited a 40- to 60-mile-wide area straddling the San Joaquin River, south of the Mokelumne River, east of the Diablo Range, and north of the sharp bend that the San Joaquin River takes to the east-northeast near Mendota in Fresno County. The Southern Valley Yokuts inhabited the San Joaquin Valley south of the bend in the river. Although they were divided geographically and ecologically, the two groups have a common linguistic heritage (Wallace 1978:462).

The Northern Valley tribes closely resembled the Yokuts groups to the south, although there were some cultural differences. The northerners had greater access to salmon and acorns, two important dietary resources, and some of their religious practices reflected the influences of groups to their north, such as the Miwok. While inhumation was the usual practice in the southern valley, the Northern Valley Yokuts either cremated their dead or buried them in a flexed position (Wallace 1978:464, 468). A chief headed the tribal villages, which averaged around 300 people. Family houses were round or oval, sunken, with a conically shaped pole frame, and covered with tule mats. Each village also had a lodge for dances and other community functions, as well as a sweathouse (Wallace 1978:462-464).

The Northern Valley Yokuts built their riverside villages on elevated areas along the water's edge to avoid the spring floods, which were a result of heavy Sierra Nevada snow melts. Living beside rivers and streams provided plentiful river perch, Sacramento pike, salmon, and sturgeon. Hunting provided waterfowl such as geese and ducks, as well as terrestrial animals such as antelope, elk, and brown bear, although by all indications, fish constituted most of their diet. The surrounding woodland, grasslands, and marshes provided acorns, tule root, and seeds.

The Northern Valley Yokuts used bone harpoon tips for fishing, stone sinkers for nets, chert projectile points for hunting, mortars and pestles, scrapers, knives, and bone awl tools to procure and process food. Marine shells, procured from coastal tribes, were used for necklaces and other adornments, and marine shell beads sometimes accompanied the deceased. The Yokuts used tule reed rafts to navigate the waterways for fishing and fowling. They also manufactured intricate baskets for a variety of purposes, including storing, cooking, eating, winnowing, hopper mortars, the transport of food materials, and ritual. Very little is known of the Northern Valley Yokuts' clothing, but drawings of their tattoos show that they served not only as a decoration but also as a form of identity (Wallace 1978:464).

Initially, the Diablo Range served as a natural barrier against heavy recruitment of Native Californians by the Spanish, who established missions along the coast. By the early 19th century, however, Spanish and (later) Mexican missionaries began to explore the inner valleys in search of potential neophytes. The Yokuts resisted recruitment and California Indians from a variety of tribes sought refuge among the Yokuts after fleeing the missions. Introduced diseases, destruction of traditional resources from cattle grazing, and forced relocation took a heavy toll on the Northern Yokuts. Despite decades of hardship, many individuals who can trace their ancestry to the Northern Valley Yokuts continue to live and thrive in the Central Valley and throughout California and the United States.

8.3.3 History

The historic era began in Stanislaus County when the first Spanish expedition entered the San Joaquin Valley in 1806 under the leadership of Gabriel Moraga. Traveling north and northwest through the region in search of possible mission sites, Moraga's party explored along what came to be known as the Stanislaus River. Moraga visited the area again in 1808 and 1810 (Kyle et al. 2002:516-517).

After Mexico gained its independence from Spain in 1822, two additional expedition forces entered the area; however, the purposes of their campaigns were no longer exploratory. Soldiers were sent into the Central Valley to recover stolen animals and punish hostile Indians in order to reduce the attacks upon coastal towns, missions, and ranchos.

Americans also began to enter the region during the Mexican period. In 1827 and 1828, Jedediah Smith entered the San Joaquin Valley through the Tejon Pass and trapped beavers along the San Joaquin, Kings, and other rivers and streams that flowed from the Sierra. Smith was followed by fellow trappers such as Peter Ogden, Ewing Young, Kit Carson, and Joseph Walker.

The first permanent European settlement may have occurred in Stanislaus County when two land grants were issued by the Mexican government in 1843. The first was the Rancho El Pescadero on the west side of the San Joaquin River near the border of what would eventually become San Joaquin County. The second was the Rancheria del Rio de Estanislao located north of the Stanislaus River bordering Tuolumne County. Two additional land grants were issued the following year. These were the Rancho del Puerto and Rancho Orestimba, both of which were on the west side of Tuolumne County near Rancho Pescadero (eReferenceDesk 2017).

The City of Modesto came into being in 1870 when the Central Pacific Railroad announced that the location would be the end point of the next extension of the rail line as it progressed south through the Central Valley (Kyle et al. 2002:521). By the time the tracks were completed in November of that year, a viable town had already been established by entrepreneurs (City of Modesto 2016). Modesto residents were among California's first irrigation advocates, and by 1904 a system of canals had been constructed to allow more productive agriculture. During the 19th century, grain-growing was Stanislaus County's dominant agricultural activity. Stock-raising, dairy farming, fruit and nut orchards, and vegetable farming all became more important over time. When Prohibition ended in 1933, the Gallo brothers came to Modesto, bringing the wine business to the area on an industrial scale. In the 21st century, almonds and walnuts are the most lucrative local crops, although fruit, vegetables, livestock, and other agricultural products remain important. Modesto is still the most important town in the region and is the Stanislaus County seat.

8.3.4 Paleontology

The standard guidelines for assessment and mitigation of adverse impacts on paleontological resources set forth by the Society of Vertebrate Paleontology (2010) have been used to establish three categories of sensitivity. These are High, Low, and Undetermined. Areas that consist of rock that is not of sedimentary origin and that have not been known to produce fossils are considered low sensitivity areas and monitoring is not required during project construction or operation. Additionally, when it can be demonstrated that the conditions of the unconsolidated sediments are such that fossils could not form in these sediments, and that any fossils found in the sediments

could not be considered in situ, they would have minimal scientific value, and the area would be considered low sensitivity. When both of these low sensitivity conditions were present, it was considered that no significant paleontological resource was present and consequently no impact would occur.

8.3.5 Cultural Resources Studies

For the purposes of this DEIR, a cultural resources evaluation based on archival data was conducted for the Proposed Program. These data were obtained largely through the Central California Information Center of the California Historical Resources System at California State University, Stanislaus, as well as the City of Modesto Urban Area General Plan and the General Plan Master Environmental Impact Report.

Archaeological Resources

Archaeological resources reflect past human occupation by the presence of cultural artifacts within or on top of the soil matrix. Prehistoric materials in the study area would most likely include obsidian, basalt, and chert flaked stone tools (e.g., projectile points, knives, and choppers) and tool-making debris, or milling equipment such as mortars and pestles. Darkened soils resulting from extended occupation of an area, along with residue from food preparation (animal bone, seeds, freshwater shell) might also be found. Historic era archaeological remains could include but not be limited to building foundations and structural remains (e.g., bricks, nails) and refuse such as glass and ceramic fragments, metal tools or tool fragments, tin cans, or items of clothing (buttons, buckles, shoes, etc.).

Information about cultural resources within the larger study area was available in the Modesto General Plan Update Final Master EIR (City of Modesto 2019b). The EIR noted that archaeological surveys have been sporadic throughout the area and have largely been conducted as part of urban development. Nevertheless, prehistoric and historic-era sites have been previously recorded primarily along waterways (Dry Creek, and the Stanislaus and Tuolumne rivers) and on adjacent terraces, which are considered particularly sensitive for archaeological remains. No specific information about archaeological sites is found within the Stanislaus County General Plan, and no other information about archaeological sites within the study area outside of the City of Modesto was garnered through archival research. However, record searches for other specific projects within the County has yielded information to suggest that types and locations of archaeological resources within the County would closely follow those identified within the City of Modesto.

Soils information presented in Chapter 9, *Geology*, *Soils, and Seismicity*, and geoarchaeological data (Rosenthal et al. 2004) indicates that the soils within the study area (Dinuba loamy sand, Hanford sandy loam, Madera sandy loam, Modesto clay loam, San Joaquin sandy loam, and Tujunga loamy sand) date from the late Pleistocene through the Holocene Epoch and have depths of up to 80 inches. These soils are largely considered to have low sensitivity ratings for buried archaeological remains, although the Hanford series is considered to be moderately sensitive and the Tujunga is rated as highly sensitive for buried archaeological remains (Rosenthal et al. 2004). Proximity to the Tuolumne and San Joaquin Rivers, and Dry Creek increases the potential for buried resources within the study area.

Built Environment Resources

A large number of built environment resources have been identified within the Program service area. These include residences, industrial and public buildings, railroads, and bridges along with historic-era features such as the Modesto Arch. The City of Modesto maintains a list of Designated Landmark Preservation Sites that contains 59 resources.[1] All of the built environment resources on the list are within the Program service area. The City of Modesto list also contains some landscape features as Landmark Preservation Sites. These include heritage trees, landscaped parks and cemeteries, and one is a golf course.

The Office of Historic Preservation's Directory of Properties in the Historic Property Data File for Stanislaus County (2017) indicates that hundreds of built resources within the Program service area, all within the City of Modesto, have been evaluated for eligibility for inclusion in the NRHP. (Although resources in Ceres, Turlock, and in other regions of Stanislaus County are also listed, they are not within the study area.) Most of these were determined to be not eligible for the NRHP, with the second largest category identified as resources that are contributors to a district that is eligible for listing by a local government. Six resources have been listed or are eligible for listing on the NRHP (City of Modesto 2019a, 2019b). One resource, the McHenry Mansion, has been dedicated as a State of California Point of Historical Interest (2019b).

Native American Coordination

The City of Modesto notified Native American tribes with a traditional and cultural affiliation with the region about the Proposed Project on June 8, 2016, pursuant to the requirements of Pub. Res. Code 21080.3.1 (also known as AB 52). Three tribes were contacted: the Northern Valley Yokuts Tribe, Southern Sierra Miwuk Nation, and Tule River Indian Tribe.

The City has received letters of interest from two Native American tribes pursuant to Pub. Res. Code Section 21080.3.1(b)(1) for all proposed City CEQA projects: the Northern Valley Yokuts and the Ione Band of Miwok Indians. However, after examining the map of the Ione Band's indigenous territory that accompanied their letter, it was determined that the Proposed Program is outside of the tribe's area of interest. A request to the NAHC for a list of tribes with a traditional and cultural association with the Proposed Program resulted in the identification of two tribes. In addition to the Northern Valley Yokuts, the NAHC listed the Southern Sierra Miwok Nation. The City notified these tribes about the Proposed Program pursuant in a letter dated June 8, 2016. A notification letter was also sent to the Tule River Indian Tribe, as there had been consultation with that tribe in the past. The City did not receive requests for formal consultation under Pub. Res. Code Section 21080.3.1(b)(2) from any of those contacted. Follow-up phone calls were made to the Tule River Indian Tribe but did not receive a response. All correspondence with tribes related to Pub. Res. Code Section 21080.3.1, including the Tribes' letters of interest to the City, is provided in Appendix C. None of the tribes requested consultation on the Proposed Program or expressed concerns about potential significant resources within the study area.

[1] The Central California Information Center of the California Historical Resources Information System, located at California State University, Stanislaus, provided the list, which was last updated in March 2011. The list is also available at www.modestogov.com/1966/City-Landmarks. Although 59 resources are identified, the list notes that one resource has been removed from landmark status, one has been demolished, and one has been moved.

Tribal Cultural Resources

No TCRs have been identified within the Program study area.

Paleontological Resources

A desktop study was conducted to assess the sensitivity of the study area or paleontological resources. The study area is predominantly underlain by Pleistocene-aged alluvial fan deposits of the Modesto Formation (California Geological Survey USGS 1991). The Modesto Formation is composed primarily of unconsolidated, unweathered, coarse sand and sandy silt along the upper portions of the unit. The older, deeper portions of this unit shift to more consolidated, slightly weathered, well-sorted silt and fine sand, silty sand, and sandy silt. The Modesto Formation is overlain by Holocene alluvium, particularly along watercourses within the study area. The Holocene soils can have depths of 6.5 feet.

The Modesto Formation has yielded a wide variety of fossils within Stanislaus County, including extinct land mammals such as ground sloths, mammoths, camels, and bison, among others. Fossils of petrified wood, clam shells, fishes, birds, and amphibians have also been uncovered (California Energy Commission 2017).

8.4 Impact Analysis

8.4.1 Methodology

The following impact analysis was conducted based on the records search, review of previous investigations and historic maps, and Native American consultation. The City of Modesto Urban Area General Plan and General Plan Master Environmental Impact Report provided city-wide data that supported the analysis of program-level impacts. The Stanislaus County General Plan also provided information for study areas within the County.

Consultation with tribes who have a traditional and cultural affiliation with the Proposed Project area followed the protocols outlined under Pub. Res. Code Sections 21080.3.1, 21080.3.2, and 21082.3, and guidelines provided by the NAHC (n.d.), and the Governor's Office of Planning and Research (2017; n.d.). Because tribes notified pursuant to Pub. Res. Code Sections 21080.3.1 declined consultation on the Program, the City determined that no TCRs exist within the study area.

8.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on cultural, tribal, and paleontological resources if it would:

- Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5;

- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature;
- Disturb any human remains, including those interred outside of formal cemeteries; or
- Cause a substantial adverse change in the significance of a TCR, defined in Pub. Res. Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:
- Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Pub. Res. Code Section 5020.1(k), or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Pub. Res. Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Pub. Res. Code Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

CEQA does not establish criteria for determining significance of paleontological resources.

8.4.3 Environmental Impacts

Impact CR-1: Impacts on Known Historic, Archaeological, or Tribal Resources (*Less than Significant*)

The Proposed Program would occur partially within Modesto's incorporated limits and partially outside its incorporated limits, within the jurisdiction of the County but within the City's sphere of influence (SOI). Program-related activities would also take place within the cities of Ceres, Turlock, and Waterford. The County and the other cities do not maintain policies or requirements related to cultural resources that are more restrictive or otherwise incompatible with those of the City of Modesto. All subsequent projects, including those in Del Rio, Empire, Grayson, Hickman, and Salida, would implement existing City of Modesto Urban Area General Plan policies related to the investigation and mitigation of historical and archaeological impacts, as necessary.

The Proposed Program does not propose demolition or modification of existing structures. Based on the program information available, the Proposed Program does not appear to propose work in proximity to any of the historic resources listed in the cities of Ceres, Modesto, Turlock, or Waterford. Therefore, it is unlikely that the Proposed Program would adversely affect known, listed historic resources, and the WSER evaluated in this PEIR would have a less-than-significant impact on historic resources.

All site-specific projects proposed as part of the Proposed Program would be required to adhere to federal (if applicable), state, and local policies pertaining to the survey and impact analysis of historic resources. Accordingly, if subsequent projects propose to demolish or modify existing structures, or if they propose work within 100 feet of structures, those structures would need to be evaluated for their significance and for any project-related impacts and mitigation. Adherence to City of Modesto Urban Area General Plan Section VII-F Policies 2-c, 2-d, 2-e, 2-f, 2-h, 2-i, 2-j,

and 2-k (presented above) would ensure that subsequent projects would avoid significant impacts on historic resources, and that any unforeseen significant impacts would be less than significant.

It also should be noted that if subsequent projects were to use federal funds and proposed the demolition or modification of existing structures, such projects would be subject to historic property review and consultation with the SHPO under Section 106 of the National Historic Preservation Act (NHPA). Any impacts identified during that review would be mitigated fully by site-specific measures developed in consultation with the SHPO. As a result, impacts on known historic, archaeological, or tribal resources would be **less than significant**.

Impact CR-2: Impacts on Previously Undiscovered Archaeological Resources (*Less than Significant with Mitigation*)

Individual projects implemented pursuant to the Proposed Program would entail extensive excavation work to install certain components. Construction grading and earthmoving activities could disturb previously undiscovered archaeological deposits or buried historic resources. Proposed pipelines, storage tanks, and groundwater wells to be located within riverbeds and otherwise adjacent to natural channels are particularly susceptible to encountering Native American artifacts. The City has adopted guidelines to aid project compliance with requirements for archaeological resources analysis, and subsequent projects would be required to adhere to these guidelines.

Projects proposing earthwork within archaeological resource study areas must adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k (presented above), which requires reconstruction archaeological investigations on the site and implementation of avoidance measures, if necessary. Improvements proposing earthwork outside of archaeological resource study areas must also adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k as well as Policies 3-a, 3-b, and 3-c (also presented above), which require the applicant (the City, in this case) to consult with Native American tribes and that a qualified archaeologist evaluate the site to determine its archaeological and cultural sensitivity, and if so, implement avoidance and minimization measures..

All proposed improvements must adhere to City of Modesto Urban Area General Plan Section VII-F Policies 2-k, 2-l, 2-m, 2-n, 2-o, and 3-c (presented above), which outline mitigation procedures that would prevent impacts on the unearthed resources and require on-site activity to cease until an archaeological site investigation is performed, in the event that resources are uncovered during construction. Construction specifications for individual projects must stipulate the relevant procedures that are to be followed in the event that cultural resources are encountered during the construction process. Adherence to existing City policies regarding archaeological investigation, construction requirements, and proper mitigation for any resources discovered on the site, as well as to **Mitigation Measure CR-1** below, would ensure that specific improvements would result in impacts on archaeological resources that meet CEQA's definition of historic resources or unique archaeological resources that are **less than significant with mitigation**.

Mitigation Measure CR-1: Conduct Cultural Resources Awareness Training for Construction Workers Prior to Beginning Work.

The City shall implement the following measures. Before initiation of ground-disturbing activities, the City or its designee shall arrange for construction crews to receive

information about the kinds of archaeological materials that could be present and the protocols to be followed should any such materials be uncovered during construction. The training shall include information about the laws pertaining to treatment of cultural resources and emphasize the requirement for confidentiality. The informational materials shall be prepared by a qualified archaeologist, and a qualified archaeologist shall conduct the initial training at the beginning of each project. Subsequent trainings should occur as new personnel work on each project; it is incumbent on the City to ensure that the contractor conveys this information to new employees. This could occur during daily safety meetings by the construction supervisor, or more formal training by a qualified archaeologist.

Impact CR-3: Disturb Any Human Remains, Including those Interred Outside of Dedicated Cemeteries (*Less than Significant with Mitigation*)

Based on the Program information for the proposed infrastructure improvements, the Proposed Program does not appear to propose earthwork in proximity to any known cemeteries or Native American burial grounds. However, projects implemented as part of the Proposed Program have the potential to disturb previously undiscovered human remains. All of the City of Modesto Urban Area General Plan policies identified above for Impact CR-2 also pertain to the discovery of human remains. Specifically, Policy VII-F.2[k](2) (presented above) cites California Health and Safety Code 7050.5, which requires the cessation of further excavation and disturbance in the event of a human remains discovery, and coordination with the County coroner and (if applicable) the Native American Heritage Commission (NAHC) regarding further action.

Adherence to Policy VII-F.2[k] and the California Health and Safety Code, as well as Mitigation Measure CR-1, will ensure that subsequent projects' impacts on human remains would be **less than significant with mitigation**.

Impact CR-4: Impacts on Paleontological Resources (*Less than Significant*)

The study area is underlain by the Modesto Formation, which is considered a paleontologically-sensitive rock unit under the Society of Vertebrate Paleontology guidelines (2010), as discussed earlier in this section. Records of vertebrate fossil localities throughout the San Joaquin Valley and all sediments referable to the Modesto Formation suggest there is a potential for uncovering additional similar fossil remains during construction-related earthmoving activities, as part of implementation of the proposed program. Though the large majority of the study area has been developed, and any fossil remains have previously been removed, there are parcels within the study area that have not yet been developed, and the proposed program would require excavation activities in undisturbed sediments below existing development. As such, the potential for damage to unique, scientifically important fossils during construction-related activities at project sites is considered a potentially significant impact. For projects located within the Baseline Developed and the Planned Urbanized areas identified in the City's General Plan, Policies VII-F.2[k](5) and VII-F.3[c](5) would apply. If paleontological resources are discovered during ground-disturbing activities, these policies would require that construction work cease in the vicinity of a find, ensure that a qualified paleontologist evaluates the resource, and that appropriate measures are taken to mitigate effects on paleontological resources if discovered. Therefore, impacts on paleontological resources would be **less than significant**.

Impact CR-5: Potential for a Substantial Adverse Impact on Tribal Cultural Resources (*Less than Significant with Mitigation*)

TCRs have not been identified within the Program study area. None of the tribes contacted under Pub. Res. Code Section 21080.3.1 have responded with concerns about the potential impact of the Program on TCRs; thus, the City, as the lead CEQA agency, has determined that no known TCRs exist within the study area.,

Project grading and earthmoving activities could disturb previously undiscovered archaeological deposits or buried historic resources. Proposed pipelines, storage tanks, and groundwater wells to be located within riverbeds and otherwise adjacent to natural channels are particularly susceptible to encountering Native American artifacts. The City has adopted guidelines to aid project compliance with requirements for archaeological resources analysis, and subsequent projects would be required to adhere to these guidelines.

Projects proposing earthwork within archaeological resource study areas must adhere to City of Modesto Urban Area General Plan Sections VII-F Policy 2-k, which requires preconstruction archaeological investigations on the site and implementation of avoidance measures, if necessary. Projects proposing earthwork outside of archaeological resource study areas must adhere to City of Modesto Urban Area General Plan Section VII-F Policy 2-k as well as Policies 3-a, 3-b, and 3-c, which require the applicant to consult with Native American tribes and that a qualified archaeologist evaluate the site to determine its archaeological and cultural sensitivity, and if so, implement avoidance and minimization measures. All subsequent projects must adhere to the City of Modesto Urban Area General Plan Section VII-F policies listed above, including 2-l, 2-m, 2-n, and 2-o, which outline mitigation procedures that would prevent impacts on the unearthed resources and require on-site activity to cease until an archaeological site investigation is performed, in the event that resources are uncovered during construction. Construction specifications for individual projects must stipulate the relevant procedures that are to be followed in the event that cultural resources are encountered during the construction process. Adherence to existing City policies regarding archaeological investigations, construction requirements, and proper mitigation for any resources discovered on the site, as well as to Mitigation Measure CR-1, would ensure that specific projects implemented subsequent to the Proposed Program would result in impacts on archaeological resources that meet CEQA's definition of historic resources or unique archaeological resources being **less than significant with mitigation.**

Chapter 9
GEOLOGY, SOILS, AND SEISMICITY

9.1 Overview

This chapter identifies geologic, soils, and seismic conditions that could affect or be affected by the Proposed Program. The chapter describes the regulatory setting, affected environment, impacts, and proposed mitigation measures based on published geologic reports and maps, a site-specific technical report, and professional expertise. The discussion of impacts considers the consequences of the Proposed Program on geology, soils, and seismicity, and how geology, soils, and seismicity would affect the Proposed Program. This chapter also evaluates whether project implementation would expose people or structures to substantial geologic hazards.

9.2 Regulatory Setting

9.2.1 Federal Laws, Regulations, and Policies

Section 402 of the Clean Water Act/National Pollutant Discharge Elimination System

The CWA is discussed in detail in Chapter 12, *Hydrology and Water Quality*. Because Section 402 of CWA is directly relevant to earthwork, additional information is provided here.

The 1987 amendments to CWA added Section 402(p), which establishes a framework for regulating municipal and industrial stormwater discharges under the NPDES program. As described in Chapter 12, the USEPA has delegated to SWRCB the authority for the NPDES program in California, where it is implemented by the state's nine RWQCBs. Under the NPDES Phase II Rule, any construction activity disturbing 1 acre or more must obtain coverage under the state's General Permit for Storm Water Discharges Associated with Construction Activity (General Permit). General Permit applicants are required to prepare a Notice of Intent stating that stormwater will be discharged from a construction site, and that a SWPPP describes the BMPs will be implemented to avoid adverse effects on receiving water quality as a result of construction activities, including earthwork.

National Earthquake Hazards Reduction Act

The National Earthquake Hazards Reduction Act of 1977 (Public Law 95-124) and creation of the National Earthquake Hazards Reduction Program (NEHRP) established a long-term earthquake risk reduction program to better understand, predict, and mitigate risks associated with seismic events. The following four federal agencies are responsible for coordinating activities under NEHRP: USGS; National Science Foundation (NSF); Federal Emergency Management Agency (FEMA); and National Institute of Standards and Technology. Since its inception, NEHRP has shifted its focus from earthquake prediction to hazard reduction. The current program objectives (NEHRP 2017) are as follows:

1. Develop effective measures to reduce earthquake hazards;
2. Reduce facilities and system vulnerabilities to earthquakes;
3. Improve earthquake hazards identification and risk assessment methods; and
4. Improve the understanding of earthquakes and their effects.

Implementation of NEHRP objectives is accomplished primarily through original research, publications, and recommendations and guidelines for state, regional, and local agencies in the development of plans and policies to promote safety and emergency planning.

9.2.2 State Laws, Regulations, and Policies

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (Alquist-Priolo Act; Pub. Res. Code Section 2621 *et seq*.) was enacted in 1972 to reduce the risk to life and property from surface faulting in California. The Alquist-Priolo Act prohibits construction of most types of structures intended for human occupancy on the surface traces of active faults and strictly regulates construction in the corridors along active faults (earthquake fault zones). It also defines criteria for identifying active faults, giving legal weight to terms such as "active," and establishes a process for reviewing building proposals in and adjacent to earthquake fault zones.

Under the Alquist-Priolo Act, faults are zoned and construction along or across them is strictly regulated if they are "sufficiently active" and "well defined." A fault is considered sufficiently active if one or more of its segments or strands shows evidence of surface displacement during the Holocene (defined for purposes of the act as referring to approximately the last 11,000 years). A fault is considered well defined if its trace can be clearly identified by a trained geologist at the ground surface or in the shallow subsurface, using standard professional techniques, criteria, and judgment (Bryant and Hart 2007). Before a project can be permitted, cities and counties must require a geologic investigation to demonstrate that proposed buildings would not be constructed across active faults.

Seismic Hazards Mapping Act

As with the Alquist-Priolo Act, the Seismic Hazards Mapping Act of 1990 (SHMA) (Pub. Res. Code Sections 2690–2699.6) is intended to reduce damage resulting from earthquakes. The Alquist-Priolo Act addresses surface fault rupture, including strong groundshaking, liquefaction, and seismically induced landslides, and SHMA provisions are similar in concept in that the State is charged with identifying and mapping areas of risk of strong groundshaking, liquefaction, landslides, and other corollary hazards, and cities and counties are required to regulate development within Seismic Hazard Zones.

Under SHMA, permit review is the primary mechanism by which development can be locally regulated. Specifically, cities and counties are prohibited from issuing development permits for sites within Seismic Hazard Zones until appropriate site-specific geologic and/or geotechnical investigations have been performed and measures to reduce potential damage have been incorporated into the development plans.

California Building Code and International Building Code

Title 24 of the CCR, also known as the California Building Standards Code (CBC), specifies standards for geologic and seismic hazards other than surface faulting. These codes are administered and updated by the California Building Standards Commission. CBC specifies criteria for open excavation, seismic design, and load-bearing capacity directly related to construction in California. CBC standards determine building strength based on regional seismic risks and recommended construction specifications to provide building strength above that risk.

9.2.3 Local Laws, Regulations, and Policies

City of Modesto Urban Area General Plan

The *City of Modesto Urban Area General Plan* (City of Modesto 2019) identifies the Stanislaus and Tuolumne Rivers, and Dry Creek, as regional parks. The River Greenway Program, which guides development within the Stanislaus River, Tuolumne River, and Dry Creek Comprehensive Planning Districts, includes the following policies that are potentially relevant to the Proposed Program and analysis of geology, soils, and seismicity:

> **Policy VII-K [a].** Continue to use building codes as the primary tool for reducing seismic risk in structures. The current version of the California Building Code, as adopted by the City of Modesto, is intended to ensure that buildings resist major earthquakes of the intensity or severity of the strongest experience in California, without collapse, but with some structural as well as nonstructural damage. In most structures, it is expected that structural damage could be limited to repairable damage, even in a major earthquake.
>
> **Policy VII-K[b].** Require all new buildings in the City to be built under the seismic requirements of the current adopted California Building Code.
>
> **Policy VII-K[c].** Enforce provisions of the Alquist-Priolo Earthquake Fault Zoning Act.
>
> **Policy VII-N[a].** Any construction that occurs as a result of the General Plan must conform with the current UBC regulations, which address seismic safety of new structures and slope requirements. As appropriate, require a geotechnical analysis prior to tentative map approval in order to ascertain site-specific subsurface information necessary to estimate foundation conditions. These geotechnical studies should reference and make use of the most recent regional geologic maps available from the California Department of Conservation Division of Mines and Geology.
>
> **Policy VII-N[e].** Control construction-related fluvial erosion by a construction erosion control program filed with the City's Public Works Department and kept current throughout site development.
>
> **Policy VII-N[f].** Include "best management practices" in the erosion control program, as appropriate, given the specific circumstances of the site and/or project. Table V-9-2 in the Master Environmental Impact Report presents examples of best management practices.

Ceres General Plan 2035

The *Ceres General Plan 2035* (City of Ceres 2018) guides land use and development in the City of Ceres. Goals and policies in the General Plan related to geology, soils, and seismicity that are potentially relevant to the Proposed Program include the following:

Chapter 7, Health and Safety

Goal 5.G Minimize loss of life, injury, and property damage due to seismic and geologic hazards.

Policies

5.G.1 Building Standards. Require that new structures and alterations to existing structures be designed and constructed according to current California Building Code standards to minimize risk to the safety of occupants during groundshaking.

5.G.2 Improving Knowledge Base. Support investigations conducted by local, State, and federal agencies and other institutions to refine, enlarge, and improve the body of knowledge regarding active fault zones, unstable areas, groundshaking risks, and other seismic conditions in the Planning Area.

5.G.6 Expansive Soils. Limit the siting of structures across soil materials of substantially different expansive properties. Require appropriate design specifications, including special slabs, where foundations are located in areas of expansive soils.

5.G.7 Critical Facilities. Ensure that critical facilities are sited, designed, and maintained to avoid damage from seismic and geologic hazards. Critical facilities include, but are not limited to, water and wastewater facilities, energy stations, hospitals, and public safety facilities.

Critical facilities provide services and functions essential to a community, especially during and after a disaster.

City of Turlock General Plan

The *City of Turlock General Plan* (City of Turlock 2012) guides land use and development in the City of Turlock. Goals and policies in the General Plan related to geology, soils, and seismicity that are potentially relevant to the Proposed Project include:

Conservation Element

Policy 7.2-c. Protect Soil and Water. Work to protect and restore natural resources essential for agricultural production.

Policy 7.2-n. Minimize Soil Erosion. Require new development to implement measures to minimize soil erosion related to construction. Identify erosion-minimizing site preparation and grading techniques in the zoning code.

Policy 10.2-a. Minimize Geologic and Seismic Risk. Continue to use building codes as the primary tool for reducing seismic risk in structures.

Policy 10.2-b. Meet Most Current Seismic Standards. Continue to require all new buildings in the City to be built under the seismic requirements of the latest adopted California Building Code.

Policy 10.2-e. Ensure Stability of Sensitive Public Facilities. Evaluate the structural stability and ability to withstand seismic activity of water tanks, underground utilities, berms, and other sensitive public facilities, and plan for any needed repairs.

Policy 10.2-f. Require Geotechnical Investigations for Proposed Critical Structures. Require that geotechnical investigations be prepared for all proposed critical structures (including water towers and wastewater lift stations) before construction or approval of building permits, if deemed necessary. The investigation shall include estimation of the maximum credible earthquake, maximum ground acceleration, duration, and the potential for ground failure because of liquefaction or differential settling.

Policy 10.2-g. Require Investigations for All Development on Sites Where Soils Pose Risk. Require soils reports for new development projects where soils pose a potential geologic risk, and use the information to determine appropriate permitting requirements, if deemed necessary.

Policy 10.2-h. Require Erosion Control Plans. Require new development to include grading and erosion control plans prepared by a qualified engineer or land surveyor.

Stanislaus County General Plan

The *Stanislaus County General Plan* guides land use and development in the unincorporated area of Stanislaus County (Stanislaus County 2016). Goals and policies in the general plan related to geology, soils, and seismicity that are potentially relevant to the Proposed Program include the following:

Conservation and Open Space Element

Goal Two. Conserve water resources and protect water quality in the County.

Policy Five. Protect groundwater aquifers and recharge areas, particularly those critical for the replenishment of reservoirs and aquifers.

Policy Six. Preserve natural vegetation to protect waterways from bank erosion and siltation.

Goal Five. Reserve, as open space, lands subject to natural disaster in order to minimize loss of life and property of residents of Stanislaus County.

Policy Sixteen. Discourage development on lands that are subject to flooding, landslide, faulting, or any natural disaster to minimize loss of life and property.

Safety Element

Goal One. Prevent loss of life and reduce property damage as a result of natural disasters.

Policy Three. Development should not be allowed in areas that are particularly susceptible to seismic hazard.

Goal Two. Minimize the effects of hazardous conditions that might cause loss of life and property.

Policy Six. All new development shall be designed to reduce safety and health hazards.

Policy Fourteen. The County will continue to enforce state-mandated structural Health and Safety Codes, including but not limited to the California Building Code, the International Property Maintenance Code, the California Fire Code, the California Plumbing Code, California Electric Code, and Title 24, Parts 1-9.

Agricultural Element

Goal Three. Protect the natural resources that sustain our agricultural industry.

Policy 3.7. The County shall encourage the conservation of soil resources.

9.3 Environmental Setting

The City and study area are located in the Great Valley geomorphic province of central California, often referred to as the California Central Valley. This geomorphic province is characterized as an alluvial plain approximately 50 miles wide and 400 miles long (California Geologic Survey [CGS] 2002). The study area is within the central portion of the province at the northern end of the San Joaquin Valley. The San Joaquin Valley is bounded by the Sierra Nevada to the east, the Tehachapi Mountains to the south, and the Coast Range (Diablo Range) to the west.

The study area is drained primarily by the Tuolumne River, a major tributary to the San Joaquin River. The study area is predominantly flat. Elevations within the City range from approximately 115 feet above msl in the northeast portion of the City to 45 feet msl along the Tuolumne River in West Modesto. Most variations in surface topography are relatively minor with more appreciable changes in grade directly adjacent to surface water features (e.g., Tuolumne River and Dry Creek).

9.3.1 Local Geology

Alluvial sediments have accumulated within the San Joaquin Basin almost persistently for the last 160 million years. Most sediments in the basin derive from the Sierra Nevada Mountains, transported and deposited by the alluvial fans draining the western flanks of that range. Some sediments originate from the Diablo Range on the western side of the basin.

The study area is predominantly underlain by Pleistocene-aged alluvial fan deposits of the Modesto Formation (USGS 1991). The Modesto Formation is composed primarily of unconsolidated, unweathered, coarse sand and sandy silt along the upper portions of the unit. The older, deeper portions of this unit shift to more consolidated, slightly weathered, well-sorted silt and fine sand, silty sand, and sandy silt. Younger (Holocene) alluvium is present near the Tuolumne River area.

9.3.2 Soils

Soils consist of younger alluvial material overlying older alluvium. These alluvial fan soils are highly fertile and productive for agricultural uses. Soil associations mapped as occurring in the study area generally consist of: Hanford, Dinuba, Tujunga, or Modesto (Natural Resources Conservation Service [NRCS] 2016). Most soils range from moderate to deep (i.e., 36 to 80+ inches deep).

The most predominant soils in the study area consist of sandy loam to fine sandy loam of the Hanford, Dinuba, Tujunga associations. In general, these soils are considered moderately well to well drained, with a very low to medium runoff class (NRCS 2016). A west-southwest trending band of Modesto loam-clay loam traverses the area north of Dry Creek. This association is moderately well drained with a high runoff class (NRCS 2016). San Joaquin and Madera sandy loams underlie the northeastern portion of the study area. These soils are moderately drained with very high runoff and a hardpan layer approximately 20 to 40 inches below ground surface (bgs) (NRCS 2016).

Soil Erosion

Soil erosion is the process of removing soil particles from a land surface by wind, water, or gravity. Factors influencing the rate of erosion may include climatic conditions, soil composition and roughness, soil moisture, ground cover, and topography and slope. Most natural erosion occurs slowly. However, ground-disturbing construction activities may increase the rate of erosion by exposing bare soils to the effects of wind and/or water. Erosion also may occur along the Tuolumne River and Dry Creek corridors during storm events, resulting in locally significant bank failures if the bank integrity is comprised or not properly stabilized. In general, the erosion potential of most soils in the study area are considered low to moderate, with the exception of the Dinuba sandy loam, which is highly susceptible to erosion by water and Modesto clay loam, which is susceptible to erosion by wind (NRCS 2016).

Expansive Soils

Expansive soils are predominantly composed of clays and can undergo substantial volume change in response to changes in moisture content. During wetting and drying cycles, expansive soils may shrink and swell, creating differential ground movements. In general, the expansion potential of most soils in the study area are considered low to moderate, with the exception of Modesto clay loam (NRCS 2016).

9.3.3 Seismicity

California is subjected to enormous tectonic forces stemming from the lateral motion of the Pacific (west) and North American (east) plates moving in opposing directions. The shearing forces of the plate movement results in an extremely fractured boundary referred to as the “San Andreas

Fault Zone." Many smaller active and historic fault zones are associated with the Pacific/North American tectonic movement as well.

The eastern portion of the San Joaquin Valley and study area lies in a region with limited faulting and relatively low seismic activity. Despite limited seismic activity, there have been several large earthquakes that resulted in ground shaking in the study area during the last 200 years. Potential seismic hazards resulting from a regional moderate-to-major earthquake include: fault ground rupture (surface faulting); ground shaking; liquefaction, subsidence, and differential settlement; and landslide, slope failure, and lateral spreading. Discussion of regional seismic faulting and hazards and their potential to occur in the study area is discussed below.

Alquist-Priolo Fault Zones and Ground Rupture

Horizontal and/or vertical surface or ground ruptures can occur during seismic events, typically along existing fault lines. Ground rupture that occurs along a fault trace (mapped location of the intersection(s) of a fault with the ground surface) is referred to as *fault rupture*. Some seismogenic faults (e.g., blind thrusts) do not extend to the ground surface and may not generate fault rupture even during major earthquakes. Other rupturing of the ground surface can occur as the result of slope failure or settlement caused by seismic shaking. Ground ruptures can result in damage to buildings, roads, and underground utilities. The potential for ground rupture depends on the proximity of faults, shaking severity, and local geologic conditions.

Fault areas considered to be of greatest risk are identified as Alquist-Priolo fault zones. No Alquist-Priolo designated fault zones or potentially active faults exist within or near the study area. Most seismic activity in this region stems from the San Andreas Fault Zone and associated fault systems west of the study area. Past evidence of recent fault displacement can be seen throughout the San Andreas Fault Zone and San Francisco Bay area. Active and potentially active faults near the study area are presented in **Table 9-1**.

Table 9-1. Regional Faults in Proximity to the Study Area

Fault	Approximate Distance from Proposed Program	Last Known Major Displacement
San Joaquin Fault (potentially active)	8 miles west	11,700–700,000 years ago; without historical record
Vernalis (inactive)	10 miles west	Within last 1.6 million years; age undifferentiated
Ortigalita Fault Zone, Cottonwood Arm Section (potentially active)	23 miles southwest	11,700–700,000 years ago; without historical record
Foothills Fault System, Southern Reach Section (potentially active)	25 miles east	11,700–700,000 years ago; without historical record

Fault	Approximate Distance from Proposed Program	Last Known Major Displacement
Greenville Fault Zone (active)	25 miles west	1980, Magnitude (M) 5.8
Calaveras Fault Zone, Central Calaveras Section (active)	44 miles southwest	1979, M 5.7 2007, M 5.6
San Andreas Fault Zone, Santa Cruz Mountains Section (active)	50 miles southwest	1989, M 7.2 1906, M 7.9

Sources: CGS 2010; USGS 2016

Ground Shaking

Seismically induced ground shaking can cause substantial damage to structures. The severity of ground shaking experienced at a specific location depends on a variety of factors, such as the magnitude and duration of the seismic event, fault type associated with the event, distance from the epicenter, and physical properties of the underlying geology and soils. The Modified Mercalli Intensity Scale (MMI) of perceived intensity, shown in **Table 9-2,** is based on observed effects and is the current standard used throughout the United States. Less intense earthquakes are typically rated on the basis of individual accounts, whereas higher intensity events are rated based on observed structural damage.

Table 9-2. Modified Mercalli Intensity Scale

Intensity	Shaking	Description/Damage
I	Not Felt	Not felt except by a very few under especially favorable conditions.
II	Weak	Felt only by a few persons at rest, especially on upper floors of buildings.
III	Weak	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibrations similar to the passing of a truck. Duration estimated.
IV	Light	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motor cars rocked noticeably.
V	Moderate	Felt by nearly everyone; many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop.

Intensity	Shaking	Description/Damage
VI	Strong	Felt by all, many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight.
VII	Very Strong	Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken.
VIII	Severe	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned.
IX	Violent	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations.
X	Extreme	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent.

Source: USGS 1989

Although ground shaking in the Modesto area has historically been very minimal, ground shaking events periodically affect the region. In Stanislaus County, the level of seismic ground shaking decreases from "High" risk along the western border of the County and the foothills of the Diablo Range, to "Moderate" risk in the central part of the County, to "Low" risk in the eastern portion (CGS 2008). The study area lies within the central portion of the County and is considered "Moderate" to "Low" to risk for earthquake shaking potential. In addition, the expected (10 percent chance of occurring in the next 50 years) peak ground shaking (acceleration[1]) in the study area is relatively low at an average of 0.247*g* (CGS 2008).

Differential Settling, Subsidence, and Liquefaction

Settlement of the ground surface can be caused by a number of geologic processes. Settlement is the lowering of the land surface elevation as a result of the compression, compaction, or consolidation of underlying soils, sediment, or rock. These processes are exasperated under increased loading (e.g., additional sediment deposition or construction of structures, including fills) or the withdrawal of groundwater. The processes cause a reduction in the volume of the materials. Compaction and compression generally occur within unconsolidated granular soils or sediment over a relatively short timeframe. Consolidation usually occurs over a longer period (sometimes many years) in saturated finer grained material as pore water (i.e., water within the spaces between sediment grains) is forced out of the sediment structure under loading or groundwater pumping. The potential for differential settlement is dependent upon local geologic conditions, soil properties, and land usage.

[1] Ground shaking is usually quantitatively expressed as the acceleration of movement relative to the acceleration of gravity (*g*).

Surface settlement can be referred to as subsidence, a term generally used for settlement of large magnitude or affecting a large area. Subsidence can also occur following oxidation of buried organic material. Areas consisting of fine-grained sediments (i.e., clays and silts) are more susceptible to ground subsidence. Although mining and extraction activities may also lead to subsidence, excessive pumping of groundwater is the predominant cause for this phenomenon. Historic land subsidence has occurred in large portions of the San Joaquin Valley, with more recent subsidence areas around El Nido and Tulare-Kettleman City (California Department of Water resources [DWR] 2014; DWR 2017a; DWR 2017b). In the Modesto area, the effects of subsidence have been subtler with surface elevations generally 0 to 5 feet lower as compared to 1949 elevations (DWR no date). However, more recent groundwater elevations from local wells within the study area generally show declines in groundwater elevations ranging from 0 to 50 feet below the historical spring low levels (DWR 2014). As such, and in consideration of other basin-wide factors, DWR has classified the San Joaquin Valley Groundwater Basin, Turlock Subbasin as having a low to medium overall potential for future land subsidence, the Modesto Subbasin as having a medium to high overall potential, and the Delta-Mendota Subbasin as having a high overall potential (DWR 2004; DWR 2006a; DWR 2006b; DWR 2017a). Please refer to Chapter 12, *Hydrology and Water Quality*, for further discussion on groundwater resources.

Ground settlement can cause the development of cracks or fissures in the ground surface. When ground settlement is non-uniform or uneven, differential settlement results, potentially inducing stress to structures.

Liquefaction can occur when water-saturated, loose sandy soils suddenly lose strength during seismic shaking. The primary factor that triggers liquefaction is moderate to strong ground shaking. The probability of liquefaction correlates directly with the intensity and duration of ground shaking (i.e., the stronger and/or longer the earthquake, the greater the chance of liquefaction). Additionally, physical properties may increase the susceptibility of soil to liquefaction. Saturated relatively clean/loose granular soils have a relatively high susceptibility for liquefaction while cohesive soils (even if saturated) have a low susceptibility.

No specific liquefaction hazards have been identified in Stanislaus County (Bryant and Hart 2007). However, areas with higher water tables and unconsolidated, granular sandy soils, such as the areas adjacent to the Tuolumne River, may be at increased risk for liquefaction due to the potential for the presence of a high water table and sandy, liquefiable soils.

Landslide, Slope Failure, and Lateral Spreading

Landslides or slope failure may occur in steeply sloped areas (15 percent slope or greater) following heavy rains, seismic events, or human activities (e.g., grading or excavation activities). Similarly, horizontal displacement of gently sloping ground (five percent or less slope) may occur along river banks or exposed embankments, a phenomenon known as lateral spreading. Saturated, loosely consolidated soils and precipitation events increase the likelihood that an earthquake will trigger landslides, slope failure, or lateral spreading.

Modesto and the surrounding area, including the outlying service areas, is relatively flat with little variation in topography. Some gradual slopes may be observed near river terraces and former sand dunes. However, effects of landslides, slope failures, and lateral spreading are negligible throughout most of the Modesto area and the outlying service areas.

9.4 Impact Analysis

9.4.1 Methodology

The methods used to evaluate the environmental impacts of the Proposed Program on geology, soils, and seismicity involved a review and assessment of published maps, professional publications, and reports pertaining to the geology, soils, and seismicity within the study area vicinity. Information reviewed included USGS and CGS geologic maps (USGS 1991; CGS 2002), NRCS soils maps (NRCS 2016), California seismic hazard zone mapping (Bryant and Hart 2007; CGS 2008; CGS 2010; CGS 2002;), DWR groundwater basin information (DWR 2004; 2006a, 2006b; 2017a; 2017b), and USGS historic earthquake data (not cited).

9.4.2 Criteria for Determining Significance

The Proposed Program would result in a significant impact on geology, soils, and seismicity if it would:

- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
  - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault;
  - Strong seismic ground shaking;
  - Seismic-related ground failure, including liquefaction; or
  - Landslides;
- Result in substantial soil erosion or the loss of topsoil;
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property; or
- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

The first criterion and sub-criterion regarding rupture of a known earthquake fault are not included in the detailed EIR impact analysis because the Proposed Program is not located within an Alquist-Priolo designated hazard zone. The nearest known active fault (i.e., surface displacement in the last 10,000 years) is the Greenville Fault Zone, approximately 25 miles west (CGS 2010). The nearest potentially active fault (i.e., surface displacement in the last 1.6 million years) is the San Joaquin Fault, approximately 8 miles west of the study area (CGS 2010). Since

there are no known faults in the study area, there would be no impact from ground rupture of a known fault.

In addition, the last criterion regarding use of septic tanks or alternative wastewater disposal systems is not included in the detailed EIR impact analysis as the Proposed Program does not involve construction of septic tanks or alternative wastewater disposal systems. Therefore, there would be no impact related to the suitability of soils to support septic tanks or alternative disposal systems.

9.4.3 Environmental Impacts

Impact GEO-1: Cause Damage to Facilities and Exposure of People to Hazards from Strong Seismic Events, Including Ground Shaking or Landslides (*Less than Significant*)

Due to the Proposed Program's substantial distance from active faults and the underlying geologic and soil conditions, the Central Valley generally experiences infrequent, lower levels of ground shaking than many other regions of California. Recent seismic events associated with the San Andreas Fault Zone have resulted in light or moderate ground shaking in the study area. Little to no damage would occur to most newly constructed structures (e.g., storage tanks and groundwater wells) in the Modesto area following ground shaking of this magnitude. Additionally, the City would be required to comply with CBC standards which would further minimize seismic-related impacts by ensuring that all structures are designed and constructed in compliance with California's seismic-related engineering standards. Any potential for foundational or structural damage associated with seismic ground shaking and adverse effects to structures or people would be minimal.

The floor of the Central Valley is relatively flat with only minor changes in topography. Some gradual slopes may be observed near river terraces and the banks of the Tuolumne River and Dry Creek. However, landslides are not likely to occur on or near any of the proposed component sites.

Based on the above, impacts related to seismic ground shaking and landslides would be **less than significant**.

Impact GEO-2: Result in Risk to Property and Life from Expansive Soils (*Less than Significant*)

Soils that contain a relatively high percentage of clay minerals have the potential to shrink and swell with changing moisture conditions. This uneven movement can fracture concrete foundations and footings, resulting in potential damage or failure of infrastructure. In general, most of the study area contains sandy or loamy soils exhibiting low to moderate plasticity characteristics (NRCS 2016). In addition, development of Program facilities (e.g., storage tanks) and upgrades to existing water distribution systems on expansive soils typically can be addressed through suitable design and compliance with CBC seismic standards by designing and building structures to a level of strength appropriate to regional seismic risks. However, the Proposed Program includes numerous components throughout the Modesto area, including areas with underlying soils exhibiting moderate to high expansive characteristics that may result in damage to infrastructure.

The City's Standard Specifications require under Section 11.05 that a comprehensive soils report be prepared for each project in the City. The report must be prepared by a licensed Geologist or Geotechnical Engineer and must include R-values of soil test samples, groundwater elevations, stripping and grading recommendations, and a determination of whether expansive soil is present. Section 11.08 of the City's Standard Specifications further requires that projects be graded/constructed in accordance with the recommendations in the soils report and any additional recommendations provided during construction by the project Geotechnical Engineer. These requirements would ensure that Proposed Program components would not be constructed on expansive soils such as to subject persons or property to substantial risks of harm. Therefore, this impact would be **less than significant**.

Impact GEO-3: Result in Substantial Soil Erosion or Loss of Topsoil (*Less than Significant*)

Construction-related activities would involve disturbance and exposure of soils, which could leave soils susceptible to erosion to precipitation and wind. The Proposed Program would include grading, excavation, trenching, or other activities that could loosen soils and increase the risk of erosion or sediment transport. In addition, construction of some components like the new storage tanks or well pump houses may involve removing, stockpiling, and transporting a substantial volume of topsoil. These impacts are considered significant. As discussed in Chapter 12, *Hydrology and Water Quality*, construction-related impacts on water quality would be avoided or minimized through implementation of BMPs and compliance with the NPDES General Construction Permit and SWPPP requirements. For Program components that would result in disturbance of less than one acre, similar construction-related impacts on water quality due to erosion would be avoided and minimized by complying with the City of Modesto's Standard Specifications which require development of a Local SWPPP or Erosion Control Plan and implementation of stormwater BMPs. Therefore, by implementing BMPs pursuant to either the NPDES General Construction Permit or the City of Modesto's Standard Specifications, this impact would be considered **less than significant**.

Impact GEO-4: Result in Subsidence, Liquefaction, or Collapse Due to Seismic Activity or an Unstable Geologic Unit or Soil (*Less than Significant*)

Under certain conditions, some geologic units or soils can become unstable and lead to landslides, trench collapse, lateral spreading, and liquefaction, especially when construction activities result in exposed soils and/or steep slopes. Construction-related ground-disturbing or excavation activities could alter soil stability. Although most Program construction activities would generally occur in relatively flat areas not at risk from landslides and lateral spreading, excavation and trenching for structures and pipelines would temporarily create potentially unstable slopes. Groundwater would likely not be encountered during shallow excavation and grading activities associated with construction of most Program components, such as storage tanks, and would not require dewatering. The U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) outlines specific Excavation and Trenching standards for building (29 CFR Section 1926.650) and utility trenching operations (29 CFR Section 1926.652). To reduce the risk of excavation-related accidents, the City and its contractor(s) would adhere to such OSHA standards.
